and the illusions of the *dilettanti* as to the merits of their productions the same as at the present day, and consequently forced the same observations upon the impartial spectators of the literary movement. 'Many', says Petronius, 'have been led astray by poetry. As soon as a man has set a verse upon its legs and has drowned a delicate idea in a flood of words, he thinks he has attained the summit of Helicon'. In addition to this, dilettantism was promoted by the intimate connexion of poetry with the school, the inevitable result of which was that poetical exercises were more or less generally practised, with or without the prompting of the teacher, solely with the object of obtaining more complete mastery over form and of acquiring excellence in a florid and lofty style.

Even those who did not share the delusion of regarding simple reminiscences, the result of study or imitation, as original or their own property, could not help being attracted by the idea of securing for themselves by constant practice the cleverness of form that they had been taught. But no doubt delight in the real or imaginary success of such poetical exercises (which by the way were chiefly responsible for interpolations in the texts of the poets most frequently read) caused many to regard as an end what should only have been a means of study. Even the *Odes* of Horace, almost too severe a critic of his own works, contain many exercises whose only merit is their form. But if Horace, in Quintilian's judgment, was the only Roman lyric poet worth reading, we may assume that the lyric poetry of the post-Augustan age was above all a poetry of schoolboys and *dilettanti*.

The political conditions of the monarchy, the interests and inclinations of different rulers, courts and court-circles, combined with the influences of school and the classical poetry of the Augustan age to turn literary inclinations, tastes, and occupations in the direction of poetry in particular. The universal peace which succeeded the battle of Actium and the decay of political life which came in with the monarchy, almost entirely excluded the Roman people from the two domains on which for so many centuries its intellectual force had displayed such richness and vigour. A mass of talent, vigour and activity, driven out of its natural path by this revolution, now turned its attention to literature. But even here those portions of the field, which under the republic had been most successfully

cultivated, remained only partially open ; freedom of speech was curtailed, the writing of history, up to the time of Nerva and Trajan, who bestowed upon men ' the rare good fortune that they might think what they liked and say what they thought ' , was full of danger, even under the tolerant rule of Augustus. Titus Labienus, one of the last of the republicans and an irreconcilable opponent of the new order of things, when he publicly read his history of modern times, omitted considerable portions of it with the words, ' this can be read after my death ' . Nevertheless, his work was condemned to be burnt, a sentence hitherto unheard of. Labienus refused to survive its destruction ; he had himself buried alive in the family sepulchre. Eleven years after the death of Augustus, Cremutius Cordus was brought to trial for having called Brutus and Cassius ' the last of the Romans ' in his *Annales* ; he anticipated his certain condemnation by starving himself to death ; his works also were burnt. In such times, poetry offered a doubly welcome refuge to peaceful spirits, who sought an ideal support for life and an escape from reality. But even this refuge was not absolutely safe ; ' the souls of the mighty ' were easily provoked, sometimes by the mere choice of a subject, and by real or seeming allusions to the present. Thus, under Tiberius, the last representative of the noble house of the Scauri brought death upon himself by his tragedy *Atreus*, in which the line, ' The folly of kings must be patiently endured ' was considered specially deserving of punishment. Such dangers, however, rarely threatened poets who were really careful to avoid them and in no way prejudiced the poetical tendencies of the age. Tacitus in his *Dialogus* expressly says that the occupation of poetry is chiefly justified by the fact that it is less likely to cause offence than oratory. Thus poetry especially filled the great gap in the life of Rome caused by the fall of the republic ; and it was by no means a mere result of human caprice, as set forth by Horace in his epistle to Augustus, that the Roman people displayed a zeal for authorship to which they had hitherto been strangers ; sons and austere fathers wreathed their brows, and savants and ignoramuses everywhere took to writing poetry.

The French literature of the first empire offers many parallels to the Roman literature of that time. Fontanes and many other poets ' exhausted their powers in laudations to order

for a fee ' ; those who did not (like Delisle) ' carefully avoided political and social problems and kept to subordinate or indifferent subjects ', which, as it were by way of compensation, they treated in an agreeable manner. The emperor bestowed especial attention upon the theatre. In 1805 two poets were commissioned to ' improve ' Corneille, Racine, and Voltaire ; yet the omission of certain passages only increased their significance. Napoleon allowed no pieces to be performed, the subjects of which were taken from recent times ; the stage ' needed a touch of antiquity ' ; in his opinion the time of Henry IV was not remote enough to avoid exciting passions. Even the *Tiberius* of Joseph Chenier was prohibited, since certain passages could be referred to the present, and in the *Ajax* of Ugo Foscolo the Napoleonic police in Milan (1812) discovered political allusions, which caused the author no slight unpleasantness.

Augustus never entertained the idea of drilling poetry to such a condition of uniformity. He knew how to make it subservient to his aims by frank recognition. The monarch had brought the blessing of 'peace and order', so long desired ; the next step was to reconcile the educated classes with Caesarism by according protection and encouragement to intellectual efforts, so long as they kept within due bounds ; as for the masses at Rome, the great improvement in their material condition and splendid shows and festivals were ample compensation for the loss of liberty. The interest displayed by Augustus and his circle (Messalla and, above all, Maecenas) in this poetical revival, which was also shared by the ladies of the imperial household, has justly become proverbial. Even more important than the favour of this circle, to which even the captious Asinius Pollio belonged, was the example of its members. Augustus was the most cultivated man of his age ; his interest in literature was sincere, and he showed it not merely by assistance and encouragement, but by openly displayed sympathy with poets and men of letters, whose recitals he listened to ' with patience and good-will '. To him the fourth book of the *Odes* of Horace owed its origin, the *Aeneid* of Virgil its preservation ; it was to him that Horace was allowed to address the *Epistle* containing a comparison between the old and the new poetry. Augustus himself tried his hand at authorship, mostly in prose ; according to Sue-

tonius, 'he only took a superficial interest in poetry'. However, he wrote a long hexameter poem on Sicily, and a small collection of epigrams, which he composed in the bath. He destroyed a tragedy (*Ajax*) before it was finished: 'his *Ajax*', he said, 'had thrown himself on the sponge' (i.e., had been wiped out). This was certainly enough poetry for a statesman on whom the heavy task was imposed of re-organizing the world. Asinius Pollio, Messalla, and Maecenas also wrote verses. The poems of the last-named, according to what we are told, confirm the observation, which applies equally to other branches of art,—that the purest taste and the soundest judgment of the works of others is not always a safeguard against bad taste and affectation in the critic's own attempts. Maecenas's poetical trifles, like everything else of his, were written in a corrupt and bombastic style; Augustus ridiculed the 'perfumed ringlets' of his 'curled' style¹. Seneca has preserved a specimen, in which this remarkable man describes the love of life with a cynicism worthy of Heine.

Tiberius, who devoted himself with the greatest zeal to the studies necessary for general education, was an admirer of the Alexandrian school; he had a special fondness for the mythological erudition with which they adorned their works. In his Greek poems he imitated Euphorion, Rhianus and Parthenius; he also composed a lyric poem in Latin, an elegy on the death of Lucius Caesar,—an event which brought him, at the age of forty-three, considerably nearer the throne; he also wrote poems of a frivolous kind. A man so gifted and ambitious as Tiberius would hardly have condescended to poetical diletantism had not his efforts to assimilate the culture of the age as thoroughly as possible, almost forced him to it. The noble Germanicus also during his strenuous life found leisure for poetry; amongst other works he left some Greek comedies. His version of the astronomical didactic poem by Aratus (*Phaenomena*) is still extant. Caligula confined himself to the study of oratory, in which he attained considerable skill; Claudius wrote several learned works, but in prose.

Nero was the first and last emperor who studied poetry not as an exercise or amusement for idle hours, but as a claimant to a prominent position in the poetical world. He never

¹ The Latin words *cincinni* (locks) and *calamistri* (curling irons) are used in the sense of 'ornamental flourishes'.

felt any interest in serious and sound learning, from which his own temperament and his *entourage* dissuaded him. His mother is said to have advised him not to study philosophy, as prejudicial to a future ruler ; his tutor Seneca prevented him from reading ancient literature, so that the pupil's admiration for the works of the master might last the longer. Although both before and after his accession, when in his seventeenth year, he delivered ' declamations ' in the presence of large audiences, he was obliged to have his public speeches written, to the general astonishment ; he was the first emperor who made use of another's pen. But his lack of scientific education proportionately increased the manysidedness of his dilettantism in the fine arts. We have already spoken of his fondness for music, which he considered his forte ; he dallied with the chisel and modeller's stick, and wrote poems as enthusiastically as he sang and played musical instruments. His poetical efforts, according to Tacitus, were intended to counterbalance, in public opinion, the bad effect of his other less seemly artistic exercises. It is doubtful whether he possessed any, or how much, real talent for poetry. Tacitus denies it to him altogether. According to that historian, ' he surrounded himself with persons who possessed a certain facility in writing verses, but had not yet made a name for themselves. These persons met, strung together the verses they had brought with them or threw off on the spot, and worked up the emperor's chance utterances into a whole. This is shown by the character of these poems, which possess neither vigour nor originality, nor uniformity of style '. It may be confidently assumed, that this was the origin of many of the poems of distinguished *dilettanti* (e.g., the ' little love-poems ' dictated by them after their meals on couches of citrus-wood), since in all branches of learning the productions of clients, slaves and freedmen were regarded by persons of quality as their own property, which they had a perfect right to make use of. In the poems of Lucius Verus, again, everything good was credited to his gifted friends. It is true, on the other hand, that in this matter Suetonius defends Nero, asserting that he had no need to deck himself in borrowed plumes, since verses flowed from him with ease. Nero's compositions, written by his own hand, were evidently (if we may believe Suetonius, who had inspected them) neither imitations nor copies, but all original, judging by

the numerous erasures, corrections and insertions. Nero's poems were numerous and of various kinds : little trifles (e.g., on Poppaea's 'amber-hair'), satires, lyrics to be sung to the accompaniment of the *cithara* (including probably solos from tragedies), a long epic called *Troica*, in which the chief hero was Paris, who, without revealing his identity, defeated all comers, including Hector himself, in a wrestling bout ; another contemplated epic, containing a complete history of Rome from the earliest times, does not appear to have been finished. Martial, who as a rule has nothing but abuse for Nero, concedes some merit to his poems. Some lines, accidentally preserved, on the course of the River Tigris, at least show a certain dexterity in versification.

Musical contests formed the chief item in the programme of the festival first instituted by Nero after a Greek model, which was intended to be held every five years, but seems to have only taken place on two occasions (in 61 and 65). Its apologists were of opinion that the victories of orators and poets would stimulate talent. But as a matter of fact Nero wanted to be the only poetical and musical star in these contests ; the participation in them of persons of distinction at his wish was only intended to enhance his reputation ; it was to him that the crown was awarded. At the second festival he gave a reading of the *Troica*. He allowed no poetical rival near his throne. Lucan, whom he had admitted into his poetical circle, soon aroused his jealousy ; when present at a reading by the poet, he ostentatiously withdrew and apparently forbade him to recite again in public (end of 62 or beginning of 63). Lucan, carried away into open hostility to the court, joined Piso in his conspiracy, and paid the penalty of death on its discovery. But, however dangerous it was in the time of Nero to claim any reputation as a poet, it was advisable—even necessary, for all who had anything to do with him, to make a show of sympathy and liking for poetry, and as far as possible to provide a foil for Nero's poetical efforts by their own. No one who knows the history of that period, can doubt that this feeling produced a greatly increased activity in the domain of poetry. It was one of the reproaches levelled against Seneca by his enemies, that he wrote verses more frequently and enthusiastically, from the time that Nero showed a fondness for the poetic art.

A complete change took place under Vespasian, who, although no poet himself, liberally encouraged talent of all kinds, including poetical. Titus, who had lived at Nero's court as a boy, had a facile gift for Latin and Greek poetry, even for improvisation; amongst other things, he described a comet 'in a splendid poem', as the elder Pliny calls it; he is also mentioned as a poet by the younger Pliny. In many respects under Domitian the conditions of the time of Nero were repeated; certainly, men's minds felt the weight of an even more terrible oppression, but poetical efforts were honestly favoured and encouraged, above all by the Capitoline competition (founded in 86) at which genius was allowed free scope. On the whole, this second Nero laid no claim, as emperor, to poetical fame, although during his enforced leisure when only a prince he had pretended a zealous devotion to poetry. Of course, at his court his youthful poetical efforts were declared to be unsurpassable. Quintilian says that the gods considered it too paltry an honour for him to be merely the greatest poet; therefore, they handed over to him the care of the universe, in order to divert his attention from such an occupation. It is doubtful whether he even began an epic on the Jewish war, mentioned by Valerius Flaccus, but it is certain that the fight for the Capitol in December, 69, during which his life was in peril, was the subject of a poem by him; Martial in 89 mentions the 'heavenly poem of the Capitoline war'. It would seem, therefore, that Domitian was by no means averse from being reminded of his poetical efforts, although he had quite given them up; and Martial does homage to him as 'the lord of the sisters nine'.

Poets also claimed Domitian's successor Nerva as one of themselves; Pliny mentions him amongst the writers of amusing and wanton trifles. Martial styles him 'the Tibullus of our age'—an expression borrowed from a poem by Nero, to whose circle Nerva had once belonged; Martial's epigrams on him, written with all the humility of a client, show that even during his last days, Domitian liked to be considered a poet.

There was no poetical fibre in Trajan's soldierly nature he seems to have been absolutely indifferent to poetry; Hadrian on the other hand, the most versatile *dilettante* who ever occupied the Roman throne, wrote verse (including indecent

poems) and prose equally well ; some of his trifles have been preserved. Even on his deathbed, whimsical as ever, he wrote the famous lines, which according to his biographer are an average specimen of his poetry—

‘ Soul of mine, pretty one, fitting one,
Guest and partner of my clay,
Whither wilt thou hie away,—
Pallid one, rigid one, naked one,—
Never to play again, never to play? ’
(C. Merivale.)

Hadrian’s example seems to have made poetry the fashion at his court. His adopted son, Aelius Verus, was a skilled versifier ; Lucius Verus, who was adopted at his suggestion by Antoninus Pius, also devoted himself to poetry in his early years, as already mentioned. Marcus Aurelius also, at the age of twenty-two, had written hexameters, of which he thought so highly that they were not in danger, like his other attempts, of being committed to the flames.

Here this series of imperial poets, almost without a parallel in history and literature, comes to an end, and poetry for a long time was an exile from the court of Rome. The next emperor who is said to have written verses (Greek) was Alexander Severus, whose education and poetical dilettantism (like that of Balbinus, the two elder Gordians, Gallienus and Numerian) show that even in the third century the old literary traditions and intellectual sympathies still survived in some of the highest circles, like islands amidst the ever-rising flood of barbarism.

During the period from Augustus to Hadrian, the ruling princes, some before and others after their accession, were nearly all poetical amateurs. This very exceptional phenomenon is undoubtedly no more the result of chance than the fact that, from the Antonines to Alexander Severus, we do not find a single imperial poet, although the emperors during that interval were for the most part highly educated. A more probable explanation is that both the later and the earlier emperors simply shared the prevailing tendencies and interests of their time, and that their attitude towards poetry was essentially the same as that of their educated contemporaries. Hence we may assume with certainty a very general diffusion of poetical dilettantism in the cultured circles of the first

century, and an equally striking decline towards the middle of the second.

In fact, there is no doubt that in the time of Hadrian, a new intellectual movement, which arrested the poetical tendencies of the first century, obtained the upper hand. The history of Roman poetry up to about 100 A.D. was as rich in names as it was poor, if not absolutely barren, in later times. The explanation of this is not to be looked for in the decay of creative power or original genius, which Gibbon regards as one of the characteristic phenomena of the second century; the poets of the age immediately succeeding the Augustan were nothing but highly educated and gifted *dilettanti* (in the best sense of the word): and even in later times there was by no means a dearth of poets. Undoubtedly, the decline of poetical aspirations was in a measure due to the domination of anti-quarianism over literature, since the study of ancient authors could not offer the same stimulus to original or reproductive effort as that of modern poets. Consequently the influence which the application of the emperors to poetry (although simply the result of the prevailing tendency of the age) exercised upon the upper classes by force of example, disappeared, and with it an important inducement to poetical dilettantism. But the chief reason for the decline is to be looked for in the great impression produced by the highly artistic prose of the sophists, which had its origin on Greek soil; it provoked the admiration of the Romans and found many imitators amongst the more impressionable. Lastly, it must never be forgotten that, chiefly owing to the new organization introduced by Hadrian, the empire was gradually developed into a military and bureaucratic state, which claimed greater powers and held out to its functionaries more brilliant prospects in their official career; the result was that talent and ambition turned their attention from *belles-lettres* in general to military service, administration and the study of the law. Eloquence, however, was still generally cultivated, but rather as a means than as an end, and in a different manner; special branches of learning, especially philology, which was closely connected with the now reviving jurisprudence, were also eagerly studied.

The new importance acquired by poetry and literature generally on the establishment of the monarchy is shown

chiefly in three things : the development of an extensive book-trade and the foundation of public libraries ; the institution of public readings of recent works (*recitationes*) ; and, lastly, the establishment of an entirely new honour for poets—the crown of gold. The last dates from the reigns of Nero and Domitian ; the other institutions go back as far as Augustus.

Even when Cicero was a young man, the elements of a book-trade must have been in existence in Rome. His friend Atticus, the first person who is known to have undertaken the multiplication and sale of books on a large scale, had numerous rivals. Under Augustus at the latest, the book-trade in Rome was a business by itself, and soon after in the provinces. The retail shops, situated in the liveliest quarters of the capital, had their pillars and entrances decorated with notices and copies of books for sale, and formed, as in modern Rome, a meeting-place for the friends of literature, who came to inspect the new books or to have a chat. Thanks to slave labour, this industry was able to furnish its wares promptly, cheaply, and on a large scale. Hundreds of scribes, writing from dictation at the same time, did the work of a modern press. Even if they did not take much longer time, the result was very unsatisfactory ; incorrectness was the chief fault of ancient books. Since two hours was enough for taking down Martial's second book, a complete copy of his epigrams could have been turned out in a little more than seventeen hours ; a bookseller, who could employ fifty scribes at once, was consequently able to produce an edition of 1,000 copies comfortably in a month. The mention of such an edition of a pamphlet of entirely personal and ephemeral interest, published at the writer's own expense, justifies us in assuming that big booksellers must have brought out much larger editions of favourite and superior works.

In our days we are too much inclined to underestimate the productive power of writing, as compared with that of the press. Yet it has been shown on various occasions, when copy not print was necessary, that the difference between the two is less than is generally imagined. About 2,000 copies of Voltaire's *La Pucelle* were distributed in Paris in a month. Of Burgos's two-sheet memorandum to Ferdinand VII (January, 1826), 5,000 copies are said to have been circulated in Spain. On the second day after A. Oppermann had received the first

copy, thousands of copies of the protest of the Göttingen Seven ¹ were in existence. Kossuth successfully distributed throughout Hungary his *Reichstagszeitung*, which he was not allowed to print. Thanks to the comprehensive organization, the fruit of many centuries of experience, and the employment of slave labour, the multiplication of MS. copies in antiquity must have been far greater. The circulation of books in distant lands soon followed. Cicero says that the depositions of the witnesses in the Catilinarian process were copied by all the clerks, circulated in Rome, distributed throughout Italy, and sent to all the provinces, so that there was no place in the Roman empire which they had not reached. According to Pliny, Varro had conferred a kind of omnipresence on the 700 persons, whose portraits were included in his illustrated biographies, by sending the work into all parts of the world. Sulpicius Severus's life of St. Martinus of Tours, which Paulinus, bishop of Trèves, had brought to Rome, was at once in general request, and the booksellers were delighted with the good business they did; 'for nothing commanded a readier sale, or fetched a higher price'. A friend of the author, who visited Africa, found that it had preceded him and was being read throughout Carthage. Going on to Alexandria, he found it in everybody's hands there as well, and also all over Egypt, in the Natron Valley and the Thebaid; he even saw an old man reading it in the desert.

The prices of books were not high. The price of the first book of Martial (118 epigrams, 700 lines), elegantly got up, was 5 denarii (about 4s.), cheaper editions 6 to 10 sesterces (about 1s. 2d. to 2s.); his *Xenia* (274 lines under 127 headings) was sold by Tryphon the bookseller for 4 sesterces (about 10d.), too high a price according to Martial, who maintained that it could be sold at half the price for a profit. It fills fourteen pages in the Teubner edition, and since the price probably included what answered to our 'binding', the transcription of the text perhaps did not cost much more than at the present day in Germany, where an ordinary sheet can be printed for about 3½d. The text of a little book sent by Statius to Plotius Grypus, written by the poet himself, cost nothing, the purple cover, the new paper, and the two knobs (*umbilici*)

¹ Seven professors who were dismissed in 1837 for having signed a protest against the abolition of the Hanoverian constitution.

at the end of the stick, round which the roll was wound, 10 *ases* (about 6*d.*). Spoilt paper found its way into the schools, where the boys utilized the clean backs of the sheets for their exercises, and into the grocery and provision shops, where it was used for making bags for pepper and incense, or for wrapping up salt fish.

But everybody also had free access to collections of literary works in both Greek and Latin. Julius Caesar's plan of founding public libraries in Rome was frustrated by his death ; but it was carried out by Asinius Pollio, to whom Rome was indebted for its first public library (Greek and Latin). Augustus added two more (one on the Palatine, the other in the portico of Octavia), and later emperors (especially Vespasian and Trajan) continually increased the number, so that in the fourth century no fewer than twenty-eight were in existence. Naturally, the libraries were also used as meeting places for the friends of literature. Asinius Pollio was also the first to utilize the rooms for rendering homage to literary celebrities in a manner before unknown. Their statues, with boxes of books at their feet (such as those we possess of Sophocles and others), or busts crowned with ivy, 'the reward of the poet', some of bronze and others of gold and silver, adorned the halls and porticoes. In Asinius Pollio's library Varro's was the only likeness of a living celebrity ; but the honour appears to have soon become very general. Sidonius Apollinaris in the fifth century could boast that his statue was to be seen among those of other literary men in Trajan's library.

Nevertheless, the general accessibility to standard (preferably older) works in the public libraries, and the activity of the book trade, which did its utmost to promote the circulation of the most recent books, were not enough to bring authors and public together, at a time when literary life was extremely rich and animated, and a general and lively interest was taken in literature. The public was still so accustomed to *viva voce* recitation, that reading never became so general as in modern times, since, without punctuation or the separation of words, frequent abbreviations, bad writing and incorrect texts nearly always made it a trouble instead of a pleasure. Poetry (especially lyric) lost most by not being heard ; since it was intended either to be sung to a musical accompaniment, or at least for a musical recital or something like it. Euphony

and rhythm were its most essential characteristics, and were most generally and keenly appreciated ; hence poems, which were read instead of being recited, seemed to lack reality ; even prose, when simply read, lost its effect, though not to the same extent. When Juvenal tells us that the announcement of a reading of the *Thebaid* of Statius by its author drew crowds to hear the pleasant voice and the favourite poem, it is clear that the voice formed part of the attraction. In the hellenistic period also, the works of poets and historians were intended for public rather than for private reading. Asinius Pollio, by the introduction of recitations (i.e., readings of new works before large and specially invited audiences), undoubtedly met a generally felt want. The ever-increasing public, which took the liveliest interest in the most recent productions of literature, became acquainted with them at first hand and in an indisputably authentic form, and at the same time satisfied its natural curiosity as to the personality of the author. Of course, literary men and poets were equally pleased to make their bow to the public in person, to convince themselves of the effect produced by their works, to profit by the criticism of the learned, but above all, to be able to enjoy to the fullest extent the approval of their contemporaries.

Owing to the crowd of idlers, who were delighted at every fresh chance of filling up their spare time, the number of *dilettanti* and poetasters, who sought above all the satisfaction of their vanity and of course expected from others the indulgence and favour which dilettantism lavishes upon itself, the rapid degeneration of this new institution was unavoidable. ' You want me to read you my epigrams, Celer ? ' runs an epigram of Martial ; ' I won't. You don't want to hear, but to recite yourself '. While *dilettanti*, such as Pliny the younger, even during the most beautiful weather, never tired of attending recitations every day and lavishing their applause, it was the real poets who suffered most from this ever-increasing mania for reading. Horace's greatest terror was the poet in his frenzy ; ' he rages like a bear, who has managed to break the bars of his cage ; the savage reciter puts the learned and unlearned to flight ; when he has caught a man, he holds him fast and puts him to death with his reading, like a leech which will not let go the skin until it has sucked its fill of blood '. ' The reciter ', says Seneca, ' brings an enormous historical

work, written very small, tightly folded together ; after he has read a considerable part of it, he says, " I will stop now, if you like ". Immediately there is a shout of " Read ! read ! " from his hearers, who would really like to see him struck dumb on the spot '. One of the characters of the Petronian romance is an old man, possessed by a mania for improvising and reciting, who in face of death on a sinking ship continues to bawl out verses and to write them on a huge sheet of parchment. In all frequented places—porticoes, baths, theatres—he at once begins to recite, although everywhere pelted with stones. The poet with his manuscript, says Martial, is more fearful and more feared than the tigress robbed of her young, the poisonous snake or the scorpion. He holds his victim fast in the street, follows him into the bath, to table, to his study, and wakes him from his sleep. Wherever he shows himself, men shun his luxurious table as the sungod turned away in disgust from the meal set before him by Thyestes, and solitude reigns around him. Martial is also of opinion that the imperial spectacles in the amphitheatre satisfied the ears even more than the eyes of the public ; for as long as they lasted, the poets amongst the spectators could not recite. One of the reasons which, according to Juvenal, drove his friend Umbricius from Rome, in addition to the continual fires and collapse of houses, was the recitations of the poets in the month of August ; in an outburst of comic despair, he describes how he himself, to obtain revenge for this torture, decided for his part not to spare the paper, which others were sure to spoil, since the place was swarming with poets.

While the vanity of poets led them to test the patience of their hearers by frequent and lengthy recitations, they only too often had recourse to all kinds of theatrical affectation, in the effort to exhibit themselves and their work in the most favourable light. The great importance attached to a fine delivery, suitable gesticulation and other externalities was sufficient to account for this. Quintilian gives detailed instructions for the oratorical debutant : on the training and necessary qualities of the voice, the compass of which ought to include the whole scale of sounds ; how to avoid monotony and the extremes of treble and bass at the same time. He warns him against the sing-song delivery which was the great fault of the orators of the day, and treats in equal detail of

gesticulation and dumb show, dress and outward appearance, for which he recommends instruction not only from a musician but also from an actor. Of course all these and similar rules were equally applicable to the reciter. When the younger Pliny discovered that he read poetry badly, he decided to have his poems read before an audience of friends by one of his freedmen ; he was in doubt, however, whether he ought to behave as a disinterested spectator, or like many others express his opinion by murmurs, gesticulation, or facial play ; but as he thought he was as poor at dumb-show as at reading, he begged Suetonius to help him out of the difficulty by his advice. Persius describes the affectation of reciters who, in a snowy white holiday *toga*, with well-curled hair and a huge diamond ring on their finger, took their seat on a high chair ; then, with languishing looks, their neck rocking backwards and forwards, they began to recite in melting tones, the result of long practice in solfaing. Sometimes they wore a woollen neckcloth, to spare their voice or show that they were hoarse ; as a matter of fact, thinks Martial, this only showed that they were as incapable of speech as of silence.

The manner in which the readers presented themselves before the public and the applause of their hearers were reminiscent of the theatre. Although the majority of the audience, invited personally or by letter, were friends or, at least, too polite not to be lavish of their applause, especially if they were themselves authors and looked forward to similar treatment at their own recitals, many, perhaps most, readers were careful to provide themselves with a reserve of hired *claqueurs*. In Trajan's time, the practice was common also amongst advocates ; it is possible that the pernicious custom may have crept into the law-courts owing to the widespread influence of the recitations. One of the poet's patrons lent him the services of some loud-voiced freedmen, who posted themselves in suitable places, especially at the ends of the benches, and at a sign from the 'leader of the chorus' (*mesochorus*), burst into shouts of applause. Sometimes, persons in the audience itself were enlisted for the purpose by the present of an old cloak, the promise of a good dinner (such were called *laudiceni*, those who gave their applause in return for a dinner), or the offer of a sum of money, which was paid quite openly in the basilicas. Pliny

relates that two of his youngest slaves had been thus engaged for three *denarii* apiece ; the rate of pay no doubt varied according to the ability of the *claqueur*, special importance being attached to the modulation of the voice. Thus, the recitations were accompanied, on the part of the audience, by clapping of hands, acclamations of all kinds, and gestures of delight ; people rose to express their admiration of the reader, and kissed their hands to him.

But not even the liveliest interest, the best intentions and the greatest desire to be civil could prevent the majority of the audience from showing annoyance at the continual round of recitations, which often lasted whole days, even in the hottest months of the year (July and August). Certainly Pliny, whose enthusiasm for literature and the literary profession knew no bounds, never got tired himself and rarely refused an invitation to a reading ; but he admitted that there were disquieting symptoms. He writes as follows : ' This year (97) has produced a plentiful crop of poets ; during the whole month of April scarcely a day has passed on which we have not been entertained with the recital of some poem. It is a pleasure to find that a taste for polite literature still exists, and that men of genius *do* come forward and make themselves known, notwithstanding the lazy attendance they get for their pains. The greater part of the audience sit in the lounging-places, gossip away their time there and are perpetually sending to inquire whether the author has made his entrance yet, whether he has got through the preface, or whether he has almost finished the piece. Then at length they saunter in with an air of the greatest indifference, nor do they condescend to stay through the recital, but go out before it is over, some silyly and stealthily, others again with perfect freedom and unconcern. . . . Were one to bespeak the attendance of the idlest man living and remind him of the appointment ever so often, or ever so long beforehand, either he would not come at all, or if he did would grumble about having lost a day, for no other reason but because he had *not* lost it. So much the more do those authors deserve our encouragement and applause, who have resolution to persevere in their studies and to read out their compositions in spite of this apathy or arrogance on the part of their audience ' (Melmoth's translation).

On another occasion, Pliny indignantly writes to a friend that recently, while an excellent work was being read, two or three of the audience sat in their places as if they were deaf and dumb. What laziness! what impertinence! what indecency! indeed, what madness to spend the whole day in insulting a man, and to leave an enemy instead of a friend!

Certainly, Epictetus's rule, not to accept invitations to readings without due consideration, was by no means unnecessary; but if one did attend, he ought to maintain an attitude of dignity and reserve and avoid giving offence. Pliny was a model of punctilious courtesy. He relates how, after a recitation, he went up to the youthful poet, embraced him, heaped praises upon him, and encouraged him to persevere in his profession. 'The family—the mother and brother of the young man were also present; the brother, at first anxious then joyful, had excited general attention by his deep and lively interest in the performance. Then Pliny also congratulated them and, after reaching home, wrote one of his elegant notes on this trifling event, which spread abroad the news of the young poet's success'. Such a reading was an event which formed the subject of conversation in literary circles during the next few days; then the poem was taken up by the booksellers, who pushed its circulation.

Considering the great importance of recitations in the literary life of Rome, it may be assumed that the emperors frequently honoured them with their presence. Augustus, as already mentioned, set the example; Claudius, after his accession, had a reader to recite his numerous works. Nero, soon after he became emperor, recited his poems himself in the theatre; this caused such delight, that a festival of thanksgiving was ordained and the poems, inscribed in letters of gold, were dedicated to Jupiter in his temple on the Capitol. Domitian, while prince, also recited in public. Dating from the second century, readings seem to have chiefly taken place in the Athenaeum, where a space in the form of an amphitheatre was reserved for the purpose. Pertinax, on the very day of his murder, had intended to be present there at a poetical recitation; and Alexander Severus frequently formed one of the audience at the lectures and recitations of Greek rhetoricians and poets.

In the middle ages, also, even after the invention of print-

ing, poets and literary men often made their works known by recitations. Thus Giraldus Cambrensis (Girald de Barri) in the year 1200 after his return from Ireland publicly read his *Topography* of the island at Oxford. The *Rederijkkamers* (poetical guilds of the Netherlands) and the Italian Academies of the fifteenth, sixteenth and seventeenth centuries may also be compared with the old Roman recitations. Boiardo read *Orlando innamorato* at the court of Ferrara, and Madame de Sévigné speaks of readings of Racine and other classical authors. Lastly, the introduction of the Greek custom of regularly recurring poetical competitions at Rome opened up to poets the alluring prospect of being crowned, an honour never before heard of, and thus gave an entirely new stimulus to poetical ambition. For Greek poetry there already existed such a competition in the *Augustalia* at Naples, founded in honour of Augustus (A.D. 2) and held every four years, which was considered by the Greek world one of the most brilliant and famous festivals of its kind. Here Claudius, who appeared in Greek dress for the occasion, ordered a Greek comedy to be performed, written by his brother Germanicus, whose memory he always honoured in every possible way. He awarded the prize to it in accordance with the decision of the judges. Statius also once received a prize (a crown of ears of corn) at Naples. At Rome the first poetical contest was that instituted by Nero, which, as already remarked, was only intended for his own glorification, and exercised little or no influence on Roman poetry.

The Capitoline *agon*, instituted by Domitian in 86, and held every four years, acquired all the more importance. The competition for the prize in Greek and Latin eloquence (a stock subject being the praise of the Capitoline Jupiter), which at first formed part of the proceedings, was soon discontinued. On the other hand, the prize for Greek and Latin poetry, which was unique of its kind, continued to be the highest aim of poetical ambition throughout the empire; and the hope of receiving the wreath of oak leaves, amidst the liveliest manifestations of sympathy, from the hand of the emperor himself, after the judges had delivered their verdict, induced the most gifted poets from distant provinces to cross the seas to Rome. If unsuccessful, they could console themselves with the reflection that no provincial was ever allowed to obtain prizes at

Rome ; at least, the African Publius Annius Florus, who failed in one of the first competitions with a poem on the Dacian triumph, assures us that the audience had unanimously demanded the prize for him, but that the emperor had refused it, to prevent the crown of the great Jupiter being carried off to Africa. Of course it was frequently discussed in literary circles at Rome, who was going to win the crown at the next competition. Statius (probably in 94) was an unsuccessful candidate. A certain Collinus, to whom it appears to have been awarded in 86, is absolutely unknown ; of the tragic poet Scaevus (or Scaevius) Memor, a brother of the satiric poet Turnus, who received it under Domitian, hardly anything is known but the name.

The grave of a Roman boy, apparently the son of a freedman, named Quintus Sulpicius Maximus, who died early in his twelfth year, has been discovered at Rome. According to the inscription on his tomb, he competed for the prize at the Capitoline *agon* in the year 94 with fifty-two Greek poets : 'owing to the talent he displayed, the favour which his tender years aroused became admiration ; he came out of the contest with honour'. The 43 Greek hexameters, improvised by him on the theme, 'What Zeus said when he reproached Helios for lending his chariot to Phaethon' (probably a common subject in the rhetorical schools), were engraved upon the monument, 'that it might not be thought that the parents were influenced in their judgment by their affection' ; they give evidence of a diligent study of Greek epic. Of two Greek epigrams in praise of the deceased, one asserts that sickness and exhaustion carried him off, since he devoted himself day and night to the Muses. In 110, the thirteen year old Lucius Valerius Pudens of Histonium, as already noticed, was unanimously awarded the prize. We know nothing of later coronations of poets, although they probably took place regularly every fourth year, until the last days of antiquity.

Further, the externalities of the festival sufficiently demonstrated its Greek character, at least in the time of Domitian. The emperor presided, wearing a Greek purple cloak and Greek shoes, a golden crown on his head, adorned with the images of the three Capitoline divinities—Jupiter, Juno and Minerva. The judges and assessors consisted of the *flamines* (priest of Jupiter) and the priestly college of the Flavian

house, similarly attired, except that their crowns, in accordance with hellenistic and Alexandrian custom, also displayed the image of the emperor. Later, the priestly colleges took it in turns to direct the competitions, under the presidency of the emperor. The brilliancy and solemnity of this festal gathering, the presence of the highest personages of the court and dignitaries of the empire, the bestowal of the crown by the emperor himself, the world-wide historical importance of the place—all combined to make the honour of coronation something unique of its kind. The memory of it survived till the middle ages, and the custom was revived in the cities of Italy from the end of the thirteenth century. At Padua and Prato, poets were crowned before Petrarch, and Dante, when in exile, hoped to receive the honour in the chapel of St. John at Florence. Petrarch, in his retirement at Vacluse, when simultaneously invited by the university of Paris and the senate of Rome to receive the crown of laurel in public, decided in favour of Rome, 'where the ashes of the great poets of antiquity were buried'. On Easter Sunday, April 8, 1341, he was solemnly crowned on the Capitol, in the hall of the senate, by the senator Ursus; after the conclusion of the ceremony, the poet went in procession to St. Peter's, where he humbly deposited the laurel on the altar of the chief of the apostles.

Besides the Capitoline, Domitian held another competition yearly on March 19, a festival of Minerva, the object of special worship at his country seat near Alba. One of the members of a college founded by the emperor, elected by lot to preside, superintended the arrangements; in addition to theatrical representations and magnificent combats of wild beasts, there were oratorical and poetical competitions. It was here that Statius (before the year 94) received the golden crown of olive for his poems on the German and Dacian campaigns—a prize of course not so highly esteemed as the Capitoline crown of natural oak leaves. No doubt the festival ceased with Domitian's death. Nothing definite is known of other poetical competitions in the later days of Rome, nor of the revival of the Neronian *agon* by Gordian III and the poetical *agones* in other cities and the provinces; but we may assume that their number was considerable. Eumolpus in Petronius says he is a poet and no mean one, 'at least, if the crown is worth any-

thing, although certainly it is sometimes bestowed by favour upon those who do not deserve it'. A Roman knight of Beneventum is described in the inscription on his grave as a 'Latin poet, crowned at the festival in his native town'. As late as the end of the fourth century, poets, as well as athletes and musicians, took part in the Pythian *agon* at Carthage, as is shown by Augustine's mention of his own coronation as a poet by the proconsul.

During these two centuries, then, poets had ample opportunity of being heard and becoming famous, and obtained applause, honour, reputation and public sympathy, to an even greater extent than at any other time. On the other hand, poetry did not secure material advantages, such as an income, since the booksellers of course paid no fees or royalties, at a time when the idea of literary ownership was unknown, and when neither they nor the author were in any way legally protected. The exemption from public duties and charges, enjoyed by teachers and physicians, did not extend to poets (according to a rescript of the Emperor Philip). A wealthy poet might certainly remain content with fame, like Lucan, who rested on his laurels in gardens adorned with marble, or the consul Silius Italicus, who devoted only the evening of his life to poetry, in his villas magnificently decorated with numerous statues and busts, on the delightful coast of Campania. Otherwise, it was extremely hazardous for a man who had no assured means of existence to make poetry the serious business of his life. Nevertheless, the number of those whom confidence in their talents (real or imaginary) led to adopt it as their profession, was evidently very large; indeed, it could not be otherwise, considering the unusual number of powerful inducements and temptations to poetry. Few, however, were successful, and those who despised this art which failed to provide bread and cheese, practical, matter-of-fact individuals, were able to appeal to the miserable condition of the majority of poets and their own complaints. Ovid refused to give up poetry, in spite of his father's exhortations to abandon an occupation which was so unprofitable that even Homer left no fortune; but, although he had enough to live on, he nevertheless complained of the poet's lot. Formerly, in the good old days of Ennius, the name of poet was honoured and respected, and wealth was his in abundance; now poetry has

fallen into disrepute, and the service of the Muse is reviled as idleness.

If this complaint could be made at the most brilliant period of Roman poetry by one of its most celebrated representatives, it is evident that poetry and poets were at all times regarded with widespread contempt by Romans of the old stamp. In the *Dialogus* of Tacitus, also, this view of poetry is chiefly insisted upon ; little is said in its praise. In addition to the fame that it may bring, it is reckoned one of the chief blessings of the poet's life that, far removed from the cares and stress, the crime and bustle of the world, he can pass his life in seclusion in the midst of nature, in the solitude of forests and groves, while his mind can take refuge in the haunts of purity and innocence, on consecrated ground. But this was just what a man ought not to do, according to Tacitus's view of life, although he does not show so pronounced an aversion from poetry as its regular opponent in the dialogue. The latter is made to say that poems and verses confer no dignity upon their author, nor any lasting advantage ; all that he obtains is the brief satisfaction of idle and useless praise. Even if he has taken a whole year, working day and night, to complete a single poem, he has further to run about everywhere, begging people to condescend to come and hear it. Nor can this be done without money. He has to rent a house, to prepare a reading-room, to hire benches and send round invitations. Even if the reading is successful beyond his expectations, his reward only lasts a day or two ; all that he gets by it is vague applause, empty words, and a brief, momentary pleasure. Even the fame of the poet is worth little ; mediocrities have no readers, the best but few. The fame of a reading very rarely extends throughout the city, to say nothing of the provinces. Very few of those who come to Rome from distant provinces, such as Spain and Asia Minor, visit the most celebrated poets in person ; or, if they do, they are satisfied with a passing acquaintance. How different, in all respects, is the position of an eminent orator, who acquires wealth, honour, influence and a world-wide reputation. Eumolpus in Petronius, who boasts of being a poet whose merits are recognized, when asked why he is so badly dressed, answers : ' For that very reason ! ' Martial also advises a friend to abandon Helicon, which has nothing to offer except loud but empty applause,

and to turn his attention to the *forum* : ' there is to be heard the chink of ready money ; but round our unprofitable chairs and platforms, nothing but the sound of kisses thrown by the audience '. If you meet people in threadbare cloaks in the streets of Rome, you may be sure that they are the Ovids and Virgils of the time ; the upright, the learned, and the amiable walk about shivering in a brown hood, simply because they are guilty of the crime of being poets ; if a son writes verses, his father makes haste to repudiate him.

The most detailed account of the miseries of a poet's life is to be found in Juvenal. Before the emperor (Hadrian) looked favourably upon the sorrowing Muses, things had reached such a pitch at Rome that even well-known and famous poets had to try the lowest means of getting a bare subsistence, such as hiring a bathroom at Gabii, a bakery at Rome, or acting as criers at auctions. The rich were lavish of nothing but their praises. If a poet went to pay his respects to a wealthy patron, he was told that he was writing verses himself and acknowledged Homer alone as his superior by reason of his antiquity. The rich never wanted money for their luxuries ; they always had enough to feed a tame lion, but there was nothing left for the poet, as if he had the larger maw. At most they would lend him an empty house, long since bolted and barred, with walls covered with mildew, to hold a reading in, but they would not give him even the money to pay for the erection of the platform or the hire of the seats and benches. But what good was a brilliant reputation to the poor poet, if it meant nothing else ? Even the celebrated Statius would have had nothing to eat, if he had not disposed of his unacted *Agave* to Paris.¹ And yet the pestilent itch for writing is incurable in many, and lasts till old age, though their heart be sick with waiting ; poets still compose sublime verses in their garret, by the light of a solitary lamp, on the chance of seeing their lean features immortalized in an ivy-crowned portrait-bust. But how can the mind soar to poetic enthusiasm, while the starving body calls aloud day and night for the satisfaction of its needs ? The mind of a man who does not know how he is to get a blanket cannot feel the divine afflatus ; even Virgil's imagination would have been paralyzed, if he

¹ A famous pantomime and dancer. Agāvē tore her son Pentheus to pieces at a festival of Dionysus on Mount Cithaeron, as described in the *Bacchæ* of Euripides.

had not had a slave to wait on him and tolerable quarters. How absurd to ask a Rubrenus Lappa to rise to the level of the buskin of the ancients, when he has been obliged to pawn his dishes and his cloak, before he could write his tragedy *Atreus*. Only a mind free from all earthly anxieties, filled with longing for the solitude of the woods, the grottoes and the fountains of the Muses, can gain admission to the ranks of true poets. Thus the years that should have been devoted to agriculture or service in the army or the navy, are passed in fruitless efforts; a needy and destitute old age approaches, and the poet curses himself and his profession, although men speak well of him. Formerly it was different: in the time of the Maecenases, Cottas, and Fabii it was an advantage to many to look pale, and to remain sober during the Saturnalia. Then paleness was regarded as an attribute as necessary to learned men, especially poets, as his beard to the philosopher; when Oppian looked ill, says Martial, he began to write verses.

But apart from the fact that Juvenal everywhere exaggerates, his description is by no means correct, since he represents poverty and want as the unavoidable and exclusive lot of the poet, unless he has private means or is willing to work at a trade. Certainly, in this case, as at all times when literary production cannot be made immediately profitable, poets were entirely dependent upon the favour and generosity of the wealthy and influential, which, however, they probably then enjoyed to a greater extent than at any other time. For it was the general opinion throughout the Greek and Roman world that wealth, rank and position imposed great obligations, and especially that the possession of a large fortune required not merely a proportionate expenditure in the public service, but also a generous distribution of superfluous wealth amongst the poor. Princely generosity was especially expected from the great men of Rome; and at a time when interest in poetry was so keen and general, this was bound to be particularly advantageous to the poet. Certainly, charity was not practised on so large a scale as formerly. Even the younger Pliny laments that the good old custom of rewarding poets for their eulogies with a sum of money, had gradually fallen into disuse; he himself, however, still kept it up, and thought it his duty to pay Martial's travelling expenses home in return for a very flattering poem.

Martial had a number of other generous patrons. Even Juvenal's complaints of the stinginess of the rich show that it was always considered to a certain extent one of their duties to assist poets, and that neglect to do so excited dissatisfaction in literary circles and brought them into disrepute.

On the other hand, it was by no means the poets alone who were benefited by this state of things; they might even return the favour with interest, for honour and fame in the present and immortality in the future were regarded as the highest of blessings by the men of that age; and who was better able to bestow them than the poet? But even during their lifetime, great men looked to poetry for guidance, as elevating and glorifying every important event. The idea that even the most favoured existence lacked something without the adornment of poetry, was widespread and never entirely disappeared, although it gradually became rare. In this sense those most highly placed felt the need of the poet and were quite ready, in their own interest, to lay him under obligations to secure his devotion. Naturally, of course, the number of poets who sought favour and generosity was always incomparably greater than that of the great men who desired to purchase the poets' praise.

In this, too, the emperors set the example. They of course expected and demanded from contemporary poets the glorification of their rule and achievements, of their person and family, of their buildings and other undertakings, of their festivals and shows, and, like Augustus, directly called for it. Certainly, during every reign there existed a poetical literature exclusively devoted to its glorification. Two years after Trajan's accession, we read of 'serious poems' (as contrasted with the effeminate panegyrics on Domitian), in which his praises were sung. Indeed, the glorification of the emperor was so generally regarded as the most natural task of poetry, that prominent (especially epic) poets, who as a rule chose other subjects, chiefly mythological, as least compromising, found it necessary to make excuses or explanations: that they were quite incapable, or not yet capable, of so lofty a task; that they would make the attempt when they were better equipped. In fact, Statius, who expresses himself to this effect at the commencement of both his *Thebais* and his *Achilleis*, had already written poems, presumably

short ones, on Domitian's German and Dacian wars. As early as the Augustan age, poets felt bound to provide such explanations. Virgil in his *Georgics* declares his intention, after he has finished it, of girding himself to sing of raging battles, and of proclaiming Caesar's fame to posterity. I would sing of the wars of Caesar, says Propertius, of Mutina, Philippi, the Perusian, Sicilian and Alexandrian wars, and the triumph at Actium, if I were capable of it. And three hundred years later, Nemesianus at the beginning of his *Cynegetica* (a didactic poem on hunting) promises that he will one day sing of the triumphs of the sons of Carus 'with a more competent lyre'. Again, Julian the Apostate in his panegyric on the emperor Constantius says that all who have anything to do with literature extol him in both verse and prose, and that it is especially easy for poets to praise his deeds.

But apart from the fame which they expected, the emperors as a rule evidently recognized a certain obligation to show their practical interest in poetry by the payment of grants and fees to prominent poets. They were regarded as the most natural and the highest patrons and protectors of poetry and poets, who accordingly addressed their dedications and homage to the emperors before all. In addition, it is worth notice, that while rhetoricians were often elevated to lucrative and influential offices, no single instance is known of a poet being so promoted. It is most probable that he was usually rewarded by considerable gifts of money.

Horace declares that every one looked forward confidently to a time when a mere hint to Augustus that any one was devoting himself to poetry would be enough to secure him a livelihood at once and encouragement to continue. Even without this assurance, we could form an idea of the pretensions and expectations aroused in the poetical world at that time by the decided interest shown by Augustus in the revival of poetry. An anecdote related by Macrobius shows the importunity and outspokenness of the poets who bombarded him with homage and dedications. A Greek had presented to him, for several days in succession, as he was leaving the palace, some trifling flatteries in verse; but Augustus did not seem to pay any attention. When he saw that the Greek was going to repeat the attempt, Augustus himself

wrote down some verses, and ordered one of his suite to hand them to him. The Greek read them, and by his looks and gesture expressed the profoundest admiration; then, approaching the emperor's litter, he offered him a few *denarii*, at the same time regretting that his means did not allow him to give more. This happy thought brought him a present of 100,000 sesterces.

Horace praises Augustus for the keen and sound judgment shown by him in his gifts to poets; his princely donations to Virgil and Varius especially did him honour. Varius had received 1,000,000 sesterces for his *Thyestes*, which was performed at the spectacles in honour of the victory of Actium; Virgil was richly rewarded, especially for the sixth book of the *Aeneid*, which contained the glorification of the house of the Caesars. He is said to have left a fortune of 10,000,000 sesterces. Horace, whose chief desire was to live in modest retirement, had positively to refuse the offers of Augustus; more than any other man he might have looked for wealth and honour, had he not despised both; at his death, he made Augustus his heir.

There is reason to believe that the liberality of the later emperors was as a rule exploited on a large scale by the poets, since nearly all the poets of those times forced themselves upon the emperor's attention by dedications or occasional flattering addresses or notices; the panegyrics in verse, composed for festal and other occasions, of which there was an enormous number, even if not directly intended for presentation to the emperor, were written in view of such a contingency. The *Eclogues* of Calpurnius Siculus afford a specimen of the homage offered to the emperors by needy poets. This poet had certainly found a patron ('Meliboeus', perhaps Calpurnius Piso), himself a poet, who had protected him from want and saved him from the necessity of migrating from Rome to a province (Baetica). But still he is continually complaining of his poverty, which obliges him to think of earning a livelihood, and prevents him from producing as much good work as he otherwise might. Hence he begs Meliboeus to present his poems to the emperor and thus become his Maecenas; since he also has access to the 'holy apartments' of the emperor, 'the Phoebus of the Palatine' (Nero). In the poem this prince, who had just ascended

the throne, is praised by the god Faunus and celebrated in the amœbacans of the herdsmen. The whole world, all peoples adore him, the Gods love him, with his reign another golden age has commenced, he is a god sent down from heaven in the form of man, and so forth. Another poem describes a magnificent spectacle, given by the 'youthful god' in the (wooden) amphitheatre (constructed in the year 57).

Many incidental but trustworthy statements prove that the emperors did not allow the poems dedicated to them to pass unrewarded. Tiberius handsomely rewarded the Knight Gaius Lutorius Priscus for a universally praised elegy on the death of Germanicus. When Tiberius's son Drusus fell ill in the year 21, the poet, in the hope of a second reward in case this prince died, composed another elegy, which he was foolish enough to read before a number of distinguished ladies; he was denounced and condemned to death by the senate for *lèse-majesté*. Claudius also must have been liberal to poets, since the 'modern poets' lamented his death. An epigram on a Greek poet living in Rome runs as follows: 'Had not the emperor Nero given me some ready money, it would have gone ill with me, O Muses, daughters of Zeus!' Vespasian was liberal in his support of eminent poets; the needy Salcius Bassus received a present of 500,000 sesterces. Juvenal greets the emperor Hadrian, who had just succeeded to the throne, as the only hope of the poets; he alone protects the sorrowing Muses, at a time when they can expect neither favour nor support from other quarters; he will not suffer a poet to be reduced to work for his bread in the future in a manner unworthy of him; may his grace and favour, which are on the look out for worthy objects, act as a spur to youthful talent! The Greek poet Oppian is said to have received a piece of gold from the emperor Marcus Aurelius for every line of his poems which he read in his presence.

Next to the emperors, who with the best intentions in the world could only satisfy a small part of the petitions and entreaties addressed to them, it was from the great men of Rome that poets expected and received protection and assistance. Of all these patrons of poetry there was none to compare with Maecenas. His importance as a diplomatist, statesman and co-founder of the new order of things was

eclipsed in the next generation by the glory of having been the noblest 'protector of those dedicated to Mercury' [in his capacity of patron god of learned men and poets]. The fact that Maecenas, at an advanced age, when, according to Tacitus, he retained the appearance of the imperial confidence rather than any real power, had more leisure after his retirement from public affairs to exhibit his literary sympathies, may have further contributed to this reputation, independently of the unanimous and enthusiastic praises of contemporary poets.

With admirable judgment he recognized genuine talent, sometimes before it revealed itself, no easy task at a time when poetical diletantism was rampant, and one rendered still more difficult after it was recognized that poetical talent was a means of gaining the favour of this great man. The number of those who, with this end in view, assumed the title of poet with more or less justification, must have been large, since even the importunate vulgar thought it necessary to have recourse to this expedient, and men forced their way to him whose chief recommendation in their own eyes was the capacity of writing more verses, and more rapidly, than any one else. Maecenas chose his friends and associates without regard to birth, rank or external advantages, but at the same time he did not consider talent and education alone; he knew how to keep sordid and disturbing elements at a distance. No house in Rome, says Horace, was purer or more free from intrigue; every one had his place and no man tried to oust another. Hence it was not easy to gain admission. Horace, who after the battle of Philippi had no resources except his brains and was emboldened by poverty to write verses, was recommended to Maecenas by Virgil and Varius, those honest souls whose friendship he valued above all else. The first audience was brief; the poet, then about twenty-six years old, was so embarrassed that he could only stammer a few words about his affairs; Maecenas, as a rule, said very little. Horace thought himself already forgotten, when, nine months later, he was invited to an intimacy with Maecenas, which lasted uninterruptedly for more than thirty years, till the death of both almost at the same time. Maecenas gave the poet as much and more than he needed, a position free from anxiety and a little property

with garden, wood and fountain, his 'delightful retreat' in the Sabine mountains; and what he gave, he gave with the greatest delicacy. In his later years a chronic invalid, a martyr to insomnia, and subject to fits of despondency, Maecenas was inclined to exact too much from Horace, whose society he found almost indispensable. Nevertheless, the poet's tact and affection enabled him to decline frankly his friend's invitations, without rousing his anger. Maecenas, in his will, besought Augustus to 'remember Horatius Flaccus as myself!'

Evidently he was more intimate with Horace than with any other poet of the day; but all whom he gathered round him were fascinated not merely by his intellect and refined manners, and his lively and stimulating interest in their works, but almost as much by his consummate skill in associating on terms of equality with men of intellect. The great men of Italy in modern times have been equally distinguished in this respect above those of all other nations. Thus he was exceptionally fitted to be the centre of a circle formed by the highest intellectual aristocracy of his time. Many palaces may have been open to poets in later times, but none ever saw so brilliant an assembly again, none ever was so hospitable as the house of Maecenas, a lofty and imposing building on the heights of the Esquiline in the midst of a large park and gardens, with an extensive view of the bustling city, the Campagna and the mountains, Tibur, Aesula and Tusculum from its upper floors. Later, the mound that marked the grave of Maecenas and that of Horace beside it rose on the spot. After the death of Maecenas, garden and palace became the property of the emperor (Nero watched the burning of Rome from its windows in the year 64), and later of Fronto.

Later, the relation of poets to their distinguished protectors was as a rule that of client to patron. The reason of this was partly that, as the brilliancy of the golden age of Roman poetry gradually faded, the noble appreciation of poetic genius in the higher circles of society, which characterized it, also disappeared. But the poets themselves were also in great measure to blame, since with all their exaggerated self-estimation they lacked the confident feeling of their own value, the self-reliance of men 'who had seen the republic', such as distinguished the poor son of the freedman of Venusia

even in the presence of his powerful benefactor, the descendant of an Etruscan princely family. Even in Horace's time, mediocre and needy poets lacked this feeling; this is clearly shown by the anonymous panegyric on Messalla, a miserable patchwork of phrases, overloaded with mythological and other scholastic erudition in certain passages, in which the want of taste almost results in nonsense. And yet this production has been thought worthy of inclusion in the collection of poems which bears the name of Tibullus. The poet begs Messalla to take the will for the deed; he is well aware of the feebleness of his powers and of the defects of his poetry. He has formerly been well-to-do; now, reduced to poverty, he puts himself entirely at his patron's disposal; if Messalla will only take a little interest in him, he will prize the favour as much as the gold of Lydia or the reputation of Homer. Even if his verses only rarely fall from the lips of his honoured patron, destiny will never prevent him from singing his praises; nay, he is ready to do even more for him,—to brave the dangers of the sea, face a squadron of cavalry, or trust his body to the flames of Aetna.

About the middle of the first century, the most brilliant and distinguished of the great families of Rome was that of Piso, the head of the conspiracy against Nero, the object of which was to set him on the throne, but which in reality caused his death (in 65). His princely liberality appears to have been chiefly shown to poets. He himself was a poet, verses flowed readily from his pen, he played the *cithara* like a master, 'his house resounded throughout with the varied performances of its inmates'; devotion to art and science was the rule. The mediocre poem, with which a still youthful poet endeavoured to obtain an introduction to Piso, is a not uninteresting specimen of 'clients' poetry'. After celebrating the renown of Piso's family, he speaks of the admirable qualities of its present representative (especially his eloquence) and the honour of the consulship already bestowed upon him; praises his noble presence, his sincerity, his generosity and affability, his education, his musical and poetical talents, his skill in sword exercise, tennis and draughts—a description which essentially agrees with that given by Tacitus. At the conclusion the poet declares that all he asks is that Piso will deign to admit him into his house, for

he is not influenced by thirst for gold, but solely by the desire of fame. He will think himself happy if he may pass his life with Piso and attempt to describe his virtues in verses worthy of them ; if Piso will open to him the path of glory and rescue him from obscurity, he will do great things. Perhaps even Virgil would have remained unknown without a Maecenas to protect him ; and Maecenas, not content with opening his house to him alone, also laid the foundation of the fame of Varius and Horace. Under his protection, poets never had to fear starvation in their old age. If Piso will listen to his prayers, the poet will sing of him in polished verse as his Maecenas ; since he feels capable of handing down a name to posterity, if indeed one may promise anything of the kind. He feels that he has courage and strength to do something great, if only Piso will stretch out his hand to the swimmer, and draw him out of the retirement into which his humble birth and poverty have thrust him. His powers are greater than one might imagine from the number of his years, since the first down is only beginning to cover his cheeks and he has not yet passed his twentieth summer.

After Nero, the position of the aristocracy, and with it that of the poets dependent upon it, underwent a change for the worse. Many of the great families had ruined themselves by luxury and extravagance ; others had fallen victims to the suspicion, hatred or cupidity of the imperial despotism. The reign of Vespasian brought to Rome new men from the cities of Italy and the provinces, who retained their old habits, contracted under more restricted conditions of life, while the emperor himself set the example of economy ; under Domitian, distinguished men had to guard against arousing suspicion by too lavish a display of generosity or too numerous a *clientèle*. Thus, the poets of that time certainly had reason to wish for the return of the good old days of Maecenas, and even of Seneca and Piso. When Martial, then a young man, came to Rome about the year 63, the hall of the Pisos, filled with ancestral busts, and the houses of his countrymen the three Senecas (the philosopher, Junius Gallio, and Annaeus Mela the father of Lucan) were open to him. All perished in the years 65 and 66 ; and towards the end of the century the only surviving representative of the great Seneca family was Lucan's wife Polla Argentaria, Martial's patroness,

addressed by him as 'queen' as late as 96. Under Domitian such patrons of literature as Piso, Seneca, Vibius Crispus and Memmius Regulus no longer existed; at least, the two most prominent poets, Martial and Statius, strove to gain the favour of a large number of persons, without being able to obtain what had formerly been granted by a single individual.

Martial had certainly been connected with the court during the reign of Titus, who had bestowed upon him the privileges of a father of three children (*jus trium liberorum*), confirmed by Domitian, and perhaps raised him to the status of a knight by creating him titular tribune. His recommendation was enough to procure the citizenship for several claimants, and he was occasionally honoured with an invitation to the imperial table; but the emperor refused, although not ungraciously, a request for a few thousand sesterces. As the poet never returns thanks for gifts received, he does not seem to have been indebted to him for any real improvement in his position, although he continually begged for it, 'without timidity or embarrassment'; he was not even permitted to connect his country or town house with the Marcian aqueduct. This is the more striking, as Domitian was fond of reading his poems; had not this been the case, Martial would not have ventured to make frequent references to his approval. He is also unwearied in his efforts to win the favour of influential freedmen and other persons at court, sometimes by the most degrading flattery; he praises them generally and flatters them individually—Parthenius, the chamberlain, Entellus master of petitions, Euphemus the superintendent of the table, Earinus the cup-bearer, Crispinus the imperial favourite, the father (already retired) of Etruseus, and a certain Sextus, who appears to have been the director of the imperial studies.

During a twenty years' stay in Rome, however, Martial had been brought into frequent relations with members of the aristocracy, which he sought to keep up and enlarge by honourable mention of them in his poems, which (as he himself says) bestowed upon them lasting fame, although he gained nothing himself by such homage. His long-standing connexion with Seneca obtained him the friendship of Quintus Ovidius, who had accompanied Caesonius (or Caesennius) Maximus, a friend of Seneca the philosopher, into exile in Sicily. The large number of men of senatorial rank to whom Martial offers homage

or flattery, whom he begs or thanks for favours in his epigrams (written during the last twelve years of his stay in Rome from 86 to 98, and in Spain up to 101 or 102) includes the following names : the poet Silius Italicus (consul 68) and his sons ; Nerva, afterwards emperor ; the wealthy orator Marcus Aquilius Regulus, notorious as an accuser in cases of *lèse-majesté* ; the enormously rich brothers Domitius Tullus and Domitius Lucanus ; the poet Stertinius Avitus (consul 92, who in 94 had the portrait of Martial set up in his library) ; the well-known author Sextus Julius Frontinus (consul for the second time 98, for the third time 100) ; the younger Pliny (consul 100) ; the poet Arruntius Stella (consul 101) ; Lucius Norbanus Appius Maximus, conqueror of Lucius Antonius Saturninus (twice consul) ; Licinius Sura (consul 102), Trajan's most powerful friend ; Marcus Antonius Primus of Tolosa, Vespasian's former partisan ; and many others. Naturally, Martial sought and found patrons amongst the knights. Amongst them may have been the elegant Atedius Melior, who gave such excellent dinners in his beautiful house and garden on the Mons Caelius. One of the friends whose praises he most frequently sings is a centurion, Aulus Pudens, who appears to have reached the rank of *primipilaris*, but not the summit of his ambition, admission to the equestrian order. He also enjoyed and highly appreciated the friendship of other centurions, to judge from his honourable mention of them in his poems.

Statius to some extent moved in the same circles as Martial and also endeavoured to win the favour of the same patrons, above all of the emperor ; he never published anything ' without appealing to his divinity '. Yet his repeated and obsequious homage and laughably exaggerated flatteries seem to have gained him nothing from Domitian but an invitation to table and a supply of water from a public aqueduct for his house near Alba. Like Martial, Statius flattered the imperial freedmen ; besides Etruscus and his father and the youthful eunuch Earinus, he especially sang the praises of the imperial Secretary Abascantus. Some of Martial's patrons (Lucius Arruntius Stella, Polla Argentaria the wife of Lucan and Atedius Melior) were also Statius's. Many senators, whose names are found in his poems, attended his frequent readings ; the aged consular and city praefect, Rutilius Gallicus,

the young Vettius Crispinus and Maecius Celer. He also enjoyed the friendship of members of the equestrian order (such as Septimius Severus, great grandfather of the emperor of that name) and of wealthy friends of literature, whom he had known in his native city Naples.

Nevertheless, in spite of their relations, so eagerly sought and carefully cultivated, with so many great and wealthy men, and in spite of the general approval with which they were received in these circles, both poets remained poor. We know this of Statius from a passage of Juvenal already referred to ; he was not so undignified as to be always complaining and begging in his poems, like Martial. He certainly had a small estate near Alba, probably the gift of one of his patrons, but it was a poor one and reared no cattle ; his failure in the Capitoline *agon* can hardly have been the only reason which induced him to return home and end his days in his native city, when at the height of his fame as a poet. Martial also possessed a small vineyard near Nomentum, but it was barren and poorly wooded, and produced nothing except an inferior wine and 'apples like lead'. But it must be admitted that Martial was anything but an agriculturist. If his friend Stella had not sent him some tiles to repair the roof of his house, the rain would have come in; the chief advantage of his property was that he could retire thither from the worries of clientship and take a rest. Towards the end of his stay at Rome some one had given him a team of mules, and he also had a small town house on the Quirinal, where he had formerly had a lodging on the third storey. But he was never independent or free from anxiety, until, at the age of fifty-seven, he decided to leave Rome, whose atmosphere was life to him, and to end his days in his native Spain. There, the cheap living and the liberality of native patrons (especially Terentius Priscus and Marcella), made it possible for him to idle and enjoy himself to his heart's content.

While poets were thus dependent on a single patron, only the most lofty conception of the bond of union could entirely exclude the danger of the degradation of the former—a danger which increased as their position became more precarious and irksome. The example of Martial shows that, in the case of less noble natures, the position of a client almost necessarily led to the misuse of poetical talent and personal degradation.

Martial not only reminds his readers in general and his patrons in particular, that a poet wants money above all things ; he is continually begging, even for a *toga*, a cloak and the like. He writes on one occasion to Regulus, that he is so pressed for money that he will be obliged to sell his presents ; will Regulus buy something ? He even declares with cynical frankness, that his poetical gifts are at the disposal of any one who likes to pay for them : ‘ A man whom I have praised in one of my poems, pretends he owes me nothing ; he has taken me in ’. In one of his epigrams the emperor is supposed to ask, what he has gained from conferring immortality on so many in his poems ? his answer is : nothing, but it amuses me. Probably all were not of the same opinion as the younger Pliny, who thought it his duty to pay Martial’s travelling expenses in return for a poem of praise, since no gifts could be greater than those bestowed by the poet, ‘ fame, praise and immortality ’. Yet many of those who were praised by Martial certainly paid for the honour, although not always as liberally as he expected.

But he mainly turned his talents to account in intellectual and witty conversation in social circles, for which indeed they were best adapted ; and on such occasions he degraded them as much as by his most cringing flatteries. We certainly cannot blame him for writing poems to order or on given subjects, such as the *Xenia*, which to all appearance were originally written as labels for *Saturnalia* presents in wealthy houses. But since the jovial guests at the *Saturnalia* carousals and readers generally relished nothing so much as indecency, Martial in this respect also accommodated himself to the taste of the public. The ideas of decency at that time allowed the poet any obscenities, if disguised in elegant language ; the disproportionately large number of indecent epigrams shows how ready Martial was to satisfy the grossest tastes of the majority, and the manner of his excuses makes it clear that he himself was conscious of having overstepped the bounds of propriety.

In spite of his brilliant talents, Martial with his merry *Saturnalia* poems reminds us somewhat of the strolling poets of old times, who invited themselves to banquets, where they were welcome, but were treated somewhat contemptuously. Statius was saved from a similar humiliation by the nature of his talents, which always had in view the pathetic and solemn ;

also he had more sense of his own dignity than Martial and a higher idea of poetry. His minor poems give us an idea of the origin of the higher occasional poetry of the age and its usual subjects. Of the three chief classes of such poems—on births, marriages and deaths—Statius's forte was the last ; the four 'consolatory poems' of his collection are selected from a large number. He calls himself 'the gentle consoler of the afflicted, who has so often soothed the pain of the still bleeding wounds of fathers and mothers, comforted affectionate sons at their father's grave, dried so many tears and so often made his voice heard beside the tomb by departing spirits.' This clearly shows that he had produced many such poems. Rich people also commissioned poets to write them for the funerals of favourite slaves and freedmen, and even of animals ; Statius has included two, one on the death of Atedius Melior's green talking parrot, the other on that of a lion torn to pieces in the arena by another wild animal. As a rule, every joyful or melancholy event in distinguished families was celebrated by the house and client poets. The poems of Statius on the recovery of Rutilius Gallicus from a severe illness, on Domitian's seventeenth consulship, on Maecius Celer's journey to his garrison in Syria are examples of the numerous and varied subjects of occasional poems. But the services of poets were especially requisitioned at the celebration of festivals, the inauguration of important buildings or artistic undertakings. The day after the colossal equestrian statue of Domitian was set up in the Forum, Statius was ordered to let the emperor have a poem upon it.

At these solemnities, occasional poetry supplied the place of modern journalism. Rich people gladly availed themselves of it, to secure publicity for eulogistic descriptions of their beautiful villas and gardens, baths, splendid buildings, art collections and valuables, and probably there was never any lack of poets ready to meet their wishes. 'You praise the baths of Ponticus, who gives such good dinners, in three hundred verses', says Martial ; 'you don't really want to bathe, but to dine'. But even when there was no special reason for it, the majority were anxious that famous poets should sing their praises, and frequently directly invited them to do so.

The larger and more distinguished the family, the more numerous probably were the poets who were eager to bestow

poetical consecration on all the most important incidents in the life of its members, whether joyful or melancholy. In her passionate grief for her son Marcellus Octavia refused to listen to 'the poems composed to glorify his memory'. At a marriage festival in the house of the emperor Gallienus all the Greek and Latin poets recited nuptial songs for many days together; but the emperor with a few verses carried off the prize 'from a hundred poets'. Of course the number 100 is not here to be taken literally; but in modern times, less than eight days after the birth of the King of Rome, more than 2,000 odes, hymns and other poetical expressions of homage reached the Tuileries, for which Napoleon paid 100,000 francs by way of honoraria. Although poets, of course, participated most frequently in the glorification of festivals in the imperial palace, they appear to have done the same in aristocratic houses generally, where in accordance with Roman taste people amused themselves by listening to the numerous productions offered to them. On the occasion of the wedding of Stella and Violentilla, Statius summons the whole 'troop' of poets, especially the elegiac poets, the singers of love, 'to contend in various modes', each according to his mastery of the lyre. Of the certainly considerable number of poems, in which the contemporary poets of Rome, in response to this appeal, sang of the wedding of their distinguished colleague, only those of Statius and Martial have been preserved.

But as in this case, so on other and quite different occasions the two poets wrote pieces on the same themes for the same patrons and friends. Both lamented the death of Atedius Melior's favourite freedman and of the aged father of Claudius Etruscus; both celebrated the sumptuous bath constructed by the latter and the bronze statuette by Lysippus, belonging to Novius Vindex; both presented Lucan's widow with some poems on the celebration of her birthday; and when the eunuch Flavius Earinus, Domitian's cup-bearer, cut off his hair and sent it in a box set with precious stones together with his mirror to the temple of Aesculapius at Pergamus, Statius at his desire composed a lengthy poem on the event and Martial five short ones. Now, since we find the only two poets of the time, with whose occasional pieces we are acquainted, so often and deliberately dealing with the same subjects, we may fairly assume that on extraordinary occasions also as a

rule a crowd of poets was seized with inspiration, and that there was a perfect downpour of poems, long and short, in all kinds of metres.

Although Statius and Martial so frequently visited the same houses, that each must have often been witness of the other's success, neither of them mentions the other, while both are lavish in praise of their numerous poetical colleagues. Evidently they did not love one another, as indeed was hardly to be expected, considering the profound contrast of their natures; even if the Spanish poet, now growing old, had been able to refrain from vexation and jealousy at the fame of the Neapolitan, which threatened to eclipse his own. But he frequently expressed a contemptuous opinion of long mythological epopees, although he does not mention the *Thebaid* of Statius. 'Certainly', he says, 'every one praises and admires them, but my epigrams are read. Epics contain nothing but monstrous abortions of the imagination; whereas my epigrams touch real life to the quick, and must be read by any one who wishes to understand himself or the age in which he lives. Any one who regards epigrams as mere trifles, mistakes their character; in reality the poet who deals with fables and legends is the trifler. The figures of epopees are giants, but of clay; my figures are small, but they live. My little books are free from fustian and bombast, my Muse never struts in a ridiculous, swelling dress with a long train. Let those austere and over-serious people, who burn the midnight oil, handle the highly tragic and lofty themes of Greek mythology; I will season genuine Roman poems with wit, and be content with the modest shepherd's flute, since its tones surpass the trumpet blasts of so many others.' In face of these attacks, made in the years in which he read the last books of his *Thebais* and the first of his *Achilleis* to the loud applause of a large audience, Statius never condescended to criticize epigrams unfavourably. He characterizes his own short poems, written 'as a sort of epigrams', as insignificant trifles, thrown off on the spur of the moment; he had been blamed for publishing anything of the kind, but he was of opinion that even badinage might be justified. At the conclusion of his *Thebaid* he complains of the clouds of mist, heaped up by envy to obscure its brilliancy.

At all times envy and jealousy amongst poets arise from their easily wounded vanity, their exaggerated self-esteem

and thirst for glory ; but in the period with which we are concerned, their dependent position, their rival efforts to win the favour and approval of the great, on whom their very existence depended, were only too likely to arouse the ugly passions of ignoble natures, and often led to irritation, persecution and calumny, intrigue and cabal of all kinds. Martial suffered much from enemies, envious and unfavourable critics of various kinds. The criticism of the literary circles of Rome was as a rule anything but benevolent. Many (from envious motives, says Martial) blamed the indecency of his epigrams ; but the number of those who declined to recognize living poets and praised only those of the past, was probably larger, as is always the case. In general, Martial regarded the censure of poets as rather a proof of the universally good reception accorded to his works, and justly preferred to see his poems approved by the guests than by the cooks. One of those who 'were ready to burst with envy' because all Rome read his poems, because he was pointed out in the streets, because many welcomed him as a guest, because he had secured a modest competence, was a Jewish poet, who was always criticizing his poems, but all the same plundered them. However, it did not trouble Martial much if plagiarists gave out and read his verses as their own, since the difference between their productions was so great that no one could help noticing the theft. He frequently complains, however, of what was far more prejudicial to his reputation as a poet and his position generally ; anonymous poets, whose identity could not be traced, published broadcast under his name virulent abuse and vulgar insults directed against men and women of rank. This treachery was all the more likely to injure him with his patrons, since in any case there was always the danger that persons, whose favour was of great importance to him, might think his sarcasm was intended for themselves ; hence his repeated assertion that he never has any particular individual in view.

In addition to these and similar glimpses in Martial's poems of the doings at these meetings in the 'school of the poets' or the portico of the temple of Quirinus, they furnish other information concerning the literary interests and tendencies of the time.

In particular, the epigrams of Martial, the poems of Statius

(90-96) and the letters of the younger Pliny (97-108/9), which are directly connected with both, acquaint us with the relation of educated society to poetry in the time of Domitian, Nerva, and the beginning of Trajan's reign. Yet the phenomena disclosed, though characteristic of this relation and of literature in general, are not exactly confined to this period alone, but may be considered essentially applicable to the whole time from Augustus to Hadrian. They also confirm the observation, that poetry at that time was of greater importance and exercised a greater influence upon education in general than at the present day.

The first impression is that of excessive industry and productivity throughout the domain of poetical literature, the whole field of which was cultivated by rival poets and *dilettanti*. Thus Juvenal, in a despairing outburst against perpetual recitations, mentions poems of the most varied kinds, which one was compelled to listen to daily; one reads a *Theseis*, another Roman comedies, a third elegies; a *Telephus*¹, and a never-ending *Orestes* take up a whole day; the columns and plane-trees of a peristyle used by the reciters resound unceasingly with descriptions of the combats of the Centaurs, of the judgment of the dead, of the carrying off of the golden fleece. A certain Varro according to Martial was equally distinguished as a writer of tragedies and mimes, lyrics and elegies; Canius Rufus of Gades appears to have been no less versatile. Manilius Vopiscus wrote lyric and epic poems, satires and epistles; Pollius Felix hexameters, epodes or distichs and iambics. In addition to the best known kinds of poetry, others less common are mentioned, such as the Aristophanic comedy and the mimiambus; many composed in Greek. Of course Martial, Statius and Pliny only tell us the names of a few contemporary poets; according to Quintilian, the number of satirists and lyric poets was considerable.

But epos, especially mythological, was probably the favourite; long epic poems of the period have been preserved, all of which, with the exception of the *Punica* of Silius Italicus, are mythological—the *Argonautica* of Valerius Flaccus, the *Thebais* and *Achilleis* of Statius. Juvenal's remarks on recitations also indicate a preponderance of epos. Its subjects were the most harmless; the poet who set Aeneas and

¹ Telephus, King of Mysia, a favourite subject of tragedy.

Turnus fighting might feel certain of never giving offence ; nobody could complain of a wounded Achilles or a drowning Hylas. To this was added the authority of Virgil, whose form was thought the easiest to reproduce. Accordingly, the school of necessity directed its poetical efforts to the field of Greek legend. Its wealth of poetic material facilitated execution ; in addition to Virgil numerous (and especially Alexandrine) models, ready to hand, supplied the want of invention, and of power to create new poems. Again, epos offered the widest scope for the development of all the excellences, which even a less gifted *dilettante* might appropriate, such as beauty of language, irreproachable versification, rhetorical pathos, and above all, descriptive liveliness. Horace speaks of descriptions of nature, which could be used as 'purple patches' to conceal the nakedness of long poems : 'a grove and altar of Diana, a stream winding through smiling fields, the course of the Rhine, the rainbow'. Seneca mentions Aetna, sunrise and sunset among such poetical commonplaces. Juvenal declares that every one knows the cave of Vulcan and the grove of Mars better than his own house. The author of *Aetna* declares that he intends to strike out a new path ; the old legends are too hackneyed. Every one knows the golden age better than his own world. Who has not sung of the expedition of the Argonauts, the Trojan war, the misfortunes of Niobe and of the house of Atreus, the adventures of Cadmus, the desertion of Ariadne ? Similarly, at the end of the third century, Nemesianus in the introduction to his *Cynegetica* announces his intention of abandoning the 'beaten track'. He enumerates a number of mythological subjects, adding, 'a number of great poets have already anticipated all these ; the old legends of former times are known to all'. Further, we may assume that Virgil's *Eclogues* and *Georgics*, as well as his *Aeneid*, were frequently imitated. Columella chose horticulture as the subject of a poem, simply because 'the divine Maro, the poet deserving of the highest reverence', had expressly called upon his successors to treat this department of agriculture poetically. Martial's friend, Julius Cerealis, besides a *Gigantomachia*, composed some rural poems, 'inferior only to those of the immortal Virgil'. The *Georgica* composed by Clodius Albinus, the rival of the emperor Severus, was also a poem.

But most of the educated men, who did not make poetry their profession but, like Atticus, were unwilling to deprive themselves of the charm which it lent to life, and whose poetical efforts were only a recreation, distraction or literary exercise, as a rule had no time for long-winded epics. The younger Pliny recommends a friend, who was training for an orator, sometimes to write something historical or a letter. ' You will do quite right again in refreshing yourself with poetry ; when I say so, I do not mean that species of poetry which turns upon subjects of great length and continuity (such being suitable only for persons of leisure), but those little pieces of the sprightly kind of poesy, which serve as proper reliefs to, and are consistent with, employments of every sort. They commonly go under the name of poetical amusements ; but these amusements have sometimes gained their authors as much reputation as works of a more serious nature. In this manner the greatest men, as well as the greatest orators, used either to exercise or amuse themselves, or rather, indeed, did both. It is surprising how much the mind is enlivened and refreshed by these little poetical compositions, as they turn upon love, hatred, satire, tenderness, politeness, and everything in short that concerns life and the affairs of the world. Besides, the same advantage attends these, as every other sort of poems, that we turn from them to prose with so much the more pleasure after having experienced the difficulty of being constrained and fettered by metre ' (Melmoth's translation).

Apart from these poetical exercises, amateur and even professional poetry no doubt consisted to a great extent, if not mainly, of reproductions of classical Greek or Roman models, and in the former case was often merely a free translation. And such reproduction was by no means unintentional. While at the present day even poetical amateurs strive after the appearance of originality in inverse proportion to their real capacity, the later Roman poets made no such effort, since their greatest predecessors from time immemorial had made it their object to transplant the flower of Greek poetry to Roman soil. Throughout the entire domain of ancient art respect for tradition was so strong that forms once recognized as models had the binding force of laws, which no artist dared resist or alter at discretion. Imitation, copy and repro-

duction were held to be legitimate and allowable, and to a certain extent industry and study were considered an adequate substitute for originality. This is especially true of all post-Augustan poetry, the chief characteristic of which is the unexampled frequency of imitations and repetitions, echoes and reminiscences of every kind. There were even 'Ovidian' and 'Virgilian' poets, who apparently employed only Ovidian and Virgilian turns, phrases and verses.

The enormous influence of Virgil on later poetry, especially epos, has been already mentioned. As Ennius and Virgil had imitated Homer, so later epic poets wrote under the spell which Virgil exercised over the whole period. Silius Italicus revered his picture more than that of any other great man, celebrated his birthday more conscientiously than his own, and approached his tomb as if it had been a temple. Statius, who at the end of his *Thebais* craves for its immortality, adds that he is content to follow the divine *Aeneis* at a distance and to tread in its footsteps with holy awe. In other branches, also, poets obtained the highest praise for the successful imitation of a great model. Passennus Paullus, a friend of the younger Pliny, was a zealous imitator of the ancients generally, whose poems he copied and reproduced, especially those of Propertius, to whose family he belonged, and whose most successful imitator he was; his elegies were 'written entirely in the house of Propertius'. Later, he turned his attention to lyric poetry, and reproduced Horace with the same fidelity.

For most of those who satisfied their aspirations by composing trifles, epigrams and all kinds of poetical odds and ends, Catullus, as in the Augustan age, was the model most generally followed; even the epigrams of a poet like Martial, certainly one of the most original of later writers, are full of reminiscences of him. He sends his little poems to Silius, as the gentle Catullus may have ventured to send his lament on the death of the sparrow to the great Virgil. This poem was the inevitable model for all similar subjects and appears to have been imitated times without number. Martial flatters Stella by saying that in his *Columba* (dove) he has shown himself as far superior to Catullus as a dove is larger than a sparrow. Unicus the Spaniard, a relative of Martial, wrote love poems, such as those of Catullus to

Lesbia or of Ovid to Corinna. Pliny's friend, Pompeius Saturninus, a distinguished orator and historian, also wrote verses 'like Catullus or Calvus, full of grace, sweetness, bitterness and passion; their tenderness and playfulness was tempered with a certain severity, this too in the manner of Catullus or Calvus'. It would be in the highest degree unjust, adds Pliny, to admire him less because he is still alive. Pliny also listened with the greatest pleasure and even admiration to another friend, Sentius Augurinus, who had recited his little poems for three days running. 'There was a good deal of writing in the light and graceful, the lofty, the gay, the tender, the sweet and the satirical vein. I am of opinion there has not for these many years appeared anything more finished of the kind, if indeed my great affection for him and the praises he bestows upon me do not bias my judgment'. For he had said 'I sing in modest verses, as formerly Catullus, Calvus, and the poets of old. But what need to mention them? Pliny, who also writes verslets, is more to me than all his predecessors'.

The example of Pliny, who did not begin 'to walk in the paths of Catullus' until he had attained consular rank and was more than forty years of age, and who relates in great detail the history of the origin of this 'late spring of song', shows most clearly how at that time the keen interest in literature necessarily attracted even the most matter-of-fact and unpoetical natures to poetry. He had already made several attempts at verse, as was only natural at a time when culture was so saturated with poetical elements, and since he himself had always aspired to literary distinction. He writes as follows to a friend: 'You have read, you say, my hendecasyllables, and are desirous to know what first induced a man of my gravity (as you are pleased to call me, though in truth I am only not a trifler) to write verses. To go back, then, to my earliest years, I had always an inclination to poetry, insomuch that when I was fourteen years of age, I composed a tragedy in Greek. What sort of a one do you ask? I really don't know; all I remember of it is that it was called a tragedy. Some time after this, on my return from the army, being detained in the island of Icaria by contrary winds, I wrote some Latin elegies on the self-same island and sea. I have since made some attempts in the heroic kind;

but these are the first hendecasyllabics I have ever composed ; and the following incident gave them birth. The treatise of Asinius Gallus was read to me one day at Laurentum, in which he draws a comparison between his father and Cicero, and cites an epigram of Tully's on his own favourite Tiro. Upon retiring to take my afternoon's nap (for it was summer time) and not being able to sleep, I began to reflect that the greatest orators have been fond of poetry and by no means despised it as an art. I tried therefore what I could do in this way ; and though I had long disused myself to do things of this sort, I wrote down, in a much shorter time than I could have imagined, the following lines upon the subject which gave me the first hint' (Melmoth). The hexameters, in which he explains how Cicero's example determined him to abandon all restraint, are utterly prosaic and heavy, his hendecasyllables probably afforded an even more terrible example of the result 'when a pedant itches to attempt the free and easy'. 'From this I turned to elegy', he continues, 'which I executed with the same ease ; and being thus lured on by the facility with which the Muses yielded to me, I added others to the number of my productions of this kind. On my return to Rome I showed my performances to some of my friends, who were pleased to approve of them. Afterwards, whenever I had spare time, and particularly when I travelled, I made several other attempts in the poetical line. At length I determined, after the example of many others, to publish a separate volume of these poems, and I have no reason to repent of my resolution. They are much inquired after, and are in everybody's hands ; they have even tempted the Greeks to learn our language, who sing them to their harps and lyres. But why am I boasting so ? though poets, remember, possess the privilege of raving. Still, I am not giving you my own judgment, but that of others, which, be it right or wrong, I am exceedingly pleased with ; and have only to wish that posterity too may be of the same right or wrong way of thinking' (Melmoth). Later, Pliny published, or at least prepared for publication, a collection of smaller poems in various metres. At the request of his hearers, the recital lasted two days, for Pliny did not, 'like others, omit a portion and take credit for doing so ; he read everything, since he wanted to improve every-

thing ; and how was he to do this, if he only submitted select passages to the criticism of his friends ?' This shows how the *dilettanti* of the time, incited to poetical efforts by the want of an intellectual occupation for their hours of leisure, the spirit of imitation, extensive reading, knack of verse-writing, the example of others, and the desire to be perfect in everything, soon came to fancy themselves poets, when they were as vain, as well-born and as rich as Pliny.

At that time it was evidently nothing exceptional for men of rank or position, whose time was much occupied, to devote their leisure hours to poetry even at an advanced age. In reference to the brilliant success of Calpurnius Piso's elegiac poems on the constellations, Pliny observes that it gives him all the more pleasure to record it, since, creditable as it was to any young man, it was a rare achievement for one of noble birth ; a remark which shows that comparatively few of the crowd of poets, who recited daily for months together, belonged to distinguished families, and in particular that the *dilettanti* of the upper classes can have had little time or inclination for considerable poetical undertakings. Amongst the consulars of that time, in addition to Pliny and Silius Italicus, Stertinius Avitus, Arruntius Stella and the aged Arrius Antoninus were poetical *dilettanti* ; Rutilius Gallicus also, praefect of the city (died 91-92) was a poet. Vestricius Spurinna, who had filled the highest offices (the consulship two or three times) and had been honoured (probably by Nerva) with a statue in triumphal dress, when 77 years of age, devoted some time daily between his walk and his bath to the composition of lyric poems in Greek and Latin, which according to Pliny were excellent. The knight Titinius Capito, who filled the extremely onerous post of imperial secretary under Domitian, Nerva, and Trajan, was also one of the chief supporters of literature, the patron of poets and literary men ; he attended the recitations of others, recited himself, and wrote remarkable poems on great men. The freedman Parthenius, Domitian's head chamberlain, whose influence was still considerable under Nerva, was according to Martial a favourite of Apollo and the Muses ; ' who drank more freely from their spring than he ? ' Unfortunately, he had not sufficient leisure for poetry. From the examples of Pollius Felix of Puteoli, Pomponius Bassulus of Aeclanum, Caninius Rufus of Comum, we may assume that

poetical dilettantism was general amongst the higher classes in the towns of Italy. At that time it was not merely one of the symptoms of the intellectual purification of immature youth, or of morbid development ; poetry continued to be the life-long companion of a large number of educated men. It was practised not merely to ennoble and adorn the intellectual life, but also since it was prized as an essential element of culture ; hence skill in managing poetical form was also regarded as a proof of superior education. Since even men of the class represented by Petronius's Trimalchio thought it incumbent on them to produce poems of their own, so as to appear well brought up, we can all the more easily understand how it was that clever poets, who preferred money to fame, sometimes found purchasers for their verses.

At the beginning of the second century, poetry was so important a factor in education that even prosaic natures like Pliny's could not escape its influence ; the reign of Hadrian saw a great and sudden change, whereby prose regained its former ascendancy to such an extent that poetry gradually ceased to be the chief field of the literary efforts of *dilettanti* and artists, and even men of poetical gifts like Apuleius devoted themselves by preference to prose. The chief cause of this change, as already observed, was the new Greek 'sophistic'.

This new art of Greek elocution, whose professors were called by the old name of sophists, began to develop after the end of the first century. The importance which it acquired, the large number of able men whom it attracted, and the general, passionate and almost incredible admiration which it called forth in the Greek world, prove that it did not merely correspond completely to the taste of the age, but also filled a keenly felt want in intellectual life in a manner that satisfied the majority of educated men. The insatiable craving for some new intellectual amusement and an impressionability to art, survived with undiminished vigour in the declining nation ; but the sound and unadulterated taste for real art, which during the centuries of the intellectual prime of Greece was formed in all departments by the marvellous abundance of magnificent creations, no longer existed.

The art of the sophists, so completely in harmony with the degenerate taste of later centuries, and apparently in all essen-

tials a revival of the Asiatic mannerism, was a spurious art. It created forms difficult to manage, hard and fast and trifling rules, even to the least details, for 'every kind of style, every form of thought, construction and rhythm'; great importance was also attached to correctness of expression, which it was sought to obtain by study and frequently perverse and pedantic imitation of ancient models, especially Attic. The chief excellence of the sophists, like that of the Meistersingers, consisted to a great extent in the apparent ease with which they surmounted the technical difficulties of their art: 'when Polemo turned a period, he uttered the last member of it with a smile, to show how easy he found it'. The knowledge of the technical rules of the new art of prose, gradually spreading amongst the educated public, sharpened the understanding and increased the admiration of the audience. But the object of special admiration was the art of improvisation, which, however, was not acquired by all the sophists; one of the greatest of them, Herodes Atticus, is said to have prized it more highly than his consular rank and his descent from a consular family. In addition to this there was a studied declamation, which only too often, like the orator's attitude, facial play and gesture, verged upon the theatrical, or closely resembled a musical performance.

But all this, even combined with the still insatiable impressionability of the Greek ear to the charm of oratorical art, is perhaps insufficient to explain the astonishing success of these 'show speeches', whose pretentious artificiality of form always repels us by the absence of real meaning, while their mawkish affectation, stilted unnaturalness, turgidity and bombast only result in a disagreeable caricature of the magnificent old-fashioned eloquence, which they claim to revive and reproduce. The enthusiasm for the sophists and their works, which showed itself in demonstrations of honour of every kind; the crowding of studious young men to the cities, where they settled down as teachers; the esteem in which they were held, which justified their playing the part of censors, advisers and peacemakers; their own almost frenzied idea of the importance and effect of their activity—all would have been impossible, at least to such an extent, had not sophistic offered the national vanity of the Greeks a new satisfaction which they had long been without. The Greeks 'still tried to fancy themselves the great

nation', and were confirmed in their pride at having been the teachers of the Romans by the latter themselves; Greece had now produced a new and brilliant form of culture, and once again set the fashion in the department of literature. But what especially won for sophistic the passionate sympathy of the Greek world, was the fact that its chief task was the glorification of the great past of Greece; the decaying nation knew no greater joy than to see itself mirrored in these reminiscences. The favourite subjects for improvisation with both sophists and their hearers were taken from Greek history. 'The deeds of their forefathers were handed down by history, and could be celebrated. But their speeches on numerous occasions were not so handed down. Consequently, it was possible to suggest what they might have said, and the answers that might have been made; what they would have said, on occasions when they did not speak at all, if they had spoken. Some of these themes were, e.g., Demosthenes after the battle of Chaeronea; how did Demosthenes defend himself against the accusation of Demades, that he had been bribed by the Persian King with fifty talents? a speech to the Greeks after the end of the Peloponnesian war, declaring that all trophies must be destroyed, since it was really a civil war; a consultation of the Lacedaemonians, to decide whether the Spartiate who returned home from Sphacteria without their arms should be allowed to enter the country again; whether Sparta, which was intended by the constitution of Lycurgus to be without walls, should be protected by a wall on the approach of the Persians. . . .' Most of these and similar themes were general favourites, and produced keen competition amongst the sophists. But none of them were so highly thought of as the so-called Median or Attic themes. In the former Darius and Xerxes were introduced, uttering their barbarian boasts against the Greeks; in the latter the deeds and heroes of Marathon and Salamis were celebrated. This is wittily set forth by Lucian, in the ironical advice given by him to a rhetorician. 'Above all do not forget to speak of Marathon and Cynaegirus¹, for this is indispensable; of the navigation of mount Athos and the crossing of the Hellespont; of the sun darkened by the arrows of the Persians; of Xerxes in flight; let Leonidas

¹ Brother of Aeschylus, distinguished for his valour at the battle of Marathon.

be always praised, the words of Othryades ¹ always read and the names of Salamis, Artemisium and Plataea repeated.' In the speech at the funeral of Proaeresius, a famous sophist of the fourth century, it was said, 'O Marathon and Salamis! what a trumpet for your trophies and victories you have lost!'

This new rhetoric strove to obtain sole authority in the domain of the arts of speech. It aimed at supplanting poetry or rather at bringing it within its own province. The mixture of the prosaic and poetical style of speech and expression, the poetical prose, which we discern in nearly all the productions of sophistic at that time and later, appears to have its root in this tendency. But the rhetoricians also believed they could take possession of the subjects of poetry. Festal speeches on gods and heroes, which were called simply 'hymns', and panegyrics on celebrated and influential men of the past and present were regarded as substitutes for the lyrics of the grand style of the past. In the class of 'Descriptions' also the poets were followed. This attempt to create a special rhetorical poetry also brought forth from the soil of the new sophistic its most characteristic production—the Greek love story.

Although this art owed its importance in the Greek world to its essentially national character, it also exercised great influence upon the Roman world. This was due to the traditional respect of the Romans for the authority of the Greeks throughout the domain of intellectual (in particular, literary) life, to their dependence upon the judgment of the Greeks, and to their desire, perhaps at that time more eager than ever before, to appropriate the advantages of Greek education. Just as they had always gone to school amongst the Greeks, ever since they had begun to elevate oratory to the dignity of an art, so at that time they earnestly endeavoured to profit by the latest and most perfect method adopted by the Greeks in the art of representation. Many young men journeyed from Italy and the countries of the west to Athens and other Greek centres of instruction, to obtain the latest educational polish by attending the lectures of the most celebrated teachers.

¹ The only Spartan survivor of the 300 who fought with the same number of Argives for the possession of the border-town Thyrea. He is said to have erected a trophy on the field and written a superscription with his blood.

The latter also made professional tours to Rome and other large towns in the west, where they sometimes made their home for a while. The chair of Greek oratory at Rome was one of the most coveted distinctions.

The importance and reputation of these Greek professors was enhanced by the notice taken of them by the emperors, who loaded them with distinctions and presents; were eager to secure their services as tutors of the heirs presumptive; promoted them to high offices (especially the Greek department of the imperial secretariate); and submitted with politeness, indulgence and patience to their ridiculous and even insolent pretentiousness. On the other hand, also, the entire attitude of the emperors towards the sophists justifies us in assuming that their works were highly and widely respected in the educated circles of Rome, and that the emperors shared this opinion.

Hadrian, the greatest admirer of the Greeks and the most ardent literary *dilettante*, was also a particular friend of the sophists; he is praised by the biographer Philostratus as the best fitted by nature of all the earlier emperors to understand and encourage distinguished talent. Trajan had bestowed upon the celebrated Polemo immunity from dues and taxes during all his journeys by land and sea; Hadrian extended the privilege to his descendants, elected him to the Academy (Museum) of Alexandria,¹ and voluntarily paid a debt of 250,000 *denarii* for him, if we may believe Philostratus, many of whose statements, however, are obviously insipid inventions or ridiculous exaggerations. But it is clear, from the childish way in which the sophists exaggerated their importance and their relation to the emperors, that such stories were generally credited. It is related that Polemo on one occasion rudely ejected Antoninus Pius, Hadrian's successor, and at that time proconsul of Asia, from his house at Smyrna. Hadrian, to protect Polemo against Antoninus's possible vengeance, expressly declared in his will that it was by Polemo's advice that he had adopted Antoninus, who accordingly, on his accession to the throne, bestowed all kinds of honours upon Polemo.

The biographies of Philostratus are full of such stories. While Marcus Aurelius was staying at Smyrna, the sophist

¹ Where learned men were supported at the expense of the State.

Aristides waited for the emperor to summon him, before paying his respects, and made the excuse that he did not wish to interrupt his studies. When Smyrna was subsequently destroyed by an earthquake, Aristides' *Lament over Smyrna* (still extant, a mere string of exclamations) induced the emperor to rebuild the city. The beautiful passage, 'The evening winds blow only over a wilderness' is said to have moved Marcus Aurelius to tears. Although it is impossible to decide what is false and what is true in Philostratus, how much is misrepresentation, exaggeration or pure imagination, it is impossible to doubt the extraordinary affability of the emperors to the sophists during the second (and part of the third) century, or the interest taken by them in their art; this alone would be sufficient to justify us in assuming that the same interest was shown by the entire educated world of Rome, which is confirmed beyond suspicion by further evidence.

One of the founders of the new art, the Assyrian Isacus, made his appearance in Rome shortly before the year 100. The impression produced by his powerful flow of language is shown by the description of the younger Pliny. 'The great fame of Isacus had already preceded him here. He possesses the utmost readiness, copiousness, and abundance of language. He always speaks extempore, and his lectures are as finished as though he had spent a long time over their written composition. His style is Greek, or rather the genuine Attic. His exordiums are terse, elegant, attractive, and occasionally impressive and majestic. He suggests several subjects for discussion, allows his audience their choice, sometimes even to name which side he shall take, rises, arranges himself and begins. At once he has everything almost equally at command. Recondite meanings of words are suggested to you, and words—what words they are, exquisitely chosen and polished! These extempore speeches of his show the wideness of his reading, and how much practice he has had in composition. His preface is to the point, his narrative lucid, his summing-up forcible, his rhetorical ornament imposing. In a word, he teaches, entertains and affects you. His reflections (enthymemes) are frequent, his syllogisms also are frequent, condensed and carefully finished. He repeats from a long way back what he had previously delivered extempore, without missing a single word. This marvellous faculty he has

acquired by dint of great application and practice, for night and day he does nothing, hears nothing, says nothing else. He has passed his sixtieth year and is still only a rhetorician' (Melmoth). After this description we may literally believe the statements of Philostratus, that the enmity of the two sophists Favorinus and Polemo was kept up by the fact that consuls and consuls' sons took sides in the quarrel; that the sophist Hadrianus excited such admiration that knights and senators crowded into the Athenaeum to hear him, even those who knew no Greek.

The scanty fragments of Roman literature in the second century after Hadrian show clearly enough that the great effects of sophistical rhetoric, promoted energetically by the lectures of the Greek professors at Rome, were not without influence on literary effort in the educated Roman world. Perhaps the very reason of the scantiness of these fragments is that many Romans, dazzled by the charm of the new Greek prose, were led to write in Greek instead of in Latin. Marcus Aurelius undoubtedly chose the first language as the result of his study of the works of the Greek philosophers in the original; but one of the most unmistakable symptoms of the influence of the Greek sophists on the literary circles of the Roman world is the fact that Favorinus of Arelate (Arles) and Claudius Aelianus of Rome (or Praeneste) equally desired to shine as stylists not in their mother tongue but in Greek; and in fact they are included amongst the most prominent Greek sophists. We only possess the works of three Roman prose writers of this period. One of these, Aulus Gellius, who was content to offer the public nothing more than a collection of learned and amusing miscellanea, hardly deserves to be called a literary man, although his studied elegance, especially in narrative, shows that he imitated contemporary Greek models. His great friend Herodes, 'famous for his graceful intellect and Greek eloquence', had published similar learned collections. Fronto, the admirer of Polemo, tried his hand at several of the forms in which the sophists were accustomed to display their art, such as a mincing narrative style, and especially letters, some written in his own name, others in the name and character of persons of the most different position and class. Some of his extant letters are in Greek. His eulogies of dust, smoke and idleness are an attempt to discuss injurious, contemptible

and useless things and qualities in the paradoxical manner of the sophists.

Lastly, Apuleius, who, as he himself says, had thoroughly familiarized himself with Greek culture at Athens, made it his life's task to do for Latin prose what the sophists had done for Greek. The combination of philosophy and eloquence, to which he chiefly owed his reputation among contemporaries and posterity, was not uncommon in the Greek sophists. Like them, he journeyed from place to place, delivering lectures prepared in advance (a carefully elaborated collection of brilliant passages and introductions has been preserved); like them, he made use of his art in the courts. Even his chief work, the *Metamorphoses* or *The Golden Ass*, is nothing but a sophistical show-piece; for the sophists also made use of this form, in order to display the advantages of the art of treating various subjects in prose. Similarly, in the *Metamorphoses*, the exposition of the art was the end, the subject was only the means. Like the Greek romances, that of Apuleius consists only of a loosely-connected series of scenes and adventures of all kinds, which afford the author an opportunity of exhibiting his art, now in comic or tragic, indecent or horrible stories, now in descriptions of scenes from nature and of works of art, now in dialogues and speeches.

The attempt of Apuleius to transplant the art of the Greek sophists into the soil of Roman literature is the most striking proof of the extraordinary influence exercised by the new Greek art over the educated western world; but at the same time all his works show how the ascendancy of this form lessened the previous importance of poetry. No one will dispute that Apuleius possessed natural poetical gifts to a higher degree than the majority of the post-Augustan poets whose works are known to us. The choice of a popular story (*Cupid and Psyche*) as a subject and the affection with which he handles it show an appreciation, certainly rare at the time, of the wild flowers of poetry, which the poetical horticulturists and their admirers in their arrogance pretended to ignore. Certainly, Apuleius also tried his hand at poems of all kinds—epics, lyrics, comedies, tragedies, satires and riddles; but he sought and acquired his reputation in prose alone. A hundred or fifty years earlier he would most probably have been distinguished as a poet; but as the prevailing tendency of former times

had been strong enough to entice even sober pedants like Pliny into the paths of poetry, so now it was the art of prose that irresistibly attracted talent and even succeeded in detaching it from the sphere which suited it so admirably. Nevertheless, Apuleius showed himself unusually successful in maintaining the double part of a poetical rhetorician and a rhetorical poet.

With the renascence of ancient culture, the poetry of the Augustan and post-Augustan age regained the high esteem it had enjoyed in antiquity. While Homer, Pindar, Aeschylus, Sophocles and Theocritus continued for centuries to be little known and still less understood, Virgil, Horace, Ovid and Juvenal were generally reckoned as the highest models. But the restoration of the authority and influence of Roman poetry over education in general reintroduced many phenomena, the result of the attitude of the educated world of later antiquity to poetry. At first humanism re-established the intimate connexion of poetry with science and learning ; its study was regarded as an important, nay, an indispensable means of education, and skill in the management of its forms and expressions as the finest flower of a noble education ; the humanists were with justice called simply 'poets' by both friends and enemies. Melanchthon, in a letter to Micyllus (1526), says : ' No one who has not practised poetry can form a correct judgment in any department of science ; and prose writers, who have no flavour of the poetic art, are wanting in vigour '. The humanists considered poetry as an art that could be learnt and acquired, like any other, by industry and practice. At the same time poetry resumed its mission of adorning the life of the privileged and of investing all its important moments with a greater solemnity. Poetry continued to be a regular subject of instruction at the universities, and was frequently the life-long companion, a decorous amusement and recreation, of those who had received a superior education. Even occasional poetry, both official and non-official, maintained an importance which is hardly intelligible at the present day. It was not till after the middle of the eighteenth century that the great intellectual revolution took place, which set before poetry (and art in general) as its aim the release of the human soul from the sombre empire of passion. This mighty movement, which caused so powerful a reaction from artificiality and conven-

tionalism of form has rendered us capable of understanding the Greeks, Shakespeare and popular poetry ; it has also, in consequence of the complete change of the attitude of the educated world towards poetry, created a less favourable estimate of the Roman poets, not so pronounced, however, amongst the Romance as amongst the Germanic peoples.

CHAPTER II

RELIGION

I THE BELIEF IN GODS (POLYTHEISM).

WE possess two different and in many respects even contradictory authorities for the state of religion in the ancient world during the first centuries of the Christian era : literature and monuments (especially inscriptional stones). The literature was chiefly the work of unbelievers or indifferentists, or of those who strove to spiritualize, purify, or transform the popular beliefs by reflection and interpretation. The monuments, on the other hand, to a great extent at least, had their origin in those classes of society which were little affected by literature and its prevailing tendencies, and felt no need, or indeed were not capable, of expressing their convictions on such matters ; thus, in the majority of cases, they are witnesses of a positive belief in a system of polytheism, of a faith that is free from doubt and subtlety alike, naïve and ill-considered. Should the modern world ever perish like the ancient, and should future generations attempt to form an idea of the religion of our time from remains of modern civilization as fragmentary as those of antiquity, they would obtain quite a different (and in some respects contradictory) impression from our literary remains than from gravestones, votive tablets, and other ecclesiastical monuments. If, then, it would only be possible in our case to arrive at an approximately correct idea by utilizing two mutually complementary classes of evidence, this is equally true of the period of antiquity under consideration. While its heathen literature affords us a glimpse of the activity of the forces which were working in the heart of paganism itself for its dissolution and decomposition, the monuments breathe a spirit of belief which for centuries was able to resist all destructive influences. But

inasmuch as the literature of the period, both Christian and pagan, has been utilized almost exclusively, or at least far more extensively (especially by theological writers) than the monuments, the latter have never received all the attention they deserve.

Even literature has not been made use of impartially ; its irreligious side has been chiefly taken into account, without any adequate consideration of the extent to which not only belief, but also superstition, are needs of the masses which peremptorily demand satisfaction. Even the literary authorities only partly confirm the prevalent idea, that paganism was already in a condition of utter decay and complete dissolution, at the time of the birth of Christianity.

Certainly, during the last century before the Christian era, many complaints (perhaps not so many as in the nineteenth century) of a diminished fear of God, of unbelief and religious indifference, are made by Greek and Roman writers, who expressly attributed the decay of religion to the theories of an 'insane creed', propagated by the schools of Greek philosophy. In fact, the Roman literature of that period and of the first century after Christ is dominated by tendencies partly deviating from the old belief, and partly directly hostile to it. The necessity for popular belief and a state religion was not only readily admitted by the educated classes on the ground of expediency ; they themselves set the example of respect for religion and all religious institutions. Cicero, in a speech delivered in the senate (*De Haruspicum Responsis*), declared that, with all his fondness for literary studies, he would have nothing to do with such literature as alienated men's minds from religious belief ; we owe, says he, our world-wide victories to piety, religion, and the knowledge that everything is directed by the will of the gods. In particular it was recognized that the masses, by reason of the crudeness of their morals and lack of education, were in need of religion. It is impossible, says Strabo, to lead the mass of women and the common people generally to piety, holiness and faith simply by philosophical teaching ; the fear of God is also required, not omitting legends and miraculous stories. The existence of gods has its uses, says Ovid with cynical frankness ; since this is so, let us believe in them and continue to sacrifice to them. Epictetus blames those who by thoughtless expressions of

doubt as to the existence of the gods destroy the seeds of virtue in youthful minds and rob many of what has preserved them from crime. Further, statesmen under the empire were specially emphatic in declaring that those who despised the gods were people who respected no one else.

Such a confession undoubtedly implied that a large number of educated men thought there was no need of popular belief in its traditional form, of which, as a matter of fact, they frequently spoke with indifference, frivolity or contempt. Certainly, this free-thinking was often only a mask; misfortune or danger tore it from the scoffer's face, who then turned eagerly to religion for assistance. It was also no uncommon occurrence for absolute unbelievers to cling the more obstinately to an isolated superstition; e.g. Sulla, who plundered the temple at Delphi, always carried about with him a little image of Apollo, which he frequently kissed, and to which he addressed fervent prayers in moments of danger. Of course many educated men were believers, and Juvenal even expresses the opinion that in his time there was no man who despised the gods.

Yet we also find (in Lucretius) a passionate expression of hatred of religion. To him it appeared a gigantic spectre, towering from earth to heaven, beneath whose heavy foot human life lay prostrate on earth, while its hideous face looked down threateningly from on high. But at last a Greek (Epicurus) boldly defied the terror. He threw open the portals of nature, penetrated far beyond the flaming walls of the universe into the infinite, and as a conqueror brought back the knowledge of the causes of all existence to mankind. Thus he has overthrown religion, but by his victory has exalted us to heaven. Let it not be thought that the acceptance of this doctrine leads to sin and godlessness; on the contrary, it is religion itself that has more frequently given birth to godless and unholy acts. The poet reminds us how Agamemnon sacrificed his own daughter Iphigenia to appease the wrath of the gods, and concludes his touching description of the death of the innocent maiden with the exclamation: 'So great the evils to which religion could prompt!'

But the school of Epicurus, to say nothing of the philosophically educated generally, was by no means so hostile to popular religion as Lucretius. No system taught atheism,

the advocates of which were hardly ever numerous. Scepticism only disputed that the existence of the divinity could be proved ; Epicureanism taught the existence of countless and eternal gods, living in a state of supreme felicity, and only denied their solicitude for the world and humanity ; but they no more abstained from worship on principle than the sceptics. The deity needs no adoration of ours, says the Epicurean Philodemus, but it is natural for us to render him this homage, chiefly by lofty ideas, but also by following in every case the custom of our fathers. In accordance with custom, says the sceptic Sextus, we affirm that there are gods who exercise supervision over human affairs, and we pay them reverence. The majority of educated men, who belonged to no definite school, but were directly or indirectly affected by philosophical influences, were more or less tolerant of the popular beliefs, although they might themselves have held monotheistic, pantheistic or fatalistic opinions, embraced a purified polytheism, or abandoned the traditional belief without having been able to find another to replace it.

Outside philosophical circles proper, the religious views current in the educated Roman world of the first century A.D. fluctuated between belief in the existence of the popular gods and a providence of which they were the agents (although the entire legendary tradition was rejected) on the one hand, and an absolute negation of these gods on the other. The former appears to have been the point of view, e.g. of Tacitus. In discussing the Jewish religion, he expresses the most decided antipathy to all that tended to neglect of the hereditary worship and to contempt of the gods. He believed that they not only carried out the unalterable laws of nature, but also directly interfered with the course of events, and announced the future by omens. Quintilian was one of that very numerous class which combined polytheistic views, the result of habit and education, with monotheistic, neither possessing the energy to define its convictions with clearness and precision, nor feeling the need of so doing. In his case the idea of animated nature, of ' the god, who is the father and creator of the world ', thrust belief in the ' immortal gods ' into the background ; but he firmly believed in a Providence, and also apparently in the prediction of the future by oracles and signs.

The elder Pliny is the most decided in his negation of the

popular belief. Thinking that he ought not to pass over, in his description of the Cosmos, 'the incessantly discussed question of the essence of the divinity', he has recorded the answers most commonly given at the time. So far as he himself is concerned, God and nature are inseparable; he regards nature as 'the mother of all things', who so often reveals herself to man in chance, which one might be tempted to designate as the deity to whom discoveries and progress are chiefly due. But reason leads us to regard as the real divinity the 'sacred, boundless and eternal' Cosmos, which is at the same time 'the work of nature and nature herself'; the soul and guiding principle of the world being the sun. Consequently it is only weakness that makes men inquire into the image and form of the divinity. Whoever the divinity may be (if indeed one exists outside nature), and wherever he may dwell, he must be all strength, all mind. It is even more foolish to believe in innumerable gods and to deify human qualities, such as concord, chastity, hope, honour and clemency; mankind, weak and weary, conscious of its own infirmity, has split up the divinity, so that each man may worship that aspect of him of which he chiefly stands in need. Hence we find the same gods worshipped under different names among different peoples, and an infinite number of gods amongst the same peoples, even diseases and evils, such as fever and orphanage, being worshipped from fear. Now since in addition there exists a belief in tutelary gods and goddesses of all individual men and women, there would seem to be more gods than human beings. Mythology is nothing but childish drivel; it is the height of impudence to attribute to the gods adultery, strife and hatred, and to believe in divinities of theft and crime. Revelation of the divinity consists in man working for humanity, and this is the path of eternal glory in which the heroes of ancient Rome formerly walked, and in which, following in the footsteps of the divinity, Vespasian and his sons still walk, lending aid to the exhausted world. It is a very ancient custom to show gratitude to the benefactors of humanity by elevating them to the rank of gods. As a rule the names of the gods, like those of the stars, are borrowed from men; for how could there be a list of celestial names? Can it be believed that the supreme power, whatever it be, takes thought for human affairs? would it not

be degraded by so melancholy and complicated a task ? How can we decide whether it be more profitable for the human race to hold this belief or not, when we see that some take no heed of the gods, while others live in awe of them or are the slaves of disgraceful superstition ? To make the idea of the divinity still more uncertain, mankind has invented a power intermediate between two opposite conceptions of it. This is Fortune, the ever-shifting, wandering, inconstant, uncertain, changing, generally regarded as blind, the patroness of the unworthy ; consequently, chance¹ itself is honoured as a goddess. Others reject even this principle, and assign all events to their constellations, and believe that the decrees of the divinity are issued irrevocably once for all. This view has begun to gain ground, and is eagerly approved of by a large number of persons, both learned and unlearned. Hence belief in countless portents embarrasses mankind, deprived of insight into the future, and the only thing certain is, that there is nothing certain, and that no creature exists that is more arrogant and at the same time more pitiable than man. Other creatures know no wants but those which kindly nature of itself supplies, and never think of death. But undoubtedly belief in the guidance of human affairs by the gods is beneficial to society, as also the conviction that evil deeds are infallibly punished, even if tardily, owing to the numerous claims upon the deity ; and that man cannot have been created next to God in order to be degraded to the level of the brutes. But even God cannot do everything ; herein lies a special comfort for man in his imperfect state. Even if he so desired, he cannot inflict death upon himself, the greatest blessing that nature has bestowed upon man amidst the many evils of life ; he cannot grant mortals immortality, or recall the dead to life ; he cannot bring it to pass that one who has lived has not lived, or that one who has filled offices has not filled them ; he has no power generally over the past except to cause it to be forgotten ; and (to use a less serious illustration) he cannot make twice ten not twenty, and the like. Hence the might of nature is indisputably proved, and is shown to be that which we call God. Such are the opinions of Pliny.

If the negation of the popular belief in most cases was directly or indirectly an effect of philosophical influences, there

¹ Reading *Fors* for *Sors*.

were also philosophical tendencies with which it was not merely completely reconcilable, but which even served to support it. Stoicism, which perhaps exercised a wider influence than any other system at that time, endeavoured to reconcile faith and philosophy in its theology, and to justify the popular religion scientifically by distinguishing the highest God, the creator and autocrat of subordinate gods, the divine power considered as a unity pervading the All, from their countless manifestations and their effects, and further assumed 'demons' as beings intermediate between gods and men. Everything, says Epictetus, is full of gods and demons. The offensive aspects of legendary tradition were removed by ingenious allegorical interpretations. In addition, Stoic theology recognized continuous revelations of the divine powers in the form of oracles, portents and the like ; it may therefore be assumed that a large number of the followers of the Stoa adhered more or less strictly to the traditional belief, and that educated men like Marcus Aurelius, who would not live in a world without gods, preferred this school to all others, since it offered a solution of the conflict between faith and reason.

Consequently, even in the first century, those who had received a philosophical education were not altogether hostile to the popular religion. And although the literature of the period, like that of the eighteenth century, is dominated by tendencies hostile to belief, they did retain their influence beyond the century. The tide of the anti-Christian tendencies of the eighteenth century, after it had risen to its greatest height, sank rapidly and was succeeded by a powerful ebb, which irresistibly carried along with it a great part of the educated world. Similarly, in the Graeco-Roman world, we find the predominating tendencies of the literature of the first century succeeded by a strong reaction in the direction of positive belief, which gained the upper hand and affected the same circles ; at the same time, belief itself frequently degenerated in many respects into crass superstition, a yearning for the miraculous, pietism and fanaticism.

The development of the theory of 'demons', also adopted by the Stoics and eminently characteristic of the religious tendencies of the period, by the Platonists after the first century, is the most striking proof of the need of bringing the popular belief into harmony with a purer theology—a need

more deeply and generally felt by the educated classes than ever before. The idea of this 'intermediate kingdom' of demons, founded upon the old Orphico-Pythagorean tradition, was developed in such a manner that philosophers who believed 'accepted the substitution of demons for popular gods, in all cases in which anything was asserted of the latter which was considered irreconcilable with the pure idea of God, while not desirous of absolutely denying it on that account'.

Although this offered the widest scope to imagination, the Platonists of the second century are completely in agreement upon all the essential points of demonology, which they regarded with marked favour ; evidently the theory had already gained a kind of dogmatic authority amongst the believers of the educated world. Plutarch says : Those who have discovered the existence of a race of demons, beings intermediate between gods and men, who unite both and keep up the connexion between them, have solved more and greater difficulties by this doctrine (whether it originates from the school of Zoroaster, from Orpheus, from Egypt or Phrygia) than Plato by his theory of matter. According to Plutarch's view, any of the three lower classes of intelligent beings, in proportion as they attain perfection, can rise to the next higher, and finally to the highest class ; the souls of the best men can become heroes, the heroes demons, and individual demons (such as Isis and Osiris) gods. For in the triple order of powers that are the agents of Providence the demons come last. The highest power is the intellect and will of the original divinity, creator and orderer of the universe from the beginning ; next to him, the gods of heaven, the general directors of human affairs ; and, lastly, the demons, special 'guardians and overseers'. Differing from other Platonists, Plutarch regards the demons as not necessarily immortal ; he relates as an undoubted fact, personally vouched for by a trustworthy authority, how the news of the death of the great Pan was received by his fellow-demons with loud lamentations ; the learned men at the court of Tiberius interpreted this as referring to Pan, the son of Hermes and Penelope. The demons are capable of likes and dislikes, and also liable to be affected by evil ; the traditional stories of abduction, wandering, concealment, banishment and menial service that are told of the gods, the sufferings of Isis and Osiris and the like, in reality

do not refer to the gods, but to the demons. The latter are called by the name of the gods with whom they are associated, and are thus confounded with them ; some, however, have retained their real name. The evil and malignant demons rejoice in gloomy, mournful rites, and if these are accorded them they abstain from further mischief ; the good and kindly, as Plato has already taught, act as messengers and interpreters, who carry upwards to the gods the prayers and wishes of mankind, and bring down to earth oracles and divine blessings. Consequently the demons often descend from the regions of the moon to administer oracles, to take part in the celebration of the highest mysteries, to punish crimes, to bring deliverance in war and perils by sea ; if in so doing they allow themselves to be influenced by anger, partiality or jealousy, they are punished by being hurled down to earth again and transferred to human bodies.

Quite in the same sense Apuleius and Maximus of Tyre represent the demons as mediators between the world of gods and men. According to the former, their bodies are neither earthy nor purely ethereal, but something between the two. Hence it is only exceptionally and of their own will that they are visible to men, like the Homeric Minerva to Achilles. The poets truly represent these demons as lovers and haters of men, whom they favour or injure. Hence they feel pity, indignation, joy and sorrow, and are subject to all human emotions generally, all of which are quite incompatible with the eternally unchangeable tranquillity of the gods of heaven. Apuleius also explains differences of cult and sacrifice by differences of 'sensual' impressionability. In accordance with their nature, they delight in daily or nightly, public or secret, cheerful or gloomy sacrifices and rites ; thus the Egyptian demons take pleasure in dirges, the Greek in dances, the barbarian in noisy music. Hence the great diversity in the forms of religious worship in different lands : processions, mysteries, sacerdotal acts, prayers of those offering sacrifice, images and attributes of the gods, position and usages of temples, blood and colour of the victims. All these have their importance according to the custom of each country, and we often learn by dreams, prophecies and oracles that the deities (i.e. the demons) are wrath if anything in their worship is neglected through carelessness or arrogance.

With the exception of a few downright atheists, says Maximus of Tyre, all mankind is united in belief in one God, the king and father of all, and in many gods, his children and fellow-rulers ; the latter are not 30,000 in number, as Hesiod says, but as numerous as the natures of the stars in heaven, or as the demoniacal essences in aether. These divine beings, some visible, others invisible, share the sovereignty of the highest god ; those most akin to him gather round his gates as domestics and companions of his table, and serve him as messengers ; others are subservient to these ; others again play a still more subordinate part. Thus a continuous hierarchy of superhuman beings keeps up the connexion between the human and the divine, and the subordinate gods (the demons) act as interpreters and mediators between human weakness and divine sovereignty. 'It is they who appear to men, speak to them, associate with them, and render them the assistance which human nature always needs from heaven.' 'They heal sicknesses, give advice in trouble, reveal what is hidden, give help in work and guidance on the road ; some exercise their power in the towns, others in the country, some on land, others on sea ; others are protecting spirits of individuals ; some are terrible, others benevolent to man, fond of civil life or war ; the natures of demons are as numerous as the natures of men.' To these belong in particular human souls separated from the body, who are unwilling to abandon their earthly desires and occupations even in a higher existence ; thus Asclepius still practises the healing art, Heracles performs deeds of might, Dionysus continues his revels, Amphilochous prophesies, the Dioscuri journey on sea, Minos administers justice, Achilles arms himself. Maximus declares that he himself has seen the Dioscuri, like shining stars, guiding a storm-tossed ship, and that Asclepius appeared to him, not in a dream, but when he was awake. This makes it easy to understand how opponents of Christianity like Celsus refused to see any difference between the demons and angels of Christian and Jewish belief. Thus the theory of demons enabled the pious to hold firmly by the popular belief in its widest extent, without coming into collision with the demands of reason, and even in its literal sense, without having recourse to the violent and artificially allegorical interpretations of the Stoics, which were regarded with suspicion by the strictly

orthodox. In this roundabout way a large number of educated people returned to the 'legends and marvellous stories which seemed to have been finally disposed of by criticism, and, according to Strabo, were only necessary for the masses and the female sex. The search for and discovery of such a compromise between the popular religion and a more rational theology presupposes a widespread, indestructible attachment to the gods amongst the philosophically educated, an earnest longing to find satisfaction in the positive belief of former times which no abstraction, however sublime, could afford.

This is fully confirmed by the general impression produced by Greek and Roman literature in the second century, in which the religious standpoint of the educated world is reflected. Amongst Roman writers, Juvenal and the younger Pliny seem to have followed the Stoics most closely, both in general and in their religious views in particular; Pliny's strong belief in dreams and prognostics corroborates this. We also know that both took part in religious worship; Juvenal, in fulfilment of a vow, offered a dedication to Ceres Helvina, who was worshipped in his native town Aquinum; Pliny had a temple built. Tacitus struggled against grievous doubts, although (as already noticed) he never entirely broke away from religious belief. Suetonius' childish faith in portents and miracles leaves no doubt as to the firmness of his belief in the gods. In the case of Gellius, to judge from his general intellectual tendencies and those of his teachers in Greece, it may at least be considered probable that he strictly adhered to tradition in the matter of belief; Fronto, who when Faustina was ill prayed every morning to the gods and asked and received from them in dreams suggestions for curing the gout, undoubtedly did so. The *Self-Contemplations* of Marcus Aurelius breathe a spirit of genuine piety; the writings of Apuleius are pervaded by a mystic religious bliss; Aelian endeavoured by his own works to propagate his orthodoxy and infatuation for miracles, with which was combined a passionate hatred of unbelief.

But the Greek literature of the second century, far more than the Roman, bears the stamp of a period whose intellectual conditions were characterized by a newly awakened religious life. Amongst the Greek writers of this time, with the exception of Lucian, only Galen, with his pantheism founded on

Stoic ideas, stands aloof from the popular belief ; love, he says for example, is a purely human affection, and is not brought about by a little youthful demon with burning torches. Dio of Prusa is far nearer to the popular belief with his undoubting faith in the divinity (and apparently in individual gods) and a providence exercised by him ; he was even convinced that those who held reprehensible opinions on divine things were of necessity worthless and abandoned creatures. The pantheism of Epictetus also accepted polytheism, and his pupil Arrian appears to have adhered to the popular religion. All the other writers take their stand on a distinctly positive belief in the gods, however different in form and conception in each individual case. Plutarch did not consider it advisable to inquire into reasons for belief in the gods ; the old belief inherited from their fathers was a sufficient foundation for piety ; should it be shaken, its stability would be endangered. Further, there was hardly any limit to his belief in miracles, although he warns people against excessive credibility, and attempts a semi-rationalistic explanation of such marvels as the sweating, sighing and bleeding of images of the gods, and their speaking with human voice. Yet he asserts that divine nature is so entirely different from human, that it is not unreasonable to expect it to perform what is impossible for man. Pausanias' simple and orthodox faith, certainly sincere, even if deliberately adopted and artificially maintained ; Artemidorus' unshakable belief in miracles ; Maximus of Tyre's crass supernaturalism ; Aristides' enthusiasm, almost amounting to religious fanaticism—all agree in belief in a providence wonderfully exercised by numerous individual gods. Only a widespread blind belief and childish superstition could call forth the anti-religious writings of Lucian, whose indefatigable and repeated attacks could not be considered as merely 'a fight with shadows'. Still less does the fact that Lucian was not subjected to persecution allow us to infer a general indifference to the religion which he ridiculed. Although his ridicule no doubt deeply wounded the religious feeling of the orthodox, it could not appear so deserving of condemnation to them as the mockery of a religion based upon revelation must appear to those who believe in it. In paganism there were not only no dogmas, but not even a church, which might have interfered to protect the threatened faith against its

aggressors. Certainly Parny's *Guerre des Dieux*, which surpasses Lucian's *Dialogues of the Gods* both in wit and in cynical mockery of all that is most sacred, appeared (1799) in France before the restoration of Catholicism, but no attempt was subsequently made to suppress it; its author became a member of the *Académie française* in 1803, and died in 1814 without having been subjected to persecution.

The emperors of the second century also were evidently under the influence of the prevailing intellectual tendency, and on their part encouraged it by their example and their earnest solicitude for religion. Pliny praises Trajan because he did not, like Domitian, claim to be honoured like a god, but only entered the temples of the gods to worship them. Hadrian, even in the opinion of a man of such exaggerated pretensions in this respect as Pausanias, showed great zeal in his veneration for the gods. Antoninus Pius never allowed a sacrifice to be performed by a deputy; a memorial set up in his honour in 143 by senate and people is dedicated to him 'by reason of his unusual and scrupulous conscientiousness in regard to the usages of the state religion'. Marcus Aurelius strove in every respect to follow the example of his predecessor, especially his piety and freedom from superstition, that he might be able to meet death with an equally clear conscience. He himself, who did not care to live in a world without gods, appears to have recognized the gods of all nations as equally powerful and equally worthy of reverence. When the war against the Marcomanni broke out he summoned priests from all countries to Rome and ordered them to perform foreign rites; during the war, by direction of an oracle of Alexander of Abonuteichos, two lions were thrown alive into the Danube by his orders. He was so extravagant in offering sacrifice that a message from the white oxen was sent to him: 'If thou shouldst conquer, we are lost!'

The nature of the newly awakened religious life of the second century must here be illustrated by a few specially characteristic phenomena, which will enable us to recognize to what an extent religious belief was strengthened. Claudius Aelianus of Praeneste, about the beginning of the third century, wrote two works in Greek on *Providence* and *Divine Manifestations*, the spirit of which may be gathered from numerous fragments. He endeavoured to prove 'that those

who assert that the deity does not exercise providence on earth are more foolish than children' by numerous stories of miracles, oracles and other direct revelations of divine power, especially miraculous rewards bestowed upon pious believers, or terrible and miraculous punishments of atheists and unbelievers. In these narratives he frequently apostrophizes those who despise religion: 'What do you say to this, you who think that Providence gropes blindly about, or is nothing but a myth?' Philosophers hostile to religion are by turns objects of pity and execration: 'O Xenophanes, Diagoras, Hippo, Epicurus and company, and all other miserable wretches hated of the gods, be ye accursed!'

A few specimens will give an idea how the insipid and unctuous language affects the pious simplicity of the good old days. 'Euphronius was a miserable fellow, who delighted in the gossip of Epicurus, which taught him atheism and wickedness.' This man had a severe attack of pneumonia, and, suffering greatly, at first called in the aid of a physician. But the art of the physician could do nothing to arrest the disease. When Euphronius began to fear the worst, his friends removed him to the temple of Asclepius. After he had fallen asleep there, it seemed to him that one of the priests told him that there was only one way of salvation and one remedy for the ills which oppressed him; he must burn the writings of Epicurus, knead the ashes of these godless, sinful and effeminate books with moist wax, smear his belly and breast therewith, and tie bandages round them. He told all that he had heard to his nearest relatives, who were full of joy, because he had not been rejected with contempt by the god. Thus the atheist was converted and was ever afterwards a model of piety for others. This book contained numerous instances of wonderful cures of both pious and godless men, accompanied by edifying remarks. 'Aristarchus of Tegea, the tragic poet, fell ill and was cured by Asclepius, who commanded him to bring a thank-offering. The poet brought the god the play named after him. But how can the gods demand and accept a reward for restoring a man to health? In their love and kindness they grant us the greatest blessings for nothing; they allow us to see the sun and to share the all-sufficing brightness of so mighty a god without reward; they give us the use of water and the countless productions and varied

assistance of fire to aid us in our work, and the vital nourishment of air. Consequently their only wish is that we should not be unmindful or ungrateful even in less important matters, and thereby, in fact, they make us better.'

The following story of a game-cock of Tanagra, which had been injured in one foot, may serve to show to what childish credulity this mania for miracles could lead. 'The cock, in my opinion impelled by Asclepius, came hopping on one leg to his master, and in the morning when a hymn of praise was being sung to the god he took a place in the choir as if it had been assigned him by the leader, and joined in the singing as well as he could, in perfect harmony with the rest. Standing on one leg, he held out the other, injured and mutilated, as if to show what he had suffered. Then he sang to his saviour with all his might and begged him to restore the use of his foot.' Having been healed in accordance with a revelation of the god, 'he flapped his wings, strutted about, lifted up his head, shook his crest like a proud warrior, and showed that Providence also watched over the brute creation'. In contrast with the stories of salvation as the result of faith, we find examples of the terrible consequences of unbelief and sin against the gods. A man, who 'with longing eyes' desired to look upon certain mysteries without having been initiated, climbed to the top of a stone, fell down from it and died. Another unhappy wretch, enervated by the doctrines of Epicurus, forced his way into the sanctuary of the temple at Eleusis, which no one but the hierophant might enter; as a punishment he was smitten by a fearful malady, and endured such dreadful torments that he longed to tear his accursed soul from his body. Sulla, who destroyed the temple of Athena at Alalcomenae, was slowly eaten by worms ('according to others, by lice'). Lastly, a Sculptor, 'who had eyes for gain only, not for piety', having received a sum of money to execute the statue of a god, produced a second-rate work, small and unsightly, in marble of inferior quality; he was afterwards punished in body, 'as an example to all and a warning never to do the like again for the sake of profit'.

Aelian was also the author of a *History of Animals*, in which 'the unerring instinct of the lower animals as a purer manifestation of nature is held up to mankind as a moral example'. Elephants worship the sun, stretching out their trunks to it,

like hands, when it rises ; but men doubt whether there are gods, or, if they exist, whether they have any care for us. The mice on an island in the Black Sea sacred to Heracles touch nothing which is dedicated to him ; when the grapes intended for his offerings are ripe they leave the island to escape the temptation of nibbling them, and do not return till the vintage is over. Hippo, Diagoras, Herostratus and the other enemies of religion would certainly no more spare these grapes than anything else which is dedicated to the gods. In another work Aelian praises the barbarians, who have not become alienated from the faith by excessive education like the Greeks ; amongst the Indians, Celts and Egyptians there are no atheists like Euhemerus, Epicurus, and Diagoras.

If the writings of Aelian acquaint us with the most extreme and unbending, indeed fanatical, orthodoxy of the pagan world, the confessions of the rhetorician Publius Aelius Aristides of Asia Minor, a man ranked by his contemporaries and posterity amongst the greatest intellects of his time, afford remarkable evidence of the intensity which religious exaltation could attain, when subject to special influences. Aristides, who was born about the year 129, came of a wealthy and distinguished family, and was the son of a priest of Zeus ; ailing from his youth, he early devoted himself with passionate eagerness to study. The nervous irritability of his delicate nature was fostered and heightened by excessive work and the excitement inseparable from the profession of sophist, which was more than any other adapted to develop most strongly his natural vanity and ambition. About 152 he was attacked by an illness, which lasted about twenty years, of which he has given a detailed account in the *Sacred Orations*, composed after his recovery (about 175). During this illness he developed a spirit of enthusiastic piety, which in course of time became concentrated upon a more and more exclusive veneration for the healing god Asclepius, compared with whom he regarded the rest of the gods as insignificant. Having frequented his temples and the society of his priests for years in the endeavour to find a cure for his disease, he thought of nothing else, whether awake or sleeping ; for, in accordance with the general belief, the god gave advice in dreams to those who sought his aid and passed the night in his temple. From that time the centre of Aristides' entire existence was his

dreams, which the god had commanded him to set down in writing. For Aristides the fulfilment of this command was a sacred duty ; when he was too weak to write, he dictated to others. Of course he followed all the instructions, even the most absurd, which he believed to have been given him in dreams, whereby he probably only aggravated his complaint ; he confesses that he grew weaker and weaker. Sometimes he imagined himself neither asleep nor awake, but between the two, in which condition he was corporeally conscious of the proximity of the god ; his hair stood on end, his eyes filled with tears of delight, and his heart swelled with pride—a state of mind which no one could describe, which the initiated alone know and understand. Amongst other things, the god ordered him to bathe in the river during the winter, in spite of frost and the north wind. After his bath he felt a wonderful relief : ‘ his temperature was even and natural ; a gentle warmth invigorated his entire body ; he had an indescribable feeling of comfort, in which everything gave way to the sensations of the moment ; he saw nothing, although his eyes were open ; he was absolutely with God ’. However terrible his sufferings, he regarded them as nothing in comparison with the honour of which the god had deemed him worthy ; any one who rightly estimated it would consider that he deserved to be congratulated rather than commiserated.

Although the religious extravagance of Aristides is most intimately connected with his exaggerated pride, his statements remind us in more than one respect of the confessions of Christian pietists. We may refer to his continual self-contemplation, his self-exaltation and self-deception, his fixed idea that he was the recipient of special favour and that he was one of the god’s elect, and the spiritual presumption which was the inevitable result. In a dream he saw the image of the god with three heads, entirely surrounded by a flame of fire (the heads excepted). The god signed to all the other worshippers to withdraw, but ordered him to remain. The enraptured Aristides exclaimed, ‘ O thou who hast no like ’, meaning the god ; who replied : ‘ It is thou that I call ! ’ ‘ These words, O lord Asclepius, are better than all human life ; all my sickness, all my gratitude are nothing to them ; they give me power to do what I will.’ In another passage he says : ‘ I also was one of those upon whom the grace of the

god bestowed, not once but many times, a new life in different forms, and who therefore regard sickness as salutary.' He would not exchange what the god had granted him for all the so-called happiness of mankind.

Convinced that he was one of the god's elect, he saw the hand of the divinity in everything, and special dispensations of providence and miraculous happenings in every-day events. He believed that the god accompanied him at every step, summoned, dispatched or detained him, gave him commands and commissions, or forbade him to do this or that. When Smyrna was destroyed by an earthquake, he writes to the two emperors that it was the god that drove him forth from the city and conducted him to a place of safety. It was the god who, contrary to all expectation, saved his old nurse Philumenē, whom Aristides dearly loved, on numerous occasions, once from a serious illness. After the death of another Philumenē, the daughter of his foster-sister Kallitychē, it was revealed to him in a dream that she had sacrificed body and soul for him. Her brother Hermias also, the dearest of his wards, 'so to speak nearly died for him'; he died, as Aristides afterwards learnt, on the very day on which he recovered from an attack of the great epidemic (subsequently communicated to the west by the soldiers of Verus). 'Thus my life hitherto was a gift from the gods, by whose divine aid I afterwards received a new life, as compensation for the old.' At that time 'the saviour (Asclepius) and lady Athene had visibly preserved him'; the latter had appeared to him in the form of the statue of Phidias, a sweet perfume was wafted from her *aegis*, he alone saw her, and called out to two friends and his nurse, who were present; they thought he was mad until they recognized the power emanating from the goddess and heard her words, as he had done. Monks of the middle ages, who read the discourses of Aristides, expressed in marginal notes their indignation at the folly, nay, the insanity of the man, 'who had a reputation for wisdom', and yet could abandon himself to such childish fancies.

The religious reaction against the influences of criticism and philosophy, the complete restoration of a positive belief in the gods in the minds of the educated, is proved by the phenomena already described. The fact itself shows that the lamentations over the supposed decay of belief were only caused by

the superficial and strictly limited tendencies of the age, which were driven back by powerful counter-tendencies. But there is nothing to show that the tendencies hostile to religion, even when strongest, ever spread beyond the narrow limits of educated circles. To all appearance they never made a deeper impression on the masses than the anti-Christian literature of the eighteenth century on the Christian belief of the European peoples in general.

The monotheistic, pantheistic and atheistic views of the world, so eloquently pleaded by their supporters in the literature of the first century, left the belief of the people in the old gods firmly rooted in the spiritual life of millions, untouched or at least unshaken. Despite all the alterations and developments, all the losses, disturbances and amplifications which affected religion, it held its ground and ever renewed itself in its two main forms. The first, prevalent in eastern lands, had developed within the Greek world ; the second, that spread over north and west as far as the influence of Roman civilization extended, had its origin in a mixture and fusion of Greek and Italian elements that it took centuries to complete. In both forms belief in the gods maintained itself for nearly five hundred years against Christianity, by which it was finally overwhelmed. So protracted a resistance is alone sufficient to prove the still unweakened vitality of the old belief. This vitality is equally manifest in the adoption and assimilation of numerous heterogeneous, even opposing religious elements, which, however, were unable to alter its character or to bring about its dissolution or decomposition. Lastly, by its continued creative productivity polytheism showed that it was still a living force.

Undoubtedly the adoption *en masse* of heterogeneous religious elements has been generally regarded hitherto as a symptom and cause of the decay of Graeco-Roman religion. Such a view, however, would only be justified if it could be proved that the belief in the old gods had been abolished, shaken, or essentially changed by the worship of new, foreign deities. No such effect is perceptible. There is no more reason to maintain that the mere increase in the number of the divinities of a polytheistic system presupposes a decline of faith or a weakening of its intensity, than that the fresh canonizations of the Catholic Church were due to a disappear-

ance of belief in the old saints, or that they were in any way prejudicial to it. Certainly the contrast between Oriental and Graeco-Roman cults is so profound, that a union of the two is difficult to understand. To our way of thinking, the former, as compared with the latter, appear strange and singular, and in some respects monstrous; and the contrast between the religious ideas on which cults and usages are founded in the two cases seems even greater. Gloomy, melancholy and mysterious ceremonies, extravagant ecstasy, self-renunciation and unlimited devotion to the deity, self-sacrifice and expiation as conditions of purification and consecration—all these elements were originally as foreign to Greek and Roman belief as they were most deeply rooted in all Oriental religions. Most sharply contrasted with this, and characteristic of Greek and Roman faith and cult, is the fixed limitation of the idea of God, the clear view of the world of gods, the relation of believers to the divinity, free from all excess, confidential and strictly regulated, the general accessibility, unpretentious simplicity, and cheerfulness of the religious services. And yet Greek and Roman believers never found these profound contrasts an absolute hindrance to amalgamation. It is well known that Oriental elements made their way into Greek religion at a very early date; into Rome at least after the second Punic war. If such was the result of a superficial contact of nations, their intimate union and fusion in the world-wide empire of Rome must of necessity have resulted in a mixture of gods in the widest extent, unaccompanied, however, by any alteration in the nature and intensity of religious belief. The world of gods, from the first to the last days of paganism, was and continued to be a domain only very imperfectly known to believers, since the light of revelation had never been thrown upon it; the belief that it could contain the most varied figures and manifestations was the more natural, since one of the essential attributes of the deity was the power of assuming any form at will. With this unlimited power of expansion in ancient polytheism was combined the tendency, already emphasized to a surprising extent in Herodotus, to recognize native gods in foreign ones. This tendency so completely dominated pious believers that it only allowed them to perceive what was really or apparently similar in the different religions, and completely blinded them to the sharpest and most glaring contrasts.

It was ever characteristic of ancient polytheism to endeavour to supplement its own imperfect knowledge of God by the cults of foreign nations ; in Greece, as in Rome, entirely heterogeneous cults were adopted at times when the idea of a diminution of the power of religious belief cannot be entertained. The fact that this was less frequently the case in earlier antiquity is clearly not to be explained by a stronger national belief at that time, but by the more restricted intercourse between nations. As such intercourse developed, the exchange of cults proportionately increased and multiplied. The ancient world and its polytheism entered upon their last phase with the establishment of the universal empire of Rome. The incessant wanderings and movements, the continual ebb and flow of the inhabitants of this enormous expanse of territory, brought about an unexampled and promiscuous intermixture of races and nations with their religions and cults. From the Thames to Mount Atlas, from the Atlantic to the Euphrates, all the provinces contained worshippers of Isis and Osiris, Baal, Astarte and Mithras, who deliberately or by their example spread the worship of their gods ; and in this manner these and other Asiatic nature divinities, under different names and with different forms of ritual, gained countless proselytes. Memorials have been found relating to the cult of the so-called Jupiter of Dolichē in Commagēnē, a sun-god identical with Bel, worshipped at Palmyra, in Dacia, Pannonia, Noricum and Raetia, Germany and Gaul, Britain, Numidia and Dalmatia ; the largest number is in Italy (twenty-nine, of which twenty-one were found in Rome, where in the second and third century this god had a sanctuary on the Aventine and another on the Esquiline). Throughout the Roman empire the cults of Egyptian divinities were most widely spread ; they made their way to the East (where their monuments are most numerous, especially in the Crimea) directly from Egypt, to the west and north by way of Italy (especially Aquileia, where a district was called after Isis and Osiris). Even in the Rhine lands they are frequently mentioned on monuments. A figure of Isis in Jura limestone, most probably belonging to the first century, made into a romanesque capital in the church of St. Ursula at Cologne, perhaps came from a chapel of the goddess in that city. Egyptian monuments of all kinds, especially statuettes of Apis, Ushebtis (little models of de-

ceased persons in the form of mummies), and scarabs found there or in the neighbourhood, may have been set up in this or other sanctuaries, in order to give them an appearance of genuineness, without any real appreciation of their actual significance. Altars of Isis and Serapis have come to light in different places ; the gravestone of an Egyptian named Horus, son of Pabek, who served in the Roman fleet, at Cologne. Chnodomar, King of the Alemanni (defeated by the Emperor Julian in 357) gave his son Agenarich the name of Serapio because, when detained as a hostage in Gaul, he had been initiated into 'Greek secrets' (i.e. the mysteries of Isis). These cults penetrated into the most remote mountain valleys ; in the Non valley in the southern Tirol, during the festivals of Isis and Serapis, the mourning of the goddess for her lost spouse was represented. 18

If there can be no doubt that in many individual cases the new cults drove the old into the background, such local or individual preference for certain divinities could no more than at any other time effect any permanent alteration in religious belief as a whole. Even individuals who, as a rule, did not aspire to a comprehensive worship of the entire world of gods, but confined themselves more or less exclusively to certain particular divinities, could very well combine the national and foreign cults without prejudice to the former. Domitian was a worshipper of Isis and Serapis, to whom he built temples at Rome ; according to Pliny, even at his table his guests were struck by 'practices due to foreign superstition'. Nevertheless he insisted that no violation of the traditional worship should go unpunished ; and Martial says that during his reign the honour of 'the ancient temples' was preserved, although the emperor himself displayed a 'superstitious veneration' for Minerva before all other divinities.

The constant change in religious conditions was accompanied by a similar change in the idea of superstition, by which was understood an erroneous belief chiefly founded upon an exaggerated awe of God, but especially idolatry and the worship of foreign divinities not considered worthy of recognition by the state. Hence the idea of superstition must have been at all times not only relative, but infinitely varied, according to each individual conception of it. The worship of the Egyptian divinities was forbidden by the senate in 58

B.C. as a 'disgraceful superstition', and their altars were destroyed; but the prohibition had no more effect than the repeated interference (in 53 and 48) with the same worship, which at that time had already made its way to the Capital, or the banishment of the deities from Rome by Agrippa in 21 B.C. and the persecution of their votaries under Tiberius in 19 A.D. The fact that they had ever been considered inferior to the Roman divinities was gradually forgotten. Minucius Felix speaks of their cult and that of Serapis as 'a cult that was formerly Egyptian, but is now Roman.'

Like the Egyptian, many other Oriental cults, which had been at first generally despised as superstitious, were gradually accepted by increasing numbers on a footing of equality with the national cults, as handed down by tradition from time immemorial. The time necessary for naturalization no doubt depended in each individual case on the most various, and in part incalculable, influences; but first and foremost on the intimacy, continuity, and extent of the relations between the votaries of the two religions. The cult of the Persian Mithras, the god of light, with which the Romans first became acquainted in the war against the pirates, was already in existence in the reign of Tiberius, but did not come into vogue until after the time of Hadrian and the Antonines. Thus it probably took about the same time as the Egyptian cults (known to the Romans about 150 years earlier) to obtain its widest recognition. Mithras monuments have been found in large numbers from the mouth of the Danube to the north of Britain and on the borders of the Sahara, the largest and most interesting of them in Germany. His cult may not have enjoyed such esteem as that of the Egyptian divinities, but Origen certainly exaggerates when he calls it obscure in comparison.

Many cults may have been for a longer time looked upon as superstitious because their practices appeared particularly strange and singular, repulsive or ridiculous. Plutarch, who regarded all the peculiarities of the Egyptian worship as worthy of reverence, despised a number of Asiatic religious customs as superstitious, especially rolling in mire, keeping the sabbath, prostration, and other 'ridiculous exercises and tortures, speeches and gestures, the result of fear of the gods, juggleries and enchantments, vagabondage, drum-beating,

impure purifications, dirty mortifications, barbarous and illegal punishments and outrages in the temples'. The fact that long familiarity with the Egyptian cults had removed the foreign atmosphere which still surrounded others, essentially contributed to this difference of opinion ; to all appearance the conception of a foreign cult as a contemptible superstition or a venerable religion depended upon the length of time it had been known. According to Suetonius, Augustus showed the greatest reverence for the old and recognized foreign cults (such as the Eleusinian mysteries), but treated the rest with contempt. But if Suetonius includes the Jewish faith amongst the cults despised by him, he is in error. Augustus (so also Livia) not only sent valuable dedicatory gifts for the temple at Jerusalem, but instituted the sacrifice of a daily burnt offering in his name, consisting of two rams and a bull, the discontinuance of which before the outbreak of the Jewish war was the first act of open revolt against Rome.

Further, the judgment passed upon foreign cults may have been affected to a certain extent by the relative importance of the people who professed them. Enlightened Romans, at least, could have had no hesitation in despising the cult of a remote, unknown and barbarous people. A veteran, who entertained Augustus at Bononia, was asked by the prince whether it was true that the first person who had plundered the temple of the goddess Anaitis (worshipped in Armenia, Cappadocia and Media) had been struck blind and died a paralytic. The veteran replied that he himself was the guilty person, that all his fortune came from the plunder of the temple, and that Augustus had just dined on one of the legs of the goddess. The increasing admixture of nationalities in the Roman Empire continually extended the sphere of influence of foreign cults, and a much smaller proportion of them were regarded as mere superstitions by the orthodox. Although this admixture of gods did not reach its height until the third century, it had already made great progress about the middle of the second century. Hadrian, who showed the greatest respect for Roman and Greek cults, 'despised foreign cults' ; no definite statement is made, but the Egyptian certainly cannot be included. During the reign of Marcus Aurelius, however, who, at the time of the general alarm caused by the Marcomannic War, summoned priests from all countries

and ordered them to perform foreign rites and all kinds of expiatory ceremonies in the city of Rome, the boundary line between foreign superstition and the national religion, both in Italy and Greece, was practically obliterated.

Certainly the ever increasing medley of the 'crowd of gods' excited the mockery of unbelievers more and more. Lucian frequently makes the mixed society of the world of gods the object of his satire. At a meeting of the gods, Hermes is ordered by Zeus to arrange the gods according to the artistic merit and intrinsic value of their statues. Thus Bendis, Anubis, Atys, Mithras and an Asiatic moon-god are allotted the highest places, statues of gold being preferred to those of marble; while, on the other hand, Atys and Sabazius, 'doubtful and alien gods', are placed at the end of the table at a banquet, by the side of Pan and the Corybantes. On another occasion the gods are discussing the claims of a number of candidates for admission to their company. Momus comes forward to speak and gives his opinion of the oriental divinities. He declares that Mithras, with his Median caftan and tiara, has no place in Olympus, he does not even know Greek and does not understand when his health is drunk. Still less ought the Egyptians to be tolerated; the dog-headed, barking Anubis in his linen garment, the oracle-giving bull Apis, the ibises, apes and goats. Momus accordingly makes the following proposal: Seeing that many unauthorized strangers, both Greeks and barbarians, have forced their way into the company of the gods, that the supply of ambrosia and nectar has begun to fail, that the great demand for them has sent the price up to a *mina* a jar, that strange gods shamelessly push themselves forward and turn the old gods out of their places, let a commission of seven fully authorized gods be appointed to investigate the claims of each of their colleagues. Zeus does not put the proposal to the vote, foreseeing that the majority would be against it, but at once declares it carried, and instructs all the gods to provide themselves with the necessary certificates for the coming examination, such as the names of their parents, a statement of their nationality, and the manner in which they have been admitted amongst the gods, and so forth.

It is often believed that the feeling which prompted this satire, the feeling that the admixture of absolutely hetero-

geneous cults was contradictory and even absurd, must have been widespread, at least among educated circles, at the time ; but there is no proof of this, nor does the state of religious affairs throughout the empire justify this assumption. The impression made upon us coincides entirely with that of Lucian and his like, simply because their attitude towards these phenomena, like our own, was one of complete impartiality ; they regarded Greek and barbarian gods alike as equally unreal, and they were able to criticize these monstrous productions of the domain of mythology with entire and absolute freedom. But this was the feeling and judgment of unbelievers only, who to all appearance formed only a minority even amongst the educated.

But the clearest proof that even the most highly-educated were little shaken in their national belief by the admixture of gods is to be found in the religious opinions of Plutarch. Even he, the priest of the Pythian Apollo, was as sincere a worshipper of the Egyptian gods as of the Greek. In the treatise *On Isis and Osiris*, addressed to a highly-educated priestess of Isis at Delphi, he declares that the gods are everywhere the same, ministering forces of a supreme world-ruling power, known by different names and worshipped in different ways by different peoples. Thus, Isis and her fellow-divinities have been known from time immemorial to all men, although some have only recently learnt to call them by their Egyptian names ; when Hesiod names Eros, Ge, and Tartarus as the first things after Chaos, he appears to have meant Osiris, Isis and Typhon. The origin of the theory, that the world is ruled neither by blind chance nor by one supreme intelligence alone, but by many powers compounded of good and evil, is unknown and lost in obscurity ; but its high antiquity and the similarity of the traditional account amongst philosophers, poets, theologians and legislators, in mysteries and ritual, among barbarians and Hellenes, is a weighty testimony in favour of its truth. Osiris and Isis are good powers, Typhon an evil one ; as to this all are agreed, but theological speculations have arrived at the most different results in regard to their real and proper nature. Some explain Osiris as the Nile, others as the principle of moisture generally, others as Bacchus, others again as the lunar world, the kindly, fructifying, moist light. According to Plutarch, no one of these inter-

pretations by itself is correct, but all must be taken together to arrive at the truth. The enigmas of Egyptian theology, which he believed to be indicated by the rows of sphinxes before the temples, did not discourage him, but all the more provoked him to investigate their true meaning ; such investigation should be undertaken in a pious and philosophical spirit, since nothing is more agreeable to the divinity than that man should attain to a correct knowledge of his nature. Thus he became intimately acquainted with the most repulsive Egyptian legends and the most singular customs of the country, especially animal worship ; he also discovered in the Greek cult customs analogous to the festivals of lamentation, and a profound symbolism in the form and ornaments of the *sistrum* (rattle) so generally used in religious ceremonies in Egypt. But though absorbed in the consideration of the monstrosities of Egyptian belief and cult, Plutarch's attitude towards the national divinities was not in the least affected ; for him they continued to be not only living, but the same as they had ever been. His belief in them was certainly different from that of Herodotus, but equally robust and sincere.

If educated men could find room in their conscience for foreign by the side of national gods, without injury or alteration of the belief in the latter, this must have been still more the case with the masses, who were even less conscious of any absurdity in the simultaneous worship of the most heterogeneous divinities. So indestructible was the vitality of the old Graeco-Roman gods, that their forms, however blended or obscured, still remained the same, and their personality was in no way affected. For this reason, belief in them had such firm hold on the souls of men, since it was attached by so many roots to the state religion, to art and poetry, to school, and to civilization generally, from which it ever drew fresh nourishment. Pausanias, for instance, says that the multitude believes what it has heard from childhood in choruses and tragedies.

And further : of all the gods in the world they were the most human, and the human heart felt most irresistibly attracted to them. They were not transformed in the imagination of believers into barbarian gods, but the latter borrowed more or less of the personality of the Graeco-Roman gods, in many instances even their names. Mithras and Elagabalus

of Emesa became Sol (the sun-god); Astarte of Carthage sometimes 'the heavenly virgin', sometimes 'the heavenly Juno'; the gods of Heliopolis and Dolichē, Jupiter. Similarly, in Palestine and the neighbouring districts, the gods of Phoenicia, Philistia and other countries received the name and form of Greek gods: Marnas of Gaza (a god of the heights, who bestowed rain and fertility) was identified by the western settlers with Zeus; Aumu the Syrian with Helios; Dusaris, the Nabataean born of a virgin, with Dionysus. The Roman inhabitants of the originally Phoenician countries of Mauretania and Numidia worshipped the cruel Moloch even in public, apparently up to the second century, and in secret (according to Tertullian) sacrificed children to him under the name of 'Saturnus, the sublime giver of fruits', or 'Saturnus the invincible god'.

If, then, Graeco-Roman polytheism was still vigorous enough to assimilate the ancient and venerable gods of the old civilized countries of the East, this assimilation could not have presented the least difficulty when dealing with the rude and obscure gods of semi- or entirely barbarous countries. Numerous memorials in Britain, Germany, Pannonia, Gaul, Spain and Africa show that the Roman settlers, officials, merchants or soldiers zealously took part in the cults of the local deities. Augustus also, during a stay in Gaul, vowed and built a temple to the wind-god Circius, the lord and sender of storms, which, while they caused devastation, also purified the air, especially from the mistral of Provence. One characteristic example may here be mentioned. A Roman governor of eastern Mauretania offers thanks in an inscription for the annihilation of a native tribe, the carrying away of its families into captivity and the extensive plunder, not to a Graeco-Roman god, but to 'the native Moorish gods, the preservers'. These cults rarely won recognition beyond the bounds of their province or district, although no doubt retained or adopted by many individuals outside the same; thus Caracalla prayed to Apollo Grannus, in addition to Aesculapius and Serapis, to restore him to health.

If the merchants settled outside their home, especially the Syrians, who were to be found everywhere in such large numbers, acted above all as missionaries of oriental cults,

the soldiers, who everywhere held fast by the cults of their native lands in their garrisons, including the veterans in the military colonies, chiefly contributed to the spread of all cults foreign to the Greeks and Romans. A legate of Numidia and consul-designate, a native of Dalmatia, in 167 erected in the temple of Aesculapius at Lambaesis a statue of his native god Medaurus (on horseback, brandishing a lance). A veteran in another town of Numidia (Thubursicum) commends his son to Noreia, a native goddess of Noricum, the birthplace of the mother who had pre-deceased her son. . . In every garrison fellow-countrymen assembled together to worship the gods of their home. Thus, in the third century, the Thracians serving in the imperial guard at Rome appear to have had a special chapel for their native gods, Heron or Heros, Asclepius Zimidrenus, and others. Similarly, the Celtic guardsmen in Rome continued to sacrifice to Arduinna and Camulus, but especially to the 'mothers' and 'wives' (*matres, matronae*) of their home, supposed to be three in number, protecting goddesses of house and family, and also of whole communities and peoples, who bestowed prosperity, abundance and fertility. All their memorials in Rome, the majority of those in Britain, and a considerable number in Germany, are due to soldiers, simple legionary soldiers or veterans, rarely centurions and equestrian officers; the 'mothers', as is shown by the inscriptions of those who were not soldiers, were divinities of the common people. It is true that the Romans living in the provinces were in a measure content to worship these barbarian gods, without troubling about their name or nature (such as the 'mothers' and the kindred Suleviae). Thus they adored 'the great god of the Numidians' and 'the Moorish gods' (amongst whom were included princes of old times worshipped with divine honours); or they invoked them under the names by which they were usually known, such as Auzius, Bacax, Aulisua, whose names appear on the monuments of north Africa, or Laburus, Lato-bius, Harmogius and others, known from inscriptional stones of Noricum and Pannonia. Frequently, however, it was thought that under these barbarous forms were concealed native gods, whose names were then used side by side with the foreign-sounding names unpronounceable by Roman lips, or were simply substituted for them; thus Caesar calls

the chief Celtic gods, Teutates, Hesus and Taranis, respectively Mercury, Mars and Jupiter. Grannus of Alsace and the Rhine lands was identified by the Romans with Apollo; Belutucader and Cocid of Cumberland, Leherennus and Albiorix of southern France, and many other Celtic local gods, with Mars; Ataecina or Adaegina of Turobriga in the south of Spain, with Proserpina; Sulis, worshipped near the baths at Bath, with Minerva; Arduinna of the Ardennes and Abnoba of the Black Forest with Diana, and so forth. These Celtic divinities could not possibly have been identified with Graeco-Roman equivalents, if believers had ceased to regard the latter as real and living personalities.

The more a province became romanized, the more the native gods were not only driven out by the Roman but also transmuted into the latter. In Spain especially both these phenomena occurred. 'In the Iberian district, which even later remained tolerably free from immigration, in the west and north-west (Lusitania, Callaecia or Gallaecia, Asturia) the native gods with their singular names, chiefly ending in *icus*- and *-ecus* (Endovellicus, Caecus Vagodamaegus), maintained their ground in their old seats even under the empire. But throughout the south (Baetica) not a single votive stone has been found, which might not just as well have been set up in Italy; the same holds good of the east and north-east (Tarraconensis), except that isolated traces of the Celtic gods occur on the upper Douro.' The worship of non-Roman divinities persisted in the southern province of Gaul much longer than in southern Spain: 'in the great commercial city of Arelate (Arles) certainly the only dedications refer to Italian gods, but at Fréjus, Aix, Nîmes and in the coast-districts generally, the old Celtic divinities were worshipped in imperial times as much as in the interior of the country. In the Iberian portion of Aquitania, also, numerous traces occur of the native cult, entirely different from the Celtic.' Certainly, the barbarian gods sometimes differed so greatly from the Graeco-Roman that identification was impossible; such were some of the local Belgian divinities, as Cernunnus squatting with legs tucked under him, with a stag growing out of his head, or the goddess of Compiègne, with birds at the breast, or the three-headed god of Rheims.

However, faith could not only assimilate strange divinities

but could also create new ones, and this creative power is the most unmistakable proof of its undiminished energy and vitality. Not regarding the divine control of which he was so deeply conscious every day and every hour at every step, as a single united whole, but feeling the necessity of breaking up the infinite divinity into an infinite number of individualities, the believer elevated important phenomena and effects, which profoundly affected human life, into divine personalities.

d The belief in a goddess of corn (Annona) and her cult do not seem to go farther back than the early empire, when the existence and safety of the eternal city depended upon the regularity and sufficiency of the supplies of grain from over sea. It was felt that it must be some divinity who gathered together the immense stores of Africa and Egypt, conveyed them safely across the sea, heaped them up mountains high in the storehouses of Rome, and, year in year out, provided daily bread for hundreds of thousands. On coins she first appears as a subordinate of Ceres, later as a separate goddess. 'Holy Annona' was certainly often invoked in fervent prayer, chiefly by those for whom in Rome the administration of the corn supply and the industries connected with it, and in the provinces the corn trade itself, provided occupation and a means of livelihood. A dedication to the holy Annona found in Rome is the work of a 'permanent measurer to the venerable corporation of wheat-flour bakers'; according to an inscription found at Rusicade (Philippeville), an export harbour of grain-bearing Numidia with state storehouses, intended for supplying Rome, a rich man had two statues set up, one 'of the genius of our native city', another 'of Annona of the holy city' (Rome).

Above all, the old Roman belief in *genii* involved a continual and unlimited increase of divine beings, as is sufficiently shown by the persistent vitality of this belief, and consequently of belief generally. The frame of mind which formed the basis of the latter continued to fill nature and existence with countless divine powers, whose mission it was to control and preserve, to generate and give life, to help and protect; these were the *genii*, whose favourite form was believed to be that of a snake. Every individual, every house and every family, every country, every city and province, legions, cohorts, centuries, corporations, guilds and unions—all had their

genius. But the feeling of piety, which saw 'in everything the trace of a god' and the hand of a divinity in every beneficent act and dispensation of providence, peopled every space with divine beings—wells, mountains, deserts, markets, palaces, warehouses, baths, archives and theatres. Every one who frequented these places paid homage to the genius or the 'guardian power (*tutela*) whether god or goddess'. The merchant, whose business took him to remote frontier lands, sacrificed there 'to the genius of the Roman people and trade'; the traveller in unknown and inhospitable countries 'to the god who invented roads and paths'. In the houses of Rome and other cities, as late as the fifth century, an image of the patron divinity, with a lighted candle or ever-burning lamp in front of it, was to be seen in the vestibule behind the door; the cult of the domestic gods (Lar, Genius, Penates), in spite of the prohibition issued against it, lasted far on into Christian times, during which angels soon took the place of genii. These minor divinities repeatedly proved their power to help within a definite sphere, and thus received special names and a more clearly defined personality; thus one of Trimalchio's guests, all belonging to the commercial class, swears by the holy 'Holdfast' (*Occupo*), and the Lares of the master of the house bear the names 'Profit', 'Good Luck', 'Gain' (*Cerdo*, *Felicio*, *Lucro*).

A necessary result of the change of the republic into a monarchy was that the genius of the reigning emperor took its place by the side of the genius of the Roman people, whose worship dated from very early times (at least as early as 218 B.C.). This appeared so natural and necessary that Augustus had no hesitation in undertaking the regulation of this cult himself. It was unavoidable that the idea of the imperial genius, worshipped as the tutelary deity of the people, should be confounded in the popular belief with the person of the emperor, who thus himself came to be regarded as the tutelary and controlling god. But although the belief in genii was not without influence on the deification of the emperor, the real home of the belief in the superhuman nature of the monarch was the East; together with the monarchy, it was transplanted from the Greek states of the East into the West.

From time immemorial distinguished men of merit in Greece had been venerated after their death as heroes (demi-

gods),—the founders of towns and colonies, the heroes of the Persian wars, the liberators of their fatherland (Harmodius and Aristogiton of Athens, Timoleon of Syracuse), also poets (Aeschylus, Sophocles), philosophers (Anaxagoras) and victors in the Olympic games. Occasionally, this elevation to the rank of heroes in course of time led to actual deification ; thus in Plutarch's time Lycurgus had a sanctuary in Sparta, in which sacrifice was offered to him 'as to a god'. Under Roman rule also, cities bestowed the honours of heroes upon prominent men after their death ; thus Mytilene honoured Theophanes, who had obtained from Pompey the privileges of a free state for the city, and Tarsus Athenodorus the meritorious Stoic, the teacher of Augustus. If in these and similar cases the choice of this manner of expressing gratitude was prompted by flattery and servility, there is no doubt that many (such as Apollonius of Tyana) were venerated after death owing to a sincere belief in their superhuman nature. How common the idea of the elevation of glorified spirits to a divine or semi-divine existence had become amongst the Romans is shown by Cicero's intention to build a temple to his daughter Tullia, who had died at the age of thirty-two. The Carpocratians, a gnostic sect of the first half of the second century, who revered Jesus together with the Greek philosophers as a model of supreme human purification, erected a temple in Cephalaria to Epiphanes, the seventeen-year-old son of their founder, after his death.

After the time of the Peloponnesian War, however, living persons also were worshipped as gods in Greece, the first known instance being Lysander, to whom Greek cities in Asia erected altars, offered sacrifice and sang paeans. Even the basest flattery would not have thought of this kind of homage had not the ancient Greeks, who were unable to imagine gods and men separated by an impassable gulf, been prone to see a being of a higher kind in every personality, which apparently or in reality was superior to the ordinary run of humanity. Nor was this way of looking at things entirely foreign to the Romans ; as a general rule, at meals libations were poured to Marius, the conqueror of the Cimbri and Teutones, as if he had been a god. The belief in the divinity of individuals also occurs outside the Græco-Roman world. Amongst the Getae the prophet Decaeneus or Dicineus,

the adviser of King Boerebistes (Burvista ; 60-50 B.C.), who dwelt in a cave on a sacred mountain, was regarded as a god ; Strabo calls him an impostor. The Boian Mariccus, who in 69 A.D. undertook to liberate Gaul from the Roman yoke, declared himself a god and found thousands to believe him.

But the cult of living heroes and persons in authority was not firmly established until after the time of Alexander the Great, whose personality, subjected to oriental influences, practically obliterated the distinction between gods and men, in the princely houses which shared his inheritance. In Egypt, where, as in Persia, it had long been held that the king was a god or at least the son of a god, Ptolemy Philadelphus first introduced the cult of the living ruler for state reasons ; in the Seleucid empire it was of prime importance, whereas the Attalidae appear to have formally abandoned it.

After the Romans began to interfere with the oriental elements in the cities of Asia Minor, the cult of the goddess Roma, to whom the inhabitants of Smyrna had erected a temple as early as 195 B.C., made its appearance side by side with the cult of the ruling prince, which attained its highest development in the kingdoms of the Diadochi. With this cult of Roma were associated the divine honours bestowed upon Roman governors and generals, such as Titus Quintius Flamininus, 'the liberator of Greece', in whose time they appeared a perfectly natural expression of enthusiastic gratitude. In the last days of the republic the dedication of temples (probably in common with the goddess Roma or other divinities) had become quite a usual manner of showing homage for Roman proconsuls.

Consequently, if the Romans had been for a long time accustomed to regard apotheosis as no excessive honour even for the living, the claim of the new monarchs to it appeared a matter of course ; and if the deification of the living was kept within certain limits, this was due to the self-restraint of the ruler, not to any want of deference on the part of his subjects. What could have been more in conformity with the belief in divine natures in human form than to regard the all-powerful rulers of the universe, 'the vicegerents of the gods upon earth', so immeasurably exalted above so many millions, as 'present and corporeal gods', and their death as an elevation to that higher world to which they

belonged ? If the apotheosis of the emperors was as a rule a work of the conscious hypocrisy of servility, it at least corresponded in certain cases to the popular belief. The 'translation' of Caesar to the gods, says Suetonius, was not only the result of a decree of the Senate, but in accordance with the belief of the multitude ; a comet, which was visible for the next seven days, was supposed to be his soul taken up into heaven. After the death of Marcus Aurelius, all orders and classes of the people, irrespective of sex or age, paid him divine honours ; any one who did not keep his image in his house was considered impious, and even in Diocletian's time his statue frequently occupied a place between the Penates ; many prophecies, confirmed by the event, were believed to have been delivered by him in visions. Thus there can be no doubt that this good and gentle and universally beloved monarch was really regarded as a god by the people. In the domestic chapel of Alexander Severus, where a religious service was held every morning, not only the souls of the holy (including Apollonius of Tyana, Orpheus, Abraham and Christ), but also the best of the deified emperors, were worshipped.

It is easy to understand, however, that this belief in a real deification of men was repugnant even to those who in other respects were staunchly orthodox. Pausanias says that in his time men were no longer changed into gods, as formerly Heracles, the Dioscuri, Amphiaraus, except in words, and in order to flatter power. He probably had in mind the apotheosis of Antinous, for which, however, an oriental model was not wanting. Thus, at Alexandria, Belesticha, 'a foreign woman of the town', received the honours of divinity and a temple as 'Aphrodite Belesticha' from her royal lover (Ptolemy II Philadelphus). No doubt, generally speaking, the cult of Antinous was observed 'in order to flatter power' ; but the belief of the next generation in the divinity of the beautiful, melancholy looking youth was sincere (as appears from Athenagoras, *c.* 177), and lasted at least till the third century. Celsus had compared the worship of Christ with that of Antinous, and Origen, who rejects this comparison as entirely inadmissible, had no doubt that in reality a demon under the name of Antinous haunted his temple. 'If one were to investigate, in a spirit of truth and impartiality, the

stories relating to Antinous, he would find that it was due to the magical arts and rites of the Egyptians that there was even the appearance of his performing anything in the city which bears his name, and that, too, only after his decease—an effect which is said to have been produced in other temples by the Egyptians and those who are skilled in the arts which they practise. For they set up in certain places demons claiming prophetic or healing power, which frequently torture those who seem to have committed any mistake about ordinary kinds of food or other religious precepts. Of this nature is the being that is considered to be a god in Antinoöpolis in Egypt, whose virtues are the lying inventions of some who live by the gain derived therefrom ; while others, deceived by the demon placed there, and others again convicted of a weak conscience, actually think that they are paying a divine penalty inflicted by Antinous. Of such a nature also are the mysteries which they perform and the seeming predictions which they utter. Far different from such are those of Jesus.' ¹

Further, the cult of the emperors was on the whole nothing more than the expression of absolute devotion, which the despot could demand from his subjects, at least so far as the recognition of a divine nature in a human personality was in no way repugnant to religious belief. If Christians have never committed the folly of worshipping a king as a god, the reason is not that the difference between ruler and ruled was less, the feeling of self-respect greater, or servility less resourceful in inventing degrading acts of homage (rather, the contrary was the case in the Byzantine empire and in France under Louis XIV and Napoleon I). Christian dogma forbade such an act of folly, which pagan belief encouraged, and only allowed the ruler to be recognized as the representative of God upon earth. The Roman imperial cult was a form, the essentially political importance of which no thinking man could mistake, while its external accomplishment left religious life properly so-called untouched, and was quite incapable of shaking belief. To the believer, that which is sacred does not cease to be so because he has seen it misused or desecrated in individual cases ; rather, like Pausanias,

¹ Origen, *Contra Celsum*, iii. 36, Eng. trans. by F. Crombie in Clark's *Ante-Nicene Christian Library*, xxiii. (Edinburgh: T. & T. Clark.)

he promptly holds up the abuse to ridicule and contempt, only to cling the more firmly to what is venerable and precious in his belief.

The best proof, however, of the strength and vitality of polytheism is the fact that it was able to hold its ground for centuries against Christianity, and further, in a certain sense to compel Christians to recognize its truth. For it never occurred to Christians in general to deny the real existence of the pagan gods ; they did not even dispute their superhuman attributes nor the miracles performed by them. Of course, it was only natural that they should look upon them as powers of darkness, demons, fallen or lost angels and their descendants, or sinful souls, permitted by God to injure and lead men astray. Consequently, even those who carried on the war of extermination against polytheism were so inextricably mixed up with it that they could not bring themselves to deny its reality. The authority of this belief must have been general and most firmly established in men's conscience, if its most irreconcilable opponents were unable to withdraw themselves completely from its influence.

But, seeing that so many direct and incontestable proofs of the universality and strength of polytheism are ready to hand, all such indirect evidence may be dispensed with. The stronger a belief is, and the more deeply it is rooted in the conscience, the more eagerly does it seek and the more certainly does it find throughout nature and life confirmation of the existence and action of the powers believed in ; it recognizes the hand of the divinity where unbelief sees only chance or natural effects of natural causes. Its most passionate demand is for facts and phenomena, which demonstrate beyond doubt the divine power to overrule the laws of nature, and this demand of necessity always secures its own satisfaction ; the miracle is the favourite child of faith. Now, if the belief in miracles is an infallible test of the intensity of belief in the higher power, which is assumed to be the author of the miracle, there can be no doubt that, in the first centuries of the Christian era, a belief in the gods of tradition and cult, entirely positive and unaffected by scepticism, was common in all strata of society. The strength of this belief varied, being of course strongest in least educated circles.

The old belief in anthropomorphism, powerfully supported

by the impression produced by the everywhere present and life-like images of the gods, made it possible for the believer to recognize the corporeal presence of the god himself in the author of a miracle performed before his eyes ; and the fact that such was the case at the time of which we are speaking is established beyond all doubt by the well-known incident of the apostles at Lystra. How certain must these men have been of the existence and close proximity of their gods, who saw in the author of the miraculous cure of the lame man and in his companion, not messengers from heaven but very gods, and were at once filled with the conviction that the gods had come down to them in the likeness of men. ' And they called Barnabas, Jupiter ; and Paul, Mercurius, because he was the chief speaker. Then the priest of Jupiter, which was before their city, brought oxen and garlands unto the gates, and would have done sacrifice with the people '. And the apostles ' scarce restrained the people, that they had not done sacrifice unto them '. Here then was a faith still living, as firm as a rock and as childlike as that of the ancient Athenians who, imagining the beautiful woman clothed in complete armour, by whom Pisistratus was accompanied on his return, to be Athene in person, worshipped her as a goddess ; Herodotus cannot find words to express his amazement at such unheard of simplicity. A parallel is to be found in the faith which in our own days makes the Italian peasant recognize the mother of God herself in a young, beautiful and madonna-like benefactress.

It may be admitted that belief was perhaps blindest and the propensity to self-deception most common in the heart of anterior Asia, as is expressly attested by Lucian in the case of Paphlagonia. Undoubtedly superstitious beliefs and prejudices were always stronger in the East than in the West. But if the believer was only rarely convinced of the actual presence of the divinity, he saw everywhere the wonders worked by him, his enthusiasm was continually re-kindled, and even sceptics were carried away by the sincere and universal belief in miracles. The miracles wrought in the year 71 at Alexandria, ' indicating the favour of heaven and an undoubted affection of the gods for Vespasian ' are described by Tacitus and other historians in perfect good faith. A blind man and a paralytic, having been inspired by Serapis

in a dream, implored Vespasian to touch them and so restore the use of their limbs. Vespasian finally decided to do as they asked publicly before the people. 'The hand immediately resumed its functions, and the light of day again shone upon the blind man. These two facts are attested by eye-witnesses at the present day, when there is no longer any advantage to be gained by falsehood'. Vespasian afterwards went unattended to the temple of Serapis to learn what the future had in store for him. There he saw a man named Basilides, although it was subsequently ascertained that he was many miles away at that moment. Vespasian recognized in his name an omen of his impending greatness. No one who believed these miracles could doubt the power and greatness of the god, to whom they were attributed by the voice of the people.

This miracle belongs to a period when the idea of appealing to miracles as great and convincing as the Christian certainly cannot be attributed to the heathen. But when the struggle of the two religions for the empire of humanity had begun, the mania for miracles necessarily became greater on both sides the longer the conflict lasted and the more furious it became. We may assume that, about the end of the second century, the need was already felt of setting up a rival to the founder of Christianity in the person of a prophet of the old gods, equally superhuman and equally capable of working miracles. This was probably the purpose of Philostratus' romance of Apollonius of Tyana, composed at the command of the empress Julia Domna. The birth of Apollonius is as marvellous as his end and his reappearance on earth, to convince a young man who disbelieved in immortality. Among the miracles performed by him are the casting out of demons and the raising of a man from the dead. His knowledge of the future and of hidden secrets borders on omniscience. The emperor Alexander Severus (as already observed) worshipped him in his domestic chapel together with Christ. The anti-Christian neo-Platonist Hierocles (under Diocletian) put him above Christ, whose acts he declared had been embellished by the fictions of the apostles, whereas those of Apollonius were attested by unimpeachable witnesses. Apollonius' reputation was great, not only among pagans, but also among Christians of the succeeding centuries.

In a Christian collection of 'oracular responses of Hellenic gods', composed about 474-91, it is declared that only Moses, Hermes Trismegistus and Apollonius were like God. The pious Jansenist Tillemont (died 1698) believed that the devil, fearing the destruction of his kingdom, had caused Apollonius to be born about the same time as Jesus; Bayle in his lexicon (1741) calls him 'the ape of the son of God'.

Not only did heathens and Christians meet miracles with miracles, but they must frequently have laid claim to the same miracle, although only one instance is reported. During the war against the Quadi (173-4) in the reign of Marcus Aurelius, the Roman army, overcome by the heat of the blazing sun, found itself surrounded by a superior force, and threatened with annihilation. Then suddenly thick clouds gathered together, rain fell in torrents, and a fearful storm wrought havoc and confusion in the ranks of the enemy; the Romans were saved and gained the victory. The effect of this event was overwhelming; according to the custom of the time it was immortalized by pictorial representation, was generally regarded as a miracle, the memory of which lasted till the last days of antiquity, and for centuries afterwards was appealed to by both Christians and pagans as a proof of the truth of their respective faiths. A picture, which Themistius had seen, represented the emperor himself appealing to Jupiter for aid with uplifted hands, while the soldiers caught the rain in their helmets; the scene on the column of Marcus Aurelius, which has hitherto been generally regarded as a representation of this event, cannot possibly be meant. The marvellous deliverance of the army appears to have been generally attributed to the emperor's prayer to Jupiter; others, however, asserted that it was really due to the art of an Egyptian magician Arnuphis, a member of his suite, who had drawn down rain from heaven by calling upon the gods, especially Hermes. But according to the account of a Christian contemporary, the miracle had been wrought by the prayers of the Christian soldiers of the twelfth legion. Tertullian also (197) refers to the Christian version as well known, and appeals to a letter of Marcus Aurelius in support of it.

Amongst the miracles, which the Platonist Celsus in his work against Christianity adduces as a proof of the existence

of the gods, he gives special prominence to oracles, prognostics and portents, by which they announced the future or issued warnings and exhortations, and which convinced the faithful not only of the existence of the gods, but also of their solicitude for mankind. 'What need is there to collect all the oracular responses, which have been delivered with a divine voice by priests and priestesses, as well as by others, whether men or women, who were under a divine influence? all the wonderful things that have been heard issuing from the inner sanctuary? all the revelations that have been made to those who consulted the sacrificial victims? and all the knowledge that has been conveyed to men by other signs and prodigies? To some the gods have appeared in visible forms. The world is full of such instances. How many cities have been built in obedience to commands received from oracles: how often, in the same way, delivered from disease and famine! Or again, how many cities, from disregard or forgetfulness of these oracles, have perished miserably! How many colonies have been established and made to flourish by following their orders! How many princes and private persons have, from this cause, had prosperity or adversity! How many, who mourned over their childlessness, have obtained the blessing they asked for! How many have turned away from themselves the anger of demons! How many, who were maimed in their limbs, have had them restored! And again, how many have met with summary punishment for showing want of reverence to the temples—some being instantly seized with madness, others openly confessing their crimes, others having put an end to their lives, and others having become the victims of incurable maladies! Yea, some have been slain by a terrible voice issuing from the inner sanctuary' (Origen, *Contra Celsum*, viii. 45, Crombie's trans. Edinburgh: T. & T. Clark.)

The belief in wonderful signs and announcements of the future, of which at that time 'the whole world was full', to all appearance was the most general form of belief in miracles, at least in the last days of antiquity. Many philosophers and others who had received a philosophical education also professed it. Certainly it was rejected by Epicureans, Cynics and Aristotelians and controverted by Academicians; but Platonists, Pythagoreans and Stoics only clung to it the more firmly, and this belief formed part and parcel of the theology

of the last-named in particular. 'The belief in an extraordinary care of God for individual man was too comforting an idea for them to renounce; they not only appealed to divination as the strongest proof of the existence of gods and the government of providence, but they also drew the converse conclusion, that, if there be gods, there must also be divination, since the benevolence of the gods would not allow them to refuse to mankind so inestimable a gift' (Zeller, *Stoics, Epicureans and Sceptics*, Eng. trans., p. 372). This belief then, which in fact necessarily presupposed a belief in the gods and providence, with which it stood or fell, was extremely common amongst the educated at that time.

It is true that Livy declares that prodigies were neither publicly made known nor recorded in historical works owing to the indifference which caused the general disbelief of his time in marvellous presages sent by the gods. But this indifference cannot have lasted long, for all the historians of the imperial period without exception record such wonders; in time prodigies even became an object of special interest to believers, which explains the origin of the collection of all the signs and wonders observed in Italy, compiled from Livy by a certain Julius Obsequens (of uncertain date).

Tacitus, who maintained a critical attitude towards the belief in signs and wonders, and expressly guarded against the common superstition, which saw an omen in every uncommon event, undoubtedly did not recognize the genuineness of a number of reputed prodigies; nevertheless, he did not doubt that they did occur, and in the later books of his great history of his time he has recorded all those subsequent to the year 51. Consequently, it seems that in his case the belief in such things, although probably always entertained by him, had increased with years. In the second book of the *Histories* (ch. 50), he relates that, on the day of the battle of Bedriacum, a bird, the like of which had never been seen, alighted on the ground near Regium Lepidum, and, undaunted by the throng of men and other birds that circled round it, would not move until Otho had killed himself; then it disappeared. When men came to calculate the time, it was found that the beginning and end of the prodigy exactly coincided with Otho's death. Tacitus expressly adds that, although he considered it beneath his dignity to embellish a serious work with fables, he could not in

this instance refuse to believe what was universally reported.

The regular mention, in Suetonius, Cassius Dio, Herodian and the later imperial biographers, of presages, especially those which announced to a private individual his future accession to the throne, or the death of the emperor, leaves no doubt as to the persistence of this belief, with which the writers must certainly have credited the majority of their readers ; and the narrative frequently shows to what extent it was held by the most prominent men of the time. Augustus, says Suetonius, paid great attention to certain omens, as to the meaning of which he had no doubt. If he put a shoe on the wrong foot, it was a bad sign ; if dew fell when he was starting on a long journey, it was a good sign. Wonderful events also always made a great impression on him ; as, for instance, when a palm tree sprouted from the cracks between the stones in front of his house, and on his arrival at Capri the drooping branches of an old holm-oak revived. Had Livy read in Suetonius the list (culled by him from books and traditions with all the industry of a bee) of all the omens which announced the future greatness of Augustus, his victories and his death, perhaps he would have recalled his complaint of the indifference of his contemporaries to such things. To a faith as robust as this, every event was full of significance ; no marvel was too great or too ridiculous for it. Suetonius seriously relates that Augustus, when a child just beginning to speak, once ordered some frogs on a family estate to cease croaking, which, it was asserted, they immediately did.

Of course different kinds of portents were differently appreciated by believers, and the various methods of divination did not always enjoy the same esteem, but sometimes one, sometimes another, found the greatest favour. But not one of the recognized kinds of divination ever fell entirely into disuse for want of belief. Cicero's crushing ridicule of the art of the *haruspex*¹ and the inspection of entrails might suggest the mistaken view, that this method of divination was too deeply discredited ever to recover its popularity, whereas nothing could be further from the truth. Cicero quotes Cato's remark, that he wondered how one *haruspex* could look at another without laughing, and Hannibal's question to King

¹ The *haruspex* foretold the future from the inspection of the entrails of sacrificial victims.

Prusias (who refused to give battle 'because the entrails forbade it'), whether he had more faith in a slice of veal than in an old general; he further recalls the fact that in the last civil war the exact opposite of what had been foretold nearly always happened. But the mockery of unbelievers no more disturbed the faith of believers than the facts which gave the lie to their belief. As always happens in such cases, they only remembered prophecies, which were, or were supposed to have been, fulfilled; and ample testimony from succeeding centuries confirms the persistence of the belief in the inspection of entrails, and its diffusion even amongst the educated classes.

The fact that Tiberius prohibited the consultation of *haruspices* in secret and without the presence of witnesses assumes a very general use of this form of divination. Claudius' apprehension (in 47) that the oldest science in Italy might become extinct through neglect, can only have referred to the decay of the Etruscan *haruspicina*, not to a general diminution of its employment. The older Pliny also says expressly that large numbers of people firmly believe that animals warn us of danger by their muscular fibres and entrails. On the morning of the day on which the emperor Galba was murdered (January 15, 69), the *haruspex* Umbricius informed him that the entrails of the victim pointed to a dangerous plot and an enemy in the house; Otho, who was standing by, took this as an omen favourable to his undertaking. Epicetetus, who in accordance with the doctrines of his school recognized divine revelations and thoroughly believed in the art which interpreted them, only advises that man should be influenced in his actions not only by divination, but before all by a sense of duty. There would have been no occasion for this advice, had not divination been very generally recognized. It is only fear of the future, he says, that so often drives men to the soothsayers. Trembling with excitement, they approach them with prayers and flattery, as if they could fulfil our wishes: 'Lord, shall I be my father's heir? Lord, have pity on me, restore me to health! But the *augur* or *haruspex* can only foresee impending events, death, danger, sickness or the like. He does not know whether they are really beneficial or injurious to the person concerned'. Herodian says that the brave resistance offered by the city of Aquileia to Maximin was mainly due to the prophecies of its *haruspices*:

‘ for the inhabitants of Italy have most confidence in this kind of divination ’. The estimation in which it was held outside Italy also is shown not only by the remarks of Epictetus, but also by the recognition accorded it by the dream-interpreter Artemidorus, who admitted only a few methods of divination besides his own : astrology, the inspection of victims’ liver (i.e. entrails), and the flight of birds. Further, accidental statements of different dates allow us to conclude that the art of the *haruspex* never lacked supporters amongst the educated. Regulus, notorious during the period from Nero to Domitian as an orator and accuser in cases of *lèse-majesté*, was accustomed in every case to question the *haruspices* as to the result of the trial. According to Juvenal, they had to answer so many questions about the favourite musical *virtuosi* and actors of distinguished women, that they got varicose veins from standing so long on their feet. The emperor Gordian I was greatly skilled in this art, in which Diocletian also had great confidence. Constantine allowed it to be practised in public, but forbade it inside the house on pain of death ; in cases of injury by lightning he ordered it himself (321) for state reasons. According to Ammianus Marcellinus, one of the means for reading the future which providence has bestowed upon mankind is the inspection of entrails ; he says that Julian, while still a professing Christian, was devoted to the art of the *haruspex* and the *augur*, ‘ and everything else practised by the worshippers of the gods from time immemorial ’. Such incidental proofs of the lasting and widespread belief in the art of the *haruspex*, which could be multiplied, justify us in assuming the same in the case of all the other traditional methods of divination.

Among the methods of inquiring into the future, astrology, the favourite science of that age, which enjoyed the highest favour, especially amongst the upper classes, did not necessarily presuppose belief in the gods and a providence exercised by them, although, on the other hand, it by no means excluded it. Of the older members of the Stoic school, which believed in Providence, Panaetius was the only one who rejected it ; he contested the efficacy of prognostics and divination in general. Yet it was only natural that the widespread belief in an inevitable fate, which more than anything else encouraged astrology, should tend to the abandonment of polytheism.

The belief ' which referred all events to their constellations by the laws of nativity ', equally approved of by the educated and ignorant and shared by Seneca, according to which what had been once decided was irrevocably fixed for all time, definitively superannuated the divinity. According to Suetonius, Tiberius showed little interest in the gods and their cult, because he was entirely devoted to astrology, and thoroughly convinced that everything happened in accordance with the decrees of fate.

But oracular predictions also, in which the gods, as it were, in person revealed the future to mankind, since they assumed the direct inspiration of the divinity, were bound more than anything else to strengthen and foster the belief in the latter. In the first centuries of the Christian era these predictions enjoyed a reputation almost as great as in any earlier period ; and the fact that they not only held their ground, but, after a temporary decline, underwent a complete restoration, is a still more indubitable proof of the strength of polytheism. Strabo, who expressly attests the decay and neglect of the Greek oracles in the time of Augustus, was certainly influenced in his statements by the recollection of the splendour of Delphi, which had been extinct for centuries. None the less, to all appearance he gives the correct explanation of the phenomenon—that the Romans were satisfied with the predictions of the Sibylline books and the Etruscan methods of divination (observation of the entrails, the flight of birds, and the heavenly signs). It was a natural result of universal empire, that the non-Roman should everywhere be kept down by the Roman element ; and it was just at that time that the overpowering impression of Roman might and greatness had reached its height in the Greek world. But although this impression was strong enough to divert man's religious needs into new channels, it was by no means strong enough to control them permanently. The old belief was completely restored ; the famous oracular temples were again filled with pilgrims. There ' prophets, full of the god and identified with him, foretold the future, warded off dangers, healed the sick, comforted the sorrowful, helped the unhappy, gave consolation in suffering and relief in distress '. Christian writers declare that with the coming of the Redeemer into the world the power of the false gods had been broken, that the charm by means of

which they had so long given speech to images of wood and stone had lost its power, and that their oracles were dumb, but even they were obliged to confess that the demons in the temples again issued true prophecies and salutary warnings and performed cures. Their object, of course, was to do all the more injury to those whom they turned aside from the search after the true God, by insinuating into their minds ideas of the false one. The foreknowledge of the future possessed by the demons was explained by their being former servants of God who were thus acquainted with his intentions. Even Petrarch, in other respects remarkably free from superstition, believed in the heathen oracles as given by demons.

The greatness of the Roman empire and the incessant mutual intercourse of all its component parts, highly developed by its admirable means of communication, enormously enlarged the area over which the influence of the more respected oracles extended. Pilgrims journeyed from remote barbarian lands to the Greek temples in search of help and counsel, and the responses of the Greek gods were received with awe in countries to which their names had never penetrated before Rome ruled the world. Apparently in the time of Hadrian, a cohort of Tungri in its fixed quarters at Borcovicus (Housesteads in Northumberland) in Britain offered an *ex-voto* 'to the gods and goddesses in accordance with the interpretation of the oracle of Apollo of Claros' (near Colophon), and similarly dedicated inscriptions at Obrovazzo in the north of Dalmatia and at Cuicul in Numidia refer to the response of the same oracle; in these cases we may perhaps assume a joint consultation of this god by troops of different provinces. Anyhow, there can be no doubt that the most famous oracles in all the provinces were consulted in imperial times, a fact confirmed by numerous incidental statements in ancient authorities. To mention only a few instances, Germanicus consulted the oracle of the bull Apis at Memphis in addition to that of Apollo at Claros, Tiberius the 'lot' oracle of Geryones near Patavium, Caligula that of 'the Fortunes' at Antium, Nero that of Delphi, Vespasian that of mount Carmel, Titus that of Venus at Paphos in Cyprus, Caracalla that of Serapis at Alexandria and all the other oracles of repute. Amongst believers, proofs of the omniscience of the oracles were brought forward, stronger even than the answers of the Delphian oracle to the

inquiries of Croesus, as recorded by Herodotus. Plutarch's friend, the learned Demetrius of Tarsus, gives an account of an event of which he was an eye-witness—the conversion of an unbelieving governor of Cilicia by an oracular response. At the suggestion of certain Epicurean scoffers at religion in his suite, he sent a freedman with a sealed tablet, containing the question to which he desired an answer, to the dream-oracle of the demi-god Mopsus. The messenger, who according to custom spent a night in the temple, dreamed that a handsome man approached him and said 'a black one', and then retired. When he informed the governor, he was terrified, fell on his knees, opened the tablet, and showed the question to those who were present: 'Shall I sacrifice a black or a white bull?' Even the Epicureans were disconcerted; the governor offered the sacrifice, and ever afterwards worshipped Mopsus.

Nothing, however, so clearly shows the extent to which the believer in miracles was capable of self-deception, and how readily oracles found admission and acceptance in countries where they had been previously unknown, as Lucian's account of the pretended oracle of Apollo and Aesculapius set up by the false prophet Alexander in his native town of Abonuteichos in Paphlagonia.

Alexander (*c.* 105–*c.* 175), who when a boy was remarkable for his beauty, had been instructed in the art of magic by a physician (a countryman of Apollonius of Tyana), to whom he acted as assistant. Having travelled with a single companion through Bithynia and Macedonia in the character of a magician and soothsayer, he decided to found an oracle of his own in his native place, which appeared specially adapted for the purpose, owing to the wealth and crass superstition of its inhabitants. Tablets of bronze, buried by Alexander in the temple of Apollo at Chalcedon and conveniently discovered again, announced that Apollo and his son Asclepius were coming to Abonuteichos. The inhabitants, highly delighted, at once set about building a temple to Asclepius. After a Sibylline oracle had been circulated to the effect that Alexander, a descendant of Perseus and Asclepius, would make his appearance as a prophet, he entered the town, an imposing and attractive personality, magnificently clad in a white and purple tunic, carrying a sickle in his hand after the manner of Perseus. The god Asclepius was said to have revealed him-

self in the form of a snake. Prompted by Alexander, his fellow townsmen found an empty goose's egg, containing a little snake, in a pool of water which had collected where the foundations of the temple had been dug. Soon afterwards he exhibited a large tame snake which had long been kept in readiness, the rapid growth of the god being looked upon as a matter of course. Appearing with the snake round his neck in a dimly-lighted room, he thrust out from his robe a snake's head made of painted linen, somewhat resembling a human face, the mouth of which could be opened or shut by means of a horsehair attachment inside. Subsequently pipes (a number of cranes' windpipes fastened together) were fixed in the head, through which an assistant could make the god speak; but these 'autophonic'¹ oracles were only given exceptionally and for a high fee. As a rule questions were handed in sealed and given back in the same condition; when opened, the answer of the god was found written inside. The name of the god was Glycon.

The fame of the oracle spread rapidly throughout Asia Minor and Thrace, and during the whole time of its existence (more than twenty years) it was visited by such crowds, that food ran short at Abonuteichos. Lucian estimates the annual income of the prophet at about £3,000 (the fee for the oracle being about 1s.), out of which he had to pay a number of assistants of all kinds; on the other hand, two interpreters of obscure oracular utterances had each to pay him £240 yearly out of their takings. The god frequently promised that the wishes of those who consulted him would be fulfilled, if the prophet interceded for them. It was no uncommon thing for questions to be asked in foreign languages, such as Syrian and Celtic (the language in general use in Galatia), and it was not always easy to find persons who understood them. Occasional blunders in the answers did not injure the prestige of the oracle; it was dangerous to deny its divine nature, for Alexander knew how to rouse the crowd of believers to frenzy against its enemies (especially the Epicureans) with the cry of 'atheists and Christians'. He gained the friendship of the priests of the most famous oracles of Asia Minor by sending on his own visitors to them.

¹ I.e. oracles delivered by the god himself. The word 'autophonic' does not seem to be in use in English, but is adopted for brevity (the Greek is *αὐτόφωνος*).

Alexander also sent emissaries into other provinces to spread the worship of his god, and soon found numerous adherents in Italy and Rome itself. Many of the most highly placed and influential personages put themselves into communication with him. Insidious questions (i.e. such as referred to the emperor or affairs of state) were kept back by Alexander; he thus had the questioners in his power, and they were obliged to pay a high price for his silence. The god-fearing and superstitious Publius Mummius Sisenna Rutilianus (*consul suffectus* about 157) believed in him so blindly, that at the command of the god Glycon, when sixty years of age, he married Alexander's daughter, whose mother was supposed to be the moon-goddess. It was Rutilianus who persuaded the emperor Marcus Aurelius to have two lions thrown into the Danube as an offering certain to ensure victory; the result was that the Romans suffered a severe defeat (under Furius Victorinus, 167-9). When Lucian wanted to prosecute Alexander for an attempt upon his life, and lodged a complaint before Lollianus Avitus, the governor of Bithynia, the latter besought him to abandon the idea, since he could not prosecute the father-in-law of Rutilianus. At that time the terrors of war, combined with the ravages of a widespread epidemic, everywhere increased the need of religion and strengthened belief. On the door of every house an oracular response could be read, supposed to be a certain preventive of the disease, and circulated by Alexander's messengers, who had recommended his assistance against pestilence, fires and earthquakes.

When Alexander died at the age of seventy, his honour, wealth and influence were still undiminished; even after his death, it was believed that his statue in the market-place of Parium in Mysia delivered oracles. Lucian's account, which might be considered exaggerated, is fully confirmed by coins of Abonuteichos with the heads of the emperors Antoninus Pius and Marcus Aurelius, exhibiting on the reverse a snake with a human head, some of them inscribed Glycon. The legends of these coins further confirm the statement of Lucian that Alexander persuaded Lucius Verus during his stay in Asia (163-6), to change the name of his native place to 'Ionopolis', which entirely supplanted Abonuteichos and is still preserved in the slightly altered form Ineboli. The above type of coin occurs there till the time of Gallus Tre-

bonianus (251-3), and under Caracalla and Gordian III also in Nicomedia, whither the cult of Glycon must likewise have penetrated. Further evidences of its extension have been found in Dacia (chiefly colonized from Asia Minor), and upper Moesia; perhaps also in Africa. Two inscriptions that have come to light in Dacia (at Carlsburg in Transylvania) are dedicated to the god Glycon, 'by his command', one in Moesia (at Uskub in Turkish Macedonia) 'to Jupiter and Juno, to the serpent and the serpent's wife and Alexander', according to which Alexander appears to have had a female counterpart, in addition to the snake mentioned by Lucian.

The fact that so gross an imposture could be practised so long with such enormous success and without serious opposition, naturally implies an even stronger belief in the recognized oracles, and enables us to estimate their influence. Several of these were dream-oracles, as those of Mopsus and Amphilocheus at Mallus in Cilicia, which announced to Sextus Quintilius Condianus his own and his brother's murder by Commodus in a dream (of Hercules, as a child, strangling the two serpents). But the belief that dreams predicted the future, not only in these sanctuaries but everywhere, was the most general of all forms of belief in portents, which was not even contested by some of those who in other respects utterly refused to believe in prophecy. Aristotle and Democritus admitted the occurrence of prophetic dreams, not, however, as sent by the gods, but as the natural effects of natural causes; the elder Pliny, also, who denied all supernatural revelation of the future, was inclined to the belief in significant dreams. In one of his earlier books he leaves the question undecided, but in a later one he states as an undoubted fact that one of the imperial guard in Rome, who had been attacked by hydrophobia as the result of the bite of a mad dog, was saved by a remedy revealed in a dream to his mother in Spain. Having no idea of his misfortune, she had communicated the purport of the dream to him in a letter, which reached him just in time to save him, when his life was despaired of. When Pliny says that this hitherto unknown remedy, which always proved successful in other cases, had been revealed by 'God', he is referring to the mysterious working of nature, also manifested in the sympathies and antipathies of its forces, certainly not to the providence of a personal divinity.

Now, although the belief in prophetic dreams does not necessarily suppose the belief in the gods and Providence, it may safely be asserted that the one was rarely unaccompanied by the other ; in the majority of cases belief and unbelief were accorded simultaneously to both. To all appearance the theory of Democritus found little favour even amongst the Epicureans, who, generally speaking, not only denied the working of Providence, but also divination, whether by dreams or in any other form. On the other hand, says Origen, all who accepted the doctrine of Providence regarded it as certain that manifestations and phenomena were brought before men's minds in dreams, some of which were of a nature entirely divine, while others revealed the future, sometimes clearly, sometimes in riddles. In sleep, says the spokesman of heathenism in the dialogue of Minucius Felix, we see, hear and recognize the divinity, whom by day we impiously deny, treat with contempt, and insult by perjury. The Stoics, especially, attached the greatest value to this ' special form of consolation derived from a natural oracle ', bestowed by Providence upon mankind ; even Christians believed that dreams that came true were sent not only by God, but also by demons, certainly with the evil intention mentioned above, and with the reservation that those sent by the latter were more frequently deceptive and impure. We shall not be far wrong, then, if we infer a universal and firm belief in the gods and Providence from the universal and firm belief in dreams.

The most superficial acquaintance with the literature (especially historical) of the first centuries of the Christian era is sufficient to establish beyond a doubt the universality of the belief in dreams. An important event is rarely described, without *one* dream at least being mentioned in which it was predicted. The most eminent men were greatly influenced in their actions by dreams, and prompted to all kinds of undertakings ; it was in consequence of a dream that Galen wrote his treatises on mathematics, and Pliny the elder his history of the Roman wars in Germany. Dreams often determined the choice of a man's career ; thus, Galen's father, in consequence of a dream, decided to educate him for the medical profession. Galen himself was frequently guided by dreams in the treatment of his patients, as a rule with the happiest results. Thus, on one occasion, acting on the inspiration of

two unmistakably clear dreams, he made an incision in the veins between the index and middle finger of the right hand, and let the blood flow till it stopped of itself. His belief in the art of divination by the flight of birds was equally strong. Suetonius begged the younger Pliny to procure the adjournment of a case in which he was defendant, since a dream had foretold that the verdict would be against him. Pliny advised him to think over the matter again, since the question was whether Suetonius' dreams signified impending events or the contrary, as in the case of a dream of his own.

Augustus, who paid careful attention not only to his own dreams, but to those of others which had reference to him, was persuaded by a dream to take his stand once every year on a certain day in a certain place, to hold out his hand like a beggar to passers-by, and to accept the copper coins offered to him. Marcus Aurelius offered thanks to the gods for having communicated to him in a dream a prescription for dizziness and blood-spitting. Cassius Dio wrote a book on the dreams and prognostics which foretold the accession of Septimius Severus; the latter, who attached such importance to his dreams that he had one of them represented in bronze, accepted it very graciously. In one of these dreams, he saw himself conducted to a lofty watch-tower, from which he had an extensive view over land and sea; he moved his hands as if he were playing the lute, and harmonious sounds reached his ear. Dio also began his great Roman history 'at the command of the divinity in a dream', and found courage and strength to continue and complete it in fresh dreams, in which Tychē (Fortune), to whom he had devoted himself as the tutelary deity of his life, promised him immortality.

The only dream-book that has survived out of a very extensive, chiefly Greek, literature of the subject, is especially interesting as a proof how generally the interpretation of dreams was recognized as a science, whose representatives endeavoured to develop as rigorous and exact a method of interpretation as possible, based upon the most comprehensive and trustworthy material available. The author of this treatise, Artemidorus of Daldis (as he preferred to call himself rather than from his native city Ephesus, in order that his mother's obscure birthplace might have the glory of having produced a famous man), lived towards the end of the second

century. He wrote in obedience to the repeated command of Apollo, who had appeared to him in a dream in visible form, and at the instigation of Cassius Maximus, a man of senatorial rank and African descent, who was also on friendly terms with Aristides. Artemidorus, who also wrote on the observation of birds and palmistry, regarded the dreams which the gods 'send to the naturally prophetic soul of man' as a practical proof of divine Providence. His chief opponents he considered to be those who believed neither in Providence nor in any kind of divination. His profound respect for the action of the divinity is shown by the warning that, when a man begs the gods to send him dreams, he should neither inquire after what is useless nor pray as if he were addressing instructions to them, and after the dream he should offer a sacrifice and a prayer of thanksgiving. He regarded his mission of interpreting the manifestations of the divinity as a priestly office, and his 'science' as sacred. To its investigation he had devoted his whole life, studied night and day, bought all the dream-books he could find, and during his journeys in Asia Minor, Greece, Italy, and the islands had made the acquaintance of as many professional *confrères* as possible, and had endeavoured to increase his knowledge by experience. His lofty idea of the truth and dignity of his science caused him to disdain all quackery and artifice. He had never endeavoured to produce an effect upon the general public or to win the approval of professional rhetoricians; otherwise it would have been as easy for him as for others to use dazzling and striking language. He always insists upon simple and intelligible explanations of dreams, and rejects all the subtleties and artificialities which impress the vulgar; he even considers them blasphemous, since to a certain extent the intention to deceive is thereby attributed to the gods who send the dreams. The only thing he was proud of was the rigorous accuracy of his interpretation. His book contains numerous proofs of his sincerity and veracity; he also had the satisfaction of knowing that, although malevolent and pedantic critics might censure its incompleteness and insufficient details, no one ventured to assert that it departed from the truth even in the slightest degree. The fewer the traces of anything that can properly be called mystical or fantastical in this book, whose production and circulation is inconceivable without an educated circle

of readers of similar views, and the more consistent, rational and methodical its treatment of the subject—the more striking proof does this afford of the fact that at this period even sobriety of judgment and a certain element of rationalism by no means excluded belief in a divine Providence, which continually manifested itself in miracles.

Of these miracles the most palpable and the most convincing were the cures of diseases by means suggested in dreams ; that is to say, those which faith most readily and most frequently created as continually affording it fresh support. These miracles, of course, took place by preference on the holy ground of the temples of the healing gods Aesculapius, Isis and Serapis, who also wrought other marvels in their sanctuaries. Thus Aristides declares of the inexhaustible ‘sacred well’ in the temple of Aesculapius at Pergamus, that by bathing in it many recovered their eyesight, and were cured of chest complaints, asthma, deformity of the feet ; a dumb man who drank of its water was able to speak ; and in several cases merely drawing water from the well effected a cure. It was by no means uncommon for the god to appear in person to believers. Origen complains because Celsus, who calls the Christians simple for believing in the miracles of Jesus, expects them to believe ‘that a vast number of Hellenes and barbarians (according to their own assertion) have seen and still see Aesculapius, not in a vision, but in person, perform cures, distribute blessings, and predict the future’. Against these assertions Origen appeals to the innumerable witnesses to the miracles of Christ, adding that he himself had seen men delivered from grievous diseases (demoniacal possession, madness), and other evils, ‘which neither men nor demons could heal’, simply by calling upon the name of God and Jesus. The two semi-divine sons of Aesculapius also appeared to many at Epidaurus and other places. In a dedicatory inscription (preserved at Rome) to Pan, giving thanks for recovery from severe illness, it is said that the god appeared visibly to the patient, not in a dream, but in broad daylight.

But of course the greater marvel, the descent of the healing gods in person to those who sought their aid, was also of less frequent occurrence ; as a rule cures were wrought by dreams, not limited to those who had passed the night in temples. In a special section on ‘Prescriptions’ Artemidorus has at-

tempted to reduce this marvel to its true proportions, by divesting it of the embellishments whereby the lively imagination of believers thought to magnify its importance, but which in his opinion were unworthy of the sublime nature of the gods. As to prescriptions, that is, treatment of maladies prescribed in a dream by the gods to men, he says that it is useless to question their efficacy. For many have been healed at Pergamus, Alexandria, and other places by prescriptions, and several believe that they are the source of medical science. But, on the other hand, absurd and ridiculous prescriptions are recorded, which have never been given in dreams, but are mere inventions. Thus, 'biting negroes' are said to have been prescribed to a sick man in a dream (meaning peppercorns, which are black and pungent); to another 'maidens' milk' and 'stars' blood' (meaning dew). Those who imagine such things show that they do not understand the love of the gods for men. The prescriptions really given by the gods in dreams are clear and simple; they prescribe salves and frictions, drinks and foods, called by the names we use ourselves; if ever they clothe a prescription in ambiguous language, the riddle is always easy of solution. For instance, a woman suffering from inflammation of the breast dreamt that she was suckling a sheep; she applied the herb called 'sheep's tongue', and was cured. Thus, it will always be found that the cures prescribed contain absolutely nothing contradictory to rational medicine; and consequently, that divine revelations are in perfect agreement with the certain results of science. For instance, the well-known writer Fronto, who suffered greatly from the gout, prayed the gods to tell him how he might be cured; he dreamt that he was walking outside the city; and as a matter of fact he obtained considerable relief by taking regular walks. Aristides was specially directed by Aesculapius, in a dream, to compose (in prose and verse) and to deliver speeches. As the god in a dream instructed a boxer, who passed the night in the temple, in the devices by which he overthrew a famous opponent, so, says Aristides, 'he has taught me knowledge and songs and subjects for speeches, and even the ideas and manner of expression, as masters teach boys their letters'. Galen mentions that Aesculapius had prescribed the writing of odes, songs and farces to many who were suffering from violent mental excitement; others were

told to ride, hunt, and practise military exercises, definite instructions being given in what cases the remedies were to be used. The patients who had put themselves into the hands of the god at Pergamus, submitted to the severest regulations, which they would never have obeyed on the advice of a physician (e.g. to abstain from drink of any kind for a fortnight). Galen was indebted to Aesculapius for the cure of a dangerous ulcer; and Marcus Aurelius, when setting out against the Marcomanni, left him behind, since the god (presumably in a dream) had pronounced against his accompanying the emperor. The custom of passing the night in the temple (*ἐγκοίμησις*, *incubatio*), still practised in southern Italy and Greece in cases of illness, was adopted by the Christian Church from paganism; the Madonna, the archangel Michael, and different saints and martyrs took the place of the gods and heroes who gave directions in dreams.

During the excavations in the temple of Aesculapius at Epidaurus in 1883-4 two of the six tablets have been found, on which the marvellous cures (of the sick who passed the night in his temple) accomplished by the god are recorded. These records are adapted to the rudest belief in miracles. In addition to cures of the lame, the blind and the dumb, we find the recovery of a woman after being five years pregnant with a boy, who immediately he was born washed himself and walked about with his mother. There are also numerous instances of the conversion of those who denied or doubted the god, and of the punishment of sinners, and of such as did not pay the fee. Besides these marvellous stories written by the priests, which belong to the pre-Roman period, an account given by an educated man of the second century A.D. of his restoration to health has also been found. This person, Marcus Julius Apellas, of Mylasa in Caria, who had been very ill (especially from indigestion) had been told by the god in a dream to repair to Epidaurus. On his journey, he was advised (at Aegina) not to worry so much: in the sanctuary itself he received numerous instructions as to the external and internal remedies to be used, a special diet, and the gymnastic exercises to be practised, amongst which swinging was included; although he was to bathe without the assistance of the bath-attendant, the god did not forget to add that he ought to give him a *drachma* as a tip. When he had prayed the god to cure

him more speedily, it seemed to him that he left the temple with mustard and salt rubbed all over his body, a little boy walked in front of him with a smoking censer, and the priest said, ' You are now cured, but you must pay the fee '. Later he was given a prescription of aniseed and oil for headache. But the patient had no headache. In consequence, however, of studying too hard the blood flew to his head, and he was cured by the prescribed means. ' He ordered me also to write down the remedy. Thankful and restored to health I departed '. Of four tablets found on the site of the temple of Aesculapius at Rome, two contain accounts of cures of blindness by dream-oracles, two of diseases of the breast which had been given up as incurable.

Many thanksgivings for recovery of health on Roman inscriptional stones evidently refer to prescriptions given in dreams. Near Velleia and Placentia there was a sanctuary of Minerva, who was called the ' mindful ' or the ' physician ' (of Cabardiacus), since she rendered help in sickness. Of course she was especially appealed to by the sick of the immediate neighbourhood, several of whose dedications and votive inscriptions have been preserved ; one of them is from the praefect of a cohort in Britain, probably a native of Cabardiacus. A woman thanks the goddess ' for having cured her of a grievous infirmity by a gracious gift of medicine ' ; another fulfils a vow, because her hair had grown again ; a man offers the goddess ' silver ears ', after recovery from an affection of the ear. The same goddess had a temple in Rome, the site of which (in the fifth quarter) has recently been determined by numerous representations of human limbs in clay (likewise offerings from patients who had been cured) found in a subterranean vault attached to it.

Not only the healing gods, but the gods generally, could render aid in sickness, by the sending of dreams or in other ways. Thus, according to an inscription in bad Latin, a slave of the *pontifices* at Rome brings an offering of a white cow to ' the good goddess ' (*Bona Dea*) for the recovery of his eyesight, having been cured, after he had been given up by the physicians, in ten months by the grace of the lady '. For although tradition and belief attributed to each god a special sphere of activity and benevolence, suited to his nature and character, the power of the gods was regarded

as boundless, and capable of being exercised outside its proper limits, wherever the god pleased; every god was looked upon as 'always having the power to render aid of every kind, and was applied to for assistance, where he was near, where he was beneficent, where he was worshipped'.

In all cases in which the believer recognized the action of a higher power, he most naturally and instinctively attributed it to the particular god to whom he had been in the habit of praying from early youth, whose sanctity, authority and reputation were greatest in his own city or country, and whose power he believed he had already experienced. Thus Aristides had heard many persons say that the god Asclepius had saved them during a storm at sea by stretching out his hand to them. Asclepius was the patron deity not only of all those who repaired to his temple, but of all the inhabitants of the country round about Pergamus, and of other localities famous for his cult; such was the great Diana for Ephesus, Serapis for Alexandria, Pan for Panias, Leto for the whole of Lycia, the 'heavenly goddess' of Carthage for North Africa, and so forth. Generally speaking, the god, whether of the highest or inferior rank, who was chiefly worshipped in each country, was its most natural helper in time of need. Pausanias (viii. 37, 8) speaking of a temple of Pan not far from Megalopolis in Arcadia, says: 'This Pan, equally with the most powerful of the gods, possesses the power of accomplishing men's prayers and requiting the wicked as they deserve' (Frazer's translation). At Stratonicea the divinity chiefly worshipped next to Zeus (Panameros or Panemerios) was Hecate. Both had saved the town from the greatest dangers in ancient times; hence (according to a document still extant) the town council resolved that every day thirty boys of good family, clad in white and crowned with wreaths of olive, should sing a hymn of praise to the accompaniment of the *cithara* in the council-house, where their statues had been erected. Beside the gods, heroes were worshipped in all Greek countries, as has been already observed; each district probably had its special protector and helper in time of need, whose sphere of activity, being confined to a small area, was all the more put to the proof and recognized within those limits. However doubtful the claims of these heroes to reverence might originally have

been, if their cults had once gained a footing, they maintained it with remarkable tenacity ; as is shown in the case of Antinous. We do not know whether the worship at Athens (in the second century A.D.) of the physician Aristomachus as the ' physician hero ' existed at a later period. In Lucian's time, sacrifice was still offered to the Scythian Toxaris, who was supposed to have saved Athens from a severe epidemic, and his gravestone cured those suffering from fever. At Chalcis in Euboea, in Plutarch's time, a priest was appointed for Titus Quinctius Flamininus, sacrifice was offered to the latter, and a panegyric in verse sung in his honour. There were temples and priests of Alexander the Great not only in Alexandria, but in many other places. As late as the sixth century the inhabitants of the oasis of Augila in the interior of Marmarica offered sacrifice to him, and a large number of temple slaves was devoted to his service ; Justinian converted them, and built a church of the Virgin Mary for them. In the time of Pausanias, not only was sacrifice offered to the Olympian victor Theagenes as a god in Thasos, but in other places in Greek and barbarian lands his statues were revered and healed sicknesses. Reverence often attached to a special statue of the hero, which was said to have proved its miraculous power. At Alexandria in the Troad there were several statues of the ' hero Neryllinus ' (probably Marcus Suillius Nerullinus, consul in 50, who administered the province of Asia as proconsul about 67-70) ; one of these was supposed to heal sicknesses and deliver oracles ; sacrifice was offered to it, and it was covered with gold and crowned with garlands. Sometimes the belief in the miraculous power of a statue was limited to the inmates of the house where it stood ; small coins and plates of silver, sometimes fastened with wax to its legs, were thankofferings from those who had been cured of fever by its aid ; impious slaves, who attempted to steal these pious gifts, were most cruelly put to death.

A belief which never doubted the repeated and supernatural revelations of the divine power and goodness was of course all the more ready to recognize the ruling hand of Providence in all the events of life which appeared quite natural or accidental to the sober-minded. The miracle, properly so called, was also nothing but one of the manifes-

tations of this power which incessantly interfered with the course of life and nature, although no doubt the most striking and convincing of them. It marked, as it were, the culminating point attained by a hundred-fold gradations of imperceptible transitions; thus, there was nothing fixed about the idea of a miracle, its recognition was subjective, conditioned by the feelings of those who believed in it, and therefore infinitely varied. Since the gods alone could perform miracles, it was from them alone that blessings could come, whether great or small. Epictetus, rebuking the Academicians, who questioned the existence of the gods, says: 'Grateful indeed are men and modest, who, if they do nothing else, are daily eating bread and yet are shameless enough to say, we do not know if there is a Demeter or her daughter Persephonē or a Pluto (the corn deities); not to mention that they are enjoying the night and the day, the seasons of the year, and the stars, and the sea and the land, and the co-operation of mankind, and yet they are not moved in any degree by these things; and do not trouble themselves about the disastrous influence that their doubts may have on the morality of other men' (*Discourses*, ii. 20, 32; chiefly from Long's translation).

Certainly many of the Stoics denied the efficacy of prayer, or, like Marcus Aurelius, advised men to leave themselves in the hands of the gods and only to pray for what was really good. Similarly Juvenal: The gods love man more than he loves himself; they know, when in our blindness we pray for a wife or the birth of a son, what will be the consequence for us if our prayer be granted; if you must ask for something, let it be for a sound mind in a sound body. The younger Pliny says that the gods rejoice more in the innocence of worshippers than in elaborate prayers; the man who enters their temples with a pure heart is more agreeable to them than one who recites a carefully prepared litany.

But such admonitions only confirm the general use of prayer, and no one can doubt that the majority of believers not only addressed themselves to the gods in all their anxieties and undertakings, but also paid them reverence and thanks in regular prayers, and commended themselves and others to their protection. Seneca even combined a belief in Fate with a belief in prayers being granted. The voices of those

offering prayers and vows would not be heard everywhere, if it was not known that the gods not only bestowed benefits of their own free will, but also in answer to prayers. They have left so many things uncertain that the use of prayers and vows may prove beneficial. Persius, like Juvenal, has made the foolish prayers of the majority the subject of a satire. It is not the sculptor, says Martial, but the man who prays that shows the gods as they really are (kind and merciful). Plutarch thought it his special duty to warn men not to believe that the prayer alone is everything; it will not be heard, nor can the help of the gods be expected, unless men help themselves. When the Jews besieged in Jerusalem gave no sign of movement on the Sabbath, even when the Romans were setting up ladders to storm the walls, they were paralysed by the bonds of superstition. God is the hope of courage and strength, not an excuse for cowardice. The pilot on a stormy sea no doubt prays that he may escape, and calls upon the saviour god, but at the same time he guides the helm, lets down the yards, and shortens sail.

The immense number of monuments and inscriptional stones of a religious character, scattered throughout the vast Roman empire, would alone be sufficient to prove, beyond all possible doubt, that during this period the gods were always regarded as the source of all blessings and the averters of all evils and dangers. These monuments attest most emphatically that the belief in an omnipresent Providence, directing the course of the world and human destinies, exercised by the gods who had been worshipped from time immemorial, as well as by those who had only become known in modern or more recent times, continued to flourish in the minds of the various populations and afforded consolation and hope in times of need and affliction of every kind to high and low, to learned and simple alike. A considerable part of these prayers, vows, thanksgivings and offerings of homage and adoration may certainly owe its origin to the outward observance of the forms of the prevailing cults, to the unreflecting force of habit or to conscious hypocrisy, but in most cases these stones afford just as many proofs beyond suspicion of a sincere, naïve and deep-seated belief. A few examples will be sufficient to give a clear idea of the nature of this belief.

In accordance with the essence of polytheism, reverence, prayers and thanks were as a rule addressed not to the whole body of divine powers, but only (as in the cult of the saints) to individual divinities, chosen partly with reference to their sphere of influence and the special efficacy and gifts attributed to them, partly for local and individual reasons. The last cannot, of course, always be indicated with certainty. When a contractor for imperial and state buildings offers thanks to the 'sacred, heavenly good goddess' (*Bona Dea*), for that with her assistance he has successfully carried an arm of the Claudian aqueduct underground, and at the same time shows his gratitude by restoring an old and ruined chapel, the 'good goddess' in this case, as frequently, is regarded as the protectress of the locality or building. On a stone near Coblenz, belonging at the latest to the age of the Antonines, a certain person thanks Mars for deliverance from frightful mental and bodily tortures; the reference here is certainly to a national Celtic divinity.

As a matter of course, thanks and prayers were addressed times without number to the national and local divinities, rather than to those whose sphere of influence embraced the favour solicited. Thus, at Smyrna, on one occasion thanks were offered for deliverance from an epidemic, not to the healing gods but to the river god Meles. A certain person set up a statue or a sanctuary at a cost of 8,000 sesterces (about £70) to the genius of a town in Numidia, on the spot 'where he had experienced the aid of his divine power'. Of course, not only natives but also strangers worshipped the divinity within whose sphere of influence they sojourned, and commended themselves to his or her protection. A Roman merchant, who traded in delicate pottery with Britain, fulfils a vow on the island of Walcheren to the local goddess Nehalennia 'for the preservation of his wares in good condition'. Titus Pomponius Victor, an official of the imperial household, who was stationed as procurator of the imperial domains at Axima in the Graian Alps (on the road from Lemens to Aosta) and probably had to take numerous journeys in connexion with his duties, addresses an elegant thanksgiving prayer in verse to the forest god Silvanus (whose image was enclosed in the hollow of a sacred oak as a natural forest chapel) for the protection hitherto afforded to him;

at the same time he promises to dedicate a thousand large trees to him, if he brings him back safe and sound to Rome with his family.

We have already mentioned the worship of the non-Roman native divinities in the northern and western provinces by Roman settlers or traders. Of the Celtic gods one of the greatest was Belenus, identified with Apollo; he was worshipped in all Celtic districts and even beyond amongst the Romans, as is shown by votive inscriptions found at Autun, Vienne, Venice and Aquileia. When the emperor Maximin (in 238) was besieging Aquileia with all his forces, the courage of the defenders was sustained by confidence in the aid of the native god Belenus; the besiegers also often saw his form hovering over the city. Herodian leaves it in doubt, whether he actually appeared to them or whether it was only an attempt to palliate the shame of their defeat by the fiction of his miraculous assistance. Yet he adds, 'the unexpected result makes anything credible'; and even a conscious fabrication in such a case shows the extent of the belief in the visible assistance of the gods, otherwise it would have had no meaning.

Travellers and wanderers in a foreign land also prayed to the local gods and performed their devotions at every place that was sacred to them. Pious wanderers, says Apuleius, lingered on their journey wherever they found a sacred grove or an altar crowned with flowers, a cave shaded by foliage, an oak hung with horns of sacrificial victims, a beech adorned with their skins, an enclosed hillock, a stump of a tree carved with an axe in the form of a statue, a plot of grass smoking with sacrificial libations, a stone moistened with fragrant essences. If the stranger performed his devotions at these centres of a simply local cult, the divine power which showed its authority in great natural phenomena the more irresistibly called for adoration. A Roman volunteer at Remagen fulfilled his vow 'to Jupiter mightiest and best, to the genius of the place, and to the Rhine', according to a stone set up in the year 190 (not the only one of this kind). But everywhere in a foreign country those who were exposed to the dangers and vicissitudes of the journey were doubly 'mindful of the gods', certainly including the native ones. A stone at Urbisaglia has preserved the memory of a present,

which an imperial freedman, Titus Flavius Maximus, sent from the east 'to the gods and goddesses of Urbssalvia'. On the other hand, at Nemausus (Nîmes) a *primipilus*, a native of Berytus, fulfils his vow to the god of his native place, the Jupiter of Heliopolis, but also to the god Nemausus. For a man always felt most directly called upon to worship the gods in whose neighbourhood he found himself; hence the inscriptions of travellers, commending themselves to the protection and favour of the native divinities, are numerous. The primeval, colossal sanctuaries of Egypt appear to have produced the most overwhelming effect upon the religious feelings of foreign visitors, as is shown by rock-hewn inscriptions on temples, obelisks, *pylones* (gateways), etc., in most places on either side of the Nile. At Talmis (Kalabsheh) in Nubia a number of Roman centurions and soldiers posted there offer homage to the sun-god Mandulis worshipped in that district, in an inscription (year 84) in the forecourt of his temple.

But the gods were, of course, frequently called upon as gods of a special activity, because, and in so far as they manifested it in a certain place. Thus, for example, at Alba Julia (Carlsburg on the Marosch) a Roman veteran fulfils his vow 'after a vision', also in the name of his wife and daughter 'to Aesculapius and Hygiea and the other healing gods and goddesses of this place', in gratitude for the restoration of his eyesight. In many cases the efficiency of the god was limited to a definite locality. Thus, the thanks of patients cured in a bath are naturally addressed to the nymphs of the spring; in many baths votive tablets of Roman visitors have been found, at Ischia for Apollo and 'the nymphs of the nitre-springs'. Other healing springs, near which inscriptions to the nymphs have been found, are e.g. those of Les Fumades (dépt. du Gard), Varasdin-Teplitz, Tüffers near Cilli, Bagnères de Bigorre, Loprésti haspól, and others. A votive tablet found near the hot springs at Vif is dedicated to 'the spirits of the eternal fire'. At the baths of Hercules (as they are still called) in Transylvania, thanks are offered to the 'health-bringing Hercules', as the god who on his wanderings through the world discovered all the hot springs, A hunter, who had been cured of a swelling in the joints (the result of a bite from an Etruscan wild boar) by the baths

or Solfatara near Tivoli, to show his gratitude for being able to mount his horse again, set up an equestrian statue of himself in marble to the goddess of the spring (Lymfa). The nymphs were also thanked for the discovery of new springs (or their divinities were worshipped as 'the new' or 'newly discovered' nymphs), or for the reappearance of a dried-up spring. A magistrate of Lambaesis in Numidia dedicated an altar in token of special rejoicing, because in the year he held office the nymph 'had given our city Lambaesis an abundant supply of water'. An inscription at Auzia in Mauretania announces the offering of a sacrificial gift to the mountain spirit, 'who wards off the violence of the storms from our native town'. Near the old marble quarries of Martignac in the neighbourhood of the Pyrenees a votive tablet records the thanks of two Roman contractors or proprietors 'who first quarried and carried out from them columns 20 feet long', 'to Silvanus and the spirits of the Numidian mountains'. A cavalry officer serving in Britain, who fulfilled his vow to Silvanus, because he had aided him to catch a mighty wild boar, which had escaped all his predecessors, certainly imagined that the forest god had his home in this particular wood. Wood-sawyers and timber-merchants also worshipped him. About the time of Trajan a legate of the seventh legion set up in its standing quarters (? Leon in Asturia or Galicia) a temple to Diana, 'in order that he might be able to hit with the javelin the flying deer, the stag, the bristly boar, and the breed of forest horses', and offered her from the spoils of the chase boars' teeth, stags' horns and a bear's skin. Inscriptions in various places in Spain offer thanks to the goddess of Turobriga for recovery of health, some one in Emerita in Lusitania also appeals to her to punish the thief who has stolen six tunics, two linen overcoats, a shirt, etc. Some one who has lost a ring promises half of it as a present to the god Nodon (in the south-west of Britain), if he recovers it. In a very ungrammatical sentence he adds: 'If amongst those who now have the ring there is any one named Senecianus, do not permit him to enjoy health, until he brings the ring to thy temple'.

Although the number of the gods, who were invoked either in all cases or at least by preference in definite places was exceedingly large, since it was at least equivalent to the

number of the more respected sanctuaries and centres of worship, yet on the other hand every god was everywhere solicited for the assistance or the gift, which he above all other gods was believed to be able to grant. This holds good not only of the greater gods, but also of the inferior and the least important. Even the cult of those countless protecting and auxiliary powers of the old Roman religion, whose action was restricted to definite cases or to certain spheres, and whose functions, according to the Christian belief, were performed by angels, continued to hold its ground under numerous forms. Of course, we cannot expect to find a great amount of evidence for the worship of these very subordinate protecting spirits, who only act at intervals. Yet, as Tertullian assures us that the day on which the child was able to stand on its legs for the first time was always sacred to the goddess Statina, we may assume that others of those divinities, who watched over the most critical moments of human life, still lived on in the popular belief. Waggoners and muleteers still swore by the (originally Celtic) goddess of horses, Epona, whose little chapel was usually in a niche of the main girder which supported the roof of the stable. There her image was crowned on feast days with roses and other flowers ; images representing her, for use in stables, are still in existence. In places where foul or suffocating vapours ascended from the ground (Beneventum, Cremona) worship was offered to the goddess Mefitis.

But, however firmly the people clung to these countless ministering divinities, since their less important but clearly defined activity brought them nearer to a section of the faithful, whose longing for intercourse with the supernatural world they were better able to satisfy than the superior gods, whose omnipotence and majesty rather kept the human heart at a respectful distance ; yet the latter, as most powerful governors of the world and special agents of Providence, still continued to be the most ardently worshipped and the most universally invoked. Everywhere the soldier prayed to father Mars, the mariner to Neptune, the merchant, the tradesman and the careful householder to Mercury, 'the dispenser and preserver of profits', the artist and artisan to Minerva, the countryman to Ceres, women with child to Diana and Lucina ; parted lovers (in Greece at least) to

the god of love ; in one of Plutarch's dialogues one of the speakers tells how his parents, soon after their marriage, which had been long delayed in consequence of a family quarrel, made a pilgrimage to Thespieae, in accordance with a vow each had made to sacrifice to Eros. The more extended their sphere of influence and the more general their worship, the more frequently the gods were appealed to. In the East, the aid of Heracles, the invincible, who overcame all terrors and dangers, was invoked in all perils by land and sea, and in sickness.

Undoubtedly, however, prayers were most commonly addressed to the supreme god, as the thunderer, the lightning hurler, the lord of storms and of the clear sky ; in times of drought, processions of women, barefooted and with dishevelled hair, ascended a hill and prayed to him for rain. On the mountain heights where he was worshipped, as Jupiter of Vesuvius, of the Apennines, etc., he was felt to be less remote from man. At the top of the Great St. Bernard pass, a district whose inhabitants (the Celtic Veragri) in Hannibal's time worshipped the god Poeninus, up to the eleventh century there stood, between the hospice (dedicated to St. Bernard in 926) and the lake (frozen during eight months of the year), in which numerous offerings and coins have been found, the recently discovered temple of Jupiter, from which the mountain was formerly called Mont Joux (mons Jovis). There, 'where the terrors of the mountains confront the wanderer to a far greater extent than on the other passes', in addition to 1,600 coins and numerous other offerings, fifty bronze votive tablets have been found presented by soldiers and other Roman travellers, who fulfilled their vows to Jupiter Poeninus, mightiest and best, for their safe journey and return. But his almighty will not only controlled nature ; he was the 'controller of things human and divine and lord of destinies', and in that capacity guardian, preserver, victor, god of battles and bringer of peace, consummator of every enterprise, saviour in all times of need and danger. Every interest, great or small, public or private, was commended to him ; his omnipotence was revealed in every event. A high official of senatorial rank fulfils his vow to Jupiter in Campania, 'because in this place he has been preserved from imminent danger and has recovered his health' ; a

steward of the distinguished family of the Roscii performs a vow to him as the preserver of the property of this family (in the neighbourhood of Brescia). At Apollonia in Phrygia a Galatian dedicated an altar to him, with two oxen in relief, because he had preserved the life of men and cattle in time of famine, led him back in safety to his native land, and bestowed fame upon his son amongst the Trocmi. An inhabitant of Apulum (Carlsburg on the Marosch) fulfilled his vow 'in return for his own safety and that of his relatives', because he had been delivered from the violence of the Carpi, who in the third century frequently invaded the province of Dacia.

In the Etruscan town of Tuder 'an infamous slave of the commune with frightful cunning' had buried a tablet with the names of all the *decuriones* (town councillors), in order to 'devote' them to the powers of the under-world. But the supreme god had revealed the crime, handed over the perpetrator to punishment, and delivered the town and citizens from the fear of the danger that threatened. In return for this, a freedman specially distinguished by the town made a vow for the prosperity of the town, the town council and the people of Tuder, 'to Jupiter greatest and best, guardian and preserver'.

It would be superfluous to multiply examples taken from Roman inscriptional stones; those already given will suffice to make clear the nature of the belief in a Providence exercised by the gods. The number and variety of these stones, found throughout all parts of the Roman world, justify the assumption that the belief to which they bear witness extended over an equally large area. Even supposing that a considerable number of these memorials may be the work of unbelievers or indifferentists, who desired to support the prevailing forms of cult by recognizing them or at least not opposing them, on the other hand such concessions or compromises could only have been possible in the face of a belief whose predominance was undisputed. Against the fact of this predominance there is no scintilla of evidence in the entire Greek and Roman literature of the period, but much that expressly and irrefutably confirms it. In view of the great progress of Epicureanism, it is certainly credible that the number of those who disbelieved in a Providence was considerable, but it was no more possible then

than at any other time even for the most careful and far-seeing observers to define even approximately the numbers of unbelievers and believers respectively. The vague expressions of authors, who in a general way discuss contemporary religious affairs, add nothing to our knowledge. Statements such as that of Pliny, that some men take no account of the gods and that blind chance is revered as a divinity ; or of Juvenal, that in the opinion of many everything depends upon chance, no one rules the world, but nature herself orders the course of events ; or of Philo the Jew, that many believe that everything in the world moves without superior guidance by virtue of its innate force, and that the laws and customs, the rights and duties of men have been established solely by human intelligence—such statements are only an inaccurate paraphrase of the Epicurean doctrine, which, as endorsing the opinion that chance prevails in human affairs, Tacitus also sets against the Stoic belief in Providence. The widespread belief in an unalterable *Fatum*, attested by him as well as by Pliny, by no means excludes the belief in Providence ; the Stoic school also, as is well-known, succeeded in combining the two. In Plutarch, also, who (in his *De Superstitione*) treated superstition and unbelief as aberrations in opposite directions from true piety, by atheists are chiefly to be understood Epicureans. There is no indication of the numerical relation between them and believers, but if Plutarch, whose religious tendencies were so closely akin to superstition, nevertheless declares atheism to be the less harmful error, we can hardly believe that he feared any peril to religion from its diffusion. Had the spread of the materialistic view of the world been calculated to arouse anxiety and offend the pious, Plutarch would hardly have recognized it as a natural reaction against excessive superstition and handled it so tenderly.

That belief in the gods was general and unbelievers few and far between, is asserted not only by Maximus of Tyre but also by Apuleius : ‘ the ignorant masses, uninitiated into philosophy, void of holiness and true knowledge, destitute of piety, without a share in truth, treat the gods without respect, partly with over-anxious reverence, partly with insolent disdain, some through superstition, others through unbelief, some full of fear, others full of self-complacency.

For most people worship the whole company of gods, dwelling high up in aether, far removed from contact with men, but not in the right way ; all people fear them, but through ignorance ; few deny their existence, and these from godlessness '. According to this, at that time at least the number of atheists and materialists, although in itself considerable, only formed a small minority as compared with the large number of believers. This view is in the main confirmed by Lucian, whose evidence in this case carries all the more weight, since he would undoubtedly have preferred to be able to state the contrary. The gods, uneasy about the future of their cult, are present at a public debate between an Epicurean who denies, and a Stoic who defends the belief in Providence. The latter is disgracefully worsted in argument. Then says Mercury : ' But what is the harm if a few return home with this conviction ? For the number of those who hold the opposite opinion is great—the majority of the Hellenes, the mass of the people, and all barbarians '.

However greatly the number of the gods of the ancient world may have been increased by the admission *en masse* of oriental and barbarian divinities, no alteration took place in the relation of believers to the divinity. The increase and multiplication of divine personalities had rather facilitated than impeded intercourse with the higher world for weak and helpless humanity, which, as Pliny correctly observes, could only grasp the idea of the divinity by breaking it up into an infinite number of individuals. Not only did the belief in a Providence exercised by the gods continue to be indispensable to the vast majority of mankind, but without cessation it demanded and created the miracle ; and it was not women and the multitude alone, as the enlightened Strabo thought, who felt the need of ' legends and miraculous tales '. It is to be hoped that our investigations have sufficiently shown that, throughout the domain of Graeco-Roman civilization, the world of gods, the result of the fusion of the two religions, on the whole maintained its sway, notwithstanding the reputation acquired by new importations, and, in spite of all admixture, re-established its authority over the minds of men.

In conclusion, we have still to consider the question of cult, the influence of which in continually strengthening

and reviving belief must be rated very highly. Even a complete inundation of the West by the religions of the East would never have eradicated the belief in the old gods, so long as their cults, which, most intimately connected with public and private life, consecrated and added solemnity to the most important crises in both, ever claiming attention and captivating the mind, the soul and the imagination in various ways, continued to exist everywhere in the traditional forms. So long as the temples 'dignified by the personal presence of the divinities inhabiting them rather than distinguished by ornament and enriched by gifts', invited men to prayer ; so long as numerous solemnities, festivities, and religious ceremonies of all kinds (sacrifices, processions, and spectacles) continually and most emphatically recalled the power, greatness and glory of the gods and their relation to mankind ; so long was it impossible for human belief to turn aside from the paths prescribed for it by the venerable tradition of so many centuries and approved by countless generations as leading to truth.

Not only is the persistence in late antiquity of all Greek and Roman cults of importance an undisputed fact, but also the retention of obscure and local cults, ceremonies, usages and forms which were no longer intelligible is amply attested in the case of so many different lands that, considering this extremely tenacious vitality of religious tradition, any great or essential diminution of it in the course of centuries appears on the whole inconceivable.

The Roman ritual was preserved, at least in great measure, down to the last days of antiquity, in forms which owed their origin to a period anterior to the beginnings of Roman history, and are based upon those very ancient ideas of the world of gods prevalent in Latium long before the Roman religion was inundated by the Greek. The liturgical hymns, in part unintelligible even to the priests who year by year chanted them according to instructions, contained the invocations of the gods under the names given to them by the oldest settlers on the hills on the bank of the Tiber, now long since obsolete ; year in, year out, a religious ceremony, of equally high antiquity, was performed by the priests with the same punctilious accuracy. The stations (*mansiones*) for the procession of the priests called *Salii*, in which the

ancilia (sacred shields) were deposited for one night, were probably restored after 382. The calendar of Philocalus (compiled in 354 from official sources) still specifies a considerable number of the religious festivals supposed to have been instituted by Numa (i.e. in existence from time immemorial), as state festivals celebrated in Rome at that time. The oldest cults were just those which survived the longest, 'when the more spiritual worships of historic times had long since fallen victims to the religion of the cross'; for instance, the procession on March 16 and 17 to the twenty-four chapels of the Argei (puppets of rushes or straw), which were hurled into the Tiber on May 13 (customs undoubtedly referring to the incoming and death of the spirit of spring); and the sacrifice of a horse (*October equus*) crowned with loaves (for whose head two of the oldest regions of the city contended) which took place at the harvest thanksgiving (October 15) on the Campus Martius. The equally ancient festival of Lupercalia lasted till 494, the day of its celebration (February 15) being changed by Pope Gelasius I into the festival of the purification of Mary.

But the continuance for a thousand years of forms of cult, unaltered and as it were fossilized, is most clearly shown by the minutes of the *fratres Arvales* (the field-brethren), the only surviving acts of a religious association. This brotherhood, usually composed in imperial times of men of the highest rank and the emperors themselves, celebrated in May a three days' festival in honour of the 'divine goddess' (*Dea Dia*, a very old name for the maternal earth-goddess, dispenser of the blessing of corn) to secure the growth of the seed then beginning to sprout, in her sacred grove of primeval trees as yet untouched by the axe, situated five miles from Rome on the road to Campania. Whenever an iron axe was used within the precincts of the grove; when a tree was blown down, or fell from decay or was struck by lightning; whenever, in fact, any iron implement was brought into it, a propitiatory offering was necessary; the prohibition of the use of iron is to be explained by the fact that at the time to which these ritual laws go back, the metal was unknown. Among the solemnities of the second day of the festival, the priests shut themselves up in the temple and touched certain pots, with fervent prayers and adjurations. The most recent

discoveries in the grove of the Arvales have brought to light potsherds of rudest manufacture, fashioned by hand without the aid of the potter's wheel, which are only found elsewhere in Latium under the peperin (i.e. the lava of the long-extinct volcanoes of the Alban mountain range). 'They were evidently the pots for boiling the grain, at a time when corn, instead of being made into bread, was beaten to a pulp'. Later in the day, the priests, after all who were not members of the college had left the temple, shut themselves up in the sanctuary, tucked up their tunics for the dance, and sang or recited a prayer to Mars and the Lares (or Lases) to avert destruction 'in Latin which must have been obsolete 400 years before Cicero, and was as unintelligible to them as the Kyrie Eleison to the sacristan; for which reason the service-book was handed to each priest beforehand by the attendants'. The text of this litany, contained in a protocol drawn up in 218 during the reign of Heliogabalus (Elagabalus) is the oldest known document in the Latin language. At that time perhaps a thousand years had passed since the 'field-brethren' had invoked Dea Dia for the first time. In the course of these thousand years, the face of the inhabited world was almost entirely changed. The city on the Tiber, once a country village, had become the centre of a world-empire; its morning and noon had passed, its evening was at hand. The occupant of the throne set up by Augustus was a priest of the sun from Syria, a thoroughly despised and frequently humiliated country. And yet still could be heard the ancient chant, the words of which the kings of Rome had once listened to with reverence—

Help us, O Lases!

O Mars, Mars, let not death and destruction overtake so many!

Be sated, O cruel Mars!

In the rest of Italy, also, very ancient local cults held their ground with the same tenacity against all destructive influences; in upper Italy Celtic, in the district of Verona Raetian, in Toscana Etruscan, especially the cult of Nortia, the goddess of destiny, at Volsinii (Bolsena). Juvenal speaks of Nortia as the patron goddess of Sejanus, who was a native of Volsinii, and as late as the fourth century the Volsinian Rufius Festus Avienus (proconsul of Africa 366, of Achaia

372, and a poet of repute) calls himself a worshipper of Nortia. Similarly, other families from Italian towns who had settled in Rome clung to their native cults, the Turpiliani to that of Feronia, chiefly worshipped at Terracina and Soractē, but also at many other places in Italy. The goddess Vacuna, by whose ruined temple in the neighbourhood of his Sabine farm Horace dictated the epistle to his friend Aristius Fuscus, was worshipped at several places in Sabine territory; her most famous sanctuary was a grove in the plain of Rieti, where the Velino flows into the Veline lake. On the other hand, the reputation of other local divinities, like that of the aldermen of small towns, as Tertullian scoffingly remarks, did not extend beyond the outskirts; thus the cult of Delventinus was limited to Casinum, of Numiternus to Atina, of Visidianus to Narnia, of Ancharia to Asculum, of Valentia to Ocriculum, of Hostia to Sutrium. A temple of the goddess Cupra in the town of the same name on the coast of Picenum was restored by Hadrian. Curious festivals, attended by crowds of pilgrims and sightseers from all quarters, and singular usages continued in existence in different places. As late as the time of Marcus Aurelius the priesthood of Diana of Nemi was bestowed upon the man who, after he had broken off a branch from a certain tree in her grove, slew the holder of the office for the time being in a duel; at that time the candidates for this reward of blood were runaway slaves.

The astonishingly numerous and manifold local cults, in great part also dating from remote antiquity, often singular, sometimes barbarous and even horrible, which continued to exist in Greece, are known to us chiefly from Plutarch, Pausanias, and inscriptional monuments. Some characteristic examples will be sufficient to show the superabundance and manysidedness of the Greek cults, and the amazing tenacity with which immemorial traditions held their ground. At Patrae, the festival of Artemis Laphria was celebrated in the following manner. Round the large sacrificial altar green trunks of trees, each sixteen ells long, were planted in a circle within which piles of the driest wood were heaped up. On the first day a magnificent procession took place, in which the maiden priestess of Artemis, on a car drawn by stags, brought up the rear. On the second day the sacrifice took place, to which both the township and individuals vied with each other

in contributing. All the victims were thrown alive on the altar, consisting of edible birds, wild boars, deer, roe, wolves and bears and their cubs ; then the fire was lighted. If a bear or other animal succeeded in getting loose and escaping, it was at once dragged back again, yet no one was ever injured by any of these animals.

In the same town, an image of Dionysus Aesymnetes (‘ president ’) was worshipped ; it was enclosed in a chest which, according to the legend, had been carried away from Troy at the time of its capture. Nine men, chosen by the people from the most distinguished inhabitants, and the same number of women, conducted the service. On a fixed night during the festival, the priest carried the chest out of the temple. Then all the children went out of the city to the river Melichus, their heads crowned with ears of corn. According to the legend, it was in this manner that the children who were sacrificed to Artemis were crowned in olden times. They deposited the crowns at the feet of Artemis, bathed in the river, wreathed their heads with ivy, and then repaired to the temple of Dionysus. Near the river Crathis there was a sanctuary of ‘ the broad-bosomed earth-goddess ’ with a very old image of wood. The priestesses were obliged to live a chaste life, and those appointed to the office must have known only one man. The truth of their declaration was proved by a draught of bull’s blood ; those who failed to stand the ordeal were instantly punished. When several candidates were equally qualified, the selection was decided by lot. At Titanē in Sicyonia there was a temple of Asclepius, much frequented by sick persons who lived in the neighbourhood ; inside the temple precincts stood some old cypress trees. Only the head, hands and feet of the image were to be seen ; the rest of the body was wrapped in a woollen shirt and cloak. A statue of Hygiea (Health) by its side was completely covered with women’s hair, cut off in honour of the goddess, and with strips of Babylonian raiment. Hard by was an altar of the winds, to which the priest offered sacrifice one night in every year, at the same time secretly throwing victims into four pits to assuage the fury of the winds ; he also sang incantations, composed, it was said, by the old enchantress Medea. At Troezen, near the temple of the Muses, there was an altar of Sleep, to whom sacrifice was

offered as well as to the Muses, since this god was said to be their greatest favourite. But the chief object of worship at Troezen was Hippolytus, the son of Theseus, to whom a magnificent temple was erected. The inhabitants denied that he had met his death by being dragged along by his horses ; they asserted that he had been carried up to heaven, where he was to be seen in the constellation Auriga (Charioteer). His priest held office for life, and a yearly festival was celebrated in his honour ; every maiden cut off a lock of her hair before marriage and deposited it in his temple. At the festivals of Dionysus the outward signs of religious frenzy, the eating of raw meat, the strangling and tearing to pieces of snakes by the Bacchantes still continued. The shedding of human blood, obligatory in certain cults, was a survival of human sacrifice. According to the legend credited by Pausanias, the image of Artemis Orthia at Sparta was the very one that Orestes had carried off from the temple at Tauri ; the goddess still required her altar to be sprinkled with human blood, for which purpose youths were still flogged at her altar till they bled. The priestess held the little wooden image of the goddess in her arm ; if the scourgers flogged a boy lightly owing to his beauty or rank, it grew so heavy that she could not carry it. Plutarch says that even in his time many died under the blows ; those who bore the flogging most unflinchingly were distinguished for life by the title of ' conquerors at the altar.' At Alca in Arcadia, during a festival of Dionysus, women were flogged in obedience to an utterance of the Delphic oracle. At Orchomenus in Boeotia, at the Agrionia, the priest of Dionysus, sword in hand, every year pursued the supposed female descendants of the curse-laden daughters of Minyas ; he was at liberty to kill the woman whom he caught, as the priest Zoilus actually did in Plutarch's time. But this pious frenzy brought down the wrath of the gods not only upon Zoilus, who died of a horrible disease, but also upon the city, which was grievously afflicted ; the inhabitants deprived the family of Zoilus of the priesthood, which was subsequently conferred by election. According to Lactantius, human sacrifices were offered to Zeus in Cyprus, until Hadrian forbade them ; even under Marcus Aurelius it was believed that they were secretly offered to Zeus Lycacus in Arcadia. In Rhodes, also, a human victim is said to have been offered to

Cronus every year, usually a criminal deserving of death (as at the festival of Jupiter Latiaris in Rome).

Our knowledge of the state of religion in Greece, down to the end of the second century and even later, as already observed, gives us the impression that the intrusion of new foreign cults no more affected or changed the essential character of the native cults than the introduction of the worship of Adonis, Cybele and Ammon in earlier times. And yet the rites of the Egyptian divinities, Isis, Osiris and Serapis (introduced at least as early as the fourth century B.C.) enjoyed a great popularity and reputation on the Greek continent as well as the islands. About the time of the birth of Christ, the worship of the Syrian Aphrodite and of the Syrian Adad and Atergatis (sun-god and earth-goddess) were associated with these in Delos ; traces of Mithras worship have been found in Athens and Thera ; and Lucian's jokes about the motley crowd of gods makes it probable that many other eastern gods had found a home in Greece. Bendis, Anubis, Mithras and others are present at the discussion concerning Providence. In much-frequented harbours at least, such as Corinth and Rhodes, foreign cults must have been numerous, while in the desolate and unvisited interior the old cults probably maintained a more or less exclusive ascendancy. If it is certain that countless old Roman and Greek cults continued to exist in the times of the theocrasy, it is no less certain that regular participation in religious worship was everywhere so general, that entire omission of the usual sacred rites gave offence or attracted attention as exceptional. The philosopher Demonax was even accused at Athens, since no one ever saw him offer sacrifice and he alone had not been initiated into the Eleusinian mysteries ; yet he knew how to calm the storm that threatened him in the assembly, where many had stones ready to hurl at him. Sicinius Aemilianus of Oea, the accuser of Apuleius, was called Mezentius (the name of the well-known 'despiser of the gods' in Virgil) for his notorious impiety. He had never prayed to a god, never entered a temple ; when he passed a sanctuary, he never so much as showed his respect by kissing his hand. He never even offered a portion of the harvest nor the firstlings of the flock to the gods of the country, who clothed and nourished him ; his property contained no sanctuary, no grove, nor consecrated ground. Those who had visited it

declared that not even a stone was to be seen sprinkled with fragrant essences nor a branch of a tree hung with garlands. Martial commended the sanctuaries on his little property at Nomentum to the care of a certain Marius, to whom he had transferred it; the pines and holm-oaks dedicated to the Fauns, the altars of Jupiter and Silvanus ('often stained with the blood of a lamb or a goat') erected by the inexperienced hand of the bailiff; further, chapels or temples of Diana and Mars and a laurel-grove sacred to Flora. He hoped that Marius, when offering sacrifice, would also commend him to the care of the gods and beg them to grant both what one of them might wish. From youth upwards familiarity with an enormous number of forms of ritual exercised an irresistible influence on Roman life. Children of tender years, says Prudentius (end of the fourth century) tasted the sacrificial meal, saw the smoke-begrimed images of the Lares sprinkled with fragrant essences, their mothers praying anxiously before the statue of the goddess of destiny with the *cornu copiæ* (horn of plenty), and, while still in their nurses' arms, kissed the images of the gods and addressed them in childish prayers.

The universal practice of sacrificing on all joyful occasions is amply attested for all classes of society. Persius ridicules property owners who pray to Mercury for the increase of their live stock, and at the same time diminish it by the frequent sacrifice of heifers. Whenever a senator was promoted to consular rank, 'the fore-court of the palace smoked with the blood of young steers'. During the absence of Augustus from Rome a senator named Rufus, in a moment of intoxication, let slip the joke that all the bulls and calves prayed that he might never return. A similar jest concerning the prayers of the white cows during the campaigns of Marcus Aurelius has already been mentioned. Juvenal offered sacrifice for the deliverance of his friend Catullus from the perils of the sea to the three Capitoline divinities—two lambs and a young ox; had he been rich, he would have substituted a fat steer of noble breed for the ox. The fees paid by the faithful for admission to the temples, for the offering of the sacrifice, and the throwing in of the gift, often made the office of priest a very lucrative one; hence they were farmed on account of the state or community, and even sold by auction in some towns of Asia Minor (in Egypt this was done on account of the emperors as

successors of the Ptolemies). A tariff of the sacrificial fees is still in existence. One of the most remarkable results of the spread of Christianity in the province of Pontus (according to Pliny in his well-known letter to Trajan in the year 112) was that the temples, no doubt those of Amisus and the neighbouring localities in the first place, were almost deserted, the sacred festivals were not celebrated, and there was scarcely any demand for sacrificial victims. However, this state of affairs, which both surprised and disquieted Pliny, was somewhat improved by the measures taken by him against the Christians. We may form some idea of the enormous extent to which animals were used for sacrificial purposes from the statement of Suetonius, that as a result of the general rejoicings at the accession of Caligula more than 160,000 victims were sacrificed in Rome alone in less than three months. Even in the time of Prudentius, the Sacred Way resounded with the bellowing of oxen driven to the Capitol for sacrifice.

But above all, it is clear from the numerous inscriptional stones that have been preserved, that pious believers continued to show their zeal and activity on behalf of their faith by building temples and keeping them in repair, by adorning them with images of the gods, and by gifts, offerings and benefactions of every kind. Even at the time when religion is usually supposed to have been at its lowest ebb, Lucretius wrote: 'that awe is still deep-rooted in the minds of men, which has called forth religious belief and the adoration of the gods; which causes new temples of the gods to be erected over the whole earth, and fills them on festal days with crowds of visitors'. Certainly, it is no proof of a general decline of belief that, during a period of uninterrupted and fearful political convulsions, some of the very numerous temples and sanctuaries in Rome were destroyed and their sites illegally appropriated even by private individuals. If the number of those which needed restoration and were actually restored by Augustus in 28 B.C. was really eighty-two, it is a question whether this number should be considered large or small, in view of the total number of such buildings.

The number of buildings, donations and benefactions given by private individuals for religious purposes was enormous, as is shown by inscriptions from Italy and all the provinces. Some of these, no doubt, owe their origin to other than religi-

ous motives ; but it is equally certain that in most cases these pious offerings and gifts were presented to earn or retain the favour of the gods or to quiet an uneasy conscience ; many, according to the inscriptions, were given 'after a vision' or 'by command' or 'admonition' of the divinity in a dream. According to this evidence, we may assume that a considerable number of the temples throughout the empire were built by private individuals at their own expense, who sometimes in addition assigned a capital sum for the upkeep of the building. In Italy especially—where in Appian's time (i.e. under Antoninus Pius) the wealthiest temples, next to that of Jupiter on the Capitol, were those at Antium and Lanuvium, that of Hercules at Tibur, and that of Diana at Aricia—the well-to-do inhabitants of municipal towns vied with their countrymen who had attained high rank at Rome, and with the patrons and other protectors of their towns, in showing their munificence and attachment to their native place ; above all, by providing it with worthy dwellings for the gods. For example, a certain Publius Lucilius Gamala (who lived from about 117 to 180) built or restored seven temples at Ostia—of Vulcan, of Castor and Pollux, of Venus, of Spes (Hope), of Fortune, of Ceres and of father Tiberinus (the deified personification of the Tiber). Martial's friend Caesius Sabinus built a temple for the nymph of a lake at Sassina. A husband and wife at Assisi built a temple, apparently of Castor and Pollux, and in addition provided the statues. In Malta a private individual spent 110,792½ sesterces (about £1,110) on the erection of a marble temple of Apollo. Great landowners also looked after the country temples on their property ; thus, Pliny repaired a ruined temple of Ceres on one of his estates. In addition to entirely new buildings and the restoration and completion of dilapidated sanctuaries, offerings, repairs of individual parts, and special buildings of all kinds (altars, sacrificial kitchens, pillars and capitals, pediments, floors, ornaments, etc.), donations and benefactions for religious purposes are very frequently mentioned on the inscriptional stones.

Images of the gods, some of them very costly, were especially common in temples. Thus, a priestess of Aeclanum presented a silver statue of Felicitas ; a cavalry officer at Formiae bequeathed 100,000 sesterces (about £1,000) for a silver processional car of Minerva weighing 100 lb. with all

accessories ; probably the temple statue of the goddess was also of precious metal. A woman left directions in her will for the erection of the statue of a god, weighing 100 lb., in a certain temple in her native town, with her name subscribed ; the question then arose, whether her heirs might provide one of bronze or whether they would be compelled to make one of silver or gold. The famous jurist Cervidius Scaevola (tutor of Septimius Severus), in view of the fact that all the offerings in the temple were of silver or bronze, decided that the statue must be of silver. A silver statuette of Mercury at Lambaesis cost 14,000 sesterces (about £140), a silver statue at Hippo Regius more than 51,000, a similar one at Vienne 100,000. Pious believers who were unable to offer such expensive gifts, had the images of divinities at least gilded, entirely or in part, e.g. the feet, but especially the face or beard. Thus at Corfinium 'a servant (female) of the great mother had the great mother repaired and gilded, the hair of Attis gilded and Bel-lona repaired' ; at the same time the priest of Attis had an altar and silver moon made for him.

Further, the images of the gods were provided with articles of clothing, attributes, ornaments and valuables according to the means of the worshipper. In his youth the emperor Galba dreamed that Fortuna stood before his door, seeking admission ; on awaking he found a bronze statue of the goddess on the threshold, which he personally removed to his estate at Tusculum, and all his life showed his reverence for it by monthly supplications and a yearly vigil. Shortly before his death he kept ready a carefully selected necklace of pearls and precious stones to adorn the statue, but finally resolved to offer it to Venus on the Capitol ; whereupon Fortuna appeared to him in a dream and threatened to take back her gifts. As a rule such pious gifts were, of course, intended for temple statues. For instance, in a temple at Puteoli a certain person, prompted by a dream, had a snake (probably that of Aesculapius) made at his own expense. An *augustalis*¹ of Ariminum left instructions in his will for the erection of a statue, apparently of a Bacchant (in a temple of Bacchus) with a golden necklace, a thyrsus, and a silver goblet 2½ lb. in weight. At Reii (Riez in the south of France) a man and his wife, in

¹ The *augustales* were a religious association at Rome, which kept up the worship of the deified emperors.

fulfilment of a vow, offered to Aesculapius, 'to show their gratitude for the surprising effect of the power of the god which they had themselves experienced,' a bronze statue of the god of sleep (they had perhaps been cured of sleeplessness) and some valuables—a gold chain of little snakes and a silver writing tablet. At Acci in Hispania Tarraconensis a grandmother, in honour of her granddaughter, offered Isis a statue or some other offering, weighing $112\frac{3}{4}$ lb. of silver, besides a set of pearls, emeralds and other precious stones for the head, neck and other parts of the body, including, according to the list, two emeralds and two pearls for the ears; two diamond rings for the little finger; a ring with emeralds, various stones and a pearl for the next finger; an emerald ring for the middle finger; eight precious stones cut in the form of a cylinder, for the shoes. Frequently (as at Riez) statues of other gods than those to which they were consecrated were presented to the temples; and donations were given, which had no reference to the cult, but were intended to enhance the beauty and magnificence of the temples, and to increase their stock of treasures. Thus, a citizen of Rhegium bequeathed to the temple of Apollo in his native place a small parchment book with ivory covers, an ivory case, and nineteen pictures.

The fact that gold and silver votive offerings (some of them very valuable) even in second-rate towns of both east and west (such as Ostia) are frequently mentioned; that the gifts of Augustus to five temples in Rome (those of Jupiter Capitolinus, Divus Julius, Apollo, Vesta, and Mars the Avenger) from the spoils of war, reached a total value of about 100,000,000 sesterces (about £1,000,000); that old and damaged temple gifts, used by Hadrian for the construction of a statue at Lanuvium, amounted to 3 lb. of gold and 206 lb. of silver; these and similar considerations would justify the assumption that the Roman empire probably contained not a few temples whose votive offerings were not inferior in number and value to those of the former treasure-chapel of the Casa Santa (Holy-House) at Loreto. Such treasures, in addition to the moneys and valuables frequently deposited in consecrated buildings, needed protection, for which purpose the military posts already mentioned were established near the temples. Those temples, whose divinities, in accordance with resolutions of the senate or imperial decrees, could be appointed heirs, were probably

the wealthiest : such were those of Jupiter on the Capitol, of Apollo at Miletus, of Mars in Gaul (?), of Minerva at Ilium, of Hercules at Gades, of Diana at Ephesus, of the Mother of the Gods from Sipylus at Smyrna, and of the 'heavenly (moon) goddess' at Carthage.

Nor were the priests and temple attendants forgotten. In reference to the clause in a lady's will, desiring her heirs to pay the sum of 10 *denarii* 'to the priest, the caretaker and the other freedmen' of a certain temple, 'on the day of the yearly market instituted by her in the neighbourhood,' Scaevola decided that the payment must be made annually.

There is no doubt that the worship of images, the contemplation of the divinity present in the image, which irresistibly influenced even rebellious and wavering souls, and the possibility of adoring the divinity in person and in some sort holding communication with him face to face, more than anything else in the cult tended to maintain and strengthen belief. Although some philosophers, like Seneca, rejected the worship of images, others, like Maximus of Tyre, insisted, with much reason, that the weakness of human nature, which is as far removed from God as earth is from heaven, needed signs perceptible by the senses in order to grasp the idea of the divinity, and that few could dispense with them. He added that the most worthy of all the different symbols of the divine beings in use amongst different peoples was the human form, as bearing the greatest likeness to God.

We need no evidence to show that the naïve belief of the masses instinctively and unconsciously transformed the image into the god himself, and that each god was split up into as many personalities as there were famous images of him. Similarly, the modern Italian believes in different Madonnas, the modern Greek in different Panagias. Even at the present day in Greece and the south of Italy ancient images of the gods are worshipped as local patron saints ; e.g. a mutilated Ariadne at Monteleone as Santa Venere, who is especially invoked in diseases of women. The removal of a colossal statue of Demeter from Eleusis in 1801 (now at Cambridge), to whose beneficence the blessings of the harvest were attributed, called forth as loud laments as the removal of Ceres from Enna by Verres, an outrage which was regarded throughout Sicily as the cause of the ruin of agriculture. In ancient times the lips, hands

and feet of the images of the gods were perceptibly worn by the frequent osculations of the devout. Suppliants begged the attendant to put them as close to the ear of the image as possible, that they might obtain a better hearing ; they whispered into it prayers and vows which they wished to keep secret ; they attached waxen tablets on which their vows were recorded to the knees of the image, that the god might not forget the object of their desires. But if their prayers were not granted, they cursed and threatened the gods, as the Christians in late times the saints. Paulinus of Nola, quite in accordance with reality, tells how a peasant rudely informs St. Felix that he expects him to recover his two oxen that had been stolen ; ' the martyr was greatly amused at the peasant's uncouthness, and he and the Lord laughed at his abuse '. Similarly, according to Epictetus, farmers, when the weather was bad, and sailors when there was a storm, hurled curses at Jupiter.

But disappointed suppliants, whether in ancient or modern times, were not content with simple curses. Wherever, and in whatever form, image worship has existed or still exists, believers have at all times vented their wrath upon the images of their gods or saints, when their prayers are unheard and their hopes of assistance unfulfilled. The old Arcadians thrashed their god Pan, when they returned from the chase empty-handed ; the Ostiak and the Laplander maltreat their idols and break them to pieces, should misfortune overtake them ; the *lazzarone* of Naples kicks the saints with whom he is dissatisfied ; the Spaniard throws his *virgen* (image of the Virgin) into the water ; the Bavarian peasant flings the wooden image of the Lord on the dung-heap if the hailstorm does not cease. In the south of Italy and Sicily, saints who do not send the longed-for rain in time of drought are frequently bound with cords and thrown into the water. During the Napoleonic campaigns, an old Bavarian battalion made St. Peter run the gauntlet, since he had refused them an easy march. An old Spanish lady of high descent (in 1871) flogged St. Martial (field-marshal of the Spanish army) with her riding whip on the day when the Carlists were obliged to lay down their arms. These examples show that such excesses are the necessary accompaniments of image worship ; and it can only be an accident that only a single instance is recorded of such an outbreak of rage in later antiquity. The manner in which it

is described by Suetonius makes it clear that he saw nothing remarkable in it. When the disquieting reports of the illness of Germanicus were followed by the rumour of his recovery, all the inhabitants, in spite of the lateness of the hour, flocked to the Capitol with lights and sacrificial victims ; the gates of the temple were almost burst open, since the people thought they could not fulfil their vows quickly enough ; on the day of his death, on the other hand, stones were hurled at the temples, altars of the gods thrown down, the domestic *Lares* flung into the streets. In this case, also, we see that the belief in the existence as well as in the power of the gods was such that nothing could shake it.

The extent to which the popular belief, unreflecting and unhesitating, was able to carry out and maintain the identification of the image with the divinity can hardly be determined. What so excited Seneca's indignation, on a chance visit to the Capitol, was partly the antiquated ritual, and partly the childish belief, incomprehensible to him, which saw the divinity himself in the image. And yet the expressions of this belief were hardly more singular or ridiculous than those already mentioned. According to the ancient religious usage, the Capitoline deities were waited upon by different persons ; Jupiter had his lictor, a servant to tell the hours of the day, and another to anoint him. Just as the latter, by waving his arms in the air, represented the operation in dumb show, so the temple attendants of Juno and Minerva moved their hands, as if dressing the goddesses' hair, while others held a mirror in front of them. On the other hand, those ' who called upon the gods to assist them in court, submitted their petitions and laid their case before them ', were evidently suppliants. Seneca also saw women sitting on the Capitol, who (probably in consequence of dreams) believed themselves beloved of Jupiter and awaited his pleasure. These and similar practices, such as the bestowal of offices upon the gods, the clothing of their images in the garb of senators and high officials, the march of the lictors before them with bundles of rods in processions, are not more surprising than their modern parallels. Thus, in Spain, the highest orders are bestowed upon Madonnas ; at Lisbon, on Corpus Christi day, St. George of Cappadocia marches at the head of the Portuguese army accompanied by pages and equerries with led horses ; in Mexico, the holy virgin of Guada-

loupe was appointed field-marshal (with a salary which was paid for fourteen years) of the insurgent army fighting against the Spaniards by its leader Hidalgo ; the holy Virgin dos Dolores was raised by Don Carlos to the same rank (in 1834). Thus, like all image worship in its lowest form, that of the period with which we are concerned had assumed the character of gross idolatry. A ceremony, which down to 1864 took place annually in the church of Santa Maria del Carmine in the *Mercato* at Naples was even more singular than the toilettes of the Capitoline goddesses alluded to by Seneca. On the second day of the Christmas festivities, in presence of the authorities and a great crowd of people, the hair and beard of a figure of the Saviour was solemnly cut ; this was called *far la barba di Gesù*.

Thus, polytheism was still sufficient for the religious needs of mankind in ancient times, while, in order to satisfy the infinite variety of its tendencies, it split up into a number of forms corresponding to the countless stages of development of the spiritual conscience. However great the contrast between the faith of a Plutarch and a Marcus Aurelius and that of the sailors and peasants who cursed Jupiter during bad weather, all had an equally firm belief in the same gods, in their power and solicitude for mankind. The difference between the most divergent forms of belief at that time was no greater than that which existed in Christianity between the highest and lowest conception of the divine.

II. JUDAISM AND CHRISTIANITY

The expansive power of Polytheism found its limits in the strict and intolerant exclusiveness of the monotheistic religions, with which agreement was impossible. What polytheists regarded as the highest and holiest was condemned by both Judaism and Christianity as horrible, accursed and soul-destroying. All that is holy amongst us, says Tacitus, is unholy amongst the Jews ; what we consider impure is lawful with them. He calls them a people given to superstition, averse from religion. Both Jews and Christians looked upon the gods to whom the heathen prayed as dead idols or evil demons. Greeks and Romans, 'who conceived the divine

fulness of life as a totality, a world, of gods', were incapable of understanding the belief which removes the divinity, solitary and almost incomprehensibly sublime, to an inaccessible distance, and separates him from adoring humanity by an immense gulf that can never be bridged. The heaven of Judaism and Christianity affected them like 'a cold wilderness'; the belief in one god was to them the negation of all that was divine—ungodliness; Christians and atheists were equally hated by the polytheistic heathens and often coupled together as enemies of religion; both Christians and Jews were reproached with hatred of the human race.

We are here only concerned with Judaism and Christianity as contrasted with paganism, and in so far as they acted and reacted upon one another. In the endeavour to obtain a general view of the state of religion under the early empire it is indispensable to indicate their position within the world-wide empire of Rome, and the circumstances which essentially favoured or hindered the progress of their doctrines, although only the most salient points can here be touched upon.

The relation of the two monotheistic religions to polytheism was very different. Although both condemned paganism absolutely and without restriction, yet only Christianity was really hostile to it. Judaism, a religion 'admirably fitted for defence, but never designed for conquest' (Gibbon), preferred isolation to an attempt to propagate its doctrines at the expense of paganism. The Jewish communities, dispersed throughout the empire and yet closely united, certainly had a certain attraction for paganism, but never injured it to such an extent as to imperil its existence; and in spite of occasional friction and conflicts the relations between Judaism and paganism were in the main peaceful.

The spread of Christianity was from the outset most effectively promoted by the dispersion of the Jews throughout the ancient world. This dispersion had begun early, and even in pre-Christian times had made great progress. In a Sibylline oracle (composed towards the end of the second century B.C.) it is asserted that every land and every sea was full of the Jewish people. Strabo says that 'even in Sulla's time a Jewish element had penetrated into every city, and there is hardly a place in the world which has not admitted this people and is not possessed by it'; according to Josephus, there was no

people on earth without a Jewish element. The *Acts of the Apostles* mentions as Jews and akin to Jews, people 'out of every nation under heaven', who heard the apostles speaking with tongues in Jerusalem: Parthians, Medes, Elamites, dwellers in Mesopotamia, Cappadocia, Pontus, Asia, Phrygia, Pamphylia, Egypt, Cyrene, Rome, Crete and Arabia. King Herod Agrippa, in a letter to Caligula, enumerates the countries in which there were Jewish colonies: Egypt, Phoenicia, Syria, Coele-Syria, Pamphylia, Cilicia, most of Asia as far as Bithynia, and the coasts of the inmost bays of the Black Sea; in Europe, Thessaly, Boeotia, Macedonia, Aetolia, Attica, Argos, Corinth, most of the countries (and those the best) of Peloponnesus; of the islands, Euboea, Cyprus, Crete; lastly, the countries beyond the Euphrates, and Libya.

But there is no direct evidence that the Jewish emigration was especially or to any great extent prompted by commercial motives; there is nothing to support this idea, but much to contradict it. The fact that the towns in which Jews are known to have settled were for the most part commercial centres proves nothing, since they offered the most favourable and varied opportunities for every occupation, especially industrial. Further, there is no trace in ancient times of a preference amongst the Jews for the trade which lives on the sale of the work of others; in the sixty-three tractates of the Talmud, which accords an honourable recognition to manual labour and occupation, there is not a word in honour of trade, but many allusions to the dangers of money-making and a wandering life. 'The Jews were always an industrious people. As long as they formed a state agriculture, horticulture and handicraft were their chief occupations. Even in the early centuries of the Christian era and after their dispersion they remained faithful to their old habits; at the beginning of the second century Josephus praises the industry of his compatriots in handicraft and agriculture'. 'In Roman literature and the laws of the emperors there are no indications that the Jews had given themselves up to petty retail trade, or had become a mercantile people at all. Their miserable condition in Rome and the great revolts in Egypt, Cyrene and the Greek islands are arguments to the contrary: a population engaged in trade does not generally have recourse to arms'. How far the

charges (certainly to be received with caution) of avarice, cheating, malice and perfidy, so commonly brought by Christian writers of the fourth and fifth centuries against the Jews, justify us in concluding that they then engaged in commerce to a greater extent than in earlier times, cannot be decided.

Outside the Roman empire, the kingdom of Parthia contained the largest Jewish element. In its Greek towns, of which Seleucia on the Tigris, said to contain 500,000 inhabitants, was the most important commercial centre beyond the Roman frontiers, there were frequent conflicts between the three nations (Greeks, Syrians and Jews) which made up their populations; for example, in the reign of Caligula the Jews were expelled from Seleucia and other cities under the eyes of the Parthian government. They were reckoned by millions in Mesopotamia, Media and Babylonia; Nisibis and Nehardea on the Euphrates were their chief seats, and after the suppression of the last national efforts in Palestine Babylonia became the centre of a new Jewish life, which spread over all parts of the Persian empire. In Palmyra also there were Jews, probably in large numbers; the community which is known to have existed there in the third century A.D. appears to have survived till the middle ages, since Benjamin of Tudela in the twelfth century attests its existence; some pillars and architraves with the inscription 'Hear, O Israel' have been found there. Zenobia and her son Baballath Athenodorus were not ill-disposed to the Jews, as is shown by their confirmation of the right of asylum in a synagogue in lower Egypt (granted by Ptolemy Euergetes I [247-221] or II [146-117]). In Arabia, also, according to the statements of Jewish, Byzantine and Arabian authorities, there are many traces of extensive ramifications of the Jewish movement. The last king of the Jewish Homerites (Himyarites) in south-western Arabia (whose kingdom lasted from 465 to 525 A.D.), Dimnus (Dhu Nowas), was a zealous defender of the faith. Thence Judaism spread to the Aethiopians and Axumites. The formerly independent Jews, who inhabited the island of Iotaba in the Arabian gulf, were subdued by Justinian. The Jewish settlements in Abyssinia appear to be of great antiquity. When Frumentius introduced Christianity there in 315, they are said to have formed half the population.

Within the limits of the Roman empire (Palestine excepted) the Jewish population appears to have been largest in Asia Minor, Phoenicia and Syria. Of the population of Antioch, especially, the Jewish colony settled there by Seleucus Nicator formed a very important contingent, and its chief synagogue is described by Josephus as of remarkable magnificence. As in Alexandria, they enjoyed a certain amount of independence and a privileged position, and the fact that both cities were centres of the Jewish *Diaspora* was an important element in their development. As late as the end of the fourth century, as is proved by the homilies of John Chrysostom against the Jews, their community possessed dangerous powers of attraction for the Christian church. Here they were also visited as physicians. In Damascus 10,000 or 18,000 Jews are said to have been massacred in the Jewish war.

King Antiochus the Great had already transplanted 2,000 Jewish families from Mesopotamia to Asia Minor, which in olden times had been one of the chief seats of the *Diaspora*, to form the nucleus of a brave and trustworthy population for Lydia and Phrygia. One or two of the synagogues of foreign communities in Jerusalem belonged to the Jews from Asia and Cilicia. In Ionia, Ephesus in early times had a numerous Jewish community, which about the middle of the first century B.C. managed to secure various privileges. Inscriptions attest the existence of synagogal communities in Smyrna and Phocaea; the latter honoured the builder (female) of the oratory and surrounding wall of the court of the synagogue with a golden crown and a place of honour. There were also Jewish communities in Caesar's time in Sardes (where they had their own court of justice), in Miletus and Halicarnassus. At Hierapolis in Phrygia payments of fines to the Jewish community for the desecration of graves were instituted, and a certain Publius Aelius Glycon left sums of money to two artisan guilds for the decoration of his grave at Passover and Pentecost. Coins of the reigns of Septimius Severus, Macrinus and Philip, on which Noah is represented in the ark with the raven and the dove with the olive branch, attest the influence of the Jewish community in Apamea (Κιβωτός). In 62 B.C. the praetor, Gnaeus Flaccus, in accordance with his prohibition of the export of gold, publicly sequestered nearly 100 pounds of gold from the tax intended

for the temple at Jerusalem ; and this can hardly have been the whole sum. Smaller sums of the same kind were confiscated in Laodicea, Adramyttium and Pergomus. At Acmonia in Phrygia the Jewish community in the time of Nero honoured different persons who had rendered service in building the synagogue—amongst them Julia Severa, a chief priestess of the imperial cult. About the end of the first century, a certain Ptolemaeus erected a burial ground for the Jews at Tlos in Lycia, as a thankoffering for his son having been raised to the dignity of archon in the community. Paul preached in the Jewish schools at Antioch in Pisidia and Iconium in Lycaonia. The Jews were numerous in Cilicia, whose chief town, Tarsus, was the birthplace of the apostle Paul ; also in Armenia. In the second century A.D. they are said to have immigrated (from Persia) to China : Mohammedan travellers speak of Jews living there in the ninth century ; Marco Polo refers to their influence in China in 1286. According to the statement of a Jesuit in the previous century their descendants remained ' true to their religion, character and customs ' ; and even at the present day they are not extinct.

Of the Greek islands Crete and Melos (where catacombs of a Christian community of the third century have been found) are mentioned as the residences of well-to-do Jewish populations, who, under Augustus, liberally supported a pretender, who gave himself out to be Alexander, who had been murdered by Herod ; the second wife of Josephus was a Jewess from Crete ' of very noble family, whose parents were highly respected in the island '. Caesar permitted religious unions of Jews in Delos and elsewhere ; Jews also lived in Cos and Paros. Euboea and Cyprus are mentioned in the letter of Agrippa ; in the latter island (where the community of Salamis, in particular, is known from the *Acts*) the Jews were numerous, down to the year 116 ; but after the atrocities committed during the insurrection, they were forbidden to enter the island again. In Greece and Macedonia, the communities of Athens, Corinth, Thessalonica, Beroea and Philippi are also known from the *Acts*. Two edicts of Arcadius (397) and the younger Theodosius (412), addressed to the prefect of Illyricum (Dacia and Macedonia), ordered that the Jews in the country should not be disturbed nor their synagogues injured. Before Theodosius II., who banished them from Constantinople, their

synagogue was in the place called Chalcostrateia ('copper-ware market'), so called from their workshops. They also spread over the northern shores of the Black Sea at an early date. In the Crimea, two Jewish communities are known from inscriptions: at Panticapaeum (Kertch) about 81 A.D., and at Gorgippia (Anapa) about 41 A.D.; in the slave emancipation acts of these districts (written in Greek) it is made a condition that those emancipated should remain true to Judaism.

According to Philo, the Jewish population of Egypt amounted to 1,000,000, or more than an eighth of the entire population. They were spread over the whole country as far as the frontier of Aethiopia. Alexander the Great had already settled Jews in Alexandria and bestowed the citizenship upon them. After his death they immigrated in large numbers. They were well treated by most of the Ptolemies. In Philo's time they chiefly resided in two of the five regions of Alexandria (in the east of the city), but many lived scattered in the other three; in all parts of the city their synagogues, surrounded by trees, were to be seen; they also had their own synagogue at Jerusalem. The chief synagogue in Alexandria, in the form of a basilica with double peristyle, was so large that an attendant had to give the signal with a flag when the congregation had to respond 'Amen' during the prayers and reading of the Scriptures. The Alexandrian Jews were chiefly engaged in commerce and navigation; some, however, in the mechanical trades. The administration of the system of the Nile dues (*potamophylacia*) was entrusted to them by the Ptolemies and also by the Roman emperors (at least during the first century. A Jewish community at Athribis in the Delta is known from an inscription of the time of the Ptolemies. According to a papyrus document, belonging to the time of the earlier Ptolemies, found in the *nome* of Arsinoë, the modern Fayyûm, in the village of Phenyris a tax had to be paid 'by the Jews and Hellenes', who formed special groups by the side of the natives. In post-Christian times there was a Jewish street in Oxyrhynchus. In the Thebaid receipts for taxes (second century B.C.) have been found, bearing the names of Jewish tax-farmers. The religious centre of the Egyptian Jews was the temple of Onias (160 B.C.) about 40 kilometres from Memphis; the whole district formed (till 73 A.D.) a small hierarchy.

In the district of Cyrene also, where Ptolemy, son of Lagus, had already established a Jewish settlement, there was a numerous Jewish population, to which one of the five synagogues at Jerusalem belonged. A disturbance was put down by Lucullus. Two thousand of them took part in the attempted revolt under Jonathas in 70 A.D. The community of Berenice, according to an extant decree of honour for a certain Marcus Titius, appears to have had nine chiefs (*archontes*) in the year 13 B.C. During the fearful and widespread revolt of the Jews, which broke out in 116 in Cyrene and Egypt, and at the same time in Cyprus and Mesopotamia, 220,000 are said to have lost their lives in the first two, and 240,000 in the last two countries. The coast-town Boreum on the great Syrtis (Syrtis Major) was for the most part inhabited by Jews; it contained a temple, supposed to have been built by King Solomon and regarded as specially sacred, which was converted by Justinian into a church after they had embraced Christianity. In the province of Africa, where the Jewish community of Carthage seems to have been the largest, the mosaic floor of the synagogue of a town called Naron has recently been discovered, together with Latin inscriptions (of a later period) of those who had it laid down. In west Africa traces of a Jewish community at Sitifi in Mauretania, and of Jewish inhabitants elsewhere (especially at Cirta) are preserved.

The statement of Valerius Maximus that in 139 the praetor, Gnaeus Cornelius Hispallus, expelled from Rome and Italy not only the Chaldaeans but also the Jews, 'who had attempted to taint Roman usages with the rites of Jupiter Sabazius', probably refers to the retinue of the ambassadors sent (140-139) by Judas Maccabaeus to Rome. At that time there were clearly no Jews settled in Italy; the identification of the god of the Jews with Sabazius is to be explained by the fact that the Greek Jews pronounced the name Zebaoth as Sabaoth. Eighty or ninety years later, they formed a considerable element of the population. This was due partly to their removal, after the wars of Pompey and Lucullus, as prisoners *en masse* to Rome, where they were soon set at liberty; partly to the development of more intimate and varied relations between east and west. The accusers of the praetor Flaccus (in 59 B.C.) hoped that their numbers, their perfect union and

their influence would make them valuable allies. The whole region beyond the Tiber was chiefly inhabited by them; probably there was also a synagogue there. The ambassadors of Herod, King of the Jews, to Augustus were supposed to have been accompanied by 8,000 of their co-religionists settled in Rome, and in 19 A.D. 4,000 freedmen of an age to bear arms, 'who were infected by Jewish and Egyptian superstition', were condemned to be deported to Sardinia. Nevertheless, in the year 40 Philo speaks of a community of Jews in Rome, and in the reign of Claudius their numbers had so increased that their expulsion, which was considered advisable owing to the disturbances that broke out amongst them, could only be carried out to a very limited extent; at all events, the apostle Paul found a community of them in Rome. The Roman Jews also had a synagogue in Jerusalem. It is clear from inscriptions that they formed a considerable number (at least seven) of individual, independently organized communities. Each had its own synagogue and council of elders, at the head of which was a president (gerusiarch), its managing officials (archons) being elected partly for life, partly for a fixed term; even minors were eligible for this office. Divine service was under the control of chiefs or rulers of the synagogue (ἀρχισυνάγωγοι), assisted by a servant (ὑπηρέτης, hazzan), the 'father' and 'mother of the synagogue' held honorary positions; the scribes (γραμματεῖς) were not regular officials, and children were eligible for the post. The different communities in Rome had burial grounds in common, five of which are known. The inscriptions are mainly in Greek, some written in an almost unintelligible jargon; some are in Latin, none in Hebrew. The use of Hebrew during these centuries was confined to church matters; the general language of the Jewish *diaspora* was Greek, except in Syria, where Aramaic was spoken. The Roman Jews are occasionally mentioned as miserable vagabonds, beggars and soothsayers. The graves and the general condition of the cemetery discovered by Bosio in 1602 (but since lost sight of) were rude and poor; no fragments of marble or painted work were found except the coarsely painted seven-branched chandelier. On the other hand, in a burial ground on the Appian Way paintings (including even figures from heathen mythology) have been found; their meaning, which is still unsolved, is pro-

bably symbolical. There are also traces of an early Jewish settlement in Portus, probably the birthplace of the Peitan (poeta) Eleazar (beginning of the eighth century), the reputed author of liturgical hymns which are still in use at great festivals in Germany, France and Italy.

In the rest of Italy Puteoli seems to have been a chief seat of the Jews, whence they spread over the cities of Campania. The contents of an earthenware vessel at Pompeii is indicated as *gar(um) cast(imoniale)*, i.e. Kosher fish-sauce (made of fish without scales, in accordance with 'the superstition of the Jews', says Pliny). A wall inscription in a *triclinium* (dining-room), **SODOMA | GOMORA** can only have originated with a Jew or a Christian; a caricature of the judgment of Solomon (perhaps of Alexandrine origin) presupposes acquaintance with Jewish traditions; the names Maria (in a list of slaves) and Martha occur in wall inscriptions. The existence of a community at Capua is proved by the epitaph of a chief of the synagogue; at Venusia by the discovery of Jewish catacombs (of the sixth century), containing the epitaph of a chief physician (*archiater*). During the siege of Naples by Belisarius the Jews offered to supply the city with provisions, and at its capture offered an obstinate and unexpected resistance. Jewish epitaphs have also been found at Tarentum and Fundi. In Apulia and Calabria (the coast formation of which is specially alluded to in a *midrash*), the Jews in the fourth century formed so large a part of the inhabitants, that, according to an imperial decree of the year 398, the communal offices in many towns could not be filled, since the Jews maintained that they were not bound to undertake them. In central and northern Italy, where their settlements are probably as old as in the south, traces of them do not occur till late. In Brixia (Brescia) the epitaph of a 'mother of a synagogue' is proof of the existence of a Jewish community. Theodoric permitted the Jews in Genoa to restore, but not to enlarge their synagogue; he confirmed the rights of the synagogue in Milan, so far as the church was not prejudiced thereby. While he was in Ravenna, a disturbance broke out between Jews and Christians; the latter set fire to the synagogues, but were compelled by the king to restore them. In Bononia (Bologna) the martyrs Agricola and Vitalis were buried in a piece of ground belonging to the Jews amongst their graves; Ambrose had their remains

removed. In Pola also a Jewish epitaph has been preserved ; a Roman epitaph mentions Aquileia as the birthplace of a *gerusiarch*. Gregory the Great (who in his letters also mentions the synagogue at Terracina) writes to the bishop of Luna (in Etruria) not to allow any Jew on his property to own Christian slaves. It is also probable that in early times there were large numbers of Jews in Sicily. The rhetorician Caecilius of Calactē (in the reign of Augustus) was probably a freedman of Jewish origin. They are frequently mentioned in the rescripts of the popes referring to the administration of the estates of the church, which extended over the two Sicilies and Sardinia. According to the letters of Gregory the Great, there were Jewish communities in Palermo, Messina and Agrigentum ; in 594 he had a list drawn up of all the estates on which Jews resided, so that in the case of those who embraced Christianity he might remit a third of the taxes. The deportation under Tiberius led to the establishment of a permanent Jewish colony in Sardinia ; in Cagliari, at least, a Jewish community existed for centuries.

Paul 'intended to visit Spain', which is mentioned in the Mishna and the Talmud, and appears to have carried out his intention ; hence it is probable that Jews lived there at that time. Herodes Antipas, who with his wife, Herodias, was banished to Lugdunum by Caligula in 39, was subsequently removed to Spain, where part of his suite may have settled. With this exception, previous to the council of Illiberis (Elvira ; probably held between 300 and 309), which definitely mentions the Jews, there is only a single trace of them : an epitaph on a Jewish child in Abdera (Adra) in Baetica, which from the form of the letters appears to belong to the beginning of the third century. About 417 there was a considerable Jewish community in Minorca. Sisebut (612-20) was the first to carry out the extremely severe legislation of the Visigoths against the Jews.

From early times, the Jews are also said to have been connected with Gaul. Archelaus, son of Herod, was banished by Augustus to Vienna (Vienne). Amongst the countries said to have been visited by Rabbi Akiba, in order to induce the Jews to take part in the rising of Bar-cocheba, mention is made of Gaul. Hilary of Poitiers (died 366) avoided the greetings of Jews and heretics in the street. In 331, Constan-

tine issued orders to the *decuriones* (members of the senate in municipal towns and colonies) of Cologne, that the Jews, with two or three exceptions (the clergy and officials of the community), should be compelled to undertake the decurionate. The community of Cologne, whose synagogue is first mentioned in 1012, must consequently have been a fairly large one and of some antiquity. Gratian, Valentinian and Theodosius again deprived the Jews of exemption from the decurionate in 383. They do not seem to be mentioned again by Greek and Roman authorities before Apollinaris Sidonius. In the seventh century King Wamba expelled the Jews from Narbo; yet in the ninth they seem to have formed a very wealthy community, which owned the town mills and much land, employed Christian workmen to cultivate the vine, and carried on trade (chiefly with the Arabs in Spain). It is clear from Gregory of Tours' history of the Franks that they were very numerous throughout Gaul in the sixth century, which justifies the conclusion that their settlements there were of high antiquity. When, for instance, in the year 576 the people of Clermont destroyed their synagogue and Bishop Avitus gave them the choice of emigrating or being baptized, more than 500 embraced Christianity; the rest removed to Marseilles. In 582 King Chilperic caused a number of Jews to be baptized at Paris. When King Guntram entered Orleans in 585, the language of the Jews was heard amongst the acclamations of the throng that welcomed him. The only Jewish inscriptions in the Danube countries are two in lower Pannonia.

In England the Jews appear to have been very numerous during the archiepiscopate of Theodore of Canterbury (669-691); hence they must have been settled there at latest after the middle of the seventh century, probably earlier. For lack of information is no proof of the absence of a Jewish population, but rather (after the early middle ages) of its undisturbed existence. Jerome says that they dwelt 'from sea to sea, from the British to the Atlantic Ocean, from west to south, from north to east, all over the world'. They believed that, should the Messiah lead them back to Jerusalem, those of them who were of senatorial or other high rank would come in carriages from Britain, Spain and Gaul, even from its uttermost limits, from the country of the Morini, from the banks of the Rhine.

After the great Jewish war the tax of two *drachmae*, formerly paid to the temple at Jerusalem, had to be given to the temple of Jupiter Capitolinus ; this led to vexatious oppression, especially under Domitian ; Nerva treated them more leniently, but did not remit the tax. With this exception, the civil condition of the Jews as such in the Roman empire was not only free from restrictions, but they even enjoyed important privileges. While confirming their fitness to hold offices of state (which at that time was certainly no advantage) Severus and Caracalla expressly exempted them from those which were repugnant to their 'superstition'. Caesar had granted them exemption from military service, a privilege which they must also have enjoyed later. They must have been at least tacitly relieved from participation in the worship of the emperors ; if in this and other respects they had the advantage of the Christians, the reason is that they were still looked upon as a nation, the Christians only as a sect. Augustus, who in the main carried on Caesar's policy of friendliness to the Jews, had ordered that they should not be compelled to appear in a court of law on the Sabbath ; that when distributions of money and corn in Rome fell on a Sabbath, their share should be distributed to them on the following day ; that instead of the oil furnished by the provinces, which they were forbidden to use, a money equivalent should be given to them, a right confirmed to the Jews of Antioch by Vespasian's friend, Mucianus. In addition to the free exercise of their religion, the Jewish communities had the right of administering their own funds, and, to a certain extent at least, jurisdiction over their own members. 'The Jewish ethnarch or patriarch in Palestine, who after the destruction of the Jewish state became the chief of the nation, must have possessed very great authority ; the office was hereditary in the family of Hillel. All the Jewish communities of the dispersion appear to have submitted voluntarily to his jurisdiction. And his powers were so extensive that the fathers of the church were obliged to make serious efforts to show that at the time of Christ the sceptre had already been taken from Judah'. For the Jews he was the chief of the state ; and thus, in spite of the destruction of Jerusalem, they were in a certain sense reconstituted a nation.

If, in spite of all the rights and privileges conceded to them,

we read in Philo that the Jews had to be content with not being treated worse than others, the remark is to be taken as referring to their social position, which certainly on the whole was very unfavourable. This, of course, was chiefly the case in countries where a strong national hatred of them existed ; or it was the direct result of wars and revolts, in which they had shed streams of blood. Thus, the hatred of the Jew expressed by Pliny the elder, Quintilian and Tacitus is to be attributed to the feelings engendered by the Jewish war. But, apart from the wild fanaticism which raged during these despairing struggles, their haughty contempt for all other nations, civilizations and religions, their avoidance of the society of their neighbours, and the manner in which they persistently kept to themselves, were sufficient to make them 'repugnant to all mankind' (I *Thessalonians*, ii, 15, 'contrary to all men', A.V.), and to create the impression that they were a people filled with hatred of humanity. The accusations, exaggerations and fabrications of anti-Jewish writers, chiefly of Egyptian origin, assisted in keeping up the hatred of the Jews, which showed itself in frequent outbursts. According to Tacitus, they taught their proselytes above all to despise the gods, to renounce their fatherland, to disregard parents, children, brothers and sisters. According to Juvenal, Moses taught the Jews not to show any one the way, nor to guide the thirsty traveller to the spring, except he were a Jew. Apion declares that, in the reign of Antiochus Epiphanes, the Jews every year fattened a Greek, and having solemnly offered him up as a sacrifice on a fixed day in a certain forest, ate his entrails and swore eternal hostility to the Greeks. With hatred of the Jews was associated contempt for their miserable condition, their disgusting uncleanness, their punctilious observance (ridiculed as superstitious) of so many apparently senseless, absurd and singular laws and customs. Next to circumcision, derision was chiefly aroused by their abstinence from pigs' flesh, which the tumultuous rabble attempted to force them to eat (as in the Jew-baiting at Alexandria described by Philo), by their scrupulous observance of the Sabbath as a day of rest, whereby, says Seneca, they lost a seventh part of their life ; and by the minuteness of the arrangements for avoiding any kind of work on that day. Juvenal mentions the baskets filled with hay, in which the food prepared the

day before was kept warm, as indispensable articles of furniture even in the poorest Jewish households. Rabbi Abahu lamented that jokes about the Jews, however feeble, never failed to cause shouts of laughter in the theatres.

On the other hand, the Jews gained friends, partly by the virtues recognized even by their enemies and praised by Josephus in his defence of them written during the reign of Trajan. These were an unchangeable piety, strict obedience to the law, their few wants, charitableness, perfect harmony amongst themselves, contempt of death in war, diligence in the mechanical occupations and in agriculture in time of peace, an unshakable confidence in God. Thus Judaism, as a truly enlightened religion, attracted many of those who were striving to attain a purer knowledge of God ; the rejection of the Greek and Egyptian image worship caused Strabo to regard the Jewish legislator as a true Stoic philosopher. Yet it may be assumed that the number of those was far greater, whose need of belief found fullest satisfaction in Judaism as the only profession of faith which, before the birth and spread of Christianity, offered a dogma depending upon revelation and consequently removed from all doubt ; how often was the unshakable conviction that it was the only true religion heroically attested by its professors. All authorities, whether friendly or hostile to the Jews, are agreed that in all lands there were very many who partly or entirely obeyed the Mosaic law ; the women especially showed themselves ' guiding stars to faith '. ' The customs of this most infamous people ', says Seneca, ' have already gained such influence that they have been introduced into all countries ; they, the conquered, have given laws to their conquerors '. Horace, Ovid, Persius and Juvenal testify that at Rome many abstained from any kind of business on the Sabbath and on the day of the new moon ; that on the former they never travelled, but prayed, lighted up lamps and hung up garlands ; others studied the Mosaic law, attended the synagogues and sent the temple-tax to Jerusalem. ' The great mass of mankind has now for a long time endeavoured to emulate our piety ', says Josephus ; ' there is no state nor province, Greek or barbarian, to which our custom of resting on the Sabbath has not penetrated, and where our fasts and the lighting up of lamps and abstinence from forbidden food are not observed.

They also attempt to imitate the harmony that prevails amongst us, the charitable distribution of our goods, our diligence in our trades and fortitude in enduring suffering for the sake of the law. But the most wonderful thing of all is, that without the bait of pleasure the law has shown itself strong in itself, and has pervaded all peoples, as God himself has traversed the world'. 'All men', says Philo, 'are in subjection to it; it exhorts them to virtue—barbarians, Hellenes, dwellers on the mainland and on the islands, the nations of both east and west, Europeans, Asiatics, the peoples of the whole earth'. The Alexandrian philosopher thought he might venture to hope that one day Judaism would become the religion of the world.

With the exception of the brief period of persecution under Tiberius, conversion to Judaism met with no legalized opposition till the time of Hadrian; and, except for some temporary attempts at suppression, the Jews continued to enjoy without interference the complete religious freedom guaranteed by Caesar and Augustus. In 42, Claudius issued an edict, 'that the Jews throughout the empire should be allowed to observe their ancient customs unhindered. He also warned them not to abuse his kindness, nor to show contempt for the superstitions of other nations, but to be content with the observance of their own laws'. This edict remained in force till later times. Horace attests that the Jews, on their part, made attempts to convert those who held a different belief; it is well known that the Pharisees in particular 'compassed sea and land to make one proselyte' (*Matt.* xxiii. 15). Yet, after the destruction of Jerusalem, the development of an unbending Rabbinism continually widened the gulf between Judaism and paganism; the Babylonian Talmud calls the proselytes a leprosy for Israel. Antoninus Pius, while allowing the Jews to resume the circumcision of their children, which had been forbidden by Hadrian, most strictly forbade the practice in the case of those who were not Jews; since this edict remained in force, the result was that (with few exceptions) no formal conversions to Judaism took place. The proselytes of this later period were no longer 'proselytes of justice' but only the so-called 'fearers of God' (*φοβούμενοι* or *σεβόμενοι τὸν θεόν*), who especially observed the Sabbath and abstained from forbidden food. To the latter class the

majority of the converts from paganism to Judaism, even in the times anterior to Hadrian, probably belonged. Further, the influence of Judaism extended beyond the limits of its own followers and led to the formation of semi-Jewish semi-pagan sects. Such were the 'worshippers of the most high god' (σεβόμενοι θεὸν ὑψιστον) in Tanais in the empire of the Bosphorus at the beginning of the third century, and probably the Hypsistarii in Asia Minor, a sect attacked by the Fathers of the Church in the fourth century.

If the very nature of Judaism, as the religion of a chosen people, set limits to its propagation at the expense of paganism, Christianity, on the other hand, had both the inclination and the strength to break through all the obstacles that barred its extension throughout the world. While the Jews regarded the conversion of unbelievers as at the most a meritorious work, for the Christians the spread of the doctrine of salvation was the highest and most sacred duty. The example of the first apostles continually inspired an ever-increasing number of imitators, who, in accordance with the teaching of the gospel, distributed what they had amongst the poor, and set out to carry the word of God from one people to another, and whose zeal never wearied nor abated even in the midst of the greatest dangers and difficulties. 'The Christians', says Origen, 'were eager to sow the word broadcast throughout the world'. The messengers of the new doctrine visited not only towns, but also villages and farms; they did not even shrink from making their way into the bosom of the family and interposing between blood-relations. Christian slaves were reproached by pagans with converting their masters' wives and children; the more zealous even incited children to disobey their fathers and teachers in order to obtain salvation. Thus, as always happens when some great movement shakes the world and fashions it anew, the ties of nature were only too often torn asunder, hearts were broken, and 'love and loyalty uprooted like an evil weed'.

The toleration exceptionally accorded to the Jewish nation as such, which resulted in a tacit release from all obligations that conflicted with their superstition, including the worship of the gods and of the emperors, could not, in the opinion of the Romans, be granted to a sect which had fallen away from

the faith of its fathers, least of all to the Christian. The attitude of the Roman state towards Christianity was one of self-defence. Since the detachment of the new faith from Judaism, which was materially assisted by the destruction of Jerusalem, its tendency, namely, the complete and uncompromising destruction of the state religion, must have become widely known.

The refusal to worship the emperor, which was one of the fundamental institutions of the empire, was an earlier and more frequent cause of the persecutions of the Christians than the refusal to worship the gods. The first which we hear of took place in the province of Asia, in several cities of which (Pergamus, Smyrna, Ephesus) there were temples for this cult, where the yearly gatherings of the festal associations devoted to it took place. 'It appears that the decision as to the attitude which the state subsequently took up in regard to Christianity, was made under Domitian, even if tradition does not allow us to state definitely in what form this decision, which was really authoritative, was embodied' (C. J. Neumann). The *Revelation of John* (a revision in the reign of Domitian of an older Jewish apocalypse) speaks of the death of the 'faithful martyr' Antipas and other Christians in Pergamus, 'where Satan dwelleth', 'that were beheaded for the witness of Jesus and for the word of God, and which had not worshipped the beast neither his image' (xx. 4).

In accordance with the conception of *majestas* (high treason), refusal to pay homage not only to the emperor as god but also to the national divinities being regarded as an offence against the state, rendered Christians liable to punishment by the criminal law. But only a few emperors and governors until the middle of the third century acted in accordance with this idea. More commonly the extraordinary powers conferred upon the higher authorities (especially provincial governors) for dealing with religious offences, were brought into operation against both proselytes and proselytizers, in order to prevent or at least to check the apostasy of citizens from the national belief. This method of procedure, not forming part of the regular administration of justice and therefore of necessity arbitrary, was in its nature 'dependent upon the individuality of the official and upon the varying mood of the people ;

hence the prevalence of 'an instability, such as is in no way perceptible in other respects in the administration of justice even during this period of decay'.

But the state of public feeling was from the outset hostile to the Christians, and became more so as time went on. They were despised by the educated classes for their humility, their ignorance, their contempt for art and science and everything which refined and adorned life, for their lack of patriotism and their indifference to the most vital interests of state. The masses hated them. Their aloofness from the society of those who were not Christians, the steadfastness with which they clung together, their aversion from all festivities which had anything to do with the cults of paganism, the strictness of their life, which implied censure of any kind of laxity, their threats of eternal damnation for unbelievers, and, generally speaking, everything which served to accentuate the opposition of Christianity to the world—these were alone sufficient to bring upon them the reproach of 'hatred of the human race'. But their 'atheism' made them hated to an even greater degree; their hostility to the national religion, their mockery of what millions held sacred, their abuse of the gods, who for centuries had protected the Roman state and raised it to such greatness, to whose favour every man was indebted for everything that made life worth living. As time went on the adherents of the ancient faith showed an increasing inclination to attribute all public and general misfortune to the wrath of the gods at the decline of their worship, and to hold Christianity and its professors responsible for this wrath. 'Most of the sentences of death pronounced upon martyrs before the reign of Decius, as in the case of the founder of the religion, were due to the blind fanaticism of the masses and the weakness of the governors'. 'If the Tiber has left its bed', says a Christian author, 'if the Nile has not poured its waters over the fields, if the sky gives no rain, if there is an earthquake, if famine or pestilence threatens, the cry immediately arises, *To the lions with the Christians!*' The aged bishop Pothinus ended his life as a martyr at Lyons in the year 177, brutally treated by the mob. 'All thought it would be a grievous crime and an act of impiety not to take part in this wanton violence, for which their gods would punish them'. In course of time the idea gained ground that the entrance of Chris-

tianity into the world was the beginning of a general decay of the human race.

The general and persistent belief in the horrible crimes falsely imputed to the Christians, held not only by the masses but also by the most highly educated, is the surest symptom of the intense and passionate hatred with which the Christians were regarded. No doubt the secrecy of their worship also contributed to this belief. From time immemorial secret religious meetings have aroused the suspicion amongst outsiders, that things take place under the cloak of religion which cannot bear the light. In the old Roman world the impression caused by the great *Bacchanalia* process (185 B.C.) lasted for centuries. At that time a secret worship of Bacchus that had made its way into Rome through Etruria was used as a cloak for the most outrageous excesses and the most abominable crimes; the result of the investigation instituted by the senate was the punishment (chiefly by death) of thousands who had taken part in these orgies. The charges of 'Oedipodean connexions and Thyestean banquets' (i.e. unnatural excesses and ritual murder) were revived against the Christians. Appeal was made to confessions wrung from slaves, women and children under torture, and also to the mutual accusations of Christian parties and sects, who, as a pagan writer observes, accused each other of the most shameful and unmentionable crimes. It may be mentioned that Hippolytus, who claimed the papacy in opposition to Callistus (215-22),¹ in his *Refutation of all Heresies*, reproaches the latter with having taught adultery and murder. Thus belief in the disgraceful orgies and ritual murders of the Christians continually received fresh support; Tacitus had both in mind when he wrote (at the beginning of the reign of Hadrian) that the pernicious superstition of the Christians, which was suppressed by the crucifixion of their founder in Judaea, had broken out anew in Rome, 'the meeting-place of all that is horrible and shameful (*cuncta atrociosa aut pudenda*), which finds ready acceptance there'. That Pliny also conducted his inquiry in a similar spirit is clear from the declaration of the Christians (reported by him to Trajan), that they had met together for a 'harmless' meal. As late as the year 200 it was affirmed and believed

¹ Hippolytus is said to have been the 'anti-pope', as such claimants were called.

that at their initiatory ceremonies a child was sacrificed and eaten with bread dipped in its blood ; that dogs were tied to the candlesticks, which they pulled down when something to eat was thrown to them ; and that the most disgraceful acts were then committed under cover of the darkness.

This mob-frenzy was the chief cause of the so-called persecution of the Christians under Nero. To divert from himself the suspicion of having been the originator of the great fire (July, 64), Nero abandoned 'the Christians, hated for their deeds of shame', to the fury of the people, which clamoured for victims. Those who avowed themselves Christians were seized first¹ ; then, on their information, an immense number of others. If not convicted of incendiarism, they were put to death on the charge of 'their general hatred of the human race' with such fearful tortures that they aroused compassion, 'although they were guilty and deserved the severest punishment' (Tacitus). Wrapped in the skins of wild beasts, they were torn to pieces by dogs or nailed to the cross ; others were set on fire, that the flames might serve to light up the night.² The imperial gardens in which 'Nero's torches' illumined the darkness were in the neighbourhood of St. Peter's Church.

The first general instructions known to us for dealing with the Christian question were drawn up by Trajan in his rescript to the younger Pliny. The latter, when governor of Bithynia and Pontus about the year 112, alarmed at the spread of the new 'superstition', asked for advice, since he had never been present at any judicial proceedings against the Christians. Trajan decided that all who were accused and convicted of being Christians should be punished ; but that any one who recanted and confirmed his renunciation by offering sacrifice to the gods should be pardoned without regard to the past. They were not to be hunted out ; the emperor also disapproved of any notice being taken of anonymous denunciations. Hadrian was the only emperor who allowed the Christians to practise their religion ; he issued orders in a decree to the governor of Asia that the Christians might only be called to account if charged with a non-religious crime, and that in

¹ Rather 'were first brought to trial'.

² Their bodies were smeared with some combustible material, which made them burn like torches.

such a case no mercy should be shown to the false accuser. In general, however, the emperors held to the policy of intervention on information received, and punished when it was unavoidable. The legal position of the Christians was thus always uncertain.

Under Marcus Aurelius their condition became worse. A rescript issued by him about 177, ordering the punishment of such as helped 'to disturb the easily excited minds of the masses by false belief', was taken to refer to the Christians. In different provinces the wrath of the population of the towns burst out against them. We possess the highly interesting report of the communities of Vienne and Lyons to the brethren in Asia and Phrygia on the persecution in the latter town (of which Pothinus the bishop was one of the victims). In Lyons the condemned Christians who were citizens were beheaded, non-citizens were thrown to the wild beasts. Contrary to Trajan's decree, the governors had the Christians hunted out, and according to a contemporary this was a general or at least a frequent practice.

It is easy to understand the reason for a fanatical hatred of the Christians at that time. Never before had the empire been visited by so many dire misfortunes. In 166 German tribes, driven on by the pressure of the nations behind them, had crossed the Danube, overran and devastated the north-east frontier provinces from east Switzerland as far as Hungary and Transylvania, and carried away hundreds of thousands of prisoners; some of their hordes had even penetrated to Italy and Greece. For the first time the empire was out of joint. The severe and costly wars, in which the Romans strained every nerve, lasted nine years before the enemy was finally overpowered. At the same time, since 162 a fearful epidemic, brought in from the east, had penetrated as far as the Rhine and Gaul, devastated the camps of the legions and changed whole tracts of land into deserts. In addition, bad harvests and famine aggravated the sufferings of the people to the utmost. Then, if ever, it seemed reasonable to believe that the gods had withdrawn their favour from the empire they had so long visibly protected; and what more likely to have caused their wrath than the increasing apostasy from the national faith, brought about by the false doctrines of the 'atheists', who shunned the light and were filled with hatred

of mankind? Marcus Aurelius himself must have shared this opinion to some extent. He was not only very devout, but a man of strong faith. He declared that he would not care to live in a world without gods, and he seems to have regarded the gods of all nations as equally powerful and equally deserving of reverence.

Finally, it must be remembered that at that time amongst the Christians themselves a visionary tendency had appeared, which obstinately challenged and resisted the state authority. It was most pronounced in the sect called Montanists, whose founder Montanus in Asia Minor (about 156) claimed to be the paraclete. The Montanists, whose views also spread to the western church, demanded the strictest asceticism and unconditional renunciation of everything earthly, announced the imminence of the end of the world and of the establishment of the millennium, attached excessive value to martyrdom and encouraged men to suffer for their belief. This longing for a martyr's death, disapproved of by moderate-minded Christians, only aroused the scorn and ridicule of the heathen, who advised them to kill themselves to save other people the trouble. When the proconsul Gaius Arrius Antoninus (184-5) vehemently persecuted the Christians in his province of Asia, they crowded before his tribunal (at least in Ephesus) and voluntarily offered their lives. Some of them he ordered to be led away to execution, but dismissed the rest with the words: 'Miserable creatures, if you want to die there are ropes and precipices!' The courage shown by the Christian martyrs in face of death impressed Marcus Aurelius with the idea that it was the result of pride and obstinacy, not of reasoned conviction.

The persecution of that date also demanded victims in Africa, where hitherto no Christian blood had been shed. We possess the protocol of the proceedings taken against three Christian men and women of Scili in Numidia by the proconsul of Africa (July 17, 180). Notwithstanding his obvious efforts to facilitate their return to paganism, the accused persisted in their profession of faith, refused to swear by the *Genius* of the emperor and to offer sacrifice for his safety (although this did not even involve a recognition of his divinity), and declined the offer of thirty days for consideration. They were beheaded on the same day; a *basilica* was sub-

sequently erected over their grave. In Rome itself at that time or a little later the Christians were condemned to forced labour in the Sardinian mines ; they owed their liberation (about the year 190) to Marcia, the mistress of Commodus. Work in the mines was the severest punishment next to the death penalty ; those condemned to it were thereby degraded to the rank of slaves, one side of their head was shaven, they worked in chains, and were liable to corporal chastisement.

Although during the years immediately after the death of Marcus Aurelius the persecution of the Christians still went on, their lot was a happier one, chiefly owing to the influence of Marcia. For nearly seventy years they remained unmolested except during the persecutions under Septimius Severus and the Thracian Maximin. The stories of ritual murders and shameless orgies gradually died out, as Christianity emerged more boldly from its retirement and Christians and pagans came into contact (even through marriage and family relations). A proof of the diminishing hatred of the Christians is that the millenary secular festival of the city of Rome, which was celebrated (in 248) with the greatest solemnity for three days and nights and undoubtedly called forth a great increase of religious feeling, concluded without any hostile demonstrations against the Christians.

If the number of martyrs up to this time was by no means inconsiderable in itself, it cannot be considered large in proportion to the size of the empire and the period of two hundred years during which they met their death (not reckoning the victims of the Neronian persecution, who cannot properly be called martyrs). This is expressly confirmed by Origen, the most learned Christian writer of the period before Constantine, in a treatise written in 248. He says : ' Only a few, whose numbers can easily be counted, have suffered death from time to time for the sake of the faith, and to encourage the rest '. His evidence is the more weighty, since his personal experiences might rather have led him to exaggerate the extent and terrible nature of the persecutions. He himself had survived two of them, and in the first had suffered most cruel treatment. His father, Leonidas, had been condemned (in 202) in Alexandria to death by the sword as a Christian ; he himself, before he was seventeen years of age, longed so violently for a martyr's death that his mother was obliged to

hide his clothes to prevent him leaving the house. When his father was in prison he wrote him an impressive letter on martyrdom, in which he exhorted him not to consider his family: 'See to it that thou dost not change thy opinion for our sakes!'

During the persecution under Maximin the Thracian he issued an *Exhortation to Martyrdom*, in which he most earnestly exhorts them not to sully themselves by a single word, even under threats of death or on the rack. The evidence of Origen as to the small number of martyrs down to the middle of the third century is confirmed (if confirmation were needed) in the passionate *De Mortibus Persecutorum* ('On the Deaths of the Persecutors'), written by Lactantius in 313-4. In this essay Decius (249-51) is made to follow directly upon Nero and Domitian. Lactantius states that the good emperors who succeeded Domitian had not shown themselves hostile to the church, and the fact that he passes over in silence the sufferings and oppressions of the Christians during the period between Domitian and Decius shows that they cannot have left a very deep impression. But even the persecution of Diocletian cannot be compared with the deeds of the Duke of Alba in the Netherlands, where the number of those who suffered death under Charles V for the sake of their faith is estimated by Fra Paolo at 50,000, by Hugo Grotius at 100,000.

Further, it is well known that the religious and missionary zeal of the Christians was rather inflamed than quenched by the persecutions. 'The spread of our doctrine', says Clement of Alexandria, 'since its first proclamation has been hindered by kings and rulers, by governors and administrators of provinces, who all oppose us with all their hired soldiers and a vast multitude of others, seeking as far as possible to exterminate us. And yet it flourishes more and more. It does not perish like a doctrine invented by man; it does not wither like a fragile gift, for no gift that comes from God is fragile. It abides and cannot be hindered in its progress, although it is prophesied that it shall be persecuted to the end'.

Yet in spite of the most glowing missionary zeal, the sublime doctrine of the gospel, too sublime for a great, if not the greatest, part of the heathen world, could never have made such relatively speedy progress without the co-operation of other causes, which had their origin partly in the needs and

weaknesses of human nature in general, partly in the social conditions of the age.

The new doctrine appealed to all mankind ; the promise of salvation was open to all, even the lowest and the most despised. Naturally it found the most favourable soil in the vast multitude of ' the weary and heavy-laden ', the poor and unfortunate. It brought the most joyful message for slaves ; it announced to them their elevation from lowliness, contempt and a position outside the pale of the law to an equality with those who were free. It must have spread with the greatest rapidity amongst this class, and certainly penetrated often enough from the cell of the slave to the house of the master. But above all it afforded unexpected consolation to the despairing and faint-hearted ; it opened a prospect of forgiveness even to the guiltiest. The heathen scoffed at the idea that, while only those who felt themselves free from guilt were invited to other ceremonies of consecration, the Christians promised that the Kingdom of God would admit both sinners and fools—in other words, the unfortunate. In these circumstances the language in which the gospel was proclaimed could only be that of the lower classes. Neither the Greek in which the books of the New Testament are written, nor the Latin in which it first became known to the West, is the written or learned language, but ' the everyday language of the home and family, of the market and the streets, of the workshops, of the country, of the camp '.

The fact that women were very impressionable to the new doctrine also exercised a very considerable influence upon its propagation. Christianity elevated women in the Greek countries, where they held a very inferior position, to the equals and companions of man ; it bestowed upon marriage a new consecration through the more intimate spiritual communion of one and the same belief and hope ; upon virginity a new sanctity ; upon the whole life of woman a higher social value. Women, however, did not always keep within the limits of their position as defined for them in the Christian community. Paul had to censure them for praying and prophesying in Corinth with head uncovered ; he was obliged to admonish them to keep silence in the churches, and to submit themselves to their husbands in accordance with the law.

But what gained the greatest number of converts to Chris-

tianity was the very same thing that made Judaism, with all its exclusiveness, so attractive: the satisfaction of the requirements of belief, sought in vain within the limits of paganism, which only a dogma depending upon revelation and thus completely beyond the reach of scepticism could afford. And further, the mysterious nature of this dogma corresponded in the highest degree 'to the propensity of the human mind, most readily to believe what is secret' (Tacitus). But perhaps nothing so irresistibly impressed men's minds as the promise, never before proclaimed with such unassailable conviction, of a better life beyond the grave, of eternal bliss. In conjunction with this hope of happiness, the fear of the eternal punishments which threatened unbelievers exercised an even more powerful effect, since a belief in the imminence of the millennium was very general amongst the Christians until the middle of the second century.

'Signs and wonders' also, after which believers hankered no less than sceptics and waverers, were of frequent occurrence, and served to confirm both the Christian and the pagan faith. In the name of Jesus, says Irenaeus (Bishop of Lyons 177-202), his disciples, who have received the gift from him, cast out devils; others have foreknowledge of and predict the future; others heal the sick by laying on of hands, and bring back the dead to life. It is impossible to number the gifts which the church has received from God for the whole world, and in the name of Jesus Christ crucified under Pontius Pilate exercises for the benefit of the nations, neither deceiving any nor accepting payment; for as she hath freely received of God, so also she freely ministers (partly from Keble's translation). Arnobius, who (like most people) regarded the miracles performed by Christ as a proof of his divine nature, in repudiating the assertion of pagans that he was a magician, laid special stress on the fact that he was able to heal the sick and bring back the dead to life by his word alone and by the laying on of hands; whereas the heathen gods only prescribed remedies, like physicians, and in thousands of cases were utterly unable to assist the sick. Similarly, Origen asserts that he has seen sick men, 'whom neither men nor demons were able to heal', freed from their sufferings by the simple invocation of God and Jesus. Augustine relates numerous miracles which he had seen himself, including no less than five cases of raising

the dead, and especially many wonderful cures which had taken place near the sepulchral chapels of St. Stephen at Calama and Hippo Regius ; there were no less than seventy written accounts of the miracles wrought near the latter building, which had not yet been built two years. As was later the case in the Germanic north, countless adherents were gained for the new faith by the conviction ' that the god of the Christians was more willing to help than the gods of the heathen, and above all had greater power '. At a horse race in Gaza, in which the horses of a zealous Christian and a zealous heathen took part, ' Christus beat Marnas ' ; the result was that many of the heathen were baptized. A poem by the rhetorician Endelevius (fourth or fifth century) most naïvely admits that conversion to Christianity commended itself by the advantages which the god of the Christians bestows upon those who profess it. Bucolus has lost his flocks by a cattle plague, while those of Tityrus have been spared. ' What god ', asks the former, ' has preserved you from this misfortune ? ' and Tityrus replies, ' The sign of the cross, painted on the animals' foreheads, has kept them safe ; if you wish to obtain the assistance of the true god, it is sufficient to believe '. ' If this is really so ', says Bucolus, ' I will hasten to adopt the true faith and to flee from error '. Aegon, who is present during the dialogue, is ready to do the same, ' for why should I doubt that the same sign that overcomes sickness will also be ever beneficial to men ? ' Augustine's account of the conversion of the chief physician (*archiater*) Dioscorus gives a specimen of the marvellous punishments inflicted upon those who obstinately refused to be converted. Dioscorus, who had been in the habit of scoffing at the Christians, during his daughter's illness implored the mercy of Christ, and vowed to become a Christian if she recovered. His daughter was restored to health, but Dioscorus, who hesitated to fulfil his vow, became blind ; on his repeating it, his sight was restored ; when he again hesitated to make confession of Christianity all his limbs became paralysed, and in addition he was struck dumb. When at last he expressed his willingness to declare himself a Christian, the visitation ceased.

Then the faith of the Christians, firm as a rock and so often heroically attested, filled men's minds with respect for a re-

ligion which had such followers. 'The more we are mown down', says Tertullian, 'the more our number increases. The blood of the Christians is seed. That stubborn obstinacy with which you reproach us becomes a source of instruction. For who is not profoundly affected by the contemplation of it, and incited to inquire what is really at the bottom of it? Who does not embrace our religion when he has finished his inquiry? and who, when he has embraced it, does not desire to suffer himself?' The morality of the Christians extorted the admiration even of their opponents. On the occasion of the inquiry, which in his capacity as governor of Bithynia he felt himself obliged to hold in regard to the Christians (especially in Amisus), Pliny shared the general prejudice, which accused them of shameful deeds at their secret meetings; but after a strict investigation, at which two female slaves were tortured, he could find nothing to accuse them of, except a 'perverse and extravagant superstition'. The accused declared to him that their sole offence or error consisted in the fact that they were in the habit of assembling before sunrise on a certain day, and offering up prayer to Christ as to a god; and that they vowed never to be guilty of theft, robbery or adultery, never to break their word, never to deny that a deposit had been entrusted to them. After this they separated and assembled together again at a harmless meal. Galen was of opinion that the faith of the Christians taught them to act in accordance with the precepts of true philosophy; he especially recognized their contempt of death, their chaste, modest, abstemious, and strictly moral life; and held that some of them were not inferior to true philosophers in their self-control and earnest endeavour to attain virtue.

But the Christian communities certainly contained some impure elements; not all the sinners, whom they admitted in the hope of reformation, were really reformed. This is proved by the reproaches addressed by Paul and an author speaking in his name to the communities at Corinth and Crete, as well as by the fact that 'James found himself obliged to censure the moral abuse of the Pauline doctrine relative to the power of faith, as that which alone brings salvation, and that the *Revelation* had to denounce certain tempters in Pergamus (the Nicolaitans), who not only did not observe the regulations as to food enjoined upon gentile Christians, but even paid no

regard to the prohibition of lewdness'. In fact, it was just this active charity and compassion, shown by the Christians to one another, that was abused by hypocrites, who joined the new community in the hope of assistance and other advantages, especially as in course of time exaggerated rumours of the wealth of the Christian communities penetrated the heathen world. It was declared that 'the brethren' sold their goods and offered the proceeds to the church; that they regarded it as the height of piety to strip their own children in order to enrich the church. Already Paul speaks of wandering Christians, who live upon ('devour') the foreign communities and rob them of their property, and he himself was obliged to vindicate himself before the Corinthians from the reproach of intentional fraud. In the *Teaching of the Apostles*, written about the time of Hadrian, travelling missionaries are instructed not to remain more than two days at most in the same place: 'but if he abide three days, he is a false prophet. And when he departeth let the apostle receive nothing save bread, until he findeth shelter; but if he ask money, he is a false prophet. . . . Yet not every one that speaketh in the spirit is a prophet, but only if he have the ways of the Lord' (Lightfoot's translation). From an anti-Christian standpoint, Lucian has described the sympathy shown to the philosopher Peregrinus Proteus by the Christians of Palestine, when he was cast into prison for having declared his conversion to their faith. After they had done their utmost (but in vain) to secure his release, they sought in every way to alleviate the hardships of his imprisonment. At daybreak old women, widows and orphans gathered round the prison gates. The heads of the community, by bribing the guards, even obtained permission to pass the night in the prison. Food in abundance was taken in, and prayers were offered up at meals. Envoys arrived even from the communities of Asia Minor, to offer consolation, advice and assistance; for in such cases, says Lucian, they show themselves incredibly generous, and give all they possess without hesitation. In this manner Peregrinus secured much money, and his imprisonment was the source of a considerable income to him. For the unfortunate, Lucian proceeds, imagine that an eternal life will be theirs; hence they attach little importance to life on earth and the good things of this world; further, their first lawgiver has

taught them that they are all brothers one of another, from the moment when they have rejected the Hellenic gods and begin to worship their crucified sage and to live in accordance with his laws. Wherefore they despise all earthly blessings alike and regard them as common to all, having adopted these theories without any sort of warranty. If a clever impostor worms his way into their confidence it is easy for him to make fools of these simple people, and to amass wealth in a very short time. Tertullian also censures the excessive attention of the communities to the bodily necessities of those imprisoned for the faith, and Ambrose seriously warns the priests against lavishing their gifts upon unworthy persons, who solicit their assistance under various false pretences.

There is no doubt that false prophets of every kind, impostors as well as enthusiasts and fanatics, found a specially favourable soil in the Christian communities for the propagation of their false doctrines, and thereby acquired influence and reputation. It is equally certain that ambitious men, whose humble position or other disadvantages prevented them from attaining their aims, attempted to play a part in this society which was denied them in political life. From the beginning sectarianism was rife amongst the Christian communities; the church persecuted the sects, and the sects each other, with bitter hatred and passionate accusations, hardly surpassed in violence by the charges brought against the Christians generally by the heathen. Celsus affirmed that the Christians were so split up that they had scarcely anything in common except the name.

The *Refutation of all Heresies* (see p. 189) composed not long before 235 by Hippolytus, a man with strong leanings towards the rigourism of the Montanists, gives an extremely interesting summary of the divisions and antagonisms in the bosom of the Christian communities, chiefly due to differences of opinion in regard to doctrine, and also of the difficulties and discomforts which sometimes resulted from the contact of the Christian with the pagan world. Hippolytus' attack on the head of the Christian community at Rome shows only too clearly what ugly passions were aroused and fostered at that time by religious controversies in the Christian world. His account, which is in many respects characteristic, is in the main as follows.

Callistus was a Christian slave belonging to a freedman named Carpophorus, an official in the palace of the Emperor Commodus, who was also a Christian. Carpophorus entrusted a considerable sum to Callistus, with which he was to found a banking business, the profits of which were to be his, although it was carried on under his master's name. Many widows and brethren deposited their money in it. But Callistus, whose mismanagement had brought him to the verge of bankruptcy, in order to escape rendering an account, fled to the harbour of Portus and took refuge on board a ship just ready to sail. Carpophorus followed him. When Callistus saw his master in the port he sprang into the sea, but was pulled out, taken back to Rome, and sent by Carpophorus to the treadmill (a common punishment of slaves). However, Carpophorus was persuaded to release him, when several of the brethren who were interested in the bank represented to him, with tears in their eyes, that their confidence in him had induced them to entrust their money to Callistus, and that the latter had assured them that he still had a certain sum safely invested. But Callistus, finding himself still unable to meet his engagements, attempted to put an end to his life and at the same time to win the glory of martyrdom. Under pretence of collecting a debt, he made his way into a synagogue on the Sabbath and disturbed the service. The Jews fell upon him and dragged him before the tribunal of the city praefect Fuscianus, who ordered him to be flogged and condemned him to hard labour in the Sardinian mines (the lead mines near Las Antas in the south-west of the island), where there were many other Christians who had been condemned on account of their faith. But Marcia, Commodus' mistress, desirous of performing a good work, ordered bishop Victor (198-9) to give her a list of the martyrs in the island, and secured their release. Callistus, whose name Victor had purposely omitted, persuaded the eunuch Hyacinthus, the bearer of the letter of emancipation, who was Marcia's foster-father and at that time a presbyter in the community, to procure his release from the governor of Sardinia. Victor was greatly displeased, but confined himself to ordering Callistus to take up his abode at Antium, and settled on him a monthly allowance for food. These events took place between 186 and 190.

Zephyrinus (199-217), the successor of Victor, was accord-

ing to Hippolytus a simple, ignorant man, who knew nothing of theological doctrines, but was avaricious and open to bribes. Callistus so ingratiated himself with him that Zephyrinus summoned him to Rome, and appointed him overseer of the great cemetery recently founded by him. Callistus succeeded in making each of the rival parties in the community believe that he was on its side, and in this manner got himself elected bishop. In this capacity he came forward with a false and pernicious doctrine : he asserted the unity of the Father and the Son, founded a school of theology, and promised forgiveness of sins to all who should join it. Many, whose conscience smote them, including those whom Hippolytus had expelled from the community in accordance with the condemnatory sentence, joined this school. Callistus taught that a bishop ought not to be deposed even for a deadly sin ; he appointed bishops, priests and deacons who had been twice and thrice married ; and allowed married clergy to continue in holy orders. The saying, ' Suffer the tares to grow together with the wheat ', he interpreted to mean that sinners should be allowed to remain in the church, whose symbol was the ark of Noah, which contained clean and unclean animals. He showed himself culpably indulgent, especially to women of rank, whom he permitted to live with slaves or men of inferior status, with whom they could not contract a valid marriage without losing their rank. Their repugnance to rearing the children of such marriages led these women to fresh crimes. Thus this impious wretch taught both adultery and murder. During his episcopate also, for the first time, second baptism was attempted by his followers.

There can be no doubt of the substantial truth of the facts here alleged, but it is equally clear that they are collected, explained, and commented upon in a most hostile manner. We shall not discuss how far the doctrine of Callistus, his exercise of spiritual discipline and his ' legitimization of average morality ', admit of a more favourable judgment. But the account given by Hippolytus makes it incomprehensible how he could have been chosen as its head by the community which knew him as a common criminal. Nothing is said of his entry into orders, and probably many other things are omitted which might possibly make such an elevation intelligible, after such a past. Callistus appears to

have become deacon of Pope Zephyrinus ; as such he administered the funds of the community, paid the salaries of the ministers of the church, and distributed alms to widows and orphans. In such a position it must have been difficult for him to avoid causing dissatisfaction ; but he would hardly have been elected bishop had not his (eighteen years) administration been in the main beyond reproach.

A venerable foundation, of great importance for the history of the primitive Christian church, and at the same time the subject of one of the most brilliant archaeological discoveries, is inseparably connected with the name of Callistus. The burial place laid out by him near the Appian way on the property of the Caccilii was to all appearance the first cemetery of the Christian community at Rome recognized by the state ; hitherto burials had taken place on land belonging to individual members, upon whose title of possession the preservation of these burying places depended. This cemetery, ever since called the Cemetery of Callistus, which was the last resting-place of the popes down to Miltiades (died 314) was re-discovered during the nineteenth century by the indefatigable genius and successful exploration of De Rossi.

The narrative of Hippolytus reminds us of what is sometimes forgotten : that the Christian communities could not possibly separate themselves entirely from the world, but that, on the contrary, they were continually called upon to bear their share of the evils and inconveniences of the civilization of the period. It is, of course, only natural that the apologists of the new faith should see only love and harmony in the one, and hatred and mutual persecution in the other. Compare, says Origen, the Christian communities of Athens, Corinth and Alexandria with the pagan communities of the same cities ; the former are meek and peaceful, since their desire is to please God ; the latter, who in no way resemble them, are given to sedition. Even the heads and elders of the communities of God, even the more indolent and less perfect among them, will be found to have made more progress towards virtue than the heads and councillors in the various cities. Yet we can hardly believe that the congregation of Corinth had completely changed since the time when Paul spoke so ill of it. At that time ' debates, envyings, wraths, strifes, backbitings, whisperings, swellings, tumults ' (2 Cor.

xii. 20)—in short, irregularities of every kind—were rife in their assemblies ; and the object of the letter of the so-called Clement of Rome, written towards the end of the first century, is to heal a schism that had arisen amongst them. The writer declares that it is a disgrace to this old and trustworthy community, to resist their elders for the sake of one or two persons. According to the *Shepherd of Hermas* (composed about the middle of the second century), the Roman community at that time also suffered from various moral evils and infirmities. There was no lack of quarrels and enmities, and the writer utters a warning against ambition, arrogance, avarice, adultery, drunkenness and so forth. Bishop Cyprian of Carthage, who suffered martyrdom in 257, says that the persecution (under Decius, which he had escaped by flight) was rather a test instituted by God ; the Christians had deserved to suffer more on account of their sins ; the long days of peace had undermined moral discipline. Amongst the priests there was no piety, amongst the ministers no sincere faith, no mercy in their works, no moral discipline. Men disfigured their beards by art, women rouged their faces, painted their eyes, dyed their hair. He further complains of insatiable avarice, of cunning frauds to deceive the simple, of snares to dupe the brethren, of marriages with unbelievers, of oaths rashly taken and of perjury, of haughty contempt of those set over them, of envenomed insults, of quarrels and obstinate hatred of one another. Many bishops, neglecting their sacred office, became agents (procurators) of secular masters, abandoned their communities, and wandered over foreign provinces in search of gain. While brethren in the community were starving, they went in pursuit of money, seized estates by fraud, and increased their incomes by usury. John Chrysostom says that, since miracles no longer happen, the heathen can only be converted by the example of Christian life ; but this is utterly corrupt, and there is not even a trace of love to be found amongst them. In Augustine, the heathen replies to the Christian who attempts to convert him : ‘ How can you exhort me to become a Christian ? A Christian cheated me, and I have never acted so ; a Christian has sworn falsely to me, and I have never acted so ’. Extreme outbreaks of dissent were certainly repressed during the early centuries by the persecutions that

weighed heavily on the whole Christian world ; later (367), when ecclesiastical disputes at Rome were settled by bloodshed, a kindly and intelligent heathen could express the opinion that no wild animal was as hostile and destructive to man as most of the Christians to one another.

However numerous the causes that contributed to the spread of the Gospel, it is certain that before the middle or end of the second century it had only a few isolated followers amongst the upper classes. Not only did their philosophical training, and a general education intimately connected with polytheism, offer the strongest resistance, but, in addition, the Christian profession of faith led to the most dangerous conflicts with the existing order of things ; and lastly, the renunciation of all earthly interests was naturally most difficult for those who possessed honour, wealth and influence. The poor and lowly, says Lactantius, are more ready to believe than the rich, whose hostility was no doubt in many ways aroused against the socialistic tendencies of Christianity. On the other hand, in the lower strata of society the spread of Christianity, assisted to a remarkable extent by the dispersion of the Jews, must have been very rapid, especially in Rome ; as early as the year 64 the number of Christians there was considerable. The architectural arrangements and the style of the artistic decoration of some of the Christian catacombs in Rome seem to show that they belong to the first century.

In the second century Christianity made far greater progress. The general defection from the popular religion in Bithynia, which emptied the temples and alarmed the younger Pliny, can have been no isolated phenomenon, at least in the eastern provinces. The existence of Christian communities, founded from Asia Minor, in Vienne and Lyons in the reign of Marcus Aurelius, justifies the assumption that the seed of Christianity had sprung up comparatively early also in the centres of civilization in the West. In the second half of this century Christian writers already spoke in very boastful terms of the spread of Christianity. There is no race of men, says Justin (died 166), barbarians, Greeks or whatever they may be called, whether they lead a wandering life in wagons or in tents without any fixed habitation, which does not offer prayer and thanks to the father and creator of the universe

in the name of the crucified Jesus. Irenaeus (bishop of Lyons 177–202) speaks of Christian communities in Germany, Iberia, Gaul, in the East, Egypt and Libya, and in the centre of the world (Rome). The author of a treatise ascribed to Tertullian uses still more high-flown and even threatening language. Addressing the Jews, he asks, ‘For in whom do all the peoples believe, if not in the anointed, who has already come?’ In addition to the countries in which, according to the *Acts*, there were Jewish inhabitants, he mentions Gaetulia, Mauretania, Spain, ‘the districts of Britain untrodden by the Romans, but subject to Christ’, Sarmatia, Germany, and ‘many other distant and unknown lands, provinces and islands’. He declares that Christians nearly everywhere already formed the larger half of the population. ‘Should we lack numbers and resources’, asks Tertullian (about 199), ‘if we chose to display open hostility, instead of merely cherishing revenge in secret? Are the Moors, the Marcomanni, and even the Parthians, and the greatest peoples, who yet are limited to a single country and their own district, more numerous than the population of the entire earth? We are of yesterday; yet we have already filled your whole dominion, cities, islands, fortresses, municipal towns, public places, even the camps, the tribes, the decuries, the palace, the senate, the forum’.

In this language there is no doubt great exaggeration, far more perhaps than would be the case if it were employed at the present day in reference to the proportion of Christians in all the populations of the world. It is also in direct contradiction to the statement of Origen (several decades later), who, exaggerating in the other direction, declares that the Christians were only ‘very few’ in proportion to the entire population of the Roman empire. Statements quite accidentally preserved show that up to 98 some 42, up to 180 some 74, up to 325 more than 550, places contained Christian communities.

But in the Roman empire the Christians not only formed a small minority as late as the third century, but this minority, at least up to the beginning of the century, was drawn almost exclusively from the lowest classes of society. It was a joke amongst the heathen that the Christians could only convert the simple-minded, only slaves, women and children;

that they were rude, uneducated and boorish ; that the members of their communities were chiefly people of no account, artisans and old women. The Christians themselves did not dispute this. Jerome says : the community of Christ is recruited, not from the Lyceum and the Academy, but from the lowest rabble (*de vili plebecula*). It is expressly attested by Christian writers that, even up to the middle of the third century, the new faith counted only few adherents amongst the higher classes. Eusebius says that the peace which the Church enjoyed under Commodus, contributed greatly to its propagation, ' so that several persons in Rome, distinguished for their birth and wealth, turned to salvation with their entire household and family '. Origen (in the reign of Alexander Severus) says that ' at the present day rich men and many high dignitaries, as well as delicate and nobly born ladies, receive the Christian messengers of the word ' ; that is to say, Christianity then obtained successes of which it had not previously been able to boast. According to Tertullian, Severus took under his protection men and women of senatorial rank, who openly professed Christianity ; and, as already observed, the indulgence shown by Callistus to distinguished female proselytes excited indignation in the Roman community. In 258, the emperor Valerian addressed a rescript to the senate, to the effect that Christians of senatorial and equestrian rank should be deprived of their possessions ; if they persisted in their belief, they should be punished with death ; Christian members of the imperial household and court should be condemned to forced labour in chains on the imperial domains. Consequently, from the time of Commodus onwards, the spread of Christianity amongst the upper classes is variously and expressly attested, whereas the reverse is the case in regard to the preceding period.

In complete agreement with this is the fact that, till about the end of the second century, Christians and Christianity are very rarely mentioned in classical literature, and then only casually, and in terms of indifference and contempt. The expressions of Tacitus and the younger Pliny show that, in the time of Trajan, the upper circles in Rome were not sufficiently interested in the new sect to take the trouble to obtain accurate information concerning it. Epictetus and Marcus Aurelius only mention the courage with which the

Christians went to their death. Both of them, however, consider this courage to be the result of obstinacy and familiarity with death, not of intelligent conviction; Marcus Aurelius also declared that it lacked dignity, and that there was even something theatrical about it. It has already been mentioned that Lucian saw nothing in the faith of the Christians but folly and infatuation. Galen, while recognizing the virtue of the Christians, felt nothing but astonishment and contempt for the complete belief of the followers of Moses and Christ in doctrines that were not proved, since he, like all the heathen, had absolutely no idea of a religious dogma. In the diffuse and extremely detailed history of Rome, carried down by Cassius Dio to his own days in the reign of Alexander Severus, no mention is expressly made of the Christians; according to him, the Christians persecuted under Domitian were accused of 'atheism and Jewish practices'; that is, he held the Christians to be a Jewish sect. Herodian does not mention them; and even the compilers of the imperial biographies (called *Scriptores historiae augustae*), some of whom wrote as early as the reign of Constantine, only notice them very seldom and casually. It was not till the middle of the second century that heathen writers began to attack Christianity. Fronto repeated the most ridiculous fabrications of the mob; and even the Platonist Celsus, who had been carefully informed by a Jew concerning the object of the Christian doctrine, in his lengthy treatise against it expressed himself to the effect that the dispute between Jews and Christians, which according to him turned entirely upon the question whether the prophesied saviour had already appeared or not, was nothing but a dispute 'about an ass's shadow'.¹

The only persons of rank in the time before Commodus, whose conversion to Christianity seems probable, are the consul Flavius Clemens, executed in 95, and his wife (or sister) Flavia Domitilla, who was banished to Pontia. On the other hand, the far from clear excerpt from Dio in no way proves that the execution of Acilius Glabrio (consul 91) about the same time was due to his profession of Christianity; according to Suetonius, he was condemned for supposed revolutionary plans.

¹ A proverbial expression = 'about nothing at all'.

The old tradition of personal relations between the philosopher Seneca and the apostle Paul has not as yet been found to have any foundation in fact, although it is very easy to understand how it may have arisen. It was very natural to attribute the many points of agreement with Christian opinions and doctrines in the writings of Seneca to the influence of the apostle, whose two years' captivity in Rome might easily have brought him into contact with the philosopher, especially as the proconsul Junius Gallio (who acquitted Paul when he was brought before his tribunal by the Jews) was Seneca's brother. Tertullian, Lactantius, and Augustine make no mention of the tradition. Lactantius speaks of Seneca as 'ignorant of the true faith'; Augustine considers that his freedom from the superstitions of the heathen, which as a Roman senator he could not publicly announce, was the result of his philosophical studies; that he was astonished at the spread of Judaism (which he hated), because he was ignorant of the purpose of God; that he never mentioned the Christians, to avoid praising them in defiance of the national opinion, or blaming them, perhaps against his own feelings. Jerome had read certain letters (some of which are still extant), said to have been exchanged between the apostle and the philosopher; but they are in reality one of the numerous literary forgeries which were called into existence by the religious zeal of the Christians. An inscription (end of the third or beginning of the fourth century) shows that in a Christian family, which traced back its origin to or at least derived its name from that of the Annaei Senecae, the tradition was highly prized. An epitaph on a tomb at Ostia, set up by a certain Marcus Annaeus Paulus, preserves the memory of his son Marcus Annaeus Paulus Petrus. The names of the apostles were very popular amongst the Christians; the use of the second name and of the two together was unheard of amongst the heathen. There can be little doubt, therefore, that the two Annaei were both Christians.

Finally, if the possibility of personal relations between the apostle and the philosopher cannot be absolutely denied, all previous attempts to make this possibility a certainty must be considered to have completely failed. The agreement (often almost word for word) of the expressions used by Seneca with those of Paul concerning the general sinfulness

of mankind, must have been due to the similar circumstances, experiences and dispositions of both, like everything else in Seneca's writings which approximates to the Christian point of view. But this agreement may also be completely explained by the particular form in which the Stoic philosophy developed, a form which had its foundation in the nature of Stoicism itself, and in the milder representatives of the school (Seneca, Epictetus and Marcus Aurelius) very naturally assumed a character sympathetic with Christianity, although no tradition has ever asserted that the two last named borrowed from Christian sources.

Consequently, judging from all that we know of the first centuries of the Christian era, it can hardly be imagined that the pagan world before the time of Septimius (emperor 193-211) and Alexander Severus (emperor 222-35), had the least anticipation of the future historical importance of the new religion, then so little regarded and so contemptuously criticized. What could this crowd of ignorant recluses, men of no importance, avail against the established order of things in an empire whose dominion of the world appeared destined to last for ever? 'Do not the Romans, without the assistance of your god, rule the whole world, including yourselves?' 'Your God', says Celsus, 'has promised his assistance to those who profess their belief in him, and even greater blessings, as you assert. And now, see for yourselves, what he has done for them (the Romans) and what he has done for you. Instead of being rulers of the whole earth, you have not even a clod of earth or a home that you can call your own; if you are found wandering about in secret, you are hunted down and punished with death'. In an empire in which so many religions existed side by side, the idea of a universal religion must have appeared absolutely incomprehensible. 'If it were only possible', says the same author, 'that all the Greeks and barbarians in Asia, Europe and Africa to the ends of the earth could recognize one law! But any one who thinks it possible is utterly devoid of understanding!'

The victory of Christianity was decided by the complete religious freedom guaranteed by Constantine. The victorious faith then immediately began to exercise its power in the suppression of paganism, at a time when the old belief had

not only ceased to offer any advantages, but entailed increasing annoyance and persecution upon its adherents. Had paganism really been for centuries in a state of decay and dissolution, its complete overthrow and the absolute supremacy of Christianity must have followed within a very short space of time. But, as a matter of fact, its death struggle, carried on under the greatest disadvantages, was prolonged for two centuries; and polytheism, utterly powerless and defenceless as it was, still survived, although Christianity ever more and more indefatigably and relentlessly endeavoured to stifle everything in the old faith that still gave signs of life, by the aid of compulsion, robbery, destruction and persecution. This alone is sufficient to prove the great vitality of paganism even in its old age. After Constantine's edicts of toleration Christianity enjoyed the favour and encouragement of the secular authority for a period of seventy years (except for a brief reaction under Julian); and yet, as already observed, it can scarcely have won over half the population of the empire. Nearly all the Roman nobles in the time of Julian were devoted to the old religion, and in the time of Theodosius about half the senators, although at that time and subsequently Christianity had made far greater progress in the towns than in the country. In the course of the fourth century the word *paganus* (countryman) came to mean 'heathen', and Endelevius in the poem quoted above (p. 197) calls Christ the god who is worshipped in the great cities as the only one. Judaism also in the *Diaspora* was chiefly, although not exclusively, a town religion.

But even during the persecution started by Theodosius in 380, which after the fall of the pretender Eugenius, who had been induced to put himself forward by Nicomachus Flavianus, the champion of paganism, was carried on with renewed vigour, the old belief showed remarkable powers of resistance. First in the East, then in the West, temples, chapels and seats of the ancient cults were laid low and reduced to ashes by fire and sword. But if the rural populations, scattered and defenceless as they were, were unable, in spite of their bitter complaints, to prevent the destruction of their sanctuaries, 'on which they placed all their hopes, for men, women and children, for their cattle, crops, and plantations, and the loss of which deprived them of all the joys of life'

(Libanius), in the towns bloody combats only too often took place between the populace and the furious clergy and monks. With the exception of direct compulsory conversion, every kind of violence was employed for the suppression of paganism. All sacrifices, ritual observances, and attendance in the temples were forbidden under threat of the severest penalties ; the priests were deprived of their privileges and banished from the towns ; the temple possessions were confiscated. Yet the repeated insistence upon these regulations and penalties during the fifth and even the sixth century, shows how extremely slow was the process of extirpation, even when the ancient faith seemed to have been deprived of all means of existence. That crime and rapacity combined with draconian legislative severity in the persecution of defenceless paganism, is proved by the repeated exhortations of Augustine, not to plunder the heathen under the cloak of religion, and by an imperial rescript of the year 423. Paganism also at that time had its martyrs, and the abominable murder of the beautiful and virtuous Hypatia at Alexandria in the year 415, shows to what deeds of horror the spirit of fanaticism could drive the Christian mob.

This systematic war of extermination waged against paganism had lasted for a hundred and fifty years, and yet the life of the ancient belief was not completely extinct. In 528 Justinian felt impelled to order a rigorous persecution of the so-called 'Hellenes'. In Constantinople itself numerous adherents of paganism were discovered and arrested amongst patricians, learned men and physicians ; one of them took his own life, the rest embraced Christianity. In 532, Bishop John of Asia, by imperial command, made a tour of the provinces of Caria, Lydia and Phrygia, where he converted and baptized 70,000 souls. Any one found offering sacrifice to idols was to be punished with death. In the West, the advancing flood of barbarism, which swept away at the same time the foundations of paganism and ancient civilization generally, hastened the destruction of the former. Yet it was not until the year 529, when the country population of the neighbourhood was still in the main pagan, that the last temple of Apollo on Monte Casino was converted into a cloister by St. Benedict. In the same year the seven last Athenian philosophers, expelled by an edict of Justinian, emigrated

and sought refuge in Persia with King Chosroes. Gregory the Great (pope 590-604) learnt to his sorrow that all the peasants in Sardinia were idolaters, and sent bishop Victor to convert them; he directed the bishop of Caralis to proceed against idolaters, *haruspices* and soothsayers, who refused to be converted by his preaching; slaves were to receive corporal punishment, free citizens were to be 'brought to repentance' by close confinement. The worship of the old images of the gods was secretly practised (especially in Greece) not only during the middle ages, but in some cases even down to our own days. Under Alexius Comnenus the image of Artemis in Patmos was destroyed by monks; Michael Apostolius, the follower of Gemistius Pletho, about 1465 found in Crete statues of the gods, to which he could address his prayers.

But even so the annihilation of paganism could not be complete. It contained elements which defied all efforts to destroy them, since they were based upon certain imperative necessities of a great portion of mankind; and these elements, under new forms, have found a place in the heart of Christianity itself and thus survived the downfall of the ancient belief. It was not merely the heathen love of festivals which demanded satisfaction also from the new religion and caused the church to allow carousals and merry-makings at the graves of the martyrs, and to compensate the people for the abolition of the pagan festivals by fixing the celebration of Christian festivals on the same days. Above all, it was the profound desire to fill the infinite gulf between humanity and divinity with intermediate beings that re-peopled heaven, now deprived of its gods, with a band of heavenly figures, to whose number there was no limit. Although Augustine rejects the comparison of the worship of saints and martyrs with polytheism, other ecclesiastical writers, such as Basil, assign them exactly the same place in the order of the universe as the later Platonists assigned to demons and heroes, or, like Theodoret, institute comparisons between the two cults, in order to prove that 'the truly divine has been substituted for the false and erroneous'. In Sicily 'the worship of the saints exhibits so complete a survival of polytheism, that it is easy to understand why educated Sicilians even at the present day in all seriousness prefer the monotheism of Islam to Christianity'. But the old gods and heroes have not in

all cases been replaced by holy personalities of the new faith ; here and there they have maintained their ground, like Demeter worshipped at Eleusis, and Santa Venere invoked in southern Italy and Sicily ; or they have been changed into the new personalities, and their myths into Christian legends. Thus, apparently, here and there in Gaul the 'mothers' of Celtic popular belief have become the three holy Maries ; Helios-Aumu, the driver of the chariot of the sun worshipped in the country east of the Jordan, has been transformed into the prophet Elijah ascending to heaven in a chariot drawn by fiery horses ; and Hippolytus, who probably came by a martyr's death in the mines of Sardinia, according to the tradition was torn to pieces by horses—the fate which befel his namesake, the son of Theseus king of Attica.

'Least of all', said Theodoret, 'ought the Greeks to be offended at what takes place at the graves of the martyrs, for it is with them that the libations, expiatory sacrifices, the heroes, the demi-gods, the deified men have originated. Heracles, Asclepius, Dionysus and many others were raised to the rank of gods ; how then can the Christians be reproached for honouring the martyrs as witnesses and servants of God, without making gods of them ? Who deserves it better than they, the champions of mankind, their helpers and protectors, from whom they avert evil and drive away the afflictions with which they are threatened by the demons ? Childless and barren women pray to them that they may become mothers ; he who has received a gift, implores them to preserve it ; those who are starting on a journey, beg them to attend them on the way, those who return safely render to them their thanks ; the votive offerings presented to them, gold and silver models of eyes, feet and hands, are evidence of vows fulfilled. The temples of the gods are destroyed, for the lord of all has introduced his own dead in their place, has driven them out and bestowed their honours upon his own children. In place of the Pandia, Diasia, Dionysia and other festivals, those of Peter, Paul, Thomas, Sergius, Marcellus and other martyrs are celebrated'. The assertion of Theodoret, that these celebrations are accompanied by Christian sobriety and modesty, not by pagan ostentation and sensuality, must be accepted with considerable reserve, as is shown by the evidence of Christian writers.

CHAPTER III

PHILOSOPHY AS A MORAL EDUCATOR

No one who has even a superficial acquaintance with classical literature needs to be reminded that, in antiquity, morality as a whole is most intimately connected with religion; that the gods, as directors of the moral order of the world and executors of its laws, require from men the fulfilment of moral obligations, reward the good and punish the evil. It has been shown that polytheism continued to exist unchanged amongst the masses down to a late period of antiquity; it remains to refute the idea that the anthropomorphism of the Greek religion, which had infected the national faith of the Romans, exercised a demoralizing influence by attributing to the gods human weaknesses and passions and representing them as transgressors of the moral laws. Of course, this was a favourite argument of the Christians in their struggle with paganism. The heathen cannot possibly be virtuous, says Lactantius, even if they are naturally good, since the example of their gods trains them to vice—Jupiter to adultery, Mars to bloodshed, Mercury to fraud, and so forth. Augustine even held the opinion that the evil spirits worshipped by the heathen allowed themselves to be accused of disgraceful deeds which they had never committed, in order to ensnare the minds of men and to drag them to destruction with themselves. But even amongst the adherents of polytheism many looked with suspicion on those ‘stories, which taught men to sin’. Dionysius of Halicarnassus preferred Roman theology to Greek, since the legends in the latter were of little use and only serviceable to the few who understood their real meaning, while, on the other hand, they taught the great mass of mankind, untrained in philosophy, to despise the gods, or to regard as lawful the infamies and crimes attributed to them.

This assertion of Dionysius, in his attack upon the absurdity of the popular belief, is the more easy to understand, since it may be assumed that sophistic, which delighted in showing its skill in defence and even in praise of what was reprehensible, did not disdain to borrow arguments from legend; thus, in the *Clouds* of Aristophanes, the 'Unjust Argument' raises the question why, if justice exists, Zeus was not punished for having bound his father with chains. In the *Homilies* of the so-called Clement of Rome a virtuous woman is said to have been seduced by an 'encomium of adultery'; perhaps this was a subject in the rhetorical schools, for practice in the art of making the bad appear good and the wrong right. The defence of adultery, which chiefly relies upon the amours of Jupiter and the other gods (and also the teachings of the philosophers) is followed by a refutation, perhaps also a subject for rhetorical exercises. If we should imitate the gods in their amours, why not in their meals? Cronus devoured his children, Zeus swallowed Metis, Pelops was set on table as a dish before the assembled gods. In fact, it is inconceivable that the acts attributed by legend to the gods could ever have really misled, even in ancient times, the moral consciousness of men of ordinary intellect and moral responsibility; that adulterers, murderers and thieves could ever have seriously attempted to justify their crimes, to themselves and others, by the examples of Jupiter, Mercury and other gods. Amongst the proofs adduced by Ovid in support of the proposition that there is nothing which cannot do harm, if misused, he says that women who are ingenious in discovering excuses for sin, might be led into it by the traditional immoralities of the goddesses: 'Corrupt minds can be led astray by anything'. On this point Seneca expresses himself as if he had no fear whatever of the possibility of a belief in the legends so absolute as to remove all fear of sin from men's minds; and no doubt he is right. For if the unbelieving rejected the popular belief just because of these fables, the rationalists, as always, explained the contradictions between tradition and the demands of reason by artificial (euhemeristic or allegorical) interpretations, or by the assumption that the immoral acts attributed to the gods were really committed by the merely semi-divine demons; while naïve and unreflecting believers were content in such cases to recog-

nize mysteries too deep for human understanding, from which no rules for human action could be derived.

Greek and Roman literature furnishes abundant evidence of the existence of the belief in a moral order of the universe, based upon and maintained by the will of the gods. Against this evidence, appeal is made to certain frivolous jests in comedies and erotic poems, in which amorous swains excuse their cunning devices, their lapses from morality and even deeds of shame, by the example of Jupiter and the other gods. They even quote the monologue of Byblis (in the *Metamorphosis* of Ovid), who attempts to justify her unnatural passion for her brother by the marriages of the gods with their sisters! With equal or even more reason it might be asserted, as was often done to the embarrassment of the ancient Christian apologists, that the sins of the patriarchs and other men after God's own heart in the Old Testament have exercised a demoralizing influence; and an attempt might be made to support the assertion by jokes or coarse expressions of a similar character in modern literature, in which 'the devil appeals to Scripture'; we may mention one of Bürger's poetical trifles, *Frau Schnips*. It is hardly necessary to remind the reader that not only were such offences everywhere severely punished by civil legislation, but that the gods were worshipped and invoked as protectors of the same laws which, according to the legend, they had broken. In particular, was not the Greek Zeus, like the Roman Jupiter, a god of marriage?

In every religion a mistaken idea of the nature and will of the deity may be found. Benjamin Constant, whose remarks upon polytheism generally are also applicable to the polytheism of our period, very rightly observes that the general spirit of religious creeds is often in contradiction to their moral commandments, and that the passions aroused by the former hinder the fulfilment of the latter; that murders are frequently committed in all good faith, in order to please a god, one of whose commandments is, 'Thou shalt not kill'! 'The fables consecrated by a religion are the object of a faith in certain respects mechanical; they sometimes appear to establish themselves permanently in a special compartment of the human brain. Rome traced back its origin to an amour of Mars with Rhea Silvia; none the less, any

vestal who allowed herself to be seduced suffered a fearful punishment'.

The undoubtedly correct view, that the licence which the gods in legend permit themselves in reference to the moral law by no means indicates their indifference to it, is illustrated by Constant by the example of kings, whose private excesses do not affect the laws against excesses committed by their subjects. 'In the Macedonian camp the soldier accused of murder was condemned by Alexander, although he himself was the murderer of Clitus. The gods, like the great ones of the world, have a public and a private character. In the former they are the upholders of morality, in the latter they follow only their own inclinations ; but only in their public character have they anything to do with men'.

'The gods are not the originators, but the guarantors of the moral law. They protect it, but do not alter it ; they do not issue its commandments, but keep them in force. They reward good and punish evil, but their will does not decide what is good and evil ; human actions are meritorious or the reverse in themselves.'

But, although belief in the government of divine powers, respect for their will, hope of their favour and fear of their wrath were always reckoned among the most essential supports of morality throughout antiquity and (as already observed) were recognized as such, they were not, properly speaking, the foundations of morality. The duties of man to the divinity, to humanity and to himself were not proclaimed by the revelations of a higher will, nor by the teaching of a divine prophet ; the heathen had not received the law from without ; as the apostle says, they were a law unto themselves ; and had to depend not only upon their own knowledge of their duties, but also upon their own strength. They had no idea of an absolute truth, founded upon supernatural revelation, and could not understand that faith, and, above all, the subordination of reason to faith, could be meritorious and possess a redeeming and sanctifying virtue. In their opinion the highest task of the thinking mind was the search after truth, to which in the conviction of Christians revelation had set a limit for ever, so that henceforth it was not only superfluous, but even unlawful. The heathen, says Tertullian, are ever

seeking truth, but never find it ; we have no need of curious questioning now that we have Christ Jesus, nor of inquiry now that we have the Gospel. If we believe this, we desire to believe nothing besides. Thou shalt believe ! This, according to Julian the apostate, was the final conclusion of Christian wisdom ; and Galen the physician, who had a high opinion of the morality of the Christians, could not understand their absolute belief (like that of the Jews) in doctrines which had not been proved true. While the messengers of Christianity promised redemption by faith, heathen philosophy proclaimed salvation by knowledge. The knowledge of good and evil, promised (according to *Genesis*) by the tempter, was for it the attainable object of all human aspirations, the foundation to be laid by man's own efforts, on which alone morality could be based. According to Socrates, knowledge is the root of all moral action, ignorance that of all errors ; knowledge can no more exist without virtue than virtue without knowledge. In the same way the Stoics defined virtue as knowledge, vice as ignorance. Consequently, virtue and with it happiness in this life were attainable by knowledge, which enabled man to subject his lower impulses to the divine element in his nature. For paganism knew nothing of human nature being thoroughly bad, of the doctrine of original sin ; even according to the Orphic doctrine it contained the good derived from Dionysus as well as the bad derived from the Titans. Hence, also, the idea of the need of redemption by supernatural grace was foreign to the spirit of the ancients and only found acceptance as their intellect decayed and lost its vigour. No greater contrast can be imagined than that between the self-control of the philosopher unaffected by mysticism, his proud consciousness of his ability to subdue all passions and desires, and the Christian's feeling of dependence, his need of redemption and his absolute subjection to the will of God. Among the cardinal virtues of paganism there was as little room for humility as for the patience which after a blow on one cheek turns the other to the smiter.

For him who knows (i.e. the wise man) the evils which torment humanity have no existence ; or at least they are unable to disturb his happiness, which is self-sufficient and self-contained. Yet, as Socrates said, the whole life of the philoso-

pher is a preparation for death, which had less terror for him than for any other man. By knowledge man is raised above the level of human weakness, withdrawn from the influences of the outer world, and is invulnerable to its attacks. But this happiness consisted not in possession but in renunciation, in the absence of all needs (for which cynicism quite consistently strove), in the abandonment not only of external possessions but also of the most important interests, of the innate feelings and inclinations of human nature which contribute most to happiness. The motto of Epictetus, 'Suffer and renounce!' in a certain sense sums up the practical philosophy, and consequently the theory of happiness, of all philosophical systems. The aim of all knowledge, says Seneca, is to teach us to despise life; only he who is free is happy, says Demonax, and only he is free who hopes for nothing and fears nothing. Epicureanism and Stoicism are at one with Christianity in their seclusion from political life; like the apostle Paul, Epicurus and also Epictetus placed celibacy above marriage; scepticism based happiness upon the knowledge of the impossibility of knowledge, consequently, in reality, upon a renunciation of knowledge.

Ancient philosophy, therefore, overcame the terrors of death not by the hope of celestial happiness, but by the knowledge of the small value of earthly existence. The Christian belief and hope, the love which springs from respect for that which is beneath us, were equally unknown to paganism. It was Christianity that first taught mankind, 'to recognize humility and poverty, mockery and contempt, outrage and misery, suffering and death as divine, and to honour and love even sin and crime as not hindering, but promoting holiness' (Goethe). Such an idea was foreign to the ancient world, although traces of the feeling occur now and again. Plato and Aristotle proposed that sickly and mutilated children should be put to death in the ideal state. Seneca thinks no more of drowning crippled and misshapen children than of drowning mad dogs and unhealthy cattle, which might infect the whole herd. In his opinion, only men of no intelligence can consider the wise man too harsh if, in accordance with the Stoic doctrines, he neither feels compassion nor forgives. The wise man must not allow his serenity of mind to be disturbed by sympathy or other emotions, for this is a weakness of feeble

minds, especially women ; he may dry the tears of those who weep, but not weep with them ; he may help them, but not pity them. In like manner, he may allow gentleness and mercy to prevail, but may not forgive ; for forgiveness is the remission of merited punishment.

In ancient times, man did not feel himself separated from the divinity by an impassable gulf, since his relation to it was not that of a creature to its creator ; and this difference in his relation to the divinity carried with it also a different relation to humanity. The fundamental Christian idea, that all men are created by one creator, children of one father, and consequently united by the bond of brotherhood, possessing equal rights and equally bound to perform the same charitable duties, is a view that was first developed in antiquity outside the domain of Christianity in the time of the Roman universal empire ; but it never became general. In contrast to this absolute equality of all creatures before God, the ancient Greeks and Romans recognized, as founded on justice, the numerous gradations of human existence, the result of political, social and national developments ; and no divine prohibition nor moral law hindered the privileged from asserting his better claims in their full extent against one whose claims were inferior. In the eyes of his fellow, the life of man was not so sacred and inviolable as it was bound to be in the presence of a divinity with whom all life originates, and who has not only not allowed but expressly forbidden his creatures to take each other's lives, a right which belongs to him alone. The position assigned to man by the ancient conception of the order of the universe allowed him, together with greater freedom and independence, far more latitude in the disposal of his own existence or of that of those who were under his protection or authority. Not only had the master the power of life and death over his slaves ; the father had the same power over his children, and it was not till late that it was made a punishable offence to expose them. Opinions were divided as to whether suicide was morally permissible. Plato, who in this respect also shows an approximation to Christianity, denied that it was (following the Pythagoreans) ; man, as the property of the divinity, must not leave the place assigned to him on his own initiative ; Plotinus, however, considered it justifiable in certain circumstances. The Stoics and Cynics not only

declared that it was permissible, but saw in it the highest practical proof of moral freedom.

As for the attitude of the Christians in the early centuries towards the heathen system of ethics, they failed, at least to a great extent, to perceive the sharp and fundamental contrast between 'virtue from justice and virtue from mercy'. Clement of Alexandria, like all Christians who at that time were indebted in the main to Greek philosophy in their education, had no doubt that it also contained truth, whether this truth was borrowed by the philosophers from the Old Testament or brought to them by inferior angels; what was false in it was the result of misunderstandings or was foisted in by false prophets sent by the devil. The relation of philosophy to Christianity was that of the derived to the original, of fragments and parts to the single whole; it was a forerunner of Christ, which trained men for the perfection that was to be embodied in him; as the law was given to the Jews, so philosophy was given to the heathen. Thus, some Jews and heathen were just before God; above all Plato and his teacher Socrates (who in Luther's eyes were godless pagans) spoke in accordance with the spirit of God. Even for Christians philosophy was valuable, nay, indispensable; the Christian writers who disdained it were afraid of it, as children of ghosts, and had formed no opinion of it.

From the middle of the second century B.C., Greek philosophy (as already observed) had begun to make its way to Rome and the West, and, in spite of all attempts to check it, had made constant progress. The multiplication of relations with Greece, the ever-increasing immigration of Greek savants to Rome, the more and more frequent journeys of Romans to Greece, where they frequently stayed for a considerable time, gave a powerful impetus to the introduction of Greek art and science, and of philosophy in particular. When Cicero employed the enforced leisure of his last years (45-43) in rendering accessible to Roman readers in a popular form the most important results of the post-Aristotelian philosophy, he evidently supplied a general want that was keenly felt by his educated countrymen. His philosophical works, which have done so much to introduce the knowledge of Greek philosophy to all succeeding ages, formed the nucleus of the new philo-

sophical literature of Rome. Amongst its best read writers Quintilian reckons (Lucretius excepted) the Stoics Brutus Plautus and Seneca, Cornelius Celsus (the follower of the Sextii, who were closely akin to the Stoics), and the Epicurean Catus, the only addition to whose numbers in the second century A.D., is the Platonist Apuleius.

Now, although after the fall of the Republic the influences favourable to the spread of Greek philosophy in the Roman world increased in number and strength, the old Roman dislike of it, based in the main on the opposition between the practical and the theoretical, between realism and idealism, continued to exist. The view expressed by one of the characters in Ennius, that it was good to 'take a sip of' philosophy, but not to become absorbed in it, was also that of Tacitus and all like-minded Roman statesmen and patriots, who were bound to oppose a speculative system, which led to indifference to the State and its most important interests. Although an acquaintance with the doctrines of philosophy, 'that noble science', was regarded as worthy of commendation; although a salutary influence 'that moderated the passions' was conceded to it; yet, among these circles, over-zealous study of its doctrines was considered reprehensible in a Roman and a senator. Helvidius Priscus, who studied Stoicism 'in order that he might take part in state affairs better equipped against the blows of fortune', and in all relations of life satisfied the highest claims of morality, was according to Tacitus an exception, since the majority only affected 'the higher studies in order to conceal an indolent inactivity under a high-sounding name'. In Tacitus the highly respected Musonius Rufus plays the part of a ridiculous pedant, who parades his knowledge on the most unsuitable occasions; in the year 70 he attempted to influence the legions of Antonius before the gates of Rome by addressing them on the blessings of peace and the evils of war, and with difficulty escaped ill-treatment at the hands of the soldiers. Quintilian also contrasts the 'true citizen and truly wise man, who devotes himself not to idle discussions but to the administration of the state', with the philosophers who hold themselves as far aloof as possible from all the duties of a citizen in general. 'What philosopher', he asks, 'has ever been prominent as a judge or orator? What philosopher has ever interested himself in the manage-

ment of state affairs, for which, however, the majority of them are fond of laying down rules ? ' The younger Pliny praises Titius Aristo as a man inferior in purity, piety, justice, and strength of mind to none of those who make an outward show of philosophy. ' Yet he does not frequent gymnasia and porticoes, nor spend his time and that of others in idle and lengthy discussions, but he always wears the *toga* and is always busy '. Men of this practical turn of mind must have regarded a regular study of philosophy as intolerable in the case of a ruler. Some expressions of the pretender Avidius Cassius afford a specimen of the manner in which the philosophical studies of Marcus Aurelius were criticized by the opponents of philosophy. He calls the emperor ' the disputant ', ' the philosophical old woman ', ' he institutes researches into the nature of the elements, of men's souls, of virtue and justice, and has no heart for affairs of state. You have heard that our philosopher's praefect of the praetorian guard, who was as poor as a beggar three days before his appointment, has suddenly become rich '. When Alexander Severus, on the advice of his mother Mammaca, gave up the study of music and philosophy, he was strengthened in his resolution by the Virgilian verses, quoted to him in place of an oracle, in which it was declared that the Romans were called upon to rule the world, while others might be allowed to carry off the prize in the arts and sciences.

In like manner Nero's mother dissuaded her son from the study of philosophy, to which he had been introduced first by the Stoic Chaeremon and then by Seneca, on the ground that it was ' injurious to one who was destined to rule '. In the circles which took a lively interest in the maintenance of the established order of things, above all in governmental and court circles, philosophy was not so much despised as feared. Caesarism, not without reason, saw in ' ideology ' a danger to itself. The speech in Cassius Dio, in which Maecenas unfolds the principles of imperial policy in presence of Augustus, also contains a warning to the emperor to be on his guard against philosophers, who propagated revolutionary ideas. He must not believe that all real or pretended philosophers were worthy and honest men, since Areus and Athenodorus had proved themselves such ; many wear this mask, in order that they may work incalculable mischief to states and individuals.

In fact, like the murderers of Julius Caesar, many critics of the government, and especially the most prominent leaders of the opposition in the senate in the first century, professed the doctrines of the Stoic school. Amongst them were republicans, such as Paetus Thrasea and Helvidius Priscus, whose aim was political martyrdom, and of those who took part in the Pisonian conspiracy (65) against Nero at least Lucan and Seneca. Besides, the emperors in general were only too ready to listen to insinuations against Stoicism and philosophy. In 62 Rubellius Plautus had been put to death while in exile, a man who, as Tigellinus represented to Nero, 'made a show of imitating the ancient Romans, and had adopted the arrogance of the Stoic school, which formed and produced turbulent spirits ever seeking danger (*negotiorum*)'.¹ Nero was instigated to persecute Thrasea (in 66) by Capito Cossutianus, who represented to him Thrasea's abstention from the deliberations of the senate as an act of rebellion, and Thrasea himself as the head of a faction. He declared that he had partisans, or rather satellites, who, although they did not yet venture to imitate the audacity of his language, reproduced his demeanour and manner; stern and morose, as if constantly reproaching the emperor for his excesses. Either their principles must be adopted, so far as they are preferable, or the leaders and instigators of these innovators must be removed. It is this sect that has produced the Tuberos and the Favoniuses, names hateful even to the old republic. In order to overthrow the monarchy, they make use of liberty as a pretext; when they have overthrown it, they proceed to attack liberty. Helvidius Priscus, Thrasea's son-in-law, who was reported to be in the habit of celebrating, together with his father-in-law, the birthdays of Brutus and Cassius, was banished (for the second time) under Vespasian and put to death in exile. Priscus, who was subsequently reckoned among the celebrated ideal figures of the Stoic school and is mentioned with respect by the younger Pliny and even by Tacitus (in spite of his prejudice against political martyrdom), was condemned by conservative monarchists, like Suetonius and Cassius Dio, who throw the responsibility for his downfall upon himself. According to Suetonius, Vespasian endured Priscus' defiant obstinacy with

¹ i.e. political martyrdom. Others translate 'eager to take part in public affairs'.

extreme patience, tried to prevent his death when it was unfortunately too late, and restrained his wrath, until he had submitted to numerous impertinent remarks, delivered in the manner of a reprimand'. Only fragments and excerpts from Dio's account have been preserved. He certainly attempts to fix the odium of the proceedings against Helvidius and the philosophers upon Vespasian's powerful friend Mucianus, but at the same time declares that Helvidius was seditious and a friend of the mob, that he had always abused the monarchy and praised democracy, acted accordingly and incited others to do the same; as if it were the task of philosophy to throw mud at the government, to stir up the masses, to overthrow the existing order of things and to bring about a revolution. Helvidius imitated Thræsea, but was greatly his inferior. Thræsea's opposition was directed against a Nero, but his words and actions were always temperate; he confined himself to passive resistance. Helvidius, on the other hand, was dissatisfied with a Vespasian and opposed him in public and in private; he sought death and thereby paid the penalty of numerous offences. According to Dio, other Stoics, as well as the Cynic Demetrius (for whom Seneca expresses his admiration), publicly expressed views incompatible with the existing order of things. The result was that (between the years 71 and 75) all the philosophers were expelled from Rome, with the single exception of Musonius Rufus (who had been banished by Nero); Demetrius and a certain Hostilius were deported to islands. In 93, the philosophers were again banished by Domitian, in connexion with the trial of the Stoic Junius Arulenus Rusticus, who in a panegyric on Thræsea had called him a holy man, and of other senators who held the same views: 'this prosecution was directed entirely against the political opposition, wherever it manifested itself in literature and the lecturer's chair, and while the most famous writers were criminally punished, the government expelled the others *en masse* from the capital'.

But after the death of Domitian the whole system of government was changed, and with it the attitude of the emperors towards philosophy, which not only ceased to be regarded as hostile to the government, but was soon encouraged in every way. In a letter written immediately after Domitian's death (96 or 97) Pliny expresses his delight at the glorious revival of

intellectual life in Rome, as attested by numerous and glorious examples, of which it would be sufficient to mention one, the lectures of the Stoic philosopher Euphrates. Pliny also praises Trajan for taking special interest in the education of youth, and for highly honouring teachers of rhetoric and philosophy. 'Studies, which had been punished with exile by a prince, who, conscious of his vices, proscribed, from fear rather than hatred, everything that was opposed to vice, are now fostered and made much of by Trajan. They are full of life and vigour, and have recovered their native land'; Dio of Prusa, who under Domitian had lived in (voluntary) exile, returned after his death. The reign of his former friend Nerva was too short for him to enjoy the benefit of his favour; Trajan, however, is said to have purposely distinguished him, and Dio, in one of his hortatory speeches on the government, declares that the emperor took pleasure in truth and frankness alone, not in flattery and lies. Hadrian, who sought the society of philosophers and of all men of learning, was perhaps the first who appointed public teachers of philosophy in Rome. Antoninus Pius appointed them in all the provinces, and according to his letter to the diet of the province of Asia the immunity from taxation, which in the case of other teachers was limited to a certain number, fixed in accordance with the size of the towns, was to be unrestricted in the case of philosophers, since there were so few of them. The salaries of the learned men summoned to the museum, including the philosophers, continued to be paid to them; at Athens public teachers were appointed by Marcus Aurelius from the four most important schools.

Under this philosopher on the throne philosophy became the fashion, even amongst the women; Stoicism, formerly so persecuted, was now considered a recommendation, and those who wished to get on pretended to adopt it or made a show of it. Among the emperor's philosophical tutors the Stoic Junius Rusticus and the Peripatetic Gnaeus Claudius Severus were influential and highly honoured. The former, a son or grandson of the Junius Rusticus executed by Domitian, was the adviser of Marcus Aurelius in all public and private affairs, and his words had great weight, in time of peace as well as war; the emperor always embraced him before going on to the praefects of the praetorian guard, twice nominated him consul and after his death ordered the senate to erect statues in his honour.

Gnaeus Claudius Severus, a distinguished citizen, had already been consul in 146 ; Marcus Aurelius made his son of the same name (consul 163 and 173) his son-in-law. Of the later emperors Septimius Severus, following the example of Marcus Aurelius, showed especial interest in philosophy, and according to Tertullian allowed philosophers great liberty of speech ; in spite of their attacks upon the emperors they received salaries and the honour of statues. Severus's wife, Julia Domna, also turned her attention to philosophy, after she had quarrelled with him as the result of the intrigues of the favourite Plautianus, and surrounded herself with philosophers.

Further, at the time when philosophy was suspected and persecuted, there was no lack of philosophers who zealously strove to represent themselves and their learning as entirely harmless to the government. Martial's friend and countryman, the advocate Decianus of Emerita, professed himself a follower of Thræsea and Cato ; in other words, he was a Stoic, but shrewd enough not 'to run with bare breast against drawn swords', for which he is commended by Martial. The poet declares he does not want a man who purchases fame by his blood, rashly shed, but one who deserves praise without martyrdom. Seneca in his letters has repeatedly defended philosophy against the reproach of hostility to the government. In a letter, which may have been written about the time when philosophy began to be looked upon with suspicion, he speaks as if it were quite inconceivable that it could ever be so suspected, although his defence itself shows that it had already been attacked on this ground. One must flee from the dangers of the world and find a sure refuge in philosophy, the science which affords protection not only amongst the good but also amongst those who are not utterly bad, like the priest's fillet, which even the worst respect. Never will worthlessness be so powerful, never will there be such a conspiracy against virtue, that the name of philosophy will not continue to be holy and venerable. Further, the philosopher must behave quietly and modestly. If it is asked whether Cato acted in this way, Seneca replies that he expressly disapproves of his participation not only in the civil war but also in the party quarrels that preceded it, as quite useless. He points to the example of the Stoics, who, retiring from political life, in their seclusion exert themselves for the ennoblement

of life and the establishment of the universal rights of man, 'without offence to one who is more powerful'. The wise man will not try to disturb universally adopted customs by his example, nor to attract the attention of the people by the novelty of his manner of life. Certainly, even he cannot be sure of absolute security. In a later letter, on the other hand, the charges against philosophy are refuted as if they had already been brought. 'They appear to me to be wrong, who think that the true followers of philosophy are obstinate and refractory, despisers of the authorities, kings and state administrators'. On the contrary, no one is more grateful to the latter than the philosophers, who have the greatest need of order and quietness in order to pursue their higher aims in life and reverence him who protects them like a father, far more than those restless and ambitious spirits, who have much to thank princes for, but also set a high value on their own services and are never satisfied with their reward. But the sincere and upright man, who has renounced the curia, the forum and political life, in order to occupy himself with higher things, loves those who make it possible for him to do this in safety; he alone bears witness on their behalf without being bribed, and is greatly indebted to them without their knowing it. As he reverences and esteems his teachers, thanks to whose kindness he has escaped the paths of error, so also he honours those under whose protection he is enabled to devote himself to noble pursuits. The benefits of universal peace are shared to a greater extent by those who make a right use of them. Again, in a later letter, he says: One must not make a boast of philosophy, for it has proved a source of danger to many who have practised it with arrogance and disdain: 'it is intended to eradicate your own faults, not to reproach others with theirs. It must not hold aloof from general custom, nor appear to condemn that which it avoids. It is possible to be wise without display or making oneself odious'. The appeal to philosophers to avoid anything out of the way, is often repeated; the very name of philosophy is already hated, even if it is practised with modesty; the more so if any one by making a show of exaggerated asceticism and contempt for the world violates traditional custom; in that case what is intended to excite admiration easily becomes hateful and ridiculous. Philosophy ought not to be used as a sign-board, a man should

even conceal his retirement, to prevent its becoming the subject of conversation and attracting attention.

It thus appears that Seneca by no means attempted only to represent as baseless the apprehensions and charges brought against philosophy by the representatives and uncompromising supporters of the existing political system, the latter of whom must have been very numerous in all circles, since they reckoned amongst them all who desired peace and order at any price as the basis of all material progress. To the mass of the people philosophy, with its high moral claims, its severe condemnation of laxity of morals, its homilies and admonitions, which unceasingly attempted to rouse them from their self-complacent indolence, must have been exceedingly annoying ; and further, the claim of philosophers, that they were better and stood on a higher level than other men, was the more offensive the more strikingly it manifested itself in dress and appearance, manner of life and other externalities. This is the tenor of the complaint against Stoicism addressed by Mucianus to Vespasian according to Cassius Dio. The Stoics, he says, are full of vanity and arrogance. A long beard, uplifted eyebrows, a coarse cloak and bare feet, are thought to entitle a man to pass himself off as wise, manly and just, and to give himself airs, even though he is ignorant of the rudiments of knowledge. They look down upon all other men with contempt, reproach the handsome man with lack of control, the wealthy with avarice, the poor with servility and so forth. Dio of Prusa gives the same reason for the general unpopularity of philosophy in Greece. The philosopher's attire, his cloak without a tunic, his long hair and beard, expose the wearer to sneers, scorn and derision, and even ill-treatment ; for most men suspect philosophers of despising all who are not philosophers, of condemning and secretly ridiculing them because of their ignorance of what really benefits mankind, especially the rich, who are the objects of general envy. Hence most people think it their duty to anticipate the philosophers' ridicule and contempt, to represent them as fools and madmen whenever possible, and thereby at the same time to show that they have reason on their side. In short, the dress which marks every one who wears it as a relentless monitor, a censor and a moralist, is as universally disliked as the schoolmaster's dress by children.

In addition to these antipathies, the half-educated and uneducated masses had a very cogent reason to despise and ridicule the laborious studies on which so high a value was placed. They were completely useless, they brought neither promotion nor reputation, nor as a rule money. Persius, who represents the inflated provincials as despising all higher (Greek) culture, introduces the centurions (who appear to have been the leaders of fashion in other respects in the Italian towns, and everywhere enjoyed amongst the middle and lower classes of society no less authority than they claimed by their consequential and overbearing manner), as expressing their contempt for philosophy as a profession whereby it is impossible to earn one's bread. If any one ventures to praise the freedom enjoyed by the wise man in the presence of those men with swollen legs, a gigantic Fulfennius immediately breaks into a horse-laugh and offers a worn-out 100-*as* piece for a hundred Greeks. 'I,' says another of this unsavoury crew, 'I know all I have any need to know. I don't care to be like your Arcesilases and self-tormenting Solons, stooping their heads, fixing their eyes on the ground, as they stand grumbling to themselves or silently move their lips like madmen, and with lower lip put forward seem to be weighing their words in the balance, deeply pondering over the dreams of some sick dotard, such as, Nothing can come out of nothing, nothing can return to nothing. Is it for this that you look so pale? is it for this that you go without your dinner? The people are amused at them, and muscular youths burst into a horse-laugh again and again, enough to twist their nostrils.' Capitalists and business men also naturally had a profound contempt for philosophers. Trimalchio leaves directions that on his tombstone should be inscribed: 'He began in a small way and became great; he has left 30,000,000 sesterces (about £300,000) and has never listened to a philosopher'.

The learned world also reproached philosophy with being a completely useless and superfluous science, in the name and on the part of a healthy common sense, which then, as at all times, claimed to have long since attained the same end and the same results which speculation endeavoured to reach by painfully circuitous paths, and accordingly denied that it had anything to learn from philosophy. What, in particular, was the use of the numerous artificial systems of moral phil-

osophy, as compared with the simple and incontestable law of morality which is implanted in all men's hearts? Further, which philosophy could be said to teach the truth, since each school declared the doctrines of all other schools to be false?

From this point of view philosophy was attacked especially by those who regarded eloquence as the aim of all educational efforts, who probably in the later days of antiquity formed the majority of the educated classes. This quite natural jealousy between rhetoricians and philosophers, 'the artists of the pure form of speech and the investigators of the inmost nature of things', which was based upon internal antagonism and was continually fostered by external causes, led to incessant and frequently embittered disputes as to the relative value of the two sciences. Pupils were already trained to take part in these struggles. Amongst the 'controversial' themes which were the subject of declamation in the rhetorical schools was the following: A father leaves three sons, an orator, a philosopher and a physician; by his will he appoints as his sole or favoured heir the one who is able to show that he renders most service to the state. Speeches are then delivered in favour of each of the three sciences and against the other two. The complete uselessness of philosophy is shown by its fruits. The question so often asked, whether virtue can be taught, is answered in the negative. The best men, the Fabricii, the Decii, became what they were without philosophy; on the other hand, the greatest criminals had been produced by the philosophical schools, as tyrants and enemies of their country by that of Socrates. But, even granting that wisdom can be acquired by instruction, the method to be adopted will always be uncertain, for all the schools contradict each other. Besides, many philosophers confess that, in spite of all efforts, a truly wise man has never existed. What, therefore, is the use of philosophy? Would it be of service in war or in civil employment? Nothing is to be found in its votaries but hypocrisy, idleness, and arrogance, by which they manage to acquire a certain influence. Their assertion, that they contribute to the diminution of vice, is contradicted by evidence.

That the teachers of eloquence were bound to be, at least in great measure, opponents of philosophy on principle, is obvious. A treatise attributed to Plutarch is directed against them. The elder Seneca's son declares that his father hated

philosophy and prevented his wife from studying it seriously. Quintilian, who strongly maintained the elder Cato's idea, that the orator was 'a morally good man, skilled in speech', affirmed that ethics was properly a branch of oratory; that it had only been separated from it through the fault of the orators who had neglected it, and had been taken possession of by 'feeble minds' and made a speciality by them; the orators must reclaim this branch of oratory as their own. Since the true philosopher can be nothing else but a morally good man, that is, the same as the true orator, a special science of philosophy is superfluous. Quintilian uses every opportunity of expressing his irritation with philosophers, of lashing their servilely painful adherence to the doctrines and expressions of the school, their endless and sophistical investigations, their complicated methods of framing the simplest propositions, their arrogance and hypocrisy, their idleness and avoidance of the world so detrimental to the interests of the state, and at the same time takes delight in exposing the weaknesses of individual schools. Dio of Prusa also, when a rhetorician, had passionately attacked philosophy, to which he subsequently devoted himself.

Fronto expresses his rage in truly comic fashion against philosophy, which had caused his imperial pupil Marcus Aurelius to desert the study of eloquence. This was all the more to be regretted, as Marcus, as Fronto writes to him, had already distinguished himself as a boy by nobility of spirit and dignity of ideas, which only lacked brilliancy of expression; the preparations and efforts necessary to secure the latter had been too laborious for him; he had consequently abandoned the study of eloquence and had suddenly jumped off to philosophy, in which there was 'no introduction to be carefully elaborated, no narrative to be constructed concisely, clearly and skilfully, no arguments to be sought for, in fact nothing of special importance'. Of course, he found matters easier with his teachers of philosophy. He only had to listen to their explanations and nod his head in token that he understood; while others read, he could generally go to sleep; he was obliged to hear frequently and at length that 'firstly, it was thus, and secondly, it was thus', and to have it laboriously proved to him, that it is clear, when it is day, while the sun was shining through the window. Then he could go quietly home,

with nothing to think about or to write out in the evening, nothing to read to his teacher, nothing to repeat from memory ; no expressions to be searched for, no synonyms to be employed as an ornament, no translation from Greek into Latin. What could be gained by a course of study such as that ? ' But, as Fronto says, Marcus would rather converse than be eloquent, and preferred to express himself in whispers and murmurs than in distinct utterances.

Lucian also, in spite of all his ill-humour with the degenerate rhetoric of his time ; in spite of his letter of renunciation addressed to it in his *Bis Accusatus* (' Twice Accused '), written when he was nearly forty years of age ; in spite of his pretended conversion to philosophy, remained at heart a genuine rhetorician, and, like Quintilian, denies the claims of speculation from the standpoint of sound common sense.

According to him, also, philosophy consisted of the practical worldly wisdom, which was not only tied to no system, but was attainable by every thinking man, even if not a philosopher. In general, philosophers were hateful to him, although he made some exceptions (belonging to the most different schools) ; and not only by reason of the contrast between their doctrine and their manner of life. The vanity, folly, unreality and absurdity of all philosophical studies form the subject of the dialogue *Hermotimus*. Hermotimus, who has been absorbed for the last twenty years in the study of Stoicism, never misses a lecture, pores over his books day and night, has no enjoyments, looks pale and thin, hopes in another twenty years to reach his goal ! But he is finally obliged to admit that, in order to be able to assert that any one system of philosophy is the only one that can bestow happiness, it would be necessary first to examine all existing systems, which would take two hundred or at least a hundred years. And what certainty is there that truth is really contained in any one system ? And even if one succeeded in discovering the only true philosophy, how could one be sure of finding the right person to teach it ? And, after all, the efforts of those who study philosophy are not even directed towards its proper aim, the practical demonstration of knowledge in actions, but rather towards miserable ' phrasicles ',¹

¹ Liddell and Scott, s.v. ῥημάτων.

sylogisms, false conclusions, and puzzling questions; their masters' cleverness in confounding others with sophisms is the object of their profound admiration. Instead of striving after the fruit, they work themselves to death for the rind and throw the leaves in each other's faces.

Lastly, Aristides evidently thought that he was fulfilling a sacred duty, imposed upon him by his position in the literary world, when in the struggle between rhetoric and philosophy he threw the whole weight of his authority on the side of the former. In two lengthy discourses *On Rhetoric* he defends it against the accusations of the Platonic Socrates (in the *Gorgias*). Rhetoric is not only (what is there denied) an art, but is indissolubly connected with all the cardinal virtues; it has been invented by wisdom for the sake of justice, and is protected by bravery and virtue; he who knows how a man should speak, also knows how he should act; in short, the art of oratory is the foundation and summary of all moral and intellectual education. Certainly, Aristides declares that he has no intention of attacking philosophy itself; he has associated with the best and greatest philosophers of his time and looks upon them as his instructors. But, as a matter of fact, these conventional commendations conceal a strong dislike, even a certain hatred, of philosophy. Aristides also defends the four great Athenian statesmen, Miltiades, Themistocles, Cimon and Pericles against the accusations of Platonic idealism in an excessively long discourse, in which he empties all the vials of his wrath upon the philosophers of the time. Even if one can put up with such unjust accusations from the great Plato, it is intolerable that utterly worthless individuals should have the audacity to imitate him and even to insult a Demosthenes. Who would endure such men's abuse even of the living, 'men whose grammatical faults outnumber their words, who look down upon others with the contempt which they merit themselves, who test others but never themselves, who praise virtue but do not practise it'? They have never, like the rhetoricians, delivered, imagined or composed a profitable speech, have never contributed to the brilliancy of festivals, have never paid honour to the gods, have never given counsel to cities, have never consoled the afflicted, have never reconciled those at variance, have never admonished the young or any one

else, have never thought of embellishing their speeches. But, creeping into their holes, they excogitate their glorious wisdom, 'ranting to some creature of their brain'¹, reaping ears of corn,² tying ropes of sand', and undoing I know not what web; for the more they gain in wisdom, the more they lose; highly pleased with themselves if they speak evil of rhetoric; somewhat after the manner of slaves, especially those who are always being flogged, they curse their masters between their teeth, or like a satyr on the stage, who curses Heracles and hides himself at his approach. However, it is quite natural that they should speak ill of everybody, for they have enough bad language and to spare; and even if they do not specially mention any one, they none the less speak evil, when they do speak; in so doing they are only giving of their own superfluity. If they were deprived of the power of lying and acting maliciously, their occupation would be gone. And with it all, they hold before the world the glorious name of philosophy as a show-piece; as if the name meant anything, as if Thersites could be beautiful if he were called Hyacinthus or Narcissus, or as if the name of Nestor could make a Margites wise?

For the reasons above indicated a large number of people, belonging to different classes of society, took up an attitude of dislike or positive hostility to philosophy; Roman patriots, conservatives by conviction, instinct or interestedness; men of the ordinary kind, who were uncomfortably affected by everything that rose above mediocrity; those who detested pretentiousness; selfish utilitarians; those who opposed and despised every kind of speculation; representatives of non-philosophical education, all strove to defend their own interests and property. It appeared to all of these that they could not more effectually support their opinion of philosophy as superfluous, valueless or even injurious, than by appealing to experience, which taught, so at least they asserted, that the standard of morality as a rule was no higher among philosophers, if indeed it was not lower, than amongst the majority of average men.

¹ Sophocles, *Ajax*, 302 (Jebb's tr.).

² i.e. attempting impossibilities. 'Ανθήρικον ('blade' or 'ear' of corn) is used in later Greek for the stalks of the asphodel plant, and this may be the meaning here, in reference to a plant that cannot be reaped.

Hence the name of philosopher subjected every one who assumed it to a keen, unsparing and jealous observation from various critics, who eagerly strove to discover his offences, weaknesses, and absurdities, that they might triumphantly denounce them. Epictetus says: When people see a man with long hair and a coarse cloak behaving in an unseemly manner, they shout, 'Look at the philosopher'; whereas his behaviour should rather convince them that he is no philosopher. When Gellius was crossing from Cassiope to Brundisium, a fearful storm endangered the safety of the ship. While every one was wailing and lamenting, Gellius looked round at a famous Stoic philosopher who happened to be on board, to get an idea of his state of mind from his demeanour. The philosopher, it is true, uttered no complaint, but betrayed his alarm by his paleness and the expression of his features. When the storm had subsided, a wealthy Asiatic Greek, who was travelling with a large suite and a luxurious equipment, immediately went up to the Stoic and ridiculed him for having turned pale in the hour of danger. The philosopher met this impertinence admirably; he removed Gellius' modestly expressed doubt on the same point by quoting a passage in Epictetus, according to which even the wise man was allowed to turn pale.

It may be conjectured that philosophers most frequently had to justify themselves against the charge of being fond of money. Ulpian, in discussing processes for fees owing for lessons or other services rendered by learned men, says that, in his opinion, philosophers could not legally prosecute claims for fees; they had above all to declare that they disdained all 'salaried employment'. On the other hand, Seneca, in a lengthy treatise, attempted to prove that there was no law against philosophers being wealthy. Certainly he does not expect to convince those, who cannot admit that any one is morally good, since they regard another man's virtue as a reproach to themselves, and who hate the very name of virtue and every one who practises it; according to them, even the Cynic Demetrius is not poor enough. No doubt philosophers as a rule are far from attaining their ideals, which are beyond human powers; but is it not praiseworthy ever to have their mind fixed upon them and to strive to reach the goal? He himself lays no claim to the name

of a wise man; he is only an earnest inquirer after truth, not to be compared with the best, but better than the bad, and content to walk steadily in the way of moral perfection. Wealth is one of the 'indifferent' things (*ἀδιάφορα*, *media*, *indifferentia*), which are not entirely without value; the philosopher, although he does not love it, yet prefers it to poverty, since it enables him to develop a number of good qualities, such as moderation, generosity, carefulness, orderliness, magnanimity. Even Cato of Utica, who praised the poverty of the good old days, had a fortune of 4,000,000 sesterces (about £40,000); Seneca himself one of 300,000,000 (£3,000,000). It is obvious that such apologies for contradictions between theory and practice, between the ideal and the real, could make but little impression on those who opposed philosophy on principle, especially as philosophers only too often were guilty of worse offences. Seneca confesses that some of them might be charged with gluttony, keeping mistresses and accepting presents. Such men could be found living in adultery, haunting the taverns and hanging about at court. And every unworthy or shameful act committed by one was a slur upon his school as a whole. The treacherous conduct of the Stoic Publius Egnatius Celer towards his patron Barea Soranus in the year 66, was fresh in men's memory a generation later, and was quoted as an example of the 'shameful deeds of the great cloak'.¹

But if philosophers of means were reproached for their wealth, it was said of the poor that their lofty ideas cost them little. The Stoic Chaeremon, says Martial, claims to be admired for his contempt of death. What gives him this fortitude is his utter poverty; he has nothing he can call his own save a broken pitcher, a hearth without a fire, a mattress, a bug, a bare pallet, and a short *toga*, which serves him as a covering by night. What a great man he is, to have the courage to give up sour wine, black bread and a litter of straw! If only he were living in the enjoyment of wealth and luxury, he would want to live three times as long as Nestor and to enjoy every moment of his life. It is easy enough to despise life when poor; the man who knows how

¹ Juvenal, iii. 115. The phrase, *facinus majoris abollae*, seems to mean 'a greater crime', although the explanation is doubtful. *Abolla* was a thick cloak worn by philosophers, and may be used to represent the class.

to endure unhappiness is really courageous. Appian says that whenever philosophers have attained to power, they have exercised it more harshly than uneducated tyrants, and thereby aroused suspicion and doubts of other philosophers, whether they have embraced philosophy for the sake of virtue or only as a consolation for poverty and indolence. Even at the present day, he says, there are many, poor and with nothing to do, who, wrapping themselves in the cloak of the wisdom of necessity, bitterly assail the rich or highly placed ; but, instead of gaining a reputation for contempt of wealth and power, they are looked upon as envious of both. Those who are abused would do well to ignore them.

As the number of philosophers increased and their society consequently became more mixed, the feeling of dislike for them became more pronounced and attacks upon them more frequent. It is one of the symptoms of the continual progress of philosophy in Rome in the second half of the first century that, from the time of Domitian at least, hypocrites frequently used it as a mask, under the shelter of which they hoped to be able to sin with impunity. On several occasions Quintilian inveighs bitterly against those humbugs who, having attended philosophical lectures for a certain time, with their hypocritical airs and long beards and by their professed contempt for others manage to obtain a great reputation ; in public they appear stern and gloomy, while at home they indulge in gross excesses. It is men such as these who make the name of philosophy hated, which in his time was used as a cloak for the greatest vices and the worst infamies. Thus the highly gifted, but morally weak Palfurius Sura (who carried on the profession of an informer under Domitian and was condemned to death on that account immediately after Nerva's accession) joined the Stoic school after he had been expelled from the senate by Vespasian. Needy Stoics and Cynics with huge dusty beards were common sights in Rome at that time ; during the reigns of Domitian and Trajan every district of the city swarmed with sulky-looking profligates, who pretended to be Curii but whose life as a matter of fact was a succession of orgies. These men also excited the dislike of honourable people by their ignorance, in spite of the numerous plaster busts of Chrysippus and other philosophers with which they adorned

their book shelves. For all they said, they might have been dumb; they wore their hair even shorter than their eyebrows; yet more than one of these Stoics, who like fresh Catos declaimed against the decadence of morality in their time, betrayed their luxurious habits by the exquisite perfumes with which they rubbed their scrubby necks.

The number of philosophers and pseudo-philosophers in the capital of the world was already so great, and even amidst the motley, ever seething crowd their behaviour so conspicuous, that they attracted general attention and criticism. How much more must this have been the case in the quietness of provincial life, so favourable to contemplation, in a country like Greece, which then, as formerly, was the true home of philosophy and philosophers, and remained so till the end of ancient civilization. Dio of Prusa (in the passages above cited) declares that the philosopher's cloak is to be seen everywhere; that the number of those who wear it is almost greater than that of the shoemakers or fullers or jesters or the followers of any other profession; but, he adds, even though we wear the dress of Socrates or Diogenes we still remain far behind them in wisdom. But even if philosophy occupied so large a space in the civilized life of Greece at that time, the number of true philosophers remained small; the majority, as Epictetus says, were philosophers in words only, not in reality; but its opponents still continued to point to the conduct of these philosophers, philosophers only by virtue of their beard and cloak, in order to represent the uselessness of philosophy as an aid to moral perfection.

Pseudo-philosophy, together with philosophy, obtained the widest recognition under Marcus Aurelius. At Rome true philosophers, such as Macedo the friend of Gellius, complained that idlers with beards and cloaks explained away the content of philosophy in sophistic language and delivered eloquent sermons against vices, with which they inwardly reeked themselves. In Africa Apuleius (under Antoninus Pius) expressed the hope that every one would not be permitted to assume the mask of philosophy, so that uncouth, dirty, uneducated men might not be able to sully the royal science, which taught noble speaking and noble living, by their evil words and equally evil manner of life. The prominence

he gives to impudent abuse and vulgarity in manners and outward appearance as the chief characteristics of these spurious philosophers, clearly shows that he was thinking particularly or exclusively of the Cynics, who in his opinion were far inferior to the Platonists. In Greece, especially, according to Lucian, in all the streets and public places were to be seen long beards, book-rolls, worn-out cloaks, and enormous sticks in abundance; shoemakers and carpenters left their workshops, to carry on an idle beggar's life as Cynics. The degradation of philosophy by the gang of false disciples, the abuse of its name which especially embittered those who were not philosophers, naturally strengthened the ranks of its opponents and played into their hands. Lucian made it his special task to hold up the ways of these men to the scorn of his contemporaries. They, the men who taught contempt for money and fame and dispassionateness, who praised virtue as the only good, taught for money, grovelled before the rich, were more passionate than snarling dogs, more cowardly than hares, more fawning than apes, more brutal than asses, more thievish than weasels, more quarrelsome than cocks. Added to this, every school abused the other. The Stoics called the Epicureans voluptuaries, the Peripatetics quarrelsome and avaricious, the Platonists arrogant and ambitious, being in turn reproached with usury, contentiousness and other vices. When the followers of the different schools quarrelled there was no infamy of which they did not accuse one another. When some of them appealed to the old philosophers in extenuation of their vices, as the Platonists justified adultery by Plato's *Republic* and drunkenness by his *Laws*, it was no wonder that many declared outright that the exclusive and absorbing study of philosophical books only led men astray from intelligent thinking.

Aristides also, in the discourse already quoted, passing from the defence to the attack, represented philosophers as a class of men destitute of all virtue and affected with all vices. They declare themselves not inferior to Zeus, but cannot resist 'the obol'. They abuse others out of pure envy; but if one were to offer them, in the middle of their lectures on abstinence, a piece of cake or pastry, they would let their tongue drop, like Menelaus his sword, when he first saw Helen. But if they were to see Helen, or only a

servant like the Phrygian handmaiden in Menander, the behaviour of the satyrs in Sophocles would seem a harmless joke in comparison. In order to understand their untrustworthiness and greed, it is not necessary to entrust anything to their care; for they everywhere lay hands upon everything they can. They call robbery division of property, envy a philosophical frame of mind, poverty contempt of money. They pride themselves on their philanthropy, but have never yet done any one a service; on the contrary, they injure those who have anything to do with them. While they pretend not to see people, even when they meet them, they travel to foreign parts in search of the rich, like the Phrygians after the olive crop; they scent their approach at once, seize hold of them at once, and promise to impart virtue to them. They hardly give a civil answer, when spoken to by other people; but they salute from a distance the cooks, bakers and other servants of the wealthy even before they have recognized them, as if they had got out of bed for that purpose. They crowd before the doors of wealthy houses and mix with the porters more than with their masters, bolstering up their servility with effrontery. When any one sees them for the first time, they show less scruple in demanding what is not their due than others in claiming what is theirs by right. For they are the people who call effrontery frankness, malignity sincerity, spoliation philanthropy. Certainly they do not ask for money, but they know how to take it. If any one sends them too little, they stick to their principles; but if they catch sight of a well-filled purse, then Perseus has overcome the Gorgon; the excuse is very artful: 'the wife and the little ones'. Their definition of greatness of soul is, in fact, quite new; that it does not consist in giving much, but in not accepting little. Some have already made it a rule never to refuse a gift, and to abuse the giver after they have received it. While they play the hypocrite like the parasites and ape the insolence of their superiors, they exhibit, like the atheists in Palestine, two most opposite faults, humility and arrogance. Like the atheists, they are far inferior to the Greeks (at least, those of the better class), and in everything else are as mute as their own shadow; except that if it is a question of abuse and calumny, one would be inclined to compare them, not

with the gong at Dodona but with flies buzzing in the dark. No one is so incapable of co-operating in anything that is needful; on the other hand, they understand better than any one else how to play the spy on a household and to bring confusion into it, how to set the inmates against each other, and how to declare that they themselves could manage things much better.

The name of philosophy was chiefly brought into contempt by the gang of Cynics, whose name and school, after long suspension, revived at the beginning of the Christian era. Even amongst them there were some noble figures; but, in the second century especially, Cynicism became more and more a 'sign-board, which concealed a host of impure elements', and the majority of these 'mendicant friars' of antiquity a veritable pest, at least in Greece, through their vulgarity, repulsiveness, and effrontery. A caricature of Diogenes and Antisthenes in outward appearance, dress, manner of life and conduct,—this was the only manifestation of a moral freedom based upon absence of wants, renunciation of the world and superiority to all human weaknesses, which found favour with only too many, who might be recognized as Cynics by the tattered cloak or simple bearskin, unkempt hair and beard, staff (occasionally even a pestle) and wallet. Their cosmopolitanism, without a home, degenerated into vagrancy, their return to a state of nature into disgusting obscenity, which Epictetus thought it his duty to prove, in a special essay, was no necessity for a philosopher. Their lack of means was bound to be used as a pretext for impudent mendicancy and low toadyism; their self-appointed mission as educators of backward humanity and physicians of its infirmities as a justification for importunity and charlatanry; their coarse vulgarity, which took the place of robust humour, as a seasoning for the sermons of these ancient capuchins.

This repulsive portrait, drawn in detail by Lucian, is also found in other authors. Petronius says that even those who spend their time with the Cynic wallet, sometimes sell the truth for money. Epictetus contrasts the ideal Cynic with 'those of the present day, the dogs round the master's table', who imitated Diogenes only in his most unmannerly uncereemoniousness, whose only claim to Cynicism was their

staff and wallet, lanthorn jaws, their pilfering and pocketing, vulgar abuse and exhibition of their broad shoulders. On one occasion, when Gellius was with Herodes Atticus, one of these beggars, with long hair and a beard hanging below his navel, approached him and held out his hand with a request for money 'to buy bread'. When asked who he was, he rudely replied, 'a philosopher, as any one could tell by looking at me'. One of the companions of Herodes remarked that he was a vagrant and a ne'er-do-well, who went the round of dirty taverns, and insulted those who did not give him anything. Herodes, however, ordered money enough to buy bread for a month to be given him. Nor is there any reason, consequently, to doubt the statement of Lucian that runaway slaves and ne'er-do-wells, who found it too much trouble to earn a livelihood in a respectable trade, chose this convenient and lucrative beggar's life, which at the same time made it possible for them to indulge their bestial inclinations under the philosopher's mask. Everywhere they levied contributions or, in their words, sheared the sheep with complete success, for most people gave out of respect for their venerable dress or from fear of their abuse; and Lucian asserts that not only were gold pieces, mirrors, perfumes and dice sometimes found in their wallets, but that many made enough by begging to buy land and houses and live in luxury.

Consequently, although antipathies of all kinds existed, well-founded or not, partly against philosophy itself and partly against philosophers, in the most different social and educational circles in both the Greek and the Roman world, yet obviously the great majority of educated persons in Rome and the western countries were thoroughly convinced that philosophy was the best guide to the highest morality. Indeed, the opposition hitherto described, many sided and vigorous, even violent, is inconceivable unless this opinion was widely held; rather it assumes it. Cicero may be regarded as the representative of the view which in later Roman antiquity reckoned the greatest number of supporters. According to him, there would be no need of philosophy at all, if the germs of virtue implanted in us by nature were able to develop themselves undisturbed. But since we are under the influence of false and perverted ideas from our birth,

imbibe them with our mother's milk, and are increasingly infected with errors by parents, teachers, poets, and finally by the people amongst whom we live, we need a cure for our ailing and ill-trained souls ; and this cure, the restoration of our natural health, we can obtain by means of philosophy alone.

The weight of the universally recognized authority of Cicero, who in his *Hortensius* appears as an advocate of philosophy against rhetoric, could least of all be denied by those who recognized in eloquence the aim and sum-total of all education. Even Quintilian, the enemy of philosophers, who is inclined to treat philosophy as the handmaid of eloquence, recognizes that no one can be morally good without the teaching of virtue and justice. The assertion that virtue can be acquired without teaching, he hardly thinks worth refutation. His ideal orator, after the completion of a comprehensive technical education, should go through an equally comprehensive course of instruction in philosophy—physics (natural philosophy), dialectics and ethics. His remark that he should be a philosopher, who will have to prove himself a truly good citizen, not by school disputations, but by acts and positive evidence of purpose, reminds us that the greatest differences of opinion prevailed in the Roman world, even amongst those who recognized the necessity or utility of philosophy, not only as to its aims, but also as to the amount of philosophical instruction that was desirable. Tacitus voices the unbending attitude of the Romans in regard to the study of philosophy as taught by the Greek schools, that it should be limited to a minimum. On the other hand, it is sufficient to mention names like Seneca, Persius, Musonius Rufus and Marcus Aurelius, to prove that the demand for entire devotion to philosophy had its representatives also in the educated Roman world. Philosophy, says Seneca, cannot be treated as an extra. It is an exacting mistress, who refuses to accept a man's leisure time, and claims to decide how much leisure he shall have. But if a man devotes all his time to it, concentrates all his thoughts upon it, and refuses to attend to anything else, he will far outstrip all other men and will not be far inferior to the gods. Philosophy is not intended to be an agreeable recreation during the day, a means of dissipating the *ennui* of the idler ; it culti-

vates and forms the mind, regulates life, directs our actions, shows what should be done and what left undone, sits at the helm and steers safely through the waves. Without philosophy no one can be free from fear, no one can live without anxiety ; events without number occur every hour which demand advice, which must be sought from philosophy. In two very lengthy essays Seneca discusses the question (often debated), whether the paraenetic section of moral philosophy, i.e. a practical teaching of duty, containing precepts for all important contingencies, is sufficient for life ; or whether such teaching must be based upon a theoretical system of principles or dogmas, which prescribe the rule of action in all particular cases. While some declared the paraenetic, others the dogmatic section to be superfluous, Seneca endeavours to show that a complete and true moral education can only be obtained by the combination of both. A conviction founded on principles must be the basis and source of all thoughts and actions, which must be directed towards a fixed goal, the highest good, as far as it is possible to reach it, as the course of ships is guided by a star. Without such conviction founded upon dogmatic principles, an invariable constancy in thought and action is impossible ; it is also the soil, on which alone the maxims of moral philosophy take root, from which alone they can draw renewed vitality. But, in addition to the general principles of the one, the special rules of the other are equally indispensable. Surrounded by perverted ideas, by errors of every kind, by lies and pretence, we require to be incessantly reminded of even well-known truths ; amidst the tumult of falsehood we need the warning voice of admonition, amidst the roar of cities a prompter by our side, to teach us, in opposition to the panegyrists of wealth, power and favour, to appreciate peaceful devotion to study and the return of the mind from the external world to itself. Philosophy alone can give us a healthy mind ; it is the only teacher of the highest art, the art of living, and not only the best, but the only guide to morality. There is no virtue without philosophy, no philosophy without virtue.

One who required such complete devotion to philosophy as Seneca was naturally difficult to satisfy in the matter of the zeal and number of its disciples. About the year 64,

he complains that no one troubles himself about philosophy, except when the games are put off or on a rainy day, when he wants to kill time; the philosophical schools, like the rhetorical, are empty. Yet these complaints of a writer who is always given to exaggeration prove at the most that his ideal remained unrealized. The banishment of Musonius Rufus in 65, who, as Tacitus says, owed his exile to his reputation, since he exercised great influence on the education of the young by introducing them to philosophy, shows that, as a matter of fact, philosophy at that time had many zealous disciples amongst the youth of the upper classes. Naturally, the number of pupils of that class must have been large, to have aroused the attention and suspicion of the Neronian régime.

Amongst the philosophers who taught in Rome and other cities of the West (especially Massilia, one of the chief seats of such studies even in Strabo's time), Greeks certainly formed the majority. That philosophy was regarded as a Greek science is also shown by the fact that many philosophers who were not Greeks, such as the two Sextii, Cornutus, Musonius Rufus, Favorinus, Marcus Aurelius, and to some extent Apuleius, wrote in Greek. The extent to which it had become naturalized in Rome as early as the last century B.C. is shown not only by the large number of followers, admirers and patrons, which it secured in the educated society of Rome, and by the rise of a Roman philosophical literature, but above all by the formation of the philosophical school of the Sextii. It was certainly only a form of Stoicism, as it took shape in the Roman consciousness, especially in the sense that it was distinctly limited to moral philosophy, with a dash of asceticism borrowed from Pythagoreanism (such as abstention from animal food). Since, therefore, it coincided in the main with the Stoicism and Cynicism of the first century, it lacked the fundamental condition of an independent existence; it was soon dissolved, and its pupils, like Seneca, returned to the great Stoic community from which the Sextii had separated. During its existence, however, the school had important representatives, and exercised considerable influence. Its founder was Quintus Sextius, a man of good family, who contemptuously declined the offer of Julius Caesar to raise him to senatorial rank

and launch him on an official career, in order to devote himself entirely to philosophy. Other important members of the school were the son of the founder, the prolific writer Cornelius Celsus, the learned grammarian Lucius Crassitius of Tarentum, who sacrificed his important teaching connexion to join the school, and Papirius Fabianus, whom Seneca, when a young man, had heard and highly appreciated. He calls him a true philosopher of the old style, not one of the modern professors, although at the same time he praises his public lectures. One felt elevated by his exhortations and incited to emulation, without losing the hope of even surpassing him ; and although as a rule his hearers preserved a modest silence, they were now and again carried away to enthusiastic applause by the nobility of his sentiments.

Of all the systems of Greek moral philosophy Stoicism was undoubtedly best suited to the Roman national character, and for this reason always had the greatest number of followers amongst those Romans who seriously aspired to moral perfection. The long list of prominent personalities in Roman history, whom we know as Stoics, contains the noblest figures of that time, and not a few who by their life and death have proved the earnestness and sincerity of the convictions they had acquired from the Stoic system of philosophy. The philosophical works of the Roman writers of this period that have been preserved also belong almost exclusively to this school. Next to Stoicism, Epicureanism probably at all times reckoned the greatest number of adherents, although there is no positive evidence of its spread in the Roman world under the empire. That the Epicureans did not make themselves prominent in public life was due to the nature of their school, which purposely sought concealment ; and there was the less need for them to assert the claims of their system in writing, since these were sufficiently set forth in earlier works.

The remaining philosophical schools had undoubtedly made less progress amongst the Romans, but probably none of them was without its representatives ; and it was a natural result of the eclectic tendency of the Romans that each aroused interest and proved attractive even outside the circle of its own followers. The lectures delivered in Rome

by the Platonist Plutarch during the reign of Domitian were attended by the most important men in the city, several of whom became firm friends of the venerable philosopher. Such were Mestrius Florus (already a consular in 69) ; Sossius Senecio (consul 98, 99, 102), to whom Plutarch dedicated his *Lives* ; Fundanus, a pupil of Musonius (probably identical with Minucius Fundanus, consul 107) ; Terentius Priscus (perhaps the same as Martial's patron), and others. Gellius, who regularly attended the lectures of the famous Platonist Calvisius Taurus at Athens, was one of a large number of Romans who studied in that city, who all attended the same lectures. We shall speak later of the position of the Cynic Demetrius at Rome during the period from Nero to Vespasian. The Cynic Crescens, whose slanders on the Christians were publicly refuted by Justin at Rome, is said to have brought about the persecution and execution of the latter. The Cynic Theagenes, a zealous adherent of Peregrinus Proteus, who according to Galen died in consequence of being wrongly treated by the physician Attalus (a pupil of Soranus), 'an ass of the sect of Thessalus', was a very well-known figure at Rome, where he daily held discussions in the *thermae* of Trajan. A large number of the friends of Theagenes accompanied Attalus, who desired to convince them of his convalescence, to the philosopher's house ; on their arrival, they found some Cynics and other philosophers engaged in washing the body of the deceased, who, according to the principles of his school, had neither household nor servants. Galen laid the foundation of his reputation at Rome in the year 162, by restoring the sixty-three year old Peripatetic Eudemus to health. During his illness, Eudemus was visited by 'nearly all those distinguished by birth and education', especially Sergius Paullus (consul about 150 and 168), also city praefect, 'a man distinguished by philosophical education and behaviour', and the consular Flavius Boethus, a zealous student of Aristotelian philosophy. The latter, as well as Civica Barbarus (consul 157), uncle of Lucius Verus, and Severus (consul 162, also an Aristotelian) had Galen to lecture to them on anatomy. These lectures were attended by a number of philosophers, amongst them the Peripatetic Alexander of Damascus, more of an Aristotelian than a Platonist, in 162 teacher of Boethus, and about 175

a public teacher in Athens ; and by Demetrius of Alexandria, a friend of Favorinus, who every day spoke in public on given subjects after the manner of his teacher. Favorinus himself, who was a sceptic, was in great favour with Hadrian, under whom and his successor he gathered round him a large number of pupils and admirers, some of high rank. Gellius, who was one of his chief adherents, mentions as his friends a Peripatetic and a Stoic, 'both distinguished philosophers at Rome'; a Peripatetic, a diligent student of Aristotle, was also a member of a learned society, with which Gellius once spent the hottest part of the summer at Tibur. Fronto recommends the Platonist Julius Aquilinus, whose lectures were the most crowded in Rome and attended by many of senatorial rank, to Quintus Aegrilius Plarianus (legate of Africa under Antoninus Pius) as a friend and student of philosophy. Apuleius (about 158) praises Claudius Maximus, proconsul of Africa, as acquainted with the works of Plato in the original. Alexander of Aphrodisias (between 198 and 211) in the dedication of a treatise expresses his thanks to the emperors Severus and Caracalla for his nomination or appointment as teacher of the philosophy of Aristotle in Rome, and declares that they truly honoured and encouraged philosophy. The first Gordian, according to his biographer, spent all his life in the society of the ancients, Plato and Aristotle, Cicero and Virgil.

These references to philosophical studies in Rome, numerous in comparison with our scanty knowledge of the intellectual conditions of the time, and other incidental statements (for example, that in Trajan's time the dialogues of Plato were represented at meals to amuse the guests), justify the assumption that, from the end of the first century, a lively and comprehensive interest in philosophy was common amongst the upper classes. Further, Porphyry's account of the success of Plotinus in Rome shows that this interest still continued as late as the end of the third century.

As a rule, a young man did not begin the philosophical course until he had completed his grammatical and rhetorical studies. Gellius, who spent an unusually long time on the latter, did not turn his attention to philosophy until his twenty-fifth year ; on the other hand, Marcus Aurelius began philosophy unusually early, at the age of twelve. The majority of

young men probably entered the school, which was to bring about the moral emancipation of its pupils and make them men in the highest sense of the word, at the time of the assumption of the *toga virilis* (i.e. when they came to man's estate). Persius, who laid aside the *bullæ*¹ and dress of a boy at the age of sixteen, now that the white *toga*² allowed him to cast his eyes freely around amidst the distracting turmoil of Rome, keenly felt the need of a trusty guide, to choose for him the right way in the mazes of the labyrinth of life ; accordingly he attached himself most closely to Cornutus. Seneca also was little more than a boy when he attended the school of Sotion of Alexandria, who belonged to the sect of the Sextii. Plutarch sent his essay *De Audiendo* (On the Art of Hearing) to a young friend, with the reminder that when he assumed the *toga virilis* he had passed out of the care of his former paid teachers and had come under the divine guidance of reason ; that philosophy alone was able to bestow the true and perfect ornament of man upon a youth.

In all probability the majority of young men continued regularly to attend philosophical lectures until they had homes of their own, although Plutarch refused to recognize the worries and occupations of housekeeping as a sufficient excuse for neglecting what was of far greater importance. In fact, it was by no means unusual for older and married men to attend a philosophical school ; Seneca was sixty years of age when he heard the philosopher Metronax in Naples. He writes to Lucilius that he has now been attending the school for five days, to hear Metronax at midday. Age, he says, is no bar to attendance ; why should I be ashamed of listening to a philosopher ? Certainly the school is not well patronized, whereas the theatre, where musical contests take place at the same time, is crowded, and the pupils of Metronax are laughed at as fools and idlers.

Philosophical instruction was confined to the three divisions of philosophy recognized by all the schools—logic, physic, and ethics. Only the Platonists at that time as a rule appear to have also included the study of mathematics. In their studies were to be seen tablets with geometrical figures drawn upon

¹ See note on p. 13.

² The colour of the toga worn by men (*virilis*) was generally white (*candida*).

them, globes, etc.; in their lecture-rooms the pupils showed their desire for knowledge by putting difficult mathematical questions. In the Stoic school of the time, as to which we have most information, the course as a rule began with logic (and dialectic), although the Stoic authorities are not agreed as to the order of subjects. Seneca calls logic the 'elementary school' of philosophers. Stoicism and philosophy at that time generally made ethics the chief subject and aim of instruction, so that the two other divisions were not only subordinate to it, but were to some extent regarded as superfluous. Nevertheless, men like Musonius Rufus and Epictetus, although they may have considered moral education to be the one and only aim of philosophy, and took little interest in logical and dialectical discussions, still held logic to be indispensable as a foundation for the study of philosophy. Those who devoted themselves to oratory were of course still more convinced that it was necessary and useful for a general scientific education.

This subject, in spite of its dryness, was the more attractive to men of keen intellect, especially if they were given to quibbling, since it was easy to obtain a brilliant reputation by a skilful use of logical forms in discussions and on other occasions. When a man has once taken up this science, so repulsive at first, its usefulness soon becomes more and more apparent; there arises an insatiable desire for learning, which must be checked, otherwise a man would be in danger of spending his life in the labyrinthine mazes of dialectic, which is as fatal as the islands of the Sirens. The worst thing about sophisms, says Seneca, is that they exercise a certain charm and arrest and fascinate the mind, which is seduced by the appearance of acuteness, while a number of more important things calls for our attention. A lifetime is hardly long enough to learn the one thing which is the aim of philosophy—how to despise life. Such fancies and aspirations were freely encouraged by a voluminous literature, to which the older Stoics, who specially cultivated this field, had contributed. There were special treatises devoted to individual captious syllogisms, the only object of which was to confuse; such were the *sorites* (how many grains of corn make a heap?), the *Cornutus* (have you lost your horns: if not, you still have them; if you have, you once had them), and the like. Such witticisms, worthy

of the Talmud, were frequently taken seriously, and the young especially spent much time over them. All beginners in philosophy, says Plutarch, devote themselves by preference to what brings reputation; some, heedless and ambitious, soar like birds to the brilliant heights of the speculations of natural philosophy; others devote their attention to discussions, embarrassing questions and sophisms, just as (to use Plato's expression) puppies take delight in pulling something to pieces and dragging it about; the majority, however, are absorbed in dialectic, to provide themselves with the necessary equipment for sophistic. The teachers, as Seneca says, 'who teach us the art of arguing instead of the art of living', unfortunately are only too ready to encourage these erroneous tendencies of their pupils, who want to form their mind, not their character. Thus philosophy has become a science of words (philology). As the result of adopting what is superfluous in philosophy and mathematics, philosophy understands the art of speaking better than the art of living. Philosophers and non-philosophers were united in the complaint that too much time and trouble were spent on logic and dialectic, which were only the outworks of wisdom, and that ethics suffered thereby. Epictetus, for example, says: At the present time the greatest industry is successfully expended on the reduction of syllogisms; whereas formerly it was expended on keeping the best part of the mind in its natural condition, and with equal success.

In the Stoic school, especially, the efforts of many students were directed more or less exclusively to the acquirement of a superior knowledge of the technicalities of dialectic and a thorough acquaintance with the literature of the subject. The pedants who still attended or had only just left school, who wanted to teach to-day what they had learnt yesterday, and 'vomited undigested morsels', pretended to know everything better than anyone else, and copied their teachers chiefly in their cocksureness and love of finding fault, frequently appear in the writings of the second century as the undesirable disturbers of conversation in Greek society. As Epictetus says, there were people who attended philosophical lectures and studied text-books with the sole object of exciting the admiration of a senator, who happened to sit next them at table, or of astonishing the guests by enumerating all the

authors who had written on a certain form of logical conclusion. When visiting Herodes Atticus in his villa on the Cephissus, Gellius met a very youthful, loquacious and noisy Stoic, who usually monopolized the conversation after dinner and delivered lengthy and insipid lectures on philosophy, about which he declared that he knew more than all other Greeks and Romans. He made free use of strange expressions, syllogisms and captious conclusions, and boasted that no one could equal him in solving dialectical problems ; that no one was as perfectly at home with moral philosophy as he was ; that he felt so thoroughly confident that he possessed the true wisdom which guaranteed eternal happiness, that he declared that no pain or grief could so much as bring a cloud upon the face of a Stoic. To take the conceit out of him Herodes thereupon ordered a passage to be read from Epictetus, in which that venerable old man rebukes the young, who call themselves Stoics, but are in no way distinguished by moral excellence or capacity ; on the contrary, they have always on their lips puerile maxims, such as are to be found in elementary school books, and misuse the name of that lofty doctrine by raising a cloud of words and subtleties before the eyes of their hearers.

Natural philosophy (physics) was too intimately connected with ethics not to be taken into consideration with it, at least to a certain extent. It was felt that the question of Providence could only be really solved together with the question of the origin of things and the order of the universe. The more attention was concentrated, onesidedly and exclusively, upon the moral task of philosophy, the less could physics be considered ; and the opinion of Socrates, that the examination of the last elements and first principles of things was beyond our powers and in any case had no practical value, was probably widely held, and was defended by so high an authority as Epictetus. Seneca also, who was fond of and interested in the speculations of natural science, would only allow their importance in so far as they contributed to moral perfection. The mind, in order to refresh itself, requires to contemplate nature, who enables it to appreciate the loftiness of the objects with which it is concerned. 'In the contemplation of the universe and its creator a man rises superior to the burden of the body ; he becomes conscious of his higher origin and

destination ; and learns to attach little value to the body and the corporeal, and to free himself from its trammels. Certainly, however, there is the danger that the mind may come to think more of self-gratification than of health, and may treat philosophy as a simple amusement, whereas in reality it is a means of health '. Plutarch also hints (in the passage above cited), that it was natural philosophy, so stimulating to the imagination, that attracted *dilettanti*, who were only half in earnest about a philosophical education. Propertius proposed to devote himself to it, when he was too old for love affairs. Then, he says, he will endeavour to understand the laws of nature, and the causes of the phases of the moon, of atmospheric variations, of rain, of the rainbow, of earthquakes, of eclipses of the sun, of the phenomena of the starry heaven and of the sea, and of the seasons ; what god skilfully governs this universe, whether a day of destruction menaces the world, whether there is a world below and infernal punishment, or whether death is the end of existence.

But logic and physics were always so completely subordinated to ethics, that the latter was regarded as the essential, if not the only, object of philosophy ; it is called simply the art, the science, the rule of life. Although, after all that has been said, this hardly needs to be proved, perhaps it will not be superfluous to show how the moral training of the young was expected from philosophy alone. In his treatise *On the Education of Boys*, Plutarch says, that as gymnastics and the healing art secure bodily health and strength, so philosophy alone can heal the infirmities and diseases of the mind. By the aid of and in company with philosophy we learn what is noble, what is shameful, what is just, what is unjust, in short, what is to be aimed at and what is to be avoided ; what is to be our attitude towards the gods, our parents, old age, the laws, foreigners, rulers, friends, women, children and slaves ; we learn that we ought to fear the gods, honour our parents, respect old age, obey the laws, submit to our rulers, love our friends, behave with decency towards women, treat children with affection, and slaves without arrogance ; but, above all, that we should neither be too exultant in prosperity nor cast down in adversity ; that we should neither allow ourselves to be overcome by desire nor show ourselves passionate and brutal in wrath. These are the most to be desired of all the

blessings which we obtain through philosophy. Foolish parents, it is said in another passage, who have neglected to give their children a good education, do not as a rule regret this omission until their sons, when grown up, instead of leading a regular and sensible life, plunge into debauchery and low pleasures ; surround themselves with parasites and other corrupters of youth, keep women, squander their fortunes in gambling, drinking, and carousing ; commit adultery and other excesses, in which they risk their life for the sake of pleasure. Had they enjoyed the advantage of being taught by a philosopher, they would not have given themselves up to such a mode of life. As the husbandman or gardener roots out the tares from the field, so the philosopher roots out from the youthful soul the evil promptings of envy, avarice, and pleasure, even though he has to cut deeply and leave a scar ; in other cases, he proceeds with caution, like the vintager when he prunes the vine, so as not to destroy noble and vicious impulses at the same time.

Wherever this conception of philosophical instruction prevailed, wherever the philosopher was regarded not only as the teacher, but chiefly as the trainer, in fact as the spiritual director of his pupils, it was necessarily considered his duty in every way to promote their moral well-being, even beyond the limits of instruction properly so called, and consequently his right to exercise entire supervision over their manner of life, and to put them on the right road by advice and exhortation, warning and reproof, mildness and severity. To all appearance, at that time a large number of prominent men, conscious of the high importance of their office, and equipped with such authority, exercised the greatest moral influence upon entire generations, the more so as pupils flocked even from far distant lands to the most famous teachers (especially at Athens and Rome), who, like Musonius, 'attracted young men from all parts, as the magnet attracts iron'. Some of these young men became intimate with their teachers, and the friendship often far outlasted the years of apprenticeship, sometimes, indeed, continued through life. Thus Persius, from his seventeenth year, was united by the ties of an indissoluble friendship to Cornutus, with whose pupils he became acquainted. Amongst these were the poet Lucan and two Greeks, the physician Claudius Agathemerus of Sparta and

Petronius Aristocrates of Magnesia, both highly educated and pure-minded men, whom Persius took as his models. Cornutus also advised him in his poetical efforts, and was mentioned in his will for a considerable legacy. Persius has expressed, in words full of deep feeling, his gratitude to his beloved master, 'to whom so large a part of his inmost being entirely belonged'. He believed himself united for ever by the destiny of the stars with the man who cherished him in tender years with the affection of a Socrates and moulded his still flexible spirit as the artist the soft clay; he delighted to recall days spent together in work and recreation, and the modest repasts, prolonged till night-fall, which interrupted serious studies. The younger Pliny, when military tribune in Syria, became devotedly attached to the Stoic Artemidorus (who afterwards married a daughter of Musonius Rufus), and protected him in time of danger. When the philosophers were expelled from Rome in the year 93 he lent Artemidorus a considerable sum free of interest to pay certain honourable debts. Even when he attained the rank of consular he looked up to his revered teacher as a pattern. Amongst all those who now call themselves philosophers, writes Pliny in the year 101, you will hardly find another so true and genuine. His endurance of heat and cold, his devotion to work, his limitation of sensual enjoyment to what is strictly necessary, his severe self-discipline—all these are trifles, compared with his other virtues, which induced a Musonius to choose him as a son-in-law out of a number of pupils of all classes of society.

Gellius has drawn an attractive picture of the relation of the Platonist philosopher Taurus to his pupils. Taurus not only allowed them to put frequent questions to him after the daily lesson, but invited those who were more particularly devoted to him to a frugal meal, at which a dish of Egyptian lentils and chopped pumpkin prepared with oil usually formed the chief dish. On these occasions the pupils were obliged to propound questions and problems, as a sort of dessert, especially witticisms suited to those enlivened by wine; e.g. at what moment a dying man really dies, when a man who stands up is no longer sitting down, when a learner begins to understand his profession. Such questions ought not to be despised, says Taurus, since the greatest philosophers had seri-

ously considered them. When his pupils were ill, Taurus used to visit them. According to circumstances, he expressed his disapproval of all that displeased him in their mode of life or study in a tone of friendliness or severity. In order to induce a wealthy young man to abandon the society of flute players and tragic actors, he sent him a copy of a passage from Aristotle on the general moral worthlessness of such artists, which he recommended him to read every day. He severely rebuked another young man, who had suddenly left off the study of rhetoric for that of philosophy, and became exceedingly angry when he attempted to justify his conduct by the example of others. Taurus also took the opportunity of quoting a very beautiful passage of Demosthenes suitable to the occasion. Thus, says Gellius, Taurus made use of every kind of warning and exhortation, to put his disciples on the way of goodness and uprightness. The educative power of his example no doubt had an equal effect. In his account of a visit paid by the governor of Crete and his son to the famous philosopher, Gellius shows that Taurus knew how to preserve his dignity in distinguished society without offending propriety. The Stoic Attalus, who had a school at Rome which was attended by Seneca, who was always the first to come and the last to go, was fond of answering his pupils' questions during a walk. Any one who visited a philosopher (he said) should always take something good home with him; for philosophy has the power of assisting not only those who are devoted to the study of it, but also those who are brought into association with it. Plutarch delivered lectures on the most varied subjects, selected at will, to the young men who were sent from far and near to Chaeronea to be educated by him, and answered the questions they put to him. Some of his later treatises which are preserved to us show that the subjects were taken not only from the entire field of morality, but also from practical philosophy in its widest extent: e.g. On Studying Poetry, On the Art of Hearing, Rules of Health, and so forth.

If philosophers thought it their duty to regulate the life of their pupils even to the minutest details, and to give them instructions even in regard to trivial and apparently indifferent matters (if in any way connected with moral principles), their right to do so was evidently quite generally recognized. Grown

up men, and especially younger men, frequently entrusted themselves to their guidance and rendered them unqualified obedience. As a rule teachers exercised greater authority over grown-up pupils than at the present day. Thus Gellius relates that the rhetorician Titus Castricius rebuked some senators who attended his school, because they had appeared in public on a feast-day in a dress unsuitable to their rank. Of course, philosophers were allowed the widest latitude in giving instructions on all and everything. Attalus recommended his pupils to sleep on a hard bed, such as Seneca used even in his old age, on which the body made no impression. Epictetus exhorted his hearers to let their beard grow, not only as a beautiful and dignified adornment, but also as a sign intended by Providence to distinguish the sexes, which we ought not to reject. A young man, who came to the school, foppishly dressed, with his hair nicely curled, was treated to a long lecture on the subject. The possibility that he might take offence and not come again nor follow his advice, did not deter the philosopher from performing a duty, for the neglect of which he might afterwards have been justly reproached by the pupil. Epictetus objected to dirtiness and slovenliness even more than to too much finery. He would have them always neat, that their company might be agreeable to their fellow-pupils, and he did not disdain to enter into the details of the care of the body—that they ought to blow their nose, wash their feet, wipe off perspiration, and clean their teeth : ‘ why ? that you may be a human being, not an animal, not a pig ! ’ This solicitude for the bodily and mental welfare which ranged from the most important to the most trifling details and even interfered with a man’s private life, was extended to the members of the pupils’ household by philosophers, without its being considered obtrusive on their part.

For example : Favorinus was informed that the wife of one of his hearers, a man of distinguished family and of senatorial rank, had just been delivered of a son ; he immediately repaired with all the pupils present to the house of the young father, congratulated him and then expressed the hope that the wife would rear the child herself. When the mother objected to this, Favorinus immediately delivered a long speech on the subject, which Gellius took down and afterwards incorporated

in his *Noctes Atticae*. Naturally, the advice of philosophers was sought by their pupils in all cases of difficulty and conscientious scruples. When Gellius, who had been appointed a judge at a very early age (not, however, before he was twenty-five), was unable to decide a certain case, he adjourned the court, went straight off to Favorinus, to whom he was greatly attached, and begged him to give him his opinion of the particular case and some general rules on the duties of a judge. To all appearance, philosophers had reason to complain that their advice was asked too often rather than too seldom. As Epictetus says, they were expected to supply rules of conduct in practical affairs, as a shoemaker or blacksmith supplies his wares ; while those who desired advice made no effort on their own part to assimilate those moral principles, from which the decision in all individual cases must be derived.

As a rule philosophers (apart from occasional interference in particular cases) exercised a practical activity and thereby a direct effect on the moral education of their contemporaries under three characters : as educators and permanent advisers of individuals, as teachers of morality in public schools ; lastly, as missionaries and popular preachers ; the last field, which the Cynics had chosen, was almost entirely abandoned to them. All the forms of professional philosophical activity are mentioned often enough by philosophers and non-philosophers, so that it is possible to obtain an idea of them, at least to a certain extent. Certainly, it is chiefly the shady and bad side, the defects and weaknesses, the ill-success and inadequacy of philosophical effort and performance, that are made the subject of discussion, and upon which the numerous opponents of philosophy on principle especially delight to dwell. But even these criticisms and attacks are a proof of the lofty claims put forward on behalf of philosophy as the moral elevator of the contemporary world, and even if such claims were only imperfectly justified in the case of the majority, yet it is admitted, tacitly or expressly, that the best and purest teachers made them good in the highest degree and exercised an enormous effect.

While the great majority were obliged to content themselves, for their moral education, with a brief course of philosophical instruction, people of larger means very frequently sought to secure the entire services of a philosopher in their household,

not only to educate their children, but also to secure for the rest of their life a trustworthy and permanent counsellor, guide and spiritual adviser. Under the monarchy, as in the last days of the republic, it seems to have been especially in the great Roman families that Greek philosophers frequently assumed this position. Such, apparently, was the relation of the Stoic Publius Egnatius Celer to Barea Soranus, whose teacher, client and friend he is called, and whose condemnation (in 66) he brought about by the false testimony which Barea's accusers had bribed him to give. A monument found near Bonn is erected by his wife to the philosopher Quintus Aegrius Euaretus, 'the friend of Salvius Julianus' (consul in 175 and legate of Upper Germany in 179); from this it appears that Julianus could not do without the society of Euaretus even in his province. But these house-philosophers, like philosophers in general, especially play the part of companions and comforters before death; no doubt the decision whether a man should take his own life was often left to them. Thus Tullius Marcellinus, an acquaintance of Seneca, a young man who had suffered from a wearisome and painful illness, was persuaded by a Stoic to starve himself to death. Tacitus relates of Titus Petronius as something unusual, that, while he delayed death by binding up his arteries, he asked that frivolous poems might be recited to him, but nothing about the immortality of the soul and the doctrines of philosophers. When Julius Canus, condemned to death by Caligula, set out for the hill, where, to use the expression of Seneca, 'victims were daily offered to our Caesar', he was accompanied by 'his philosopher', with whom he conversed about his thoughts at the time, and the condition of his soul. Rubellius Plautus, who awaited the emissaries of Nero without attempting flight, was reported to have been confirmed by the philosophers Musonius Rufus and Coeranus in his resolution to prefer death to a life of anxiety and uncertainty. The messenger who brought the expected death-warrant to Thræsea, found him absorbed in conversation with the Cynic Demetrius: 'from their earnest looks and some words uttered more loudly than the rest, it could be inferred that they were discussing the nature of the soul and the separation of mind and body'. The emperor Julian also, when fatally wounded, entered upon an abstruse discussion of the sublime nature of the human soul

with the philosophers Maximus and Priscus, and carried it on till he expired.

The position which Greek philosophers accepted in great Roman families for a certain length of time, could only be maintained on a level worthy of the dignity of philosophy if both parties regarded it from the highest point of view. In such cases, the philosophers themselves were only too often incapable of securing the esteem of those to whom they should above all have set a good example. On the other hand, distinguished Romans seldom entirely forgot that these 'teachers of wisdom' were in reality only their dependants or paid employees. The shady side of the picture has been represented at considerable length and in strong language by Lucian in his usual style, in a treatise specially written to warn a certain philosopher named Timocrates, who wanted to obtain a post in an aristocratic family. This shady side was no doubt unpleasantly in evidence with special frequency, after Marcus Aurelius had made philosophy the fashion. Many who were unable either to understand or respect it, thought it their duty to go into raptures over the lofty idealism of Plato, and desired, if possible, to have a Greek philosopher in their train, who might be at once recognized as such by his venerable appearance, his long beard and the dignity with which he wore his cloak. The prospect of obtaining an honourable and influential position in a great and wealthy family was highly attractive to many, who did not shrink from the annoyances incidental to their application for the post. They were even ready to submit to a test of their qualifications, at which they had to give proofs of their knowledge and ability, to undergo an inquiry into their past, and sometimes had to compete with most unworthy candidates, many of whom only used the philosophers' mask as a recommendation for exorcism, magic and similar practices. If this examination was successfully passed, after an invitation to a big dinner, at which the brilliancy of the establishment was calculated to dazzle and intimidate the novice, the question of terms was discussed and settled. The master of the house declared his readiness to share everything with his new house-companion; 'for it would be ridiculous not to treat a man, to whom one has confided one's most precious possession, one's own soul or that of one's children, as joint owner of everything else'. Neverthe-

less, a yearly salary was fixed, which was certainly surprisingly small, but was considered to be made up for by the friendly and honourable treatment promised, by the frequent presents on feast-days ; above all, an appeal was made to the lofty ideas of philosophers on the question of money. In this manner philosophers advanced in years, forgetting the praises of liberty sung by Plato, Chrysippus and Aristotle, sold themselves into base and ignominious servitude ; like the rest of the crowd of domestics, from whom they were only distinguished by their coarse cloak and their bad Latin, they were summoned by the clock every morning to their duty as supernumeraries, which lasted till a late hour and entailed unpleasantnesses and degradation of all kinds, inflicted only too frequently upon the patient Greeks, who were not expected to complain. When they were used up or their company was no longer required, they were quietly turned out of the house on a foggy night on some utterly unfounded charge, helpless and utterly destitute.

The position of the representatives of philosophy at court was far more precarious than in the great houses, and far less consistent with the ideals of the science ; indeed, in the opinion of many a philosopher was as much out of place at court as in a tavern. Plutarch has endeavoured to prove in a special treatise that, in spite of all dangers and difficulties, the wise man cannot in certain circumstances refuse such a position, since he has the opportunity of doing incomparably more good in it than in any other. The philosopher will be all the more ready to undertake the care of a soul, whose activity, wisdom and justice affects the lot of many ; for in this manner he will benefit the many through the individual, like Anaxagoras the friend of Pericles, Plato of Dio, Pythagoras of the statesmen of Italy. Philosophers who devote themselves to the moral education of private persons liberate individuals only from their weaknesses and passions ; but he who ennobles the character of a ruler thereby promotes the interests of and improves the condition of the whole state. For the sake of such advantages one must submit to become a courtier and to be abused like a servant. If even the philosopher who refrains from all practical activity on principle does not shun the society of educated princes of noble character, one who takes an interest in political life will also take an interest in them, unobtrusively and without annoying them with un-

timely and sophistical advice, while at the same time he will be always ready to meet their request for his advice and assistance.

From the incidental mention of philosophers as resident at the courts of Augustus, Nero, Trajan, Hadrian, Julia Domna and Elagabalus (the 'sham philosophers'), it would seem that, like other learned men, the teachers of philosophy very frequently, if not as a rule, had their place in the imperial *entourage* (as *συμβιωταί*). These positions also were to some extent salaried. Lucian says that one of the most distinguished philosophers of the time was paid by the emperor for his society, but was compelled, in spite of his age, to accompany him on his travels, like an Indian or Scythian hireling. It naturally depended on the personality of the emperors and the tone of the court, whether the position of the philosopher was worthy or unworthy of him. Seneca reminds Marcia, in his letter of consolation, how Augustus' wife Julia, whose intimate friend she was, after the death of Drusus sought and found consolation in the pious exhortation of Areus, 'her husband's philosopher'; according to Seneca, Areus in addressing Julia calls himself 'the constant companion of your husband, one who knows not only what is public property, but all the more secret impulses of both your minds'. Augustus, after the conquest of Alexandria, had honoured Areus by declaring that he would spare the city, since it was his birthplace. Nero, on the other hand, made his philosophers a source of amusement, by inviting representatives of different schools to dinner and setting them on to wrangle.

But undoubtedly philosophers, especially those who were conscious of their value, for the most part preferred a public sphere of activity to the most brilliant position at court or in a distinguished family. The Stoic Apollonius, when summoned by Antoninus Pius to undertake the tuition of the young Marcus Aurelius, left Chalcis with a number of his pupils and settled in Rome, but refused to take up his quarters in the palace of Tiberius, where Marcus Aurelius lived. He declared that it was the duty of the pupil to go to the teacher, which the heir to the throne actually did. The opening of a public school not only held out the prospect of a worthier life, of an important and, in certain conditions, even splendid activity, which might extend in centres like Athens and Rome to the

pick of the young men from various provinces, but also of a magnificent income. For to all appearance only the minority held such strict views as the Platonist Nigrinus, who called the schools of the philosophers who taught for money stalls and shops where virtue was offered for sale like any other wares.

But, apart from this, the conduct of philosophers who taught in public, and especially their lectures and method of instruction, gave cause for various criticisms. And this censure is expressed so freely and emphatically and so constantly repeated by the philosophical writers of the time, that we might easily be inclined to form too unfavourable an opinion of the philosophers' schools at that time. But it must never be forgotten that men like Musonius, Plutarch, Epictetus, Taurus and Demonax were, as a matter of fact, bound to insist upon the same high standard of excellence in others, up to which they themselves acted, and that they had incessantly to remind teachers and pupils how far they were still removed from the true aim of philosophy, in order to bring them nearer to it. Thus in their writings they constantly refer to the weaknesses, trivialities and defects which hampered philosophical instruction and could only be acutely felt when contrasted with the numerous examples of noble and splendid work and effort which the age could show.

The effects of philosophical instruction were in any case without doubt only too often hindered through the fault of teachers and pupils alike. Vanity, thirst for fame, and probably greed of gain often led teachers to think more of the applause than of the real welfare of their hearers, many of whom preferred agreeable conversation, the exercise of acuteness, and the acquisition of a knowledge adapted for show, to serious study and a difficult and painful struggle for moral ennoblement. Hence many who had attended philosophical lectures for years with unwearying industry did not even carry away from them a smattering of philosophical culture. Many, says Seneca, came only to hear, not to learn, just for recreation, as one goes to the theatre; for a great part of the pupils the school is a place of amusement. Their object is not to throw off vice and adopt a new rule of life, but to find something to tickle their ears. Others came with writing tablets, to get hold of the words, not their meaning; words

which they repeat to others with as little profit as they listen to them themselves. Lofty passages in the lectures make an impression upon some, which is reflected in their faces, but, like the nervous excitement produced by music, is not permanent; only a few are capable of retaining the substance of what they have taken down. Consequently, the majority of pupils were not in the frame of mind which Musonius regarded as indispensable, if instruction was to prove successful. A hearer who is not quite lost, he said, ought to shiver while the philosopher is speaking; to feel ashamed, repentant, joyful and astonished by turns; the expression of his features should change according as the philosopher's treatment of the diseased or healthy parts of his soul variously affects him and his conscience. In fact Epictetus, who had heard Musonius, attests that his language was so forcible, that he gave such prominence to moral infirmities, that every one of his hearers, applying his words to himself, believed that some one had been speaking against him to the philosopher. But it was just this (as Plutarch also complains) that was too much for the majority of those who listened to a philosopher's lecture as if he had been a tragedian or orator. As long as he kept to generalities, they willingly followed him, but as soon as he began to deliver frank and emphatic warnings, they took it ill as a piece of officiousness; and many were weak-minded enough to stay away from the school after a speech that touched them on the raw, like patients who, after the surgeon has used the knife, run away without waiting for the bandages. Beginners also allowed themselves to be frightened by the difficulties of the study or the lecture, or were too shy to ask for explanations, or pretended that everything was clear to them even when they understood nothing. Many even had the assurance to attempt to teach the teacher how he ought to teach. 'One', says the Platonist Taurus, 'comes and says, "Teach me this first," another, "I want to learn this, not that"; one wants to begin with the *Symposium* of Plato because it speaks of the nocturnal revels of Alcibiades; another with the *Phædrus* for the sake of the speech of Lysias. There are really some who want to read Plato, not to ennoble their life but to refine their manner of expressing themselves, not to become more moral but to become more agreeable members of society'. The complaint of Taurus that many

teachers, even without being invited, hastened to the doors of wealthy young men where they patiently waited till midday, till their pupils had slept off their last night's debauch, is a proof that there were teachers who were ready to accommodate themselves to the most unjustifiable requests of their pupils. Epictetus recommends his pupils, when they hear any one speaking in a manner which shows that he has not the vaguest idea of the first principles of morality, to ask themselves seriously : Am I a man of this sort ? ' Am I conscious that I know nothing, as a man should be who really knows nothing ? Do I approach the teacher as if he were an oracle, prepared to render implicit obedience ? Or do I enter the school, like a drivelling idiot, only in order to learn the external accessories of philosophy, and to understand books which I did not understand before, and to be able to explain them to others, as occasion serves ? ' The pupils, he continues, certainly wear the garb of the philosopher, but their soul is not at peace and free from the anxieties and excitements of the external world. Perhaps one of them has had a fight at home with a slave, which caused an uproar amongst his neighbours ; or a foreign student is greatly annoyed because he has not received a remittance from home, or is thinking of what people say of him there, that he is certainly making progress and will return omniscient. ' I should certainly like that ', he says to himself ; ' but one has to work so hard, and nobody sends me anything from home ; the baths at Nicopolis are wretched, it is as miserable here as at home '. ' And then they say : nobody gets any good from the school. But who attends it in order to be cured of his errors and to purge his opinions, to discover what he needs ? What you go to school to look for, that you will carry away with you. You want to chatter about principles. Do not they provide you with ample material for boasting of your pretended knowledge ? Do you not reduce syllogisms, do you not understand how to manage sophisms and fallacies ? '

But it was not the fault of the pupils alone that philosophical instruction did not produce the desired result. Often enough the responsibility lay with the teachers, eager for applause, fame and money, who, knowing that people were mostly influenced by externalities, and above all by a brilliant style, neglected matter for form. The orator's grey hairs, says

Plutarch, the modulation of his voice, his gravity and self-conscious assurance, but, above all, the sound of applause, carry away young and inexperienced hearers; the expression also has something deceptive about it, if it is graceful and copious, weighty and well-prepared for the occasion. Pliny's eulogy of the highly respected Stoic Euphrates shows how essential were the personal appearance and oratorical skill of the philosopher even in the judgment of educated hearers. 'He disputes with subtlety, solidity and elegance; often he goes so far as to reproduce the well-known sublimity and copiousness of Plato. His language is rich and varied, and particularly agreeable, so as to lead on and impel those even who fight against it. Add to this that he is tall of stature, of noble countenance, with flowing locks and a huge white beard; all of which may be thought mere accidents of no account, yet they add greatly to the veneration which he inspires. There is no squalor in his attire, nothing of moroseness about him, but much grave earnestness: his approach is productive of respect, not awe. His sanctity of life is remarkable, and no less so is his affability. He inveighs against vices, not individuals; sinners he reclaims rather than chides. You follow his admonitions attentively, hanging on his lips, and longing to be convinced even after he has succeeded in convincing you' (*Epistles*, i. 10, J. D. Lewis's translation). Naturally, rhetoricians as a rule only paid attention to form. One of them expresses himself as follows in Epictetus: 'Let us call on Epictetus as we pass and hear what he has to say before we charter a ship'; then, when leaving the philosopher's house, 'There was nothing in Epictetus; he makes blunders in construction and etymology'. Your only reason for coming to school is to criticize mistakes of that kind, is the philosopher's rejoinder.

Epictetus, who by no means denied the effect of eloquence in a philosophical discourse, would scarcely have made pompous, flowery language and eagerness for applause the subject of a lengthy dissertation, if they had not been common faults of the 'professional philosophers' of the age. The little scenes from life with which his exhortations are interlarded afford admirable illustrations of the self-complacent vanity of this class of teachers and of their general behaviour. Wherever they showed themselves, their desire was to hear people

shout, 'Oh the great philosopher!' and they walked along as if they had swallowed a spear.¹ If his audience was scanty and their applause small, the professor went away downcast; if the applause was great, he went round and asked each one, What did you think of me?—Admirable, sir, as I hope to be saved!²—How did I deliver that passage?—Which passage?—The one in which I described Pan and the Nymphs.—Marvellously.—Why then, continues Epictetus in his attack on these philosophical rhetoricians, did you praise that senator?—Because he is a talented and industrious young man.—How so?—He admires me.—That's proof enough!—But, he continues, after having been your pupil so long, after having heard your disputations and lectures, has he become more modest? does he examine himself? does he know how parlous is his condition? has he thrown off his conceit? does he desire instruction? You say yes; well then, does he desire to be taught how to live? no, you fool, but how to talk; it is for this that he admires you; listen to what he says, 'this man really writes most artistically, far more elegantly than Dio!'³ So then do you, whose state of mind is so deplorable, you who are so greedy of applause and count the number of your audience, do you pretend to teach others?—Well, I had a very large audience to-day.—Yes, very numerous; there may have been five hundred altogether.—That's not nearly enough, more likely a thousand; Dio never had so many to listen to him.—How should he?—And they show a fine appreciation of lectures. What is beautiful, sir, can move even a stone.—There you have the words of a philosopher, there you have the state of mind of one who thinks to benefit mankind, there you have a man who has heard a lecture! Did Socrates ever say, when in the company of his pupils, Come and listen to the discourse which I am going to deliver in the house of Quadratus? Why should I listen to you? do you want to show me how admirably you can arrange words? Granted: but what good is it to you?—Well, you ought to applaud me.—How?—Say, Oh! and, Excellent!—So then it is for this that young men are to quit their country, leave parents, friends, kinsmen and all that belongs to

¹ We should say, 'a poker'. The Greek word (ὀβελίσκος) also means 'a spit'.

² 'I swear by all that is dear to me' (Long's trans.).

³ Dio Chrysostom of Prusa in Bithynia, not Dio Cassius the historian.

them, that they may applaud your fine concluding periods ? Did Socrates, Zeno and Cleanthes do this ? But it may be objected, says Epictetus ; is there not a special style for hortatory speeches ? Certainly, just as there is a style for refutation and a didactic style. But who has ever mentioned a fourth in addition to these, the epideictic (display) style ? In what does the hortatory style really consist ? In the ability to make clear to one person or several the nature of the struggle in which they are involved, and to convince them that they think of everything else but what they really desire. They really desire what leads to happiness, but seek it in the wrong direction. To attain this, is it necessary to provide thousands of seats and invite thousands of hearers, to mount the platform in elegant attire or in a shabby philosopher's cloak and describe the death of Achilles ? I implore you by the gods to give up spoiling noble words and subjects. Who that has heard your lectures and disputations has ever felt anxiety for his own salvation or communed with himself ? Who of them has ever said on leaving : The philosopher touched me to the quick ! I must not do these things any more ! Does he not rather say to some one else, even if you have been loudly applauded, What he said about Xerxes was very fine ? to which another rejoins, No ; but about the battle of Thermopylae. And this, forsooth, is what one hears from a philosopher !

The philosophers resembled the sophists in their style of lecturing, their hearers also applauded as if expressing their approval of a brilliantly executed piece of music rather than of the serious exhortations of a professor of morality. When the philosopher, says Musonius, exhorts, warns, advises, reprimands or instructs in any other way, and his hearers indulge in unconsidered and hackneyed words of praise, shout and gesticulate, are roused and excited by elegances of expression, by the rhythmical cadence of words, then you may feel sure that both speaker and hearers are alike worthless, that it is not a philosopher who is speaking, but some one playing the flute. Similarly Plutarch says that the noisy applause in the philosophers' schools would lead any one outside to believe that a dancer or musical virtuoso was being encored. He also criticizes the expressions of approval, which were then in fashion. As if the old-fashioned exclamations,

Good ! Wise ! True ! were no longer sufficient, people now cried, Divine ! Inspired ! Inimitable ! and confirmed their words by an oath. Agreement with a philosopher was expressed by Clever ! with an old man by Witty ! or Brilliant ! But certainly, in Plutarch's opinion, the hearer ought not, on the other hand, to sit mum and listless, as if he thought that he had only, as it were, to take his seat at dinner, while others worked their hardest. But even at lectures at which applause was not the rule, the audience generally sat upright in their places, not in a careless or supercilious attitude, kept their eyes on the speaker, showed a lively interest and wore a cheerful, kindly expression, not only free from ill-humour, but from all distracting thoughts that had nothing to do with the lecture. Not only a gloomy brow, wandering looks, a stooping attitude, legs crossed in an unseemly manner, but also nodding and whispering to a neighbour, smiling, yawning, an air of depression and the like—all these were to be sedulously avoided.

The almost minute precision of the rules by which men of such great and recognized importance as Plutarch, Epictetus and others thought it their duty to assist in maintaining the dignity of philosophical instruction is in itself by no means the least convincing proof how deep and widespread must have been the interest taken in philosophical lectures and schools. And, similarly, the claims put forward by the most important writers as to the efficiency of these schools, show that, notwithstanding all the weaknesses, aberrations and ill-success of many teachers, they were still regarded as the real centres of moral education, and to some extent justly, as is attested by the works of the numerous philosophical writers of the age.

While the directors of public schools confined their activity to a limited (although extensive) circle of pupils and followers, there was another class of philosophers, who, representing themselves as the real missionaries of morality, devoted their attention to all mankind. These were the Cynics. Even if the majority of these 'mendicant friars of antiquity', as above described, deserved their bad name, yet the truly noble personalities in their ranks, who for the sake of their lofty mission renounced all worldly goods, were the objects of an equally general admiration and respect. Dio and Epictetus, the most esteemed teachers of the second century, were

inclined to Cynicism, and ranked Diogenes next to Socrates. Epictetus in particular has the highest idea of the mission of the true Cynics : that no one should adopt it unless he is conscious of being chosen for it by the divine will. The Cynic must free himself from all passions and desires. Other men can hide themselves behind the walls of their houses ; the only protection of the Cynic, who has no home and lives under the open sky, is modesty ; he must have nothing to conceal, for where and how could he conceal it ? He, ' the general teacher and instructor ', should have nothing to fear ; otherwise, how could he ' uphold the dignity of the office of superintendent of the rest of mankind ? '

But it is not sufficient that he should acquire knowledge and freedom for himself ; he must also know that he has been sent by Zeus as a messenger to men, to instruct them on good and evil, to warn them that they have gone astray and are seeking the substance of good and evil where it is not ; but where it is they never think. Then he makes his Cynic preach to the people. ' O ye men, whither are ye being hurried ? What are ye doing, O unhappy wretches ? Ye seek happiness where it is not. Why do ye seek it outside yourselves ? It is not in the body, in riches, in power, or in sovereignty. Consider the strong, the wealthy, the powerful, listen to their sighs and lamentations, look on Nero and Sardanapalus, or Agamemnon ! ' Having with dramatic vividness set all this before his hearers, especially the constant anxiety and distress of the latter, he makes them ask in the manner of a sermon : ' Where then is the good, if not in all this ? Tell us, sir, our messenger and guardian ! ' ' Where you neither think it is nor seek it. Had you so desired, you would already have discovered it in yourselves, and would not be seeking what is another's as if it were your own. Seek it in yourselves, O unhappy wretches ! There you must cultivate it, there cherish and preserve it. How is it possible to live happily, without goods and chattels, without house and home, destitute, uncared for, without a servant, without a country ? Look you, God has sent you the man who can show you in practice that it is possible ! Look at me : I sleep on the ground, I have no wife, no children, no estate, nothing but earth and sky and a single coarse cloak. And yet what do I lack ? Am I not without anxiety and fear ? am I not free ? How do

I treat those whom you admire and honour? is it not like slaves? do not all, when they see me, think they see their own lord and king?' Epictetus then reiterates that the Cynic must serve the deity with his whole heart and without hindrance and assist his fellow-men; that he must not be tied down by private obligations or other engagements, the violation of which would mean the transgression of the moral law, the observation of them the abandonment of the mission of 'messenger, guardian and herald of the gods'; a special instance of such engagements is marriage. Where in this case would that king be who devotes himself to the general welfare, 'to whose protection the people are entrusted, and upon whom so many cares devolve'; whose duty it is to superintend others, husbands and fathers—to see who treats his wife ill or well, who deserves punishment, whose house is well ordered, whose the reverse; just like a physician who goes round and feels the pulses of his patients? You have fever, you a headache, you the gout; you must fast, you must take food, you must not have a bath, you require the knife, you must be cauterized. How can a man have leisure for all this if he is hampered by private duties? If we truly understand the greatness of the true Cynic, we shall not wonder why he takes no wife, why he begets no children. He is the father of all mankind, all men are his sons, all women his daughters; he cares for them, chides them as a father, as a brother, as a servant of our common father Zeus.

In fact, at that time there were men in Rome who at least approximately realized this ideal. Two of them are known to us, Demetrius, who lived at Rome in the first century, and Demonax, who lived at Athens in the second. The former literally carried out in practice the principles of self-sufficiency and a return to a state of nature amidst the splendour, luxury and excessive culture of golden Rome, the metropolis of the world, and obtained for Cynicism, which Cicero had uncompromisingly rejected as 'the enemy of modesty', the respect of the Romans. The ragged beggar, who rejected with scorn a gift of 200,000 sesterces (about £2,000) from Caligula, who despised Nero's threats, called forth Vespasian's displeasure by his ostentatious disdain, and expressed his contempt for those who disagreed with him with unceremonious bluntness, was greatly in request amongst his most distin-

guished and most highly placed contemporaries, by whom he was treated with the greatest respect. Thræsea devoted his last hours to a conversation with him on the subject of immortality and the next world. Seneca's respect for his inflexible strength of mind was the more sincere, since he was conscious of his own weakness in comparison ; in his judgment, Demetrius was a great man even when compared with the greatest. Seneca abandoned the society of those who were clothed in purple, in order to be able constantly to enjoy the conversation of this noble man, whom he so greatly admired. And how could he help admiring him ? In fact he lacked nothing ; he lived not as if he despised everything, but as if he had left it for others. Upon those who heard him speaking as he lay naked on his straw pallet he produced the double impression that he was not only a teacher, but a witness of truth. According to Seneca, ' Nature has created him in our time in order to show that neither can he be corrupted by us nor we improved by him. He is a man of perfect wisdom, although he himself disclaims it, and of unshakable resolution in carrying out his principles, while his eloquence is equal to the loftiest themes ; it is neither skilfully arranged nor troubled about words, but pursues its subject with powerful flight, as inspiration urges it. I have no doubt that Providence has endowed him with such lofty morality and power of language that our age might not be without an example and a living reproach '.

A treatise generally attributed to Lucian, and in any case the work of a contemporary, gives a description of a man who was ' an example and a living reproach ' to his age, as it were a personification of the ever warning conscience of his fellow-citizens. This was Demonax, who spent the best part of his life in Athens and starved himself to death when nearly a hundred years of age. Demonax was opposed to Demetrius and those like him, but in agreement with Epictetus, with whom he was on friendly terms. He endeavoured to smooth the roughnesses of the Cynic mode of thought, and especially to rob his admonitions and reproofs of their forbidding harshness by the aid of wit and intellectual grace ; his entire philosophy was characterized by mildness, kindness, and cheerfulness. He regarded all men as his kinsmen. He rendered practical assistance to his friends, so far as it was permissible ;

warned the fortunate of the transitory nature of the blessings of fortune, and consoled those who complained of poverty, banishment, old age or sickness. He strove to reconcile brothers who had quarrelled, to make peace between husbands and wives, and frequently acted as mediator in political dissensions, and generally with success. In this manner he lived a healthy and peaceful life of nearly a hundred years; he was never a burden to any man, never accused any man; he helped his friends and never had an enemy; and was generally beloved and respected throughout Greece. Whenever he appeared, every one stood up, even the highest officials, and all were silent. Towards the end of his long life, he used to enter the first house he came to without invitation and eat and sleep there; the inmates regarded it as the visit of a god or good spirit. There was a keen rivalry amongst the women who sold bread to be the first to serve him; every one from whom he received a loaf believed that he would bring her luck; the children offered him fruits and called him father. When a party quarrel had broken out in Athens, his mere appearance in the assembly was enough to restore quiet; when he had convinced himself of this, he went away without saying a word. The Athenians gave him a magnificent funeral at the expense of the city, and mourned him for a long time; the stone seat on which he used to rest was held sacred and crowned with garlands in his honour. His funeral was largely attended; all the philosophers were present and carried his body to the grave.

The portrait of Peregrinus, later called Proteus, is not so clear, since we only know him from the description of Lucian, in which he appears as much a fool as a knave. But it is clear that this description cannot possibly correspond to the reality, not only from the unimpeachable testimony of another contemporary, but partly from Lucian's own statements. We can hardly be mistaken in regarding the sordid or shameful motives which Lucian attributes to Peregrinus in all that he did, as the malicious assumptions and fabrications of passionate opponents, who were absolutely incapable of understanding the nature of a fanatic such as Peregrinus.

Peregrinus was the son of a well-to-do citizen of Parium on the Hellespont. In the course of his travels, extending over several years, he visited Palestine, where he joined the

Christians and so zealously advocated their doctrines in his writings, that he was appointed president of the community. Thrown into prison in consequence of his conversion, he is said to have begged to be put to death, but the governor of Syria, not considering him of sufficient importance to deserve martyrdom, discharged him. Returning to Parium, he presented to it what was left of his property, which had been plundered during his absence and was supposed by his followers to be very large (according to Lucian it amounted to the considerable sum of fifteen talents, £3,536 gs.), and then recommenced his wandering life. Having quarrelled with the Christians, he adopted Cynicism in Egypt, and crossed over to Rome, where he criticized the existing order so outspokenly that he was expelled by the city praefect. He is then said foolishly to have attempted to stir up a revolt against the Romans in Greece. In 165 he put an end to his life at Olympia, after the games were over, by carrying out his long-announced intention of burning himself to death ; on a bright moonlight night, in the presence of a crowd of Cynics, calling upon the spirits of his parents, he threw himself upon a funeral pyre erected in a ditch and disappeared in the grave of fire.

The conversion of Peregrinus to Christianity, his defection and adoption of Cynicism, are quite intelligible. 'It was just a nature like his that, in the restless search for truth and internal satisfaction, could be as easily attracted to Christianity as it was subsequently estranged from it, when subordination to ecclesiastical dogma and ecclesiastical customs was required of it'. But Christianity and Cynicism were not only in perfect agreement in the absolute contrast which both presented with polytheism, but the Cynic abandonment of all earthly ties and contempt for the world was closely akin to that element of Christianity, which subsequently found complete expression in the life of the hermit and the monk. Nor did this affinity pass unnoticed in ancient times. Celsus had compared the preachers of the doctrines of Christianity with mountebanks, since they addressed themselves by preference to the uneducated masses, to which Origen replies that the Cynic popular preachers did exactly the same. Julian the Apostate found a great similarity between 'those who renounced the world, as the impious Galilaeans called them'. and the Cynics ; the difference was that the latter did not

make such a good thing out of it as the former, who 'by renouncing a little scraped together a great deal, or rather everything', since the duty of charity supplied them with a decent excuse for raising tribute. The Cynics had no such excuse, and besides even the heathen were more intelligent than 'those fools'. In everything else there was no difference between the two. Both accepted honour and homage for their pretended renunciation; both abandoned their country, wandered all over the world, and made themselves a nuisance in camp, the Cynics being even more impertinent and obtrusive than the monks. In view of these and similar comparisons between Cynicism and Christianity, John Chrysostom and Gregory of Nazianzus thought it necessary to point out emphatically how far inferior the former was to the latter.

That the gloomy, harsh and rugged aspect of Cynicism was especially prominent in Peregrinus is shown by the rejoinder of Demonax (whose cheerfulness made Peregrinus refuse to acknowledge him as a Cynic), 'And you are no man!' Gellius, however, who often visited him in his hut near Athens not long before his end, speaks of him with great respect. He had heard many excellent and salutary words from this 'worthy and strong-minded man', who, amongst other things, asserted that the wise man would do nothing wrong, even though gods and men should not know that he had done wrong. For one ought to avoid sin, not from fear of punishment or disgrace, but from love of the good. But in the case of those who lack this higher moral strength, the thought that no wrong can remain hidden, but that time will finally bring all things to light, is a very effectual motive for avoiding ill-doing.

Lastly, his self-destruction was intended to crown a life in which he had striven to imitate Heracles, the great model of the Cynics, with an end like that of the hero; to teach men contempt of death and at the same time to prove to the world that a Cynic also was capable of the much admired resolution of the Indian sage Calanus. The postponement of his suicide till the Olympian games were over, the choice of night time for carrying it out, the admission of only a few spectators of similar opinions, do not prove that Peregrinus sought his greatest triumph in theatrical effect. Certainly he was a fanatic, but there is no reason to doubt the earnestness and sincerity of his convictions, and, with the exception

of Lucian's account, there is no evidence that, at that time or later, they were ever doubted. About twelve years after his death Athenagoras saw his statue in Parium, and Ammianus Marcellinus, in mentioning his suicide (also referred to by the chroniclers) calls him a famous philosopher.

The Cynic school continued to exist till the end of antiquity. In addition to the discourses of Julian, there is no lack of evidence which permits us to trace its continuance, and as late as the beginning of the fifth century its adherents were evidently very numerous.

It is only natural that the literature of the time should tell us far more of the attempts to elevate the standard of morality through philosophy than of its effects. Nevertheless, all that we are told goes to show that as a matter of fact philosophy was then regarded by the educated world as the true and highest moral educator of humanity, and even the opposition to it only confirms the universality of this conviction. That the zealous and comprehensive efforts hitherto described really produced important results, is clear from the simple fact that so large a number of the noblest men of these centuries, on their own information or according to the statement of others, were indebted to philosophy for the formation of their character ; and further, from the high respect which was paid to distinguished philosophers by their contemporaries and posterity. In a world which refused slaves the rights of men, the former slave Epictetus was one of the most generally respected personalities, and Hadrian, the ruler of this world, is said to have sought his friendship. The most important teachers and writers of these centuries, the freedman Epictetus, the knight Musonius Rufus, Seneca the consular and the emperor Marcus Aurelius, belonged to the most different classes and ranks of life. The effect of philosophy extended to all strata of society, from the highest to the lowest. Philosophy, says Seneca, does not look at a man's pedigree ; the equestrian order, the senate, and military service are closed to many ; but knowledge is open to all, and all are of noble birth as far as its attainment is concerned. A great soul can reside in the body of a slave or freedman as well as in that of a Roman knight.

But not only did philosophy break through the barriers and limitations of the orders and classes of society ; it

also to a great extent weakened the exclusiveness of national consciousness, and by its partial subjection of this feeling, so strongly developed in all ancient peoples (and especially in the Romans) and so harshly asserted, it proved itself to be one of the most real and transforming influences of the period of civilization which is here described. Cynicism and Stoicism, in particular, developed their original leaning towards cosmopolitanism and a brotherly love that included all mankind, on the highly favourable soil of the Roman world-empire, in such a manner that their theories of the relation of the individual to mankind breathe a Christian spirit to the same extent as they attest a most decided rupture with the specifically ancient views of the world. It was thought by many that this development of philosophy could only be explained by direct Christian influences; but in the case of Seneca no such explanation of this phenomenon was needed, and the repugnance to 'the Galilaeans' expressed by Epictetus and Marcus Aurelius excludes the assumption of Christian influences. The Christians of that period, indeed (as already observed), themselves recognized an independent morality of the heathen, which they attempted to account for partly by their acquaintance with the sacred writings of the Jews, partly by the intervention of 'demons' working against Christianity. They would certainly not have had recourse to such singular explanations had they believed that the virtues of the heathen could be attributed to Christian influences. In fact, the result of an unprejudiced investigation must be that Stoicism and Cynicism raised themselves by their own efforts to a moral conception of men's rights and duties higher and purer than any in earlier antiquity. The Stoic principle of the homogeneousness of all men, who, as Epictetus expresses it, all have God for their father, and consequently are all brothers, was first followed out by the Stoics of this age in its widest extent and to its ultimate results. They taught, expressly and repeatedly, love of one's enemy, patience and indulgence not only towards the erring, but forgiveness of evil done to us and its requital with benefits. A comparison of the views of that age with those of the older philosophers in regard to slavery affords the most infallible criterion of the progress made in the idea of the relation of the individual to humanity. Plato found nothing offensive

in this 'cancerous affection of the ancient world', and never conceived the idea of a complete abolition of slavery in the future; while Aristotle even endeavoured to prove that it is a natural institution, and regarded slaves as 'living chattels' and barbarians as born slaves of the Hellenes. Seneca, on the other hand, insists that we should regard slaves above all as human beings, as humble friends, and, in so far as they are subject to the same authority as ourselves, as fellow-slaves. And there is no doubt that these theories did in reality contribute essentially to the improvement of the position of slaves. The effects of the philosophy of that age lasted far beyond its own days; the third century affords us the remarkable evidence of Origen, which is beyond suspicion, that while few still read Plato, Epictetus was read 'by all'.

An age which raised itself by its own efforts to higher and purer views of morality than all the ages which preceded it, which not only produced a Musonius, Epictetus and Marcus Aurelius, but in which these preachers of a gentle, truly human system of ethics were generally admired and their doctrines generally adopted, cannot have been an age of utter moral decay, as it has been so often called. If there is no graduated scale of the morality of a period so well known, least of all is there one for these centuries, in regard to which we possess only isolated statements, partly limited to definite spheres, partly exaggerated or one-sided. To the latter belong the rhetorical declamations of the elder Pliny and Seneca; to the former the description of the horrors of the imperial house, the awful consequences of an absolute despotism, the fearful suppression of the aristocracy by Caesarism, in Tacitus and the other historians, and the accounts of the corruption, filth, and immorality which Rome, like every great city, fostered in abundance, in the satirists and in Martial. It would be inadmissible to draw general conclusions from these sources alone as to the morality of the whole period, even if they did not offer, amidst much that is repulsive, hateful and horrifying, many agreeable and sublime impressions, which even decidedly predominate in other authorities, such as the letters of the younger Pliny, and the works of Quintilian, Plutarch and Gellius. And if we leave out of consideration those declamations about the disappearance of the 'good old times', it will be difficult to find any evidence in the literature of the

age that men thought they were living in a period of general decay, but rather the reverse. Even Seneca concludes a striking picture of the prevailing immorality with the declaration that he does not wish to fasten the responsibility upon his own age. 'Our forefathers complained, we complain, and our descendants will complain, that morals are corrupt, that wickedness holds sway, that men are sinking deeper and deeper in sinfulness, that the condition of mankind is going from bad to worse. But in reality they remain where they were, and will still remain so, save for trifling movements in one direction or the other, like waves carried backwards and forwards by the ebb and flow. . . . Vices belong to no particular age, but to all mankind. No age has been free from guilt'. Tacitus was convinced that everything was not better in earlier times, but that his age also had produced much that was worthy of imitation by posterity; perhaps there is a cycle of morality, as of events. And Marcus Aurelius, whose view of the world was principally determined by the Stoic doctrine of the eternal cycle of events, who saw in history only an eternal repetition, was bound to regard human wickedness as something that ever remained the same. 'What is wickedness?' he asks. 'That which you have often seen. Ancient, medieval and modern history will be found full of the same things as houses and cities at the present time. Nothing is new'. But he was far from seeing nothing but wickedness in the present. Nothing delighted him more than to think of the good qualities of his contemporaries, and his greatest pleasure was to survey as a whole the examples of the virtues exhibited in the character of each.

CHAPTER IV

BELIEF IN THE IMMORTALITY OF THE SOUL

WHEREVER and whenever the belief in immortality has not been firmly established by belief in revelation, doubt, unbelief and denial of immortality have been associated with the different forms which such belief has assumed. It is probable that not only have there always been men to whom the eternal existence of an individual appeared unintelligible, but also others for whom life was only endurable as ending with death, and who were filled with horror at the idea of its lasting for ever. It is remarkable that it is one of the most energetic natures of the later Roman world, the elder Pliny, who rejects, almost passionately, the belief in immortality. He was a man whose lot was a favoured one, who with untiring perseverance strove to make every minute of his life serviceable to the state, to humanity, to the knowledge of truth, and in the pursuit of this object found a noble end that was worthy of his life.

‘Every man’s last hour brings about exactly the same state of things that existed before his first hour. Souls and bodies no more have feelings and consciousness after death than they had before birth. But human vanity imagines a prolongation of existence into the future, and invents a life beyond the grave, attributing sometimes immortality, sometimes change of form to the soul, and sometimes consciousness to those below the earth; it worships departed spirits and makes those gods, who have ceased to be even men; as if our breath in any way differed from that of all other creatures, or as if other things in nature did not last much longer than man, for which no one has foretold immortality. But what sort of body could the soul have after its emancipation? What substance? what power of thought? How could

it see, hear, and taste? What use could it make of these gifts, or what good would it be without them? Where is its place of abode, and how great is the number of shadowy souls after so many centuries? All such ideas are only fit to pacify children, idle dreams of a state of mortality, which is anxious to last for ever! What absurd folly, to think that life can be renewed by death! And where would there ever be rest for the created, if the consciousness of the soul continued in heaven, and the shades of the dead in the underworld? In reality this pretended sweet consolation and this happy faith robs death, the chief blessing of nature, of its virtue, and doubles the pain of a dying man by holding out the prospect of a life beyond. For if it is sweet to live, to whom can it be sweet to have lived? But how much easier and more certain would it be for every one to trust in himself and accept his experience of the time before birth as a certain proof of what will happen in the future!'

This expression of a longing for annihilation, which bears some resemblance to the Buddhist view of life, stands by itself. But the materialistic conception of the soul and the denial of immortality based upon it were at least as common as the Epicureanism, by which Pliny's view was no doubt directly or indirectly determined, and with which his materialism also agrees in the idea of a heavenly origin of the soul and its 'kinship with the stars'. For the convinced adherents of this doctrine the prospect of an end of existence was not a melancholy one. It was for them a consoling thought, to reach a harbour, where they would be for ever removed from disappointments and the caprices of destiny. Their fancy was taken by the idea of rising calmly from the table of life, like guests who had had their fill, in order to abandon themselves to a dreamless sleep. The memorial of Gaius Matrinus Valentius is dedicated by his wife, who survived him, 'to eternal sleep'. Other funeral monuments of similar character, and others dedicated 'to eternal rest' (*securitati*), indicate the denial of immortality, although not always expressed so unequivocally as in the self-composed epitaph of a certain Nicomedes of Cos, who was apparently a strolling singer of the Homeric poems: 'After having ridiculed absurdities, I lie here in a sleep from which there is no awaking'. A Latin inscription runs: 'I have lived and believed in

nothing beyond the grave'; a Greek one: 'There is no boat in Hades, no Charon, no Aeacus who holds the keys, no Cerberus. All of us whom death has carried away are rotten bones and ashes, nothing else'; in another it is said of the dead man that, after having finished his course, he has become a tomb, a stone, an image. 'The elements out of which he was formed take possession of their own again; life was only lent to the man, in death he restores it, he cannot keep it for ever. By his death he pays his debt to nature'. A favourite distich runs: 'I was not, but I became; I was and am no longer; thus much is true. Whoever says otherwise, lies; for I shall no longer be'. It is frequently added that death is no evil, since consciousness ceases with life. A certain Lucius Maecius Marcus, who in his lifetime built an 'eternal house' for himself and his, says in the inscription (as if he were still alive): 'I once was not and now am; one day I shall no longer be; I do not regret it'. On a gravestone the following words are put into the mouth of a dead woman: 'I once was not and am no longer. I know nothing of it; it does not matter to me'. 'Death', it is said on another stone, 'is the last and most beneficial remedy'. This was also expressed jestingly. A freedman named Ancarenus Nothus says in his epitaph that he is no longer afraid of having to go hungry; that he is free from gout and need not pay for his lodging, since he is living in permanent free quarters. With the denial of its continuance is also combined the invitation to enjoy this transitory life: 'I was nothing, I am nothing. Do you who are still alive, eat, drink, enjoy yourselves, come'! 'Do you, O comrade, who read this, enjoy your life; for after death there is neither pain nor laughter, nor joy of any kind'. A sepulchral monument, which was found in 1626 under the confessional of St. Peter's church, a recumbent statue of a man with a drinking-cup in his hand, excited such disgust by the atrocious nature of the inscription, that the statue was hidden or thrown into the Tiber. The inscription was erased with lime, but a copy has been preserved. The deceased, notwithstanding his gross materialism, appears to have led an orderly, decent life as a citizen. He came from Tibur; his name was Flavius Agricola, and he had had himself represented in the attitude in which he was fond of emptying the bottle during his

lifetime. He had lived most agreeably with his wife Flavia Primitiva for thirty years ; she, a modest, industrious, beautiful woman, had been a worshipper of Isis. After her death his son Aurelius Primitivus had consoled him by his affection and received him into his house. In conclusion, he advises his readers in some verses, (which evidently were frequently employed, but in varied form), to enjoy the pleasures of wine and love, since after death everything else is destroyed by earth and fire.

It is highly probable that the most outspoken materialism was the most convincing to unbelievers in the educational sphere to which the composers of these epitaphs belonged, who naturally also were fond of displaying their enlightened ideas and superiority to those who were less advanced by a vigorously worded profession of faith, which neither custom nor dogma prohibited them from recording upon tombstones. On the contrary, this appeared a specially suitable opportunity for summing up their life's experiences ; so that we need not be surprised to find the lowest and most degenerate form of Epicureanism, which sought the only true good in the grossest sensual enjoyment, openly flaunting itself in this manner. Allusion is frequently made to an epitaph in this style on King Sardanapalus, or a variation of it : e.g. What I have eaten and drunk, I have taken with me ; what I have left behind, I have lost. We must interpret in the same sense those epitaphs in which baths, wine, and love, moderately enjoyed, are extolled as the source of true pleasure in life, and the dead man is made to say that he has taken everything with him into the grave, i.e. every real blessing which life can offer has passed into his possession and thereby, as it were, become part of himself.

As compared with the thousands which betray no doubt in a life after death, the number of materialistic epitaphs is exceedingly small, although (as observed) no obstacle existed which could prevent even the most reckless materialist from expressing his unbelief in this manner. The feelings of the ancient world in regard to death and burial were in many respects essentially different from those of the moderns ; to the former even jesting did not seem incompatible with the seriousness of the grave. But we should be bound to assume that materialism had made great strides, even if we

did not possess definite evidence of the spread of Epicureanism, especially amongst the uneducated, and (to judge from modern analogies) perhaps even more amongst the half-educated. Certainly, it is quite impossible to define, at any particular period, the proportion of materialists to believers in immortality; but there is reason to believe that, in spite of their relatively large number, they formed only a small minority even in the later days of antiquity.

If, further, the denial of immortality was a capital and fundamental principle in the materialistic philosophy of Epicurus, the finite nature of the soul was also assumed in other philosophical systems. Certainly, the Stoic belief in a limited, but indeterminate continuance of life after death in its practical application had essentially the same value and effect as the belief in immortality. Yet Panaetius, who lived about the middle of the second century B.C. in the Scipionic circle at Rome and later at Athens, always enjoyed a great reputation and exercised great influence, especially on the Romans who were inclined to Stoicism, diverged in this, as in other points, from the tradition of the school. He absolutely denied life after death, and Cornutus, the teacher of Persius, expressed an equally decided opinion that the individual soul died and perished with its body, while Marcus Aurelius wavered between the ideas of an extinction of the soul at death and a passage into another existence. Amongst the Peripatetics, to whom Panaetius attached himself by preference, Dicaearchus, who was taught by Aristotle himself, also denied the continued existence of the soul, which he regarded as the result of the mixture of the corporeal substances, dependent for its very existence upon the body, and pervading all its parts. Aristotle himself certainly taught the continued existence of the thinking spirit, but not of the person or individual; and he expressly rejected the idea that the dead (called 'the blessed', οἱ μακαρίται, by the people of Greece) could be happy. Of the later Peripatetics Strato of Lampsacus, the pupil of Theophrastus, to all appearance entirely abandoned the belief in immortality; and Alexander of Aphrodisias (time of the Severi), who has been honoured with the name of a second Aristotle, has attempted to show that Aristotle also denied immortality.

But there was also a philosophy which affirmed immor-

tality as emphatically as Epicureanism denied it. This was Platonism, the only philosophy which undertook to prove it scientifically, since to the Pythagoreans the theory of the immortality and transmigration of souls was rather a dogma than a philosophical principle. As Platonism in general irresistibly attracted those whose minds were set on things above the earth, its theory of the soul in particular was a comfort and consolation to all who needed, in addition to a belief in immortality, a philosophical proof of their convictions. Cato of Utica, also, the 'perfect Stoic', as Cicero calls him, whose death made him an ideal figure in later Stoicism, read the *Phaedo* of Plato before committing suicide. Certainly Plato's proof of immortality could convince no one who was not already convinced, and Strato's criticism had shown it to be inconclusive; but the name and reputation of Plato were a guarantee of the truth of his doctrine, that satisfied Cicero and certainly most people, who preferred to err with him than to recognize the truth with his opponents. 'It is impossible to estimate how much his dialogues have done to strengthen, spread and develop the belief in immortality, with varying success in the course of centuries, but without interruption down to our own days'. 'Posterity has correctly judged him as the type of the priest and sage, who with warning hand points the way upwards to the immortal human spirit, from this poor earth to the eternal light.

In his belief that he could scientifically prove the imperishability of the soul, Plato allowed himself to be increasingly influenced in his ideas of its destiny before and after its life in the body by the mystical theories of the Orphico-Pythagorean sects. The Orphic communities worshipped above other gods the Thracian Bacchus (Dionysus), and his ecstatic cult contained the deeply rooted conviction 'that a god lived in the human form, and could only be set free by the bursting asunder of the chains of the body'. In connexion with this conviction was developed the effort to detach oneself from the earthly and perishable by means of asceticism (the so-called Orphic life), which determined the direction of the belief and mental attitude of these mystic separatists. The belief in a compensating justice in the next world is also indebted to them for its elaboration and confirmation. These theories, which travelled from Thrace by way of Greece

to lower Italy and Sicily, blended with those of the Pythagorean communities, and in that form, which continued unaltered for centuries, were widely adopted throughout the Greek world. The most important of the Orphico-Pythagorean dogmas was the theory of the transmigration of souls, the cycle of continual new birth which the soul must traverse, in order to do penance for its falling away to the corporeal and to regain its divine nature. Consequently it is not death, but life, which is held to be the wages of sin. After its earthly life the soul awaits judgment in Hades, in accordance with which the pious look forward to a blessed existence in company with the gods of the underworld, sinners to punishments in Tartarus, which in the eschatological poems of the Orphists are described in all their horror, 'with the object of terrifying, converting, and awakening mankind'. Plato appropriated both the doctrine of the transmigration of souls and their punishments, which were regarded partly as purificatory (especially by means of fire, a theory also adopted by Origen and elevated by Gregory I. to a dogma) and partly as eternal, and attached great value to an emphatic announcement of them.

Virgil also was indebted to Orphism for the main features of his portrait of the underworld, especially the descriptions of Elysium, Tartarus and the valley of Lethe (where the souls that are to enter new bodies first drink forgetfulness of the old). Similarly Plutarch in his description of the other world, has drawn upon Orphic literature; after the example of Plato, he gives it in the form of a vision of a dead man restored to life, whose soul has preserved the recollection of its impressions while separated from the body. The abode of the blessed is like a grotto of Bacchus, decked with verdure and flowers of every kind, which exhales a gentle fragrance that intoxicates the soul like wine, and is full of Bacchic pleasure, laughter, jest and song. At the place of torture the punishments for offences are of three classes. The mildest are for those who have already done penance on earth. But he who arrives from his life on earth unpunished and unpurified, is tormented until every passion is eradicated by pains and tortures, which surpass those of the flesh in violence and severity as much as the reality surpasses the dream in clearness. The scars and weals of the passions remain in

some cases longer than in others ; hence the colours of the souls are varied and manifold. A blood-red colour shows cruelty ; a bluish, that sensuality has been eradicated, and so on. The colour indicates the end of purification and punishment ; after it has disappeared the soul becomes bright and of one colour. At the place of the severest punishments is heard the sound of the mournful wailing of souls, which are enduring the most cruel tortures. The narrator sees the soul of his father, full of marks and scars, coming forth from a chasm and stretching out his hands to him, while it is being dragged away by its tormentors to fresh penances (he had poisoned certain persons without having been found out during his lifetime). He sees a number of souls in coils of two, three or more like snakes, and devouring each other. Further, there are three lakes, of boiling gold, cold lead, and rough iron, in which demons, like smiths, dip the souls of the avaricious, and pull them out again with their implements. Having been made red-hot and transparent in the lake of gold, they become as hard as hailstones in the lake of lead, and black and brittle in the lake of iron, so that, when broken and crushed, they assume new forms, and are thrown again into the lake of gold, suffering indescribable torments during these changes. Many, who thought their punishment was ended, were carried away to fresh tortures, at the instance of the souls of their descendants, who had been obliged to do penance for their ancestors' crimes during their lifetime. Finally, he sees the souls of those who, that they may be born again in the bodies of animals, are violently transformed by their tormentors with various instruments. Amongst them is the soul of Nero, which in addition to other tortures is pierced with red-hot nails. It was intended for the body of a viper, but at the bidding of a loud voice, which suddenly issued from a blaze of light, the body of some tame animal, which sings and lives by marshes and lakes (perhaps a toad), was assigned to it as a habitation : ' for the gods owed Nero a reward, for having bestowed freedom upon the Hellenes, the best and most god-favoured people of all his subjects '.

Traces of the widespread acceptance of the Orphic doctrine are also to be found in epitaphs. Such is the prayer addressed to the god of the underworld, Aidoneus or Osiris,

the Egyptian lord of the soul, that he would bestow cold water upon the deceased, by which is meant the water of life. The gold leaves (which the dead appear to have held in their hands), found in graves at Thurii and Petelia (about the third century B.C.) and at Eleutherae in Crete (about the second century A.D.), show that the formulae, which the consecrated one was obliged to be familiar with on his entry into Hades, in order to obtain the water of life, were always put into the grave with him, for many centuries in the same manner. The Christians also retained the idea, but not in its original significance. 'Cooling' (*refrigerium*) is with them a typical designation for the state of the blessed after death, and the prayer for this cooling is addressed not only to Christ, but also to martyrs.

Also the idea of an elevation of the soul into aether, to the stars, to the neighbourhood of the gods, which had its origin 'in religious presentiments as much as in philosophical speculations', was compatible with Orphico-Pythagorean doctrines. It appears gradually to have ousted the idea of a place under the earth for the pious, and under the influence of Stoic views to have found the widest acceptance in later times. Statius leaves it undecided whether his father's soul has soared to the heights above and, sojourning in the regions of light, is following the paths of the stars, or whether he is dwelling in the fields of Lethe amongst the heroes of the past and the shades of the departed. Yet in some epitaphs the latter idea is expressly rejected: the soul of the dead is not in the underworld amongst the shades of the departed, but has risen to the stars. To the same effect the younger Pliny says of the Emperor Trajan's dead father: his abode is either amongst the stars or near them, whence he looks down upon his son and rejoices in his fame and glory.

In the first centuries of the Christian era the majority of the educated classes of the Roman world were probably as little affected by the mystical doctrines of religious sects as by those of the different philosophical schools. They adhered to no single philosophical system, but according to their individual needs formed their opinion of the world by means of eclecticism, and were only indirectly or to a small extent influenced by philosophy in general. Some did not even feel the need of being firmly convinced on the subject

of immortality, while others had abandoned the idea in despair. The diametrically opposite results at which the different philosophical tendencies had arrived, the assault upon the principles supported by the most reputed teachers delivered by others of equal repute, were bound to lead the sceptically minded in particular to the conclusion that the scientific investigation of this subject was a task beyond human powers. This was the view held even by a man like Socrates, although he was naturally inclined to believe in a life after death. It was very natural that those inquirers, who made the body the subject of their investigation, should feel the gravest doubts as to the immateriality of the soul. The physician Galen, although anything but a materialist and a declared opponent of Epicurus, regarded the Platonic idea of the immateriality of the soul with great suspicion. How should incorporeal substances be distinguished from one another? he asks; how can an incorporeal nature pervade the body? how can it be so affected by the body, as happens in regard to the soul in cases of madness, drunkenness and similar circumstances? 'He does not presume to decide this point, any more than he intends to affirm or deny immortality'.

Quintilian also considers the question, whether the soul when released from the body is immortal or at least continues to exist for a certain time, as one that has not been decided. Tacitus was equally unconvinced at the time when, in his mature years, he wrote the life of Agricola. He concludes with the wish that the deceased may rest in peace, 'if there is a place for the spirits of the pious; if, as the wise believe, great souls are not annihilated with the body'. In these last words he alludes to the doctrine of Chrysippus, that only the souls of the wise will endure till the conflagration of the world. Even Cicero, who attached such high importance to the belief in immortality, did not consider it superfluous to allay men's fears of death, in the event of the soul perishing with the body.

But although Cicero recognized that doubt was justifiable, he was himself firmly convinced that the soul was immortal. His reasons were probably exactly the same as those of the majority of believers among the educated classes; they were based, not so much upon dogmas or scientific proofs, as upon instincts, needs and feelings, partly characteristic

of human nature in general, and partly developed by the special influences of Roman civilization. For, although Cicero reproduces in detail the Platonic proof of immortality, he expressly states (as already observed) that he considers the conviction of a Plato enough for him, even unsupported by argument, and to all appearance he adduces this proof more for the satisfaction of others than for his own. His belief, like that of all kindred natures, was based above all upon a lofty conception of the greatness and dignity of the human intellect, upon admiration and reverence for its powers and performances. He was convinced that the intellect, which had invented language and writing, associated man with man, measured the orbits of the stars, created civilization, the arts, poetry and philosophy, could not possibly be of an earthly and perishable nature. Its power, wisdom, inventiveness and memory appeared to him divine; its origin could not be an earthly one, it must be derived from heaven, and therefore divine. In this conviction he was confirmed by the agreement of all peoples, which on this point was as complete as on the belief in divinities; further, by the belief of the greatest intellects of his own nation and by the recognition of immortality in the religious cult of the dead, observed without alteration for so many centuries. Further proofs, according to him, were to be found in the anxiety of men as to what would become of them after death, the sacrifice of the best amongst them for posterity, and the general and natural desire for recognition by posterity and for posthumous renown. Everywhere and at all times it was just the men who were most distinguished in character and intellect who had acted as men would only act with the prospect of immortality before them; and it is in the belief held by the noblest and best that we are most likely to discover a knowledge of the truth. Cicero has expressed his belief in personal immortality almost poetically in the *Dream of Scipio*, in which he describes the blessedness enjoyed by the mighty dead of the past in celestial spheres, after they have been uplifted from the prison of the body to the true and eternal life.

But certainly all the hopes of a life beyond the grave which were not founded upon religious convictions were persistently vague. This is shown in particular by the example of Seneca,

who nevertheless professed his adherence to a Stoicism that taught the doctrine of immortality, and who in addition was greatly in favour of the Platonic views of the question. There was a time in his life when immortality appeared as inconceivable and undesirable to him as to Epicurus, of whom he held the highest opinion. In one of his tragedies he says : ' He who has set foot on the waters of the river of the dead, exists no more. As the dirty smoke from the kindled fires ascends and vanishes after its brief journey, and as the fury of arctic Boreas drives before it and dissipates the clouds heavily charged with rain, so the spirit, which animates our bodies and regulates the term of existence, will pass away ; after death there is nothing—death itself is nothing, only the most recent arrival or goal reached, in the velocity of space. Let the avaricious discard their hopes and let the anxious set aside their fears. Dost thou betray any curiosity to know where thou shalt rest after death ? Where those rest who have not come into existence at all. Repacious time swallows us up, and we merge into Chaos. Death is the inseparable bugbear of the body, nor does it spare the soul any more than it does the body. Taenarum—and the kingdom under that relentless ruler, and the dog Cerberus which blocks the way and guards the difficult approach—all this is empty talk and idle words, like the terrors revealed during a frightful nightmare ' (*Troades*, 392-411, trans. W. Bradshaw). Although Seneca perhaps did not long adhere to this uncompromising attitude of denial, he never attained a firm and undoubting belief in immortality. He writes to his friend Lucilius the Epicurean, whose last letter had awakened him from a pleasant dream, that he was on the point of accepting the consoling belief in the immortality of the soul and of adopting the opinions of great men, which certainly promised more than they proved ; on the receipt of Lucilius' letter he awoke, the beautiful dream vanished, and yet he would like it to return. In fact, in the conclusion of his letter he looks forward to a longer and better life to which the earthly life is only a prelude. Then will the secrets of nature be revealed to us, the heavens, which the soul chained to the body can only endure from a distance, will be lighted up on all sides alike, night will no longer succeed day, and we shall recognize that we lived in darkness, as long as the

divine light only penetrated to us through the narrow medium of the eyes. If we compare the conclusion with the beginning of the letter, we can hardly doubt that the confidence which he here displays was assumed. In fact, he declares often enough in his latest writings that it is doubtful whether there is another life, whether the soul continues to exist, whether death is only a transition or the end. We could only be certain of its nature and effect, if a man were to rise from the dead. But Seneca knew of no man who had so risen.

Philosophical speculation could only give an assurance of continued existence in combination with religious belief, as in the case of Pythagoreanism and Platonism. Certainly a considerable number of educated men entirely abandoned a philosophical proof of immortality, and sought and found consolation and peace of mind in regard to the other life in religion alone. Vast numbers of people, such as Plutarch's wife Timoxena, derived their firm belief in immortality from the Orphico-Dionysiac mysteries, which were widely diffused throughout the entire Greek world and were especially in vogue in the second century A.D. But of all the Greek mysteries the Eleusinian maintained the reputation of being the most sacred festival of grace, and the celebration of the sacred night was perhaps most thronged in the last days of antiquity. Throughout the Roman empire foreign (Thracian, Phrygian, Egyptian, Syrian, Persian) secret cults became more and more attractive, owing to the charm exercised by the mysterious, especially if unfamiliar; certainly all of them promised immortal happiness to their votaries. Those who were consecrated to the service of Isis and Mithras were called 'born again', 'born again to eternity'. The essence of the worship of Mithras was perhaps the old Persian belief in a resurrection of the dead.

Amongst the evidences of the belief in immortality and the hope of a higher existence must be reckoned numerous figurative representations on funeral urns and altars, sarcophagi, and other monuments, of which the most artistically adorned could only have been within the reach of the well-to-do, that is, generally speaking, the better educated. Certainly the language of these images and figures is not always intelligible; the artistic production of the age, which as a

rule endeavoured to satisfy the new requirements of art by borrowing from the immense stock of existing creations, in this case also frequently employed older representations with a new meaning. The great mass of mythological scenes, so rich in figures, with which the front sides of the sarcophagi are adorned, belongs to these ancient creations ; the majority of them date from the period from the second to the fourth century, and in many cases (perhaps as a rule) were not made to order, but were executed for buyers to choose from, in accordance with the prevailing demand. If the connexion of the myths represented with death, immortality and the other world cannot always be proved with certainty, and perhaps sometimes the only object was to fill up the empty spaces with favourite representations, yet in the majority of cases there can be no doubt of the idea with which they were selected for this purpose. The figures of the myths are, as it were, poetical types for the symbolical expression of abstract ideas ; and even here the prevailing tendency of Greek art and poetry to transfigure human existence by elevating it into the regions of the ideal, is manifest. Only rarely (as in the fable of Prometheus) is the union and separation of soul and body represented ; usually the transition to another life and its happiness or misery is symbolized by the destinies of the gods and heroes. The rape of Proserpine to the shades and her return to the world of light, the death of Adonis succeeded by his resurrection, were favourite subjects ; perhaps the carrying off of the daughters of Leucippus by the Dioscuri to a higher existence had a similar significance. The stories of Admetus and Alcestis, of Protesilaus and Laodamia, indicate the hope of a meeting again after death and the continuance of conjugal love beyond the grave. Hercules, the hero who after incessant struggles frees himself from the infirmities of mortality and proves victorious even over the powers of the underworld, appears in his combats and labours as a real victor over death. Achilles in Scyros, who preferred a brief and glorious life to a long and inglorious one, and was rewarded for his choice by removal to Elysium, is apparently intended to be a guarantee of the reward which awaits virtue ; the stories of Actaeon, Marsyas, Clytaemnestra, and the battle of the giants, are perhaps warnings of the punishments which overtake sinners. The delights of the blessed are indicated by the

joyous meetings, dances, and festivities of the crowd which forms the retinue of Bacchus, the motley throng of Bacchants, Maenads, Satyrs, Pans and Centaurs, whose exuberance of life, on sarcophagi and urns, gets the better of death: 'the ashes appear still to be enjoying life in their peaceful abode' (Goethe). The god himself by his resurrection, according to the Orphic doctrine, guaranteed immortality to those who had been initiated into his mysteries; Ariadne, raised by him to heaven, was regarded as an example of the soul freed from mortality and removed to a higher world. The companies and bands of the Nereids and marine divinities, rocking themselves on the waves of the sea, and the sports of the love-gods (*Ἔρωτες*, Cupidines) appear to represent the condition of the blessed. In 1857 and 1858 two stately, two-storied mausoleums (constructed in the second half of the second century A.D.) were discovered facing one another on opposite sides of the Via Latina at Rome. The arched roof of the chief chamber in the lower story of one, which contains three sarcophagi, is richly ornamented with stucco reliefs; a medallion in the centre represents the soul of the deceased as a veiled figure carried by a griffin, and is surrounded by twenty-four other medallions with Bacchants, Nereids and love-gods in small square fields. In a Latin poem, found near Philippi, on the death of a boy it is said that the women dedicated to Bacchus would now take him into their company as a satyr in a flowery meadow, or the nymphs in their torch-light dances.

Whether the belief in immortality found more opponents than supporters even amongst the small minority of educated persons, cannot be determined; but there can be no question that at all times a vast majority amongst the masses in the main held firmly to the ideas of the immortality of the soul, propagated from primitive times through successive centuries, notwithstanding all the modifications which had been introduced in the course of time. The belief of man in his continued existence is one of the strongest and commonest instincts and needs of the human soul. This is confirmed generally by the study of the customs of primitive peoples and of the oldest civilized peoples, although exceptions are not wanting; amongst the Indo-Germanic nations, in particular, this belief goes back far beyond the beginnings of

tradition. Belief in immortality is as much in keeping with human nature as belief in the rule of higher beings ; it springs from the dread of annihilation ; the impulse of self-preservation in this case instinctively extends beyond the grave. Man, awakened to consciousness, seeks in the next world the solution of the enigmas of life, consolation for his sufferings and disappointments, 'at the grave he plants the seed of hope'. Only a minority is capable of reflection, which leads to doubt and denial. The longing for annihilation, with which for so many centuries millions in Asia have been filled, springs from fear, not of immortality in itself, but of the torture of endless re-births.

Certainly, as in all ages, currents of materialism reached the masses in later Graeco-Roman antiquity ; but neither the analogy of similar experiences in modern times nor the comparatively small number of materialistic or sceptical epitaphs of persons of the lower classes justifies the assumption that they ever made much progress or injured positive belief to any considerable extent. In contrast to such epitaphs, others express a firm confidence in immortality and reunion after death ; for example, the inscription on the common grave of a married couple, of whom the wife had died first : 'I am waiting for my husband'. But, in particular, there is abundant and absolutely trustworthy evidence that the popular belief on the whole, so far as Graeco-Roman culture extended, was still determined by the original Roman and Greek ideas of the other world, which in the course of centuries had variously amalgamated.

Certainly, Roman writers have asserted at different times, that no one believed in the old popular fables of the underworld. No old woman, says Cicero, is so weak-minded as to be afraid of 'the Acherontian depths of Orcus, the pale realm of death wrapped in darkness'. No one, says Seneca, is so childish as to fear Cerberus and the darkness and the ghostly figures of the skeletons of the dead. Only quite young children, who as yet pay no entrance money to the baths, believe that there are departed spirits, and subterranean realms, a Cocytus and black frogs in the Stygian abyss, and that so many thousands cross the river in a bark. In any case it is true that the Greek ideas, to which these passages chiefly refer, were less generally accepted in Italy and the western

298 Belief in the Immortality of the Soul

lands, although there also the reading of poetry in all the schools, theatrical performances and the plastic art, must have favoured their propagation, which was undoubtedly underestimated by the authors cited. Yet Lucretius could say that the fear of Acheron troubles man's life from its inmost depths, throws the dark shadow of death over all and allows no pleasure to be pure and unalloyed ; certainly in his pictures of the universally dreaded tortures and ' eternal punishments ' in Tartarus the Orphic descriptions of the underworld may have been before his mind.

Juvenal could hardly have been serious in denying the persistence of the Roman popular belief in the spirits of the departed ; his idea seems to have been to represent only its coarser elements as entirely abandoned, and even in this he is certainly wrong. Like all enlightened intellects, he is only too ready to assume the opinions that prevailed in his own circles to be the only ones that are reasonably possible and consequently universally admitted. But least of all was Juvenal in a position to deny the general belief in immortality. No one will dispute that he must at least have known as much about the views of his educated contemporaries as ourselves.

In regard to one at least of the Greek fables ridiculed by Juvenal we know that it was widely believed in, even in the west. This is the fable of the ' grim ferryman of the muddy pool ', as Juvenal calls him, to whom the dead man is obliged to present his obol in his mouth as passage money. That the people in Greek countries generally believed in the existence of the ferryman of the dead is expressly attested by Lucian : ' the mass is so preoccupied with this idea that, when a man dies, his relatives hasten to put an obol into his mouth to pay the ferryman for his passage across the Styx, without first finding out what money is current in the underworld ', and so on. Even at the present day this custom exists in Greece, and Charon still survives, although in altered form, in the popular belief and songs under the name of Charontas or Charos, a god of death and the underworld generally. Sometimes he appears as an archer, sometimes as a reaper, sometimes as a monstrous ghostly horseman escorting the hosts of the dead, sometimes as an eagle swooping down upon its prey, and sometimes (but rarely) as the ferryman of the dead How

general and deeply rooted must that belief have been, which has given proof of such indestructible vitality, in spite of the fact that, for fifteen hundred years, all the conditions necessary for its continuance were lacking ! Originally, to all appearance, the piece of money given to the dead man to take with him was a symbol of the purchase of his entire property, which he was supposed to take with him intact. This obviously ancient custom, which persisted with remarkable tenacity in many countries of the Roman empire to a late period, indeed, through the middle ages and down to our own times, was brought into connexion with the idea of the ferryman of the dead, and this explanation (of the obol as passage-money) became a popular belief.

If, therefore, there can be no doubt that a thing which, according to Juvenal, only little children believed, was in reality believed by thousands and thousands in the Roman empire, we have as little right to doubt the persistence and propagation of the other popular ideas of the underworld. Cicero's, Seneca's and Juvenal's assurances to the contrary may be confronted with the equally positive assurance of Lucian. He says that the great mass of the common people imagined the other world exactly as the poets had described it. It was a monstrous, gloomy kingdom of the dead, ruled by Pluto and Proserpine, with Cocytus and Pyriphlegethon, the Acherusian lake, the adamant gate guarded by Aeacus and Cerberus, the asphodel meadow with the river of Lethe, the judges of the dead, who send the good into Elysium and hand over the wicked to the tortures of the Furies, while those who were neither good nor wicked wander as shades over the asphodel meadow, living upon the gifts and sacrifices offered to the dead. Plutarch says that those who feared the teeth of Cerberus and the cask of the daughters of Danaus, sought protection against them in consecrations and purifications, whereby they thought to obtain a guarantee that they would continue to live in Hades in a clear spot and pure air, in the midst of jest and dance. He certainly was of opinion that 'not many' believed these 'old wives' fables'; but of course his estimate was subjective and determined by accidental impressions, like that of Lucian, to whom the number of believers appeared to be very large. Thus the statements of both are equally unreliable. But we can hardly suppose

that the ideas of the great multitude in regard to life after death were more enlightened than those of a man like Aristides, who nevertheless appears to have believed that those who had not been initiated into the Eleusinian mysteries would lie in the underworld surrounded by mud and darkness. In his essay *On Superstition*, Plutarch enumerates amongst its hallucinations the ideas of the deep gates of Hades, of the streams of fire and steep precipices of the Styx, of a darkness full of ghosts, where frightful forms appear and piteous cries are to be heard, of judges and executioners, of gulfs and abysses, that conceal a thousand torments ; and the fact that he himself regarded superstition as a widespread evil, is the result (as already observed) of the eagerness with which he combats it.

We may suppose that many, if not most, Greek ideas passed into the popular belief of the West, especially when we consider the effect exercised by the Roman poets through the schools. From the time of Ennius, detailed descriptions of the underworld were a favourite subject with epic (perhaps also tragic) poets, and that of Virgil before all others probably influenced, both directly and indirectly, the ideas of a vast multitude.

No proofs are needed to show that the ideas of a more or less material existence of the departed, such as is assumed in the old fables handed down from time immemorial, were as widespread amongst the masses as the fables themselves. The vast majority of mankind at that time were even less capable than they are now of exercising the faculty of abstraction, which the idea of a purely spiritual existence requires. In every attempt to portray the unknown life the imagination left to itself was, and still is, obliged to work, involuntarily and unconsciously, with colours and forms borrowed from the life with which it is acquainted, and its most refined and most ethereal images are no more immaterial than the rudest and grossest. It was in the nature of things that the latter should be the only ones which the great multitude could comprehend and retain. All the less reason, therefore, is there to doubt the assertion of Lucian, that many believed that the dead really lived on the gifts, sacrifices and meals offered them by those who survived them ; that many ordered their belongings, clothes and jewellery to be burnt or buried with them, in the belief that they would need them in the

next world or would be able to derive some benefit from them. In fact, a great part of the articles of domestic life preserved in our museums comes from graves, in which were deposited the soldier's weapons, the artist's and artisan's tools, the women's toilette articles, and the child's playthings. The orator Regulus ordered his fourteen-year-old son's numerous teams of driving ponies, his riding ponies, his large and small dogs, his nightingales, parrots and blackbirds to be burnt on his funeral pyre. In Lucian's *Philopseudes* a husband tells how he has shown his love for his deceased wife not only during her life but also at her death by burning all her clothes and jewellery with her; yet on the seventh day, while he was reading Plato's *Phaedo*, she appeared, and complained that one of her gilded sandals had not been burnt with her. She indicated the spot under a chest where it was; when found, it was burnt in accordance with her desire. The objects to be buried with the dead were frequently defined by will. The will (first century) of a wealthy Roman in the district of the modern Langres gives instructions (perhaps in accordance with old Celtic usage) that all his hunting and fowling appliances are to be burnt with him—lances, swords, knives, nets, snares, lime-twigs, bird-lime, hunting tents, etc., litters and sedan-chairs, a boat made of reeds, all his variegated and embroidered clothes and all the chairs (?) of elk's horns. The same will orders the planting of orchards near the grave, which are to be continually tended by three gardeners and their apprentices; gardens, vineyards, and parks were very frequently laid out near graves, 'in order that the departed souls might enjoy the beauties of nature'. An inscription at Cirta says: On my tumulus bees shall sip the thyme blossoms, the birds shall sing pleasantly to me in verdant grottoes; there buds the laurel, and golden bunches of grapes hang on the vines. We may well believe that many of the extant testamentary dispositions which refer to the adornment and cult of the graves were made in the belief that the departed were able to take an interest in the joys and pleasures of this world, and certainly very often in the belief that they continued to lead a material existence, especially in the vicinity of their graves.

After all that has been said, no further proof is needed of the widespread belief in immortality even in the later days

of antiquity. Besides, it is sufficiently shown by a single fact which has hitherto not been taken into consideration: the equally widespread belief in apparitions, and consequently in the possibility of the return of the dead, in a general intimate connexion of the world of spirits with the world of the living, in a constant influence of the former upon the latter. This was a very ancient belief among both Greeks and Romans; but our knowledge of its development and of the forms which it assumed amongst the two peoples is incomplete. The idea that the good spirits of the departed acted as protecting spirits of the living, crops up in the oldest Greek poetry. For instance, Hesiod says that the souls of the men of the golden age, after its close, became good spirits ('demons') who, wrapped in mist, wander over the earth as guardians of mortal men, keep watch over justice and injustice, and distribute wealth; but nothing more is heard of this idea until the time when the later Platonism amalgamated it with its theory of demons. The corresponding belief in the spirits of the wicked as *larvae* and *lemures*, 'tormented themselves and tormenting others', can, on the other hand, only be shown to have been general and firmly held amongst the Romans. But in other respects the two peoples are commonly in agreement as to the belief in spirits. Among both the belief was chiefly connected with the spirits of those who had died a violent death, whose implacable wrath pursues and destroys even the innocent, and of those who remained unburied. Even if, in later times, the Greek and Roman belief in spirits, in consequence of an interchange of ideas, tended to approximate more and more, the former lacks the firm support, the definite form and direction, which the latter received from a public cult. The idea of an uninterrupted mutual intercourse between the upper and lower worlds was supported and strengthened in Roman popular belief especially by the opening of the *mundus* (i.e. the deep circular pit, which in every city was consecrated to the gods and spirits of the lower world, also regarded as gods of sowing) on three days in the year (August 24, October 5, November 8), when the hosts of 'the silent ones' could go in and come out unhindered; then the festival of All Souls on February 21 (*Feralia*) and the *Parentalia* in the preceding week (13-20), the neglect of which, according to the legend, was fol-

lowed by a terrible mortality ; lastly, the usages whereby it was attempted to appease and conciliate the ghostly visitants during the three nights of the *Lemuria* (9, 11, and 13 May).

The intimate and mutual connexion of belief in immortality with the belief in ghosts, the eagerness to accept the latter in support and confirmation of the former, and the fact that sceptics were convinced, or ready to be convinced, by apparitions, need no explanation. The author of the *Homilies* of the so-called Clement of Rome relates that, when tormented by doubts as to immortality, he desired to be incontestably convinced by the actual sight of a departed soul. He thought of journeying to Egypt and persuading a magician to conjure up a dead man ; but on being reminded by a philosopher that this was not only forbidden by law, but was an act hateful to God, he abandoned his intention. A monument erected by a certain Tiberius Claudius Panoptes and his wife Charmosyne to their two daughters 'after a vision', bears the inscription : 'Thou who readest this and doubtest whether there are *Manes*, make a wager with us, and thou wilt soon learn the truth'. But even in educated circles belief in ghosts and in immortality often went hand in hand. It is true, however, that not only all those who held or were inclined to Epicurean or materialistic views, ridiculed the nightly wanderings of the *Lemures*, dreams, miracles, witches and magic, and declared that only women, children and delirious invalids saw ghosts, but a large number of those who believed in immortality (e.g. Seneca) doubted or rejected the idea of the appearance of ghosts.

But whether they formed the majority even in philosophically educated circles (especially after the second century), is by no means certain. The company of Eucrates described by Lucian in the *Philopseudes* have not the slightest doubt that there are 'demons and ghosts, and that the souls of the dead wander about on the earth and appear to as many as they please'. This company consisted of a physician, a Peripatetic, a Stoic, a Platonist and a holy Pythagorean ; Eucrates himself was a man who had thoroughly studied philosophy. The neo-Pythagoreans and Pythagorizing Platonists, who found in apparitions a guarantee of the truth not only of their belief in immortality but also of their demonology, were the firmest believers in ghosts. The philoso-

phizing rhetorician Maximus of Tyre, whose views are founded entirely upon a Platonism already inclining to neo-Platonism, like all those who shared his opinions, regards the demons (including departed souls) as the real bond between the sensual and super-sensual world. The souls that have become demons, he says, are grieved at their past and happy in their present life; they are also distressed at the lot of kindred souls, who still linger on earth, and in their love of mankind desire to associate with them and to hold them up when they slip. And they are commissioned by the divinity to visit the earth and to take an interest in every human birth, in the destinies, thoughts and actions of men, to help the good, to assist those who suffer wrong, and to punish those who do evil. He relates, without expressing the least doubt, that the inhabitants of Ilium often saw Hector with glittering arms bounding at full speed over the plain, and that Achilles often appeared to mariners on the little island in the Black Sea before the mouth of the Danube, where as a glorified hero he had a sanctuary: some beheld him advancing in the form of a young man with fair hair in golden armour, others heard him singing a battle song, while others both heard and saw him. Achilles himself had awakened a sailor who had fallen asleep on the island, led him to his tent and given him hospitality; Patroclus poured out the wine, Achilles played the *cithara*, and Thetis and a band of demons were present. Apuleius has handled the theory of demons with special affection. The human soul also is included amongst the demons in their capacity of mediators between the earthly and the higher world; the souls of the good and just after death act as protecting spirits on earth; those of the bad are condemned to perpetual wandering as *larvae*, 'harmless bugbears to good men, but destructive to bad'. In his defence against the charge of magic he utters the following imprecation against his accuser, by whom he had been falsely accused of using the figure of a skeleton for magical purposes: 'May the God (Mercury) who wanders backwards and forwards between the upper and the lower worlds, bring upon you the displeasure of the gods of both in requital for this lie; may you ever see before you the figures of the dead, and all the shades, *Lemures*, *Manes*, and *Larvae* that there are, all the nocturnal apparitions,

all the ghosts of the tombs, all the terrors of the places where the dead have been burnt'. An inscription at Puteoli concludes with the words: 'May the wrath of the shades of those who lie buried here visit him who moves this stone from its place'. Plutarch, in his dedication of the biographies of Dio and Brutus to Sossius Senecio, in order to refute those who disbelieved in apparitions, appealed to the authority of those who foretold the end of these two men, so strong-minded and philosophical, as they themselves admitted. He quotes the statement of others (apparently without disbelieving it) that a ghost had haunted, and continued to haunt, a bath at Chaeronea, where in Lucullus's time a murder had been committed. But the belief in spirits and demons was also compatible with other philosophical opinions than those of Platonism. The Cynic Peregrinus Proteus, who according to Lucian threw himself into the flames with the cry, 'O demons of my mother and father, receive me graciously!' had spread the report that after his death he was destined to become a demon who afforded protection by night; and there could be no doubt that a number of people would be simple enough to declare that they had met him at night or that they had been cured of fever by him. The younger Pliny, whose views were chiefly determined by Stoicism (he had been intimate with the Stoics Euphrates and Artemidorus), begs his friend Licinius Sura (consul 102) to give him his opinion as to whether there were such things as ghosts and whether they had a form of their own and a superhuman nature (*numen*), or whether they were merely idle fancies, which received their shape from our own fears. He believed the former, and amongst other proofs told a ghost story, which is very like that of the Pythagorean Arignotus in Lucian's *Philopseudes*. A large house at Athens was rendered uninhabitable by a ghost that haunted it every night; the spirit appeared in the form of an emaciated old man with a long beard and chains on his hands and feet, which rattled terribly. At last a philosopher named Athenodorus had the courage to face the ghost, which beckoned to him till he took a light and followed it; in the court it suddenly disappeared. On the following day the spot was dug up and a skeleton in chains was found; after it had been duly buried the ghost was never seen again. Pliny believes this story,

he says, on the assurance of others, and narrates another, even still more childish, as an undoubted fact which occurred during his own lifetime. Pliny's friend Suetonius says that before Caligula's interment it was well-known that the keepers of the Lamian gardens, whither his body had been brought, were alarmed by ghosts, and that the house in which he died was regularly haunted by night until it was burnt down. The writings of Pausanias provide further examples of a strong belief in spirits amongst educated men in the second century; and yet his belief is, if possible, surpassed by the ghost-mania of Philostratus and Cassius Dio. What the former tells us of the appearances and exhibitions of power by the heroes of the Trojan war may be regarded as having been essentially borrowed from popular tradition. According to him the figures of the Homeric heroes appeared to the herdsman of the Trojan plain, as big as giants, in warlike array, especially Hector, who performed marvels, and Protesilaus among the Greek heroes, who was still alive. He was now in Hades, now in his home Phylace in Phthia (where he also imparted oracles), now in Troas; he appeared at midday, healed the sick, and gave aid in the torments of love; he blinded an adversary by his appearance. Cassius Dio repeatedly reports quite seriously that on great occasions the dead rose *en masse* from their graves, e.g. at the battle of Actium and Nero's attempt to dig a channel through the isthmus of Corinth. He relates that in the year 220 a spirit, which called itself that of Alexander the Great, exactly resembled him in form and features and wore a similar dress, marched with a retinue of 400 men dressed as Bacchantes from the Danube to the Bosphorus, where it disappeared; no official ventured to stop it, but on the contrary, lodging and food were everywhere provided for it at the public expense.

A widespread and absolute belief in ghosts in higher and educated circles may also be inferred from the frequent mention of spells to call up the spirits of the dead. These incantations seem very frequently to have been the cause of horrible crimes, since enchantment was supposed chiefly to have power over the souls of those who had died a violent death, especially if premature; hence, murders, particularly of children, were only too often committed with this object. Amongst the Roman Emperors Nero, Caracalla, Didius

Julianus and Elagabalus (Heliogabalus) practised this kind of magic. Dio expressly states that the two last caused children to be put to death. Caracalla, who tried every kind of magic and divination, in order to get rid of the apparitions of his father and his murdered brother, by which he was continually pursued, endeavoured to call up the spirits of the former and Commodus, but in vain; it was whispered in Rome that the shade of Geta appeared with that of Severus. For the same reason Nero called up the spirit of his mother Agrippina. He was most passionately addicted to the incantation of spirits, and since 'his dearest wish was to slaughter human beings', he may well have offered more sacrifices to his mania than any one else. Tiridates, the Parthian king who came to Rome in 66 with a retinue of magi, initiated him into the 'magic meals' and all the secrets of magic, with which, however, Nero must already have had some acquaintance. For Lucan (died 65) has inserted in his *Pharsalia* an episode of the incantation of the dead, described in luxuriantly horrible language, obviously with no other intention than to emphasize his condemnation of this mania of the Emperor, whose avowed enemy he had been since 64. It is Sextus, 'the unworthy son of the great Pompey', who endeavours to learn the future by calling up the dead; disdaining the aid of sacred prophecy and legitimate means, he had recourse to the 'horrible mysteries of the magi, those enemies of the gods' and to the terrors of the underworld; 'the gods of heaven were not omniscient enough for the wretch!' The sorceress Erichtho, who complies with his wish, is an unnatural creature, who establishes her claim to be listened to by the gods of the underworld by numerous cruel and monstrous crimes, amongst which the murder of children is expressly mentioned. The description of the ceremony itself does not produce the impression that it is a mere picture of the imagination. Its details are substantiated in almost every essential part by other similar descriptions. It is almost indispensable in such cases that the ghost should only answer questions, and not speak without being spoken to; and the choice of a dead body, whose lungs are uninjured, can hardly be a poetical invention, but appears to be a practice of those who called up spirits, which was certainly greatly favoured by believers. It is also easy to

understand the assertion that it would be easiest to revive the bodies of those who had recently died. Conjurations of the spirits of those who had long been dead probably succeeded best without witnesses. Thus the Alexandrian savant Apion summons the shade of Homer, in order to ask him in which of the seven cities which claimed the honour of his birthplace he was really born. Unfortunately, the spirit did not allow him to communicate the answer, perhaps for the same reason as the spirit of Protesilaus in Philostratus; since the zeal of the other cities in the worship of Homer would be abated.

Further, magicians made use of the spirits called forth, as well as of other demons, to torture their enemies with apparitions, to inflict pain and sickness upon them, to tie their tongues, and so on. Similar magical arts were also practised by means of incantations written on tablets of lead and laid in the graves; a number of these have been preserved. This practice is a species of the so-called 'devotion', whereby living persons were consecrated to the powers of the underworld. It is founded on the old and widespread belief that these powers exercise authority over life, which they endeavour to draw down beneath the earth; the spirits of the dead included amongst them, who, in order to appease them, were called the good or the friendly (*Dei Manes*) and had to be conciliated with sacrifices, are also invoked in the old formula of 'devotion', whereby the Roman general dedicated the army of the enemy to death. In an epitaph erected by a husband to his dead wife, he declares that he honours her remains with as much awe as a divinity. 'O dearest, spare thy husband; I implore thee, spare him, that for many years longer he may continually bring thee sacrifices and garlands, and fill the lamp with fragrant oil'. An address to a dead 'mistress or patroness' runs: 'As long as I live, I will honour thee; what will happen after my death, I know not. Spare thy mother and thy father and thy sister Marina, that she may be able to pay thee honour when I am gone!' With the same idea the dead are called upon to preserve their relatives or to pray for them to the gods of the underworld.

Even if we are only acquainted with the dark and sinister aspect of the belief in spirits at that time, it is enough to prove that the tendency to plunge into the mysteries of the next world and the world of spirits was widespread and irresis-

tible ; and even if the horrible may have constantly exercised a most irresistible attraction upon the imagination, the latter assuredly must also have busied itself in portraying the peace and rapture enjoyed by the blessed in contrast to the tortures and restlessness of the unhappy.

But certainly the consolation, which the belief in immortality afforded to that age and to antiquity generally, was very different from that offered to believers by the Christian hope of eternal happiness. The ancient belief in immortality not only lacked the incontestable security and certainty of a belief based upon revelation and consequently the firm support afforded by the latter to the imagination in its portrayal of the other life ; in addition, it was by no means so exclusively directed towards eternity as the Christian belief, but quite as much, if not to a greater extent, towards the life on earth. According to the Roman popular belief and the Platonic demonology, the reward of the good chiefly consisted not in being carried away to a super-terrestrial and blessed existence, but in taking part in the joys and sufferings of those who came after them, as guides, helpers, and protectors. Cicero could find no other explanation of the fact that, at all times and amongst all peoples, the best are ready to sacrifice themselves, than that they will be able to be witnesses even after death of the consequences of their acts and of the glory obtained by them.

The tendency of the Greek and Roman cult of the dead was to preserve unbroken the connexion between the living and the dead. The abodes of the dead were not secluded, peaceful and rarely visited resting places, like our cemeteries, but were situated before the gates of cities, on both sides of the main road, where the stream of living traffic that flowed past was at its full. As Varro says, they were intended both as a constant warning to passers-by, that they themselves would one day reach this haven, and also as an incessant reminder, not only to relatives and descendants, but to all posterity, to keep alive the memory of the departed. On gravestones this reminder often took the following form : ' O weary wanderer, who passest me by, after long wandering, here thou shalt come at last '.

In inscriptions a prayer is frequently offered for a friendly recollection of the dead : e.g. ' Titus Lollius Musculus lies here by the wayside, that passers-by may say : Greeting to

Titus Lollius'. Similarly, wanderers are requested not to begrudge an honourable and friendly greeting to the dead, who in return blesses them for the attention: 'Mayest thou who readest these lines, enjoy a healthy life, love and be loved, until thine hour comes!' Sometimes even a reply is put into the mouth of the dead, so that a kind of dialogue between him and the passer-by could be read by the latter on the gravestone.

It was commonly believed that the dead always found pleasure in such indications of sympathy on the part of all the living without distinction, and also that the sacrifices, gifts and meals offered at their graves, the floral decorations of the memorials on 'rose and violet days', the light of the freshly-filled grave-lamp and the smell of its fragrant oil, would be equally agreeable to them, if only as proofs that they were not forgotten, by posterity. All such offerings were made under the idea that it was the desire of the departed as it were to continue to live amongst future generations. The same is the meaning of the scenes from the past life of the dead represented on Greek funeral monuments: 'their existence is as it were continued and stereotyped'. The sight of these simple and touching representations, which excites our sympathy in the highest degree, most agreeably affected the spirit of Goethe, which in this respect also was akin to that of the ancients. It specially pleased him that the men represented on these gravestones did not fold their hands or look up to heaven, but stood side by side as they had stood side by side in life, as they had loved one another: 'the wind, which blows to us from the graves of the ancients, comes with sweet perfumes over a group of rose trees'. And even those who rejected or did not need the belief in a personal immortality have at all times throughout antiquity attached great value to being held in remembrance by posterity. Even Epicurus, in whose theory of happiness the principle that existence and consciousness ceases with death forms the real keystone, ordered in his will that his birthday and the 20th of every month should be kept as a festival in memory of himself and his friend Metrodorus; and the custom was observed by his followers even for centuries after his death.

But although those who believed in immortality held firmly to the idea of a continued personal existence, higher,

purer, and consequently happier, they by no means admitted such a difference between the life beyond the grave and the life on earth as the followers of Christ. Consequently, they were not so keenly opposed to unbelief and doubt. When the Greeks in popular language called the dead 'blessed', it meant that they were delivered from the troubles, sufferings and disappointments of life. Death, which brought this deliverance, did not therefore appear an evil, even if it was the end of existence. The words put by Plato (in the *Apology*) into the mouth of Socrates, addressed to his judges after his condemnation, perhaps best express the contrast between the Christian and the pagan view of the matter: Death is either an eternal sleep or the passage to a new life, but in neither case is it an evil. Both views, consequently, are consolatory, but one more so than the other.

The Christian belief regards death, not followed by resurrection to a life of happiness, as the most unhappy lot imaginable. It considers the next life as the true one, from which earthly existence receives its light, and without whose beams it would be completely dark. Happiness will not fall to the lot of man, says Lactantius, in the way philosophers have imagined. No man can be happy so long as he lives in the body, which must necessarily be dissolved by decay, but only when he lives in the spirit alone, after the soul has been freed from the companionship of the body. One thing alone can make us happy in this life, to however small an extent; we must flee from the seductions of pleasures and serve virtue alone in all our troubles and sorrows, which are exercises and confirmation in virtue; we must keep in the rough and difficult path which is left open to us, leading to happiness. Consequently, the greatest good, the possession of which bestows happiness, can only be found in religion and doctrine, which include the hope of immortality. Augustine calls eternal life the greatest good and eternal death the greatest evil. Only that man can be called happy here below, whose whole being is directed to that end, and who keeps it steadfastly in view in glowing affection and loyal hope; even then he is happier in hope than in reality. Without this hope there is only a false happiness, only misery and sorrow.

It is a view very commonly held, that the ancients set a higher value on this life, since their hopes of the life beyond

the grave could neither be so firmly established nor so clearly set forth as those of the Christians. But the general impression derived from Greek and Roman literature by no means confirms this. The innate love of existence, nourished on the ever fresh splendours of the world and on the greatness and beauty of human life, is certainly an essential element in the ancient view of life. But it is only one of its two poles, the second and opposite being a feeling of resignation arising from a deep consciousness of human misery and helplessness, whose painful and submissive expressions pervade all ancient literature. Even Homer, to whom the idea of the other world afforded absolutely no consolation, makes the supreme god say : Of all things that breathe and creep upon the earth, nothing is more miserable than man. And even if he believed that in the hell of Zeus there stand two casks, the one full of good, the other of bad, gifts, later writers imagine two casks for the bad and only one for the good ; and Simonides thought human life so full of evils, that there was no room for the air to penetrate between one suffering and another. When the mother of Cleobis and Biton asked the goddess to grant her sons what would be the best thing a man could obtain, the goddess gave them death, and, according to Herodotus, declared that death was better for man than life. This was confirmed on several occasions by the revelations of other divinities. It is during the period of the youthful and manly vigour of the Greek intellect that the idea already expressed by Theognis and amongst others by Sophocles, and put into the mouth of Heracles by Bacchylides, is repeated in various forms : the best fortune is not to be born at all ; the next best to go whence one came as soon as possible after birth. Hence (in the oft-quoted words of Euripides) we ought to pity those who are born, and to bury the dead with joy and congratulations. Even if death is a dreamless sleep, says Socrates in Plato's *Apology*, it is preferable to life ; for every one, even the Great King, when he reflects upon his life, will find that the days and nights, which he has spent better and more happily as a dreamless night, can very easily be numbered. Menander, the wittiest poet of the Alexandrine period, whose fragments give forth the dull tones of resignation, says, ' Whom the gods love, die young ' : to him sadness appeared the ' twin sister of human life ', and that man the

happiest, 'who without sorrow has looked upon the grandeur of the world, and then returned in haste to the place whence he came'.

Even Roman literature supplies expressions of a similar kind. Thus Cicero concluded his *Hortensius* with a discussion of the vanity and unhappiness of men. The errors and hardships of life, it is said, appear to justify that ancient sage, according to whom we are born to atone for sins committed in an earlier life, and also Aristotle, who recognized that the combination of soul and body was a torture, such as the Etruscan pirates are said to have practised on their captives, whom they bound face to face with corpses and let them die. It has already been mentioned that in the case of Pliny, in whose opinion no mortal was happy and shortness of life was the greatest boon nature had granted to man, the feeling of unhappiness increased to a positive longing for annihilation, and that death appeared to him the best gift of nature. Seneca also, who delights in describing the wretchedness of life in ever varying aspects, praises death as the greatest benefit. Life is absolutely lamentable; it resembles a city taken by assault; it is a stormy sea, which surrounds us and often hurls us on the rocks, and its only harbour is death; it is slavery, when the strength to die fails; the 'cruel stress of life' is the chain which fetters us; death alone prevents the fact of our birth from being our greatest punishment. And even if a Marcus Aurelius regarded the evils of life as unreal, yet its blessings were 'vain, transitory and trifling'; life itself was 'a struggle and a passing guest', its duration a mere point, before and behind us an endless abyss that engulfs all. And yet, amidst the eternally flowing current of the past, man should, and could, stand fast as a rock in the sea; if completely untroubled about the world outside, in respectful submission to fate he retires into the stillness of his own reflections, as into a strong citadel; if he remains loyal to the god who dwells there, if he fulfills the demands of nature, conscious of being only a small part of the great whole. If with cheerful calmness he awaits the end, which may come at any moment, whether annihilation or transformation, he gently parts from life, like the ripe fruit, which in its fall utters the praise of nature as its creator and gives thanks to the tree which bore it.

INDEX TO THE COMPLETE WORK

- A cubiculo*, I. 35
A libellis, I. 52
A rationibus, I. 51
Ab admissione sive admissioales, I. 89
Abascantus, I. 53; II. 212
Ab epistolis, I. 53
 Abnormal scenery, I. 384
 Abraham worshipped, III. 118
Abonuteichos, II. 299
 Abstemiousness, II. 141
 Accompaniment, not always following song, II. 340
Acilius Buta, I. 124
Acilius Glabrio, III. 208
Acme, I. 61

APPENDICES

VOL. I

I. THE LOTUS TREE.

By Professor Ferdinand Cohn, Breslau.

(Vol. I, p. 10, l. 9 from bottom.)

THE word lotus does not appear to exist in the Semitic or Egyptian languages. Homer, like our modern poets, uses it as a foreign word, to which no clearly defined meaning is attached. It grows on the meadows of Ida under the embrace of Zeus; it is the sweet fruit which, eaten by the companions of Odysseus, made them forget their home; but this gives the botanist no better clue than the *moly* of Homer or the 'blue flower' of romantic poetry.¹ Only the lotus, which according to Homer was eaten by horses, may have been an ordinary fodder plant. In Herodotus (ii, 92) we first meet with the lotus of the Nile, 'as it is called by the Egyptians'; from the description it is easily identified with the *Nymphaea Lotus* L., to be distinguished from *Nymphaea Nelumbo*, also called lotus by us. The blue lotus-flower of the Nile (*Nymphaea caerulea* Sav.) is not mentioned either by Herodotus or Theophrastus. The latter, whose merits have not hitherto been sufficiently recognized by botanists and scholars, mentions (*Hist. Plant.*, vii, 15) the lotus as an example of those plants of which various forms bear the same name; the different kinds of lotus are distinguished by their leaves, stalk, flower, fruit, value as a food (*δύναμις κατὰ τὴν προσφοράν*), and habitat. One kind is herbaceous (*ποιῶδες*), with foliate stalk; it includes the *μελιλωτός* (a kind of clover). Another kind, also called lotus, resembles the Egyptian bean (*κύαμος Αἰγύπτιος*, *Nelumbium*), only it is smaller, more slender, and bears a fruit like poppy-heads (*Nymphaea Lotus*; *Hist. Plant.*, iv, 8, 9).

Further, lotus is the name given to certain trees in Libya, of which again there are several kinds, distinguished by their fruit. One kind thrives best and is most commonly found in the Syrtis, in the country of the Nasamones, in the island of Pharos, the old home of the Lotophagi, who took their name from it; and in larger quantities on the neighbouring mainland. This lotus (*Hist. Plant.*, iv, 3) is a tree, as large as a pear tree or a little smaller, with incised

¹ [See Novalis, *Henry of Ofterdingen*.]

leaves, like a sort of holm-oak (*πρίνος*, translated *ilex* by Pliny); its wood is black, very close, sapless (*δασαρκον*), does not rot (*δασαπής*), is too heavy to float, like box, ebony, and cornel wood; the heart (*μήτρα*) of the wood is especially thick and heavy. The fruit is broad, as large as a bean (*κύαμος*), changes its colour like the grape when ripe, grows closely together on the young shoots like myrtle berries, is sweet, of agreeable flavour, harmless, and even wholesome for the stomach; there is also a sweeter kind without stone or kernel, used for making a kind of wine or as a food. This kind of lotus is so common in Libya that the fruit is sufficient to provide food for an army for days.

The lotus called *παιλουργος* is of a different kind. It is used in the Euhesperides islands as firewood (*καυσίμοις χρῶνται*); it is distinguished from the lotus of the Lotophagi by its more shrub-like growth and its round red fruit of the size of the *κέρδος*; its wood is superior, but its fruit not so sweet; Pliny appears to call it the Cyrenaic lotus.

Lastly, some authorities mention a shrub-like (*θαμνώδης*) lotus, with many branches, a thick stalk (*στελέχει εὐπαχής*), and large fruit, not fleshy outside but more like leather, not so sweet as that of the lotus of the Lotophagi, but still of agreeable flavour; the wine which is made from it will not keep longer than two or three days, after which it turns sour.

Pliny's account of the lotus (*Nat. Hist.*, xiii, 104-6), of which he distinguishes (xiv, 101) three kinds—the tree, the shrub, and the herb—is taken word for word from Theophrastus, but he adds some comments not to be found in that author; e.g. that the Libyan tree (which he also calls *Syratica*, the Syrtian) was also called *cellis* (or *cellhis*) in Africa; that the fruit, as large as a bean, was saffron-coloured; that the berries were preserved in jars.

Again, Theophrastus does not allude to the fact that the lotus is also found out of Africa; in the passage referred to above he only speaks of the wood, which was used for making flutes, knife blades, etc., and may have been imported like ebony. Pliny, on the other hand, observes that the lotus was common (*familiaris*) in Italy, but was modified by the change of soil. He gives the name of African to a small (*brevis*, according to Nepos) tree or shrub (*frutex*), branching out from the root (*haec ibi natura arboris*, he says at the end of his description). On the other hand, the lotus of Italy is a tree with a short trunk, which throws out such a luxuriant growth of strong branches that they themselves resemble trunks. For this reason it is much in request in the front of houses, where its thick shade often extends to the neighbouring buildings; but it soon loses its foliage, and in winter does not shut out the sun. Its fruit, although wild, is agreeable in flavour, resembling the cherry, while that of the African lotus is only the size of a bean. Pliny sings its praises (*Nat. Hist.*, xvi, 123): no tree has longer, more numerous, or stouter branches, or a bark more agreeable to the eye; moreover, it attains a great age. A lotus tree in the grove of the temple of Lucina must, he thinks, be at least 450 years old, since Lucina derives her name from this very grove; a lotus in the Volcanal is considered to be as old as Rome itself; its roots penetrate through

the *stationes municipiorum*¹ as far as the Forum of Caesar (xvi, 235).

Although Pliny (certainly on insufficient grounds) asserts that the Italian lotus, as contrasted with the *Lotus transmarina*, had been from very early times indigenous, he does not give it a Latin but a Greek name (λωτός), and also calls it the Greek bean (*jaba graeca*). The latter name would be inexplicable, if it were not intended to distinguish it from the Egyptian bean, which is also called lotus (*Nelumbium*); yet it is difficult to understand how a really native tree could have acquired a name which indicated a foreign origin. Dioscorides only says of the λωτός δένδρον, that it is a large tree with sweet berries larger than peppercorns. According to Orazio Comes the lotus tree is not represented in Pompeii.

As for the botanical determination of the lotus-tree, the African can be entirely disregarded, while it cannot be decided which of the different kinds mentioned by the ancients are to be referred to the *Zizyphus Lotus* Willd. (*Rhamnus Lotus* L.), *Z. vulgaris* Lam., *Z. Spina Christi* Willd. or other kinds of fruit-trees. The 'so-called lotus-trees in Rome, or Greek beans', including those in the garden of the orator Crassus on the Palatine, which were 180 years old and still fresh and green when destroyed during the Neronian fire, must have been nettle-trees (*Celtis australis*). They certainly cannot belong to the species mentioned above, which are all only thorny shrubs or small trees. Mattioli (Matthioli) of Siena, the commentator on Dioscorides, has already identified them: 'if lotus-trees still grow in Italy, they can only be the trees which are called *Bagolaro* in the Trentino and near Görz, and *Perlaro* in the Veronese country; this is shown by the thick branches and stems, the drooping leaves notched like those of the *ilex*, the agreeable blue-black colour of the smooth bark, the stone-fruit like cherries, with long stalk, first green, then yellowish, then red, and finally black, of a sweet and agreeable flavour' (*gustu suavi non ingrato*; *Comment. in Dioscor.*, Venice, 1558, p. 157).

In Istria this tree is sometimes a metre in diameter; its blackish heart-wood, surrounded by a light, white sap-wood, is made into carriage-poles; the branches, on account of their toughness, are chiefly used at the present time for making whip-handles, which are exported in great quantities from Trieste. It is remarkable that no mention is made of this in ancient writers; Theophrastus and Pliny (following him) only speak of the lotus-wood (especially the root) being used for all kinds of turnery-ware. A *Celtis* is also found in German gardens, especially in South Germany; the Mediterranean species (*Celtis australis*) is not so hard as the kindred North American (*C. occidentalis*). *Diospyros Lotus* L., the date-plum, belonging to the order *Ebenaceae* and indigenous in the Mediterranean countries, is still cultivated in Italian gardens for its sweet, yellow stone-fruit as large as a cherry. It forms an imposing shrub, or even tree, and sometimes attains a height of 10 metres; its wood is hard and blackish. It has been often identified

¹ [Possibly seats allotted in the Forum to the inhabitants of the *municipia*, so that they might hear the speeches; cp. the *græcostasis* or station of the Greeks, i.e. foreign ambassadors.]

with the lotus of Pliny, but in my opinion answers to his description less than the *Celtis*.

II. EXHIBITION OF NATURAL CURIOSITIES AT ROME.

(Vol. I, p. 14, l. 8.)

IN republican times remarkable and rare productions of nature and art were publicly exhibited at Rome on two occasions in particular—at triumphs and the games. From the time of Pompey, who exhibited an ebony tree at the triumphal procession in honour of his victory over Mithridates (Pliny, *Nat. Hist.*, xii, 20), it became customary to carry trees in triumphal processions (for instance, the balsam-tree after the triumph over the Jews). The ornaments (*insignia*) used at the games to decorate the Forum, Comitium and other places, were chiefly works of art, but also included natural curiosities. Thus Scaurus, during his aedileship, in addition to other marvels (*miracula*) exhibited the bones (brought from Joppa) of the monster to which Andromeda had been exposed; they were larger than the ribs of the Indian elephant (*Nat. Hist.*, ix, 11). Parrots and other rare birds also seem to have been used to decorate the Forum (Varro, *R.R.*, iii, 9, 7).

In imperial times all rarities and marvels were, if possible, sent from the provinces to the emperors, who usually exhibited them in public. They were then deposited in generally accessible places, especially temples (see Pliny, *N. H.*, ix, 116, xii, 94), which in ancient times were frequently used as museums. The name given to all these curiosities was *miracula* (Pliny, xxxvi, 196, *dicavitque ipse pro miraculo—obsianus quatuor elephantes*), or θαύματα (Pausanias, ix, 21); the curators were called *οἱ ἐπὶ τοῖς θαύμασιν* (Paus., viii, 46, 2): see the note of Siebelis and Spanheim, *De Praestantia et Usu Numismatum*, i, p. 7. The *acta diurna*, which furnished material to the compilers of the city chronicles and other writers, often made mention of such exhibitions (Pliny, *Nat. Hist.*, x, 5; cp. E. Hübner, *De senatus populi Romani actis*, 1860). Of course, all notices of the kind are not derived directly or indirectly from this source; e.g. in many cases Pliny relates instances that came under his personal knowledge.

Human deformities perhaps excited the greatest interest. Philodemus, *Περὶ σημειῶν καὶ σημειώσεων*, col. 2, 3 (T. Gomperz, *Herculanische Studien*, heft i, p. 4): καὶ σπάνια δ' ἔστιν ἔνια, καθάπερ ὁ γενόμενος ἡμίπηχυσ ἀνθρωπος) ἐν Ἀλεξανδρείᾳ, κεφαλὴν δὲ κολοῦσι(κ)ήν ἔχων, ἐφ' ἧς ἐσφυροκόπουν, δ(ν ἐ)πεδείκνυν οἱ ταρειχευταί, (κ)αὶ ὁ γαμηθεὶς ὡς παρθένος ἐ(ν Ἐ)πιδαύρῳ κἀπειτα γενόμενος) ἀνὴρ, καὶ ὁ γενόμενος ἐ(ν Κρή)τῃ πηχῶν ὀκτώ καὶ τεττ(αράκ)οντα τοῖς ἐκ τῶν εὐρεθέ(ντων) ὁσίων σημειουμένοις, ἐτ(ι δ' οὐδ)ς(?) ἐν Ἀκώρῃ πυγμαίους δ(εικνύ)ουσιν, ἀμέλει δ' ἀνα(λ)όγου(ς τοῖς οὐδ)ς) Ἀντώνιος νῦν ἐξ Ἑλλά(ς ἐκο)μίσ(ατο . . .)(ἐκ Συρίας ἐκ. ?) Cp. the editor's preface, p. xix; the pygmies of Acoris (in Middle Egypt, on the east bank of the Nile) remind us of the representations of pygmies in Egyptian landscapes. Such monstrosities could be most successfully exhibited in Rome, at a time when not only dwarfs were frequently kept in the houses of the great, the deformity being sometimes caused by artificial means (Pseudo-Longinus, *De Sublimitate*, 44, 5, ed. Jahn, p. 68, 17: τὰ γλωττόκομα, ἐν οἷς οἱ πυγμαῖοι,

καλούμενοι δὲ νῆαι τρέφονται; cp. Jahn, *Archäologische Beiträge*, p. 430; J. Marquardt, *Privatleben der Römer*, i, 1886, p. 152; Casaubon on Suetonius, *Augustus*, 83), but also giants and giantesses (Martial, vii, 38). 'Genuine' crétins also fetched a high price (Martial, viii, 13) and hermaphrodites were greatly in favour (Pliny, *Nat. Hist.*, vii, 34, in deliciis habiti). There was also a monstrosity market in Rome, where specimens of men without calves, with short arms, with three eyes, and pointed heads could be bought (Plutarch, *De Curiositate*, 10: ὥσπερ οὖν ἐν Ῥώμῃ τινὲς τὰς γραφὰς καὶ τοὺς ἀνδριάντας καὶ νῆ διὰ τὰ κάλλη τῶν ὀνίων παιδῶν καὶ γυναικῶν ἐν μηδενὶ λόγῳ τιθέμενοι, περὶ τὴν τῶν τεράτων ἀγορὰν ἀναστρέφονται, τοὺς ἀκνήμους καὶ τοὺς γαλεάγκωνας καὶ τοὺς τριοφθάλμους καὶ τοὺς στρουθιοκεφάλους καταμανθάνοντες καὶ ζητούντες, εἰ τι γεγέννηται σύμμικτον εἶδος κάποφύλιον τέρας κ.τ.λ.).

Augustus publicly exhibited a boy named Lucius Icius, who was not quite 2 feet high, weighed 17 pounds and had a stentorian voice (Suetonius, *Augustus*, 43). On the other hand, according to Papius Fabianus, there was at that time in Rome a boy, whose stature was that of a very tall man; but he soon died, as had been generally anticipated (Seneca, *Ad Marciam*, 23, 5). In the reign of Claudius a giant from Arabia, named Gabbara (— 'giant' in Arabic), 9½ Roman feet high, was exhibited (cp. Fleischer in Sillig on Pliny, *Nat. Hist.*, vii, 74). He is perhaps identical with the one mentioned by Columella (*De Re Rustica*, iii, 8, 2), who calls him a Jew, and states that he had recently been exhibited at a *pompa circensis*, and was taller than the tallest Germans. Amongst the presents sent to Tiberius by Artabanus was a Jew named Eleazar, seven ells long (Josephus, *Ant. Jud.*, xviii, 4, 5: διὰ τὸ μέγεθος γίγας ἱερακαίτο). Such curiosities were preserved after their death for public edification. Pliny (vii, 75) saw some dwarfs' bodies in cases; a giant and giantess named Posio and Secundilla were to be seen in the time of Augustus in a vault in the gardens of Sallust. From Antioch on the Maeander an androgynous being was brought to Rome and presented to Claudius. Up to the age of thirteen it had been a girl, and in the year 45, when about to be married, exhibited the signs of manhood. Nero, in 61, was presented with a child with four heads, with limbs corresponding (Phlegon, *Mirabilia*, 35 and 49, in C. W. Müller, *Frag. Hist. Graec.*, iii, pp. 618, 622).

Any rare and remarkable animals that reached Rome were exhibited by Augustus, who took special delight in them (Aurelius Victor, *epit.*, i, 25), in the circus and other places: a snake 50 ells long in the Comitium, a rhinoceros near the Septa, a tiger on the stage (Suetonius, *Augustus*, 43). Apparently he also exhibited the presents received from India, it was said from King Porus: a man without arms, three large adders, a snake ten ells, and a river tortoise three ells long, a partridge larger than a vulture—perhaps 'the jungle fowl which Forbes describes as having something of the plumage of the partridge' (O. de Beauvoir Priaux in *Journal of the Royal Asiatic Society*, xvii, 370, 27; Strabo, xv, 719: τὸν τε ἐρίμαν, ἀπὸ τῶν ὤμων ἀφηρημένον ἐκ νηπίου τοῦ βραχίονος, ὃν καὶ ἡμεῖς εἶδομεν κ.τ.λ.). The phoenix which was brought to Rome in 47, to justify the celebration of the Secular Games (Hirschfeld, *Zu den*

Silvae des Statius, in *Oesterr. Mitth.* iii, 1881, p. 275 f.) was exhibited by Claudius in the Comitium; but it was universally regarded as an imposture (Pliny, x, 5; Tacitus, *Annals*, vi, 28; Dio, lvi, 27; Hübner as above, p. 48 f.). The white deer, which Pausanias (viii, 17, 4) admired at Rome, also appear to have been publicly exhibited; on the other hand, the animals mentioned by him in ix, 21 were probably seen by him in the amphitheatre or confined in cages. A model of the skeleton of a whale, which had strayed into the Mediterranean, was shown by Severus in the amphitheatre, probably at the games; it was large enough to hold fifty bears (Dio, lxxv, 16).

Tiberius also exhibited a beam from the longest trunk of a tree known up to Pliny's time. It belonged to a larch that had been felled in Raetia, was 120 feet long, and of a uniform thickness of 2 feet. It was used in the building of Nero's amphitheatre. Agrippa also kept as a curiosity, in a portico of the *Septa* built by him, a beam 1½ feet thick, and 20 feet shorter. Pliny had seen it himself (xvi, 200 ff.). Curiosities of the vegetable kingdom were certainly sent regularly from the provinces to the emperors. A procurator sent from Byzacium in Africa nearly 400 sprouts from a single grain of wheat; Nero received from the same district 360 stalks from a single grain (Pliny, xviii, 94), and from Cyrenaica a specimen of the plant *silphion*, a great rarity, since at that time it had completely died out in the district (Pliny, xix, 39). During the reign of Nero a transparent stone as hard as marble was discovered in Cappadocia, which soon became known in Rome, for Nero used it for building in the Golden House a temple of Fortuna which remained light by day, even when the doors were shut (Pliny, xxxvi, 163). Galen says (*De Antid.*, i, 4 ed. K., xiv, p. 25), *κομζομένων γὰρ τοῖς βασιλεῦσι τῶν ἀρίστων ἀπανταχόθεν*, etc., and mentions (*ib.*, p. 64) that the most valuable medicaments from distant lands were kept in large quantities in the imperial storehouses (*ἀποθήκαις*).

On more than one occasion gluttons excited general interest in Rome. The chronicler of the year 354 informs us that 'in the reign of Nero there lived a glutton, named Arpocras, an Alexandrian by birth, who consumed the following trifles (*manducavit pauca*): a boiled wild pig, a live hen with its feathers, 100 eggs, 100 stone-pine kernels, hobnails, broken glass, the twigs of a palm-broom, four tablecloths, a sucking pig, a bundle of hay—and then still seemed hungry'. It was said that Nero wanted to give him live men to tear in pieces and devour (Suet., *Nero*, 37). Another person exhibited himself under Alexander Severus, who, according to the same chronicler, performed similar feats of gluttony. A third named Phagon lived under Aurelian, who was highly delighted with him (*Vit. Aurel.*, 50; cp. Mommsen in *Abhandlungen der Sächs. Ges.*, ii, p. 646).

Instances of remarkable female fecundity and multiple births also attracted attention. Amongst the images of remarkable persons set up by Pompey in his theatre was one of a woman of Tralles named Eutychnis, who had borne 30 children, 20 of whom had carried her body to the pyre (Pliny, vii, 34). The *acta* of the 11th of April, 5 B.C., reported that a citizen of Faesulae had sacrificed on the Capitol with 8 children, 28 grandsons, 19 great-grandsons,

and 8 granddaughters (*ib.*, vii, 60) ; this was recorded not merely as a curiosity, but as affording a vivid contrast to the ever-increasing celibacy and the low birthrate. The State chronicle of 354, under Diocletian and Maximin, reports that a woman in Rome named Irene had four children at once, three boys and a girl. A female slave of Augustus bore five children at once, and Augustus ordered the fact to be recorded on her tombstone after her death, which took place soon afterwards (Gellius, x, 2). It is repeatedly mentioned in the *Digests* that under Hadrian a woman of Alexandria, named Serapias, was brought to Rome, who bore four children at a birth, and forty days later brought a fifth into the world (Ulpian, *Digg.*, v, 4, 3 : sed et Laelius scribit se vidisse in Palatio mulierem liberam, quae ab Alexandria perducta est, ut Hadriano ostenderetur, cum quinque liberis, ex quibus quatuor eodem tempore enixa, inquit, dicebatur, quintum post diem quadragesimum). According to Gaius it was only a single birth (*ib.*, xxxiv, 5, 7) : Julianus, who says the same, adds : Et hoc et in Aegypto affirmatum est mihi (*ib.*, xlvi, 3, 36). This is certainly the same woman whose children, according to Phlegon of Tralles, were brought up at the expense of the emperor Trajan (*Mirabilia*, 58 in Müller, *Frag. Hist. Graec.*, iii, p. 623) : καὶ ἑτέρα τις γυνὴ κατὰ τὴν αὐτὴν πόλιν, πέντε ἐν ἐνὶ τοκετῷ ἀπεκύησε παῖδας, τρεῖς μὲν ἄρρενας, δύο δὲ θηλείας· οὗς ὁ αὐτοκράτωρ Τραϊανὸς ἐκέλευσεν ἐκ τῶν ἰδίων χρημάτων τρέφεσθαι. πάλιν δὲ μετ' ἐνιαυτὸν ἄλλα τρία ἢ αὐτῇ γυνὴ ἔτεκεν (cp. S. W. Zimmern, *Geschichte des römischen Privatrechts*, i, 330). Phlegon also reports that he had seen a man 136 years of age, who had been shown to the emperor Hadrian (*Mirab.*, p. 610 : Φαῦστος Καίσαρος δοῦλος ἐκ Σαβίρων ἀπὸ πραιτωρίου Παλλαντιανοῦ ἔτη ρλς, ὃν καὶ αὐτὸς ἐθεασάμην, Ἀδριανῷ τῷ Καίσαρι ἐπιδειχθέντα). A friend of Porphyry the Neoplatonist had a slave, who understood the language of birds ; but his mother, being afraid that he might be sent as a present to the Emperor, made water in his ears while he was asleep, with the result that he lost the gift (Porphyry, *De Abstin.*, iii, 3, p. 220 Rhoer.).

Sometimes pretended fabulous creatures were brought to the capital from distant parts of the vast empire. Manilius, who (in the last days of Augustus) mentions (*Astron.*, iv, 101) 'the bodies of animals with human limbs', appears to have seen such creatures. A wild man is said to have been brought to Rome from the African desert, where there were supposed to be wild men and women (the latter of which some considered to be the origin of the Medusa legend). The date cannot be ascertained, for Pausanias who mentions the fact (ii, 21, 7) relies on an unknown writer, the Carthaginian Procles, son of Eucrates. Under Claudius a hippocentaur (a fabulous monster, half-man, half-horse) was caught alive on a mountain in Arabia and sent to the prefect of Egypt with other presents intended for the Emperor ; it died there, was preserved in honey, sent on to Rome, and shown in the imperial palace. Phlegon, who describes it fully, says (*Mirab.*, 63, Müller, p. 623) that any one who disbelieved it could see it, ἀποκρίνεται γὰρ ἐν τοῖς ὀρίοις (ἔμπροσξ Xyl. and Jordan, *Topographie*, ii, 151 : ὀππελοῖς Meursius, ἠθσαυροῖς Bochart) τοῦ αὐτοκράτορος τεταρχευμένος ὡς προσέειπον. Pliny also briefly refers to the creature (vii, 35). A satyr was sent to Constantine at

Antioch (sale infuso—ut ab imperatore videretur; Jerome, *Vit. Paul. Erem.*, ed. Vallars, ii, 7 f.; cp. J. Beckmann, *Gesch. d. Erfind.*, ii, 274). Up to Pliny's time Tritons and Nereids appear to have been only heard of, not seen. An embassy from Olisipo (Lisbon) to Tiberius announced that a Triton of the well known type had been seen and heard there in a cave, blowing a shell; that a Nereid, also of the usual type, but covered with scales in the human part of the body, had been seen on the same bank, and the inhabitants had heard the melancholy wail of the dying water-nymph (Pliny, ix, 9). Pausanias, however, saw a Triton in Rome (ix, 21, *ἐν τοῖς Ῥωμαίων θαύμασι*), with green hair, skin covered with scales, large teeth, the hands covered with shells like those of mussels, ending in a fish's tail. Poggio also mentions the appearance of a Triton, of which he saw a wooden model in Ferrara (Jakob Burckhardt, *Cultur der Renaissance*, p. 528).

In the year 17, when Asia Minor and several other countries were visited by an earthquake, a supposed relic from the heroic age was sent to Tiberius. In places where the earth had split asunder remains were found of bodies of enormous size. As a sample, a tooth from one of them, more than a foot long, was sent to Tiberius. Being asked whether he would like the whole body to be sent, he declined, being unwilling to disturb the rest of the heroes in their grave; but, in order to form an idea of its size, he ordered a geometrician, named Pulcher, to make a model of a head in proportion to the length of the tooth, which he then sent back (Phlegon, according to the grammarian Apollonius, *Mirabilia*, 43, Müller, p. 621).

These freaks of nature aroused fresh interest in Christian times. They proved the possibility of many of the statements in the Bible. Augustine remarked that there was nothing incredible in giants being born from the union of angels and mortal women, since shortly before the destruction of Rome by the Goths (410) a giantess had been publicly shown, whose parents were of the ordinary stature. Augustine had also seen the molar-tooth of a giant on the shore at Utica (*De Civitate Dei*, xx, 9; 23, 2). On the other hand, the freaks of nature, real and fictitious, such as pygmies, *skiapodes*,¹ et caetera hominum vel quasi hominum genera, quae in maritima platea Carthaginis musivo picta sunt, ex libris deprompta velut (?) curiosioris historiae (*ib.*, xvi, 8, 1), were used by unbelievers as arguments against the possibility of the descent of all men from Adam. Although Augustine regarded many of these supposed freaks as pure invention, he observes that there were certainly many men who, though wonderfully made, were still men and consequently descended from Adam. At Hippo Diarrhytus there was a man whose feet were almost crescent-shaped, with only two toes on each, and hands the same. Hermaphrodites undoubtedly existed, although they were very uncommon. Further, several years before, but during his time, a man had lived in the East who had two heads, two breasts and four hands; from the middle of the body downwards his limbs were single, but of remarkable length. As long as he lived

¹ [A fabulous people in Libya, the soles of whose feet were so large that they could turn them up and use them as umbrellas.]

many persons undertook the journey to the East on purpose to see him.

III. PROVINCIALS IN ROME.

(Vol. I, p. 14, l. 13.)

THE victories of Greek and Asiatic athletes, musicians, singers, flute and cithara players in the Capitoline and other Roman *agones* are frequently mentioned in their inscriptions (*CIG*, i, 247, 1440; ii, 2682, 3425, 3674; *Add.*, p. 1112, no. 2810 b; iii, 5804-6, 5919, 6829). On plastic artists from Greece and Asia Minor see vol. ii, pp. 322f. The majority of the sophists, whose lives are described by Philostratus, appeared in Rome. On the influx of Greek savants into Rome (in Strabo's time especially from Tarsus and Alexandria), cp. Bernhardt, *Griechische Literaturgeschichte*, § 82, 2, vol. 1², p. 497 ff. On the grammarians, who settled in Rome during the period from Augustus to Trajan, see E. A. Gräfenhan, *Geschichte der klassischen Philologie*, iii, 32-67.

The following poets of the Anthology mention their stay in Rome: Antipater of Thessalonica (ep. 27), Jacobs, ii, p. 102; Crinagoras (ep. 24), *ib.*, p. 134; Antiphrilos of Byzantium (ep. 16), *ib.*, p. 158; Leonidas of Alexandria (ep. 8), *ib.*, p. 175; Lucillius, *ib.*, iii, p. 29. Greek, Oriental and Egyptian physicians and astrologers in Rome will be spoken of later. Here we may add a few examples of provincials, who came to Rome, some of them at a very early age, to finish their education. From Rhegium (*CIG*, iii, 6112):—

δῶρα δὲ Μουσῶν καὶ βρέφος ὦν ἀγαπῶν,
δωδεκέτης ἦλθον Ῥώμην, φίλε, τῆς με καλύπτει
ἥδε νέον βῶλος πατρὶ λιπόντ' ἀχέα.

From Lugdunum (Boissieu, *Inscr. de Lyon*, p. 499): *Memoriae A. Vitellii Valerii*. Hic annorum X in studiis Romae de[functus]. A beautiful youth from Messene in Arcadia studied law in Rome (Philostratus, *Apoll. Tyan.*, vii, 42). Epitaph of one Titus Oclatius Athenagoras Nicomedensis juris studiosus on the Via Labicana (Henzen, 7235). Other instances of provincials studying law in Rome in E. Kuhn, *Die städtische und bürgerliche Verfassung des römischen Reichs*, i, 88, 608; O. Karlowa, *Römische Rechtsgeschichte*, i, 674. Epitaph of a youth of Salona who died in his twenty-second year (*CIL*, iii, 2, 6414: nam studiis jam Rome (*sic*) laetantem invida Fortuna repenti funere mersit).¹ From Leptis the future emperor Severus: octavo decimo anno publice declamavit. Postea studiorum causa Romam venit (*Vita*, 1). Journeys to Rome and residence there for study are mentioned by Julianus, *Digg.*, v, 1, 18 § 1; Scaevola in Ulpian, *Digg.*, xii, 1, 17; Ulpian, xlvii, 10, 5, § 5; and Modestinus, l. i, 36: Titio, quum esset Romae studiorum gratia, epistola missa est a magistratibus patriae suae, ut porrigeret imperatori.

It can only be an accident that no such evidence is forthcoming from the first two centuries. From the beginning of the empire there must have been a constant influx of provincials into the capital for purposes of study; Seneca mentions this as one of the usual

¹ [According to note in *CIL*, the inscription was found at Plastova near Scardona.]

inducements for foreigners to come to Rome (*Consol. ad Helvium*, 6, 2). See also Tacitus, *Dialogus de Oratoribus*, 20: Juvenes, qui profectus sui causa oratores sectantur, saepe in colonias ac provincias suas scribunt; also *ib.*, 10. Suidas, s.v. *Μαρκίανός*: οὗτος συνήν Μουσωνίῳ ἐκ Παμφυλλίας· φιλόκαλος γὰρ ὢν καὶ φιλάγαθος ὁ Μουσώνιος τοὺς πανταχόθεν εἴλκε παρ' ἑαυτὸν, ὥσπερ ἡ μαγνήτις τὸν σίδηρον.

IV. EMBASSIES TO ROMAN EMPERORS FROM FOREIGN COUNTRIES.

(Vol. I, p. 17, l. 2.)

IN his *Mémoire où l'on discute la réalité d'une mission arienne* (*Mém. de l'Acad. des Inscriptions*, x, p. 226) Letronne throws doubt upon several of the supposed Indian embassies to the Roman emperors. In particular, following Mannert, he doubts the reality of the embassy of King Porus or Pandion, lord over 600 kings, to Augustus, referred to by Strabo (xiv, 686; xv, 719) on the authority of Nicolaus of Damascus, who had met it at Antioch. As he observes, the account rather gives the idea of a company of Indian jugglers eager to get the best price for their curiosities, than of the embassy of a powerful Indian prince: three ambassadors (the reputed sole survivors of a larger number), bearing presents consisting of eight slaves almost naked, an armless man, three large adders, a snake ten ells long, a river-tortoise three ells long, and a large bird: their credentials, a Greek letter written on parchment.¹ One of the members of the embassy was the Indian, who voluntarily burnt himself to death at Athens.

Although Letronne's suspicions deserve consideration, he is certainly wrong in regarding all the Indian embassies to Augustus referred to by ancient writers as one and the same. Augustus' own statement on the Marmor Ancyranum shows this idea to be inadmissible: 'that embassies from Indian kings had frequently been sent to him, which had never happened before in the case of a Roman general' (Mommsen, *RGDA*³, p. 132 f., from which Suetonius, *Augustus*, 21, followed by others, has borrowed). At least one such embassy was known as early as 17 B.C., in which year Horace says that the proud Scythians and Indians had recently (*nuper*) petitioned Augustus (*Carmen saeculare*, 65; cp. *Odes*, iv, 14, 41: Te Cantaber non ante domabilis Medusque et Indus, te profugus Scythes Miratur).

In fact, we know that Augustus had received at least two embassies from India before 17 B.C.: the first during his stay at Tarraco in Spain (26 or 25 B.C.; Orosius, vi, 21; Jerome, *Chron.*, ad Ol. 188), the second in the island of Samos (20 B.C.). The latter is referred to at length by Cassius Dio (liv, 9). As he mentions the man without arms and the self-immolation of one of the Indians on the pyre, he evidently means the embassy seen by Nicolaus of Damascus. A further statement, however, makes it probable that he has confused the report of the embassy of Nicolaus with a report of a later Indian embassy (about 12 or 11 B.C.). Dio says that amongst

¹ The use of parchment for writing purposes by the old Hindus is doubted by O. de Beauvoir Prieaulx (*Journal of the Royal Asiatic Society*, xvii, 309).

the presents brought by the Indians were some tigers, the first that had been seen in Rome. Is it likely that Nicolaus, who describes item by item the presents brought by the ambassadors whom he met at Antioch, would have omitted this 'truly royal present'? (O. de B. Priaulx, as above, p. 313).

Now, we know from the statement of Pliny, to all appearance taken from the *acta diurna*, that Augustus, on the occasion of the dedication of the theatre of Marcellus on the 4th of May, 11 B.C., exhibited, for the first time in Rome, a tame tiger in a cage (Pliny, viii, 65). Is it conceivable that Augustus postponed for nine years the exhibition of a curiosity that had never been seen before (Varro declared that it was impossible to catch a tiger alive, *De ling. lat.*, v, 20), and ran the risk of the valuable animal dying in the interim? Against such a supposition we have the express statement of Suetonius (*Augustus*, 43) that Augustus always exhibited objects of interest at once, without waiting for the show for which they were intended (*citra spectaculorum dies*), such as 'a rhinoceros in the Septa, a tiger on the stage, a snake 50 ells long in the Comitium? The tiger here mentioned is undoubtedly the one exhibited in the theatre of Marcellus—at a show certainly, but not one at which wild animals were common. Augustus, without waiting for the next wild beast hunt, took advantage of the first opportunity that offered itself for the exhibition.

If, then, the first (tame) tiger in Rome (according to Pliny) was exhibited in 11 B.C.; if this exhibition (according to Suetonius) to all appearance took place soon after the arrival of the animal in Rome; if (according to Dio) the first tigers were brought to Rome by Indian ambassadors, for whom it would be comparatively easy to bring tame tigers with them, it follows that this embassy must have reached Europe in 11 B.C. or shortly before, and that Dio has confused two reports of two different embassies.

Nor can the statement of Florus (iv, 12) refer to the embassy of 20 B.C.: *Seres etiam habitantesque sub ipso sole Indi cum gemmis et margaritis, elephantos quoque inter munera trahentes, nihil magis quam longinquitatem vitae imputabant quam quadriennio impleverant; et tamen ipse hominum color alio venire caelo fatebatur.* Borghesi (*Œuvres*, ii, 96) has certainly shown it to be very probable that amongst the marks of respect decided upon by the senate on the occasion of Augustus's return to Rome in 19 B.C. was an entry on a car drawn by elephants (of which certainly Augustus made no use). The statue of Augustus on an elephant *biga* (the first of its kind, Pliny, xxxiv, 19) appears first on coins of this period, and stood over the arch of the Milvian bridge, which was finished in 16 B.C. Borghesi (p. 105) expresses the belief that the elephants brought by the Indian ambassadors in 20 B.C. (to which he refers the statement of Florus) suggested this distinction, and Mommsen (*RGDA*², p. 133) agrees with him. But the omission of the elephants in Nicolaus would be as inexplicable as that of the tigers; hence, Florus must be referring to another Indian embassy (of which Augustus according to the *saape* of the Monumentum Ancyranum had received at least three). Further, no special reason was needed for the decree of an elephant car, since Pompey had already desired to make his entry

in one on the occasion of his African triumph (81 B.C.), and had only been prevented from carrying out his intention by the narrowness of the gate (Pliny, viii, 4; Plutarch, *Pompey*, 14).

Specialists in Indian antiquities, who are convinced of the reality of the embassy described by Nicolaus, have attempted to determine by whom and whence it was sent, but have arrived at the most different conclusions. Lassen (*Indische Alterthumskunde*, iii, p. 59) takes the Porus of Nicolaus to be some descendant of the old Pançava nation, who founded an independent kingdom in the western Punjab, and was a snake-worshipper. A. Weber (in Mommsen, *RGDA*¹, p. 133) is of opinion that Porus is the people of the Pançava, Pandion the tribe of the Pandya in southern India (Lassen, i, 158). O. de Beauvoir Priaux (*On the Indian Embassy to Augustus*, in the *Journal of the Royal Asiatic Society*, xvii, 1860, p. 309, where it is assumed that there was only one embassy) arrives at the conclusion that a Buddhist Hindu rajah in the north of the peninsula was persuaded by Alexandrian merchants to send an embassy with them for commercial purposes to Alexandria, whence it proceeded to Augustus (perhaps by way of Antioch to Samos). Lastly, Reinaud (*Relations politiques et commerciales de l'empire romain avec l'Asie orientale* in *Journal asiatique*, 1863), who also supports the view that there was only one embassy, considers that it was dispatched by a Buddhist prince of Bactriana, who is called Kanishka in a history written in Sanskrit, Kanerké and βασιλεὺς βασιλέων on his coins (on which half the legend is Greek), and was the most powerful Indian prince of his time (see A. Weber, *Indische Skizzen*, p. 99).

Reinaud (p. 189) also assumes a Chinese embassy to Augustus, on the evidence of Florus, iv, 2, Seres etiam (misere legatos) and the ode of Horace to Maecenas (iii, 29), in the eighth strophe of which he finds an allusion to it (Tu civitatem quis deceat status Curas et urbi sollicitus times Quid Seres et regnata Cyro Bactra parent Tanaisque discors), and in *Odes*, iv, 15, 23 an allusion to a treaty concluded with China. This assumption, however, is inadmissible, since Augustus would certainly not have omitted to mention a Chinese embassy in his list of those received by him.¹ In addition to the Indian, he only records embassies from the German peoples (*RGDA*², p. 104 f.: Cimbrique et Charydes et Semnones); from the kings of the Sugambri, Marcomanni, and Suevi (pp. 135 and 140); further the frequently mentioned embassy of the Scythians (between the Danube and the Dnieper) and Bastarnae (in lower Moesia beyond the Danube), of the Sarmatae on both banks of the Don, of the Albani and Iberi (in Shirwan, southern Daghestan, Grusia), of the Medes and Parthians (in Atropatene; *ib.*, p. 133 f.). The embassies of *plurinae aliae gentes* are not specified by name, obviously as not being of sufficient importance. Probably they included those of the Aethiopes and Garamantes mentioned in Rufius Festus (*Brev.*, 19) and Victor (*epit.*, i, 9), unless they wrote *abusi vocabulis Vergilianis* (*Æneid*, vi, 795: super et Garamantas et Indos proferet imperium; *RGDA*³, p. 133). Strabo (iv, p. 200) also speaks of an embassy of

¹ F. Hirth, *China and the Roman Orient* (1885), p. 305, says: The Chinese annals clearly insinuate that Kan Ying (A.D. 98) was the first Chinese who ever penetrated as far west as T'iao Chih (according to Hirth, Chaldaea).

British princes : *νυνὶ μέντοι τῶν δυναστῶν τινὲς τῶν αὐτόθι πρεσβεύουσι καὶ θεραπέλαις κατασκευασάμενοι τὴν πρὸς Καίσαρα τὸν Σεβαστὸν φιλίαν, ἀναθήμενὰ τε ἀνέθηκαν ἐν τῷ Καπετωλίῳ καὶ οἰκίαν σχεδὸν τι παρεσκευάσαν τοῖς Ῥωμαίοις ὅλην τὴν νῆσον.* Augustus himself mentions the presence of two British kings Dumnobellaunus, whose gold coins have been found in Kent and Essex, and Tim . . ., more correctly Tinc . . ., son of Commus, whose coins have been found, especially in Sussex (*RGDA*¹, p. 139 f.).

Ambassadors from the Garamantes also visited Rome in the reign of Tiberius (A.D. 24) : *sequebantur et Garamantum legati, raro in urbe visi, quos Tacfarinate caeso percussa gens et culpa sociā satisfaciendum populo Romano miserat* (Tacitus, *Annals*, iv, 26).

In the reign of Claudius, according to Pliny (vi, 84), four ambassadors from Taprobane (Ceylon), the chief of whom was named Rachias, arrived in Rome. They were escorted by a freedman of Annius Plocamus, farmer of taxes on the Red Sea, who was supposed to have been cast ashore on Ceylon during a voyage round Arabia, and to have persuaded the king of the island (by his accounts of Rome and by the excellence of the Roman denarii)¹ to make overtures to the Roman Emperor. Letronne also contests the reality of this embassy, chiefly on the ground of the absurdity of some of its statements, e.g. that the Great Bear and the Pleiades were not visible in Ceylon. Lassen, who takes no offence at these 'inventions' (p. 216), is of opinion (p. 61) that the embassy was sent by King Kandramukhaçiva (Chandra-Mukha-Siva, A.D. 44-52). O. de B. Priault (*On the Second Indian Embassy to Rome*, in *Journal of the Royal Asiatic Society*, xviii, 345), who also regards the ambassadors as actual representatives of an actual prince, explains their false statements as due to misunderstanding, since no one but Plocamus' freedman understood their language, and that probably only very imperfectly. He thinks that the ambassadors were not real Sinhalese, but belonged to the Tamil stock, who frequently penetrated from south Hindustan into Ceylon, and were ruled by rajahs, whose court was at Nalloor (pp. 357-360; J. Emerson Tennent, *Ceylon*, i, p. 532).

Pliny further mentions an Arabian embassy which visited Rome during his time : *qui mea aetate legati ex Arabia venerunt, (de ture) omnia incertiora fecerunt* (xii, 57). This was probably one of the embassies sent by Charibael, king of the Sabaeans and Homerites of southern Arabia, to ask for the friendship 'of the Emperors' (Vespasian and Titus, as Gutschmid also assumes); see *Periplus Maris Erythraei*, 23, and cp. the chronological abstract, *συνεχέσι πρεσβείαις καὶ ὄμοις φίλοις τῶν αὐτοκρατόρων*. The inhabitants of Hadramaut (Chatramotitae), whose chief town Sabattha was the chief centre of the incense trade, at that time were included in the Sabaean kingdom (Kiepert, *Lehrbuch der alten Geographie*, 167).

After his return to Rome (106) from the Dacian war Trajan received numerous embassies from barbarian peoples, including Indians (Dio, lxxviii, 15 : *πλείστοι ὄσαι πρεσβεῖαι παρὰ βαρβάρων ἄλλων τε καὶ Ἰνδῶν*). Letronne, who wrongly throws doubt even upon this Indian embassy, believes (with Reimar) that it came from southern Arabia (included under India), and was due to the recent

¹ *Quod pares pondere denarii essent, cum diversae imagines indicarent a pluribus factos.*

conquest of Arabia Petraea by Palma (Dio, lxxviii, 14). In itself it is very probable that Indian princes after this event endeavoured to gain the friendship of Trajan, who ten years later penetrated as far as the Persian Gulf and only very unwillingly abandoned his designs on India on account of his advanced age (Dio, lxxviii, 28; cp. Reinaud, p. 369). The ambassadors were present at the spectacles provided by Trajan where they occupied the seats of the senators. Hadrian and Antoninus Pius received ambassadors from Bactriana (*Vita*, 21: reges Bactrianorum legatos ad eum amicitiae petendae causa supplices miserunt), the latter also from Hyrcania and India (Victor, *epit.*, 15, 4: ad quem etiam Indi, Bactri, Hyrcani legatos misere; Appian, *praef.*, 7: βάρβαροι ἔθνη περιχρὰ καὶ ἀκερδῆ, ὧν ἐγὼ τινὰς εἶδον ἐν Ῥώμῃ πρεσβευομένους τε καὶ διδόντας αὐτοὺς ὑπηκόους εἶναι).

The Indian embassy to Elagabalus, which the Gnostic Bardesanes met, is the first whose reality is admitted by Letronne, although not entirely without reserve. Lassen (p. 62) and Reinaud (p. 376) assume that it was sent to Marcus Aurelius (Lassen calls him Antoninus Pius); but it is clear from Stobaeus (*Ecl.*, i, 3, 56) that the emperor was Elagabalus: 'Ἴνδοι οὐ ἐπὶ τῆς βασιλείας τοῦ Ἀντωνίνου τοῦ ἐξ Ἐμψῶν εἰς τὴν Συρίαν Βαρδῆσανη τῷ ἐκ Μεσοποταμίας εἰς λόγους ἀφικόμενοι: cp. Porphyry, *De Abstinentiā*, iv, 17, p. 355: Βαρδῆσανης ἀνὴρ Βαβυλωνίος, ἐπὶ τῶν πατέρων ἡμῶν γεγονώς καὶ ἐντυχὼν τοῖς περὶ Δαμάδαμον πεπεμμένους Ἴνδοις πρὸς τὸν Καίσαρα. From the name of one of the ambassadors (Sandanes), Lassen concludes that the sender of the embassy ruled over that part of the Malabar coast which is called Ariake of the Sandani and less correctly Sandani; in Stobaeus, however, the name is Σανδάλης.

In the description of Aurelian's great triumph (A.D. 274) in Vopiscus (*Vita*, 33) the ambassadors of foreign peoples present in Rome are enumerated in addition to the captives (as Reinaud, p. 389, 1, correctly observes); for Aurelian had not been at war with the Axomitae, Indi and others, and no captives from these tribes could have figured in his triumph; further, the words *cum suis quique muneribus* show that the preceding names refer, not to captives, but to ambassadors. The ordinary punctuation must, however, be altered; perhaps the word *legati* (although not indispensable) has dropped out. After enumerating the wild animals in the procession the writer proceeds: gladiatorum paria octingenta praeter captivos. [legati] gentium barbararum Blemmyes, Axomitae, Arabes eudaeomones, Indi, Bactriani, Hiberi, Saraceni, Persae, cum suis quique muneribus. Gothi, Alani, Roxolani, Sarmatae, Franci, Suevi Vandali, Germani religatis manibus captivi processerunt. inter hos etiam Palmyreni. A car, richly ornamented with gold, silver and precious stones, was one of the presents sent by the King of Persia. Tacitus (afterwards emperor) speaks of the same embassies and their presents (*ib.*, 42): illum (Aurelianum) Saraceni, Blemmyes, Axomitae, Bactriani, Seres, Hiberi, Albani, Armenii, populi etiam Indorum veluti praesentem venerati sunt deum. Illius donis, quae a barbaris gentibus meruit, refertum est Capitolium. Reinaud rightly observes that this triumph was the last great festival of pagan Rome.

The numerous embassies of barbarian peoples to Constantine, of foreign appearance, in their national costume, the bearers of valuable presents, are described by Eusebius, *Vita Constantini*, iv, 7; he speaks of Blemmyes, Indians and Ethiopians, and (in 8) of an embassy from the King of Persia. In iv, 50 he further mentions ambassadors from east India (*Ἰνδῶν τῶν πρὸς ἀνίσχοντα ἡλίον*), who reported that Indian princes rendered homage to Constantine by setting up paintings and statues of him. Letronne rightly considers this incredible, but admits that the embassy might really have been sent by a prince of northern India (cp. Reinaud, p. 393; see also Hirth as above, p. 305, and on the despatch of a Syrian merchant Ts'in-lun to Ta-ts'in with 10 male and 10 female dwarfs (222-252), whose arrival is not mentioned in the Chinese annals).

The embassies which Julian received at Constantinople in 362 were intended for Constantius (Zonaras: *ἐχηρημάτιζε δὲ καὶ πρὸς βασιλεῖσιν ἐκ διαφορῶν ἐθνῶν σταλεῖσι πρὸς τὸν Κωνσταντῖον*) and, as Gibbon has observed (chap. xxiv),¹ could not possibly have arrived in time, if they had not been dispatched till after Julian's accession, as is asserted by Ammianus (xxii, 7, 10): *proinde timore ejus per finitimos longeque distantes explicato, legationes undique solito ocus concurrebant: hinc Transstigritanis pacem obsecrantibus et Armeniis, inde nationibus Indicis certati cum donis optimates mittentibus ante tempus (?) abusque Divis et Serendivis; ab australi plaga ad famulandum rei Romanae semet offerentibus Mauris; ab aquilone et regionibus solis; per quas in mare Phasis accipitur, Bosphoranis aliisque antehac ignotis legationes vehentibus supplices, ut annua complentes sollemnia, intra terrarum genitalium terminos otiose vivere sinerentur.* It is generally recognized that *Serendib* is Ceylon; according to Letronne (p. 234) the *Divi* can only be looked for on the south or south-east coast of the western Indian peninsula; on the other hand, Reinaud (p. 401) says: *quant au mot dib, c'est probablement une île de la mer Rouge, appartenant à ce qu'on nommait alors l'Inde citérieure.*

V. THE POPULATION OF ROME.

(Vol. I, p. 17, l. 13.)

FROM the facts at our disposal we can only form an incomplete and conjectural estimate of the population of Rome. We shall do no more than attempt to examine individual data as carefully as possible and to justify the conclusions to be drawn from them. The details communicated to me by C. Rodbertus (died 1875) have been of great service. I assume the reader to be acquainted with the examination of the subject by E. von Wietersheim (*Geschichte der Völkerwanderung*, i, 1859, pp. 259-265).² A criticism of the latest

¹ These embassies had been sent to Constantine. Ammianus, who unwarily deviates into gross flattery, must have forgotten the length of the way, and the short duration of the reign of Julian.

² Pietro Castiglioni (*Della popolazione di Roma dalle origini ai nostri tempi in Monografia della Città di Roma*, ii, 1878, pp. 187-395), arguing from the census lists, arrives (p. 251) at the conclusion that in the reign of Claudius the whole population of Rome was about 1,250,000 (950,000 free citizens, 300,000-350,000 slaves), di cui metà abitante nelle 14 regioni, che son quelli—che potevansi mantenere col grano provveduto per l'annua consumazione di Roma.

view—that of Beloch (*Die Bevölkerung der griechisch-römischen Welt* 1886, pp. 392–413) will be found at the end of this section.

The estimates of Bunsen, Zumpt, Höck and Marquardt are based upon the statement of Augustus that in 749 A.U.C. he had given 'trecentis et viginti milibus plebis urbanae sexagenos denarios viritim' (Mommsen, *RGDA*², p. 58). I now agree with Marquardt (*Staatsverwaltung*, ii², p. 119), after Hirschfeld's convincing statement (*Die Geldeverwaltung in der römischen Kaiserzeit*, in *Philologus*, xxix), that the 320,000 of the 'plebs urbana' only include those citizens who were qualified to vote, not freeborn male children. Dio expressly states (liv, 16, A.U.C. 747) that the free female population of Rome was considerably smaller than the male: ἐπειδὴ τε πολὺ πλείων τὸ ἄρρεν τοῦ θήλεος τοῦ εὐγενοῦς ἦν, ἐπέτρεψε καὶ ἐξελευθέρας τοῖς ἐθέλουσι, πλὴν τῶν βουλευόντων, ἀγασθαι. There being nothing to settle the question, I reckon (with Wietersheim) the free female population to be about 17 per cent. less than the male (5 per cent. in accordance with the usual proportion in great modern cities, and 12 per cent. owing to the lack in Rome of free female domestics from other places).¹ The usual but quite arbitrary estimate of knights and senators and their families as 10,000 is too low; the 3,000 *judices quadringenarii* and their families must have equalled that number, and they by no means comprised all the knights in Rome (Madvig, *Verfassung und Verwaltung*, i, p. 176); at the *transvectio* on the 15th of July, which was never attended by all those who had a right to take part in it, 5,000 knights put in an appearance in the reign of Augustus (Dion. Halic., vi, 13) and, to judge from the increasing frequency of the equestrian title on inscriptions, their number was being continually augmented (Mommsen, *Staatsrecht*, iii, 1, 491). Consequently the number of the knights and the members of their families may be reckoned at 15,000 during the reign of Augustus; the 600 (at least) senatorial families (Madvig, i, 128) may have numbered 2,000. The number of non-Romans (residing temporarily, for a considerable period, or permanently in the capital) may be assumed, for purposes of comparison, to be twice that of the foreign population of Paris at the time of its greatest splendour under Napoleon I (Dureau de la Malle, *Écon. polit.*, i, 370). The number of soldiers did not amount to 30,000 (Wietersheim), but about 20,000; in the time of Augustus, when only three praetorian cohorts were stationed in Rome (Marquardt, *Staatsverwaltung*, ii², p. 476), only about 13,000. Consequently, for 749 we get the following figures:—

¹ The following estimates of the population of Rome in modern times are borrowed from Castiglioni's tables (p. 351); the large preponderance of males is undoubtedly due to the clergy.

					Male.		Female.		Total.
1600	..	..	..	..	63,133	..	46,596	..	109,729
1700	..	..	..	..	88,929	..	60,518	..	149,447
1800	..	..	..	..	80,580	..	72,424	..	153,004
1877	..	..	..	..	160,184	..	122,030	..	282,214

According to the *Censimento della popolazione del Regno d'Italia al 31 Dec. 1882*, vol. iii, there were 796 females in Rome to 1,000 males, and 137 boys under 10 years; see Beloch (*Bevölkerung*, p. 401). The same proportion being assumed, Rome would have contained (in 759) 254,720 free adult females of the *plebs*; but this is not permissible, for the reason given above,

- (1) 320,000 free grown up males belonging to the plebs.
- (2) 265,600 free grown up females belonging to the plebs.
- (3) 17,000 senators and knights with their families.
- (4) 13,000 soldiers.
- (5) 60,000 foreigners.

675,600

With the exception of (1) and (4), these figures are useless for real statistical purposes; and there are absolutely no trustworthy data for estimating the number of freeborn children of both sexes, or of the slaves. As to the first, it can only be affirmed with certainty that it was considerably less than the number of children in modern large cities, marriages being less frequent and less prolific. It is perhaps doubtful whether the effects of infanticide and exposure (Marquardt, *Privatleben der Römer*, i², 3 and 4) were more ruinous than the enormous infant mortality of modern times, the reasons of which are well known. Duruy (*Hist. des Romains*, v, 16) remarks: En pleine civilisation moderne le nombre des enfans trouvés a été en France de 125,997 en 1861, malgré la suppression des tours, avec une moyenne annuelle de 203 infanticides. In the time of the Revolution the number of exposed children rose from 23,000 in 1790 to more than 63,000 in 1802 (Taine, *Origines de la Fr. c., Révolution*, iii, p. 108, 1); as early as 1796 it reached 50,000 (out of about 800,000 births; in the foundling hospitals $\frac{1}{4}$ of the foster-children died; see Sybel, *Geschichte der Revolutionszeit*, iv, 440).

As for the slaves, Marquardt (*Staatsverwaltung*, ii², 123) has adduced a number of weighty arguments in support of his view, that they were at least half as numerous again as the free. But it does not seem to me that so high an estimate is justified.¹ It must be remembered, first of all, that most of the *plebs urbana* were poor people, or even *proletarii*, few of whom had slaves, while persons of moderate means found the maintenance of slaves a very heavy burden owing to the high price of provisions (Juvenal, iii, 166: *magno Servorum ventres*). In Petronius' colony a well-to-do freedman might certainly be able *viginti ventres pascere* (mostly slaves; *Petron.*, 57), but not in Rome. The entire household of Umbricius, who was not quite without means, could be taken on a single *reda* (Juvenal, iii, 10), and he lights himself home with the end of a candle (286).

Juvenal's Naevolus in his straitened circumstances has only one slave, yet he will be obliged to buy another; but even if his yearly income should reach 20,000 sesterces, he does not want more than four, two of whom are to be skilled workmen, so that they may bring in more than they cost to keep (Juvenal, ix, 64-66, 142-146). We cannot even conjecture the number of the wealthy households (in which large numbers of slaves were kept) or of the *servi publici*, so that I make no attempt to estimate the total number of slaves.

¹ Castiglioni estimates the slaves in Rome from 700-800 A.U.C. at a half, from 800 onwards at two-thirds of the male burgess population. Beloch (p. 404) thinks that the proportion of slaves to freemen was 1 to 2. Apart from other objections, a slave population of 280,000 in a total population of 850,000 (870,000 including the garrison) in 749, could hardly have increased to an alarming number by the year 24.

That it was very large, however, is shown by the statement of Tacitus (*Annals*, iv, 27) that in the year 24 Rome was terrified by the fear of a slave war: *urbem . . . jam trepidam ob multitudinem familiarum, quae gliscebat immensum minore in dies plebe ingenua* (cp. also iii, 53). But a male slave population of e.g. half a million (the female must have been very much smaller) was enough for that. I would also observe that it is unsafe to argue from the 400 slaves in the house of Pedanius Secundus (Tacitus, *Ann.*, xiv, 42), the man of the highest position in Rome at that time, that the *average* number of domestics in rich and well-to-do households was very large. In 12 A.D. Augustus, in order to check the growing luxury of persons in exile, ordered that they should not possess more than 125,000 *denarii* (500,000 sesterces, about £5,000), or more than 20 slaves or freedmen (Dio Cassius, lvi, 27). May we not assume that these two standards were proportionate to each other? If a man required many more servants in Rome than in places of exile, life in the latter was much cheaper; and it is not to be believed that the number of servants would have been set down as very small in relation to property for reasons of security, since a large property offered a much better opportunity for dangerous undertakings than a large number of servants.

Assuming the above figures to be approximately correct, we can only say that the population of Rome in 749 probably exceeded a million; but, owing to the varying estimates of the number of slaves, we cannot say by how much.

On the analogy of the changes in the population of modern large towns, we must assume in the case of Rome (to the time of the epidemic in the reign of Marcus Aurelius) a constant increase, only temporarily arrested by pestilence, famine, and civil war. In 1788 the population of Paris was 599,569, in 1836 899,315, in 1856 1,178,262, in 1860 (after the enlargement of the city) 1,525,235, in 1866 1,825,300. In 1600 the population of London was 150,000, in 1760 676,000, in 1811 1,304,000, in 1841 1,948,000, in 1881 3,816,483, in 1886 (estimated) 4,149,533. In 1709, after the union with Cölln and the adjacent suburbs, the population of Berlin was 55,000, in 1749 110,000, in 1825 220,000, in 1855 440,000, before 1873 880,000, on the 1st of December, 1885, 1,315,297; the increase (about 4 per cent. yearly) is twice as large as that of London and Paris, and is only rivalled by that of New York (Lammers, *Berliner städtische Selbstverwaltung*, in the *Deutsche Rundschau*, Feb., 1882, p. 182).

Owing to the great difference in the numbers of the male and female inhabitants of Rome and the resulting limitation of marriage, the growth of the population by births must have been considerably less than in a modern large town. In any case, the number of children of the wealthy classes born in wedlock was far smaller than in the nineteenth century in a great part of Central Europe. At the beginning of the 'thirties in Naples, Würtemberg, and Bohemia there were five or six children of a single marriage, in Hesse, Mecklenburg, Prussia, Russia, and the Netherlands four or five. The legislation of Augustus, with its punishments and rewards (e.g. the *ius trium liberorum*), framed in reference to the well-to-do classes especially, produced no effect (Tacitus, *Ann.*, iii, 25). The fact

that this legislation did not extend to the poorer classes is no proof that marriages were more frequent or more prolific amongst them, as is assumed by Pöhlmann (*Übervölkerung der antiken Grossstädte*, p. 48, 7). It is quite conceivable that Augustus only had in view the promotion of prolific marriages in the middle classes; it is also possible that he regarded this as unattainable in the case of the proletariat. On the other hand, Pöhlmann is right in saying that the passage (Dion. Halic., ix, 51) quoted by Rodbertus only refers to the rarity of marriage amongst the country day-labourers, not amongst the city proletariat. Further, it must be borne in mind that amongst slave populations the proportion of births is always unusually low (Wappäus, *Allgemeine Bevölkerungsstatistik*, i, 157). Lastly, considering the unhealthiness of Rome and the frequent occurrence of devastating calamities we are justified in assuming an extraordinarily high rate of mortality.¹

On the other hand, the irresistible and many-sided attractiveness of Rome, with the absence of restrictions on migration, probably brought about a larger increase of population by additions from without than in any modern large town. 'The emancipations of slaves *en masse* also contributed to its growth, since undoubtedly the place of those who obtained their freedom was in part at least filled from without' (Rodbertus).

Of course it is impossible to determine the rate of increase. The number of recipients of the *congiarium* (320,000) in 749, compared with 250,000 in the distributions from 710 to 742, does not justify us in assuming with Mommsen (*RGDA*², p. 60), that the number of the plebs increased from 250,000 to 320,000 during the years from 710 to 749; as early as 708 Caesar found 320,000 recipients of free corn (Marquardt, *StV*, ii³, 118) and the munificence of Augustus in 749 may have been unusual. Nor is it safe to conclude from the statement (Suetonius, *Augustus*, 41) that Augustus during the dearth of 759 *tesserae nummariae* duplicavit, that there was a very considerable increase of population during the ten years 749-759 (as Rodbertus does, in discussing the real value of money in antiquity in Hildebrand's *Zeitschrift für Nationalökonomie*, xiv, 386 note). Rodbertus identifies the *tesserae nummariae* with the *tesserae frumentariae*, and concludes from their duplication that from 749 to 759 the number of the plebs (with 200,000 recipients of corn gratis from 752) rose to more than 400,000. But it is at least doubtful whether the *tesserae nummariae* are really (with Benndorf, *Beiträge zur Kenntniss des attischen Theaters*, in *Zeitschrift für Oester. Gymn.*, xvi, 1875, pp. 592 ff. and 621, 1) to be taken as *frumentariae*, or (with Marquardt, *StV*, ii³, 125 and Mommsen, *RGDA*², p. 26) as tickets for the purchase of corn at a reduced price.³ The communication of Tiberius to the senate during the scarcity of the year 32 (Tacitus, *Ann.*, vi, 13: *quanta majorem quam Augustus rei frumen-*

¹ No doubt infant mortality was very high, but I am not inclined to believe (with Pöhlmann, p. 27, 2) that the sepulchral inscriptions distributed over four or five centuries are conclusive on the point. According to Beloch (p. 48) the epitaphs in the 1st, 2nd and 10th *regiones* of Italy show that 289 persons out of 1,000 died before the age of 16, as compared with 540·4 in Prussia in 1876.

² Hirschfeld also has abandoned his former view (*VG*, 131, 1) and now agrees with Marquardt and Mommsen.

tariae copiam advectaret) is perhaps a stronger argument for an increase of the population.

But if the population of Rome in 749 amounted to more than a million, allowing for a considerably smaller increase than in the case of the large towns of Europe in modern times, it might have risen to a million and a half or more in 70 or 80 years.

A statement in Josephus (*B.J.*, ii, 16, 4) on the consumption of corn in Rome, derived from an official document (cp. *Ind. lect. Regimont aestiv.*, 1873), probably dates from this period. The document was a *breviarium totius imperii*, drawn up under the same headings as that composed by Augustus and read in the senate after his death (Suetonius, *Aug.*, 101; Tac., *Ann.*, i, 11). Like the latter it probably contained a list of the *regna* and *provinciae*, no doubt the source of the statements that Thrace was a five days' journey (of the imperial *tabellarii*) in breadth, and a six days' journey in length: that Asia contained 500 cities, Gaul 305 tribes, and (in round numbers) 1,200 cities: that Asia was under a proconsul, Achala and Macedonia under a governor with six lictors (Mommsen, *StR*, i², 369, 2). Also a list of the *tributa* and *vectigalia*, the source of the statements that the population of Egypt (Alexandria not included) was 7,500,000 according to the poll-tax lists, and that the tribute from Judaea was not a twelfth of the tribute from Egypt. *Largitiones ac necessitates*: that Egypt supplied one-third, Africa two-thirds of the annual corn supply required by Rome. *Classes*: the Pontus fleet of forty ships of war with a personnel of 3,000. *Quantum militum sub signis ubique esset*: cp. Marquardt, *StV*, ii², 453 ff. Josephus could hardly have had the opportunity of utilizing such a document before he settled in Rome, where he wrote the history of the Jewish war about the year 75 (cp. Paret, *Josephus' Geschichte des jüdischen Krieges*, introd., p. 19).

In the *Epitome de Caesaribus* (2) it is stated that under Augustus 20,000,000 *modii* of corn were supplied every year by Egypt to Rome. There is no doubt that this figure is taken from an official source, and it is at least probable that this source is Augustus' *Breviarium totius imperii*, since the historians certainly utilized it as much as his *Index rerum gestarum* (Mommsen, *RGDA*², p. ix). In this case the 20,000,000 *modii* would be the budgetary amount of corn to be supplied to Rome by Egypt as fixed under Augustus.

Marquardt (*StV*, ii², 126, 6) assumes that the amount mentioned in the *Epitome* was still contributed by Egypt in the time of Josephus, and, since it formed a third of the total amount required, reckons the latter at 60,000,000 *modii*. From this he draws a conclusion as to the population. On the other hand, Rodbertus observes that the double tithe contributed by Egypt both under Augustus and in the time of Josephus (Marquardt, *ib.*, 196, 3) was only a proportionate impost, which varied with the produce of the harvest. 'The 20,000,000 *modii*, even, in Augustus' time, could accordingly only be taken as an average figure for five or ten years. But during the interval down to the time of Vespasian are we to assume that the productive development of Egypt ceased? 20,000,000 *modii* suppose a harvest of 100,000,000 in the time of Augustus. In the first century of the empire the provinces were especially flourishing.

If the production of Egypt rose during this period from 100,000,000 to 150,000,000 *modii*, the fifth in Vespasian's time brought in 30,000,000, and the application of the figures to the population gives a different result'. The fact that according to the passage in Tacitus (*Annals*, vi, 13) the total import of corn in 32 was greater than in 14, also justifies us in believing that the third of the total required, supplied by Egypt under Vespasian, amounted to more than the impost of 20,000,000 *modii* under Augustus.

Hence it may be assumed as probable that under Vespasian Rome consumed more than 60,000,000 *modii*, and that the population was really larger than would appear from calculations based upon this rate of consumption. In attempting to ascertain the number of the people from the consumption of corn, we must not (as Marquardt has already observed) reckon 5 *modii* monthly (or 60 *modii* yearly) as the average consumption per head. For this ration of gratuitous corn was given with the intention that it should be more than enough. Slaves, who lived almost entirely on grain, in Cato's time received 4 to 4½ *modii* (Marquardt, *ib.*, 110 ff.). But at Rome certainly only part of the slaves and the poorest inhabitants lived exclusively on grain; vegetables also were one of the chief articles of food (Pliny, *Nat. Hist.*, xix, 52); the better to do amongst the plebs and upper classes consumed other articles, while women and children needed considerably less than hardworking slaves. Consequently, the average consumption of corn probably amounted to less than 4 *modii* per head.

Assuming a consumption of 4 *modii* per head monthly a total consumption of 60,000,000 *modii* would give a population of 1,250,000; with a consumption of 3½ *modii* the total would be 1,714,285.

Further, the expressions used by Josephus in regard to the deliveries of corn from Egypt and Africa (τῇ 'Ρώμῃ σίτον μηνῶν τεσσαρῶν and μηνῶν ὀκτώ τὸ κατὰ τὴν 'Ρώμην πλῆθος τρέφουσι) leave scarcely any doubt that the total amount required by Rome was fixed officially during the reign of Vespasian. It may be assumed that the state granaries always contained more than a year's supply, in case of navigation being interrupted, or any other emergency.

Another official statement of Vespasian's reign may also be utilized in estimating the population of Rome. The survey begun in 74 gave 13,200 paces as the circumference of the inhabited part of the city (Jordan, *Topographie*, ii, 85-87), or 13.13 Roman *miglia* (1 Roman *miglio* = 1484.9 metres; *mille passus* = 1478.7). The length of the wall of Aurelian (not including the projections of the 251 rectangular towers) was, according to Bernardini 10.58, according to Nolli 11.13 *miglia* (Jordan, *ib.*, i, 343, note 9). His statement on p. 334 that these figures denote the length of the wall on the left bank, is an error. In the measurement given by D'Anville, quoted in Preller, *Roma, StRE*, vi, 507, namely, 12,345 Roman paces, the projections are evidently included). Its area, according to Dureau de la Malle (*Écon. pol.*, i, 347) is 1396.469 hectares; according to Beloch (p. 404) only 1230 (not including the river).

De la Malle's calculation (*ib.*, 406), that the assumed area of 1396 hectares was inhabited by 560,000 people, hardly needs refutation.

Zumpt (*Stand der Bevölkerung*, p. 62, note) has already observed, that if De la Malle had argued from the population of the most crowded quarter of Paris in 1821 (the fourth *arrondissement*), where 46,624 people occupied 51·63 hectares, he would have arrived at nearly double the number. But in the year 74 it is not a question of the area enclosed by the Aurelian wall (1,230 hectares, if Beloch is right), but of a considerably larger area. If the circumference of the wall was 11·13 miles, the area of Rome (supposing a similar figure) in the time of Vespasian, with its circumference of 13·13 miles, amounted to 1,712 hectares; if the circumference of the wall was 10·58, the area in 74 under the same assumption was 1,894 hectares.

For that time we must assume a greater density of population than even in the most thickly populated of modern large cities, owing to the greater height of the houses and the greater narrowness of the streets. In addition to this, as already observed by Wietersheim (p. 260) we must take into consideration the radical difference between ancient and modern dwelling-houses, 'such as is most vividly shown by the example of Pompeii. Protection against the weather was the only thing considered in ancient houses; the furniture was limited to what was absolutely essential; so that at least four of the Pompeian rooms or chambers could be contained in a tolerably large modern room. Even in later times, down to the Middle Ages, the accommodation was extremely limited, and no essential alteration took place till the last three or four centuries'.¹

Certainly, thousands of dwellings were merely 'sleeping rooms' (Rodbertus), as is shown by numerous allusions to dark rooms which could not be entered without stooping (Martial, ii, 53; iii, 30); many probably slept in sheds (Tacitus, *Hist.*, i, 86; cp. Horace, *Odes*, i, 4, 13, *pauperum tabernas*, *Ars Poetica*, 229; Nissen, *Pompeianische Studien*, p. 600); it is clear that attics and garrets were often used as lodgings (Juvenal, iii, 159 ff.; Suetonius, *Gramm.*, 9; Pöhlmann, p. 98), and a considerable number may have spent the night in the open air or under the archways (Martial, x, 5, 7).² But above all it must be remembered that the population of Rome consisted in great part of slaves, who certainly as a rule had the poorest sleeping accommodation. Consequently, if we must assume a denser population in ancient Rome than even in Naples (where in 1881 1,470 persons lived in quarters only a hectare in extent near the harbour), certainly many more than 650 lived on a single hectare, which Beloch regards as the highest possible average number.³ On this calculation, Rome in 74 would have had 1,117,000 inhabitants to 1,800 hectares (the mean between 1,712 and 1,894); consequently, in reality their number must have been considerably

¹ In some quarters of Naples the sleeping apartments (all without windows) of 4 to 5 square metres are divided by a horizontal partition wall into an upper and a lower room and afford shelter in favourable circumstances to no less than 20 human beings, in addition to various animals. (W. Kaden in *Augsburger Allgemeine Zeitung*, 15 Dec., 1873.)

² Pöhlmann wrongly takes these and other *foveae* for cellar-lodgings. There may have been some in Rome, but there is no evidence of it.

³ Neither the imperial palaces swarming with inmates nor the Circus Maximus with its shops in the arches of the lowest storey are to be included amongst the uninhabited public buildings (Beloch, p. 409) which are to be deducted from the total area.

larger. Here we may mention again that the amount of water supplied by the aqueducts in 97 under Frontinus' administration was more than sufficient for a population of 2,000,000 (Pöhlmann, p. 143).

In spite of the ravages of the epidemic in 79, and other set-backs from time to time, there must have been on the whole a constant increase in the population down to the beginning of the epidemic in 167; and, supposing the correctness of the results hitherto obtained, we must assume with every probability that it exceeded 1,500,000 in the first half of the second century.¹ As there can hardly have been much more space available for new buildings in the interior of the city, and many were probably pulled down to make room for the splendid edifices (chiefly erected during the period from Vespasian to Hadrian),² the suburbs must have continually extended from 74 to 167. As a matter of fact, the number of the police districts (*vici*) of Rome from the year 74 to the time of Constantine increased from 265 to a total between 307 (304) and 423 (nearer the former). Five *regiones* (I, X, XII, XIII, XIV), which in 136 contained 66 *vici*, had 143 under Constantine (Jordan, *Topographie*, i, 315). The two *regiones* that formed the west end, the ninth (Campus Martius) and the fourteenth (Transtiberina), especially increased rapidly and constantly; under Constantine their circumferences were 32,500 and 33,388 Roman feet respectively, more than twice the circumference of all the rest (with the exception of the thirteenth, Aventinus). The fourteenth (6.6 Roman *miglia* in extent) was consequently larger than the modern Trastevere, since the fortifications which surround the latter (excluding the castle of Sant' Angelo) are in all only 5.5 Roman *miglia* in length. If this circumference of the fourteenth region be added to the length of the Aurelian wall on the left bank, the total circumference of Rome under Constantine is, according to Bernardini (8.96 + 6.6) 15.56, according to Nolli (9.51 + 6.6) 16.11 Roman *miglia*; consequently, considerably greater than in 74 with a correspondingly greater area.³

Further, since it is probable that the suburbs in particular suffered from the devastating effects of the great epidemic, which raged under Marcus Aurelius and Commodus (chiefly amongst the lower classes), the Aurelian wall might have excluded an area, which 100–150 years earlier was thickly populated, but at that time was a desert. But it also still excluded a suburban population, which, as Rodbertus concludes from the *Vita Elagabali* (27), must have been considerable. At his death Severus left a supply of corn for seven years (*septem annorum canonem*), 75,000 *modii* of which could be given out daily (*Severus*, 8; 23). Of Elagabalus it is said :

¹ Pöhlmann (p. 23), while rejecting every attempt to solve the question of ancient populations with the data at our disposal, nevertheless says that imperial Rome may once have reached the figure of 2,000,000 (p. 123), but can scarcely have exceeded it.

² On the other hand space was gained by the removal of the *vestibula*. They are last mentioned by Juvenal (l, 132) in the last years of Trajan; on the other hand, at a time which Gellius (born 130–134) could still remember, none can have existed (xvi, 5, 3). Probably they disappeared under Hadrian, no doubt in consequence of the increased street traffic.

³ Jordan's assumption of 900 hectares for the time of Constantine, according to him rather too high than too low (*Topographie*, i, 543), is an impossible one.

jusserat et canonem P.R. unius anni meretricibus, lenonibus, exoletis intramuranis dari, extramuranis alio promisso, quum eo tempore juxta provisionem Severi et Trajani (*v.l.* Bassiani, Hirschfeld, *Getreideverwaltung Roms in Philologus*, xxix, 24) septem annorum canon frumentarius Romae esset. 'Provisio in the administration of the corn supply is a technical expression for a rough calculation or provisional estimates' (Rodbertus). By *extramurani* the biographer evidently means the inhabitants of the suburbs (outside the fourteen *regiones*), in accordance with the language of his day, when the Aurelian wall was already built. If, then, such a promise was made to the *meretrices lenones exoleti* of the suburbs, their numbers must have been considerable, and the suburbs, where they formed an important part of the population, must have been of considerable extent.

From the amount of the corn supply of Severus, Hirschfeld (p. 25) concluded that at that time a great decrease in the population of Rome had already taken place. He supposes that by far the largest part of the corn in Rome had been sold by the State, since the system of taxation in kind left little for private trade (Rodbertus), which, besides, could not hold out against State competition (pp. 23, 33). And since only 75,000 *modii* daily (27,375,000 yearly) were supplied by the *canon* of Severus, he estimates the total requirements of Rome at that time at about 30,000,000 *modii*, which would give a population of 625,000 or 714,285. On the other hand, according to Rodbertus the amount of the *canon frumentarius* had nothing to do with the population. 'It was not the general grain supply of Rome, but the regular budgetary figure of the State grain-quantum, which was kept in view and fixed at Rome for frumentarian requirements (market department, pauper department, institutions)'.

Lastly, attempts have repeatedly been made to ascertain the population of Rome at that time from the 1790 (1782) *domus* and 46,602 (44,171) *insulae* mentioned in the description of the city written between 312 and 315 (?). Wietersheim (pp. 251-265), who thinks that *insulae* must mean not only whole houses, but also parts of houses separated by walls up to the top, arrives at a population of 1,400,000 to 1,450,000. Marquardt (*StV*, ii², 125) says: 'In 1872 in Paris one house was occupied by 28.84, in Berlin in 1871 by 57.14 persons; reckoning 29 to a house in Rome, this gives 1,332,637 inhabitants, with 57, 2,619,321; taking an average of 35, we should get 1,608,335'. But it is evident that all conclusions drawn from the number of persons living in the houses of modern large cities as to the number living in those of Rome are more than problematical (Pöhlmann, p. 22). Besides, the meaning of *insulae* in the description of the city cannot be settled with certainty. Jordan (*Topographie*, i, 543) arrives at the result, that it is impossible to consider them as anything but houses. On the other hand, O. Richter (*Insula in Hermes*, 1885, pp. 91-100) defines them as 'the blocks of dwelling-houses (amongst which entire houses might be included), regarded administratively as a whole, which existed in the time of Constantine; that is to say, a conception which cannot be represented topographically'. Beloch (p. 408) considers them to be

' separated family apartments, somewhat corresponding to the fire-places (*fuochi*) of medieval Italian statistics '.

The statement of Olympiodorus in Photius (*Bibliotheca*, pp. 59, 30-33) on the corn requirements of Rome soon after 410 (Hirschfeld, pp. 26, 37) is too uncertain to be utilized. In 500 Rome appears to have been very deserted; for at that time Theodoric gave *populo Romano* et *pauperibus annonas singulis annis, centum viginti milia modios* (Anon. Valesii; Ammianus Marcellinus, ed. Wagner and Erfurdt, p. 622): at the earlier rate of distribution 120,000 *modii* would only have been enough for 2,000 persons.

The most recent investigator of the subject (J. Beloch, *Die Bevölkerung der griechisch-römischen Welt*, pp. 392-413), who regards all previous attempts to settle the population of Rome as 'lamentable' failures, arrives at the result that for the year 5 B.C. it may be estimated at 800,000 in round numbers (without Ostia), and that it remained practically stationary to the time of Diocletian (pp. 404, 394, 412). This result is based mainly on the assumption that the superficial area of 1,230 hectares surrounded by the Aurelian wall is not only almost equal in circumference to the fourteen *regiones* of Augustus, but was not essentially increased in all later enlargements of the city (p. 404); whereas as early as the time of Vespasian it was wider in circumference, and, consequently, its superficial area was considerably greater, and still further increased in later times. The number of the recipients of corn (320,000), for which a total population of 800,000 appears far too low, is explained by Beloch as including the inhabitants of the Campagna within a radius of perhaps 20 or 30 miles: 'We may assume that the proletariat, to a distance of about 40 kilometres, regularly poured into Rome for the distributions of corn, and were consequently included in the lists of those who had a claim to it. A circle described round Rome with a radius of 40 kilometres extends to Caere, Ostia, Ardea, Velitrae, Praeneste, Tibur, Cures, Soracte, and Lacus Sabatinus' (p. 402). But for several reasons it is inconceivable that the mere influx of the inhabitants of these places entitled them to be put on the lists of the recipients. Not only would the feeding of the country population at the cost of the State have been as useless an expenditure as the feeding of the proletariat of the capital was an imperative necessity; but only the latter could be called *plebs Romana* and *urbana* by Augustus (*RGDA*¹, 59, 1; Mommsen, *StR*, iii, 1, 461, 2). These indications are alone sufficient to show the impossibility of Beloch's assumption, and therefore of his estimate as a whole. The statement of Aurelius Victor, that the supply of corn from Egypt under Augustus amounted to 20,000,000 *modii* is to all appearance derived from an official source; but it is rejected by Beloch, who quite arbitrarily assumes that Victor has 'evidently' confused it with the total supply of corn and has stated the amount in round numbers (p. 411, 2). Lastly, Beloch's view, that the population of Rome remained stationary for three centuries, is contrary to all analogies. Certainly, as he observes (p. 393), the situation of Rome was unfavourable, living dear, the climate unhealthy, and only factitious causes raised it to the rank of a great city. But this is the case to a greater degree in St. Petersburg, whose population,

notwithstanding, rose from 191,846 (including soldiers) in 1784 to 320,000 in 1826, and 532,241 in 1852.

VI. ON THE USE OF VEHICLES IN ROME.

(Vol. I, p. 20, l. 4.)

THE republican regulations as to the use of vehicles in the city remained unaltered under the empire, except that as a rule women were no longer permitted to drive (Mommson, *StR*, i², 378, 3). Caesar's municipal law of 709 forbade the use of vehicles in the streets of Rome, during the first ten hours of the day, starting from sunrise, *i.e.* at the time when pedestrian traffic was greatest. Exceptions were made in the case of conveyances used: (1) for public buildings, temples, and house-breaking; (2) by certain persons (the Vestals, the *rex sacrorum*, the *flamines* at public sacrifices, and generals at a triumph; the privilege of the Vestals was subsequently bestowed upon some of the empresses); (3) at public games, specially the circus procession; (4) in the case of conveyances which had arrived in the city during the night, but only if they were empty or were used for the removal of public rubbish (Pöhlmann, p. 131; cp. Marquardt, *Röm. Privatl.*, ii², 729).

This regulation, which limited the conveyance of all heavy loads (especially material for private buildings) and (with few exceptions) personal carriage traffic to the time before sunrise or the two last hours of the day, appears to have continued in force during the first two centuries; at least, I am not aware of any authority against this. Caligula's order to those who brought the news of the supposed conquest of Britain—*ut vehiculo ad forum usque et curiam pertenderent*—is evidently reported by Suetonius as an act of madness (*Caligula*, 44). Where heavily loaded carts are spoken of as passing through the city by day, there is no doubt that they were employed on public buildings, for which there was such a mania at that time. Such are the following passages.

festinat calidus mulis gerulisque redemptor,
torquet nunc lapidem nunc ingens machina tignum,
tristia robustis luctantur funera plaustris.

(Horace, *Epp.*, ii, 2, 72).

Alfenus libro II Digestorum (*Digg.*, ix, 2, 52 [53] §2): In clivo Capitolino duo plaustra onusta mulae ducebant; prioris plaustrum muliones conversum plaustrum humeris sublevabant, quo facile mulae ducerent, [inter] superius plaustrum cessim ire coepit, et quum muliones qui inter duo plaustra fuerunt e medio existiissent, posterius plaustrum a priore percussum retro redierat et puerum cujusdam obtriverat; dominus pueri consulebat cum quo se agere oporteret. (Here *humeris sublevabant* is a conj. of C. W. Müller: F² has *plastrumori subl.*; but see Mommsen's note). Plutarch, *Galba*, 8, 4: Ἀπόριον δὲ τινα τῶν κατηγορικῶν ἀνατρέψαντες ἀμάξας λιθοφόρους ἐπήγαγον. Juvenal, 3, 254:

longa coruscat
serraco veniente abies, atque altera pinum
plaustra vehunt; nutant alte populoque minantur.

nam si procubuit, qui saxa Ligustica portat
axis et eversum fudit super agmina montem,
quid superest de corporibus ?

Accordingly, when Hadrian vehicula cum ingentibus sarcinis urbem ingredi prohibuit (*Vita*, 22), this absolute prohibition (later than the above passage, written under Trajan) has nothing to do with the law, as Dirksen observes (*Civilist. Abhandlungen*, p. 278). But the conveyance of enormous loads was not forbidden out of any consideration for pedestrians, who might have been injured just as much by smaller ones, but because of the dangerous effect of the shaking on houses, pavements, and *cloacae*. Cicero, *Pro Scauro*, 22, 45 : quum diceres—in privatam domum vectas esse tantas moles, ut satis dari damni infecti coegerit redemptor cloacarum, quum in Palatium plaustris extraherentur. This passage is quoted by Pliny (*Nat. Hist.*, xxxv, 6 ; xxxvi, 106), where the indestructibility of the *cloacae* is extolled : trahuntur moles superne tantae, non succumbentibus cavis operis, etc. Pliny, *Panegyricus*, 51 : non ut ante immanium transvectione saxorum urbis tecta quatiuntur : stant securae domus, nec jam templa nutantia. These dangers were evidently the origin of Hadrian's prohibition, the details of which we do not know. In the general terms in which it is stated, it is meaningless : for there were some enormous loads which could not be divided, e.g. monoliths. Hadrian himself had the colossus of Nero transported by 24 elephants (*Vita*, 19).

As far as I know, there is no trace of vehicles being used by any one in Rome during the first two centuries (apart from the exceptions specified in the *lex Julia* and later). On the contrary, the lines of Juvenal (iii, 236) :

redarum transitus arto
vicorum inflexu et stantis convicia mandrae
eripient somnum Druso vitulisque marinis,

show that the use of the *redae* was limited to the night. They are travellers' vehicles, arriving, departing, or passing through the city. Juvenal (vii, 179 : anne serenum expectet spargatque luto jumenta recenti ?) refers to a drive in the open country, not in the streets of the city. The guests, whom Domitian terrified by a pretended funeral banquet, were sent away τοὺς μὲν ὀχήμασι, τοὺς δὲ φορτοῖσι παραδούς (Dio, lxvii, 9) : Lucius Verus (*Vita*, 5) provided his guests with vehicula cum mulabus et mulionibus cum juncturis argenteis, ut ita de convivio redirent : in both cases after the tenth hour of the day. Apart from this, however, it may be supposed that the emperors did not always trouble themselves about the regulation. The statement in Philostratus (*Apoll. Tyan.*, viii, 7, p. 133, 53 ed. Kayser), referring to Domitian's informers, τὸ μὲν ἵπποτροφεῖν αὐτοὺς κατὰ ζευγῶν εἰς τὴν ἀγορὰν ἐκκυκλεῖσθαι λευκῶν is of no weight, except for Philostratus' own time. Galen expressly testifies that no one drove in Rome (ed. K. xi, p. 299, where he relates that a rich man drove from his house in the suburbs to the place ἐνθα τῶν ὀχημάτων ἀποβαλεῖν εἰς αἰθρὰν εἰσισμένοι). When Annia Faustina, daughter of Marcus Annianus Libo (consul 128 ; Borghesi, *Cœuvres*, iii, 224) drove to visit the sick Commodus at the third hour of the day

(Galen, *De praenot. ad Epig.*, xii, ed. K. xiv, p. 661), she probably enjoyed this privilege as related to the imperial house.

Plautianus (A.D. 205) appears to be the first person mentioned as using a carriage in Rome. According to Dio (lxxvi, 4), when summoned by Severus (certainly at a very late hour of the day), οὕτως ἤρχειθῃ—ὥστε τὰς ἡμέρας αὐτὸν πεσεῖν ἐν τῷ παλατίῳ. Possibly a carriage was at that time one of the distinctions of the *praefectus praetorio*, as later of the high imperial officials generally (Bethmann-Hollweg, *Hdb. d. Civilproc.*, p. 59, 20). But there is no doubt that at the beginning of the third century it was by no means unusual for private persons to drive in Rome. Soon afterwards, the use of a carriage decorated with silver (*Vita L. Veri*, 5, quoted above) appears to have been a regular privilege of the senatorial order: Alexander Severus, *Vita*, 43, carrucas Romae et redas senatoribus omnibus ut argentatas haberent permisit; interesse Romanae dignitatis putans ut his tantae urbis senatores vectarentur: Aurelian, *Vita*, 46, dedit praeterea potestatem ut argentatas privati carrucas haberent (i.e. allowed them to use them in Rome, for permission was not needed for outside), quum antea aerata et eborata vehicula fuissent. Perhaps the alteration is to be attributed to the influence of Orientalism. In Ammianus' description (xiv, 6) the enormous carriages (carrucae solito altiores) and the dangerous driving in the city are prominent features.

In the other imperial towns the regulation was no doubt frequently transgressed.¹ Claudius issued an edict to remind travellers to pass through the towns of Italy on foot or in a sedan-chair or litter (Suetonius, *Claudius*, 25). Yet Seneca, writing under Nero, mentions the rattling of carriages passing through (*Epp.*, 56, essedas transcurrentes) as one of the causes of the unceasing noise at Baiae. Riding in large towns was again forbidden by Hadrian (*Vita*, 22), riding and driving by Marcus Aurelius (*Vita*, 23), and Aurelian (*Vita*, 5) before his accession, although wounded, did not venture to enter Antioch in a carriage (quia invidiosum tunc erat vehiculis in civitate uti), but rode on horseback. Certainly, however, the imperial *legati* at that time used carriages in their provinces: ex quo factum ut in vehiculo etiam legati sederent qui antea pedibus ambulant (*Severus*, 2). Artemidorus, who seems to have written under Commodus (ed. Reifferscheid, *praef.*, p. vii), speaks of riding in towns as a peculiar privilege of free men, but the reference is certainly to processions: according to the same passage, the use of carriages was confined to the priestesses: *Oneirocritica*, i, 50: φημί δὲ ἀγαθὸν ἐλευθέραις γυναιξίν ἄμα καὶ παρθένοις πλουσίαις τὸ διὰ πόλεως ἄρμα ἐλαύνειν. Ἀγαθὰς γὰρ ἱερωσύνας αὐταῖς περιποιεῖται. Πενιχραῖς δὲ πορνείαν τὸ διὰ πόλεως ἰππάζεσθαι προαγορεύει· δούλοις δὲ ἐλευθερίαν. Ἴδιον γὰρ ἐλευθέροις τὸ διὰ πόλεων ἰππεύειν. According to Philostratus (*Vit. Soph.*, ii, 10, 2) the sophist Hadrianus, the successor of Herodes

¹ At Pompeii the remains of a stable have been found on the high road before the gate of Herculaneum. The *stationes* of the *cisiarii* (cab-drivers, who carried travellers) were certainly always before the gates. In an inscription from Cales (*CIL*, x, 4660) a *chivus* is mentioned as paved ab Janu (sic) ad cisiarios port[ae] Stellatinae; at Pompeii extra portam Stabianam, *CIL*, x, 1064, viam a milliario ad cisiarios, qua territorium est Pompeianorum (consequently outside the city).

Atticus in the chair of oratory at Athens drove to his lectures. The anecdote (*Philogelos*, 138) of a centurion of Sidon, who wanted to have a man punished for driving through the market, may belong to a later date; driving through the market places probably continued to be forbidden, when it was allowed in the streets.

VII. ROMA AUREA, AETERNA, SACRA.

(Vol. I, p. 29, l. 6.)

OF course *aurea* was never an official epithet. Ovid, *A.A.*, iii, 113: *simplicitas rudis ante fuit: nunc aurea Roma est et domiti magnas possidet orbis opes*. Martial, ix, 59, 1: *in septis Mamurra diu multumque vagatus, hic ubi Roma suas aurea vexat opes*. *Vita Prescen. Nig.*, 12 (a translation of a Greek epigram): *hunc reges, hunc gentes amant, hunc aurea Roma*. Ausonius, *Cl. urb.*, 1: *Prima urbes inter, Divum domus, aurea Roma*. Juvenc., *Libri evang.* iv, praef. 2: *aurea Roma*. (Cp. Jordan, *Topogr.*, ii, 374, 425).

Of the other two epithets (Wilmanns, *Ex. Inscr. Ind.*, p. 454; *Tibull.*, ii, 5, 23, *Romulus aeternae nondum firmaverat urbus moenia*) *aeterna* became official under Hadrian, who built the temple Venus and Roma (Preller, *R.M.*, ii², 356, dedicated on the foundation day of the city, April 21st), of which there are coins with the legend *VRBS ROMA AETERNA* (Roma sedens in templo d. globum s. hastam; Eckhel, *D.N.*, vi, 510 f.).

According to Jordan (*Forma Urbis*, p. 8) Rome was called *sacra* in the sense in which that word was applied to everything connected with the emperor and his household (Hirschfeld, *VG*, 96, 1) under Severus, who 'stamped it as the imperial city both in reality and name' (Hirschfeld, 174, 1). The oldest official inscription in which the epithet is found (*VRBI SACRAE REG. XIII*; *CIL*, vi, 1030, Jordan, *F.U.*, 1) belongs to his reign. The coin referred to by Preller (*R.M.*¹, 709, 1) on which Severus is called *sacerdos urbis* (which would be hardly conceivable if this were the origin of the name) is a forgery (Jordan, *ib.*, and on Preller, *R.M.*, ii, 358, 2). In Africa (Cirta, Thamugadis) there are municipal *sacerdotes urbis* of high rank; also in Noricum and Pannonia (Jordan, *ib.*, ii, 355, 2). Certainly this cult may have been first introduced into the provinces under the Severi; perhaps the title *urbs sacra* first became official at that time. But it already occurs in the inscription of a corn-dealer at Praeneste of the year 136 (*CIL*, xiv, 2852, 12: *notus in urbe sacra*),¹ and thus may have come into existence as early as the building of the temple of Venus and Roma.

VIII. THE OFFICIALS *A RATIONIBUS*, *A LIBELLIS*, *AB EPISTULIS*.

(Vol. I, p. 34, l. 17.)

THAT these three offices were considered of far greater importance in the second century than in the first is most clearly shown by the rank of those who held them and the offices which they previously

¹ Also in the epitaph of L. Nerisius Mithres (*CIL*, ix, 4796, l. 6). On the occasion of Circus games in December, 196: *καὶ μετὰ τοῦτο τὴν Ῥώμην καὶ Βασιλίδαν καὶ Ἀθῆνας ὀνομάσαντες ἕως τότε τοιαῦτα πάσχοντες; ἔκραζαν* (Dio, lxxv, 4).

or subsequently filled. I shall accordingly give a list, as far as possible in chronological order, of the officials in question for this period, so far as they are known to me, together with a statement of other offices held by them as mentioned in inscriptions or elsewhere, so far as is necessary. A number of corrections and additions to this and the previous edition, for which I am indebted to my friend Otto Hirschfeld, are enclosed in square brackets and signed H. The nature of these offices (and also of the *a studiis*, *a cognitionibus*, *a memoria*) has been exhaustively investigated by Ed. Cuq, in his *Mémoire sur le Consilium Principis d'Auguste à Dioclétien* (in the *Mémoires présentés par divers savants à l'académie des inscriptions*, tom. ix, 1884, pp. 311-503; cp. especially pp. 356-401).

(a) **A Rationibus.**

There is no evidence of this title under Augustus; it first appears under Tiberius as the name of a subordinate official of the imperial household. It was borne by the directors of the central office for the administration of the imperial finance, which had certainly existed since the beginning of the empire (Mommson, *StR*, ii³, 2, 1001, 1), but was first raised by Claudius' freedman Pallas to be one of the most important and influential court offices. Hadrian made it one of the equestrian procuratorships, and its holders (now called *procuratores a rationibus*), though now and again freedmen, regularly assumed the highest position amongst the equestrian procurators, both as regards rank and salary. They had an assistant of lower rank and a considerable number of officials, for the most part freedmen (cp. Hirschfeld, *VG*, 30-33, where also the known subordinate officials of the office *a rationibus* are given).

Inscriptions of the second half of the second century also mention the title *procurator summarum rationum*, who is certainly not identical with the *procurator a rationibus*, as assumed by Marquardt (*StV*, ii³, 308).¹ Hirschfeld thinks that it refers to the sub-director of the fiscal administration, upon whom Marcus Aurelius probably bestowed a higher rank and a more honourable title. The title *procurator a rationibus* must have been replaced not much later by that of *rationalis* (καθολικός), commonly used in the third century for the superintendent of the fisc (Hirschfeld, pp. 33-40).

In enumerating the officials *a rationibus* I ignore the subordinate officials (for these see Hirschfeld, *VG*, 32 f.; *CIL*, vi, 8417-8431). All those to whose names the simple *a rationibus* is added (without being particularized as *adjutor*, *tabularius*, and the like) must be regarded as supreme directors, in the absence of definite reasons to the contrary.

Antemus Ti. Caesaris Aug. l. a rationibus accensus delat. ab Aug. *CIL*, vi, 8409 (Mommson, *StR*, i³, 336, 1).

Ti. Claudius Aug. l. Actiacus a rationi(b). Doni, vii, 139, p. 900 = *CIL*, vi, 8412.

Ti. Claudius Felix Aug. l. a rationibus. Orelli, 4377 = *CIL*, vi, 8413. Hardly identical with the well-known procurator of Judaea,

¹ [This is clear from the fact that the *proc. summ. rat.* is promoted to the *ab epist. lat.* (*CIL*, vi, 1564). No importance need be attached (Marquardt, 308, 5) to Greek names of the office in literature and inscriptions. H.]

who is called Claudius Felix by Suidas, s. Claudius and Zonaras, vi, 15, but by Tacitus, *Hist.*, v, 9, Antonius Felix [so Henzen, 5404; cp. Nipperdey on Tacitus, *Ann.*, xi, 29, vii, 54, and Josephus, *Ant. Jud.*, xviii, 6, 6; xx, 7, 1. H.].

Ti. Claudius Aug. l. Abascantus a rationibus. Grut., 588, 2 = *CIL*, vi, 8411.

M. Antonius Antoniae Augustae l. Pallas (Mommsen, *Index Plin.*) a rationibus under Claudius and Nero till 55 (died 62); see schol. Probi ad Juv., i, 108. The inscription (*CIL*, vi, 2, 11965): dis manibus Antonius Asclepiades Pallantis l. fecit sibi et Juliae Philumene conjugii carissimae, found on the Via Tiburtina, where the monument of Pallas stood (Pliny, *Epp.*, vii, 29) is rightly referred to him by Matranga (*Bull. dell' inst. arch.*, 1853, p. 136). The names Antonius and Julia also point to the first century, to the end of which the letters and relief appear to belong. On the other hand, Borghesi identified him with M. Antonius Pallas, cos. suff. 167, perhaps because Pallas is called a freedman of Claudius by Suetonius and Zonaras.

Carpus Aug. l. Pallantianus (Orelli, 1797) was adjutor of Claudius Athenodorus praef. annonae (Orelli, 3200 = *CIL*, vi, 8470), probably under Nero; cp. Hirschfeld, *Getreideverwaltung* in *Philologus*, xxix, p. 28; *CIL*, xiv, 2833 [M. Antonius Pallantis l. Nobilis] with the note).

Claudius Etruscus' father, perhaps the successor of Pallas, apparently administered the office under Domitian and died about 91.

Atticus Aug. l. a rationibus, known from the inscription of his wife Claudia Attica (Orelli, 1494 = *CIL*, x, 6640), found at Nettuno and set up in Domitian's eleventh consulship (85). [The same Atticus is mentioned in an inscription of the Despuig museum (Bouer, *Museum D.*, n. 37 = *CIL*, vi, 8410): dis manibus Fortunati Attici Aug. lib. a rationib. lib. tabular. Fructus imp. Caesaris Domitiani Aug. Germanic. Atticianus tabular. a rationib. amico carissimo: where Fructus is a slave who has passed from the possession of Atticus into that of Domitian. H.] An Abascantus Aug. a rat. Attic(ianus) *CIL*, vi, 8408. Epaphra Aug. l. Atticianus *ib.* 8451.

Crescens Aug. l. a rationibus, Spon., *Misc.* p. 210 = *CIL*, vi, 8414 [probably a Flavius or Claudius (Crescens Neronis libertus, Tac., *Hist.*, i, 76), as his sister is Flavia Aug. l. Daphne. H.].

The fragment from Ameria in Muratori, 921, 1: . . . l. l. a rationibus, etc. (better in Doni, p. 310, p. 187) is not quite clear; Nero seems to be mentioned in it. [The inscription appears to me open to grave suspicion. H.]

Diadumenus Aug. lib. a rationibus Aniceto lib. Fabretti, 477, 150 = *CIL*, vi, 8415. No doubt identical with *CIL*, x, 3347 (Misenum) Diadumenus a rationib. [according to La Vega's copy D. A(ug. l.) a rationib. H.]; cp. Lanciani, *Acque e acqued.*, p. 216, and *Bull. com. d. R.* 1886, p. 104, 1158 (lead pipes in the Villa Casali): Diadumeni Aug. [l. a rationib.] Ti. Claud. Felix f. [On the other hand probably different from Orelli, 2946: Diadumeno Aug. l. praeposit. ordinato ultro a Divo Tito viii cos. (A.D. 80)—died A.D. 120: cp. Murat., 879, 1. H.].

Philotimus Aug. l. a ration. *CIL*, vi, 8416.

R.L.M.

D

Later than the time of Hadrian, freedmen as well as knights still filled the office. The earliest of the former is

T. Aurelius Aug. lib. Aphrodisius *proc. Aug. a rationibus* (Grut., 371, 2 = *CIL*, xiv, 2104). As the praenomen shows, he was manumitted by Antoninus Pius before the latter's adoption by Hadrian, when Antoninus was still called Titus Aurelius Fulvus.

Ti. Claudius Secundinus L. Statius Macedonicus (Murat., 690, 6 = Kellermann, *Vigg.* 31 = *CIL*, v, 1, 867 [Aquileia]) was *praef. leg. Tra[janae]* and rose from the procuratorship of the provinces of Lugdunensis and Aquitania to be *proc. a rationibus*, and afterwards *proc. annonae*. [Cp. Murat., 915, 9. In his inscription *CIL*, v, 1, 867 Mommsen supplies *proc. provinc. Lugdunens. et Aquitan[icae] a rationib. Aug.* Rather Aquitan. [*proc.*] *a rationib. Aug.*: cp. *Philologus*, xxix, 32, 18. A son of this Secundinus is perhaps referred to in *CIL*, vi, 1605. H.]. His date is defined by a lead-pipe found at Portus, *CIL*, xiv, 2008a: Imp. Antonini Aug. Pii sub cur. Cl. Secundini ra[tion] (rather a ration.) et Anni Phlegontis Aug. lib. ex off. Demetri liberti.

L. Valerius Proculus (according to the inscription on him in Malaca, *CIL*, ii, 1970 = Henzen, 6928; better *ib.*, p. 522) after holding various important procuratorships became *proc. provinciarum trium Galliarum, proc. a rationibus Aug. praef. annonae praef. Aegypti* (the *praef. Aegypti* is confirmed by Henzen, 7420 e, the *praef. annonae* (in the year 144) by Grut., 255, 1-3; consequently, according to the analogy of similar equestrian official careers the *procuratio a rationibus* may with certainty be assumed as having been held by him). Cp. Hirschfeld, *Getreideverwaltung*, *Philologus*, xxix, 30, 11.

Bassaeus Rufus, of humble origin, under Marcus Aurelius worked his way up by his military ability to the highest equestrian offices (Dio, lxx, 15; Orelli, 3574; cp. Henzen, iii, p. 372 = *CIL*, vi, 1599). After having been procurator in several provinces, lastly in Belgica and the two Germaniae, he became *proc. a rationibus*, then *praefectus annonae* or *vigilum*, *praefectus Aegypti* (between 161 and 166), lastly *praef. praetorio*. Cp. Hirschfeld as above, p. 31, 14 and *VG*, p. 226 foll. His immediate successor was perhaps

Ti. Cl. Vibianus Tertullus *CIL*, iii, 6574 (Ephesi ad aedem Dianae): ΤΙ. ΚΛ. ΟΥΪΒΙΑΝΟΝ Τέρτυλλον τὸν ἐπὶ τῶν Ἑλληνικῶν ἐπιστολῶν καὶ τῶν καθ' ὅλου λόγων τῶν μεγίστων αὐτοκρατόρων καὶ ἐπαρχῶν οὐκ ὀλίγων—Spectatus Augg. nn. lib. adjutor tabul. ob merita ejus.

P. Licinius Papirianus *proc. M. Aureli et d. Veri a rationibus*, *CIL*, viii, 1641.

Cosmus Aug. lib., who administered the office, while Bassaeus Rufus was *praef. praet.* At Saepinum (Altilia), where the Bojano gate once stood, through which the path (il tratturo) goes, along which the sheep are driven back from Apulia into the Abruzzi, there is still to be seen the inscription (Mommsen, *IRN*, 4916 = *CIL*, ix, 2438; after 166 A.D., cp. the notes), which contains copies of three official letters. The third of these is addressed by Septimianus (lib. Aug. adjutor a ration.) to Cosmus: cum conductores gregum oviaricorum, qui sunt sub cura tua in re praesenti subinde quererentur per itinera callium frequenter injuriam se accipere a stationariis

et magistratibus Saepino et Boviano eo quod in transitu jumenta et pastores, quos conductos habent—dicentes fugitivos esse et jumenta abactia habere—retineant et sub hac specie oves quoque dominicae sibi pereant in illo tumultu: necesse habuimus etiam atque etiam scribere, quietius agerent, ne res dominica detrimentum pateretur; et cum in eadem contumacia perseverent, dicentes non curaturos se, neque si tu eis scripseris haut fieri rem, rogo, domine, si tibi videbitur, indices Bassaeo Rufo et Macrinio Vindici praefectis praetorio eminentissimis viris, ut epistulas emittant eosdem ad magistratus et stationarios etc. Cosmus accordingly approaches the *praef.* who in accordance with his desire give instructions to the officials of Saepinum. The same Cosmus and the same Septimanus (*sic*) in Murat., 896, 2 = *CIL*, vi, 455; cp. Hirschfeld, *VG*, p. 159. The inscription is dated . . . I Kal. Octobr. [L. Venuleio Apronia]no II et L. Ser[gio Paulo II: 168 A.D.]. As in this fragment Cosmus is called a *rationibus* *Augg.*, the two Augusti Marcus Aurelius and L. Verus (died 169) are meant. [The same Cosmus on a lead pipe, *AdI*, 1857, p. 69 (Romae in Aventino = Lanciani, *Acque e acqued.*, p. 237, 173; according to the same, his house was in the 13th *regio*, *ib.* 303): Cosmi Aug. lib. a rat. H.] His immediate successor was perhaps

Euphrates, who filled the office after 168. Galen, xiv, 4: ἦν δὲ [M. Antonin.]τηνικαῦτα διὰ τὸν Γερμανικὸν πόλεμον ἐν τοῖς περὶ τὸν Ἰστρον χωρίοις ἐμοῦ παραιτησαμένου τὴν ἀποδημίαν ἐκείνην. ἐπεὶ δὲ τὴν ὑπὸ Δημητρίου τοῦ ἀρχιάτρου σκευαζομένην ἀντίδοτον ἐπήνει, μετὰ θάνατον αὐτοῦ γράψας Εὐφρατεῖ τῷ καθολικῷ, παρ' οὗ τὰ πρὸς τὴν σύνθεσιν ἐλάβανεν ἀπλὰ φάρμακα, δηλῶσαι τίς αὐτῷ παρὴν τῶν λαμβανόντων σύνταξιν αὐτοκρατορικῇ, καὶ πυνθόμενος ἐμὲ διὰ παντὸς αὐτῷ κατὰ πάσας τὰς συνθέσεις παραγεγενῆσθαι, σκευάζεσθαι μὲν ἐκέλευσεν ὑπ' ἐμοῦ τὴν ἀντίδοτον. Marcus Aurelius was away on the Danube from 168 to 174, during which time Galen practised as a physician and was engaged in literary work at Rome. This passage seems to show that the *proc. a rationibus* also exercised supervision over the imperial *horrea*.¹

Aelius Achilles was *rationalis* (*i.e.* procurator *a rationibus*) in 193, according to the edicts addressed by him and (his adjutor) Cl(audius) Perpetuus Flavianus Eutychus to the officials of the department of public buildings: Wilmanns, *Ex. Inscr.*, 2840 = *CIL*, vi, 1585 a and b: cp. Hirschfeld as above, p. 36.

Zosimus. Bronze stamp in the Kircher Museum (unpublished): Zosimi a rationibus. Hirschfeld as above, p. 32, 3.

Knights of uncertain date:—

C. Junius Flavianus (Grut., 426, 5 = Or., 3331 = Boissieu, *Inscr. d. Lyon*, p. 240) attained the same office by the same steps. He had been *tr. mil. leg. VII Gem.*, a name given to the legion under Vespasian: Hirschfeld, as above, 32, 17.

M. Petronius Honoratus (*CIL*, vi, 1625 a and b), after holding the military offices, was *proc. monet. proc. xx her. proc. prov. Belg. et duarum Germaniarum proc. a ration. Aug. praef. ann. praef.*

¹ Lurius Lucullus, to whom the answer of Commodus to the complaint of the imperial *coloni* of the *saltus Burunitanus* is addressed (Mommsen, *Hermes*, xv, 1880, p. 385; *CIL*, viii, 10570, col. iv, 4) was not a procurator, but the leader of the complainants (Karlowa, *Röm. Rechtsgesch.*, i, 630).

Aegypti (according to Labus in the last years of Marcus Aurelius, cp. Franz, *CIG*, iii, p. 131) pontif. minor; Hirschfeld as above, 31, 15. [Cf. Roulez, *Mém. de l'ac. de Bruxelles*, xvii (1843), p. 40. H.]

L. Julius Julianus (according to Barnabei's reading L. Ve[hil]ius G[ratus] Julianus), according to his inscription found in the Tiber, after holding several posts as an officer in the Parthian and Germanic war (in both of which he distinguished himself) became proc. Aug[g.-et] pr[aep.] vexillationis per Achaïam et Macedoniam et in Hispanias, adversus Castabocas (*sic*, 178-9) et Mauros rebelles (176-7); he then held various procuratorships, including one with a military command (last in Britain, 183-4); became prefect of the fleets at Ravenna (185) and Misenum (186); received the office a ration[ibus] 187, the prefecture of the corn supply 188 (between M. Petronius Honoratus and M. Aurelius Papirius Dionysius); lastly, succeeded Cleander as *praef. praet.* 189, and was put to death by Commodus (Hirschfeld, *VG*, 229, 49 and 52, which with Barnabei I regard as identical). See Barnabei, *Di un' epigrafe onoraria a L. Julio Juliano*, in *Notizie degli Scavi*, Dicembre 1887.

Cn. Pompeius Homullus Aelius Gracilis Cassianus Longinus (Mur., 735, 4 = Fabr., 128, 47 = Kellermann, *Vigg.*, 36 = *CIL*, vi, 1626), was proc. Aug. prov. Britanniae, proc. provv. Lugdun. et Aquitan. before he was proc. a rat. [The inscription is by his heirs, and was presumably set up after his death. H.]

M. Aurelius Julianus. *CIL*, vi, 1596: Aurelio Juliano a rationibus et a memoria, cp. Fabretti, 573, 395 (M. Aurelii Juliani a memoria) and *CIL*, xiv, 2463 with the notes; perhaps identical with the similarly named praefectus praetorio: *CIL*, v, 4323; Hirschfeld, *VG*, p. 32, 3. He had a villa on the Via Ardeatina (Lanciani, *Acque*, p. 304).

The fragment in Muratori, 768, 5 (wanting in Kellermann) [runs according to De Minicis *Iscriz. Fermane*, p. 215, no. 628 = *CIL*, ix, 5440: Proc. Aug. a rationib.—*praef. vig.* p. c. d. d. p.; more correctly explained in *AdI* (1839, p. 44) patrono coloniae, etc. H.].

Forged and wrongly read inscriptions: L. Mummius Achaicus *praef. coh. trib. mil. ab epist. T. Caes. divi Aug. item a rat. etc.* Grut., 1073, 7 = Orelli, 3567; cp. Henzen, iii, 372. Further, Gruter, 414, 8, regarded by Henzen, *Jahrb. der Alterthumsfr. im Rheinl.*, xiii, 95 as badly copied [cp. Borghesi, *AdI*, 1846, p. 319 ff. Also Donati, 308, 7; 320, 4; Murat., 979, 3 = *CIL*, vi, 5, 3089; further, *CIL*, ii, 396*. The Speratus M. Nonii a rationibus in Gruter, 588, 4 should be (as in *CIL*, v, 413) Speratus M. Nonii Agathonici. H.].

Third and fourth centuries:—

Aurelius Eubulus of Emesa, perhaps *libertus*, under Elagabalus τοὺς καθόλου λόγους ἐπιτετραμμένος (Dio, lxxix, 21): cum plerosque eunuchos rationibus et procurationibus praeposuisset Heliogabalus, hic illis et veteres sustulit dignitates (*Alex. Sev.*, 23).

Felicissimus. Fuit sub Aureliano etiam monetariorum bellum, Felicissimo rationali auctore . . . monetarii auctore Felicissimo ultimo servorum, cui procurationem fisci mandaveram, rebelles spiritus extulerunt (*Aurelian.*, 37). Cp. Mommsen, *De Caesi Saturn. tit.*, in *Nuove Mem. d. Inst.*, ii, p. 324.

Aemilius Victor v(ir) p(erfectissimus) a rat. in the time of Diocletian. Henzen, notes to 5887 = *CIL*, vi, 1120.

Basilus Donatianus v.p. rationalis, same period, *ib.*, 1121.

Julius Antoninus rationalis under Maximian, *CIL*, iii, 325.

Geminus Festus v.par. (vir perfectissimus a rationibus?) under the same, *Eph. Epigr.*, iv, p. 278, 795.

(The inscription of a procurator a rat. fisc. Constantini Aug. ñ—, Murat., 83, 2 from Ligorio, is not genuine.)

(b) A Libellis

Hirschfeld, *VG*, p. 202, 2: the title of a freedman of Tiberius acceptor a subscr(ptionibus) (Wilmanns, 384 [= *CIL*, vi, 5181] with note) no doubt corresponds to the *a libellis* in use after the time of Claudius.

C. Julius Callistus. So he is called in Scribonius. Josephus, *Antiq.*, xix, 1, 10: Κάλλιστος ἀπελεύθερος δὲ τοῦ Γαίου κτλ. [Neither in this lengthy passage nor in Dio, lix, 29 (murder of Caligula: ἐν οἷς ἦν ὁ τε Κάλλιστος καὶ ὁ ἐπαρχος) is any office spoken of; both would probably have mentioned it, if he had held it at the time. H.] In Pliny, *Nat. Hist.*, xxxvi, 10 he is described as Caesaris Claudii libertorum potentia notus. Under Claudius ἐπὶ ταῖς βίβλοις τῶν ἀξιώσεων ἐτέτακτο, Zonar., 563 D. By a sempstress he had a daughter, who became the mother of Nymphidius Sabinus (Plutarch, *Galba*, 9, 1). [Since, according to Tacitus (*Ann.*, xi, 29), in the year 48 Callistus was as powerful as Narcissus and Pallas, who were respectively *ab epistulis* and *a rationibus* (cp. *Ann.*, xii, 1), he evidently still held the office of *a libellis* at that time. H.] The passage in Scribon. Largus, *praef.* 23: tradendo scripta mea latina medicinalia deo nostro Caesari—divinis manibus laudando consecrasti does not justify the conjecture of Bücheler (*Conjectanea in Rhein. Mus.*, xxxv, 327), that he was also *a studiis*. His predecessor was perhaps

Polybius, also *a studiis* (Sueton., *Claud.*, 28), *a libellis* according to Seneca (*Cons. ad Polyb.*, 6, 5; cp. 5, 2). Seneca's treatise was composed before 44: Jonas, *De ordine librorum L. Annaei Senecae philosophi*, p. 30. He was put to death at the instigation of Messalina, whose lover he had been, in 47 or 48 (Dio, lx, 31, Tillemont, *H.d.E.*, i, p. 374). A Ti. Claudius Polybianus occurs in *CIL*, vi, 2, 12402.

Doryphorus (τὸν τὰ τῆς ἀρχῆς βιβλία διέποντα, Dio, lxi, 5), the successor of Callistus, one of the most powerful freedmen of Nero and his boon companion (Sueton., *Nero*, 29), was said to have been poisoned (in 62) for having opposed the marriage of Nero and Poppaea (Tac., *Ann.*, xiv, 65). His successor was probably

Epaphroditus (*a libellis*, Suetonius, *Nero*, 49), who assisted Nero to take his life, for which he was executed by Domitian (Sueton., *Domit.*, 14; Dio, lxvii, 14—according to Dio's chronology this was a year before Domitian was murdered). He is sometimes mentioned by Epictetus (*Diss.*, i, 1, 20; i, 19, 16; i, 26, 11), who was his slave. The Epaphroditus, to whom Josephus dedicated his *Anti-*

quities and *Autobiography*, must be a different person, since in ch. 65 of the latter work the death of Agrippa II (101) is assumed; see S. Paret, *Des Joseph. Gesch. des jüdischen Krieges*, introd. p. 23. The identification of an Epaphroditus Aug. l. a cubiculo, whose *villicus* Atticus had a certain Claudia Prima as *contubernalis* (Lanciani, *Miscell. epigr. in Bull. com. d. R.*, v, 1877, p. 172, 153), with the freedman of Nero is at least doubtful.

Entellus (ὁ τὰ τῆς ἀρχῆς βιβλία διέπων, Dio, lxvii, 15), under Domitian, is mentioned by Dio (not by Suetonius) as having taken part in the conspiracy against the emperor. Martial (viii, 68) sang the praises of his glasshouses. M. Ulpius Aug. lib. Cladus Entellianus occurs in Wilmanns, 286.

Dis manibus T. Fl. Capitolini Hermes Aug. lib. a libellis et Flavia Irene parentes filio dulcissimo v. a. viii. m. v., *CIL*, vi, 8614; also (8615-8617) the inscriptions of some subordinate officials.

Only three *equites* of the second century are known to me as having held this office. T. Haterius Nepos, according to his inscription (Borghesi, *AdI*, 1846, p. 313 [*Œuvres*, v, p. 3] = Henzen, 6947), after holding the military offices, was first censitor Brittonum Anavionens. (an unknown people; but cp. *BdI*, 1867, p. 40), then proc. Aug. Armeniae major. (between 114 and 117), ludi magni, hereditarium, a censibus, a libellis Aug., praef. vigilum, praef. Aegypti. He held the last office 126 A.D.; consequently, the *a libellis* probably at the beginning of Hadrian's reign.

Mommsen's earlier view (*StR*, ii², i, 398) that a *libellis* may have been the first century term for the office later called a *censibus*, appears incompatible with this inscription (to say nothing of the difference of the two offices); the same may be said of Marquardt's view (*StV*, ii², 217) that a *libellis et a censibus* denoted only one office. The combination of the two (so also in the fragment *CIL*, iii, 259 [Ancyra] . . . a libellis et c[ensibus]) is explained by Hirschfeld (*VG*, 18, 4) by the fact that the head of the census department would be best informed as to the circumstances of the petitioners and the justice of their claims, which certainly in part had reference to taxation. Mommsen, in his most recent explanation (*StR*, iii, 490), that the department a *censibus* was a subdivision of the office a *libellis*, dealing with requests for admission into the equestrian order and the senate (in which evidence of property was of especial importance), leaves it undecided, 'whether the title a *censibus et libellis* belongs to the whole department usually called a *libellis*, or how the titles a *libellis* and a *censibus* are related to each other'. [It is certainly very probable that, even if the two offices were different, a close connexion existed between them, and they were often managed by the same chief director. H.]

C. Julius Celsus (Boissieu, *Inscr. de Lyon*, vii, p. 246 = Henzen, 6929), having been procurator in several provinces, lastly in Lugdunensis and Aquitania, became a *libellis et censibus*; as an honour to him, his son was in amplissimum ordinem ab imp. Antonino Pio allectus.

M. Aurelius Dionysius Papirius. Marini, *Atti d. fr. Arv.*, p. 798 = Franz, *CIG*, iii, 5895: *Μ. Αὐρήλιον Παπίριον Διονύσιον τὸν κράτιστον καὶ ἐνδοξότατον ἐπαρχὸν Διγύπτ[ου] καὶ ἐπαρχὸν εὐθενίας, ἐπὶ βιβλικοῦ*

δω[ν] καὶ ἀναγνώσεων τοῦ Σεβαστοῦ¹ ἐπαρ[χον] ὀχημάτων καὶ δοικητῶν τα[χθέντα] καὶ περὶ τὴν Φλαμινίαν ἐπι[τηδειῶν] σύμβουλόν τε τοῦ Σεβαστοῦ (Mommson, *StR*, ii³, 2, 1031, 2). Perhaps the inscription in Orelli, 2648 = *CIL*, x, 6662: [a libellis imp. Commodi ?] Pii Felicis Aug. ducenariorum praef. vehicul. a copis Aug. per viam Flaminiam centenariorum consiliario Aug., etc. (cp. Hirschfeld, *VG*, p. 101, 1), refers to the same person. Franz considered him identical with the *praef. annonae* Dionysius Papirius, who was put to death in 189 (Dio, lxxii, 12-14): on the other hand, Henzen (*AdI*, 1857, p. 97) has pointed out, that the *praefectura annonae* preceded the *praefectura Aegypti*. Sievers (*Philologus*, xxvi, p. 42), who maintains the identification, assumes a degradation of Dionysius from the *praefectura Aegypti* to the *praefectura annonae*, to which the passage in Suidas (s.v. εὐδοκῶσης) might refer: Ἀδριανός. ὁ δὲ Κλέανδρος εὐδοκῶσεν τὸν ὑπατοῦς τῆς ἐν Αἰγύπτῳ ἀρχῆς κωμῶδων, καὶ παραλύει αὐτὸν τῆς ἀρχῆς οὐδὲν ἀδοικοῦντα. That such a degradation, although certainly extremely rare, was by no means impossible, is proved by the case (quoted by Hirschfeld, p. 28) of Arrius Varus *praef. annonae* in 71: Varus praetorianis praepositus vim atque arma retinebat. eum Mucianus pulsum loco, ne sine solacio ageret, annonae praefecit. Consequently, there is no doubt of the identity of the Dionysius Papirius of the inscription and of Dio; cp. Hirschfeld, p. 32, and *VG*, p. 269, 5.

If none of the above appears to have risen higher than the *praefectura Aegypti*, this is either accidental or the inscriptions are previous to the end of their career. Papinianus, who was *magister libellorum* under Severus, as is well known, afterwards became *praefectus praetorio*. Similarly, under Alexander Severus, Ulpian, after holding the office *a libellis* (cp. Hirschfeld, p. 33); also C. Caelius Saturninus, whose inscription is discussed by Mommson in the *Nuove mem. d. Inst.* [Other evidence of the office of *magister libellorum*: Henzen, 6518 = *CIL*, vi, 1628: *praef. vigil.*—*magistro a li(bellis) ma(gistro a ce(ns)ibis)*. Orelli, 2352 = *CIL*, vi, 510: *magister libellorum et cognit. sacrar.* Gruter, 151, 6 = *CIL*, xii, 1524: *ex magistro scrinii libellorum. Digg., prooem. § 9: magister sacrarum libellorum et imperialium cognitionum.* Aurelius Arcadius Charisius *magister libellorum* (fourth cent.) *Digg.*, i, 11. A sub-director in the beginning of the third century, Fabretti, 689, 107 = *CIL*, vi, 180: dedication to Caracalla, Geta Julia Aug. by Antonius (?) lib. proximus a libellis. Gruter, 587, 7 = *CIL*, vi, 8615: M. Aurelio Aug. lib. Tertio a libellis adiutori. Other subordinate officials in Cuq, *Le consilium principis*, p. 370. Gruter, 587, 8 = *CIL*, vi, 5 n. 3245 * is not genuine. Similarly Orelli, 3215 = *CIL*, vi, 5 n. 3379*: M. Caecilius Paullinus a libellis fisci f. H.]

¹ Mommson (*StR*, ii³, 926, 1 but not in ed. 3) takes ἐνὶ βιβλ. καὶ ἀνὰ. to be one office — a *libellis*: similarly, Cuq, *Le magister sacr. cogn.* (*Bibliothèques des écoles françaises*, xxi [1881], p. 108). Bücheler, *Conjectanea in Rhetic. Mus.*, xxxvii, 328 takes (certainly wrongly) ἐν ἀνὰ. to mean a *studiis*. Hirschfeld understands by it a *recitationibus Augusti*, i.e. the official whose duty it was to draw up the addresses to be delivered by the emperor (cp. Dirksen, *Manuale*, s.v. recitare. e.g. oratio D. Marci quam in castris praetoris recitavit), perhaps an extension of the duties of the department *a libellis* introduced under Marcus Aurelius.

(c) *Ab Epistulis.*

The treatise of Egger, *Observations historiques sur la fonction de secrétaire des princes chez les anciens* (Paris, 1858), did not become known to me until after the first edition of this section had appeared. I am indebted to it for some supplementary remarks, which I have always acknowledged.

1. *Before Hadrian.*

Justin, xliii. 5, 11 : Trogus . . . dicit . . . patrem quoque sub C. Caesare militasse epistularumque et legationum, simul et anuli curam habuisse.

This office is not the same as that of an imperial private secretary. As Hirschfeld observes (*VG*, 202, 3), it is the latter that is meant by Suetonius, when he says that Augustus 'officium epistularum detulit' to Horace. He wrote to Maecenas (Suetonius, *Vit. Horat.*) : ante ipse scribendis (O. Jahn, *Philologus*, xxviii, 10 : rescribendis, comparing Sueton., *Aug.*, 45, epistulis legendis ac rescribendis ; rather rescribendo) epistulis amicorum sufficiebam, nunc occupatissimus et infirmus Horatium nostrum a te cupio abducere : veniet ergo ab ista parasitica mensa ad hanc regiam, et nos in scribendis epistulis juvabit. *Regiam* (which Mommsen, *StR*, ii², 2, 764, 4 considers a clerical error) is in my opinion unobjectionable, if it be regarded as a humorous expression (like *parasiticam* derived from the *palliat*) : Hirschfeld's suggestion *reclam* does not seem to me even possible. Augustus' will was partly written by his freedmen Hilario and Polybius (Sueton., *Aug.*, 101) ; Polybius read it before the senate (Dio, lvi, 32). [Polybius Divi Aug. l., Gruter, 75. 9 = *CIL*, xiv, 3539. H.]

From the time of its institution, the office was held by freedmen till the second half of the first century. It is in itself very probable that from the beginning it was divided into Greek and Latin departments. In spite of this division, however, the supreme control (at least after the time of Claudius, when these three court offices first acquired their great importance) was evidently in the hands of a single director ; this is proved by the high position which Narcissus held together with Callistus and Pallas and could only hold as exclusive head of his office, and from the fact that Abascantus under Domitian carried on the correspondence with both the Greek and Latin speaking provinces. On the other hand, in the second century each of the two departments appears to have been constituted an independent office, perhaps by Hadrian ; the fact that in that century officials were called *ab epistulis* without any further addition is by no means a proof of the contrary ; for it can hardly be doubted that not only the heads, but also the subordinate officials—*adjutores*, *proximi* (*CIL*, xiv, 2815), *tabularii*, *scriniarii* (*CIL*, x, 527), *ab epistulis* (cp. Cuq, p. 391)—were called simply *ab epistulis* for the sake of brevity. One Libanus Caesaris vern. *ab epistulis*, who died in his seventeenth year (Gruter, 586, 7 = *CIL*, vi, 8597), was no doubt only a subordinate.

Although in the second century also freedmen exceptionally held the office *ab epistulis* (i.e. apparently as heads), this may be explained from the fact that the division of the office into two independent

bureaus had diminished the importance of each of the latter. But probably Hadrian's rule of filling these offices only by members of the equestrian order was on occasion arbitrarily departed from. Perhaps we should also hear of freedmen *a libellis* in the second century, if we had more inscriptions relating to the holders of this office. The fragmentary inscription (*CIL*, vi, 3836) of a person unknown, of praetorian rank (at earliest belonging to the third century), who managed the Greek department, is unique. It concludes (in descending scale): [misso] ad juniores legendos per Aemiliam ab epistulis Graecis cur. Ocriculorum praetori quaestori.

The *ab epistulis* in the first century, so far as they are known from inscriptions, have already for the most part been enumerated by Borghesi (*Adl*, 1846, p. 324). Those who were undoubtedly subordinate officials I shall not notice here. The inscriptions of the city of Rome are now to be found in *CIL*, vi, 8596-8613.

[C. Julius Styrax *ab epist. lat.* Murat., p. 926, 21 = *CIL*, vi, pt. 5, n. 864 *. Titulus a Ligorio interpolatus. H.]

Januarius Caesaris Aug. *ab epistulis.* Gud., p. 199, 10 = Spon., *Miscell.*, p. 205 = *CIL*, vi, 8596.

[Gruter, 578, 6 = Orelli, 2437 = Mommsen, *IRN*, 6851 = *CIL*, vi, pt. 5, n. 963 *, 964 *: Agriae Triphosae vestifcae Livius Theona *ab epistulis graec. scribe a lib. pontificalibus coniugi sanctissimae b.d.s.m.* On the same stone (Orelli, 41): Byrae Canacianae Liviae Aug. ser. a veste magn. Ti. Claudius Alcibiades mag. a bybliotheca latina Apollinis item scribe *ab epistulis lat.* is a forgery by Ligorio. Henzen, *Zu den Fälschungen des P. Ligorio in Comment. Mommsen*, p. 633.]

Ti. Claudius Aug. l. Philologus *ab epistulis.* Murat., 2043, 2; Jahn, *Spec. epigr.*, p. 93; *CIL*, vi, 8601 s. [Borghesi, *Œuvres*, v, 297, with probability considers him to be the pupil of Pudens, the grammarian, procurator of Aemilia Lepida (Gruter, 653, 2; Borghesi, v, 296). H.]

Ti. Claudi Aug. lib. Eudaemonis *ab epistulis, etc.* *CIL*, vi, 8600.

Ti. Claudio Augusti liberto Primioni *ab epistulis, etc.* *CIL*, vi, 8603.

Narcissus. His death (*Tac., Ann.*, xiii, 1) took place before the burial of Claudius (Seneca, *Apocol.*, 13, 1). Narcissi Aug. lib. *ab epistulis* (on a copper pipe), Murat., 911, 1. Narcissi Aug. l. *ab epistulis* (on a lead pipe, in fundamentis S. Ignatii. Fabretti, *Inscr. ant.*, p. 543, 408). Narcissi Aug. l. *ab epistul.* (lead pipe, *Bull. comm. d. R.*, 1886, p. 104, 1160). His house was in the ninth *regio* (Lanciani, *Le acque*, p. 303).

Burrus. Josephus, *Ant. Jud.*, xx, 8, 9: καὶ οἱ ἐν τῇ Καισαρίᾳ δύο πρῶτοι Σύρῳ Βούρρον (παιδαγωγὸς δὲ οὗτος ἦν τοῦ Νέρωνος τάξιν τὴν τῶν Ἑλληνικῶν ἐπιστολῶν πεπιστευμένος) πείθουσι πολλοῖς χρήμασιν αἰτήσασθαι παρὰ τοῦ Νέρωνος αὐτοῖς ἐπιστολὴν ἀκυροῦσαν τὴν τῶν Ἰουδαίων πρὸς αὐτοὺς ἰσπολιτείας· καὶ Βούρρος τὸν αὐτοκράτορα παρακάλεσας ἐπέτυχε γραφῆναι τὴν ἐπιστολὴν. He is not to be confounded with Africanus Burrus (ὁ τῶν στρατευμάτων ἐπαρχος, *ib.*, 8, 2)¹, and was no doubt a freed-

¹ Mommsen (*Provinces of the Roman Empire*, Eng. tr., ii, p. 206 n.) considers him to be the same, since in his idea παιδαγωγὸς in Josephus corresponds to rector imperatoriae juventutis, the title given to Afranius Burrus in Tacitus (*Ann.*, xiii, 2).

man. The son of Parthenius, Domitian's *cubicularius*, was also called Burrus (Martial, iv, 45).

Secundus. Σεκούνδος ὁ ῥήτωρ ἐπὶ τῶν ἐπιστολῶν γενόμενος τοῦ Ὀθωνος, Plutarch, *Otho*, 9, who quotes him as his authority on the emperor's final resolutions. [As the epithet ὁ ῥήτωρ seems to indicate that he was an orator of reputation, we may identify him with Julius Secundus, one of the speakers in the *Dialogus* of Tacitus; he was one of the 'celeberrima ingenia fori' (*Dial.*, 2), and a friend of Quintilian (x. 3, 12), who praises his elegance of style (xii, 10, 11). He died at an early age (x, 1, 120). H.] He was probably an *eques*; 'the fact that Tacitus expressly mentions (*Hist.*, i, 58) that Vitellius appointed *equites* to posts in the imperial household usually given to freedmen, does not exclude the probability that Otho did the same', Mommsen, *Cornelius Tacitus und Cluvius Rufus in Hermes*, iv, 322, 1.

Dionysius Suidas: Διονύσιος Ἀλεξανδρεὺς, ὁ Γλαύκου υἱός, γραμματικὸς, ὅστις ἀπὸ Νέρωνος συνῆν καὶ τοῖς μέχρι Τραϊανοῦ¹ καὶ τῶν βιβλιοθηκῶν προῦστη καὶ ἐπὶ τῶν ἐπιστολῶν καὶ πρεσβειῶν ἐγένετο καὶ ἀποκριμάτων.² ἦν δὲ καὶ διδάσκαλος Παρθενίου τοῦ γραμματικοῦ· μαθητὴς δὲ Χαυρήμονος τοῦ φιλοσόφου, ὃν καὶ διεδέξατο ἐν Ἀλεξανδρείᾳ. C. W. Müller's identification of him (*Geogr. min.*, p. xvi) with the author of the *Περὶ ῥήσεως* is impossible. The latter wrote under Hadrian, as he himself states in the acrostic (109-134, 513-522 of the poem—ἐμὴ Διονυσίου τοῦ ἐντὸς Φάρου—Θεὸς Ἑρμῆς ἐπὶ Ἀδριανοῦ discovered by G. Laue (*Zeit und Heimath des Periegeten Dionysios in Philologus*, xlii, [1882], p. 175). If Dionysius, when twenty-five years old, succeeded Chaeremon, who was summoned to Rome about the year 50 to undertake the education of Nero, he would have been ninety-two in 117; according to Suidas, he did not live till that year. The grammarian might be the father and teacher of the poet.

Fortunatus Aug. lib. verna paternus ab epistulis accensus patron. divo Aug. Vespasiano lictor curiat. viat. honor. et dec. cos. et pr., Orelli, 3197 = *CIL*, vi, 1887; and his brother

Epaphroditus Aug. l. ab epistulis in the same inscription. [Perhaps the person to whom Josephus addressed his works. H.] His *Antiquities* appeared in 94 (xx, 11); *Autobiography* about 103; *Against Apio* probably later (cp. Paret, *Gesch. des jüdischen Krieges*, 21-24).

T. Flavius Aug. l. Protogenes ab epistulis, Gruter, 586, 5 = Muratori, 901, 2.

T. Flavius Aug. l. Epictetus ab epistulis a copis mil. lictor curiat. Orelli, 2922; cp. Henzen, iii, p. 246 (Mommsen, *Rhein. Mus.*, vi, 23) = *CIL*, xiv, 2840.

¹ I.e. who lived in the period from Nero to Trajan. Suidas evidently borrowed from a list of the learned men of that age.

² The latter office, also held by Claudius' physician in ordinary, C. Stertinius Xenophon (τὸν ἀρχιατρὸν τῶν θεῶν σεβαστῶν καὶ ἐπὶ τῶν Ἑλληνικῶν ἀποκριμάτων, *Bull. d. Corr. hellén.*, 1881, p. 473), cannot be identical with the Greek secretariat, as Mommsen (*Provinces of the Roman Empire*, Eng. tr., i, p. 361 n.) assumes; its duties consisted in receiving the Greek deputies and replying to their requests (cp. Cuq, *Consil. principis*, p. 398 and authorities there given: *CIG*, 1625; Keil, *Syll. inscr. boeot.*, p. 118; Josephus, *Ant. Jud.*, xiv, 10, 6; Dio, iv, 27). According to Hirschfeld, *VG*, 205, 2, it was a branch of the *ab epistulis*.

T. Flavius Aug. l. Euschemon qui fuit ab epistulis, item procurator ad capitularia Judaeorum. Orelli, 3345 = *CIL*, vi, 8604.

[T. Flavius Aug. l. Hermes ab epistulis Graecis vix. ann. xviii, m.v. d. xiii. Orelli, 1727; cp. Henzen, iii, p. 154, a forgery. *CIL*, vi, 5, 3247 *.]

T. Flavius Aug. l. Ilias ab epistulis Latinis. Murat., 901, 3.

Flavius Alexander Aug. lib. ab epistulis Latinis. Murat., 905, 10 = *CIL*, vi, 8610.

T. Flavius Aug. l. Thallus ab epistulis Latinis, *CIL*, vi, 8911.

Flavius Abascantus. *CIL*, vi, 8598: D.m.L. Amyro Abascanti Aug. lib. ab epistulis l. Domitia Nereis conjugi optimo; 8599: Thallo Abascanti Aug. lib. ab epistulis lib. Hirschfeld (*VG*, p. 209, 1) distinguishes the contemporary Abascantus of Henzen, 6524, since the office *a cognitionibus* was certainly at that time included under the *ab epistulis*, and therefore could not have been held subsequently to the latter, as we should have to assume if the two Abascanti are regarded as identical. The inscription in question (*CIL*, vi, 8628) runs: Diis manibus T. Flavi Aug. lib. Abascanti a cognitionibus Flavia Hesperis conjugi suo, etc. On the tombstone is a representation of Scorpis, the famous charioteer in the reign of Domitian (Martial, x, 50, 53; xi, 1, 15), whose patron Abascantus probably was. Cuq (*Le magister Sacrar. cognit.* in *Bibliothèque des écoles françaises*, xxi, p. 163) considers the identification probable, and the *a cognitionibus* to be the office last held by him, consequently higher than the *ab epistulis*. Perhaps the *balneum Abascanti* in the second regio (Preller, *Regionen der Stadt Rom*, p. 115) was built by one of them. The name T. Flavius Abascantus is of frequent occurrence: *CIL*, vi, 3, 17975 (D.m.T.Fl. Abasc.), 18073, 18140, xiv, 2191. Tiles with the inscription C. Flavi Abascanti Restitutus fec. (*Bull. comm. d. R.*, 1886, 286, 1291-3). A Ti. Claudius Abascantian., son of T. Flavius Abascantus and Claudia Stratia (*CIL*, vi, 2, 14895). The inscription in Fabretti (249, 29): Antistia L. f. Priscilla Abascanti Aug. lib. ab epistulis l.l. d.d. is not genuine (*CIL*, vi, 5, 3060 *).

Cn. Octavius Titinius Capito praef. cohortis trib. milit. donat. hasta pura corona vallari proc. ab epistulis et a patrimonio, iterum ab epistulis divi Nervae eodem auctore ex S. C. praetoriis ornamentis ab epistul. tertio imp. Nervae Caesar. (Trajani Aug. Ger. praef. vigilum Volcano d.d., Orelli, 801 = *CIL*, vi, 798.) Mommsen, *RGDA*², 179: intellegitur Domitiano cujus nomen more solito suppressum est et ab epistulis fuisse et procuratorem a patrimonio (cp. Hirschfeld, *VG*, p. 41, 1): then *ab epp.* to Nerva, then to Trajan. See Mommsen, in *Hermes*, iii, 37, 5: Pliny, *Epp.*, i, 17; viii, 12.

M. Ulpius Aug. l. . . . ab epistulis. Orelli, 1641.

M. Ulpius Aug. l. verna (? Verna) ab epistulis latinis. Orelli, 2997.

M. Ulpius Aug. l. Eros ab epistulis Graecis. Gruter, 587, 2 = *CIL*, vi, 8607.

[Ionii Aug. l. ab epistulis. On a lead pipe. Fabretti, 539, 60. H.]

Acindynus Aug. lib. ab epist. lat. *CIL*, vi, 8609.

Ulpia Athenais Glypti Aug. lib. ab epistulis uxor. Orelli, 1641 = *CIL*, xiv, 3909.

The above survey shows that before the time of Hadrian the office was for the most part held by freedmen; it also follows from the inscriptions which mention other offices held by them that at that time it was not very highly thought of. It should also be mentioned, that a certain Bassus was Aug. lib. prox. ab epistul. Graecis proc. tractus Carthaginiensis (Gruter, 586, 9 = Henzen, 6935 = *CIL*, vi, 8608); he was no doubt a freedman of Claudius, his son's name being Claudius Comon (cp. Eichhorst, *Quaest. epigr. de procuratoribus*, p. 28). As under Claudius preference was not usually given to freedmen, this case may be regarded as a deviation from the rule. On the other hand, the career of Titinius Capito is very similar to those of the equestrian presidents of the *officium ab epistulis* after Hadrian.

2. After Hadrian.

C. Suetonius Tranquillus, son of Suetonius Laetus, tribunus angusticlavus of the thirteenth legion Gemina P.F., probably obtained the office through his patron C. Septicius Clarus (*praef. praet.* 119), together with whom he appears to have been dismissed in 121; cp. Tillemont, *Hist. des emp.*, ii, p. 389; Suetonius, ed. Roth, *praef.* p. viii), on the ground of having shown too little respect for the empress Sabina (*Vita Hadriani*, 11). Reifferscheid (*Sueton. Reliquiae*, p. 465) conjectures that he wrote the treatise *De Institutione Off.* (1) because he was himself *magister epistularum* to Hadrian, and (2) in consequence of the organization of the court offices by the emperor (Egger, as above, p. 27). Because Spartianus calls Suetonius *magister epistularum*, we must not assume that this expression was in use at that time; it does not occur in inscriptions of the second century.

C. Avidius Heliodorus, rhetorician, father of the pretender Avidius Cassius. *Vit. Avid. Cass.*, 1: homine (Casaubon, tamen) novo genitus Avidio Severo [read Syro: ὁ δὲ δὴ Κάσσιος Σύρος μὲν ἐκ τῆς Κύρρου ἦν, Dio, lxxi, 22. H.] qui ordines duxerat et post ad summas dignitates pervenerat (Dio, *ib.*, τὸν τὰς ἐπιστολὰς αὐτοῦ [Hadriani] διαγαγόντα, *ib.*, lxi, 3, where we should obviously read with Hirschfeld πρὸς τὸν Λουίδιον Ἡλιοδωρον ἰοῦ πρὸς τὸν αὐτοῦ ἴδιον Ἡλ., probably the Heliodorus mentioned in *Vita Hadriani*, 15, 16). He rose to be prefect of Egypt in the year 140 according to the inscription in a temple in Assuan (Syene). Aristides, *Or.*, xxvi, p. 339 J: ἡκεῖ δὲ μοι καὶ παρὰ Ἡλιοδώρου τοῦ τῆς Αἰγύπτου ὑπάρχου (? ἐπάρχου) γενομένου γράμματα ἅμα τοῖς βασιλικοῖς. Cp. Leptone, *Recherches sur l'Égypte*, p. 246 ff. [and *Archäol. Zeitung* 1869, p. 123 = *CIL*, iii, 2, 6025: per C. Avidium Heliodorum *praef. Aeg.* H.] *Avid. Cass.*, 1: Quadrat. . . illum. . . adserit. . . apud ipsum Marcum praevaleidum. nam jam eo imperante perisse fatali morte perhibetur.

L. Julius Vestinus, probably a son of Claudius' friend of the same name (cp. appendix xi). *CIG*, iii, 5900: Ἀρχιερεῖ Ἀλεξανδρείας καὶ Αἰγύπτου πάσης (cp. Mommsen, *Provinces of the Roman Empire*, ii, Eng. tr., p. 248, n. 1) Λευκίῳ Οἰηστίνῳ καὶ ἐπιστάτῃ τοῦ μουσείου καὶ ἐπὶ τῶν ἐν Ῥώμῃ βιβλιοθηκῶν καὶ ἐπὶ τῆς παιδείας Ἀδριανοῦ

ἐπιστολεῖ τοῦ αὐτοῦ αὐτοκράτορος [Suidas : Οἰησῆτινος Ἰούλιος χρηματίας σοφιστῆς ἐπιτομὴν τῶν Παμφίλου γλωσσῶν : cp. Borghesi, *AdI*, 1846, p. 325. H.] Cp. Letronne as above, p. 251 f. That ἐπιστολεὺς simply = *ab epistulis* (doubted by Letronne, p. 471) is shown by Phrynichus, p. 379, ed. Lobeck. Ἐπὶ τῇ παιδείᾳ, wrongly translated 'tutor' by Letronne and Franz, = *a studiis*. *CIL*, vi, 9520 : Dis manibus Niconi L. Juli Vestini ser. librar.—mater fec. f. carissimo.

An inscription found at Ephesus (Muratori, 453, 3 = 706, 3 = 2026, 4 = Waddington, *Voy. arch.*, 176 = *CIL*, iii, 431) enumerates the offices and dignities of a fourth secretary of Hadrian. The name is lost : Borghesi's opinion (*AdI*, 1846, p. 325) that the reference is to Vestinus cannot possibly be correct (as Hirschfeld observes), since in a Greek inscription on the same person (found in Syria ; *Bullet. de corresp. hellén.*, iii, [1879,] p. 257) . . . μωνι is found as part of the cognomen. The Ephesian inscription runs . . . proc. | imp. Caes. Trajani Hadrian | . . . as dioecesis Alexandr. | . . . oc. bibliothecar. Graec. et | Latin. ab epist. Graec. | proc. Lyc. | Pamp. Galat. Paphl. Pisid. Pont. | proc. heredita | . . . proc. provin | ciae Asiae | proc. Syriae | Hermes Aug. lib. adjutor ejus. [Perhaps his name was [Εὐδα]μων and he was a native of Egypt, where the name appears to have been particularly common ; cp. Benseler, p. v ; the beginning of his career would agree with this. I am inclined to identify him with the person named in *Vita Hadriani*, 15 : Eudae-monem prius conscium imperii (perhaps in reference to his office as secretary) ad egestatem perduxit, especially as Heliodorus is mentioned in the same passage. H.]

Celer (Philostratus, *Vit. Soph.*, i, 22, τεχνογράφος, i.e. author of a manual of rhetoric, βασιλικῶν ἐπιστολῶν ἀγαθὸς προστάτης, *ib.*). A speech of Dionysius of Miletus was attributed to him ; since he was his contemporary (Philostratus speaks of him as Διονυσίῳ τῶν ἐκ μειρακίου χρόνον διάφορον), he may have held the office (of course *ab epist. graec.*) under Hadrian. It is not quite clear from Aristides, *Or.*, xxvi, p. 335 J, whether he was still in office at that time. Aristides says that Plato had appeared to him in a dream and asked him, ποῖός τις, ἔφη, σοὶ φαίνομαι εἰς ἐπιστολάς ; μὴ φαυλότερος τοῦ Κέλερος ; τὸν γραμματέα δὲ λέγων τὸν βασιλικόν. καγὼ, εὐφήμει, ἔφη, τὸ καὶ μεμνησθαί σε τοιοῦτον (read τοιοῦτου) ὄντα ὅστις εἶ. Perhaps he is identical with the Greek rhetorician Caninius Celer, tutor of Lucius Verus (*Vita Veri*, 2) ; cp. Fabricius, *Bibl. Gr.*, vi, 126.

L. Domitio L. f. Quir. Rogato pontif. minor. proc. Aug. provinc. Dalmat. proc. monetæ Aug. ab epistulis L. Aelii Caesaris praef. equ. alae I Arauacorum trib. mil. leg. VI victric. praef. coh. I Fl. equitatae praef. coh. I Dalmatar. accenso velato Domitia Venusta marito optimo et sibi. *CIL*, vi, 1607 = Orelli, 2153.

Two freedmen of the succeeding period are known, perhaps under L. Verus, with whom freedmen had great influence :

L. Aurelius Aug. l. Secundinus ab epistulis latinis. Donati, p. 309, 4.

M. Aurelius Alexander Aug. lib. ab epistulis graecis. Gruter, p. 586, 8 = *CIL*, vi, 8606. [The order of his offices was perhaps : (1) p.p. tabell. stat. xx her., Henzen, 6568. (2) prox. ab epist. lat.

Visconti, *Mon. Gab.*, p. 126 = *CIL*, xiv, 2815 (lead pipe). (3) ab epp. graec. *CIL*, vi, 8606. H.] Cp. *VG*, p. 255, 1.¹

Amongst the *equites*, the Romans were of course ab epp. *lat.*, the Greeks ab epp. *gr.*, even where not expressly stated.

[Ab. epp. *lat.* Quint?ilio C.f. . . . [adlecto in amplissimum] ordinem inter praetorios iudici[o imp. Antonini Aug. ab epistu]lis latinis procuratori summarum ratio[num procuratori A]isiae iuridico Alexandreae ab epistulis [M. Aureli Caesaris ? procuratori] Macedoniae, ab commentariis Cornelii Re[pentini pr. pr.]. Henzen, *Nuove memor. d.I.*, 1865, p. 286 = *CIL*, vi, 1563. Hirschfeld, *VG*, 43, 1.

Sex. Caecilio Q. F. Quir. Crescenti Volusiano praefect. fab. sacerd. Curioni sacris faciendis advocato fisci Romae proc. [x]x her. ab epistu[l.] [di]vi Antonini ab [ep]istul. Augustorum patrono municipii d.d.p.p. (Thuburbo minus, between 161 and 169). *CIL*, viii, 1174.

T. Varius Clemens (in the inscription on him in his birthplace Celeia, also between 161 and 169, *CIL*, iii, 5215 = Gruter, 482, 5 = Seidl, *Monum. Celeiana*, p. 58) is called ab epistulis Augustor. proc. provinciae Belgicae et utriusque Germ. Raetiae Maur. Caesar[iensis] Lusitaniae Ciliciae praef. auxiliorum in Mauret. Tingitan. ex Hispania missorum, etc. (the expedition against the Mauri under Antoninus Pius; *Vita*, 3, Pausanias, viii, 43). A letter from him, when procurator of Mauretania, to M. Valerius Etruscus, *legatus* of Numidia (152) in the inscription on the tunnel at Saldæ: Mommsen, *Arch. Zeitung*, n.f. iii, 1870 = *CIL*, viii, 2728. He is perhaps the same as the Clemens mentioned by Dio (lxxi, 12, in the year 170) as prefect of Dacia (Tillemont, *Hist. des emp.*, ii, 610).

Tarrutenus (Tarrutenius) Paternus. Dio (lxxi, 12) expressly states that he was ab epp. *lat.* to Marcus Antoninus, and before 170, in which year he was appointed commander of the Cotini against the Marcomanni (Tillemont, *Hist. des emp.*, ii, 611): see Hirschfeld, *VG*, p. 227 f. He had already been *praef. praet.* under M. Antoninus; Commodus removed him from office (183) by raising him to senatorial or consular rank (*Vit. Comm.*, 4; Dio, lxxii, 5) and then had him put to death. His successor was perhaps

Vitruvius Secundus, qui epistulas imperatorias curabat (*Vit. Comm.*, 4) who was his intimate friend and was put to death at the same time.

Manilius, ab epp. *lat.* to Avidius Cassius, with whom he had great influence (Dio, lxxii, 7); his name was Manilius Pudens (*ib.*, lxxi, 29); Hirschfeld, *VG*, 206, 2.

Ab epp. *gr.* Ti. Claudius Vibianus Tertullus ab epistulis graecis et a rationibus Augg. *CIL*, iii, 6574: see above, p. 34.

Alexander, surnamed Πηλοπλάτων. Philostratus, *Vit. sophist.*, ii, p. 571: ἐβάδιζε μὲν γὰρ εἰς τὰ Παιωνικὰ ἔθνη κατακληθεὶς ὑπὸ Μάρκου βασιλέως ἐκεῖ στρατεύοντος καὶ δαδωκότος αὐτῷ τὸ ἐπιστέλλειν Ἑλλήνων. *Id.* p. 575: τελευτῆσαι τὸν Ἀλέξανδρον οἱ μὲν ἐν Κέλτοις φασὶν ἐπὶ ἐπιστέλλοντα, οἱ δ' ἐν Ἰταλίᾳ πεπαυμένον τοῦ ἐπιστέλλειν.

Cornelianus, rhetorician, probably the father of the rhetorician

¹ Perhaps also, as Cug, p. 385, 6 observes, the *ensor* mentioned in the *Digest*, xxiii, 2, 57, § 1 was ab epistulis: Divus Marcus et Lucius imperatores Flaviae Tertullae per Mensorem libertum ita rescripserunt.

Metrophanes (Suidas : *Μητροφάνης, Κορηλιανού ῥήτορος, Λεβαδεύς κ.τ.λ.* Amongst other works he wrote a treatise *Περὶ τῶν χαρακτήρων Φιλοστράτου*). Phrynichus, who dedicated his *Ἐκλογή* to Cornelianus, lived, according to Photius, under M. Antoninus and Commodus, who are therefore the βασιλεῖς meant in *Epit.* 418 ed. Lobeck : *πρώτιστον μὲν ἐν παιδείᾳ μέγιστον ἀξίωμα ἀπάντων ἔχοντα σὲ καὶ διὰ τοῦτο ἐκ προκρίτων ἀποφανθέντα ὑπὸ τῶν βασιλέων ἐπιστολέα αὐτῶν*. Cp. p. 225 : *οὐ δὲ βασιλικὸς ἐπιστολεὺς ἐπιφανεῖς* and p. 379 : *ἐξελληνίσαν καὶ ἀττικίσαν τὸ βασιλικὸν δικαστήριον καὶ διδάσκαλος καθιστάμενος οὐ μόνον αὐτῶν τῶν λόγων (ἀλλὰ καὶ ?) οἷον χρὴ λέγειν, σχήματος καὶ βλέμματος καὶ φωνῆς καὶ στάσεως*. It is uncertain whether, as would appear from this passage, he also held the office *a cognitionibus* ; Hirschfeld (*VG*, 209, 1) doubts it. See p. 43 above. Mai identified him with Sulpicius Cornelianus, the friend of Fronto, whose home and studies he shared (*Ερρ. ad amicos*, i, 4 ; cp. *Epp. Gr.*, ed. Niebuhr).

Adrianus, sophist. Philostratus, *Vit. sophist.*, ii, 11, p. 256 ed. Kayser : *νοσούντι—κατὰ τὴν Ῥώμην, ὅπου δὴ καὶ ἐτελεύτα, ἐψηφίσαντο μὲν τὰς ἐπιστολὰς ὁ Κορμόδος ξὺν ἀπολογία τοῦ μὴ καὶ θάττον, ὁ δὲ ἐπιθείσας μὲν ταῖς Μούσαις, ὥσπερ εἰώθει, προσκυνήσας δὲ τὰς βασιλείας δέλτους, τὴν ψυχὴν πρὸς αὐταῖς ἀφῆκεν ἐπιταφίῳ τῇ τιμῇ χρησάμενος*. Yet Suidas says : *μαθητὴς Ἡρώδου—ἀντιγραφεὺς τῶν ἐπιστολῶν ὑπὸ Κορμόδου ἐγένετο* (i.e. dictator epistularum, Salmasius on *Script. Hist. Aug.*, ii, 785), an expression employed by Suidas in accordance with later usage. [He is no doubt the Ἀδριανὸς ὁ ῥήτωρ, ὅπως σοφιστεύων, ἀλλ' ἐτι συνὼν τῷ Βοηθῷ, mentioned by Galen in *De Progn. ad Epig.*, ed. K. xiv, 627. H.]

A Sempronius Aquila ab epp. gr. Aug. is mentioned in an Ancyra fragment of uncertain date published by Ramsay in *Bull. d. corr. hellén.*, vii (1883), p. 20 = *Oesterreich. Mittheil.*, ix (1885), p. 123, 83 : *[δήμ]ου Ῥωμαίων, πρ[ι]τ[ο]ρα [ἀ]ποδεδειγμένον Σεμπρωνία Ῥωμανὰ θυγάτηρ Σεμπρωνίου Ἀκύλου γενομέ[ν]ου ἐπὶ ἐπιστολῶν Ἑλληνικῶν Σεβ[αστοῦ] τὸν γλυκίτατον ἀνδρα*.

In the inscription (*IRN*, 4618 = *CIL*, x, 4860) . . . [Gabini Te]r. Aspri pon[tificis] augur[is] [a patrimonio]o ? Augg. nn. et graph. [imp. Antoni]ni, etc., Borghesi's suggestion that *graph.* = *graphēi*, i.e. *ab epp. gr.* is impossible, as already observed by Mommsen.

In the third century the following are known :—

Antipater of Hierapolis, sophist, *ab epp. gr.* to Severus (Philostratus, *Vit. sophist.*, ii, 24, p. 265 ed. K.), tutor of Caracalla and Geta (*ib.*). Galen, *De Theriaca ad Pisonem*, p. 458, ed. K. xiv, p. 218 : *ὅποτε γούν Ἀντίπατρος, ὁ τὰς Ἑλληνικὰς ἐπιστολάς αὐτῶν πράττειν* [read *τάττειν*, cp. Josephus, *Vita*, 65, *Ant. Ju.*, xx, 8, 9. H.] *πεπιστευμένος, καὶ διὰ τὸ σεμνὸν τοῦ ἥθους καὶ διὰ τὴν ἐν τοῖς ἐητορικοῖς λόγοις ἐντελὴ παιδείαν μεγάλως ὑπ' αὐτῶν (Severus and Caracalla) τιμώμενος, τῇ νεφρτικῇ διαθέσει περπεσών, δεινὰ καὶ ἀνήκεστα ὑπὸ τοῦ πάθους ἐπασχεν, ἀξιώσαντων αὐτῶν εἶδον τὴν περὶ τοὺς φίλους εἰς τὸ σώζεσθαι σπουδὴν, καὶ θαυμαστὴν τὴν περὶ λατρικὴν φιλοτιμίαν*.

Marcus Agrippa, *τάς τε διαγνώσεις καὶ τὰς ἐπιστολάς διοικήσας* (Dio, lxxviii, 13) for Caracalla, although the latter handed over to his mother Julia *τὴν τῶν βιβλίων τῶν τε ἐπιστολῶν ἐκατέρων πλὴν τῶν πάνυ ἀναγκαίων διοικήσιν* (lxxvi, 18 ; cp. lxxviii, 4). Mommsen (*StR*, ii²

926, 1; the note is omitted in the 3rd ed.) and Hirschfeld (VG, 209, 1) assume that Marcus Agrippa was first a *cognitionibus*, then *ab epistulis*: but cp. Cuq as quoted on p. 43 above. [In reference to Caracalla's assassination, it is stated (*Vit. Carac.*, 6): *non ignorantibus Marcio Agrippa, qui classi praeerat, et praeterea plerisque officialium.* H.]

Aspasius of Ravenna (Philostratus, *Vitt. sophist.*, ii, 33; cp. Egger as above, p. 17). He also held the professorship of rhetoric at Rome, *νέζων μὲν εὐδοκιμώτατος, γηράσκων δὲ ἔξιν αἰτῖα τοῦ μὴ ἐτέρῳ ἀποστήναι βούλεσθαι*. Philostratus addressed a letter to him on the art of composing the imperial letters (see vol. i, p. 56 and n.).

Maximus of Aegae, author of a life of Apollonius of Tyana (Philostratus, *Ap. Tyana.*, i, 3, 5, ed. K., p. 3, 3): *ἡξιώθη δὲ καὶ βασιλείων ἐπιστολῶν οὗτος εὐδοκιμῶν τὴν φωνήν* (ib., i, 12, 14 ed. K., p. 7, 7).

Calvisius Statianus—*ab epistulis latinis* Augustor. Veronensis patronus. Maffei, *Museum Veronense*, 116, 1 = Orelli, 3907 = *CIL*, v, 1, 3336 ['*litteris bonis*'], consequently belonging probably to the second century. H.]

Numisius Quintianus v.p. *ab epistulis latinis* Gordiani (239), Grut. 272, 2 = *CIL*, vi, 1088. Claudius Eusthenius, qui Diocletiano *ab epistolis* fuit. Hist. Aug. *Vit. Carini*, 18. [Eutropius *ab epp.* Constantini; cp. Tzschucke, praef. ad Eutrop., p. 9. After Constantine: Orelli, 2352; Codinus, *De Orig. Constant.*, p. 51; Libanius, ed. Reiske, iii, p. 438. Julian's secretaries Nymphidianus (Eunapius, *Vitt. Soph.*, p. 177 Boiss.) and Himerius (Tzetzes, *Chil.*, vi, 28). A magister epistular[um], *Bull. trimestr. des antiq. afric.*, 1885, p. 24, n. 694. Fragment by the *vir praetorius*, p. 41 above. Forgeries: Orelli, 3567 (cp. Henzen, iii, p. 372); Gudius, 202, 4; Doni, vii, 52, 156, viii, 37. H.]

The *officium a memoria* cannot be definitely shown to have been in existence until the time of Caracalla; it did not originate, as Mommsen thought, in the *a studiis*. Certainly Lipsius's emendation (*Elect.*, i, 12, adopted by Roth) in Suetonius, *Aug.*, 79 is very probable: Julius Marathus, libertus et a memoria ejus (MSS., etiam memoriam). In any case, as Cuq (p. 401) conjectures, the formal institution of the office was probably due to Hadrian; the oldest inscription in which it is mentioned, is Muratori, 892, 11 = *CIL*, vi, 8618: D.m. Ctesiae Aelii Cladei a memoria et cubiculo Aug. ser. M. Aurelius Julianus a rationibus et a memoria, *CIL*, vi, 1596 = xiv, 2463. Herodian, iv, 8, 4: *ἦν αὐτῷ* (Caracalla) *τις τῶν ἀπελευθέρων φίλτατος, Φῆστος μὲν νομα, τῆς δὲ βασιλείου μνήμης προεστῶς*. The same person appears to be meant in the corrupt passage of Dio (lxxviii, 32: *τὸν κατὰ τοῦ Ταράντου πρῶτον*) [and is no doubt identical with the Festus mentioned in *Vita Macrini*, 4: *Macrinum . . . donatum . . . anulis aureis patrocinantem sibi conliberto suo Festo*, obviously an imperial freedman. H.]. On the base of a statue of his wife or daughter at Tibur, *CIL*, xiv, 3638: *Marci Festi* [a cubic. ?] et a memor . . . Antonini Pii [felicitis]. The combination of the two offices (see Karlowa, *Rechtsgesch.*, i, 545) is also shown by Dio (lxxvi, 14), according to Hirschfeld's emendation: *ἐπεπίστευτο τὴν τε μνήμην* (for *γνώμην*) *αὐτοῦ καὶ τὸν κοῦτῶνα*. Hist. Aug., *Vit. Pescen. Nig.*, 7: *Pauli et Ulpiani praefecturae, qui*

Papiniano in consilio fuerunt : ac postea quum unus ad memoriam, alter ad libellos paruisset, statim praefecti facti sunt ; *Alex. Sev.*, 31 : post meridianas horas subscriptioni et lectioni epistolarum semper dedit operam, ita ut ab epistolis et libellis et a memoria semper assisterent . . . nonnunquam . . . sederent, relegendibus cuncta librariis et iis qui scrinium gerebant ; *Carinus*, 8 : Junius Calphurnius, qui ad memoriam dictabat, talem ad praefectum urbis super morte Cari epistolam dedit. Cp. Boissieu, *Inscriptions de Lyon*, p. 252 (Eichhorst as above, p. 29). Orelli, 3195 and 3196 (= *CIL*, vi, 8619, imperial rescript to a certain Januarius lib.), 2352 (of the year 376), 3192 (same date), 6328 = *CIL*, x, 1727. Gruter, 151, 6 = *CIL*, xii, 1524. *Notitia dignit.*, ed. Böcking, ii, p. 414 *-416.* *CIL*, vi, 8619-8622. Gothofred., *Ad cod. Theod.*, ed. Ritter, ii, p. 93. *CIL*, xiv, 4062 = *Bull. comm. d. R.*, 1883, p. 237, 671 (sarcophagus) : D. m. Artemidori Aug. lib. adlect. a memoria q.v.a. xvii d. xvii Valeria Philoc . . . filio dulcissimo. [In the second half of the fourth century the author of the *Breviarium rerum gestarum*, Rufius Festus ; cp. Bernhardt, *RLG*⁴, p. 715, n. 516 (Teuffel, *RLG*⁴, Eng. tr., 416, 1) : 'the heading in the Bamberg MS. (eleventh cent.) is *breviarium Festi v.c. magistri memoriae*'. With this should be combined the notice in Bähr (*RLG*, ii⁴, p. 307, n. 12) that he is spoken of as *dictator* in MSS. H.] In the inscription Henzen-Orelli, 6328 = *CIL*, x, 1727, an Aurelius Symphorus Aug. lib. officialis vetus a memoria et a diplomatibus is mentioned ; the latter, probably a branch of the *a memoria*, also occurs by itself in Orelli, 2795 = Doni, xvii, 22 = Murat., 785, 4 (T. Aelius Aug. lib. Saturninus a diplomatibus) ; cp. Hirschfeld, *VG*, p. 105 and 279 note. In the office a *codicillis* letters of appointments were drafted (cp. Marquardt, *Prl.*, ii⁴, 805, 1). In the inscr. *CIG*, 4033, 4034 : *πρεσβεύσαντα ἐν Ἀσίᾳ ἐξ ἐπιστολῆς καὶ κωδικιλλῶν θεοῦ Ἀδριανοῦ, ἐπιστολῇ* is the imperial letter despatched from the secretariat, containing the notification of appointment perhaps accompanied by instructions, *κωδικιλλοὶ* the letters patent (cp. Waddington, *Mém. de l'Inst.*, 1867, p. 220 ; Karlowa, *Rechtsgesch.*, i, 541). A *codicillis* alone : Orelli, 2902 = *CIL*, xiv, 4011 ; Orelli, 2903, 5009 = *CIL*, vi, 8440 ; cp. Fronto, ed. Niebuhr, p. 102 (6311). M. Ulp. Aug. lib. Stratus adjutor a *codicillis*. *BdI*, 1862 (*CIL*, vi, 8441s.), p. 8. M. Ulpio Aug. lib. Laeto a *codicillis*, *Bull. comm. d. R.*, iii (1875), p. 162. Hirschfeld, as above (p. 60, 2 ; 205 n.) takes *codicilli* to mean testamentary provisions, and believes that the officials a *codicillis* were concerned with the administration of inheritances. The fact that T. Aurelius Egatheus a *codicillis* (*CIL*, vi, 8440) was once so employed is not sufficient to confirm this view, which is not very probable¹ (A Euphemus Lucillae Aug. a legatis, *CIL*, vi, 8434a).

The office a *memoria*, to which a considerable portion of the duties formerly performed by the *ab epistulis* and a *libellis* was transferred (apparently after the beginning of the third century), the time after Constantine constituted the imperial bureau, while the

¹ Hirschfeld, who adheres to his opinion, in order to show to what an extent the *ratio hereditatum* was subdivided, calls attention to the officials *ab auctorita[tibus] ratione heredit.* *CIL*, vi, 8439.

other heads of departments only retained preliminary functions, chiefly as examiners. The result was that they were driven more and more into the background, and were held to be inferior in rank to the *a memoria* (Hirschfeld, pp. 210-215 ; Cuq, p. 473).

IX. THE ORDER OF THE OFFICES HELD BY IMPERIAL FREEDMEN.

(Vol. I, p. 37, l. 6 from bottom.)¹

THE gradual promotion of freedmen on the imperial initiative to more important duties and positions at court (cp. Hirschfeld as above, p. 266) is best illustrated by certain inscriptions in which undoubtedly the offices held by various persons are specified in their proper (ascending or descending) order.

I cite first the fragments of two imperial rescripts to a freedman named Januarius. In the first, he is rewarded for the satisfactory performance of his duties as *proximus a memoria* by a yearly salary of 40,000 sesterces ; in the second, he is promoted to the *statio voluptatum*. The fragments, with the insertions of Mommsen and Hirschfeld (*CIL*, vi, 8619), read as follows : Januario [lib.] salutem. [Functus es per annos . . . ministerio officii me]moriae. in quo mihi probe et laboriose et ex dis[ciplina mea operam prae]buisti u]t indulgentiae meae praerogativam tanto magis cu[ra tua probaverit, quanto plus amoris tuo [?] min]isterio sit mihi conciliatum ; ideoque justum arbitratus sum [adaequare te] ceteris proximis, qui in aliis stationibus quadragena millia n. [accipiunt ; neque haec indulgentia c]uiquam mira videri potest cum iudicium meum fidei labori sed[ulitati tuae optimo jure tri]bui a me intelligatur. Bene vale.

[Januar]io lib. salutem. [Quoniam functus studio pecul]iare ministerio officii memoriae es et fides ac modestia qua semper et egisti et commendatio . . . magistri tui hortantur, ut te ad splendendam voluptatum statio[nem promoveam, defero tibi officium . . .] colliberti tui, nec dubito operam insumpturum, ut talem te [in eo praebeas, qualis esse debet, qui a]d latus principum tam diu egerit. Bene vale.

I next give the inscriptions, in which the careers of imperial freedmen are indicated.

1. Ti. Claudius Aug. lib. Bucolas praegustator tricliniarum (*sic*) proc. a munerib. proc. aquar. proc. castrensis cum. Q. Claudio Flaviano filio et Sulpicia Cantabra matre d.d. Found at Caere (*Bull. d. Inst. arch.*, 1840, p. 95 ; Henzen, 6337).

Bucolas began his career as a 'taster', an office filled during the reign of Claudius by the eunuch Halotas, who is said to have assisted in poisoning him (Suetonius, *Claud.*, 44). Other imperial tasters are mentioned in the inscriptions. Orelli, 2993 and *CIL*, vi, 602, 9003-9005 (9004 : collegium praegustatorum), x, 6324 (praegustator et a cubiculo Neronis) ; cp. Nipperdey on Tacitus, *Ann.*, xii, 66 and Marquardt, *Prl.*, i², 147, 8. Then he became superintendent of the table, a post mentioned elsewhere ; both in the imperial household (Orelli, 794,

¹ A great part of this article has already appeared in the *Programm* of the University of Königsberg (May 12th, 1861 ; Acad. Alb. Regim., 1861, iii).

cp. Henzen, iii, p. 78 = *CIL*, vi, 1884 : M. Ulpio Aug. lib. Phaedimo¹ Divi Trajani Aug. a potione item a laguna et tricliniarch. lictori proximo et a comment. beneficiorum [died 117, at the age of twenty-eight] and in private houses (Becker-Göll, *Charicles*, iii, 373). The Euphemus, no doubt an imperial freedman, whom Martial (iv, 8) asks to hand a copy of his poems to the emperor at table :

hora libellorum decima est, Eupheme, meorum,
temperat ambrosias cum tua cura dapes . . .
tunc admitte iocos

was probably Domitian's superintendent of table. Bucolas was next promoted to be business manager of the imperial gladiatorial games. The explanation of procurator a muneribus or munerum (Henzen, 6344) given by Borghesi (*BdI*, 1830, p. 123)—'che amministrava i regali fatti all' imperatore'—can hardly be correct, since it is highly improbable that there was a special department connected with such presents. Mommsen formerly held the view (now abandoned by him) that the reference is to the waterworks called *munera* (*StR*, ii², 951, 4; Hirschfeld, as above, p. 167, 1). On the permanent officials who administered the imperial *munera* cp. Hirschfeld, p. 177 f. A tabularius a muneribus in *Bull. comm. d. R.*, 1881, p. 43.

The office of *proc. aquarum*, next held by Bucolas, is one of the higher procuratorships: according to the inscription Orelli, 946 = *CIL*, x, 6569 (first half of the third century) it carried with it a salary of 100,000 sesterces. It has been discussed at length by Hirschfeld (*VG*, p. 161) and Lanciani (*Le acque*, p. 319). Both assume that it was instituted by Claudius, and give lists of officials, Bucolas being the first named (Lanciani puts him in the reign of Domitian). Finally, he became *proc. castrensis*, an office incidentally mentioned by Marini (*Atti d. fr. Arv.*, p. 956); Eichhorst's conjecture (*Neue Jahrbücher*, 1865, p. 207), that this was the manager of the *ludi castrenses*, is untenable. Hirschfeld has abandoned his earlier view (*Das aerarium militare in der Kaiserzeit*, in *Philol. Jahrb.*, 1868, p. 690), that the *procuratores castrenses* were the subordinate officials of the chief director of the administration of all the military funds, the *procurator rationis castrensis*. He considers (*VG*, 196–200) the titles *procurator castrensis*, *procurator rationis castrensis*, *procurator fisci castrensis* to be terms for one and the same official, the director of the imperial residence, who according to the inscription (Henzen, 6529: M. Aurelius Basileus vir ducenarius *proc. rationis castrensis*) received a salary of 200,000 sesterces. On the other hand, Mommsen (*StR*, ii², 2, 807, 2) observes that the city palace was never called *castra*, and, owing to the tendency of the Augustan principate to disguise the military government, could never have been so called. He considers the *proc. castrensis* to be the official appointed to look after the imperial *vestis castrensis* and camp and travelling equipments generally—a position hardly sufficient to explain the importance which must have been attached to it. [The tendency of the Augustan principate is not absolutely decisive as to the nature of an office which cannot

¹ A. M. Ulpius Phaedimus Aug. lib. a cubiculo (*CIL*, x, 6773).

be shown to have existed before the time of Claudius. And although at first it may only have been connected with the imperial quarters outside Rome, the instances quoted (*VG*, p. 198) show that in the third (and most probably in the second) century the functions of the *proc. castr.* extended also to the imperial palace inside—especially the activity of the *tabularius vat. castrensis* for the May festival of the Arval brethren to be held in the imperial palace in 219. H.] The *procuratores castrenses* are all imperial freedmen: Henzen, 6337, Muratori, 901, 1 (Ulpius Crater Aug. lib. *proc. castr.*); Henzen, 6344 (to be discussed under no. 4), 7419 d; ([Aur]elius Aug. [lib.] Saturninus *procur. cast.*); he appears to be identical with the Saturninus in Maffei, *Mus. Ver.*, p. 85, 2 (Saturninus Aug. lib. *proc. castrensis*); Orelli, 4008, cp. Henzen, iii, p. 436 (Aurelius Hermas Aug. lib. *proc. k.*); cp. *CIL*, vi, 8511 sqq.; *CIG*, 3888 (M. Αὐρ. Σεβαστῶν ἀπελεύθερον Κρήσκεντα ἐπίτροπον Λουγδούνου Γαλλίας καὶ ἐπίτροπον Φρυγίας καὶ ἐπίτροπον καστρήσιν. According to the last inscription the *procuratio castrorum* appears to have been the preliminary step to the procuratorship of a province; since the latter was rarely attained by freedmen, the *proc. castr.* must be regarded as one of the highest positions accessible to them. The inscription Orelli, 2972, *CIL*, xiv, 2932: Paeon Aug. lib. *proc. castr.* *proc. hereditat. proc. voluptat. proc. Alexandr. sibi posterisque suis* is genuine, though doubted by Henzen (iii, 246, cp. 508). Hirschfeld adds: Fabretti, 689, 108: M. Aurel. Stertinius Carpus una cum Carpo *proc. k. patre* and Fabretti, 196: xlv d.m. Primi-genio Epagathio Aug. l. *proc. f(isci) c(astrensis) delicio*. Forgery, by Ligorio: Gud., 37, 1; 60, 10; 191, 5.

2. P. Aelio Aug. lib. Liberali¹ *procuratori annonae Ostiensis. procuratori pugillationis et ad naves vagas. tribunicio collegi magni. decuriali decuriae viatoriae consul. decuriali gerulorum. praeposito mensae nummul. f. f. Ost. ornato ornamentis decurionatus col. Ost. patrono Laurentium vici Augustanor.* Henzen, *BdI*, 1875, p. 5 (Illustrazione di una lapide latina ritrovata a Castel Porziano); now *CIL*, xiv, 2045.

This inscription, which decides the position of the vicus Augustanus Laurentium, has been admirably explained by Henzen, from whom I take the following. The offices are enumerated in descending order. P. Aelius Liberalis, a freedman of Hadrian, began his career as director of a bank, established by the Roman central administration of the corn supply at Ostia (*mensa nummularia fisci frumentarii Ostiensis*), in which position he received from its senate the insignia of the decurionate. He then entered the corporation of the *geruli* (bearers of letters and official documents, Mommsen, *StR*, i³, 366, 3 and 4), who belonged to the public *apparitores*; next, the chief (consular) *decuria* of the *viatores* (*ib.*, p. 344); and then held the office of a tribune of the 'great college' devoted to the cult of the imperial house (*collegium magnum larium et imaginum*, etc.). By 'procurator pugillationis' and 'ad naves vagas' Henzen understands the procurator of the official delivery of letters (*pugillatio* in Sidon. Apol., *Ep.*, ix, 4 *pugillator* = letter carrier) by the mail-

¹ *CIL*, xiv, 2178 (Aricia): Aeliae Saeniae Nigrinae Aelius Liberalis *cojug. b.m.f.*

boats stationed at Ostia. On the other hand, Mommsen (*StR*, ii³, 2, 1030, 3) observes: 'it seems more probable to understand an official charged with the registration (*pugillatio*) of ships arriving in Latin harbours'. Hirschfeld, who agrees with Mommsen, adds (*VG*, p. 140): 'Since from about the time of Hadrian to Caracalla the *proc. portus* is replaced by the *proc. annonae*, this *proc. pugillationis et ad naves vagas* may have exercised some of the duties of the *proc. portus*, which were not included in the *procuratio annonae*, especially the control of in- and out-going ships'. Lastly, P. Aelius Liberalis became *procurator annonae* at Ostia. As *patronus* of the *Laurentes vici Augustani* (perhaps the *vicus* mentioned by Pliny, *Epp.*, ii, 17 as near his Laurentinum) he was honoured by them with this inscription.

3. On the inscription *CIL*, iii, 348 (offices in ascending order): M. Aur. Aug. liber. Marcioni proximo rationum *proc. marmorum* *proc. prov. Britanniae* *proc. summi chorag.* *proc. prov. Frygiae*, see Hirschfeld, *VG*, 183, 2.

The following inscription (end of second or beginning of third century) shows some resemblance to the career of Bucolas:

4. M. Aurelio Augg. lib. Proseneti a cubiculo Aug. *proc. thesaurorum* *proc. patrimonii* *proc. munerum* *proc. vinorum ordinato a divo Commodo*. in Kastrense patrono piissimo liberti benemerenti sarcophagum de suo adornaverunt (on a large sarcophagus found near the Via Labicana; Henzen, 6344).

As the *procuratio patrimonii* was certainly a higher office than the *procuratio vinorum*, the order must be a descending one. [This is especially clear from *ordinatus a Divo Commodo* in *kastrense*: i.e. (first) appointed by Commodus to a post in the imperial palace, by which the lower, non-procuratorial positions are indicated, which, being merely preliminary steps to the procuratorships, are enumerated. H.] The office of chamberlain (*a cubiculo*) was consequently the highest of these held by Prosenes, to which he was appointed immediately after the administration of the imperial treasures, where no doubt valuables of all kinds were kept, especially clothing (*Vita Alex. Sev.*, 40: in thesauris vestem nunquam nisi annum esse passus est; cp. the passage quoted by Salmasius, *Cod.*, xi, 14: *privatae vel linteariae vestis magistri, thesaurorum praepositi vel baphiorum ac textrinatorum procuratores*, etc.; Hirschfeld, *VG*, 193, 1). 'Praepositus thesaurorum' in the latter passage = *procurator thes.* In the latest period the *praep. thes.* was one of the officials sub dispositione comitis sacrarum largitionum (*Notitia dign. Or.*, ed. Böcking, i, 82). Böcking prefers the plural, since in *Notit. Occ.*, x, i, c. 12 *praepositi thesaurorum* are mentioned. But these are provincial *thesauri*, each of which had its special superintendent, while in the case of the imperial treasure-houses there is no reason to assume that there was more than one administrator. [The *praepositus thesauris dominicis* (Henzen, 6871 = *CIL*, viii, 1322) is an officer, and these *thesauri*, instituted for military purposes (cp. *Hist. Aug.*, Gallieni, 3) are to be distinguished from the others. H.]

On the *procuratio patrimonii*, i.e. the administration of the imperial private property cp. Hirschfeld, pp. 23; 41, 3. The *pro-*

curatio munerum has been discussed above. There remains the *procuratio vinorum*. Different wine-producing countries of Italy were obliged to furnish wine for the capital; a special department and funds were appointed in this connexion. The chief official was called later *rationalis vinorum* (on the titles *procurator* and *rationalis* cp. Hirschfeld, pp. 36–38). *Not. Occ.*, ed. Böcking, ii, 1, p. 16,* cp. p. 194 * sqq.; Gothofred. on *Cod. Theodos.*, xiv, 6, 3 (ed. Ritter, v, 210): hinc titulus vinarius Symmacho lib. 7. epist. 95 et arca vinaria, id est, ratiocinium hujus praestationis vini. cujus quidem arcae vinariae rationes tractabat peculiaris Rationalis qui sub p.u. fuit, Rationalis vinorum ut docet notitia imperii. Several passages are there quoted, in which the *arca vinaria* is mentioned. In this department Erasinus Caes. n. ser. and Aelius Aug. lib. Eutychnus were appointed *adjutores a vinis* (Henzen, 6377, 6378 = *CIL*, vi, 9092, 9091). [The latter is perhaps the same as Eutychnus Caes. n.s. verna ped(isequus) a vinis, Muratori, 899, 6 (where it is wrongly explained) = *CIL*, vi, 8527, according to which as a slave he had held a lower post in the same department. H.] See also Jahn, *Spec. epigr.*, c. 31.

Prosenes died in 217, having embraced Christianity (according to the very probable assumption of De Rossi, *Inscr. Christ.*, i, 5, p. 9). On the right side of the sarcophagus, above a griffin, there is the following inscription: Prosenes receptus ad deum v non. . . . is sa . . . nia Praesente et Extricato II regrediens in urbe ab expeditionibus. scripsit Ampelius lib. The gaps are thus conjecturally filled by Mommsen: Prosenes receptus ad deum v non. [Ma]i [as] (vel [Jul]i[as]) Sa[me in Cephalle]nia Praesente et Extricato II regrediens in urbe[m] ab expeditionibus, who rightly assumes (against De Rossi), that the words scripsit Ampelius lib. are not to be connected with what precedes.

Several years older is the inscription of Casa Calda, found on a magnificent sepulchral memorial on the Via Appia, now *CIL*, vi, 1598. From Henzen's exhaustive commentary (*AdI*, 1857, p. 86) I quote the necessary explanations.

5. [L. Aurelius Nicomedes qui et] Ceionius et Aelius vocitatus est L. Caesaris fuit a cubiculo et divi Veri imp. nutr[itor].

[a divo Antonino Pio equo publico et sac]erdotio Caeniniensi item pontif. min. exornatus ab eodem proc. ad silic. et praef. vehicul. factus et ab imp. Antonino.

[Aug. et divo Vero cura copiarum exercit]us¹ ei iniunct. hasta pura et vexillo et corona murali donatus proc. summarum rat. cum. Ceionia Laena uxore sua hic situs.

The offices and distinctions of Nicomedes are all equestrian, and, although the insertion of *equo publico* is doubtful, they are certainly subsequent to his elevation to the equestrian order; consequently, his career cannot be compared with those of the other imperial freedmen. But while in other cases freedmen, upon whom *ingenuitas* was bestowed, in enumerating the positions filled by them, ignore those which involve *libertinitas*, these latter (L. Caesaris a cubiculo et divi Veri imp. nutritor) are in this instance quite exceptionally

¹ This line is supplied by Mommsen.

mentioned. Otherwise, all the priesthoods, offices, and decorations of Nicomedes are equestrian (Mommson, *StR*, iii, 1, 518, 4). The *sacerdotes Caeninenses* (Orelli, 96, 2180, 2533, 3349), like the *pontifices minores*, are always of equestrian rank. Similarly, the managers of the postal system (*praefecti vehiculorum*) known from other sources are all *equites* (Hirschfeld, p. 100, 3; Mommson, *StR*, ii³, 2, 1031), who after they had risen to the *praefectura alas*, were appointed imperial procurators—as *sexagenarii*, *centenarii*, and (in combination with the office *a copiis. Aug. per viam Flaminiam*; cp. Hirschfeld, p. 101, 1) *ducenarii*. On the *proc. summarum rationum* see p. 32; on the *cura copiarum*, Hirschfeld, 101, 1.

6. The latest inscription to be quoted (time of Alexander Severus), found near Corinth and copied by Cyriacus of Ancona (now *CIL*, iii, 536), is as follows:—

Theoprepen Aug. lib. proc. domini n. m. Aur. Severi Alexandri Pii Fel. Aug. provinciae Achaiae et Epiri et Thessaliae rat. purpurarum proc. ab ephemeride proc. a mandatis proc. at praedia Galliana proc. saltus Domitiani tricliniarcham praepositum a fiblis praepositum a crystallinis hominem incomparabilem Lysander Aug. lib. officialis.

Ψ[ηφισματι] Β[ουλης]

The offices are mentioned in descending order. Theoprepes was, accordingly, at first superintendent of the imperial crystal vessels (i.e. the valuable glass-ware), then of the buckles or clasps on clothes. As early as the last days of the republic military tribunes wore golden clasps: Pliny, *Nat. Hist.*, xxxiii, 39: sed in militia quoque in tantum adolevit haec luxuria, ut M. Bruti e Philippiis campis epistulae reperiantur frementis fibulas tribunicias ex auro geri. In the second century there was great extravagance in this respect. Hadrian, who wore clasps without jewels, was admired for his economy (*Vita*, 10; cp. the notes of Casaubon and Salmasius); on the other hand Gallienus wore golden clasps set with precious stones (*Gallieni duo*, 16). Aurelian (*Vita*, 16) even allowed common soldiers to wear golden clasps, whereas they had previously only worn silver ones. 'Fibula aurea cum gemmis' is mentioned as a present to a newly appointed military tribune in 238 (*Inscr. v. Thorigny*, ii, 10, in Mommson, *Ber. d. sächs. Ges.*, 1852, p. 241. The *fibula* in Martial (v, 41, 5, *trabeasque et Idus, fibulasque censusque*) is also to be understood as a distinction of the tribunes. Numerous statues and busts of the period show that cameos were frequently used for the adornment of belts and clasps. Probably the *praepositus a crystallinis* and the *pr. a fibulis* were both subordinates of the *praepositus thesaurorum*. The office of *tricliniarcha* has been already spoken of (p. 50f.); after this Theoprepes was appointed administrator of two imperial domains, the *saltus Domitianus* (cp. Hirschfeld, *VG*, 25, 3) and the *praedia Galliana* (*saltus Galliani qui cognominantur Aquinates in the 1st regio*, Pliny, *Nat. Hist.*, iii, 116). He next became *procurator a mandatis*, i.e. he superintended the drawing up of the imperial instructions issued to proconsuls, propraetors, and procurators for the administration of the provinces (Dio, liii, 15; Pliny, *Ad Trajanum*, 56; often in the Digests, cp. Puchta, *Instit.*, p. 528, Hirschfeld, *VG*, p. 206 n.). Lucian, *Pro Lapsu in Salutando*: τι δ'; οὐχὶ καὶ ἐν τῷ τῶν ἐπτολῶν βιβλίῳ, ὃ ἀεὶ παρὰ βασιλέως λαμ-

βάνετε, τοῦτο πρῶτον ὑμῖν ἐστὶ παράγγελμα, τῆς ὑγιείας τῆς ὑμετέρας αὐτῶν ἐπιμελεῖσθαι;

As far as I know, this office, like that of the *procurator ab ephemeride*, is only mentioned here. [The latter in all probability was created by Alexander Severus in imitation of Alexander the Great (*Vita*, 30, quem praecipue imitatus est; 64, se Magnum Alexandrum videri volebat; cp. 31 f.), whose *ephemerides* or day-books were kept by Eumenes of Cardia; cp. *VG*, 206, 1. H.] According to Casaubon's conjecture (on Suetonius, *Augustus*, 64), the custom (dating from the time of Augustus) of keeping a diary of the events of the imperial household (*commentarii diurni*) was imitated from the Macedonian court, which had borrowed it from the Persian. There is the more reason to believe this, since the latter appears directly or indirectly to have been the model of other Roman court institutions (see p. 59). The diary of Trimalchio (Petronius, 30) is perhaps a caricature of the imperial diary. Augustus forbade his daughter and granddaughter to say anything, which could not be inserted in it (Suetonius, *Aug.*, 64). Aurelian's biographer made use of his day-books (*ephemerides*) written on linen, in which he had had the events of the day set down (*Vita*, 1). On the basis of these day-books biographies of the emperors were written in diary form, such as the *ephemerides vitae Gallieni* by Palfurius Sura (*Gallieni duo*, 18) and the *ephemeris* of Turdulus Gallicanus, used by Vopiscus in the biography of Probus (*Vita*, 2). Their official *commentarii*, also frequently mentioned (Sueton., *Domit.*, 20; Tacitus, *Hist.*, iv, 40; Trajan *ad Plinium*, 95; Digg., iv, 6, 32), which were kept by slaves and freedmen, were different from these (cp. Hirschfeld, *VG*, 206, 1; *CIL*, vi, 8623; Mommsen, *StR*, ii², 2, 907 f.).

The last office held by Theoprepes was the administration of the imperial purple factories (Marquardt, *Prl.*, ii², 514) in Achaia, Epirus, and Thessaly: proc[uratore]m domini n[ostri] M. Aur[elii] Severi Alexandri Pii Fel[icis] Aug[usti] provinciae Achaiae et Epiri et Thessaliae rat[ionis] purpurarum. Perhaps the *ratio purpuraria* owes its origin to Alexander Severus, who seems to have been the first to sell purple from the imperial factories (Hirschfeld, *VG*, 193, 1).

X. ROMAN NAMES ASSUMED BY *PEREGRINI* AND FREEDMEN.

(Vol. I, p. 47, l. 6.)

GALBA's freedman Icelus, Marciani cognomine ornatus (Suetonius, *Galba*, 14) after his elevation to the equestrian order, took this *equestre nomen* (Tacitus, *Hist.*, i, 13) as a second *cognomen* (Tacitus, *Hist.*, i, 46). (R. Macke, *Die römischen Eigennamen bei Tacitus*, ii [*Progr. d. Gymn. zu Hadersleben*, 1888], p. 18; cp. Mommsen, *StR*, iii, 1, 426, 3.) A similar case (mentioned in Dio, lxxix, 16) is that of Aurelius Zoticus of Smyrna, the favourite of Elagabalus, who received the cognomen of his imperial master's grandfather Avitus. But freedmen also appear to have been sometimes permitted to make use of a more becoming cognomen in addition to their Greek or foreign one. If the examples of such double names (Phileros Aequitas, Eros Merula) chiefly belong to the last days of the republic and the early empire, the reason is that later the freed-

man-name was as a rule discarded; many freedmen (e.g. M. Verrius Flaccus, Sueton., *De grammaticis*, 17) in this manner appear to have acquired the pure equestrian name. Suetonius, *ib.*, 18: L. Crassicius generis libertini, cognomine Pasicles, mox Pansam se transnominavit Martial, vi, 17:—

Cinnam, Cinname, te jubes vocari.
non est hic, rogo, Cinna, barbarismus?
tu si Furius ante dictus esses,
fur ista ratione dicereris.

Such arbitrary alterations of name were a violation of legal provisions, which (as is shown in thousands of cases) must have forbidden a freedman to assume family *cognomina* usually borne by the nobility and *equites*.

On the other hand, while freedmen were especially fond of changing the Greek *cognomen* for a Roman, provincials of free descent, who possessed or received the rights of citizenship, and had no reason for concealing their origin, frequently seem to have borne a Greek as well as a Roman *cognomen*, sometimes before, sometimes after the latter. Thus, e.g. Α. Φορτίος Φόρτις Ἀσκληπιάδης, Πόπλιος Ἀἴλιος Φλαβιανὸς Ζωῆλος, Γ. Κλαύδιον Σειλιανὸν Πολύκριτον, Τιβ. Κλ. Μοντανὸν τὸν καὶ Ἡσύχιον, Αὔρ. Ἀγησιλάου Σεκούνδου, Τ. Στατίλιον Τιμοκράτη Μεμμιανόν, Πο. Ἀἴλιον Ἀρποκρατίωνα τὸν καὶ Πρόκλον (Borghesi, *Œuvres*, iii, 499). *Corp. Inscr. Att.*, iii, 698: τὸν ἐπώνυμον ἀρχοντα Μάρκον Αὐρήλιον Καλλίφρονα τὸν καὶ Φροντεῖον. To this class belongs Νικαεύς, ἀνὴρ τῶν ἐστρατηγηκότων Ῥωμαίοις, Σηδάτος ὄνομα, τὸ δ' ἀρχαῖον Θεόφιλος (Aristides, *Or.*, xxvi, p. 324, Jebb; cp. p. 301); for the inscription on a Θεόφιλος Σηδάτιος (*sic*) found at Laodicea (*CIG*, 3937) no doubt refers to him or one of his relatives (Waddington, *Mém. de l'Inst.*, 1867, p. 256). Borghesi identified him with M. Sedatius C. f. Severianus cos. 150 (*CIL*, iii, 1575).

In the early empire *peregrini* also assumed Roman gentile names, for Claudius found it necessary to prohibit this (Suetonius, *Claud.*, 25: peregrinae condicionis homines vetuit usurpare Romana nomina duntaxat gentilia). Not only the assumption of non-Roman names, which may have frequently taken place when a man's position was changed (e.g. in Lucian, *Gall.*, 14, a certain Simon who had become wealthy calls himself Simonides), but also of Roman *cognomina* continued to be allowed. This was fairly common in the case of Greeks, Egyptians and Jews: e.g. Σιμωνίδης ὁ καὶ Ἀγρίππας ἐπικληθεὶς (Josephus, *Vita*, 76). For other examples see Letronne, *Rech. pour servir à l'hist. de l'Égypte*, p. 247 ff. (Διόσκορος Μακρεῖος, Ἡράκλειτος Οὐετρανός, Σαβινιανός Σαρατίων and so forth). Sometimes Greek names were translated into Latin. Suidas, s.v. Εἰρηναῖος and Πάκατος: Εἰρηναῖος (ὁ καὶ Πάκατος κληθεὶς Ῥωμαίων διαλέκτῳ) μαθητὴς Ἡλιοδώρου τοῦ μετρικοῦ, γραμματικοῦ Ἀλεξανδρέως. On the other hand, Roman names, except in poetry (Ianthis for Violantilla, wife of Arruntius Stella, Martial, vi, 21; vii, 15, 50), were only Grecized in familiar conversation. On both sides of the sarcophagus of Tertinia Victorina at Lyons (Orelli, 3030) χαίρε Νικασί—*in* laire Νικασί occurs, rightly regarded by Boissieu (*Inscr. de Lyon*, p. 310) as a Greek translation. Cp. *CIG*, 6739 (D. m. et memoriae aeternae Aur. Callistes—εὐθύμει Καλλίστη); also 4346, 6759, 6792 ff.

XI. THE FRIENDS AND COMPANIONS OF THE EMPEROR.

(Vol. 1, p. 70.)

It will be seen that, in deference to Mommsen's essay (*Die comites Augusti der frühern Kaiserzeit in Hermes*, iv, 120-131) I have essentially altered my former views. He proves beyond doubt that the imperial *comites* were developed from the proconsular,¹ that they were specially appointed by the emperor for each journey or expedition, and that consequently there were no permanent *comites* of the emperors in earlier times. This also shows that my assumption of the identity of *comes* and *amicus* was wrong. As the emperors chose their travelling companions from the circle of their friends, every *comes* was an *amicus*, but every *amicus* was not a *comes*.

But Mommsen's statement (p. 124, 1) that I sought the origin of the *comites* and *amici* in the ceremonial of eastern royal courts is not correct. In fact, I derived the institution of the *amici* from the party-spirit of republican statesmen, and only assumed that, in the development of the different *forms* under which the *amici* appeared, the ceremonial of oriental courts had even more influence than the custom of the republican period. If, in my remark that this was already the case in the earliest courts, I included that of Augustus, I think I may hold this view without disputing the assertion that 'in the Augustan state-organization no single feature reminds us of an oriental court, and it is especially characteristic of it that it avoids all such parallels'. But, considering the varied relations between the court and the East and the frequent visits of oriental princes (Mommsen, *RGDA*,² p. 41 f.; Schürer, *Neutest. Zeitschrift*, 216 ff.), it seems to me by no means improbable that oriental forms and customs, which not only left the state-organization unaffected, but were also compatible with Roman manners, made their way into the court in the time of Augustus. Augustus, who passionately refused the address '*domine*' as an insult (Suetonius, *Aug.*, 53), would have still less tolerated the 'barbarous custom' of adoration, which Caligula attempted to introduce. On the other hand, he could introduce from the East the custom of greeting his most intimate friends with a kiss,³ without any violation of custom.

As far as I know, the greeting of men with a kiss cannot be shown to have existed amongst the Romans in republican times,³ but occurs under Augustus. Lipsius also says (*Elect.*, ii, 6): *qui mos invaluit maxime, ut opinor, sub Augusto*. The first mention of the

¹ Cp. also Mommsen (*Die Gardetruppen der römischen Republik und der Kaiserzeit in Hermes*, xiv, p. 26) on the *φίλων ἰαη* (cohors amicorum praetoria), 500 strong, formed by Scipio Africanus in 133 B.C. according to Appian (*Hisp.*, 84) from his clients and friends.

² Mommsen himself also has essentially altered his view. In his *Provinces of the Roman Empire* (Eng. tr., ii, p. 5), he says that the regulations of the Parthian and Persian empires referring to the position of the dynasty 'recur with few abatements among the Roman Caesars, and are perhaps borrowed in part from those of the older great monarchy'.

³ Of course, members of the same family and on special occasions (such as thanksgiving festivals, Cicero, *Pro Sestio*, 52, 111) those more distantly connected, were in the habit of kissing each other (Becker-Göhl, *Gallus*, i, 89); in Greece, on the other hand, it was unknown even at the time when it was usual in Rome. Dio Chrysostom, *Or.* 7, p. 110: *ἐγὼ δὲ ἀναμνησθεὶς, χαίρει, ἔφη, Σωτᾶν καὶ προσελθὼν ἐφίλου αὐτὸν καὶ τὸν ἕτερον· ὃ δὲ δημοσὺν ἐλέα σφόδρα, ὅτι ἐφίλου αὐτούς· τότε ἔγνω ὅτι ἐν ταῖς πόλεσιν οὐ φιλοῦσιν ἀλλήλους.*

custom known to me is in the year 6 B.C.; Suetonius says that Tiberius on his departure for Rhodes behaved with great formality, *ne verbo quidem cuiquam prosequentium reddito paucosque admodum in digressu exosculatus* (Suetonius, *Tib.*, c. 10). That the custom, even in the time of Tiberius, was almost exclusively limited to persons of distinction, is shown by Pliny's remark (*Nat. Hist.*, xxvi, 3) on the prevalent face eruption: *nec sensere id malum feminae aut servitia plebesque humilis aut media, sed proceres veloci transitu osculi maxime*. Since, therefore, from republican times the *amici* were separated into two classes at their reception (Mommson, as above, p. 128), the imperial practice, well attested later, of distinguishing his more intimate friends by a kiss, may well have originated under Augustus. The abolition by edict of the 'daily kiss' by Tiberius, the apparent unpopularity of this regulation, which drew forth a justification from Valerius Maximus, make it probable that at that time there were a number of persons at court, who claimed a daily kiss from the emperor by right of custom.

It was usual for Persians of equal rank to kiss each other on the lips; at the court it was the privilege of the 'kinsmen' to kiss the king (Duncker, *Gesch. d. Alt.*, iv⁴, 526, 4), a privilege which Alexander the Great reserved for his most intimate friends. Chares of Mitylene relates that at a banquet he offered the goblet from which he had drunk to one of his friends, who stood up and, having drunk to the king, did him reverence, kissed him, and then lay down again. Callisthenes, who had omitted to do him reverence, was not allowed to kiss him (Plutarch, *Alexander*, 54, 2; cp. Droysen, *Gesch. Alexanders*, p. 352). The institution of 'friends', which was common to the Persian, the Parthian,¹ the Nabataean (Strabo, xvi, 4, 21, p. 779), and probably to other oriental courts,² passed on (to all appearance from the Macedonian court)³ to the courts of the Diadochi (especially the Ptolemies and Seleucidae): cp. Letronne, *Rech. pour servir à l'histoire de l'Égypte*, pp. 58, 314. On the titles *συγγενής* and *φίλος* and the forms in which they were conferred under the Ptolemies, cp. Lumbruso, *Recherches sur l'économie politique de l'Égypte*, pp. 189-195; also *L'architetto Sostrato in Comm. in honorem Mommseni*, p. 32, and *L'Egitto*, pp. 150, 168-175. (Sostratus was *φίλος τῶν βασιλέων*, Strabo, xvii, p. 791; cp. Franz, *CIG*, iii, p. 290; so also *Ἀρχιμήδης, Ἰέρωνι τῷ βασιλεῖ συγγενῆς ὢν καὶ φίλος*, Plutarch, *Marcell.*, 14, 7). Cp. also the inscription from Arsinoë in Cyprus of the time of Ptolemy Euergetes II (Lebas-Waddington, 2781; *συγγενῆς*, *ib.*, 2787, 2796, 2821 A. As an order of precedence amongst the friends undoubtedly also existed at the court of the Ptolemies (*τῶν πρώτων φίλων* in an inscription in Le-

¹ The *μεγιστάνες*: Athenaeus, iv, p. 152, cp. Cless in *SIRE*, v, p. 1209; also the title *τῶν πρώτων φίλων* is found amongst the Arsacidae; S. Reinach, *Fouilles de Dêlos* in *Bull. d. corr. hell.*, vii, 349).

² Fragments of an inscription from Soada (in Syria) probably of the time of the Idumaeen kings: *βασιλέων φίλων* (Lebas-Waddington, 2303).

³ Diod. Sic. xvii, 31: after Alexander had been restored to health by the physician Philippos, *τὸν ἰατρὸν τιμήσας μεγαλοπρεπῶς, κατέταξεν αὐτὸν εἰς τοὺς εὐνουστάτους τῶν φίλων*.

tronne, p. 58, cp. Plutarch, *De Exilio*, 7, p. 601), they were graduated as at the Persian court, the first place being held by *οἱ ἐπὶ τοῦ φιλήματος*, as Lucian, using an apparently technical expression, calls those whom the prophet Alexander of Abonuteichos deemed worthy of his kiss (Lucian, *Alexander*, 41).

The fact that the custom of greeting the friends with a kiss (which certainly existed at the Persian and probably at other Oriental courts) was not known at Rome in republican times, while there is evidence of it during the reigns of Augustus and Tiberius, justifies the conjecture that it was transferred from the East to Rome. The use of the Roman expressions for the Persian king's friends (Curtius, vi, 5, 11: *fratremque Darei recepit in cohortem amicorum*; *ib.*, 26, 17: *aliquem amicorum ex prima cohorte*; cp. Mützell on the first passage) shows that during the early empire the Romans themselves were reminded by the latter of the friends of the Roman emperors.

Although this conjecture cannot be proved, it is to a certain extent supported by the fact that there is another institution of the Augustan court, also common to those of Persia and Macedonia: the keeping of a diary of all the events of the imperial household (see above). As far as I know, there is not the slightest trace of anything of the kind in the distinguished families of the republic, while other distinctions preserved in their family archives are frequently mentioned. Hence Casaubon (on Suetonius, *Aug.*, 64) says: *mos iste a Graecis (i.e. the Macedonians) ortus*.

Further, if a number of children of noble houses were brought up at court together with the emperor's children, as appears to have been common, we may perhaps conjecture, bearing in mind the facts mentioned, that in this case also the Persian and Egyptian custom set the example: *πάντες γὰρ οἱ τῶν ἀρίστων Περσῶν παῖδες ἐπὶ ταῖς βασιλέως θύραις παιδεύονται* (Xenophon, *Anab.*, i, 9, 3; Duncker, *Gesch. d. Alt.*, iv⁴, 526-528). Diodorus's description (i, 53) of the bringing up together of the children born on the same day as Sesostris, gives an idea of the corresponding institution at the court of the Ptolemies; cp. Lumbroso, *Recherches*, p. 208 (*παῖδες σύντροφοι*), p. 209 (*παῖδες τῶν τιμωμένων ὑπὸ τοῦ βασιλέως*).

Lastly, the 'fire' carried in front (*i.e.* the fire-pan or torch, M. Antoninus, *Comment.*, i, 17), which under the Antonines and still later appears as a privilege of the emperor and empress, has already been derived from the Persians by Lipsius (Excursus to Tacitus, *Ann.*, i, 7): Xenophon, *Cyropaed.*, viii, 3: *καὶ πῦρ ὀπισθεν τοῦ ἄρματος ἐπ' ἐσχάρας μεγάλης ἄνδρες ἐκπορτο φέροντες* (Cyrus followed behind the chariot). On the other hand, Mommsen (*StR*, i³, 423) refers this custom to the 'torch-right' possessed by officials (the right of having lights carried before them by night), which was extended to the emperors, and later became their exclusive honorary right (cp. ii³, 806, 823).¹

I shall now give a list of the imperial friends and companions

¹ Mommsen, *StR*, i⁴, 424, 4: "It is possible that the Persian custom (Curtius, iii, 3, 9: *ignis—argenteis altaribus praeferebatur*; Ammian. Marc., xxii, 6, 34) may have influenced the imperial custom, but not probable, in so far as it depends upon the national religion." In my opinion, this connexion might easily have been ignored in Rome.

known to me in the first and second centuries (cp. the *Programm*, 'Recensio amicorum et comitum. Caesarum usque ad Severi tempora', in *Acad. Alb. Regim.*, 1873, iv, which is here reprinted with numerous additions).

Friends of Augustus. Senators. L. Cocceius Nerva. Seneca, *De Clem.*, i, 10, 1: Sallustium et Cocceios et Dellios et totam cohortem primae admissionis ex adversariorum castris conscripsit. In 37 B.C. Nerva accompanied Maecenas as Octavian's ambassador to Antony: cp. Horace, *Sat.*, i, 5, 28 and Haakh, *StRE*, ii, p. 473.

Q. Salvidienus Rufus, quem ad consulatum usque provexerat (Suetonius, *Aug.*, 66), was condemned to death before entering on office (he was *consul designatus* for the year 39 B.C.) Haakh, *StRE*, vi, p. 720.

M. Vipsanius Agrippa, consul 37, 28, 27 B.C., cp. e.g. Dio. liv, 29.

Q. Fabius Maximus Paullus, consul 11 B.C., died A.D. 14. Nipperdey on Tacitus, *Ann.*, i, 5; Plutarch, *De garrul.*, p. 508A; Pliny, *Nat. Hist.*, vii, 150; Quintilian, vi, 3, 52; Henzen, *Acta fr. Arv.*, pp. 185, 240.

C. Asinius Gallus, consul 8. B.C. In 5 B.C., according to a letter of Augustus to the inhabitants of Cnidus, he was sent there to conduct a criminal investigation: Γάλλῳ Ἀσινίῳ τῷ ἐμῷ φίλῳ. L. Ross, *Inscr. ined.*, 312, l. 11 (cp. A. Nauck in *Philologus*, ix, 169); better M. Dubois, *Lettre de l'empereur Auguste aux Cnidiens* in *Bull. d. corr. hellénique*, 1883, p. 64 (Mommsen, *StR*, ii², 2, 959, 1).

Cn. Calpurnius Piso, consul 7 B.C. Patris sui legatum atque amicum he is called by Tiberius (Tacitus, *Ann.*, iii, 12).

Nonius Asprenas. Suetonius, *Aug.*, 56: cum Asprenas Nonius artius ei junctus causam veneficii, accusante Cassio Severo, diceret, consuluit senatum, quid officii sui putaret, cunctari enim se, ne si superesset, eripere legibus reum, sin deesset, destituere ac praedamnare amicum existimaretur. Dio, lv, 4 (9 B.C.): φίλῳ τε τινὶ δίκῃ φεύοντι συνεξηράσθη, προσηκουώσας τοῦτο τῇ γερουσίᾳ, καὶ ἐκεῖνον γε ἔσωσε κ.τ.λ. Perhaps L. Nonius Asprenas cos. suff. Kal. Jul. (A.D. 6); cp. Teuffel, *RLG* ⁴, 267, 2 (Eng. tr.).

Poppaeus Sabinus. Tacitus, *Ann.*, vi, 39: Fine anni (A.D. 35) Poppaeus Sabinus concessit vita, modicus originis, principum amicitia consulatum (A.D. 9) ac triumphale decus (A.D. 26; *Ann.*, iv, 47) adeptus maximisque provinciis per xxiv annos impositus, nullam ob eximiam artem, sed quod par negotiis neque supra erat; cp. Nipperdey on *Ann.*, i, 80; iv, 46; vi, 39; xiii, 45.

D. Junius Silanus in nepti Augusti adulter, quamquam non ultra foret saevitum, quam ut amicitia Caesaris prohiberetur, exilium sibi demonstrari intellexit (he did not return from exile until A.D. 20; Tac., *Ann.*, iiii, 24).

K n i g h t s. Q. Dellius: cp. Seneca, *De Clem.*, i, 10, 1 quoted above, and Drumann, *RG*, i, 391, 64.

Cornelius Gallus, quem ad praefecturam Aegypti (30 B.C.) ex infima fortuna provexerat (Suet., *Aug.*, 66). In 27 B.C. xliii aetatis suae anno propria se manu interfecit (Jerome); cp. Teuffel, *RLG* ⁴, 232 (Eng. tr.).

C. Cilnius Maecenas (died 8 B.C.); cp. Marquardt, *Hist. eqq.*, p. 79; Teuffel, *RLG* ⁴, 220, 6 (Eng. tr.).

C. Proculeius, brother of Maecenas' wife Terentia ; Dio, liv, 3 ; Tac., *Ann.*, iv, 40 ; Haakh, *StRE*, vi, 86.

Sallustius Crispus (died A.D. 20), incolumi Maecenate proximus, mox praecipuus cui secreta imperatorum inniterentur—aetate propecta speciem magis in amicitia principis quam vim tenuit (Tac., *Ann.*, iii, 30).

C. Matus ex equestri ordine d. Augusti amicus (Pliny, *Nat. Hist.*, xii, 13).

Vedius Pollio eques R. ex amicis d. Augusti (Pliny, *Nat. Hist.*, ix, 77, Tac., *Ann.*, xii, 63). Son of freedmen parents, died 16 B.C. (Dio, liv, 23). Borghesi also refers the inscription *CIL*, ix, 1556 (Beneventum) to him : P. Veidius P. f. Pollio Caesareum Imp. Caesaris Augusto et Coloniae Beneventanae.

Friends of Tiberius. Senators. Lucilius Longus (cos. suff. A.D. 7, died 23) omnium illi tristium laetorumque socius, unusque e senatoribus Rhodii secessus comes (Tac., *Ann.*, iv, 15).

Cn. Cornelius Lentulus (Tac., *Ann.*, i, 27, cp. iv, 29). Consul 18 B.C., died A.D. 25. Cp. Nipperdey on Tac., *Ann.*, iv, 44.

Sentius Saturninus, husband of the Jewish proselyte Fulvia. Josephus, *Ant. Jud.*, xviii, 3, 5 : καὶ ὁ Τιβέριος ἀποσημαίνει γὰρ πρὸς αὐτὸν φίλος ὡν Σατουρνίνος τῆς Φουλουίας ἀνὴρ ἐπισκῆψε τῆς γυναικὸς κελεύει πᾶν τὸ Ἰουδαϊκὸν τῆς Ῥώμης ἀπελαθῆναι (A.D. 19). H.

S. Vistilius praetorius, quem Druso fratri percarum in cohortem suam transtulerat convictu principis prohibitus, commits suicide at an advanced age (A.D. 32 ; Tac., *Ann.*, vi, 9).

Cn. Calpurnius Piso (see above) writes before his death to Tiberius : et parenti tuo probatus et tibi amicus (Tac., *Ann.*, iii, 16).

Poppaeus Sabinus (see above).

L. Seius Tubero, brother of Sejanus, consul A.D. 18 (Cn. Lentulus et S.T.—primores civitatis, intimi ipsius amici, Tac., *Ann.*, iv, 29 ; cp. Nipperdey, and ii, 20 ; v, 6).

M. Cocceius Nerva (son of the friend of Augustus, Haakh, *StRE*, ii, 473) Caesari familiarissimus (Pompon., *Dig.*, i, 2, 2, 49) ; unus senator consulatu (A.D. 22) functus accompanied Tiberius to Capreae (Tac., *Ann.*, iv, 58) ; proximus amicorum (died A.D. 33 ; Tac., *Ann.*, vi, 26).

L. Salvius Otho tam carus tamque non absimilis facie Tiberio principi fuit, ut plerique procreatum ex eo crederent (Sueton., *Otho*, 1). He succeeded Galba in the consulship (A.D. 33 ; Suet., *Galba*, 6).

M. Aurelius Cotta Maximus Messalinus. Nothing appears to be known of his official career (cp. Nipperdey on Tac., *Ann.*, ii, 32). He was accused in 32, but Tiberius sent a written defence of him to the senate, repetito inter se atque Cottam amicitiae principio crebrisque ejus officiis commemoratis. *StRE*, vi, 2, 2356, 101. Henzen, *Acta fr. Arv.*, p. 179.

L. Pomponius Flaccus, consul 17, died 33, when *legatus propraetore* of Syria. Henzen, ib. 195.

L. Calpurnius Piso pontifex, consul 15 B.C., city prefect, 17–32, died in 32 at the age of eighty. Henzen, ib., p. 180. Suetonius, *Tiberius*, 42 : cum Pomponio Flacco et L. Pisone noctem continuumque biduum epulando potandoque consumpsit, quorum alteri

Syriam provinciam, alteri praefecturam urbis detulit, codicillis quoque juncudissimos et omnium horarum amicos professus. H.

Rank uncertain. Sex. Marius Hispaniarum ditissimus (Tac., *Ann.*, vi, 39); ὁ φίλος αὐτοῦ καὶ διὰ τοῦτο καὶ πλουτήσας καὶ δισηθείς τοσούτον (Dio, lvi, 22); defertur incestasse filiam et saxo Tarpeio deicitur (A.D. 33; Tac., *Ann.*, iv, 36).

Julius Montanus tolerabilis poeta, notus et amicitia Tiberii et frigore (Seneca, *Epp.*, 122, 11): perhaps the father of the senator Julius Montanus (died 56; Tac., *Ann.*, xiii, 25). Teuffel, *RLG**, 252, 13 (Eng. tr.); *SIRE*, iv, 489, 18.

Knights. L. Aelius Sejanus, praefectus praetorio A.D. 14-31; cp. Tac., *Ann.*, iv, 1 sq. and 59; Sueton., *Tiber.*, 55; *SIRE*, i², 345, 77.

Avilius Flaccus, prefect of Egypt 32-37. *CIG*, iii, p. 360: ἐν τοῖς ἐταίροις ἀριτεῖς παρὰ Τιβερίῳ Καίσαρι. Philo, *Leg. in Gai.*, p. 517 M: κριτεῖς τῶν πρώτων φίλων παρὰ Τιβερίῳ Καίσαρι, *ib.*, c. 19.

Curtius Atticus unus eques Romanus ex illustribus who accompanied Tiberius to Capreae (Tac., *Ann.*, iv, 58); Marino participi Sejanus Curtium Atticum opprresserat (*ib.*, vi, 10).

Vesularius Flaccus eques Romanus cui propior cum Tiberio usus erat (Tac., *Ann.*, ii, 28).

Vesularius Flaccus ac Julius Marinus ad mortem aguntur, e vetustissimis familiarium, Rhodum secuti et apud Capreas individui (A.D. 32; Tac., *Ann.*, vi, 10).

Pompeius Macer. Strabo, xiii, 2, 3: (Theophanes of Mytilene) νῦν—ἀπέλιπε Μάκρον Πομπήιον, ὃν τῆς Ἀσίας ἐπίτροπον κατέστησεν ποτὲ Καῖσαρ ὁ σεβαστὸς καὶ νῦν (c. A.D. 18) ἐν τοῖς πρώτοις ἐξετάζεσθαι τῶν Τιβερίῳ φίλων. His son of the same name, eques Romanus illustris, died A.D. 33; cp. Nipperdey on Tac., *Ann.*, vi, 19.

C. Caesius Niger. *CIL*, vi, 2169: Dis manibus sacrum C. Caesio Q.f. Nigr. ex prima admissione ex quatuor decuris Curio Minor Caesia C. l. Theoris patrono et sibi. Mommsen says: Titulus cum positus sit aetate Augusti vel Tiberii (nam C. Caesar quintam decuriam addidit), hunc Nigrum significat alteri utri fuisse amicum primae admissionis (cp. *SIRE*, ii², 834, 2).

(P. Plautius Pulcher—comes Drusi filii Germanici, *CIL*, xiv, 3607.)

Friends of Gaius Caesar. **S**enators. Valerius Asiaticus cos. suff. under Tiberius, died A.D. 47 (Tac., *Ann.*, xi, 3); Asiaticum Valerium in primis amicis habebat—consularem (Seneca, *De Constantia sapientis*, 18, 2).

L. Vitellius ex consulatu (34) Syriae praepositus (Sueton., *Vitell.*, 2). Recalled, οὕτως αὐτὸν . . . ἠλώσατο, ὥστε ἐν τοῖς πάντι φίλοις αὐτοῦ νομοθεῖναι (Dio, lix, 27); cos. ii 34, iii 47, censor 48, died 51.

A. Vitellius L. f., afterwards emperor, born 15, Gaio per auri-gandi, Claudio per aleae studium familiaris, sed aliquanto Neroni acceptior (Sueton., *Vitell.*, 4; cos. 48).

C. Passienus Crispus (cos. II 44). Schol. Juv., iv, 81: Omnium principum gratiam appetivit, sed praecipue [C.] Caesaris, quem iter facientem secutus est pedibus (Valla: Thyberium [read Cajum] Caesarem per Alpes iter facientem secutus est: Matthias, *De schol. Juv.*, p. 26).

Knights. Naevius Sertorius Macro (cp. Nipperdey on Tac.,

Ann., vi, 15) is reckoned among Caligula's friends by Suetonius (*Calig.*, 26); Hirschfeld, *VG*, p. 219.

Friends of Claudius. Senators. Ser. Sulpicius Galba, afterwards emperor, cos. 33, gratissimus Claudio receptusque in cohortem amicorum (Sueton., *Galba*, 7). Accompanied Claudius on his expedition to Britain in 43.

Three others who accompanied him on this expedition (see Hübner, *Das römische Heer in Britannien* in *Hermes*, xvi, [1881,] p. 525):

Valerius Asiaticus (cp. the friends of Gaius Caesar above). Tac., *Ann.*, xi, 3: Asiatici—recenti adversus Britanniam militia.

L. Junius Silanus, great-grandson of Augustus, betrothed to Octavia, Arval brother 42, praetor 48, died 49 (Tac., *Ann.*, xii, 3, 4, 8 with Nipperdey's notes).

Cn. Pompeius Magnus, betrothed to Antonia, elder daughter of Claudius. He and Silanus carried the news of the conquest of Britain to Rome (Dio, ix, 21). Both were put to death by Claudius (Suetonius, *Claud.*, 27–29; Seneca, *Apocol.*, 11).

T. Plautius Silvanus Aelianus (probably a nephew of Aulus Plautius) cos. suff. I 45 (B.)¹, II in a year unknown, legat. et comes Claudii Caesaris in Britannia. Orelli, 750 = *CIL*, xiv, 3608. On the position of the *legati pro praetore* as *comites* cp. Mommsen, *StR*, ii², 2, 853, 5.

Cn. Sentius Saturninus cos. 41 according to Eutropius, vii, 13: (Britannia) devicta per Cn. Sentium et A. Plautium, illustres ac nobiles viros.

IRN, 5245 (= *CIL*, ix, 2847) also refers to a *comes* in this expedition: . . . civ. . . . id. . . . regi sac. flam. . . . patric. leg. Caesaris pro . . . Claudii in Britannia ad . . . ro pr. in Hiberia ad sel. . . . ornamenta triumph. . . .

Paulus Fabius Persicus cos. 34. He is called nobilissimum virum, amicum meum by Claudius in his speech on the *jus honorum* of the Gauls, col ii, l. 24 ed. Nipp. Henzen, *Acta fr. arv.*, p. 186.

Seneca, *Apocol.*, 13 names as friends of consular rank put to death by Claudius:

(Q. Eutetius) Lusius Saturninus, cos. suff. between 15 and 17 (B.).

Pompeius Pedit cos. in a year unknown.

Cornelius Lupus cos. suff. 42 kal. Jul. (B.).

Ser. Asinius Celer cos. suff. 44 kal. Jul. (B.); cp. *SIRE*, i², 1867, 9d. Lusius Saturninus, Cornelius Lupus circumventos—Suillio (Rufo) objectabant (Tac., *Ann.*, xiii, 43; cp. Nipperdey on the passage).

P. Suillius Rufus cos. suff. 46 kal. Jul. (B.). Claudii amicitia diu prospere, nunquam bene usus (*Ann.*, iv, 31), in insulas Baleares pellitur (58; *Ann.*, xiii, 43).

L. Vitellius (see above) formidine C. Caesaris, familiaritate Claudii turpe in servitium mutatus (Tac., *Ann.*, vi, 32).

L. Vitellius and Caecina Largus (cos. A.D. 42). Accompanied Claudius on the journey to Ostia (A.D. 48; Tac., *Ann.*, xi, 33).

A. Vitellius (see above).

Petronius vetus convictor ejus (consequently before his acces-

¹ B = Borghesi, *Fasti consulares*.

sion; Seneca, *Apocol.*, 14), no doubt identical with P. Petronius (vir consularis, Sueton., *Vitell.*, 6; cp. Haakh, *StRE*, v, 1402, 11).

Julius Planta. Edict of Claudius on the citizenship of the Anauni (Mommsen, *Hermes*, iv, 102, l. 16): in rem praesentem misi Plantam Julium amicum et comitem meum, qui cum adhibitis procuratoribus meis quique in alia regione quique in vicinia erant, summa cura inquisierit et cognoverit, cetera quidem, ut mihi demonstrata commentario facto ab ipso sunt statuatur pronuntietque ipsi permitto (Mommsen, as above, p. 110).

K n i g h t s. Lusius Geta (praef. praet. with Rufrius Crispinus before Afranius Burrus *Ann.*, xii, 42) and

C. Turranus praef. annonae (cp. Nipperdey on *Ann.*, i, 7; Hirschfeld, *Über die Getreideverwaltung in Philologus*, xxix, 27) are called potissimi amicorum (*Ann.*, xi, 31).

L. Julius Vestinus. *Claudii oratio*, col. ii, 11: ex qua colonia (Vienna) inter paucos equestris ordinis ornamentum L. Vestinum familiarissime diligo et hodieque in rebus meis detineo. According to the inscription on a weight at Alexandria prefect of Egypt in the sixth year of Nero's reign: ἐπὶ Λευκίου Ἰουλίου Οὐρηστίνου ἡγεμόνος (Allmer and Terrebasse, *Inscr. ant. de Vienne*, ii, addit., p. 1; cp. Hirschfeld, *Zeitschr. f. öster. Gymn.*, 1877, p. 905, 2). He was perhaps the father of M. Julius Vestinus Atticus the consul and of Hadrian's secretary (see above). In 71 Vespasian entrusted him with the restoration of the Capitol (Tac., *Hist.*, iv, 53; cp. Nipperdey as above; Mommsen, *StR*, ii*, 2, 950, 3). Desjardins (*Un ami de Claude* in *Rev. de Philol.*, 1880, iv, p. 59; cp. *Géographie de la Gaule*, iii, p. 287) refers to L. Julius Vestinus the Viviers fragment, as restored by him: [L. Anto]n. L. f. Vol. Ve[stino Malloni Anni]o Romano, etc. The different gentile names make this identification improbable. Hirschfeld's restoration (*CIL*, xii, p. 310, 2452-4) is: M. Jun[i]o (sic) M. f. Vol[tinia] Vestino Malloni . . . oncanio Romano omnib. honorib. Vienn[ae] functo adlecto in amplissimum ordinem senat[orium] inter quaestorios, aedili curuli, praetori, legato provinc. Asiae. He observes: ad Vestinum Claudii imperatoris amicum civem Viennensem, qui in equestri ordine permansisse videtur, male Desjardins rettulit, quamquam ejusdem familiae eum fuisse, id quod jam Allmerus i, p. 223 suspicatus est, haut improbabile est.

F r i e n d s o f N e r o. S e n a t o r s. C. Petronius consul (*Ann.*, xvi, 18, year unknown)—dein—inter paucos familiarium Neroni adsumptus est (died in 66).

A. Vitellius cos. 48, afterwards emperor (see above).

T. Flavius Vespasianus, afterwards emperor, cos. 51 k. Nov. (B.); peregrinatione Achaica inter comites Neronis (Sueton., *Vesp.*, 4).

L. Annaeus Seneca, cos. suff. 57 (De Rossi, *Bull. Cr.*, 1886, p. 62; Henzen, *Arvali*, 34); writes to Nero: sed uterque mensuram implevimus, et tu, quantum princeps tribuere amico posset, et ego quantum amicus a principe accipere (Tac., *Ann.*, xiv, 54).

M. Julius Vestinus Atticus, perhaps son of L. Julius Vestinus (Nipperdey), cos. 65 (killed during his consulship soon after the 13th of April) ex intima sodalitate (Tac., *Ann.*, xv, 68).

R. L. M.

F

M. Salvius Otho, afterwards emperor (born 32), flagrantissimus in amicitia Neronis (*Ann.*, xiii, 46, cp. 12; Plutarch, *Galba*, 19); summum inter amicos locum tenuit (Sueton., *Otho*, 2). Deicitur familiaritate sueta, post congressu et comitatu Otho, et—provinciae Lusitaniae praeficitur (in 58, Tac., *l.l.*); provinciam administravit quaestorius per decem annos (Suet., *Otho*, 3).

M. Annaeus Lucanus (born 39) revocatus Athenis a Nerone cohortique amicorum additus atque etiam quaestura honoratus non tamen permansit in gratia (died 55; Suetonius, *Vita Lucani*).

Montanus (probably Curtius Montanus, father of the poet mentioned in Tac., *Ann.*, xvi, 28 and 33; cp. Nipperdey on the latter passage and p. 68 below). Juvenal, iv, 136: noverat ille luxuriam imperii veteris noctesque Neronis.

K n i g h t s. Afranius Burrus praef. praet. from 51 (Tac., *Ann.*, xii, 42, cp. 69); died 62 (*Ann.*, xiv, 51). The passage in Tacitus (*Ann.*, xiii, 6), giving the substance of the city gossip at the time when the Parthian war was imminent, shows that he was one of the friends of Nero: Burrum tamen et Senecam multarum rerum experientia cognitos—datum plane documentum, honestis an secus amicis uteretur, si ducem amota invidia egregium, quam si pecunio-sum et gratia subnixum per ambitum deligeret.

Sofonius Tigellinus alendis equis amicitiam Neronis nactus (Schol. Juv., i, 155); intimis libidinibus adsumptus (Tac., *Ann.*, xiv, 51); up to 62 praef. vigilum then praetorii, died 69; cp. Hirschfeld, *VG*, p. 221, 14.

Claudius Senecio adolescentulus decorus, liberto Caesaris patre genitus, in 55 privy with Otho to Nero's amour with Acte (Tac., *Ann.*, xiii, 12). In 65 he took part in the Pisonian conspiracy: e praecipua familiaritate Neronis speciem amicitiae etiam tum retinens (*Ann.*, xv, 50).

Cossinus, eg. R. amicitia Neronis principis notus (Pliny, *Nat. Hist.*, xix, 93).

Friends of Galba. Senators. T. Vinus Rufinus cos. with Galba II (69) and put to death with him. Galbae amicitia in abruptum tractus (Tac., *Hist.*, i, 48; Henzen, *Acta fr. Arv.*, p. 200).

The three following were also friends of Galba.

M. Salvius Otho. Mane Galbam salutavit atque ut consueverat, osculo exceptus (Sueton., *Otho*, 6).

In addition to Vinus and Laco, Galba consulted, as to the choice of a successor,

Marius Celsus (cp. Nipperdey on Tac., *Ann.*, xv, 25; *Hist.*, i, 71), cos. kal. Jul. 69, and

Ducennius Geminus, cos. under Nero, praefectus urbi under Galba.

K n i g h t s. Cornelius Laco praef. praet. (Tac., *Hist.*, i, 14; Sueton., *Galba*, 14; Plutarch, *Galba*, 29), although he is nowhere expressly spoken of as a friend: Hirschfeld, p. 221, 7.

Pompeius Longinus. Tac., *Hist.*, i, 31: pergunt etiam in castra praetorianorum tribuni Cetrius Severus, Subrius Dexter, Pompeius Longinus—milites—Longinum manibus coercent exarmantque, quia non ordine militiae [provectus], sed e Galbae amicis fidus principi suo et desciscentibus suspectus erat. H.

Friends of Otho. Senators. L. Vitellius, cos. suff. 48. Tac., *Hist.*, i, 48: multos e magistratibus, magnam consularium partem Otho non participes aut ministros bello (Mommson, *StR*, ii³, 2, 853, 5), sed comitum specie secum expedire jubet; in quibus et Lucium Vitellium, eodem quo ceteros cultu, nec ut imperatoris fratrem nec ut hostis.

Marium Celsum cos. des. (see above)—statim inter intimos amicos habuit (Tac., *Hist.*, i, 71).

Suetonius Paullinus cos. suff. k. Mart. 42, II 66. Plutarch, *Otho*, 6: οἱ δὲ περὶ τὸν Κέλσον καὶ Παυλλίνον ἄλλως ἐφείλοντο συμβούλων ὄνομα καὶ φάων.

K n i g h t s. Licinius Proculus—intima familiaritate Othonis, chosen by the soldiers to succeed Laco as praef. praetorio (Tac., *Hist.*, i, 46; Hirschfeld, p. 221).

Friends of Vitellius. Senators. M. Cluvius Rufus (cos. under Tiberius or Caligula, certainly later than 41. B.) omitta Hispania (in 70) comitatu principis adjectus est (Tac., *Hist.*, ii, 65).

T. Catius C. Silius Italicus cos. 68 in amicitia Vitellii (Pliny, *Epp.*, iii, 7), who in his conversations with Flavius Sabinus consulted him and Cluvius Rufus (Tac., *Hist.*, iii, 65).

C. Fabius Valens and

A. Caecina Alienus coss. kal. Sept. 69 (B.). It is clear from Tac., *Hist.*, ii, 92 that both are to be considered as friends of Vitellius in the special sense: munia imperii Caecina ac Valens obibant—variis in hunc aut illum Vitellii inclinationibus, nec unquam satis fida potentia, ubi nimia est. simul ipsum Vitellium subitis offensis aut intempestivis blanditiis mutabilem contemnebant metuebantque, nec eo segnius invaserant domos hortos opesque imperii.

Vibius Crispus (see under Vespasian and Domitian) was a regular table-companion of Vitellius according to Dio, lxxv, 2.

Friends of Vespasian. Senators. M. Antonius Primus in 61 condemned for forgery (Tac., *Ann.*, xiv, 40), in 70 senatorium ordinem recuperaverat, attached himself to Vespasian (*Hist.*, ii, 86), and received the consular insignia (*Hist.*, iv, 4); sed paullatim levior viliorque haberi, manente tamen in speciem amicitia (*Hist.*, iv, 80). Cp. Martial, x, 23 and Giese, *De personis a Martiale commemoratis*, p. 5 ff.

T. Clodius M. Eprius Marcellus et

Vibius Crispus, nunc principes in Caesaris amicitia—ab ipso principe cum quadam reverentia diliguntur (Tac., *Dial.*, 8); both were coss. suff. in 61 (Borghesi, *Æuvr.*, iv, 536).

C. Licinius Mucianus ter consul (Borghesi, *ib.*, iv, 345), I before 67, II 70, III 72. Henzen, *Acta fr. Arv.*, p. 190.

T. Rutilius Varus—q. divi Vespasiani, aed. cur. com. imperato[r.] Orelli, 3440 = *CIL*, x, 1258.

K n i g h t s. C. Plinius Secundus in 79 prefect of the fleet at Misenum. Distentus impeditusque—amicitia principum (Pliny, *Epp.*, iii, 5).

Otacilius Sagitta. Murat., 2004, 2 = *CIL*, x, 2, 8038 (Epistula Vespasiani ad Vanacinarum [gentis Corsicanae] magistratus et senatores a. p. C. 72 IIII id. Octobr. scripta): Otacilius Sagittam amicum et procuratorem meum ita vobis praefuisse, ut testimonium

vestrum mereatur, delector. On the document cp. Mommsen, *StR*, ii^a, 1127, 1.

Ti. Julius Alexander (Mommsen, *Roman Provinces*, Eng. tr., ii, 246 n.) accompanied Titus as adviser in the expedition against Jerusalem: φίλων δὲ δοκιμώτατος εὐνοϊὰν τε καὶ σύνεσιν Τιβέριος Ἀλέξανδρος, πρότερον μὲν αὐτὸς τὴν Αἴγυπτον διέπων, τότε δὲ τῶν στρατευμάτων ἀρχὼν, κριθεὶς ἄξιος ἐξ ὧν ἐδεξιώσατο πρῶτος ἐγχειρομένην ἀρτί τὴν ἡγεμονίαν καὶ μετὰ πίστει λαμπρὰς ἐξ ἀδελφου τῇ τύχῃ προσέθετο (Josephus, *Bell. Jud.*, v, 1, 6. H.).

Friends of Titus. None known except the elder Pliny (cp. Suetonius, *Titus*, 7).

Friends of Domitian. Senators. Borghesi, *Annot. a Giovenale: Œuvr.*, v, 513 concludes from Juvenal, iv, 72 that all the advisers summoned by Domitian (except the two prefects) were consulars: vocantur ergo in concilium *proceres* quos oderat ille; in quorum facie miserae magnaeque sedebat pallor amicitiae; cp. 83, maria ac terras populosque regenti quis comes utilior? According to Bücheler's interesting conjecture (*Rhein. Mus.*, xxxix, 283), Juvenal's description of this cabinet council was a reminiscence of Statius' *De bello Germanico* (147, tanquam de Chattis aliquid torvisque Sygambri dicturus), of which Valla's scholia to Juvenal, iv, 94 have preserved four lines (Jahn, *Rhein. Mus.*, ix, 627 and Bücheler as above. The following took part in the conversation (the order is as given by Juvenal):

Pegasus (attonitae positus modo vilicus urbi) qui temporis Vespasiani praefectus urbi fuit. Teuffel, *RLG*⁴, 316, 1, Eng. tr. Consequently, he was city prefect for the second time under Domitian. [Borghesi, *Œuvres*, ix, p. 269, assumes only a prefecture. H.]

Vibius Crispus (see above and Borghesi, p. 520). Statius, *l.l.*: Nestorei mitis prudentia Crispi. Cp. Veiento.

M'. Acilius Glabrio cos. perhaps under Claudius or Nero, p. 521: Statius, *l.l.*: et prope Caesareae confinis Acilius aulae. His son of the same name cos. 91. Henzen, *Acta fr. Arv.*, p. 175.

Rubrius Gallus cos. under Nero, p. 521 ff.

Montanus, perhaps T. Junius Montanus cos. suff. 81, p. 523. [Rather (according to Nipperdey on Tac., *Ann.*, xvi, 33) the father of the Curtius Montanus mentioned there and in chap. 28. H.]

Pompeius, perhaps Cn. Pompeius Ferox Licinianus cos.; year unknown, p. 524 f.

L. Valerius Messalinus, cos. 73 and

A. Fabricius Veiento, cos. under Domitian; for both see Mommsen, *Index Plinianus*. Statius *l.l.*: prudentia Crispi et Fabius Veiento—potentem signat utrumque purpura, ter memores implerunt nomine fastos, according to whom therefore Crispus (in his second consulship) and Veiento were colleagues. Bücheler takes Fabius as an appellative (the prudent).

The following are also known:—

Velius Paullus, under Domitian proconsul of Bithynia. See Mommsen as above; Martial, ix, 31, cum comes Arctoïis haereret Caesaris armis Velius, etc. The war here referred to is the Sarmatian, not the Dacian; perhaps, however, *comes* is not to be understood in the technical sense.

M. Arrecinus Clemens (consularem, unum e familiaribus et emissariis suis, Sueton., *Domit.*, 11); consul I 73, under Domitian II (B.). Hirschfeld, pp. 222, 3. Asbach, *Consularfasten der J.* 68–96, in *Bonner Jahrbücher*, lxxix (1885), p. 149.

Palfurius Sura, consularis filius a Vespasiano senatu motus—abusus familiaritate Domitiani acerbissime partes delationis exercuit (Marius Maximus in Schol. Juv., iv, 53).

Festus. Martial, i, 78, 10: hujus Caesar amicus erat. Perhaps C. Calpetanus Rantius Quirinalis Valerius Festus cos. suff. 71. Borghesi, *Œuvres*, v, 62. Cp. *CIL*, v, 531 leg. Aug. pr. pr. of Pannonia (73). *Wiener Studien*, 1882, p. 216. Tacitus, *Hist.*, iv, 49. leg. Aug. Tarrac. 79/80, *CIL*, ii, 2477, 4799, etc. Asbach as above, p. 110.

Knights. Cornelius Fuscus praef. praet. (Hirschfeld, 223, 25) and

Crispinus, according to Borghesi (p. 573–6) perhaps his colleague. Cp. Hirschfeld, p. 223, 26.

Friends of Nerva. L. Verginius Rufus, born 15, cos. 63, 69, 97, died towards end of 97. Caesares, quibus suspectus fuerat, evasit; reliquit incolumem optimum atque amicissimum (Pliny, *Epp.*, ii, 1, 3; cp. Mommsen, *Ind. Plin.*).

According to Pliny (*Epp.*, iv, 22), both Fabricius Veiento and Junius Mauricus were friends of Nerva (cp. Mommsen, *Ind. Plin.*).

Friends of Trajan. Senators. L. Neratius Priscus cos. 83 (cp. Teuffel, *RLG* ⁴, 342, 1, Eng. tr.). Frequens sane opinio fuit Trajano id animi fuisse ut N.P. non Hadrianum successorem relinqueret, multis amicis in hoc consentientibus (*Vita Hadr.*, 4; Mommsen on *CIL*, ix, 2454–5).

L. Licinius Sura, cos. before 98 (Asbach, p. 158), 102, 107. Dio, lxxiii, 15. *Vita Hadr.*, 3. Victor, *Caes.*, 13, 8.

Q. Sosius Senecio cos. 99, 102, 107. Dio, lxxiii, 16.

A. Cornelius Palma, cos. 99 and 109. Asbach, *Consularfasten d. J.* 96–119, in *Bonner Jahrbücher*, lxxii (1882), p. 13. Inscription on his statue in the Forum, *CIL*, vi, 1386. His statue (as governor of Asia about 115) set up by the Carians. *Anthol. Pal.*, xvi, 35. Fröhner, *Krit. Analekten (Philologus, Supptband, v, 70)*.

L. Publilius Celsus cos. II 113. Dio, lxxviii, 16: ἐστῆσε δὲ καὶ τοῦ Σοσίου τοῦ τε Πάλμου καὶ τοῦ Κέλσου εἰκόνας. οὕτω πον αὐτοῖς τῶν ἄλλων προετίμησε. That the two last were friends of Trajan is shown by *Vita Hadr.*, 3: ut a Sura comperit adoptandum se a Trajano esse, ab amicis Trajani contemni desiit ac neglegi; cp. 4: in adoptionis sponsionem venit Palma et Celso inimicis semper suis. Further,

C. Avidius Nigrinus cos. under Trajan and

Lusius Quietus cos. 115, who were executed together with Celsus and Palma (*Vit. Hadr.*, 7; Dio, lxxix, 2) were no doubt also friends of Trajan.

T. Junius Omullus, consularis according to an inscription of Nemausus, is no doubt the Homullus mentioned in *Vita Alex. Ser.*, 65, as a friend of Trajan (in Pliny, *Epp.*, iv, 9, 15 wrongly Titius Homullus; cp. Mommsen, *Ind. Plin.*, s.v. Homullus). Borghesi

Œuvres, viii, 416. (M. Valerius Homullus cos. ord. 151; cp. *CIL*, ii, 3415. H.)

L. Dasumius cos. about 100 (Waddington, *Fastes des provinces asiatiques*, 119, 120), may have been one of the friends of Trajan, as according to his will he perhaps received from him an estate of the value of 6,000,000 sesterces and certainly left him a legacy (*Test. Dasum.*, l. 85-87 and 125, ed. Rudorff, *Zeitschr. f. geschichtl. Rechtswiss.*, xii, 370 ff., 389 ff.; *CIL*, vi, 10229).

Hadrianus (Dio, lxix, 1; *Vit. Hadr.*, 3) ad bellum Dacicum Trajanum familiaris prosecutus. Henzen, *Inscr. Onor. di Adr.*, AdI, 1863, 150 (*Philologus*, xix, 358): quaestori imperatoris Trajani et comiti expeditionis Daciae, donis militaribus ab eo donato bis.

D. Terentius Gentianus Scaurianus (*CIL*, iii, 1463: leg. Aug. consuli pontif.) according to the inscription on the great Pyramid (*CIL*, iii, 21), where the probable reading is:—

Scit nomen Decimi Gentiani pyramis alta
pontificis comitisque tuis, Trajane, triumphis
lustra sex intra censoris consulis esse.

Otherwise Mommsen, *Ephem. epigr.*, iv, 28, but as above in *StR*, i², 577, 2. Cp. also *CIL*, iii, p. 688 DXXV (Feb. 17th, 110): sunt in Dacia sub D. Terentio Scauriano, and *Digg.*, xlvii, 21, 1 (Hadrian's rescript to him in 119). Asbach, *Consularfasten* 96-119, p. 47 takes him to be a son of the Terentius Scaurus in Pliny, *Epp.*, v, 12. [He subsequently incurred the suspicions of Hadrian, one of whose friends he probably was. *Vit. Hadr.*, 23. H.]

Knight. Pompeius Planta. Trajan, *Ad Plinium*, 7. Pompeium Plantam, praefectum Aegypti, amicum meum (*ib.*, 10). Mommsen, *Ind. Plin.* Hirschfeld, *VG*, 270, 3. H.

Friends of Hadrian; for the most part mentioned in *Vit. Hadr.*, 15.

Senators. *Vit. Hadr.*, 8: optimos quosque senatores in contubernium majestatis adscivit. Cp. Mommsen, *StR*, ii², 991, 2.

L. Julius Ursus Servianus, Hadrian's brother-in-law, cos. II 102, III 134, killed in 136 at the age of 90; cp. Mommsen, *Ind. Plin.*

L. Catilius Severus cos. II 120, Syriae praepositus (*Vit. Hadr.*, 5) praef. u. qui sibi praeparabat imperium, qua re prodita dignitate privatus est; *ib.*, 24; cp. Mommsen as above.

L. (Neratius) Marcellus, brother of L. Neratius Priscus, cos. 129, forced by Hadrian to commit suicide (*Vit. Hadr.*, 15); Mommsen, *Ind. Plin.*

C. Ummidius Quadratus, cos. suff. 118. Mommsen, *ib.* Henzen, *Acta fr. Arv.*, p. 202.

A. Platorius Nepos, cos. suff. 119, later suspected by Hadrian (*Vit. Hadr.*, 15 and 23; cp. Henzen, *Acta fr. Arv.*, p. 194) and

Sosius Pappus. Both had already been intimate with Hadrian during Trajan's reign.

T. Atilius Rufus Titianus cos. 127. Titianum ut conscium tyrannidis et argui passus est et proscribi (*Vit. Hadr.*, 15). According to *Vit. Anton. Pii*, 7, he was not condemned till this emperor's reign. Lebas-Waddington, 1619. He had a villa at Antium (Villa Aldobrandini): Lanciani, *Le acque*, p. 304.

T. Caesernius Statius Quintius Statianus Macrinus cos. (under Antoninus Pius before 150 [B.]) divi Hadriani comes in oriente ante quaesturam. Henzen, 7420a = *CIL*, viii, 7036.

Voconius. Apuleius, *Apol.*, 11: divus Hadrianus cum Voconii amici sui poetae tumulum versibus muneraretur, etc. Perhaps C. Licinius Voconius Romanus, raised to senatorial rank by Trajan; cp. Mommsen, *Ind. Plin.* and Teuffel, *RLG*⁴, 346, 5 (Eng. tr., 341, 2).

Knights. Attianus, once Hadrian's guardian and already his friend in Trajan's reign (*Vit. Hadr.*, 4, 5 and 9), with Plotina and Matidia conveyed Trajan's remains to Rome. Cum Attianum ex praefecto praetorii ornamentis consularibus praeditum faceret senatorem, nihil se amplius habere quod in eum conferri posset ostenderit (*ib.*, 8); consularium quattuor occisorum—necem in Attiani consilia refundebat (*ib.*, 9); amicissimos—postea hostium loco habuit ut Attianum (*ib.*, 15). In 119 he compelled him to resign when *praef. praet.* (cp. Hirschfeld, 225, 32).

Ti. Claudius Livianus, prefect under Trajan in the first Dacian war 101/2 and

Q. Marcus Turbo Fronto Publicius, appointed *praef. praet.* 119, and apparently still in office in 135. In *Vit. Hadr.*, 4 we should probably read (with Hirschfeld, p. 224): expeditionis Parthicae tempore—utebatur Hadrianus amicitia—ex equestri (ordine) Attiani, tutoris quondam sui, et Liviani [et] Turbonis.

C. Septicius Clarus, in 119 appointed to succeed Turbo's colleague Similis as *praef. praet.*, deprived of office 121. Cp. Mommsen, *Ind. Plin.*

Friends of Antoninus Pius. Senators. **M. Valerius Homullus** cos. 151; cujus Homulli multa joca semper patienter accepit (*Vit. Anton. P.*, 11). He opposed the adoption of Marcus Aurelius (*Vit. M. Anton.*, 6). Henzen, *Acta fr. Arv.*, p. 199. See also above.

Friends of the two Augusti.¹ **Senators.** **M. Cornelius Fronto**, cos. 143, perhaps already a friend of Antoninus Pius, in any case his successor, although there is no express testimony: cp. Teuffel, *RLG*⁴, 355 (Eng. tr.).

P. Salvius Julianus bis consul (ord. 148, suff. in the last years of Antoninus or later), *praef. u. et Ictus* (*Vit. Did. Jul.*, 1). Salvii Juliani amici nostri (rescript of the Divi Fratres in *Dig.*, xxxvii, 14, 17 pr.). Cp. Teuffel, *RLG*⁴, 350, 1-4 (Eng. tr.).

Q. Junius Rusticus cos. I in Hadrian's last years, II 162. Rescriptum divorum fratrum—ad Junium Rusticum amicum nostrum, *praef. urbi* (*Digg.*, xlix, 1, 1, 3). Teuffel, *RLG*⁴, 358, 3 (Eng. tr.).

[**M. Pontius Laelianus Larcius Sabinus** (cos. 163)—sodalis Antoniniani Verianus—comes divi Veri Aug. donatus donis militaribus bello Armeniaco et Parthico ab imp. Antonino Aug. et a divo Vero Aug.] Orelli, 3186. The fragment—[comes] Antonini Aug. et L. Veri bello Germanic. item comes Imp. Antonini Aug. Germanici Sarmatici—has been wrongly combined with the above inscription. Cp. Borghesi, *AdI*, 1855, p. 25.

M. Jallius M. f. Bassus Fabius Valerianus cos. *praef. [aer . . . leg. Aug. pr. pr.] provinc. Pannoniae inferioris curator oper. publ.*

¹ Et Verum quidem Marcus Capuam usque prosecutus amicis comitantibus a senatu ornavit additis officiorum omnium principibus (*Vit. M. Anton.*, 8).

(161; *CIL*, vi, 1119b) [leg. Augg. pr. pr. prov.] Mysiae inferior. (between 161 and 169; *CIL*, iii, 6169) comes Augustorum Par[thi]c[a]e expeditionis?). *CIL*, xii, 2718 sq. (Alba Helvorum).

T. Vitrasius Pollio [cos. II 176—adfinis? Aug]ustorum (Marci et Commodi) comes [M. Antonini et L. Veri] Augg. expeditionis . . . Germ[anicae] item comes [M. Antonini et Com]modi Augg. expedit. Germ[anicae] Sar[matica]e bis donis m[ilitat]i. donatus etc.].—s[odalis] Antoninianus] maritus A[nniae] Flaviae Fausti]nae (filiae Annii Libonis cos. 128 patrui imp. Marci), etc. Henzen, 5477; Hirschfeld, *VG*, 227.

Julius Verus leg. pr. pr. of Syria. A street restored under the two emperors 163/165 per Jul. Verum leg. pr. pr. provinc. Syr. et amicū suū impendiū Abilenorū (*CIL*, iii, 199).

K n i g h t s. L. Volusius Maecianus Ictus. Amicus noster in a rescript of the Divi Fratres (*Dig.*, xxxvii, 14, 17 pr.). Put to death by the army 175 when *praef. Aegypti* or *juridicus Alexandreae* (*Vit. Avid. Cass.* 7). Mommsen, *Abhandl. der sächs. Ges.*, iii, 282. Teuffel, *RLG* 4, 360 7 (Eng. tr., 360, 8). Hirschfeld, p. 227.

Friends of Lucius Verus. S e n a t o r s. M. Pontius Laelianus Larcus Sabinus cos. (163) sodalis Antoninianus Verianus—comes divi Veri Aug. donatus donis militarib. bello Armeniaco et Parthico ab imp. Antonino Aug. et a divo Vero Aug. (Orelli, 3186; see above). E. Napp, *De rebus imperatore M. Aur. Antonino in Oriente gestis* (Bonn, 1879), p. 69.

M. Claudius Fronto cos. (c. 170 [B.]) comes divi Veri Aug. donatus donis militarib. bello Armeniaco et Parthico ab imperatore Antonino Aug. et a Divo Vero Aug. corona murali item vallari item aurea item hastis puris IIII item vexillis IIII . . . Henzen, 5478 = *CIL*, vi, 1377; Napp, p. 69, 5.

T. Caesernius Statius Quinctius Macedo Quinctianus (son of Hadrian's friend of the same name) cos. co[m]mes divi Veri] per Orientem; according to Borghesi's restoration of the inscription, Henzen, 6502 = *CIL*, v, 1, 865; Napp, p. 75 ff.

L. Dasumius Tullus Tuscus, adopted son of Trajan's friend L. Dasumius, holder of important positions under Antoninus and Marcus Aurelius. Borghesi, *Œuvres*, vi, 429; Henzen, 6051 (cp. 6922 and *CIL*, iii, 1, 4117): L. Dasumio P. f. Stel. Tullio Tusco cos. comiti August. auguri, etc. Wilmanns, 1188: Verba "comiti Aug." postea addita sunt; fuit fortasse Veri comes, cum in Orientem proficisceretur.

Friends of Marcus Aurelius. S e n a t o r s. C. Fulvius Bruttius Praeseus C.f.M'. Valerius Maximus Pompeius L. Valens Cornelius Proculus Aquilius Viento cos. (153, 11 180)—socer imp. [Caes. Commodi Aug. sodalis] Hadrianalis sodalis Antonin[ianus] Verianus] Marcianus comes imp[er]atoris Anto[nini] et Commodi Augg.] expeditionis Sarmaticae *praef. u.*? Henzen, 5488; *ib.*, *Acta fr. Arv.*, p. 187.

C. Aufidius Victorinus, son-in-law of Fronto, fellow-pupil of Marcus Aurelius (*Vit. M. Anton.*, 3), cos. II 183, *ὁπὸ τοῦ Μάρκου ἐν τοῖς πᾶσι τιμηθεὶς* (Dio, lxxii, 11), *praef. u.*, died 186. Henzen, *Acta*, p. 178.

Seius Fuscianus, also a fellow-pupil of Marcus Aurelius, cos. II 188 (*Vit. Commod.*, 12), a strict *praef. urb.* (*Vit. Pertinac.*, 4).

K n i g h t s. Baebius Longus and Calenus, both fellow-pupils of Marcus Aurelius (*Vit. M. Antonin.*,

3). *Friends of Commodus.* Senators. T. Vitrasius Pollio (see above).

C. Fulvius Bruttius Praesens (see above).

Junius Severus. Statimque (Commodus Albino) successorem misit Junium Severum unum e contubernalibus suis (*Vit. Clod. Alb.*, 14). De Vit (*Onomast.*) identifies him with the *cos. suff.* 154 (*CIL*, iii, p. 881); it is more probable that he was his son.

C. Pescennius Niger *cos. II* in Oriente 194. (B.) Hunc in Commodianis hortis in porticu pictum de musio inter Commodi amicissimos videmus sacra Isidis ferentem (*Vit. Pesc. Nig.*, 6).

The chief *Friends of Septimus Severus* are enumerated in the *Epit. de Caesaribus*, 20: (T. Sextius) Lateranus (*cos.* 197), (L. Fabius) Cilo (*cos. II* 204. Gruter, 407, 1 = *CIL*, vi, 1, 1408: comiti imp. L. Septimi Severi; *Dig.*, i, 15, 4, *amicum nostrum*)¹ (Cornelius) Anulinus (*cos.* 216; Dio, lxxiv, 3; *CIL*, ii, 2053), (Pomponius) Bassus (*cos.* 221, died 221; Dio, lxxix, 5). Also known are: C. Fulvius Plautianus *cos. II* (Orelli, 934: necessarius Augg. et comes per omnes expeditiones eorum, died 205); cp. *CIA*, iii, 633, and Hirschfeld, *VG*, 230; Q. Hedi Rufus Lollianus Gentianus *cos.* 211, comes Severi et Antonini Augg. ter. (Orelli, 3657 = *CIL*, ii, 4121; cp. Lebas-Waddington, p. 739); Aemilius Papinianus, successor of Plautianus as *praef. praet.*, put to death 212; cp. Teuffel, *RLG* ⁴, 371 (Eng. tr.). [C. Julius Pacatianus adlectus inter comites Augg. nnn. (only temporarily admitted into the imperial retinue in the expedition to Britain, since he was procurator Alp. Cott.; cp. Mommsen, *StR*, ii², 836, 2), *CIL*, xii, 1856 = Allmer, *Inscr. de Vienne*, 1963. H.]

Friend of Antoninus (Caracalla). Maternianus. Herodian, iv, 12, 4: ἐπιστέλλει Ματερνιανῶ τινί, τότε πάσας ὑπ' αὐτοῦ ἐν Ῥώμῃ πράξεις ἐγκεχειρισμένῃ, πιστοτάτῃ εἶναι δοκοῦντι φίλων καὶ μόνῃ κοινωνῶ τῶν ἀπορρήτων: cp. Dio, lxxviii, 4, 7, 15. H.

On the *Friends of Alexander Severus* cp. *Vit. Alex. Sev.*; 68. *CIL*, xiv, 3900 (ager Tiburt.): C. Caesonio C. f. Quir. Macro Rufiniano consulari sodali Augustali comiti imp. Severi Aug. (otherwise unknown). *CIG*, 3499 (cp. 3500), Thyatira: M. Γραῖον Δικτίριον Ῥουφίνον τὸν λαμπρότατον ὑπατικόν, φίλον τοῦ Σεβαστοῦ, κτίστην καὶ εὐεργετὴν τῆς πατρίδος οἱ βυρσεῖς. Borghesi puts his consulship in the reign of Alexander Severus, but he is not mentioned amongst that emperor's friends in the passage referred to above. *Cod. Justin.*, viii, 37, 4 (A.D. 222): Ulpiani praefecti annonae Icti amici mei. [Cassius Dio also was no doubt one of the friends of Severus (Dio, lxxx, 5). H.]

Elagabalus. The fragment *CIL*, vi, 3839: *Cos. comiti amico* — — *praef. ann.* refers to the time of Elagabalus.

Time unknown: Gruter, 1100, 3 = *CIL*, v, 2, 5811: C. Sentio Severo Quadrato c. v. *cos. amico et comiti Aug. n. Julii fratres Maximus et Victor* (dug up at Milan in 1594).

¹ His house was in the 12th regio (Lanciani, *Le acque*, p. 303); he also had a villa on the Via Ostiensis (ib., p. 305).

Kaibel, *epigr. Gr.*, 441 (second or third cent., in vico Trachonitidis):—

4 . πιστοτάτου βασιλεῦσιν, ἀμωμήτοις τ' ἐπάρχου

8 . καὶ τοῖς ἐὼν βασιλῆος ἀμύμονος ἐσθλὸς ὄπλων.

CIL, viii, 597 (prov. Byzacena): iunio Faustino a d o Postumiano c. v cos. adlecto inter comites Augg. nn. sacerdoti flavialititali, etc. "The person referred to, who seems to be entirely unknown, lived between the age of M. Aurelius and Aurelian, probably at the end of the third century."

XII. THE USE OF *VIR CLARISSIMUS* AS A SENATORIAL TITLE.

(Vol. I, p. 133, l. 11.)

IN the course of the first century *vir clarissimus* gradually became an established official title of persons of senatorial rank. It is doubtful whether *clarissimi* in Seneca (*Brev. Vit.*, 8, 2: annua congiaria homines clarissimi accipiunt) is to be taken in this sense. As J. Naudet (*De la noblesse chez les Romains*, 1863, p. 72, 1) has observed, it first occurs as an unquestionable title in two *senatus consulta* of the year 56, which, it is true, are only preserved in a single copy (Orelli, 3115; Mommsen, *Ber. der sächs. Ges.*, 1852, p. 272 = *CIL*, x, 1401: Hosidio Geta et L. Vagellio cos. clarissimis viris); since the document was found at Herculaneum, it must have been prepared at latest under Vespasian, who perhaps ordered the two *senatus consulta* to be set up in all the Italian cities (Mommsen, p. 276). Similarly in a document of the year 69 (*CIL*, x, 7852, 13; Mommsen, *StR*, iii, 1, 471, 2). But even under Domitian it does not seem to have been a *standing* title of senators. Statius (praef. *Silvae*, iii, about 94) calls Maecius Celer (of senatorial rank) 'splendidissimum juvenem,' and (praef. *Silvae*, iv, 95) Julius Menecrates of Naples (son-in-law of Pollius Felix), who could not have been of higher than equestrian rank, 'splendidum juvenem'; on the other hand, Plotius Grypus (who was a senator) is only 'majoris gradus juvenem.' Certainly he speaks in the following terms of Vettius Crispinus (also a senator): sic te, clare puer, genitum sibi curia sensit; but it is clear from Suetonius (*Galba*, 14: quosdam claros ex utroque ordine viros) that *clarus* may be taken merely as a complimentary epithet. In Martial, praef. ix (A.D. 94) epigramma—ad Stertinius (cos. 92) clarissimum virum, there is no doubt that the words denote a title. (In Quintilian, i, 7, 29, where Bonnell reads: et clarissimos et consules geminata eadem littera legimus, the reading is extremely doubtful.) The first writer, who unquestionably so uses it, is the younger Pliny, not in a confidential communication with an equal in rank, but in writing to an inferior (Suetonius): tribunatum, quem a Neratio Marcello, clarissimo viro, impetravi tibi (*Epp.*, iii, 8); clarissimi consules (*Epp.*, vii, 33), in an official address in the senate; similarly, et statim Murena tribunus: permitto tibi, vir clarissime Veiento, dicere (*Epp.*, ix, 13) and pro collega meo Cornuto Tertullo, clarissimo viro (*Panegy.*, 90); also, providentissime, domine, fecisti quod praecepisti Calpurnio Macro, clarissimo viro (correspondence with Trajan, *epp.* 56 and 67, ed. Keil; 61 and 77 ed. Mommsen). Similarly, in an inscription of the early years of Tra-

jan's reign, Orelli, 784 and Henzen, 5404 = *CIL*, v, 1, 34, where a pronepos Antoni Felicis is called *c.p.* (= clarissimus puer); in documents of the year 101 (*CIL*, vi, 1492) under Hadrian (*CIL*, viii, 2532) and Antoninus Pius (*CIL*, v, 532; Mommsen, *StR*, iii, 1, 471, 2); the jurist L. Fulvius Aburnius Valens in the year 118 is called *c.i.* (= clarissimus juvenis), Orelli, 3153 = *CIL*, vi, 1421; in the *senatus consultum de nundinis saltus Beguensis* of the year 138 (*Eph. Epigr.*, ii, 273 = *CIL*, viii, 270), the petitioner Lucilius Africanus is called *c.v.* (= clarissimus vir). An inscription (of Hadrian's time) on the poetess Julia Balbilla (Tauromenium) calls her *τὴν λαμπροτάτην* (*CIG*, 5404); also a decree of senate and people gives the same title to a certain Jallia Bassa (belonging to the family of Jallius Bassus, cos. before 161; Bruzza, *Bull. munic. di R.*, 1883, p. 138; cp. Letronne, *Rec. des inscr.*, ii, pp. 350-367). By the side of *λαμπρότατος*, which correctly (at least till the end of the second century)¹ was only used for senators (cp. e.g. *CIG*, 3499, 3979), *κράτιστος* was at first in use for both senators and knights.²

Knights: *CIG*, 2790: Γ. 'Ιούλιον Φίλιππον (ἐπίτροπον τῶν Σεβαστῶν, *CIG*, 9233) τὸν κράτιστον πατέρα συγκλητικῷ ἀπὸ ἐπιτρόπων. *ib.*, 3497: τὸν κράτιστον ἐπίτροπον τοῦ Σεβαστοῦ. Lebas-Waddington, 1385: τὴν κρατίστην γυναῖκα τοῦ κρατιστοῦ δουκηναρίου, ἀπὸ ἐπιτρόπων. Senators: σὺν τῷ κρατίστῳ Φλ. Δρυαντιανῷ συγκλητικῷ (Neubauer, *Comment. epigr.* [69], p. 32). In a letter of Hadrian to the γερουσία of Ephesus in the year 120 (C. Curtius, *Ephes. Inscr.* in *Hermes*, iv, 178: Κορνελλίῳ Πρεῖσκῳ τῷ κρατίστῳ ἀνθυπάτῳ; and in another letter of his to Stratonicea-Hadrianopolis in the year 127 (*Bull. de corr. hellén.*, xi, 1887): τῷ κρατίστῳ ἀνθυπάτῳ Στερτινίῳ Κουαρελίνῳ καὶ τῷ ἐπιτρόπῳ μου Πομπηίῳ Σεουήρῳ. Cp. the inscriptions (date unknown) in *Hermes*, iv, p. 194: Κλαυδιαν Σ[ωσιπάτρου] ? θυγατέρα Τιβ. Κλ. Ἐρμείου λαμπροτάτου ὑπατικοῦ καὶ Αἰλίας Πειθαῖδος τῆς κρατίστης ὑπατικῆς ἀδελφῆς Τιβ. Κλ. Δράκοντος Σωσιπάτρου Θεωνίδος τῶν κρατίστων ἀνεψιῶν καὶ ἀπόγονον πολλῶν ὑπατικῶν Φλ[άβιος] Ζωτικὸς τὴν ἰδίαν πατρῶνισαν. But after the third century *κράτιστος*, corresponding to the Latin *egregius*, is only found used of knights (Hirschfeld, *VG*, 273 note). See Boucherie, *Ἑρμηνεύματα*, p. 81: *διασημότατος* perfectissimus, *κράτιστος* egregius. In the age of the Antonines the title *vir clarissimus* was evidently in general use (cp. Gellius, i, 2, 1; i, 22, 6; xviii, 10, 1; in other passages *c.v.* may have fallen out). Cp. also Apuleius, *Apol.*, 443: cum Lolliano Avito *c.v.* praesente publice dissererem. Orelli, 3767 = *IRN*, 2505 = *CIL*, x, 1814 (year 161). Orelli, 4040 (decr. mun. Tergest., later than 161). Orelli, 1632 (year 173). Lucian, *Macrobian*, 1: *λαμπρότατε* (29, *λερώτατε*) *Κύριε* ἄλλε. For other evidence of later or unknown date, inscriptions and legal sources, see Naudet as above.

¹ From this time *λαμπρότατος*, like *clarissimus*, seems to have been occasionally used in reference to the chief prefectures. Ulpianus Primianus *praef. Aegypti* in the third year of the reign of Severus is called ὁ λαμπρότατος ἡγεμῶν (*CIG*, 4863); Septimius Heraclitus *praef. Aegypti* in 215 ὁ λαμπρότατος in a document of Arsinoe (as Opellius Macrinus *praef. praed.*, Hirschfeld, *VG*, 232 and 275. Wilcken, *Arsinoitische Tempelrechnungen* in *Hermes*, xx, 469).

² This was already noticed by Marini, *Arvali*, p. 748, 59. Dessau, *Steuertarif von Palmyra* in *Hermes*, xix (1884), p. 514, 1.

XIII. *MANDRAGORA.*
(Vol. I, p. 174, l. 4.)

At my request, Professor Ferdinand Cohn investigated the ancient traditions relating to the mandragora, or mandrake. He communicated the results of his inquiries to the *Jahresbericht der schlesischen Gesellschaft für vaterl. Cultur* (1887, pp. 285-293), from which the following remarks are taken.

From the time of Hippocrates to the first century A.D. the mandragora was only known as an officinal plant. The juice of the rind of its root, extracted by squeezing or boiling, was used as a narcotic or anaesthetic in surgical operations. 'The description of the effects of mandragora juice in Dioscorides and Pliny in almost the same words, the exact dose being given, leaves no doubt that the reference is to cases of intoxication by atropine, which, although its existence in the mandragora cannot be chemically demonstrated, shows its presence by the effects indicated. Theophrastus had already declared that mandragora in too large doses was fatal.' He and Dioscorides hint that it was one of the ingredients of love potions, whence it was called Circe-plant (*Κίρκια*, Diosc., *Materia Medica*, iv, 76; Circaeon, Pliny, *Nat. Hist.*, xxv, 147). This use of it seems to be of great antiquity, 'if the *dudaim* of *Genesis* and the *Song of Solomon* is rightly interpreted as love-apples (mandragora berries) by the Septuagint'.

The root was usually dug up with strange ceremonies (drawing a circle round it thrice with a sword and looking towards the west). Theophrastus (*Hist. anim.*, ix, 8) makes merry over this; but neither he nor Pliny knows the later story, that the only safe method of procuring it involved the sacrifice of the life of a dog. Josephus (*Bell. Jud.*, vii, 6, 3)¹ tells the story of the root Baaras or Battaritis, Aelian (*Nat. anim.*, xiv, 24-27) of the root ἀγλαοφῶτις or κυνόσπαστος (by which the peony is probably meant). The MS. of Dioscorides written in Constantinople in the fifth century for the emperor's daughter Julia Anicia is the earliest evidence of the transference of the story to the mandragora. A miniature drawing in it represents personified Invention (Heuresis), with one hand handing a root of the mandragora to Dioscorides, with the other holding on a rope the strangled dog, which has drawn the root from the ground. In a second picture Heuresis is describing the root to a painter sitting in front of an easel, who is sketching it on a white, gold-rimmed tablet (Schreiber, *Culturhistor. Bilderatlas*, Taf. viii, 3).² The still older Naples Dioscorides MS. shows at the same passage by the side of the text two illustrations called the male and female mandragora, unmistakably corresponding to the *Mandragora autumnalis* Spreng. (*M. officinarum* Bert.) and *M. vernalis* (the sex names did not indicate differences of sex in antiquity, but the more or less robust

¹ 'They dig a trench round about it, till the hidden part of the root be very small; they then tie a dog to it and when the dog tries hard to follow him that tied him, this root is easily plucked up, but the dog dies immediately, as if it were instead of the man that would take the plant away; nor after this need any one be afraid of taking it into their hands' (Whiston's translation).

² English edition, *Atlas of Classical Antiquities*, by W. C. F. Anderson and P. Gardner (1895)

varieties). That the root was supposed to resemble the human form is shown by Columella (x, 19, *semihominis*—*mandragorae*) and by a pseudo-Pythagorean treatise on the effects of plants quoted by Pliny, in which, according to a gloss in the Dioscorides MS. (*M.*, iv, 76) it was called ἀνθρωπομορφος. In the illustrations mentioned, the *M. autumnalis* resembles a man, the *M. vernalis* a woman.

As is shown by the translation of *Dudaïm* by *mandragore* = *al-rûna* in a Munich gloss of the tenth century, the mandragora was early identified on German soil with the *al-rûna*, a devilish spirit and a magic root in human form (Grimm, *Teutonic Mythology*, Eng. tr. iii, 1202-4, iv, 1673). From the thirteenth century mandragora and *alraun* are always synonymous. The real mandragora, which is never found beyond the Alps, had scarcely ever been seen by the peoples of Central Europe at that time.

XIV. THE *SPORTULA* OF THE CLIENTES.

(Vol. I, p. 196, l. 8.)

THIS difficult subject, on which there exists great diversity of opinion, deserves further investigation, but our information is so scanty and obscure that much must remain uncertain or unexplained. The authorities whom I have consulted are: P. Buttmann, *Über die Sportula der Römer* (in J. D. Seebode, *Krit. Bibliothek*, iii, 1821, pp. 391-409); F. Schneider,¹ *De Sportula* (*Progr. des Gymn. zu Brieg*, 1836); W. A. Becker, *Gallus*, ii², 164, in the main reproduced by Rein in *StRE*, vi, 3185, and Becker-Göll, ii, 204; G. Heuermann, *Über die Clienten unter den ersten röm. Kaisern* (*Progr. des Gymn. zu Burgsteinfurt*, 1856), pp. 14-30, and *Untersuchungen über die Sportula der Clienten* (*progr. of same gymn.*, 1875)³; O. Guttman, *Observationum in M. Val. Martialem particulae v* (*Breslauer Doctor dissertation*, 1866), pp. 31-39. The latest and best discussion of the subject will be found in Marquardt (*Prl.*, i², 207-212), whose views have in several instances caused me to modify my own.

It is probable that in earlier times the patron was accustomed to invite the client to dinner; this appears to have been usual even in Horace's time (*Epp.*, i, 7; I should also be inclined to regard the persons mentioned in *Sat.*, ii, 7, 36; 8, 41; *Epp.*, i, 18, 10 as actual clients). Whether a money equivalent was substituted in Columella's time must be left undecided; in *praef.* i, 9 and 12 he calls the clients '*mercenarii salutatores*', their daily visits a '*cotidianum tributum*' (Seneca, *De brevitate vitae*, 14, 6, *meritoria salutatio*, not *sportula*, as Rein says, a word which according to Haase's index does not occur in Seneca). Certainly, at the beginning of Domitian's reign (and perhaps much earlier)² the client, instead of being invited to a regular dinner (*cena recta*) was presented with a portion of the food to take away or an equivalent in money. Both were called *sportula*, the money *sportula* being the more common.

¹ [Marquardt and Rein give the name as *Schmiedler*. I am unable to trace the treatise. Tr.]

² Referred to as i and ii.

³ Perhaps after Nero's introduction of the *sportula* at the *cenae publicae* (Suetonius, *Nero*, 16; Marquardt, p. 210, 5).

About the year 87 the *cena recta* to clients was reintroduced. The third book of Martial, composed about this time, is the only one in which he mentions the new arrangement and the abolition of the money *sportula*. Both these innovations were perhaps connected with Domitian's reintroduction of the *cena recta* at the *cenae publicae* (instead of the *sportulae* substituted for them by Nero; Sueton., *Domitian*, 7); perhaps also the patrons thought it would be cheaper, since the food set before the clients was inferior—a frequent cause of complaint. Thus Martial, iii, 60:—

Cum vocer ad cenam, non jam venalis ut ante,
cur mihi non eadem, quae tibi, cena datur?
ostrea tu sumis stagno saturata Lucrino,
4 sugitur inciso mitulus ore mihi . .
9 cur sine te ceno, cum tecum, Pontice, cenem?
sportula quod non est, prosit: edamus idem.

Further, the clients lost by the exchange to a certain extent, since the money *sportula* helped to supply their wants (iii, 3); for this reason a starveling Spaniard on his way to Rome turned back at the Milvian bridge, on hearing the report (*sportularum fabulæ*, iii, 14) of its abolition.

The following epigram (iii, 7) refers to the same thing:—

Centum miselli jam valet quadrantes,
anteambulonis congiarium lassi,
quos dividebat balneator elixus.
quid cogitatis, o fames amicorum?
regis superbi sportulae recesserunt,
'nihil stropharum est, jam salarium dandum est'.

This epigram cannot be taken (with Heuermann, i, 27 and Guttman, p. 37) as an expression of delight at the new arrangement; the last verse, and the two other epigrams, which clearly indicate the clients' dissatisfaction, forbid such an interpretation. 'The client', says Buttmann (p. 399), 'in whose name Martial speaks (iii, 7) is greatly displeased because the *patronus* wants to put him off with empty invitations, and demands a regular salary'. Martial himself, who was no doubt dissatisfied, states the condition under which the innovation would be acceptable to clients; but its fulfilment could hardly be expected from patrons, since it would have meant additional expense to them. In any case, the new arrangement did not last long, chiefly owing to the client's dissatisfaction; for the fourth book assumes the reintroduction of the money *sportula*; thus, iv, 26:—

Quod te mane domi toto non vidimus anno,
vis dicam, quantum, Postume, perdiderim?
tricenos, puto, bis, vicenos ter puto nummos
ignoscas: togulam, Postume, pluris emo.

The patron here addressed, who appears to have paid his client only sixty sesterces for the whole year, certainly only rarely required to be waited upon, but gave less for each attendance than the usual money *sportula* (25 *asses* = 100 *quadrantes* = 6½ sesterces), paid also when the client accompanied his patron on a journey (e.g. at Baiae, i, 59).

Larger sums were also offered (viii, 42) :

Si te sportula major ad beatos
non corruperit, ut solet, licebit,
de nostro, Matho, centiens laveris.

x, 27 : Natali, Diodore, tuo conviva senatus
accubat et rarus non adhibetur eques,
ac tua tricenos largitur sportula nummos,
nemo tamen natum te, Diodore, putat.

Here we should probably assume (with Buttmann, p. 409 and Guttman, p. 36) that distinguished guests were entertained and money distributed to the clients ; so perhaps also vii, 86. On the other hand, in ix, 100 :

Denaris tribus invitas et mane togatum
observare jubes atria, Basse, tua,

the three *denarii* appear to be promised for long service, consequently the remuneration was less than the ordinary ; the poet refuses the offer with the remark that he couldn't buy a new toga with it.

Wealthy and distinguished persons apparently claimed and paid for the services of their clients year in year out ; the annual pay of a client 2281½ sesterces (about £25) was no great expense for senators. (The younger Pliny, by no means a wealthy member of the senate, left in his will a sum of money to provide 1120 sesterces apiece annually for 100 freedmen ; Mommsen, *Hermes*, iii, 102). Less well-to-do persons only exceptionally requisitioned the services of clients, the pay being of course regulated partly by the services required, partly by the means and position of the donor. Cp. iv, 26 above and ix, 85, where a patron shams illness in order to deprive his clients of the *sportula*, which was not given when their services were not required (Marquardt, 212, 4). Probably many clients were obliged to earn their pay by this patron one day, by that the next, and needed a large number of such engagements, in order to find employment and pay even for the greater part of the year (Martial, xiv, 125 : si matutinos facile est tibi perdere somnos, attrita veniet sportula saepe toga). Zealous clients contrived to earn more than one *sportula* in one day (i, 80 : sportula, Cane, tibi suprema nocte petita est. occidit, puto, te, Cane, quod una fuit).

Although the clients as a rule were squared with the *sportula* in money or in kind (Martial, xiii, 123), of course they sometimes received invitations to the *cena recta* (Martial, ii, 18 ; x, 18 ; cp. xi, 24 ; xii, 77, 6). But in that case they must frequently have had to put up with scanty fare at the patron's table. Cp. xii, 26, 13 : et rogat ut secum cenes Laetorius' inquit. viginti nummis ? non ego, malo famem ; i.e. the meal does not cost the patron more than 20 sesterces (? asses). Thus, in the *Acta* of the Arval brethren the cost per head is given : hoc anno cenatum est a singulis dies singulos denariis centum (Henzen, *Acta*, p. 16 ; Marquardt, *StV*, iii², 453, 6). So also in iv, 68, which Heuermann (ii, 8) and Marquardt (*Pril*, i², 211, 7) refer to the money *sportula*, the reference is to a meal :

Invitas centum quadrantibus, et bene cenas.
ut cenem invitor, Sexte, an ut invideam ?

Only when the client dines at the patron's table can he imagine that he has been invited to arouse his envy; the patron dines well, the client so badly, that his meal cannot have cost more than 25 asses.

Juvenal describes a somewhat later age than Martial. As regards the payment of clients proper, there seems to be no difference; in Martial the *sportula* is distributed in the evening, in Juvenal (i, 125) in the morning, but so trifling an alteration is unimportant. 100 *quadrantes* was still the usual sum, with which the clients bought clothes, food, and firing. But it is remarkable that in Juvenal, in addition to the clients (the *turba togata* of l. 96), even men of old family (*Trojugenae*, 100), praetors and tribunes, well-to-do freedmen and even women in sedan-chairs (consequently women of position) present themselves to receive the *sportula*, and the highest dignitaries reckon up at the end of the year how much it has brought them in (Juvenal, i, 117-128). We may, therefore, perhaps assume that rich and distinguished men (and even women) at their morning complimentary visits did not disdain to accept the usual fee of 100 *quadrantes* (l. 120), which they probably gave to their servants; that they went round to secure the doles (128, Buttmann, p. 407), accompanied by their clients (*comites*, 119), in the early morning. As they in turn paid the same fees to their own visitors, the acceptance of the trifling sum could not be considered unseemly, so long as it was regarded as a mere formality; it would only appear so, if it was hinted that importance was really attached to it or that it was much sought after. Becker-Göll (ii, 211) consider that this passage refers to extraordinary family festivities (cp. Pliny, *Ad Trajanum*, 116).

Martial, who mentions (ii, 18; x, 10; xii, 26) the complimentary visits of distinguished persons and their abject exhibitions of devotion, never mentions a *sportula* paid to them or to non-clients generally; this seems to show that the custom of bestowing it upon distinguished visitors was not developed until after the death of Domitian. The same may be said of the morning visits paid by women of position, which are not referred to by Martial or earlier writers.

Lastly, on Juvenal, iii, 249:

Nonne vides quanto celebretur sportula fumo?
centum convivae, sequitur sua quemque culina,

the scholiast's explanation is certainly correct: *pulmentaria secum portant comparata e sportula*, i.e. the eatables distributed (so Becker-Göll, ii, 206), or bought with the *sportula*, and prepared in the cook-shop, are carried home by the clients' slaves in a portable kitchen, to prevent their getting cold (so Heuermann, ii, 9 and Marquardt, 211, 8). Gifford in Mayor's Juvenal *ad loc*: "How often have I been reminded of the *sportula* by the firepans and suppers of the Neapolitans! As soon as it grows dark, the streets are filled with twinkling fires glancing about in every direction on the heads of these modern Corbulos, and suddenly disappearing as they enter their houses with their frugal meal."

In later times, the following references to the *sportula* (paid on

extraordinary occasions) are all that are known to me. Apuleius, *Apol.*, 88: quippe ita placuerat, in suburbana villa potius ut conjungeremur, ne cives denuo ad sportulas convolarent, cum haud pridem Pudentilla de suo L milia nummum in populum expunxisset ea die qua Pontianus uxorem duxit et hic puerulus toga est involutus. *Vit. Gallien.*, 16: convivatus in publico est. congiariis populum mollivit. senatui sportulam sedens erogavit, matronas ad consulationem suam rogavit, denique manum sibi osculantibus quaternos aureos nominis sui dedit. *Ammian. Marcel.*, xiv, 6, 17: cum autem intervallata temporibus convivium longa et noxia coeperint adparari, vel distributio sollemnium sportularum; anxia deliberatione tractatus, an exceptis iis, quibus vicissitudo debetur, peregrinum invitari conveniat etc. Symmachus, *Epp.*, ix, 134: sportulam consulatus mei et amicitiae nostrae et honori tuo debeo, hanc in solido uno ad te misi, orans ut benigno animo sollemnia officii mei libamenta suscipias, Vale.

XV. THE USE OF *DOMINE* AS A FORM OF ADDRESS IN ORDINARY LIFE.

(Vol. I, p. 199, l. 10.)¹

THE use of *domine* ('sir') as a form of address has never been adequately discussed. The best account of it will be found in Lipsius, *Excursus ad Tac. Ann.*, ii, 87, P.; all the other writers cited by Gessner in his *Thesaurus*, s.v. *dominus* have either copied him or added nothing new. I shall chiefly confine myself to the first three centuries. I further exclude (1) the well-known practice of lovers, who call themselves *dominus* and *domina* (mistress), a custom transferred by Ovid and his imitators even to the heroic age (*Heroides*, xiii, 145; xv, 18, 118, 164, 176; *Melam.*, ix, 465); (2) the use of *domine* in addressing the emperors, discussed by Spanheim (*De usu et praest. numm.*, diss. vii, 8, p. 729, ed. 1671) and with his usual acuteness and in detail by Eckhel (*Doctr. numm.*, viii, p. 364).²

During republican times, with few exceptions, *domine* was never heard as a form of address in the mouth of a free man. Even in imperial times it was never so generally in use as at the present day; it was limited to certain relations, expressed special politeness and respect, or was used for special reasons.

It may have been a very old custom, derived from the nature of the *patria potestas*, although only occasionally preserved or intentionally revived, that children addressed their father as *dominus*. Augustus strongly objected to it, since its use might have led people to think it was intended gradually to introduce it as the Emperor's right. He would not even allow his own children or grandchildren (Suetonius, *Augustus*, 53) to call him 'sir' in jest or earnest. That it was customary in many houses is shown by the epigram of Martial (i, 81):

A servo scis te genitum blandeque fateris,
cum dicis dominum, Sosibiane, patrem.

¹ Cp. *Progr. der Königsberger Universität* (Jan. 23rd, 1859).

² On the use of *domine* in addressing the emperors from Augustus to Julian, cp. Chr. Schöner, *Über die Titulaturen der röm. Kaiser* (Erlangen, 1881), pp. 26-33.

In the will (dated A.D. 175) of a son who died at Sirmium, found at Cephaledium (Cefalù) in Sicily, we have: have michi domine pater, vale michi domine pater (Orelli, 4359). Letronne, *La Statue vocale*, p. 244: καὶ τὸ προσκίνημα πάντων τῶν ἀδελφῶν καὶ τῆς κυρίας μητρός. In the oldest times the wife also possibly addressed her husband as *dominus*. Yet I only know one instance, in which there is no admixture of flattery or endearment, and that belonging to an age when members of a family frequently addressed one another in that manner. *Dig.*, xxiv, 1, 57: Paulus libro VIII Responsorum: —Ea quae a marito suo pecuniam ex causa donationis acceperat, litteras ad eum misit hujusmodi: quum petenti mihi a te, domine carissime, annuerit indulgentia tua.

Also in the time after Augustus, whenever equals or inferiors are so addressed, it is due to the wish to be especially polite. In Epicetetus philosophers, physicians and soothsayers are frequently addressed as 'sir', but only by those who need their assistance and want to curry favour with them. *Diss.*, ii, 7, 9: διὰ τοῦτο κολακεύομεν τοὺς μάντεις· Κληρονομῆσω, κύριε, τὸν πατέρα; Ἰδωμεν, ἐπεκθυσώμεθα. Ναί, κύριε, ὡς ἡ τύχη θέλει. *ib.*, ii, 7, 12: νῦν δε τρέμοντες τὸν ὀριθάριον κρατοῦμεν, καὶ τὸν (ὡς?) θεὸν ἐπικαλούμενοι δεόμεθα αὐτοῦ· κύριε, ἐλέησον· ἐπιτρέψον μοι ἐξελθεῖν. *ib.*, ii, 15, 15: οὐ θέλεις τὰ τοῦ νοσοῦντος ποιεῖν καὶ τὸν λατρὸν παρακαλεῖν; Νοσῶ, κύριε· βοήθησόν μοι· τί με δεῖ ποιεῖν, σκέψαι, ἐμὸν ἐστὶ πειθεσθαι σοι. *ib.*, iii, 10, 15: τί οὖν κολακεύεις τὸν λατρὸν; τί λέγεις; ἴαν σὺ θέλῃς, κύριε, καλῶς ξεῶ. *ib.*, iii, 22, 38: ἐν τίνι οὖν ἐστὶ τὸ ἀγαθόν, ἐπειδὴ ἐν τούτοις οὐκ ἐστίν; Εἰπέ· ἡμῖν, κύριε ἀγγελε καὶ κατὰσκοπε. *ib.*, iii, 23, 11: πρῶν ἐπαυθεὶς περιήρχου καὶ πᾶσιν ἔλεγες· τί σοι ἔδοξα; Θαυμαστὸς, κύριε, τὴν ἐμὴν [σοι] σωτηρίαν. *ib.*, iii, 23, 19: τὸ καλόν, κύριε, καὶ λίθον κινήσαι δύναται. From one passage it might seem that the address was regarded as a proof of servile obsequiousness; *iv*, 1, 56: οὐκ οὖν ἀλλὰ κωλύσαι ἐστὶ καὶ ἀναγκάσαι, θαρρύν λέγε μὴ εἶναι ἐλεύθερον· καὶ μὴ μοι πάμπου αὐτοῦ καὶ προπάμπου βλέπε, καὶ ὦν ἡν γήτει καὶ πᾶσιν· ἀλλ' ἂν ἀκούσῃς λέγοντος ἔσωθεν καὶ ἐκ πάθους, κύριε· κἂν δώδεκα βάρβοι παράγωσι, λέγε δοῦλον. Here, however, a slavish temperament is clearly only attributed to one who calls another 'sir' ἔσωθεν καὶ ἐκ πάθους. Petronius, 57: unus ex conlibertis Trimalchionis—'an tibi non placent lautitiae domini mei'? *Colloquia scholastica* (gloss. Labb. ii, 427): Γῆε κύριε, τί ἐπιτάσεις;—Μὴ τι ἔχεις χρήματα εὐκαιροῦντα;—Τί χρεῖαν ἔχεις δαλεῖσασθαι;—Εἰ ἔχεις χρῆσόν μοι πέντε δηνάρια. *Colloq. schol.*, ed. Haupt, *Ind. lect. Berol. hib.* 1871 (on entering a house, apparently a senator's): χαῖρε κύριε, χαῖρε κυρία. βασιλεῦ χαῖρε, βασιλεῖα χαῖρε, Πόθων [μητέρα], θύγατερ Πελάγους Ἀφροδίτη, πῶς τὰ παιδία; ζῶσιν καὶ καλῶς ἔχουσιν. Philogelos, ed. Eberhard:¹ 5, κύριε σχολαστικέ· 144, Εὐτράπελος ἀγρὸν δρομέα ἰδὼν εἶπεν· οἶδα τίνοσ χρηρίζει ὁ κύριός μου οὗτος. (Cp. 208 and 235). Scaevola, *lib. I Responsorum* (*Dig.*, xiii, 6, 26): Quidam ad creditorem litteras ejusmodi fecit: decem quae Lucius Titius ex arca tua mutua acceperat, salva ratione usurarium habes penes me, domine. Even after his accession Marcus Antoninus

¹ According to Eberhard this collection was made in the fifth century; but these anecdotes, although handed down in a very late form, certainly had their origin in part (as is shown by their contents), and perhaps altogether, in an earlier age: thus in 87, the gladiatorial games are supposed to be still in existence.

writes to Fronto: vale mi domine magister (*Epp. ad M. Anton.*, ii, 2, p. 98).¹ Fronto himself calls his son-in-law Aufidius Victorinus *domine* (*Epp. ad am.*, i, 11), his friend Squilla Gallicanus *domine frater* (*ib.*, i, 28), Arrius Antoninus, a younger kinsman of Antoninus Pius, *mi domine fili carissime* (*ib.*, ii, 11). Scaevola, *Dig.*, xxxii, 41, 4: *testamento pueros ita legaverat: Publio Maevio, dominulo meo, ab heredibus meis dari volo.* The respectful and confidential address *domine frater* (e.g. Hyginus, *De munif. castr.*, 45) was certainly very common down to the latest times. Inscription on a draughtboard (Marquardt, *Prl.*, ii², 859): *domine frater ilaris semper—ludere tabula.* Palladas (*Anthol. Pal.* ed. Jacobs, ii, 293 = cap. x, 44 ed. Dübner):—

Ἦν ὁ φίλος τι λάβη, δόμινε φράτερ εὐθὺς ἔγραψεν.
ἦν αὖ μὴ τι λάβη, τὸ φράτερ εἶπε μόνον.
ἦν γὰρ καὶ ταῦτα τὰ ῥήματα. αὐτὰρ ἔγωγε
οὐκ ἔβλεψα δόμινε. οὐ γὰρ ἔχω δομῆναι.²

Of course such modes of address as *frater*, *pater*, *mater*, *fili* were common at all times. Cicero, *Verres*, iii, 3, 66, 155: *volo mi frater fraterculo tuo credas.* Horace, *Epp.*, i, 6, 54: 'frater', 'pater' adde, ut cuique est aetas, ita quemque facetus adopta (cp. *Sat.*, ii, 1, 12). This was also the custom later. Petronius, 98, 100; *ib.*, 7, *mater*. Lucian, *Lucius*, 4, *μητηρ*. Martial, ix, pr., x, 65, 3. Juvenal, v, 135. Epictetus, *Diss.*, i, 26, 15; iv, 13, 18. Quintilian, *Declam.*, 321. Gellius, xiii, 20, 5 (mi fili). Apuleius, *Metam.*, ix, 181. *Vit. M. Anton.*, 18: cum in amore omnium imperasset, atque ab aliis modo frater, modo pater, modo filius, ut cujusque aetas sinebat, et diceretur et amaretur. Paulus, *I. IV ad Viellium* (*Dig.*, xxviii, 5, 58 [56], 1): Qui frater non est, si fraterna caritate diligitur, recte cum nomine suo sub appellatione fratris heres instituitur. Desideri(um?) frater in the letter of a *pontifex* to a colleague A.D. 155 (Wilmanns, 312). Among Christians: Athenagoras, *Supplicatio*, 32; Minucius Felix, *Octav.*, 3; Cyprianus, *Epp.*, 21. Celerinus Luciano: haec cum tibi scriberem, domine frater; *ib.* 3, rogo itaque, domine et peto per dominum nostrum Jesum Christum ut ceteris collegis fratribus tuis, meis dominis referas; 4, peto ergo domine carissime Luciane—ut omnibus dominis meis fratribus; *Ep.*, 22: Lucianus Celerino domino, si dignus fuero vocari collega in Christos. The Gallic pilgrim, who relates an account of her journey to the holy places (385–388) apparently to the inmates of a convent, addresses them as 'dominae (venerabiles) sorores' or 'dominae' (Gamurrini, *S. Silviae Aquilanae peregrinatio in Biblioteca dell'accad. storico-giuridica*, iv, 1887, pp. 39, 55, 75, 105).

In the *Metamorphoses* of Apuleius the hero is sometimes addressed as 'Luci domine' (ii, 30; iii, 50), in the first passage by his host Milo, in the second by the town council of Hypata, who are anxious to appease his anger at a joke which they had played upon him: neque tuae dignitatis, vel etiam prosapiae tuorum ignari sumus, Luci

¹ Naber (*Epp. Graec.*, vi, p. 252) reads 'have mi optime magister' for 'have mi domine magister' (*Epp. ad M. Caes.*, i, 6 ed. Niebuhr, p. 31).

² In passing it may be observed that this epigram shows that at that time (reign of Arcadius, emp. 395–408) αἰ was pronounced as ē. This fact, not noticed by Hermann (*De emendanda ratione Graecae grammaticae*, p. 52) had already been pointed out by G. Voas (*Instit. Orat.*, iv, p. 220).

domine. nam et provinciam totam inclytae vestrae familiae nobilitas complectitur. It is worthy of remark that Apuleius begins his apology as follows: certus equidem eram—Maxime Claudii quique in consilio estis, while his accuser according to the quotation (p. 563 ed. Flor.) had begun: hunc ego, domine Maxime, reum apud te facere instituo. This clearly shows that at that time even persons of higher rank were by no means universally addressed as *domine*; it seems that Apuleius, by omitting it when addressing the proconsul, desired to keep up the appearance of outspokenness and perhaps of a certain equality, while his opponent behaved like an inferior. It cannot be a mere accident that in the numerous conversations between learned or educated men in Gellius this form of address never once occurs, while it is found in polite addresses, some of which are seriously meant, while others are ironical. In any case, it was purposely avoided; perhaps some of the 'antiquaries' objected to it as too modern. The persons who appear in Gellius call one another 'magister' (iii, 1; iv, 1; xviii, 7; xix, 10; xix, 13; xx, 10), 'magister optime' (xviii, 4; xix, 10), 'vir doctissime' (vi, 10), 'vir bone' (xviii, 10), 'philosophe' (xix, 10), 'philosophorum amplissime' (i, 2), 'mi Favorine' (xx, 1). Favorinus the philosopher even calls a woman of rank 'mulier' (xii, 1), not *domina*. Yet the strict avoidance of *domine* was probably limited to individual circles. An instance (from the same period) of the title being given even to inferiors by superiors as an act of special politeness is found in a letter (apparently of the year 149) to a collegium fabrum Narbonensium subaedianorum from its patronus (Henzen-Orelli, 7215), which concludes: valere vos cupio domini optimi et carissimi mihi. From the third century: Dig., xxxv, 2, 22: Nesennius Apollinaris Julio Paulo. ex facto, domine, species ejusmodi incidit, in which we should perhaps recognize the address (to be mentioned later) of the pupil to the teacher: Bremer, *Rechtslehrer und Rechtsschulen*, p. 31. *Testamentum M. Grunni Porcelli* (Bücheler, Petronius, ed. 2, p. 231, 6): rogo, domine coce, vitam peto; p. 232, 15: mei domini vel consobrini mei, qui in medio testamento interfuistis, jubete signari.

Clients in particular were obliged to show their inferiority to their patrons by addressing them as *domine*. The reason why this is first mentioned in Martial is because it is just the relationship of client and patron that he most frequently touches upon; the application of the title 'King' to the patrons is already found in Horace (*Epp.*, i, 7, 37: rexque paterque audisti coram nec verbo parcius absens); similarly in Columella, praef. i, 9. Cp. Martial, i, 112; ii, 32, 8; ii, 68; vi, 88; ix, 92.

But, generally speaking, it may be said that superiors were usually addressed as *domine* by inferiors. Dasumius in his will (year 109) alternately calls his highly placed friend Servianus 'S. meus' and 'S. dominus meus' (Rudolfi, *Zeitschr. f. geschichtliche Rechtswiss.*, xii, p. 381). Carpophorus, a Christian freedman of Commodus (in Hippolytus, *Refut. haeres.*, ix, 12, ed. Duncker, p. 454) addressed Fuscianus, praef. urb.: δέομαι, κύριε Φουσκιανέ. Avidius Quietus (proconsul of Asia under Hadrian; see Waddington, *Asie Mineure*, p. 239, no. 860, and cp. p. 722 [Fastes cons., no. 130]) in a letter

about the town of Aezani (in Phrygia) to Hesperus, *proc. Caesaris*, calls him 'mi Hespere carissime', and is addressed by Hesperus as 'Quiete domine' (*CIG*, iii, 3835 = Waddington, *Asie min.*, 862). A letter from an Ephesian L. Pompeius Apollonius to the proconsul L. Mestrius Florus (83/4) begins: *Μυστήρια καὶ θυσίαι, κύριε* (Dittenberger, *Sylloge*, 390). Septimius, adjutor a rationibus, writes to his superior, Cosmus: rogo, domine. In the inscription on the tunnel at Saldae under Antoninus Pius (Mommsen, *Arch. Zeit.*, n.f. iii, 1870) the (equestrian) procurators of Mauretania, writing to the (senatorial) governors of Numidia, address them as *domine*. This may have been a standing title for senators generally (Martial, xiv, 1, 1: *synthesibus dum gaudet eques dominusque senator*). It was the more natural, if the superior were the older man. In Petronius (86) the boy from Pergamum asks the quaestor's companion: rogo, domine, ubi est asturco? Perhaps pedagogues and tutors were regularly addressed in this manner by pupils (Becker, *Gallus*, ii², 71). Quintilian, vi, 3, 100: et Fulvius Propinquus legato interroganti, an in tabulis quas proferebat chirographus esset, Et verus, inquit, domine. *Κύριε* is certainly meant in Lucian, *Gall.*, 9: *ἐντυγχάνω χθὲς τῷ Εὐκράτει, καὶ ἐγὼ μὲν προσεῖπὼν αὐτὸν ὥσπερ εἰώθειν δεσπότην, ἀπηλλάττομαι*.¹ Even in later inscriptions *dominus* before the name (except in addresses) is very rare. In addition to *CIL*, viii, 597 (quoted above), a d o Postumiano c. v. cos., I know only one example, *CIL*, ix, 2803 (Aufidena): D. Fl. Severo v.p. statuum marmoream quae meritorum ejus perenne testimonium loqueretur, ponendam ordo et populus Aufidenatum censuit civi et patrono.

Assemblies and corporations were honoured with this address by those who stood, or pretended to stand, in a dependent relation towards them. Tiberius, addressing the senate, declared that a good prince must be the servant of that body: 'in you I have, now as formerly, good, just, and well-disposed masters' (Sueton., *Tib.*, 29). A letter from the army to the senate after the death of Aurelian has: hunc et inter deos referte, sancti domini p.c. (*Vit. Aurel.*, 41). The senate is called *sanctus* as early as Ennius, *Ann.*, 243 V, and in Virg. *Aen.*, i, 426; cp. Horace, *Odes*, iv, 5, 3; Cicero, *Catil.*, i, 4, 9; Juvenal, xi, 29 (sacer); in Greek inscriptions ἡ ἱερὰ σύγκλητος (Keil in *N. Rhein. Mus.*, xx, 543; Lebas-Waddington, 519, p. 142). Claudius pushed his deference so far that, at the gladiatorial games, he frequently called the spectators *domini* to put them in a good humour (Sueton., *Claud.*, 21). Artists, who wished to gain public favour on the stage, called the audience 'gentlemen'. Nero, who carefully imitated the ways of cithara-players to the most trifling detail, addressed the public on his appearance: 'Gentlemen, give me a favourable hearing!' (Dio, lxi, 20: *κύριοι ἐμοί, εὐμενῶς μοῦ ἀκούσατε*).

In Nero's time it was already customary for one man to greet another, whose name he could not think of, as *dominus*, to avoid impoliteness (Seneca, *Epp.*, iii, 1). Even slaves might be so addressed; cp. Martial, v, 57:

Quum voco te dominum, noli tibi, Cinna, placere.
saepe etiam servum sic resaluto tuum.

¹ Ennodius ad summam animi venerationem significandam etiam pluralem substantivi *domini* advocavit (W. Hartel, *Analecta, Wiener Studien*, 1880, p. 232).

It is well known that women were called *domina* even by their husbands. Seneca, *De Matrim.* in Jerome (ed. Haase, iii, 429): *vocanda domina, celebrandus natalis ejus.* Epictetus, *Encheiridion*, 40: *αἱ γυναῖκες εὐθὺς ἀπὸ τεσσαρεςκαίδεκα ἐτῶν ὑπὸ τῶν ἀνδρῶν κυρίαί καλοῦνται. τοιγαροῦν ὁρῶσαι, ὅτι ἄλλο μὲν οὐδὲν αὐταῖς πρόσσεστι, μόνον δὲ συγκοιμῶνται τοῖς ἀνδράσι, ἀρχονταὶ καλλωπίζεσθαι καὶ ἐν τούτῳ πᾶσας ἔχειν τὰς ἐλπιδας.* Dig., xxxii, 41 (Scaevola): *uxorem et filiam communem heredes instituit, et uxoris fidei commisit in haec verba: peto a te, domina uxor.* Cp. Ovid, *Tristia*, iv, 3, 9; v, 5, 1; Sueton., *Claud.*, 39; Orelli, 2663; Renier, *Inscr. de l'Alg.*, 624; *ib.*, 2074 = Wilmanns, 592; *id. ib.*, 534; *CIL*, v, 1, 4438 (Brixia): *et conjuge (sic) hujus, domne meae sanctissimae et amicae carissimae; CIL*, v, 2, 6039 (Mediolani): *dominae et conjug. carissimae; CIL*, vi, 2, 14351, *sanctissimae conjugi* — *nn. conjux dominae: ib.*, xiv, 3358: *Matid[iae] Valeria[nae] domin[ae] optimae; CIL*, xii, 682^a (Arelate): *nn. vibus sibi posuit et nn. dominae et uxori*; Philogel., 234: *Ὁξοστόμος τὴν γυναῖκα ἡρώτα λέγων· κυρία, τί μεμοῖσις*; Christian age, De Rossi, *Inscr. Christ.*, 30 (A.D. 307): *τῇ κυρίᾳ καὶ δειμνήστῳ Μαρτίᾳ.* *Ib.*, 78 (344): *dominae conjugi Tigridi.* The *patrona* was not only called *domina* by her *clientes*, but also *regina*, as is shown by the epigram of Martial (x, 64: *contigeris regina meos si forte libellos*) addressed to Polla Argentaria, Lucan's widow; Haupt (*Colloq. scholast.*, *Ind. lect. Berol. hib.* 1871; see above), *Βασίλεια χαίρει.*

Lastly, we must mention the strange custom of blood-relations, who addressed and spoke of one another as *dominus* and *domina*, partly in jest, partly as a mark of respect or endearment. Augustus (for the reason already mentioned, p. 81) forbade such terms of endearment (*blanditiæ*) to be used by his children and grandchildren (Sueton., *Aug.*, 53). Waddington, *Asie min.*, 323/4, *μετὰ κυρίου τοῦ υἱοῦ*, 415, l. 15, *μετὰ κυρίου τοῦ πατρὸς αὐτῶν.* Naturally, the mother was called and spoken of as *domina*. *CIL*, v, 1, 1470: *dominae et matri incomparabili; ib.*, 2826 = Henzen, 5571: *dominae matri Val. Maximillae nob. fem. (wife of Maxentius).* Letronne, *La statue vocale*, p. 244 (in a *Syrinx*)¹: *τὸ προσκύνημα πάντων τῶν ἀδελφῶν καὶ τῆς κυρίας μητρός.* It was also usual amongst brothers and sisters. Seneca calls his brother 'dominus meus Gallio' (*Epp.*, 104, 1). In a letter to Fronto (*Epp. ad M. Antonin.*, 2 and 3) Marcus Aurelius calls Lucius Verus 'dominus meus frater', and in like manner Verus writes of Marcus Antoninus (*Epp. ad L. Ver.*, i, 11) and Fronto himself of his own brother (*ib.*, 6, 5, *domino fratre meo*). *CIL*, viii, 333 (Ammaecdera): *domino meo fratri rarissimo posui; CIG*, iii, 4781^b (in Syringe Memnonis): *Βουρίχιος σχολαστικὸς ὁ καὶ Ἰλᾶτων (?) ἐθαύμασα εἰσπορήσας· τὸ προσκύνημα τοῦ κυρίου μου Σαπρικίου τοῦ ἀδελφοῦ μου.* (Letronne, *La stat. vocale*, p. 274, and Franz, *l.c.*, p. 1210, wrongly translate *κύριον* by 'teacher' and insert *καὶ* before *τοῦ ἀδελφοῦ*). Orelli, 3007: *Julia Hellas Hygiae dominae et sorori bene merenti.* Even parents called their children *domine* and *domina*, and even if it is only in jest that Jupiter addresses Cupid as 'domine fili' (Apuleius, *Metam.*, vi, 124), Symmachus quite seriously writes to his daughter as 'domina filia' (*Epp.*, vi, 40; vi, 67). In the *Hist.*

¹ [*Syrinx* was an underground burial vault.]

Apol. regis Tyri, 17, the King says to his daughter, 'bene dicis, domina'; *ib.*, 50: Apollonius exclamavit: domina Tharsia, nata dulcis. Scaevola, *L. XVIII Digestorum* (*Dig.*, xxxii[iii] 37, 2): Maevio substituit Sempronium pupillum suum, deinde codicillos—confirmavit, quibus ita cavit:—cujus in locum partemve ejus Publium Sempronium, dominum meum, heredem esse volo: cp. 5, Μαζίμω τῷ κυρίῳ μου δηνάρα μέρια πεντακισχίλια, 41, 4: Publio Maevio, dominulo meo. M. Aurelius, *Ad Frontonem de feriis Alsiensibus*, 1: domnulam meam febricitantem repperi. Salvianus, *Epp.*, iv: Ad socerum et socrum. Ypatio et Quietae parentibus Salvianus Palladia et Auspiciola salutem (the address is: affectus dilectissimi [carissimi] vel domini indulgentissimi):—advolvor vestris, o parentes carissimi, pedibus, illa ego vestra Palladia, vestra gracula, vestra domnula; cum qua his tot vocabulis quondam indulgentissima pietate lusistis, quae vobis per varia nomina nunc fui mater, nunc avicula, nunc domina: cum esset scilicet unum vocabulum generis, aliud infantiae, tertium dignitatis. Victor Vitensis, *Persecutio Vandalorum*, ii, 9, 30: conspicimus mulierculam—manu infantulum unum tenentem atque in his sermonibus consolantem: curre, domne meus. Hence we also find sepulchral inscriptions of little children, as in Fabretti, *Inscr. ant.*, p. 582, 167: d. m. domino filio Amantio—qui vix. ann. vi m. ii d. xv. Renier, *Inscr. del'Alg.*, 583: filio et domino meo—vix. ann. ix. Cp. *CIL*, vi, 2, 14190: Macciae Deuterae alumnae et dominae meae bene merenti. *CIG*, 1158 (Argos): Κύριε Τιβέριε, χαῖρε ἡγήσας . . ., where the fragment tells us nothing of the age of the deceased. That the custom still existed in Christian times is shown not only by the passage from Salvianus and the Christian sepulchral inscriptions quoted by Fabretti, but also by the passage in the Passion of SS. Perpetua and Felicitas, c. 4 (*Acta martyrum*, ed. Ruinart, p. 89, ed. Veron. 1731): tunc dixit mihi frater meus: domina soror. The remark of De Rossi (*Inscr. Chr.*, 103, A.D. 348? : "domino [filio?]) : ipsa inscriptionis dictio (praesertim domini appellatio defuncto tributa) saeculum plane quartum sapere videtur," is certainly wrong : at least, it is difficult to see why a mode of expression so common in earlier times should have taken so long to find its way into sepulchral inscriptions.

XVI. ENDEARING AND COMPLIMENTARY NAMES FOR WOMEN AND GIRLS.

(Vol. I, p. 228, l. 10.)

FABRETTI, *Inscr. dom.*, p. 146, 174: Nomen fuit, nomen haesit nascenti Cusuccia; cp. Borghesi, *Œuvr.*, iii, p. 502. To all appearance also Glaucopi (for glaucopidi) Veneri above the monument of a certain Gellia Agrippina, c(larissima) p(uella), erected by her nutritores lactanei Aurelia Soteris and Mussius Chrysogonus (Maffei, *Mus. Ver.*, p. 293, 1 = *CIL*, vi, 1424) is to be taken as a complimentary name that had lasted from childhood. Venus was in common use as a distinguishing title of beautiful women and girls.¹

¹ So perhaps Musa for female singers and poets. A female musician is called Petronia Musa. Kaibel, *Epigr.*, 551 = *CIL*, vi, 3, 24042.

Lucretius, iv, 1177 (1185, Munro): nec Veneres nostras hoc fallit. Seneca, *Apocol.*, 8: sororem suam, festivissimam omnium puellarum, quam omnes Venerem vocarent. Haupt, *Colloq. Schol.* [Ind. lect. Berolin. hibern. 1871], p. 6: βασίλισσα χαίρει, Ἰδῶν [μήτερ] θυγατρὸς Πελάγους Ἀφροδίτη. Venus as the name of a slave: Wilmanns, *Ex. Inscr.*, 367. CIG, 6278 (Kaibel, *Epigr. Gr.*, 565, 5): αὐτὴ ἐμὲ γειναμένη μήτερ Βένους. CIG, 6215 = K. 635: καλλιτεκνον σεμνήν δδε τύμβος ἔχει σε, Ἀφροδίτη. Venus as an epithet CIL, ii, 4415: Veneri Latinillae Spedius M. Ternianus maritus. CIL, vi, 2, 12281: Arabia Firma Venus Afra. Aphrodite as an epithet: CIL, ii, 4382; v, 2, 5869, 6851, 7104, 7395, 8938; vi, 286, 3446. Overbeck, *Pompeii*, i^a, 109. Aphrodite alone as a woman's name, CIL, vi, 2, 12119-12123: it was even given to Christian women, as in the *coemeterium* of Callistus (B. Schultze, *Die Katakomben*, p. 324). MEROPI HELIADI (so Henzen on Borghesi, as above, p. 510) which occurs twice written in the same way on the monuments of a brother and sister (Q. Licinius Q. fil. Florus Octavianus and Licinia Lampetia; Maffei, *Mus. Ver.*, 293, 2; Muratori, 1477, 2), also erected by the *nutritores lactanei* mentioned above, appears to be in the dative, but I am unable to give an explanation. According to Lanciani, *Suppl. al vol. vi del CIL*, *Bull. com. d. R.*, 1883, p. 230, the same is found on the pedestal of a statue of honour. Pet-names in -illa (Julitta, Livitta). Jahn, *Analekta*, *Hermes*, iii, 190; J. Klein, *N. Rhein. Mus.*, xxxi (1876), p. 297; cp. Mommsen's criticisms (*Observ. epigr. in Ephem. epigr.*, iv, p. 522) of Klein's list, according to which only Gallitta, Pol(l)itta, Julitta, Livilitta can be regarded as certain: the first three are of common occurrence, the last is only found CIL, viii, 6777.

XVII. THE STORY OF AMOR AND PSYCHE AND OTHER TRACES
OF THE FOLKTALE IN ANTIQUITY.
(Vol. I, p. 229, l. 5 from bottom.)¹

THE classical, and still more the pseudo-classical student have from time immemorial regarded popular poetry with more or less disfavour. Accustomed to consider complete harmony of form and matter and perfection of form as of paramount importance, they are repelled by the nature of a class of poetry which, caring little about form and equally incapable of mastering it, can never fashion an artistically perfect whole, although able to produce overpowering effects by its instinctive genius. Only reflection can enable the classically trained mind to understand this poetry. Hence we need not be surprised to find that even in ancient Greek and Roman literature popular poetry is only exceptionally mentioned; but although we only find in it isolated traces of popular and nursery tales, we must not believe with Welcker (*Griechische Götterlehre*, i, 110) that the Hellenic spirit was devoid of that childlike simplicity, 'which is the essence of the German, Slavonic, and Persian tales, in which while they belie the convictions of reason and the experience of the observer who knows mankind, the motley world of nature and human society appears to be mirrored as it were in the eyes of children'.

¹ Cp. the *Progr. Acad. Alb. Regim.*, 1860 I and II. The additions kindly communicated to me by Reinhold Köhler are marked R.K. [The word translated by 'folktales' is *volksmärchen*.]

Even our own pre-romantic literature gave no hint that we possessed an abundant store of poetic folktales; yet so it was. Certainly it had to be discovered.

But although we cannot in any case expect a rich harvest of popular tales from classical literature, the study of the literature of the subject itself, especially among kindred peoples, may be of great service in assisting us to trace them further. Following the advice of J. Grimm (*Vorrede zum Pentamerone des Basile*, trans. Liebrecht, p. xi), I have searched for traces of Greek nursery tales in Lucian, but have found few; I am not inclined to believe that the original of his 'Timon, on whose field Zeus, Hermes, and Ploutos take up their abode and to whom the whereabouts of a treasure is shown, is to be found in a story well-known amongst us'. On the other hand, the magic rings, which Timolaus wishes for in the *Ship or Wishes* (*Navigium*, 42) certainly appear to be borrowed from a popular tale, especially as each is said to have only *one* special virtue: one makes a man healthy, strong, and invulnerable, another renders him invisible, like the ring of Gyges; a third gives him the strength of more than ten thousand men; a fourth confers the power of sending others to sleep and of opening any door that is shut; a fifth makes him irresistibly lovable—marvellous virtues, such as are common in our own popular tales. Perhaps the statement that with the right tail feather of a cock it is possible to open every door and to see everything without being seen (*Somnium seu Gallus*, 28) has the same origin. Also in the *Vera Historia* we catch glimpses of old fairy tales, some of them borrowed from the East: e.g. the vines, from the top of which grow maidens (i, 8), the lights that run about in Lychnopolis by night (i, 29), the enormous fish which swallows the travellers (i, 30). The description of the land of the blest (ii, 13) reminds us of Schlauraffenland¹ or Cockaigne, the gigantic halcyon, which sinks the ship with its wings (ii, 40), of the fabulous roc. The inhabitants of the moon have eyes which they can take out and put in again; when they lose them they borrow from others (i, 25), like Lamia (see below and E. Rohde, *Der griechische Roman*, 192-6). But, although I have searched carefully, I have been unable to find further traces of popular tales in Lucian. On the other hand, the story of the ring of Gyges, which rendered its wearer invisible, particularly in the form in which it is told by Plato (*Rep.*, ii, 359D-360B) appears at least to contain such elements. The shepherd Gyges, during a great storm and earthquake, sees the earth riven asunder; he descends into the opening, and finds a hollow brazen horse, and a corpse inside it. From the finger of the corpse he pulls off a ring, and soon discovers that he becomes invisible, when he turns the collet of the ring inside his hand (cp. *Γύγου δακτύλιος* in Diogenianus, ii, 20; *Paroemiographi Graeci*, ed. Leutsch and Schneidewin, ii, p. 20). The turning round of the ring is also mentioned by Cicero (*De Officiis*, iii, 9) and Pliny (*Nat. Hist.*, xxxiii, 8, where, perhaps by an oversight, Midas appears as the owner). The opinion of E. Müller, that the brazen horse points

¹ Cp. the descriptions of the comic poets in Athenaeus, vi, 94, p. 267E [also in J. Poeschel, *Das Märchen vom Schlauraffenlande* in Paul & Braune's *Beiträge zur Geschichte der deutschen Sprache und Literatur*, v (1878), 389-427. R. K.]

to the breeding of horses in Lydia, the subterranean abyss to the frequent earthquakes in that country, appears to me as unacceptable as his general explanation of the story (*Philologus*, vii, 239). The other Platonic myths (Fischer, *De mythis Platonicis*, Regim., 1865) as far as I can see, have nothing of the popular tale about them.

It must remain uncertain whether professional story-tellers (*fabulatores*, whom Augustus used to send for to talk him to sleep, Suetonius, *Aug.*, 78), who told their stories as a rule in public (in a hippodrome, Dio Chr., xx, p. 264 *M. Iatoplar tiva' ἡ μῦθον διηγούμενον*, Lobeck, *Aglaoph.*, p. 1316) for money (Pliny, *Epp.*, ii, 20, 1: *assem para et accipe auream fabulam*),¹ also told popular tales. Elsewhere, the latter are only mentioned as told by mothers and nurses to children (Grimm, ii, p. 469²; cp. B. Schmidt, *Griechische Märchen, Sagen, und Volkslieder*, [1877.] p. 11, 3, and 12, 2-4; Plato, *Rep.*, 377B; *Quintil.*, i, 8, *aniles fabulae*, i, 9, 2, *fabulae nutricularum*; Julian, *Orat.*, vii, p. 204, *κινῶς—ὥσπερ αἱ τίτθαι μῦθους ᾄδοντες*; Tacitus, *Dial.*, 29), or at most as an amusement for girls and women (Arnobius, *Adv. Gentiles*, v, 14: *cum historias, quaeso, perlegitis tales, nonne vobis videmini aut textriculas puellas audire taediosi operis circumscribentes moras aut infantibus credulis avocamenta quaeritantes anus longaevas*; cp. Tibullus, i, 5, 84: *adsideat custos sedula semper anus. haec tibi fabellas referat*). As a rule they were considered as much beneath the notice of men as in modern Greece (J. G. Hahn, *Griechische und Albanesische Märchen*, Introd. i, p. 9; B. Schmidt as above). This is no doubt the chief reason why we know so little of them. But it has been quite correctly observed by Haupt (in *Hermes*, vii, 10) that Persius, who had been brought up amongst women, evidently has in mind the stories heard by him in the nursery, when he mentions (ii, 37) the wishes of the grandmother, aunt, and nurse for the boy in his cradle. 'May he be a catch for my lord and lady's daughter! May the pretty ladies scramble for him! May the ground he walks on turn to a rose-bed'! (Conington). The first and last wish undoubtedly have their origin in nursery tales, and probably the second. Jahn has already observed that the third wish occurs in a Neapolitan story, and Haupt recalls the names, which owe their origin to these and similar wishes—'Rosentreter' and those already explained by Grimm, *Teutonic Mythology* (Eng. tr., iii, p. 1101)—'Rosenlacher', 'Rosenlächter', 'Blumlacher' [cp. R. Köhler's note in Laura Gorenz's *Sicilianische Märchen*, ii, 225]. Aristides (*Or.*, xlviii, p. 357 J) says that one must leave it to nurses to lull their charges to sleep by telling them tales of a sweet sea, of river horses, of a sea which flows into a river, and the like; but these instances of the marvellous are not taken from popular tales, but are due to the writer's own imagination, unless in this case (and in Tertullian, *Adv. Valentinianos*, 19: *puerilia dicibula, in mari poma nasci, in arbore*

¹ See E. Rohde, *Über griechische Novellen: dichtung und ihren Zusammenhang mit dem Orient in Verhandlungen der Philologenversammlung zu Rostock* (1875), p. 63. He rightly regards them as disseminators of Greek stories in the Grecized East.

² [Except where otherwise stated, the references to Grimm are to the English translation of his *Kinder- und Hausmärchen* by Margaret Hunt in Bohn's Standard Library, 2 vols., 1884. Numbers by themselves indicate the number of the tale. Tr.]

pisces) we are to imagine some story of impossible things as in Grimm (*The Story of Schlauraffenland*, 158; cp. ii, p. 450). In the tales of antiquity we make the acquaintance of little more than ghosts and bogeys, such as Lamia (who belonged so essentially to fable, that Demetrius of Soli called King Demetrius *Mithos*, because he had a mistress named Lamia: Plutarch, *Demetrius*, 27), Gorgon, Ephialtes and the Mormolycae (Strabo, i, 2, p. 19 C.): the 'towers of Lamia' (Tertullian, *Adv. Valent.*, 3), associated with the 'combs of the sun' (?), are perhaps an allusion to the stronghold of a child-eating ogress, like her who in German fairy-tales lives in a house of gingerbread. In a modern Greek tale the Lamnissa carries off the King's daughter to her enchanted tower, where she sleeps for forty days and forty nights until she is released by a King's son (Schmidt as above, p. 76, who on p. 226 also refers to the passage in Tertullian). In the old Greek story Lamia, when at home, kept her eyes in a vessel, and thus was blind; when she went out, she put them in their place again; she was also said to sing at home (Plutarch, *De Curiositate*, 2: *νὺν δὲ ὥσπερ ἐν τῷ μύθῳ τὴν Λαμίαν λέγουσιν οἴκοι μὲν ἔδειν τυφλὴν, ἐν ἀγγεῖῳ τινὶ τοὺς ὀφθαλμοὺς ἔχουσιν ἀποκειμένους, ἔξω δὲ προϊούσαν ἐπιτίθεσθαι καὶ βλέπειν*. Cp. schol. Aristophanes, *Pax*, 757; Diod. Sic., xx, 41; Suidas, s.v.; also Plautus, *Mil. glor.*, 346: *nam ego quidem meos oculos habeo nec rogo utendos foris* may be derived from another version or kindred story; cp. Lucian, *Vera Historia*, i, 25 referred to above). In the Greek tale the monster may by her singing have enticed into her castle children who had lost their way, but her blindness made it easy for them to escape. In order to pursue them, she was obliged to put back her eyes. In the old folktale the child was pulled out alive from the Lamia's belly (Horace, *A.P.*, 340: *neu pransae Lamiae vivum puerum extrahat alvo*, probably as represented in an *Atellana*.) like the kids from the wolf's belly (Grimm, 5, *The Wolf and the Seven Kids*). A Pomeranian version seems to agree entirely with Horace: while his mother is away, a child is swallowed by a goblin similar to Knecht Ruprecht (see Grimm, *Teutonic Mythology*, Eng. tr., ii, p. 514), but the stones swallowed with the child make the goblin so heavy, that he falls down and the child jumps out of his mouth unharmed. In antiquity, the Manducus bears the nearest resemblance to Knecht Ruprecht: like Lamia, Mania (Festus: *Manias*—*quas nutrices minitantur pueris parvulis*) and other bogeys (Munk, *De Atellanis*, p. 39), he may have passed from the nursery tale into the *Atellana*. Lamia, who also plays an important part in modern Greek popular tales (Hahn, as above, p. 331) is mentioned by Dionysius of Halicarnassus (*De Thucydide Judicium*, 6) in a passage, where he is speaking of the fables of earlier historians: *λαμίας τινὰς ἱστοροῦντες ἐν θλάσι καὶ νάπαις ἐκ γῆς ἀνεμένας, καὶ ναῖδας ἀμφιβλοῦσας ἐκ ταρτάρων ἐξιούσας καὶ διὰ πελάγους νηχομένας καὶ μεζόθηρας, καὶ ταύτας εἰς ὁμιλίαν ἀνθρώπων συνερχομένας* (just like the beautiful Melusine and the Nereides of modern Greek popular belief).¹ Acco

¹ [Lamia occurs twice in the Vulgate; *Isaiah*, xxxiv, 14, and *Lamentations*, iv, 3 (where the Septuagint has *ὄρεκίνταυροι* and *δράκονες* respectively; cp. also M. Mayer, *Lamia* in *Archaeol. Zeitung*, 1885, p. 119. R. K.] But it is at least doubtful whether a Lamia is represented on the vase there discussed (*Taf.*, vii, 2).

and Alphito also belong to the goblins of old Greek nursery tales (Plutarch, *De Sloic. refug.*, 15, p. 1040 B. : τῆς Ἀκκοῦς καὶ τῆς Ἀλφίτου δι' ὧν τὰ παιδάρια τοῦ κακοσχολεῖν αἱ γυναῖκες ἀνέλγρουσιν), and perhaps the child-stealing Gello, told of in Lesbos and mentioned by Sappho (Zenobius, *Paroem.*, iii, 3 : Γελλῷ παιδοφιλωτέρα, where read Γελλοῦς according to cod. Coisl. in Montfaucon, p. 608, and Suidas s.v.). Even to-day anxious parents go in fear of Gello ; cp. Wachsmuth, *Das alte Griechenland im neuen* (1864) p. 77 ff. Cp. Fix in the Paris edition of Stephanus under Γελλῷ and B. Schmidt, *Volksl. d. Neugriechen*, 139 (*Gillo und die Gillouden*).¹

The name of Acco, like that of Gello, is used proverbially, not of a goblin, but of a foolish woman, who talked to her reflection in a mirror, took her dress from the loom half finished and put it on (Zenob., i, 53, ed. Leutsch and Schneidewin, i, p. 21). This reminds us of *Clever Elsie* (Grimm, 34) and *Catherine* (59), who, when half asleep, cut her clothes to pieces, and when she woke up, said, 'Am I myself or not?', being finally convinced that she was not. Similarly, other foolish men and women may have made their way from the popular tale into the proverb ; Morychus (Zenobius, v, 13 : μωρότερος εἰ Μωρύχου. αὐτῇ ἡ παροιμία λέγεται παρὰ τοῖς Σικελώταις ἐπὶ τῶν εὐθεῖς τι διαπρασσομένων—λέγεται δὲ οὕτως : μωρότερος εἰ Μωρύχου, ὅς τὰ ἐνδον ἀφείς ἐξω τῆς οἰκίας κάθηται), Ibycus, Coroebus, Meletides, Amphistides (Diogen., v, 12), Mammacythus, Butalion (Didymus on Aristophanes, *Ranae*, 991), Praxilla (Diogen., i, 1), Charixena (*Etyim. Mag.*, 367, 21 ; *Appendix Proverbiorum* in Leutsch, *Paroemiographi Graeci*, ii, 82), Macco and Lamo (schol. Aristoph. *Equites*, 62 : cp. Stephanus, *Thesaurus* s.v. μακκοῦ and L. Cohn, *De Aristophane Byzantio et Suetonio Tranquillo Eustathii auctoribus in Neue Jahrbücher für Philologie*, 1881, supptbnd, p. 350). Praxilla, when asked what was the most beautiful thing, answered, 'The sun and figs', i.e. things sweet as sugar ; Coroebus was so silly that he tried to count the waves of the sea (Zenobius, iv, 58, Κοροῖβον ἡλιθιώτερος) ; Meletides could only learn to count up to five ; when he was married, he never touched his wife, for fear she might complain to her mother² ; Amphistides did not know whether he was born of his father or his mother. Other persons and events of popular tales may also have made their way into proverbial expressions, for instance, Pases, the mighty enchanter, who could call up at will a magnificent banquet and attendants, and as suddenly cause them to disappear (cp. Philostratus, *Apolonius*, iv, 25, where the banquet of an Empusa disappears, gold and silver plate, attendants and all) ; he also possessed a half-obol piece, which always returned to him after he had paid it away (Suidas, s.v. Πάσης, Apostol., xvii, 6, τὸ Πάσητος ἡμιωβόλιον). Juvenal, vi, 363, ac velut exhausta rediuvus pullulet arca nummus et e pleno semper tollatur acervo, is certainly a reminiscence of a story of the lucky penny or wishing-purse. Perhaps Cissamis of Cos was originally a character in a folktale. He was a wealthy

¹ [On Gillu or Gyllu (Γιλλοῦ, Γυλλοῦ), see also K. N. Sathas, *Μεσαιωνικὴ Βιβλιοθήκη* v, 572-578. R. K.]

² Told of Margites in Photius and Hesychius (Μαργίτης, μωρός τις [ἡ] μὴ εἰς ὧς μίξιν γυναῖκος, καὶ γυνὴ προτρέπηται αὐτόν) ; cp. Sueton. in Eustathius 1669, 43.

owner of flocks, whose finest sheep was carried off every year by an eel. Cissamis killed the eel, which appeared to him in a dream and ordered him to bury it. Cissamis neglected to do so, and perished with all his family (Zenobius, iv, 64, Κίσσαμις Κῆρος). Some proverbial-sounding expressions in Roman poetry also may be reminiscences of popular tales. In Martial, xiii, 2, 1 : *nasus, qualem noluerit ferre rogatus Atlas*, Grimm (ii, p. 422) is reminded of a story, in which a man's nose grows to an enormous length after he has eaten a certain fruit or vegetable. Plautus, *Trinummus*, 1023 : *quorum unus surripuerit currenti cursori solum* may allude to a story like that of the *Masterthief* (Grimm, 192) ; Petronius, 45 : *milvo volanti unguis rescare*, to one like that of the *Three Brothers* (Grimm, 124, cp. 129), of whom the barber shaves a running hare, the smith pulls off a galloping horse's shoes and fastens them on again ; the line found on a column in Pompeii : *moram si quaeris, sparge milium et collige* (Zangemeister, *Bull. d. I.*, 1865, p. 190), to the task (so frequently mentioned in popular tales ; see below) of separating or picking up different kinds of seeds, usually performed by animals (Plautus, *Trin.*, 410 : *quam si tu obicias formicis papaverem*). The expression in Petronius (45), *si tu aliubi fueris dices hic porcos coctos ambulare*, is no doubt derived from a story of Schlauffaffen land ; the proverbial measuring of money by the bushel (in both Greek and Latin) was certainly common in popular tales (Xenophon, *Hellenica*, iii, 2, 27 μέλιτι ἀπομετρούσασθαι τὸ παρὰ τοῦ πατρὸς ἀργύριον. Horace, *Sat.*, i, 1, 96 : *dives ut metiretur nummos* ; Petronius, 37, *nummos modio metitur* ; cp. Grimm, 142, *Simeli Mountain* ; [R. Köhler in L. Gonzenbach's *Sicil. Märchen*, ii, 251] ; so also the equally proverbial 'carbonem pro thesauro', Phaedrus, v, 6, 6, Zenobius, *Cent.*, ii, 1 c, with Schneidewin's note (Grimm, 182, the presents of the little people, coal changed into gold and back again ; B. Schmidt, *Volksleben der Neugriechen*, 192, 5, any one who tells any one that he has dreamt of a treasure, finds coal instead) ; perhaps also the 'golden mountains' (Plautus, *Aulul.*, iv, 8, 1 : *pici divitiis qui aureos montes colunt* ; Terence, *Phormio*, i, 2, 18 : *modo non montes auri pollicens* ; Apuleius, *Apol.*, p. 437 : *nec montibus auri satiabitur* ; cp. Jahn on Persius, iii, 67), although here the allusion may be to 'Persarum montes' (Lucretius, ii, 44, see Varro in Nonius, p. 379 ; *montes mariaque polliceri* in Sallust, *Catilina*, 23, 3 = to promise boundless wealth). The expression 'in rutae folium coicere' (Petronius, 37) may be an allusion to a tale of Thumbling (Tom Thumb) (such as Grimm, 37 and 45), who, while creeping among the weeds, is swallowed by a grazing cow, especially as Greek Thumblings are known (Grimm, i, p. 392). [C. Schenkl, *Zur Däumlingssage in Germania*, viii, 384, compares the child Hermes and his tricks in the Homeric hymns ; cp. also Gaston Paris, *Le Petit Poucet et la Grande Ourse*, Paris, 1875, pp. 21 and 39. R. K.] In Plautus, *Mil. glor.*, 803 (ed. Lorenz) : *non potuit reperire, si ipsi Soli quaerundas dares*, we may have one of the stories, in which the sun is asked to disclose the whereabouts of something that is hidden. The fragment of Varro, too (*Sat. Menip.*, 432 : *Prometheus liber X* (in Bücheler's Petronius, ed. min., p. 200 : *Chrysosandalos locat sibi amiculum de lacte et cera Tarentina, quam apes*

Milesiae coegerint ex omnibus floribus libantes, sine osse et nervis, sin pelle, sine pilis puram putam proceram candidam teneram formosam) may contain a reminiscence of a popular tale; similarly, the growth of wings after eating a certain root (Aristophanes, *Aves*, 654 : *ἔστι γὰρ τι ῥίζιον, ὃ διατρυγόντ' ἔσσεσθον ἐπτερωμένω*). Perhaps the story in Ovid (*Metam.*, iv, 49) should also be mentioned here : Nais an ut cantu nimiumque potentibus herbis Verterit in tacitos juvenilia corpora pisces, donec idem passa est.

Apio in his *De Mago* mentioned the magician Pases, and books on magic undoubtedly often contained fabulous traditions, which found a place even in scientific works, as is shown by Pliny's account of the wonderful virtues of animals, plants, and stones. The magic herbs of Asclepiades, by whose aid man can dry up seas and rivers, open everything that is shut, put hostile armies to flight, and procure everything in abundance, resemble the miraculous gifts of fairy tales. The second and fourth marvel is of frequent occurrence, the first in the story of the *Six Servants*, one of whom drinks up the sea, 'so that it becomes as dry as a meadow' (Grimm, 134), the third in Grimm, 54 (*The Knapsack, the Hat, and the Horn*) and its variations (i, p. 409), in which tapping on a knapsack calls forth great armies and cannon, which nothing can resist. The wonder-working herb *Osiritis* in Egypt was according to Apio the Homeric *moly* : any one who dug it up was bound to die at once (Lehrs, *Quaest. epicae*, p. 26; Pliny, *Nat. Hist.*, xxx, 18). This quality of the *alraun* root, as well as the manner of obtaining it without danger (Grimm, *Teutonic Mythology*, Eng. tr., iii, p. 1202) was known to antiquity. According to Josephus (*Bell. Jud.*, vii, 6, 3), at Baaras near Machaerus on the East of the Dead Sea there grew a root of the same name (according to Cedrenus' *Compendium*, p. 305 D. in Lobeck, *Aglaophamus*, 904 u, where it is called Battaritis, near Caesarea), from which at evening a light shines forth, making it impossible to approach it, since any one who does so immediately dies. Accordingly, a trench is dug round it and a dog tied to the root; the dog pulls it out and falls down dead. The root is used to heal those possessed with demons. This root was later identified with the mandragora, which again was brought into connexion with the *alrune* on German soil (cp. Grimm as above; Rohde, *Griechische Roman*, 230, 1; and appendix XIII). Both ancient and German popular belief prescribed the same method of procuring the *springwurzel* (explosive root) : the nest of a woodpecker is closed with a wooden bung; the bird, who knows where to find it, fetches it and holds it before the bung, which at once *springs out* (Grimm, *Teut. Myth.*, Eng. tr., iii, p. 973; Keller, *Thiere des hl. Allerthums*, p. 285). It was anciently believed that any one who had eaten a dog's tongue was bound to speak the truth (Petronius, 43 : *verum dicam qui linguam caninam comedi*). The language of birds and beasts generally, which in the German story was acquired by eating a white snake or a dragon's or bird's heart (Grimm, 17; cp. i, p. 357), had been learnt by Apollonius of Tyana [from the Arabs according to Philostratus, i, 20, who themselves learn it *συντρίβου τῶν δρακόντων οἱ μὲν καρδίαν φασίν, οἱ δὲ ἥπαρ*. R. K.] According to Porphyry, *De Abstinence*, iii, 3 (p. 220 ed. de Rhoer),

Apollonius heard one swallow tell another to hurry to the gate of the city, for an ass laden with corn had fallen down there, and the corn was scattered all over the ground. Birds know where to find hidden treasures (Aristophanes, *Aves*, 601). They also know the future, and speak about it to one another (cp. the story of *Faithful John*, Grimm, 6). 'Ἐταῖρος δὲ ἡμῶν ἐξηγείτο τις, continues Porphyry, αἰκέτου εὐτυχῆσαι παιδός, ὅς πάντα ξυνῇ (read ξυνίει) τὰ φθέγματα τῶν ὀρνέων· καὶ ἦν πάντα μαντικά καὶ τοῦ μετ' ὀλίγον μέλλοντος ἀγγελτικά· ἀφαίρεθῆναι δὲ τὴν σύνεσιν, τῆς μητρὸς εὐλαβηθείσης μὴ δῶρον αὐτὸν βασιλεῖ πέμψειεν, καὶ καθέδοντος ἐς τὰ ὦτα ἐνοουρησάσης. It was also popularly believed in Greece that knowledge of the language of animals and prophetic inspiration could be acquired by allowing snakes to lick out the ear, but lost by spitting into the mouth, as in the tales of Melampus, Glaucus and Cassandra.¹

Thus we everywhere come upon traces of a widespread agreement between ancient and German popular belief; but in particular the popular mythology of antiquity exhibits the most surprising similarity with the popular traditions of the north-European peasants, as is clearly shown by the valuable results of the exhaustive investigations of Mannhardt (*Wald- und Feldkulte*, 1877). This similarity extends to popular traditions, tales, and usages; the individual traditions deal with the same subjects as ours, and are identical with them in range and matter. There we find repeated the popular traditions of the death of the wood-spirit (= death of the great Pan), of the fettering of intoxicated wood-spirits, of the self-chastisement of the man who damages a tree, of the metamorphoses and disappearance of the fairies (= the story of Thetis), of the change of the sun god's beloved into a sun-flower as she waited on the road, of the change of the woman riding on the whirlwind (Harpy) into a horse. Also our stories of the change of treasures into coal, of the dragon watching over a hoard of gold,² of the dwarfs or goblins who become visible as soon as their hat or cap is knocked off, must have been well known.³ The story of the Teumessian fox was, in its unmutated form, a variant of Grimm, *Kinder- und Hausmärchen*, 60.⁴ There also we find stories like that of the dragon-slayer (Peleus); lastly, the may-pole, harvest-may, harvest home, harvest festival, harvest-race, the leaf-man (Jack-in-the-Green), the summer-solstice bonfire (Palilia, Hirpi Sorani). Further, we find the same mythical personifications, directly created by a primitive religious feeling from the material supplied by the contemplation of nature. We find, in entirely analogous forms, the wild huntsman (Zetes, the Boreades), the flying woman (Harpy), the moss-folk and wood-maidens (Dryades), the wild men (Cyclopes, Centaurs, Pans, Satyrs), the water-witch (Thetis), the bull-formed river-spirit' (Mannhardt, ii, 349).

¹ Cp. Preller, *Griech. Myth.*, ii³, 472-480, esp. 473, 1. Pliny, *Nat. Hist.*, x, 137: vel quae Democritus tradit, nominando aves quarum confuso sanguine serpens gignatur quem quisquis ediderit intellecturus sit avium colloquia.

³ Petronius, 38; Preller, *Röm. Myth.*, ii³, 105, 1.

⁴ Mannhardt, ii, 58.

The varied extent of this agreement in ancient and modern popular traditions is further shown by the belief (common to antiquity and modern times) in the cap of invisibility ('Αἶδος κυρτή, Preller, *Gr. Myth.*, i², 655, *Tarnkappe*), the divining or wishing rod (Cicero, *De off.*, i, 44, 158; cp. Preller, i², 344; Grimm, *Teut. Myth.*, Eng. tr., iii, p. 974), ghosts (e.g. Pliny, *Epp.*, vii, 27; Plutarch, *Lucullus* i; Lucian, *Philopseudes*) and their disappearance at cockcrow (B Schmidt, *Griech. Märchen*, 244; Prudentius, *Cathemerina*, i, 37; Lucian, *Philops.*, 14¹), witches (Grimm, *Teut. Myth.*, Eng. tr., iii, 1036), and were-wolves (*ib.*, 1093). That mice (whose place in modern popular belief has been taken by rats which were unknown to antiquity; cp. Hehn, *Kulturpflanzen und Haustiere*⁴, p. 380) desert houses before they fall (Cicero, *Ad Att.*, ix, 14; Aelian, *Hist. An.*, vi, 41); that if a man reads inscriptions on tombstones, he loses his memory (Cic., *De sen.*, 7, 21; Grimm, *Teut. Myth.*, iii, p. 1811); that he who has a ringing in the ears is being talked about elsewhere (Grimm, *ib.*, p. 1117; Pliny, *Nat. Hist.*, xxviii, 24; Statius, *Silvae*, iv, 4, 26; *Anthol. Lat.*, ed. Riese, 452); that when thinking of any one to whom we wish well, it is effective to pinch the thumb (Plin., *H.N.*, xxviii, 24, 25)—all this was believed in antiquity, as in many cases to-day. The modern belief in sympathetic cures has many points of agreement with the old; in the former executed criminals (and murdered men) have taken the place of the gladiators, whose blood was supposed to cure epilepsy (Pliny, *Nat. Hist.*, xvii, 28, 4; Wuttke, *Der deutsche Volksaberglaube der Gegenwart*², 120). According to W. Kaden (*Skizzen und Kulturbilder aus Italien*, 1882), a notched (in Cato, *Res rust.*, 160, split) reed is considered a cure for warts in Calabria, and urine for inflammation of the eyes, as in Cato, 157, 10, for dim eyesight. One of the recognized remedies against enchantment (on which and on the evil eye, see Jahn, *Über den Aberglauben des bösen Blicks bei den Allen in Ber. d. sächs. Ges.*, 1855, esp. p. 82; Marquardt, *Prl.*, i², 84; Wuttke, pp. 153, 155) now, as in antiquity, was spitting (Wuttke, 171). Further, there appears to be a general agreement between the superstitions of the nursery in ancient and modern times. According to Mannhardt's very probable assumption (*WFK*, ii, 125, 1), it was the function of the dea Candelifera (Preller, *RM*, ii², 208) to see that a light was left burning by the cradle of new-born children (a practice still common in the houses of German peasants), to prevent the subterranean powers, dwarfs and the like, from changing it; in Apuleius (*Met.*, v, 28), where Venus calls Psyche 'meae formae succubam', *succuba* appears to be a changeling (Petronius, 63; Grimm, *Teut. Myth.*, Eng. tr., ii, 468; iii, 1421). There seems no doubt that a large number of the conceptions and forms of popular belief found a place in ancient as well as modern popular tales. The story of the two witches in Apuleius (*Metam.*, i), who cut out the heart of the faithless lover of one of them and stuff it in a sponge in its place, is exactly like some Servian witch-

¹ According to Lucian, *Philops.*, 15, the clang of brass or iron scares ghosts. With this is perhaps connected the modern belief that they cannot endure the striking of sparks with flint and steel, the beating of pots and pans, the clank of the scythe, and so forth (Wuttke, *Der deutsche Volksaberglaube der Gegenwart*, ed. 2, p. 453).

stories (Grimm, *Teut. Myth.*, Eng. tr., iii, p. 1080); the words of Panthia: heus tu spongia cave in mari nata per fluvium transeas, sound as if they were borrowed word for word from a popular tale. (The belief in Thessalian sorceresses still lives in Greece: Wachsmuth, *Das alte Griechenland im neuen*, p. 34). But unfortunately Petronius and Apuleius are writers, whose turn of mind in many other respects differs from the classical, and they are the only ones who have not disdained to borrow directly from popular superstition—Petronius only so far as he found it necessary to mark the inferior culture of his middle-class characters, Apuleius to a far greater extent and with evident interest in the subject.

The fables of Æsop have also preserved some traces of the popular tale (see E. Rohde, *Ein griechisches Märchen in Rhein. Mus.* xliii, 1888, pp. 303–305). 'A weasel (γαλή) falls in love with a handsome young man; Aphrodite answers its prayer and changes it into a beautiful maiden, whom the youth woos and weds. A mouse sent by Aphrodite runs across the bridal chamber, the weasel in maiden form springs up and tries to catch the mouse to eat it, and is forced to resume its animal shape' (Æsop, 88, ed. Halm). This tale, which was already well known in the fifth and fourth centuries B.C., as is shown by the proverb in the comic poet Strattis: *ὁ πρέπει γαλή προκοτίζιν* (Zenob., ii, 93), reproduces a type found in the *Mahabharata* and an American Indian tale: 'The love of a demonic being in animal form, its change into human form in order to associate with the loved one, its resumption of the animal form, as soon as an accident or malicious contrivance brings an object near, which rouses to activity the natural impulses of its animal nature.' Cf. Zielinski, *Das Wiesel als Braut in Rhein. Mus.*, xliv, 1889, p. 156 f. (νόμος, like Mod. Gr. *νομήτρα*, is said to have been also a name for the weasel); and especially August Marx, *Griechische Märchen von dankbaren Thieren und Verwandtes*, 1889. The following fable, mentioned by Grimm (ii, p. 527; Plutarch, *Conviv. septem. sap.*, 14, the source of *Fab. Æsop.*, 389, ed. Hahn), is also a children's tale: The moon asked his mother to make him a little coat, which would fit him. The mother answered, 'How can I make one to fit you, since you are at one time full moon, at another half-moon, at another new moon?' The story, in which part of the lifetime of certain animals (the horse, the ox, and the dog) is allotted to man (Grimm, 176), by which his character at different periods of his life is explained, is found with certain variations in Babrius (74; cp. Grimm, ii, p. 456; W. Grimm, *Über eine Thierfabel des Babrius in Haupt's Zeitschrift für deutsches Alterthum*, xii, 228–231 = *Kleinere Schriften von W. Grimm*, iv, 1887, pp. 395–399; Reinhold Köhler, *Zu dem Märchen von der Lebenszeit in H. R. Gosche's Jahrbuch für Literaturgeschichte*, i, 1865, pp. 196–98). The story of the wren also appears to be very old (Grimm, ii, p. 455; cp. Knaack, *Ein griechisches Thiermärchen in Berliner Philol. Wochenschrift*, 1888, p. 507). The fable in Phædrus (*App. fab. novae*, 3, ed. L. Müller) is akin to the German tale of the rich man and the poor man (Grimm, 87; cp. ii, p. 373). Mercury is inhospitably received by two women; he grants to each the fulfilment of a wish. The one wishes that her child may soon have a beard, and the infant grows one at once;

the other, a common prostitute, wishes that everything she touches may be obliged to follow her: she blows her nose, and draws it down to the ground. 'Generally speaking, the tales of the entertainment of wandering gods form part of the oldest storehouse of common Indo-Germanic myths' (Rohde, *Der griechische Roman*, 508 note).

But the further investigation of the connexion between folktales and the sagas of gods and heroes is also of the greatest importance for the knowledge of the ancient folktale. Elements of the folktale in the myth, and mythical elements in the folktale, have already been pointed out in many instances, especially by the brothers Grimm in the notes to their tales (see also Welcker, *Griechische Götterlehre*, i, 107; and Hartung, *Religion und Mythologie der Griechen*, i, 144). I may mention the similarity of the Sisyphus legend (Preller, *GrM*, ii³, 76) and the story of Spielhansl or *Gambling Hansel* (Grimm, 82; cp. i, p. 442); in both death and the gods of the underworld (the devil) are overcome by craft. Emmanuel Cosquin (in his excellent work, *Contes populaires de la Lorraine, comparés avec les contes des autres provinces de France et des pays étrangers et précédé d'un essai sur l'origine et la propagation des contes populaires européens*, 1886, ii, p. 28, in the parallels to 37, *Chatte blanche*, p. 12) has pointed out the relationship of the myth of Jason and Medea (qui du reste a bien l'air d'un conte populaire) with a class of tales in which a young man is ordered by an evil being to perform apparently impossible tasks, which he does by the aid of a maiden (usually the daughter of the evil being); they flee together, and escape pursuit by magic. When the young man reaches his home he forgets the maiden, who nevertheless succeeds in making him remember her. As this last feature is altered beyond recognition in the Jason myth, we may recognize in Aeson's dismemberment and return to life the displacement of a motive which recurs in a number of similar stories: in these it is always the maiden who allows herself to be cut to pieces, in order to be able to assist her lover (p. 25). Mannhardt has shown that the myth of Peleus and Thetis is identical with an elf-saga and a Siegfried saga, the latter of which is the foundation of several tales, especially that of the two brothers, 'an incontestable argument against Benfey's assertion, that the materials of folktales are *entirely* of Buddhist origin, and reached Europe at a comparatively late period' (*Wald- und Feldkulte*, ii, 78; cp. 53, 57, 68, 151 note; also B. Schmidt, *Griechische Märchen*, p. 15). 'The identity of the stories and legends referred to with the adventure of Peleus is unmistakably shown by the agreement of several features combined in the same order (contest with a monster on a mountain, the acquisition of a victory-giving magic sword at the moment of the fight, cutting out of the tongues, their production in proof of victory, sleeping on the scene of the contest); the relationship of the traditions is most clearly shown in the Tristan saga' (p. 51). All the chief features of the old *Peleis* are repeated in modern Greek and north European traditions: the fairy (Thetis) changing herself into animal and other forms, to escape her hero suitor: her refusal to speak while living with him; her sudden

disappearance when reviled by him (or for some other reason). Rohde has made other contributions to our knowledge of the mutual relations of myth and popular tale (*Der griechische Roman*, p. 125 note: the story of the metamorphosis of Glaucus by a magic plant, the virtues of which became known to him through the revival of dead fishes that were laid upon it; cp. Grimm, 16 and i, p. 356 [Cosquin, ii, 80, 1]; the solitary life of maidens like Hero and Danaë in a tower,¹ p. 134, 1; the father's love for his own daughter, p. 420, 1, are all favourite motives of both saga and fairy tale; cp. also Rohde, *Die sardinischen Sagen von der Neunschläfern*, in *N. Rhein. Mus.*, xxxv, [1880], p. 157); he has also pointed out the insertion of fairy tale elements in the romance of Achilles Tatius (*Der gr. Rom.*, 484, 1). Hahn's important work on Greek and Albanian tales is the first step towards a comprehensive comparison of kindred myths and folktales; the relationship of the story of Amor and Psyche with a myth (Zeus and Semele) has already, to my mind, been convincingly shown by Felix Liebrecht. B. Schmidt in his *Griechische Märchen, Sagen, und Volkslieder* (1877) has shown in particular the frequent admission of elements of the ancient myth into the modern popular tale by numerous and interesting examples; cp. especially pp. 224, 226 f., 229, 231, 236 f., 238, 248. Among the fairy tales recorded, the majority of which have their home in the island of Zacynthus, no. 23, 'the seven-headed snake, in its relation to the Theseus legend affords an especially instructive insight into the manner in which different ancient elements are amalgamated in the modern Greek popular tale, and shows how curiously they are sometimes remodelled and how diversified is the combination' (p. 238). R. Köhler (*Über die europäischen Volksmärchen in the Weimarer Beiträge zur Literatur und Kunst*, 1865, p. 187) has indicated the following tales recorded in antiquity, as recurring amongst other peoples: the stories of Polyphemus (Servian, Hungarian, Esthonian, Finnish, Gaelic), King Midas (Servian, Breton, Irish, Mongolian), the Egyptian Rhampsinitus (Greek [Trophonius], German, Danish, Gaelic), and another Egyptian tale in Mannhardt (*Zeitschrift für deutsche Mythologie und Sittenkunde*, iv, 232).

The story admitted by Apuleius into his romance contains so many foreign ingredients and is so disfigured by unsuitable embellishments, that its real nature has frequently been misunderstood, although the brothers Grimm long ago explained it correctly. These misunderstandings are chiefly due to the names Amor and Psyche, which have led most of the commentators from Fulgentius Planciades downwards to consider the allegory of the relation of the human soul to the Platonic Eros, arbitrarily extended and fantastically embellished by the writer, as the real foundation of the Apuleian story. The idea of Eros and Psyche being related as two lovers is first found clearly expressed in the poems of Meleager (last century B.C.), who assumes it as already known. It is the motive of numerous works of art, perhaps produced or prompted by the younger

* In the parallels to *Le fils du pêcheur*, ii, p. 66 (cp. especially p. 80) Cosquin shows the close relationship of the Perseus myth with a certain class of popular tales. [Cf. E. S. Hartland, *The Legend of Perseus*, 1894-5, Tr.]

Attic school, the subject of which is the separation and reunion, the joys and sorrows of the pair of lovers, but especially the torments which they cause each other. As Jahn remarks in his exhaustive discussion, it was not a myth, the unconscious product of the legend-creating power of the people, but an allegory, originating in poetic reflection; hence it never became the property of the people, but remained unknown outside educated circles (*Über einige auf Eros und Psyche bezügliche Kunstwerke in Ber. d. sächs. Ges.*, 1851, p. 156).

But an impartial consideration of the story in Apuleius will soon convince us that it bears only slight resemblance to the allegory. Two lovers, made unhappy by a long separation for which one of them is responsible, are finally joined together in an everlasting and blissful reunion; and this is no doubt the reason why Apuleius gave the names of Amor and Psyche to the hero and heroine of his narrative. But here the resemblance ceases. Psyche brings sorrow upon Amor, but unintentionally; if she suffers torments for his sake, it is without his knowledge. If, notwithstanding, we attempt to interpret the entire narrative according to the allegory upon which it is supposed to be based, we shall be obliged to have recourse to the most violent explanations, and even then there will remain many characters and incidents, which it is utterly impossible to explain allegorically. For instance, according to Hildebrand (Apuleius, i, *Prolog* p. xxxii), the sisters of Psyche are fleshly desires; hence they are exceedingly beautiful and attractive, are sought in marriage by numerous suitors and finally happily wedded, but to men worthy of their wantonness (?), and so forth. According to Creuzer, who follows Fulgentius (cp. Apuleius, *Psyche*, ed. Jahn, p. 64), the three daughters are the flesh, free will, and the spirit; according to Carus, unconsciousness, world-consciousness, and self-consciousness! Others even take them to be the three kingdoms of nature (Stadelmann, *Amor und Psyche in Neue Jahrbücher für Philologie*, xc, 202). Similarly, Krahner's view (*Eros und Psyche*, second ed., 1861) must be considered fundamentally erroneous. Instead of a restoration of the ancient myth, which is perhaps no longer possible, he attempts a remodelling, the object of which was 'to clothe certain truths of salvation in the garb of anticipation'. The author is convinced 'that the ancient myth certainly had for its foundation certain profound ideas, and must at one time have existed in a much purer and more consistent form, but that the age of Apuleius was neither able to understand nor to hand it down in this nobler form'.

I am unacquainted with the majority of the older discussions of the subject, referred to in the Stuttgart *Realencyclopädie*, vi, 1, 176 note and i², 880. The most recent contribution to the already extensive literature known to me is a treatise by J. A. Hartung, *Auslegung des Märchens von der Seele und des Märchens von der schönen Lilie* ('Exposition of the tale of the soul and of the tale of the beautiful lily'), which also contains a brief natural history of the popular tale in general (*Programm des Gymnasiums zu Erfurt*, Easter, 1866). Hartung agrees with me in regarding the story as a popular tale, but further rightly lays stress on the fact that Apuleius also had in view 'a glorification of the morally purifying influ-

ence of the mysteries'. 'The wanderings and dangerous tasks which Psyche has to go through, resemble the preliminary trials of those who offer themselves for initiation; the name Psyche (soul) itself proves that a morally religious feeling is at the bottom of the story' (or rather, is read into it by Apuleius). Certainly, Hartung goes too far in his ingenious attempt to interpret every important incident in the narrative symbolically. In particular, it seems to me that the frequent use of the number three, a standing feature of popular tales, cannot possibly be regarded as an allusion to the mysteries. Friedrich Pressel's interpretation, in the *Erläuterungen* to his free translation of the story (*Psyche. Ein allegorisches Märchen nach dem Lateinischen des Apuleius*, Ulm, 1864, kindly brought to my notice by Reinhold Köhler), is much nearer the truth. He certainly starts deliberately from the wrong principle, 'that the folktale (*märchen*) as a distinct *genre* of art was always unknown to classical antiquity'. For he assumes the separation of the natural and divine in the consciousness, and, as the result, the endeavour to escape from the barren, miserable world by means of the power of the imagination. The Greeks, and still more the Romans, were unacquainted with 'a poetry of yearning'. Only when 'the ancient consciousness went astray in itself and the belief in an invisible world became a necessity, did the new consciousness of the age (which found its expression in Neoplatonism) produce a new class of poetry, the artificial and allegorical story, not the naïve popular tale'. Yet Pressel, altogether contrary to his deduction, goes on: 'Or can the Apuleian fiction be a revision of an originally naïve tale? I confess that this is my opinion, because I think that, if a distinction be made between the invention and the execution, I can perceive a very great difference. The invention, it seems to me, is too good; the man, in whose head it originated, could not have been guilty of the errors of taste, which have crept in here and there in the narrative of Apuleius'.

Leaving entirely out of consideration the moral and religious intentions of Apuleius and the mythological and allegorical elements of his narrative, I propose to discuss only its essential features. These show that it belongs to a large class of tales, whose character has been described by the brothers Grimm (*Über das Wesen der Märchen, Kinder- und Hausmärchen*, Berlin, 1819, p. xlv [= *Kleinere Schriften von Wilhelm Grimm*, ed. G. Hinrichs, Berlin, bd. i, 1881, p. 351. R. K.]) as follows: 'While its idea always remains the same, a folktale is told four or five times, in each case under different relations and circumstances, so that in form it can be regarded as another story. The good and innocent daughter, generally the youngest, is promised to a monster by her father under stress of necessity, or she voluntarily gives herself up to it. Patiently she endures her lot, frequently troubled by human weaknesses, for which she has to atone by severe penalties; at last, however, she falls in love with the monster, who at once throws off his ugly form (hedgehog, lion, frog) and appears as a faultlessly beautiful youth. This story, which is common amongst the Indians and is obviously connected with the Roman and Old French tales of Amor and Psyche and Parthenopex and Meliure, signifies *Enthralment by the*

Earthly and Redemption by Love. Step by step the pure works its way out; if the development is interrupted, worldly misery and sorrow rush in, and the earthly can only be thrown off by the contact of souls, by their recognition in love'. Of the folktale formulae laid down by Hahn (as above, p. 45), it is certainly to the 'Freya formula' that the tale of Amor and Psyche essentially belongs; for the fundamental features of this formula are: (1) The wife or betrothed is missing and the husband abandons her on that account. (2) She wanders about in search of him. (3) Recovery and reconciliation. But also, apart from the fact that in this case the wandering is not the most important element, features and motives are frequently adopted from other forms. Indeed, speaking generally, the popular tale is indebted for the apparent abundance of its creations to a kaleidoscopic admixture of a number of fundamental forms by no means large (Benfey, *Pantischalantra*, praef. xxvi; Hahn, p. 43).

If the course of the story in Apuleius in the main exhibits the characteristics indicated above, and its outlines recur in the tales of the most different peoples, it is evident that it was not invented by Apuleius, but that in its original form it is one of the tales common to numerous Aryan and non-Aryan peoples, which Apuleius became acquainted with as a Roman (or perhaps Greek)¹ popular tale, and adapted and altered in his own way. Although it is certainly disfigured by his additions, omissions, and alterations, with the aid of similar German tales alone we can still effect a probable restoration of the original.²

At the beginning, not only the matter, but also the manner is partly preserved. 'In a certain city there once lived a king and queen' (cp. Perseus, ii, 37; p. 90 above). They had three beautiful daughters, but the youngest was by far the most beautiful; her beauty was so great and magnificent, that it could not be expressed in words.³ But while the two eldest were married to kings, the youngest had to be given over into the power of a monster. The motive of this turn in the story appears to me to be correctly stated by Bolle (*Apuleius als Lectüre für die unterste Stufe eines Gymnasiums oder einer Realschule. Progr. des Gymnasiums und der Realschule zu Celle*, Easter, 1877, p. 13).⁴ A king's son, whose mother (like the queen in *Little Snow-white*) is jealous of her reputation for being the most beautiful woman in the world, and is also an enchantress, falls in love with the youngest of the three daughters

¹ Fulgentius Planciades (Jahn, *Apuleii Psyche et Cupido*, p. 63, 27) mentions a Greek version: Aristophontes Athenaeus in libris qui Dysarestia nuncupantur, hanc fabulam ingenti verborum circuitu discere cupientibus prodidit. M. Zink (*Der Mythologe Fulgentius: ein Beitrag zur röm. Litt.-Gesch. und zur Grammatik des afrikanischen Lateins*, ii, Würzburg, 1867, p. 89) does not regard the quotation as an invention (since the contents of the story are admirably suited to a book *On Discontent*; Rohde, p. 345, 4, without justification conjectures *Δυσχερεια* for the title), but thinks that Fulgentius had seen the name of the author in an oblique case, and that it was really Aristophon. Aristophontes, however, occurs as a personal name in Plautus, *Captivi* (Teuffel, *Studien*, 451). B. Schmidt (*Griech. Märchen*, p. 14 note) states that he was credibly assured in the island of Zacynthus (Zante) that a very similar tale was current amongst the people.

² My attempt at restoration was first published in the *Morgenblatt* (1858, no. 37 f.).

³ 'A young woman as beautiful as a picture; nay, so beautiful, that it cannot be expressed in words' (Grimm, 166, *Strong Hans*).

⁴ His idea of adapting Apuleius for school reading also seems worthy of attention.

of the king. His mother, seeing that her beauty is surpassed by that of the princess, pursues her with hatred and bewitches her son to punish him for loving her. After the lovers had received the names of Amor and Psyche, Venus was bound to be made the mother of the king's son. In a modern Greek variant of the tale of *Snow-white* the goddess of love (the mother of Erotas) also takes the place of the beautiful wicked queen.¹ B. Schmidt (*Griechische Märchen*, 17, *Maroula und die Mutter des Erotas*): 'There was once a king's daughter, who was by far the most beautiful of all the women in the world. When the mother of Erotas heard of it, unable to endure that any woman should be more beautiful than herself, she conceived the idea of killing the maiden'. B. Schmidt observes (p. 233): 'Erotas' mother's hatred of the maiden who surpasses her in beauty; the sufferings which she inflicts upon her; and her final pacification certainly remind us of the story of Amor and Psyche': and I believe that, in view of the existing analogies, we are justified in assuming that Apuleius found the motive of jealousy in the popular tale which he made use of.

In this tale we may suppose that the enchanted prince (who had been changed into a monster) met the father of the beautiful princess, perhaps out hunting, and, by threatening to kill him, made him promise to give her up. Apuleius, however, represents her parents as being induced to do so by an oracle of Apollo. But from the point at which the beautiful king's daughter, dressed in grave-clothes, is escorted by her weeping relatives in melancholy procession to the top of a steep rock, where she is abandoned, he has again followed the tale. A passage in Grimm's *Two Brothers* (60) is exactly parallel: 'the youngest, accompanied by his animals, entered a city, which was all covered with crape. . . . The huntsman . . . asked the host why the city wore the garb of mourning. Because, replied the host, our king's only daughter is to die to-morrow. . . . Outside the city is a high mountain, whereon dwells a dragon, to whom a pure maiden must be offered every year; otherwise, he ravages the country. Now there is none left but the king's daughter, and she must be given up to him to-morrow'. The Greek *Twin Brothers* (Hahn, 22, i, 170) corresponds to the German story, in which a monster guards all the springs and prevents the inhabitants from drawing water, except once a year, when a maiden is offered to him; the king's daughter is a victim. Certainly, the exposure of the king's daughter in the ancient tale cannot have been introduced in this manner, since the story of the two brothers has no further similarity with it; and it is just as possible that the escort of the maiden, apparently destined for sacrifice, to the top of a mountain, occurred in several tales, as that Apuleius borrowed individual features from other tales. In Grimm (88, *The Singing, Soaring Lark*) a father of three daughters falls into the power of a lion and can only save himself by promising him the first thing which should meet him on his return home; and this proves to be his youngest daughter. This story, which occurs in the most varied forms amongst different

¹ In a kindred Sicilian tale the son of the mother (in this case an ogress) who hates her daughter-in-law is called *lu Re d'Amuri*, the 'King of love' (Cosquin, *Contes populaires de la Lorraine*, ii, 237).

peoples (Grimm, ii, p. 378), is the one that corresponds most closely to that of Apuleius, at least in its main theme: 'the heart is put to the proof and everything earthly and evil falls away at the recognition of pure love' (*ib.*, 381).

The monster, to whom the maiden is surrendered, was also in the ancient tale an enchanted man. I had long thought it probable that he was changed into a dragon, before I became acquainted with the following kindred tales, which completely confirm my conjecture. Certainly, when the oracle calls the destined husband of the king's daughter 'a cruel, snake-like monster' (*saevum atque ferum vipereumque malum*, *Metam.*, iv, 33), we have perhaps only a reminiscence of Sappho's description of love as a 'bitter-sweet, unruly snake' (γλυκύπικρον ἀμάχανον δρπετον), although Fulgentius (ed. Jahn, p. 62) says: *jubetur puella—pennato serpenti sponsa destinari*. But the sisters of Psyche also assert that they have seen him in this form, and that this is the reason why he never shows himself to her. They describe him as a huge snake, gliding along in many coils, with enormous jaws, dropping poison, and remind her of the oracle which foretold her marriage to a horrible monster (*trucis bestiae*). Many peasants and huntsmen are said to have seen the dragon, on his return from feeding in the evening, swimming across the waters of a neighbouring river (*Met.*, v, 17, cp. 20: *postquam sulcatus intrahens gressus cubile solitum conscenderit*). Only at night the spell was evidently broken, and the enchanted one resumed his proper form, that of a beautiful youth, in which he visited his wife. In numerous kindred stories the enchanted are permitted to resume their true form during certain hours, days, weeks, or months. Probably the tale used by Apuleius also contained the feature, that when the enchanted one returned to human form no ray of light might fall upon him, which would only increase the strength of the charm and make it last longer. This is the case in the story already compared (Grimm, 88), in which the lion, to whom the youngest daughter must be surrendered, is a king's son; during the night he and his people who were enchanted with him resume their natural form. But when the ray from a burning candle falls upon him, he is changed into a dove, and is obliged to fly with the doves seven years long; this happens to him once when a ray no broader than a hair falls upon him through a crack in the door; immediately he is transformed into a white dove and flies away. At least we are here reminded of Amor, who, when the light of Psyche's lamp falls upon him, awakes from sleep and without uttering a word flies away and then addresses her from the top of a tall cypress (*Met.*, v, 23). So also Grimm (ii, p. 381): 'Our story also agrees with it in this, that light brings misfortune and that night, which loosens all bonds, always dissolves the spell'. Also, in the Greek tale of *Golden Wand*, to be mentioned below (Hahn, 7) the king's son is changed into a dove and in consequence of the discovery of the secret is wounded by the sisters.

So then the king's daughter is left alone on the top of a rock to be married to such a husband. A gentle breath of wind wafts the timid maiden down into a flowery valley where, refreshed, she sees a grove with a clear spring of water and a palace

adorned with fairylike splendour. Even in the description we seem to hear the note of the folktale: the walls of the rooms are so resplendent with gold, that even night seems like daylight (v, 1). Similarly, in a modern Greek story, in the palace of the dragon, to whom the king's youngest daughter is surrendered, 'the sleeping apartment is so splendid, that it gives light by night' (B. Schmidt, *Gr. Märchen*, 94). No man is to be seen; she only hears the voices of the invisible servants, who carry out all her commands, and fulfil all her wishes. This also is a common feature of the folktale (Rohde, *Der gr. Roman*, 195 note): so in the tale of *The Young Giant* (Grimm, 90): 'after he had sat there a while, all at once the door opened, and a large table came in, and on the table wine and roast meats and much dainty food, all of which had placed itself there, for there was no one to set it on table. Then the chairs moved up of themselves, but there came no people, until suddenly he saw fingers, which handled the knives and forks and put food upon the plates; but this was all that he could see'. Then the invisible husband warns the king's daughter not to admit her two sisters, who are trying to find her; but as she cannot resist the desire to see them, he warns her earnestly and repeatedly at least not to listen to their insinuations nor to endeavour to gain sight of his form and features; if she does this he must leave her, and the child, which she carries in her womb, will be mortal; but if she represses her curiosity, it will be divine. However, the insinuations of the sisters and curiosity gain the upper hand; she inquires about what is forbidden, and what was foretold comes to pass. The curiosity which leads to doing something forbidden, with the result that previous good fortune ceases and misfortune breaks in, is a common feature of folktales, e.g. the forbidden opening of a shut door, in Grimm (3, *Our Lady's Child*; 46, *Fitcher's Bird*; cp. ii, p. 341, 394). Similarly, the opening of the chest containing Erichthonius brings misfortune to the daughters of Cecrops. In a Hanoverian version (Grimm, 87) the king's son is changed into a raven; in the king's daughter's bedroom is a mirror, in which she is able to see everything that goes on in the castle where she had lived; but she is forbidden to allow her maid to look in it. So the king's daughter always carries the key about with her; but on one occasion she leaves it in the door of the room, the maid goes in and looks in the mirror. The raven tears her in pieces and says to the king's daughter: 'Now you must go forth and serve seven years and do the work of seven maids' (Grimm, ii, p. 379). There are also many points of resemblance between the Roman tale and that of *Cinderella* (Grimm, 21), in which the two elder and less beautiful sisters treat the youngest with malicious cunning, but in the end are duly punished. The following occurs in a Hessian version: After *Cinderella* has lived happily with her husband for a year, he sets out on a journey, leaving behind all the keys, with strict injunctions that she is not to open a certain chamber. When he has gone, she is persuaded by her wicked sister to unlock the forbidden chamber, in which they find a well of blood. When lying ill after the birth of a son she is thrown into this well by her sister, who takes her place in bed; but the guards hear her cries, save the real queen, and the false one is punished

(Grimm, ii, p. 364). The frequent mention of the expected child in Apuleius, and of the influence which the constancy of the mother is supposed to exercise upon its nature, permits us to conjecture that in the ancient tale the spell also had power over the child, if the mother did not stand firm, and that it was destined to come into the world in the same form as its enchanted father. The latter impresses upon her that she may preserve him, herself and her little one from the misfortune that threatens them, if she remains firm (v, 13).

The king's daughter, in despair at the result of her curiosity, tries to drown herself, but in vain; the river bears her safely to the bank. She then wanders about in search of her lost husband, and comes to a certain country, the king of which is the husband of one of her sisters. The latter allows herself to be deceived by the story that the husband desires her for his wife instead of the one who is repudiated (Psyche); she hastens to the rock, whence the west wind formerly wafted Psyche, but hurls herself headlong down to death. In the same manner the other sister is deceived by the youngest and punished for her malice and cunning.

In the tale adapted by Apuleius the repentant wanderer now evidently reaches the place where she atones for her error by hard service, severe tasks and renewed stedfastness, and redeems her beloved. In the Hanoverian story the king's daughter, who has brought about the separation from her husband by her carelessness, comes to a wicked woman, whom she has to serve for seven years and to do the work of seven maids (Grimm, ii, p. 380). In some of the tales that follow this hostile being is the mother of the husband. This was undoubtedly the case in the tale used by Apuleius; Venus takes the place of the enchantress, who has transformed her son and put her hated daughter-in-law to severe tests, which finally bring about deliverance. But instead of the king's daughter seeking out her mother-in-law, with whom she at first expects to find her husband (cp. *Mét.*, vi, 5), Apuleius makes Venus seek her; she at first hides herself from her, fearing discovery, but finally voluntarily gives herself up. The sole object of all this is to make room for ornamental episodes, in harmony with the taste of the writer and his contemporaries, who probably regarded them as great improvements on the too simple narrative, while to us they rather seem to disfigure it. When Psyche attempts suicide, Apuleius has already inserted a totally unnecessary episode about Pan (v, 24); then follows (v, 28-vi, 10) the account how Venus learns of her son's marriage and violently reproaches him; how Ceres and Juno in vain attempt to appease her; how Psyche in vain implores them to protect and grant her a refuge; how Venus searches for her everywhere, whereupon Psyche gives herself up and is handed over to the servants of Venus, Anxiety and Sorrow, to be tortured and scourged. This mythological padding is in part affected and frigid allegory, in part downright burlesque. Venus speaks to Amor as an enraged mother in comedy addresses a dissolute son, Ceres and Juno like two old gossips; the marriage with Psyche is said to be invalid, because it took place at a country house without witnesses; Mercury as public crier of the gods, offers a reward of seven kisses

from Venus to the finder of Psyche. In one passage, certainly, we are reminded of the popular tale, where the wandering princess in the temple of Ceres arranges in order the sheaves, garlands, and scythes that were lying about in confusion. Similarly, in German tales good maidens and women, during their wanderings often in desolate solitudes, often, without being called upon lend a helping hand and thereby earn the thanks of kindly spirits.

From these unedifying episodes we return again to the story, stepping out as it were from an elaborate formal garden of the rococo period into the natural free life of the forest. The princess, to atone for her error and to release her husband, has to accomplish three difficult tasks. First, she has to sort out a heap of barley, wheat, millet, poppy seeds, peas, lentils, and beans before evening; ants perform the task for her. Next, she has to fetch wool from spiteful, savage sheep with golden fleeces; in despair she is about to throw herself into the river, when a reed whispers to her to wait till the sheep rub their wool off on to the trees; then she will be able to collect it. Lastly, she has to fetch water from a spring (in Apuleius called Stygian), which flows in a fearful, inaccessible ravine and is guarded by dragons; an eagle fills her crystal vessel with the desired water.

The first task is exactly the same as that imposed upon *Cinderella* (Grimm, 21) by her stepmother, in which doves render assistance. The second task recurs in the Indian tale of the woodcutter's daughter, and frequently also in German tales. In *The White Snake* (Grimm, 17) all the suitors of the king's daughter have to perform three tasks: if they cannot, they have to die. One of these consisted in picking up ten sackfuls of millet seed scattered over the grass, between sunset and sunrise; this task is also performed by thousands of ants. These tasks are especially characteristic of the 'Bride-wager class', in which the suitors stake their heads against the bride, who can only be won by the accomplishment of difficult tasks (Hahn, p. 54; cp. ii, p. 323). Also in the Greek tale of *The King's Son and the Beardless Man* ants sort out for the king's son four horse-loads of wheat, barley, spelt, and maize, all mixed together, in half a day. I am not acquainted with an exact analogy to the second task; I will return to the third later. The princess may have earned the gratitude of the animals who assist her, as in so many tales (including the Indian), by taking pity on them or rendering them assistance (in Hahn formula 32, *The Grateful Animals*, p. 57). Apuleius may have omitted this; it suits his narrative better that all nature should assist the chosen of the god of love. Perhaps it did not occur in the tale;¹ the animals may assist the unhappy maiden out of compassion, and similarly the inanimate beings, the reed and (later) the tower, from which she intends to throw herself down. 'The sun, the moon, and the stars above all possess a spiritual nature, and when they speak to those in distress and give them presents which deliver them out of their trouble, they appear as divine beings, objects of worship (quorum opibus aperte juvantur,

¹ Cosquin, who considers (*Cont. pop. de la L.*, ii, p. 230) that in the original tale Psyche must have done the animals a good turn to account for the assistance rendered her, supposes a Buddhist version.

Caesar, *B.G.*, vi, 21), as in ancient times they actually were to the Germans. Trees and springs, whose worship was of long continuance, are also instinct with life. The spring, which leaps sparkling over the stones, warns the children not to drink of it; if they do they will be transformed' (Grimm). Thus in the Roman tale the spring guarded by the dragon cries out to the princess: 'Begone! What are you doing? Have a care! What do you want? Mind what you do! Flee, else you will die!' (vi, 14; cp. the warning of the lake in the tale of *The Seven-headed Snake*, B. Schmidt, *Gr. Märchen*, 119).

To these three tasks now succeeds a fourth. The king's daughter has to descend into the underworld and fetch up a little beauty-ointment from the goddess of the dead. This may be only a variation of the third task, borrowed by Apuleius from another version of the tale, for we naturally only expect three tasks, according to fairy tale precedent; it is also possible that the fourth task was in this case exceptionally added, as a last, most difficult task, aggravated by three temptations. The water of the Stygian spring, like the beauty-ointment (*i.e.* a means of renewing youth) reminds us of the water of life frequently mentioned in German tales (Grimm, 97). Just as the tower, from which the king's daughter in the old tale intends to throw herself down, instructs her how to obtain what she desires, so does a dwarf in the German tale: 'It springs from a well in the court of an enchanted castle, but you cannot make your way thither, unless I give you an iron rod and two small loaves of bread. With the rod strike three times on the iron gate of the castle, and it will spring open; inside lie two lions, with mouths wide open; but if you throw in a loaf to each they will be quiet; then hasten and fetch some of the water of life, before it strikes twelve, else the door will close and you will be shut in'. The prince does as he is told, but, finding in a room a beautiful newly-made bed, he cannot help lying down upon it to rest. 'So he lay down and went to sleep; when he awoke, it was striking a quarter to twelve. Then he sprang up in alarm, ran to the well, drew some water in a cup which stood hard by, and hurried off. But when he was going out of the iron gate it struck twelve, and the door shut so violently that it took off a piece of his heel'. Exactly in the same manner in the ancient tale dangers and temptations stand in the way of the performance of the undertaking, and exactly in the same manner, at the last moment, after the greatest difficulty has been surmounted, the attempt is threatened with failure. On her way to the palace of the god of the dead the king's daughter has to take in each hand a cake and barley meal, honey and wine, and in her mouth two copper coins. Three times she is tempted to let the cake fall; if she does, she will have to remain in the underworld; for then she will be unable to quiet Cerberus, when going in and coming out. She first meets a lame ass laden with wood, whose driver, also lame, begs her to lift up the logs of wood that have fallen off. While crossing the river of the dead (when Charon himself has to take the coins out of her mouth) a dead old man swims after the boat, stretching out his putrefied hands and entreating that he may be taken on board. On the opposite shore are seated some old women at the loom, who

beg her to lend them a hand. She successfully overcomes all these temptations. She is invited by the goddess of the dead to take part in a sumptuous banquet; but she is forbidden to take anything but a piece of bread, which she is obliged to eat sitting on the ground. She obtains what she desires and makes her way back without any accident; but when she reaches the upper world, although forbidden to do so, she cannot resist the temptation of opening the box, from which a narcotic vapour ascends and plunges her into a deathlike sleep. But her lover, now set free by her loyalty and stedfastness, hurries up and brings her back to life.

The conclusion, in which the marriage of Amor and Psyche is celebrated in heaven, is another example of low comedy (*Met.*, vi, 22-24). Psyche bears a daughter Voluptas. Here also it is clearly shown that Apuleius in his narrative has amalgamated two heterogeneous elements, allegory and popular tale; for where the expected child is mentioned it is repeatedly spoken of as a boy (v, 12, 13), certainly in accordance with the fairy tale—a fact evidently forgotten by Apuleius.

It can hardly be accidental that there are no ancient works of art which illustrate the narrative of Apuleius.¹ Classical art, like classical poetry, disdained to borrow its subjects from the folktale. Certainly it might have done so, after the tale had been introduced into literature by Apuleius (the date of the Aristophontes mentioned by Fulgentius Planciades appears to be unknown); but at that time the productive power of plastic art was practically extinct. If any proof were needed that the folktale is rich in motives admirably adapted for representations, Raphael would have furnished it in the frescoes of the villa Farnesina and in another cycle of extremely graceful representations; Thorvaldsen also has represented the chief scenes in a number of sketches to be seen in his museum at Copenhagen.

In my opinion, the evidence from German parallels clearly shows that a genuine folktale forms the basis of the Apuleian narrative. Experts will doubtless be able to make this evidence more complete. Of the kindred stories mentioned in Grimm (ii, p. 381) the Dutch (*Wodana*, 3) is unknown to me; the Swedish (Grimm, ii, p. 509) is only distantly related. I did not become acquainted with the others until I had completed my attempt at reconstruction. As they in all essentials confirm it (most of them especially in the feature that the lover or husband of the heroine is changed into a snake), I shall give their contents so far as it is necessary, in order to show the thorough general agreement in spite of manifold differences in points of detail. These differences are due to that jumbling together of features and motives from different tales which is peculiar to the composition of the folktale.

¹ Heydemann (*Eros und Psyche* in the *Archäol. Zeitung*, 1869, taf. 10) considers the sarcophagus there represented, which perhaps depends upon the same source as the narrative of Apuleius, to be older than the latter. I am not acquainted with the carved stones there mentioned. I have been unable to consult M. Collignon's *Essai sur les monuments grecs et romains relatifs au mythe Psyché* (Paris, 1877), where two carved stones are represented (according to Cosquin, *Contes*, ii, p. 224), the subjects of which are said to be directly borrowed from the narrative of Apuleius: Psyche sorting the grains with the assistance of the ants and receiving the water of the Styx from the eagle.

Several stories in the *Pentameron* of Basile are akin. In 15 (*The Snake*), a snake woos a princess, and having performed three tasks which were considered impossible is perforce accepted by the father as a son-in-law. While the pair are in the bridal-chamber, the king looks through the keyhole and sees the snake transformed into a handsome young man; he breaks in and burns the snake's skin that is lying on the floor. But the young man changes himself into a dove (see above, p. 104), which injures its head while flying through the window. The king's daughter wanders about in search of her husband. She learns from a fox what the birds in the forest are telling one another: that the king's son had been changed into a snake for seven years by a witch; that this period was almost over, when in consequence of the snake's skin being burnt he was changed again into a dove; that during his flight he had injured himself so severely that he was very near death; that the only remedy was to besmear his wounds with the blood of the birds who had told the story and with that of the fox. The fox procures the first for the king's daughter, who kills the fox by cunning and obtains the second. She then repairs to her sick husband and heals him, and is happily reunited to him.

In the *Padlock* (19) the youngest of the three daughters of a poor mother becomes the wife of an enchanted prince; her envious sisters persuade her to disobey his commands, whereupon he repudiates her. She wanders about, till she bears a boy, whose birth brings about her husband's disenchantment. In the *Golden Root* (44) Parmetella, the youngest of the three daughters of a poor gardener, finds her way into a subterranean enchanted palace, where she is wedded to a Moor, who at night assumes his proper form, that of a beautiful youth. When Parmetella spies upon him in this form, he drives her away, at the same time telling her that his enchantment has been prolonged for seven years through her curiosity. Parmetella meets a fairy, who gives her advice and the means of protection during her years of wandering. After seven years, when her iron shoes are in holes, she arrives at a house, wherein dwells a man-eating witch with seven daughters spinning, the mother and sisters of her husband. The fairy's advice saves her from being eaten, but she is again threatened by the same fate, unless she is able to perform three difficult tasks imposed upon her. Her husband, however, takes pity upon her and assists her. At his command ants sort out a mixed heap of various seeds, and birds fill twelve bed-ticks with feathers. Lastly, the witch sends Parmetella to her sister to fetch musical instruments for the marriage festival of her son, in reality that she may be put to death. Her husband gives her a little loaf, a bundle of hay, and a stone; with the first she quiets a dog, which would eat her, with the second a horse which would trample on her, and with the stone she keeps a door steady which is always banging to and fro. She escapes all dangers and obtains the instruments, but on her way back is unable to refrain from opening the box which contains them; whereupon they all fly into the air. Finally, however, she is reunited to her husband, who reconciles her with his seven sisters; the old witches and the daughter of the second who is intended for his bride perish.

Amongst the tales of the Comtesse d'Aulnoy, *Le Serpentin vert* (the green dragon) is an originally kindred story, which, however, has adopted many features from Apuleius (*Cabinet des fées*, iii, 174-227). A king has two twin daughters, one of whom has been enchanted by a wicked fairy and is terribly ugly. She retires into solitude, and after a number of adventures detailed at great length in the author's manner, marries a king whom she has never seen; she agrees to the condition that she will never attempt to see him until the time of his atonement is over; as a warning she is obliged to read the story of Psyche. But her mother and sister, when on a visit, induce her to break her oath and to spy upon her husband by night. She recognizes in him a green dragon by which she had formerly been terrified, which now immediately disappears. She then falls into the power of the wicked fairy who has enchanted her; she makes her put on tight iron shoes and sets her to perform three difficult tasks. She has to spin off a distaff full of cobwebs, to plait fishing nets of the web, and lastly, to climb a mountain with a millstone round her neck, to fill a basket with four-leaved clover, and to draw a pitcher of marvellous water from a fountain guarded by giants in a deep valley. She accomplishes all these tasks with the aid of a kindly fairy and the water restores her beauty. After she has descended to the underworld to fetch the water of life from Proserpine, she is released with her husband. In *Le Mouton* (the Ram; *Cab. d. f.*, iii, 431) compared by Grimm (ii, p. 493) a king is so enraged with the youngest of his three daughters that he orders her to be put to death. She is saved and lives with a prince, who is changed into a ram. The writer has invented the dénouement. The princess, while on a visit to her father, forgets her ram, who dies of grief. *Gracieuse et Percinet* (ii, p. 5) need only be mentioned, since the heroine has to perform three difficult tasks for a step-mother. In *L'Oiseau bleu* (ii, p. 67) the king's son, who has been changed into a blue bird, is wounded with knives through the agency of hostile beings, and believes his innocent sweetheart to be an accessory to the crime. After a difficult and dangerous journey, she finds and marries him, after having bought permission from his betrothed, by wonderful gifts, to be allowed to approach him.

In the Magyar tale of the *Snake-prince* (Gaal, p. 364), it is predicted to the prince, who has come into the world in a snake's skin, that he will be able to put it off on his wedding night for the first time and every night afterwards; but he must put it on again every morning. His wife burns it while he is asleep, whereupon he curses her and prays that her shoes may not fall from her feet and that she may not bring forth a child until he has become reconciled to her. He then leaves her, and after long wandering arrives at an island, marries the king's daughter, but lives unhappily with her. Meanwhile his first wife wanders about the world in search of him; she first comes to the moon, who knows nothing of him, then to the sun, and lastly to the wind, who conducts her to him. By presents of gold, which the sun, moon, and wind have given her, she persuades the queen to allow her access to the king twice at night, but to no purpose, since he is always in a deep sleep caused by a soporific draught. At last, a faithful servant changes the sleeping draught

for another; the king becomes reconciled to his wife, who bears a beautiful boy, who comes into the world aged six years.

Kindred tales are also found amongst the Greek and Albanian, which exhibit equally remarkable agreement with the German. In *The Golden Wand* (Hahn 7, from Epirus), a merchant trading with India has three daughters, the youngest of whom begs him to bring her a golden wand thence. Now Golden Wand is the name of an Indian prince, who gives the merchant a letter, a ring, and a basin for his youngest daughter. When she fills the basin with water, throws the ring into it, and cries three times, 'Come, come, come, my golden wand', he comes flying in the form of a dove, washes in the water, and is changed into a man. The sisters play the spy and become jealous of the youngest. The eldest calls the dove, but does not notice that there is a knife in the basin, with which the dove cuts itself and then flies off. The youngest sister now journeys to India to find her lover; on the way she hears from a bird of prey and a dove that he can only be healed with an ointment which must be made from the flesh of both birds. She shoots them, prepares the ointment, and heals the king's son. In *Filek Chelebi* (Hahn 73, from Crete) the youngest of three poor sisters marries a Moor, who at night is transformed into a handsome young man. On the advice of her sisters she plays the spy and surprises him in this form; he declares to her that her curiosity has put off his disenchantment which was near at hand. She is obliged to have three pairs of iron shoes and three golden apples made, to ascend three mountains, and, rolling the apples before her, to make her way to the sisters of *Filek Chelebi* who live at the summit; after she has finished her wanderings, she brings her child into the world and is united to her husband, who is now set free from his enchantment. *Zi, Ba, Achmet Chelebi* (71) is very similar. The *Snake-Prince* (Albanian, from the island of Poros, Hahn, 100) corresponds exactly to the Magyar tale (and also to a Servian and a Wallachian (Hahn, ii, p. 311)).

The following Indian tale, taken down by an Englishman from the mouth of a washerwoman at Benares, was communicated by him to the *Asiatic Journal*, xxxvii (1842), p. 114;¹ a German translation in *Ausland* (February, 1843) appeared in H. Brockhaus's *Die Märchensammlung des Somadeva Bhatta aus Kashmir* (ii, 191-211). Although it still survives in the mouth of the people, Benfey considers it to be very old (*Pantschatantra*, ii, p. 255).

In a certain Eastern kingdom there lived a poor man named Nur-Singh, who supported himself and his wife and daughter Tulisa by wood-cutting. Tulisa, who was beautiful and of an age to marry, went into the forest to gather wood; she came to a dilapidated well, from which issued a voice, which called her by name and asked her, 'Wilt thou be my wife?' The question was repeated three times. At last she answered tremblingly that only her father could decide; whereupon the voice bade her summon him. Nur-Singh obeyed the summons, and persuaded by the promise of great wealth, consented to his daughter's marriage. When the wedding day drew

¹ [This is translated from the German, the original English not being available at the time; a few alterations have since been made after consulting it. Ta.]

near, splendid wedding presents were conveyed by unseen hands to the bride's cottage. Having adorned herself, she repaired with her parents to the well ; then the voice called upon the father to place a ring that was floating in the air upon Tulisa's finger. After the three had partaken of a sumptuous meal in a splendid pavilion a palanquin appeared, which the bride entered with fear and hesitation, and unseen hands bore her away ; her parents followed and came to a valley, where stood a large palace, through the door of which the litter disappeared. They then returned home with lightened hearts.

Soon after his daughter's marriage the woodcutter became rich and aroused his neighbours' envy, who falsely accused him before the king ; he was thrown into prison and condemned to death. But on the morning of the day on which he was to die, he and the king alone were left alive in the city ; all the inhabitants had been killed by snakes. The king entreated the woodcutter to call his subjects back to life ; the woodcutter called upon his son-in-law, whereupon the voice ordered the snakes to revive the dead by antidotes known to them alone. This was done ; and the woodcutter was handsomely rewarded and set free.

Meanwhile, Tulisa lived very happily with her husband, but only saw him at night-time. She was not allowed to leave the palace, but it was royally furnished and provided her with all kinds of recreation ; she also had serving-maids, who amused her by playing on the lute and telling stories.¹ On one occasion, seeing a squirrel pursued by another animal, she drove the latter away. After some time, however, she felt a great longing for the society of her fellow-creatures. One day, looking out of the window, she saw an old woman, who addressed her with flattering words and begged her to let her in ; Tulisa at last allowed herself to be persuaded to let down a sheet from the window, up which the woman climbed with extraordinary nimbleness.² In the course of conversation the old woman asked Tulisa whether her husband had ever eaten from the same plate with her ; when she said no, the old woman suggested that she must demand it as a token of the respect due to her from her husband. Tulisa did so, when her husband appeared at evening ; he apparently granted her request but in reality ate nothing. After some time Tulisa saw another old woman before the window, and allowed her to climb up to her room like the other. This old woman asked Tulisa whether her husband had ever chewed a betel-leaf and offered it to her to eat (a delicate mark of attention amongst lovers). Tulisa was obliged to say no to this also, and allowed herself to be persuaded to ask him the reason ; but he evaded the question. Finally, a third old woman appeared, who asked her whether her husband had ever told her his name. Tulisa was persuaded to ask him to tell her what it was, as a proof of his affection. He entreated her not to insist, since it would bring destruction upon her, but in vain. At last, he led her to the bank of a river, and having again asked her not to persist in her request, slowly entered the water,

¹ Apuleius, *Met.*, v, 15 : jubet citharam loqui : psallitur ; tibias agere : sonatur ; chorus canere : cantatur.

² This reminds us of the wicked sisters in the ancient story.

repeating his entreaty until only his head and shoulders were visible. When she still persisted, he cried out, 'My name is Basnak Dau!' At the same moment a snake's head appeared on the surface of the water and sank into the stream.

Tulisa stood again in her old ragged clothes, the palace had disappeared, her parents were still living, as poor as before, in their old hut. Their complaints and reproaches increased her unhappiness, but not so much as her own remorse and longing for all that she had lost. Once she fell asleep while gathering wood, and when she woke up she heard two squirrels talking. From their conversation she learned that her husband's mother had lost all her strength, since he had become king of the snakes; but that she would recover it, if his mortal wife could be persuaded to ask him his name; this had been accomplished by her confederate, Sarkasukis, in the form of an old woman. The squirrel whom Tulisa had saved then asked if there were no means of restoring his power to Basnak Dau. The other answered, 'Tulisa must wander eastwards, until she comes to a wide river, which is full of snakes; she must swim across and on the other side seek for the nest of the bird Huma, and lay one of its eggs in her bosom until it is hatched. Then she must offer to serve in the palace of the queen her mother-in-law; there heavy tasks will be imposed upon her, and if she cannot perform them she will be devoured by snakes. But when the egg is hatched, the bird, who brings kingly power to all who possess it, will peck out the eyes of the green snake, which is always coiled round the queen's neck. Then Basnak Dau will recover his kingdom and become reconciled to his wife.'

Tulisa, undeterred by these dangers, boldly entered upon her journey, and reached the river swarming with snakes. She had provided herself with some earthen jars and, tying some bamboos together, she laced them across with twigs and laid a quantity of grass upon the top. Using this as a raft, she crossed in safety to the other side; some squirrels sprang before her to encourage her. She was then guided by squirrels and bees to the Huma's nest, from which she took an egg and laid it in her bosom. At last she came to the queen's palace. She was conducted to her presence, and found her lying on soft cushions, with the green snake round her neck. The queen agreed to take her into her service, at the same time telling her that if she could not perform her commands she would have to die. She gave Tulisa a crystal vase, and told her to collect in it the scent of a thousand flowers in a paved court surrounded by high walls. A swarm of bees came flying along, each bringing a little bag with scent, which it dropped into the vase. On the next day, she was given a large pitcher full of seeds and told to make a splendid ornament from them. A large number of squirrels came and put precious stones into the pitcher, and took out the same number of grains. Tulisa also heard from the squirrels that their common enemy, Sarkasukis, was in the neighbourhood, and that he could only be prevented from entering the castle by burning certain herbs. The squirrels, however, would be obliged to retire, and she would have to depend upon her own vigilance. Tulisa burnt herbs incessantly as she had been told, until the young Huma

came forth from its egg. It grew up with incredible rapidity, suddenly flew on to the queen's shoulder, and picked out the green snake's eyes. The queen, knowing that her power was at an end, cried out aloud: Sarkasukis, in his true form as an ugly demon, fell to the ground, and long processions of genii, squirrels, and snakes escorted their rightful master into the palace. Tulisa, now queen of a kingdom of spirits, was reunited to him for ever; her parents recovered their former wealth.

A Bessarabian story also, connected with the name of the emperor Trajan (of whom the inhabitants tell all kinds of stories), reminds us of the popular tale, as already pointed out by A. von Haxthausen in his studies on the internal condition of Russia (ii, 460): 'Beyond the Danube lived a king named Trajan, who loved a queen who lived on this side of the river, named Bielayakeyina (the white princess). He rode over to her every evening, and left her before sunrise. But the princess wanted to see him by daylight. His horse always neighed before the sun rose, and as a signal for his departure. One day she ordered some oats to be thrown in front of the horse, who forgot to neigh. But when the sun rose, horse and rider disappeared like smoke.

My list of parallels to the story in Apuleius being necessarily inadequate, I expressed the hope that some specialist would complete it, and Professor Adalbert Kuhn (died 1881) kindly consented to do so. I have made no alteration in the communication with which he favoured me, especially as only a few of the tales known to me are referred to by him.

I begin by remarking that I have confined myself only to two groups of tales, closely related to that used by Apuleius, in order to show more clearly that it is only a question of the use of a popular tale. In both groups we have a man, usually changed into an animal, wedded to a young maiden, who in spite of his terrifying form, remains constant in her affection. In the first group the betrayal of the secret postpones his release from enchantment, and brings about a fresh trial of patience and love; in the second, as a rule it directly furnishes the means of release. The introductory accounts of the manner of the betrothal or of the origin of the change of form may be disregarded, since they are not essential. In the first group the Scandinavian (Danish, Swedish, Norwegian, Icelandic) recensions are decidedly most akin to Apuleius; the Danish in particular agrees in the most essential features. I will first give a list of the tales used by me.

1. 1. *Danish*, in Grundtvig's *Gamle Danske Minder*, i, 100-115: *Den lille hvide hund* (the little white dog).

2. *Swedish*, in Hyltén-Cavallius and Stephens, *Svenska folksagor och äfventyr*, i, 2, p. 323: *Jungfrun som såg på sin käraste vid ljus* (the maiden who looked on her beloved with a light [candle, lamp]). Three versions: A. *Ulfprinsen* (the wolf-prince; from Södermanland, with three variants from Småland and Finland). B. *Prins Hatt under jorden* (Prince Hat under the earth; from Småland with a variant from Västergötland). C. *Den halde hunden* (the lame dog; from Småland, with a variant from the same province).

3. *Norwegian*, in Asbjörnsen and Moe, *Norwegische Volksmärchen* ii, 102, no. 11: *East of the Sun and West of the Moon*.
4. *Icelandic*, in Jón Arnason *Islenzkar þjóðsögur og æfintýri*, ii, 334: *Sigurdr Kóngsson* (Siegfried the king's son).
5. *Holsteinish*, in Müllenhoff, *Schleswig-holst. Sagen*, p. 385, no. 3: *Der weisse Wolf* (the white wolf).
6. *Bohemian*, in Waldau, *Böhmisches Märchenbuch*, p. 160: *Der weisse Bär* (the white bear).
7. *Greek*, in J. G. Hahn, *Griech. und alban. Märchen*, ii, 67, no. 73: *Filek Chelebi* (a Moor takes the place of the animal).¹
8. *Albanian*: A. *ib.*, ii, 116, no. 100: *Das Schlangenkind* (the snake-child), and B. *ib.*, ii, 130, no. 102: *Taubendiebe* (dove thieves). Cp. further C., *ib.*, i, 97, no. 7.
9. *Wallachian*, in Schott, *Wallachische Märchen*, no. 23: *Trandafir* (a pumpkin takes the place of the animal).
10. *Neapolitan*, in Basile, *Pentamerone*, i, 19, p. 246: *The Padlock*, agreeing mostly with no. 7; cp. also *ib.*, ii, 168, no. 43: *Pinto-smauto*.
11. *Servian*, in Wuk, *Serbische Märchen*, no. 10, p. 82 (another snake-bridegroom).
12. *Transylvanian*, in Haltrich, *Siebenbürgische Märchen*, p. 228, no. 43: *Borstenkind* (bristle-child).
13. *Indian*, in Benfey, *Pantschalantra*, i, 255: *Tulisa*.
14. *Kalmuck*, in Jülg, *Kalmükische Märchen*, p. 39, tale 7.
15. *Gaelic*, in the extract from Campbell, given by R. Köhler in Benfey's *Orient und Occident*, no. iii, 2, 114 and no. xii, 2, 126.
16. *Scotch*, in Chambers's *Popular Rhymes* (first ed.), p. 75, *The Red Bull of Norway*, in the third ed. with the variant of the *Glass Mountain*, according to R. Köhler on Campbell (*loc. cit.*, xii.).
17. *The Harz*, in A. Ey, *Harzmärchen*, p. 9.
- The Lark* in Grimm (88), already compared (p. 103), is not further cited here.
- II. 1. C. and T. Colshorn, *Märchen*, p. 64, no. 20: *Vom kling-kesklanken Lowesblatt* (cp. 3).
2. *Ib.*, p. 139, no. 32: *Der verwunschene Frosch* (the enchanted frog).
3. Müller and Schambach, *Niedersächsische Sagen und Märchen*, p. 265, no. 5: *Das klingende, singende Blatt* (the ringing, singing leaf).
4. *Ib.*, p. 263, no. 4: *Die Rose* (the rose).
5. *Holsteinish*, Müllenhoff, p. 384, no. ii: *Vom goldenen Klingelklangel* (cp. 3).
6. *Suabian*: in Meier, *Schwäbische Märchen*, p. 202, no. 57: *Drei Rosen auf einem Stiel* (three roses on one stem).
7. *Tirolese* in Zingerle, i, p. 182, no. 30: *Die singende Rose* (the singing rose).
8. *Ib.*, ii, p. 173: *Die Schlange* (the snake).
9. *Ib.*, p. 391: *Der Bär* (the bear).
10. *Flemish*: in Wolf, *Wodana*, ii, 61: *Roosken zonder doornen* (the rose without thorns).

¹ B. Schmidt, *Griechische Märchen*, 9: *Prinz Krebs* (Prince Crab) and 10: *Die Schönste* (the most beautiful maiden) may be added.

11. *Servian*: in Wut, p. 77, no. 9: *The Snake-bridegroom*.

12. *Russian*: in Benfey, *Orient und Occident*, ii, 539, from Afanasieff's collection, communicated by Schiefner.

13. *Indian*: Pantschatantra, i, 8, in Benfey, ii, 144: *The enchanted Brahmin's son*.

I will now compare the individual features with the narrative of Apuleius.

'A king and a queen (merchant, peasant, etc.) have three daughters, the youngest of whom is the most beautiful and the most amiable': cp. Swedish, i, 2 B; German, ii, 1, 2, ii, 3, 4, 5, ii, 7, 9; Greek, 7, 8 C; Flemish, ii, 10; Gaelic, i, 15. Owing to the special elaboration of the story in the Icelandic version there are four (i, 4), in the Norwegian many daughters (i, 3). The elder sisters are proud and haughty (Swedish, i C, Scotch, i, 16). Conversely, in the Tirolese story (ii, 9) the eldest sister is good, the younger proud and wicked. The end of the tale ii, 1 recalls the former contrast. 'The elder daughters are married to kings, the youngest to a monster (or animal)'. Cp. Swedish (i C), where the eldest desires for her husband a king with golden hair and beard, the second one with silver hair and beard, while the youngest is content to obtain only a lame dog. In nearly all the tales the bridegroom of the youngest takes the form of an animal. The Swedish story, i, 2 A (variant), ii, 11, i, 11, 13, ii, 13, i, 8 A, ii, 8, and B. Schmidt (*Gr. Märchen*, 10), mention the snake or the dragon (*viperum malum, immanis coluber, multimodis voluminibus serpens*).

The manner in which the bride is handed over to the promised bridegroom is nearly always different in the above from that in Apuleius: in the first group the animal himself fetches away the bride (only in a Swedish version, i, 2, B, the king leads her out under the hazel bush amidst the lamentations of her companions). Elsewhere a similar leading out is very common in tales and needs no further proof.

Equally unknown to the cycle of tales compared is the heroine's being wafted down by the wind, an incident which dropped out automatically, when once her being taken to the top of the rock was omitted. In place of this the animal and the maiden, after they have entered a thick forest, suddenly sink into the depths of the earth (i, 1), or come to a mountain ravine (i, 2 A) or a hole in the earth (i, 2 A, variant 1; i, 2 B, variant); in i, 3 the bear knocks upon a rock, which opens. As soon as they enter, a splendid palace appears, in which everything is of glittering gold and silver (i, 2 A, B, C; i, 1, 3, 10, ii, 6), and the table sumptuously spread with food and wine (i, 1, 3, 10, 17, ii, 4, 6); the invisible handmaids who perform all Psyche's wishes, appear in i, 3, where the bear gives the maiden a silver bell, which she only has to ring and immediately everything she desires is before her.

In the majority of the tales compared the bride is forbidden to reveal the change of her husband's form; in i, 2 C, 7, 8 C, 10 she is persuaded by her sisters to do so (in ii, 6, the elder sister persuades her to infringe another prohibition); here also jealousy is as a rule the cause. The triple temptation in Apuleius occurs in i, 2 B, 4, 10; as Apuleius utilizes the awakening maternal feelings to entice her

to infringe the prohibition, so in i, 2 B the stepmother attacks the young wife on this her weak side, by praising the children, who are playing at their mother's feet. Apuleius has: *O nos beatas, quas infantis aurei nutrimenta laetabunt! qui si parentum, ut oportet, pulchritudini responderet, prorsus Cupido nascetur*; in the Swedish tale: *hon tillade, at de s  ckert br  ddes upp   sitt f  derne, och att Prins Hat m  nde vara en mycket fager ungersvenn* (she added that they no doubt took after their father and that Prince Hat must be a very beautiful youth). The northern group, with the exception of the Icelandic, contain the feature, that the young wife is advised to look at her lover by a light while he is asleep; this she does, like Psyche in Apuleius, and wakes him, forgetting all warnings through the heavenly sight. While i, 1 A, B and 3 introduce a wax or tallow candle, from which a drop or snuff falls upon the loved one, in i, 2 C it is the lamp, but the catastrophe is brought about by the young wife looking at him for three nights in succession. The Icelandic tale (i, 4), instead of the kindling of a light, speaks of swinging a stone over the sleeper's head. But the kindling of the light is found in the Neapolitan (i, 10), where, however, the story is somewhat differently worked out.

From this point most of the above tales take a different turn from the narrative of Apuleius. The commonest variation is that the abandoned wife wanders through the world in search of her vanished husband and arrives at three different stages, where she finds sympathy and assistance; having found her lover again, at the moment when he is celebrating his marriage to a fresh bride, she persuades her with gifts to allow her to pass three nights in succession in her lover's chamber. Finally, she succeeds in recalling the past to his memory and is reunited to him. The Danish story (i, 1), on the other hand, agrees throughout with Apuleius, as will be seen from the following extract.

When her lover awakes, he says to her: 'Now we must be separated for a long time; you must go forth and leave your (three) children behind. You will be allowed to visit them, but you may not play with them'. A moment afterwards she was standing alone in a dark forest, in which she found her three children in three little houses. On reaching the first and second, she quietly looks on at them while they are playing; but when she comes to the third and he rolls a golden apple towards her, she is unable to resist the temptation of rolling it back. At once the little white dog appears, and tells her she must go and serve the old witch who lives at the edge of the forest. She does so, and the witch, who is about to marry, sends her to her sister in the underworld, to fetch some musicians in a box. The dog now appears again and gives her advice; she is to go straight on till she comes to a bridge, on which she is to put a loose plank in its place and then cross over; after this, she is to hang the little door properly which swings on a single hinge, and go through, when she will come to the underworld; in the court she will see a dog barking round a firkin of butter which is turned upside down, which she must set right; the witch will offer her cake and wine, but she must neither eat nor drink. She does everything as she is told, and when the witch goes to fetch the musicians, she hides

the cake offered her in her wallet (*maus* = 'wallet' and 'stomach') and pours the wine over herself. When the old woman returns and asks, 'Cake, where art thou?' the cake replies, 'In the girl's *maus*', and the wine cries out 'Right down the girl'. The old woman now gives her the box and tells her not to open it; when the girl has gone the witch calls upon the dog, the little door, and the plank to bite and squeeze and push her into the water, but they refuse, since the girl has done them a kindness. So she gets back to the wood without accident, when she is overcome by the desire to know whether there really can be musicians in the box; she lifts up the lid a little, they fly out, but the little dog comes up and sends them in again. She takes them to the witch, who says, 'Now you shall prepare for the wedding'. The witch then gives her a card of black wool, which is to be washed white, and some linen to wash, amongst which is her lover's shirt with the three grease-spots. In the first and second tasks she is assisted by the little white dog. The witch, in her rage, bursts into a thousand pieces, the little white dog again becomes a handsome prince, and so on.

Thus the Danish story differs in the number of the tasks set (only three instead of the four in Apuleius), and also in their nature and order: however, in the washing of the white wool black we can recognize an echo of the collecting of the gold wool in Apuleius. But the descent into the underworld affords some striking parallels. As in Apuleius Psyche is given a box (pyxis) to fetch the beauty-ointment for Venus, so the deserted wife is sent with a box to the witch's sister in the underworld, to fetch musicians for the wedding. The quieting of Cerberus with the *polenta* may be compared with the propitiation of the dog by setting up the firkin that has fallen down. In Apuleius the tower warns Psyche neither to sit down nor to partake of the sumptuous banquet (*prandium opipare sumere*), in the Danish tale the little white dog gives a warning against taking cake or wine. As Psyche on her return is unable to restrain her curiosity and opens the box, from which a stupefying vapour ascends, which wraps her in Stygian sleep, from which she is awakened by Cupid, so here the wife opens the box, the musicians fly away, and are brought back by the little dog.

Two variants of the Swedish tale are attached to the Danish version. In i, 2 A var. 3 the wife on her wanderings meets an old woman, who gives her a ring, a cushion, and two hams. One of these she gives to a bear, who in return takes her over a large piece of water. She then comes to the palace of the evil witch and enters her service. She has first to sweep the floor till it is as white as snow; in this she is assisted by the wolf-prince, to whom in return she gives the ring; she is next sent to the witch's sister to hear tales (*för at höra sagor*). The prince again gives her good advice: she must give the cushion to the lattice that it may not squeeze her, and the second ham to the dogs, that they may not tear her to pieces. Thus she escapes all dangers, returns in safety, and the prince's deliverance takes place.

As to the second variant of i, 2 C, the editors state that it agrees with the text except in the conclusion, which, where the princess makes ready to search for her husband, agrees with the second part

of 14 B (*The King's Son and the Princess Singorra*). In this tale, which is found in two variants (of which A is entitled *The King's Son and Messeria*), a prince, like the princess in our tales, falls into the hands of a lady of the sea, who sets him to perform difficult tasks, which he does with the aid of her daughter (Messeria or Singorra). In 14 A he has (1) to wash black yarn white and white black; (2) to separate a barrel of wheat and a barrel of rye which are mixed together; (3) to cleanse an ox-stall of 100 oxen. After he has performed these tasks by the aid of Messeria, he is told to choose one of the daughters of the lady of the sea; he will then be allowed to return home. But Messeria has told him that the daughters of the lady of the sea would be changed into different animals, and that she would become a little cat. So he selects the right one; the lady of the sea then sends him to her sister, to fetch the wedding dress for the young bride. Messeria again advises him how to escape the dangers that threaten him; here the lattice-gate of the Danish tale recurs; two vultures, which he must quiet with pieces of meat, take the place of the dogs; similarly, he is forbidden to eat or drink anything from the sister's hands. He escapes all perils, obtains the box and opens it, when a shower of sparks shoots out, which he fastens up again with the assistance of Thumbings, and so on.

In no. 14 B the three tasks are different, the dangers which threaten him while fetching the wedding things identical or similar. Thus, he divides two cakes that he has taken with him between a bear and a wolf which threaten to gobble him up, but only seats himself on a particular (black) chair belonging to the witch, whereas Psyche is advised to sit only on the ground, touches nothing that is offered her and conceals them as in the Danish tale.

Consequently, in this case we have, in addition to the washing the yarn white, Psyche's first task, the separation of certain grains, then the quieting of the warders of the underworld with cakes, etc., the choice of a particular seat and abstaining from food and drink. Finally, the box and its opening recur.

Thus we find very essential features of the second part of the Roman tale preserved in the Scandinavian group; of the four tasks two are almost identical, one at least is akin to that in Apuleius, and the last, not yet referred to, the third in Apuleius, seems to me to have left its traces in the Icelandic tale. Psyche has to fetch water in an urn from the Stygian rock, but its enormous height and slipperiness (saxum immani magnitudine procerum et inaccessa salebritate lubricum), the wild rock-springs and fierce dragons, make her shrink back in terror; then the eagle of Zeus flies up and fetches her the water. Similarly, in the Icelandic tale, the young wife arrives at the third stage, an enormous mountain, whose steep ascent is as smooth as glass (the glass-mountain of other tales). Her helper furnishes her with frostnails for climbing and winds a cloth round her head, to prevent her seeing or hearing the marvels and horrors of the place. In this manner she successfully attains her end. Further, in a Polish tale in Lewestam (p. 117), a student is carried on to the mountain of glass by a hawk, which takes him for dead and sticks its claws into him; Çaktideva in Kathāsaritsāgara (p. 26, 30) is carried aloft by a bird to the golden city of the Vidjādhara, and

similarly in Conon (*Narrations*, 35) a shepherd who has descended a ravine, by a vulture. This makes it probable that Apuleius employed a similar feature in his own manner in the construction of the third task.

A. KUHN.

Recently published sources have but little to add to the above. With the stories discussed under I three Italian tales are connected; no. 14 of the *Novelline di Santo Stefano, raccolte da Angelo de Gubernatis* (Turin, 1869); nos. 15 and 27 in the *Sicilianische Märchen, aus dem Volksmund gesammelt von Laura Gonzenbach* (Leipzig, 1870): also no. 2 in de Gubernatis may have originally belonged here. Of the tales discussed under II we have two remarkable variants in Nos. 9 and 77 of the Gonzenbach collection; a special class of this group is formed by the versions connected with no. 13, which have been discussed by Reinhold Köhler in his notes to no. 12 in Widter-Wolf's *Volksmärchen aus Venetien (Jahrb. für roman. und engl. Litt., vii)*, to which may be added Gonzenbach, nos. 42 and 43.

ERNST W. A. KUHN.

The most recent and the most exhaustive survey of kindred folktales has been given by Emmanuel Cosquin, independently of the above, in his frequently quoted *Contes populaires de la Lorraine* (1886), in the notes to 63 (*Le loup blanc*, ii, 217-230) and 65 (*Firosette*, *ib.*, 236-245), the wealth of material being increased by contributions from different countries; see also his *Essai sur l'origine et la propagation des contes populaires européens* (i, pp. xxii and xxxii).

On the other hand, Andrew Lang, in his introduction to the reprint of William Adlington's translation of *Cupid and Psyche* (1887), attempts to explain its similarity to so many tales of the most different peoples by the fact that the fundamental *motifs* of the narrative are founded partly upon universal human notions (mother-in-law's jealousy of daughter-in-law, punishment of curiosity, etc., p. xxxi), partly at least upon very widely spread ideas, such as that of the friendly assistance which animals can render to men (p. xxxviii); also the belief that living beings can descend into Hell and return safely, provided they have not tasted of the food of the dead, is found amongst the Ojibways and Maoris, in Melanesia and Finland, as well as in Greece (p. xxxvi). Lastly, the essential incident of the Apuleian tale, the prohibition to inquire after the husband's form, is derived by Lang from the imposition by belief or custom of 'a kind of marriage taboo', of certain restrictions on the intercourse of newly married couples, just as in ancient Sparta the young married man might only visit his wife by night (p. xlii).¹

The last explanation is the least convincing. The world of the popular tale is throughout imaginary; not the least part of its charm, as well as of its character, is its complete independence of the premises of reality, indeed, its contrast to them. Also that motive has entirely the character of a fiction, not that of a reminiscence, however distorted, of something real.

Moreover, the fact that certain ideas are common to many or all peoples by no means justifies us in expecting to find them em-

¹ This is examined in detail by Lang in *Custom and Myth* (1884), pp. 64-86, which, however, is unknown to me.

played everywhere in an equal degree as motives of the popular tale. Perhaps we should rather expect the opposite, since in the case of each individual people they are connected with other ideas which are peculiar to it alone.

But lastly, the points of agreement in the tales of so many peoples of Asia and Europe are so numerous and substantial, that they can only be explained by the assumption of a common origin, and Benfey's view, that they for the most part come from India, has rightly been widely accepted.¹

It is true that customs and ideas, of so singular a kind that their recurrence would seem to be impossible unless they were transferred, are found in countries in different parts of the earth, between which there can never have been communication (Peschel, *Völkerkunde*, pp. 22-27). This fact, however, can do no more than make individual striking similarities in the fictions of the most different stocks appear spontaneous,² but cannot explain the thorough agreement in the principal motives and their combination, of the European and Asiatic tales hitherto examined.

Thus, certain similarities between a Zulu tale in Lang (p. lxxviii) and the tale of Amor and Psyche do not justify the conclusion, that the elements of the latter were common to the whole human race in an earlier state of society. A girl undertakes a dangerous journey to a distant place. After an adventure of the 'swallowing (Kronos) class', she reaches the kraal, where she is to be wedded; but the bridegroom is missing. The young man, on whom her heart is set, the youngest prince, had disappeared when a child. The girl remains there. Meat and beer, placed in her hut, are consumed at night by an unseen being (as a matter of fact the lost prince). One night he feels the girl's face in the dark and retires in the morning, without her having seen him, since he forbade her to make a light. On the following night he allows her to touch his person; it is slippery, so that her hands cannot grasp it. His mother had sewn him up in a boa's skin when he was a child, in order to protect him against the jealousy of her rivals, who had brought animals of various kinds into the world; his 'elder brothers' also had tried to kill him out of jealousy. Now that he has become a man, he is set free by the girl's love and placed upon the throne.

Lastly, I will quote from F. Liebrecht's *Amor und Psyche, Zeus und Semele, Pururavas und Urvaci* (in Kuhn's *Zeitschrift für vergleichende Sprachforschung*, xviii, p. 56) the chief arguments for the view there set forth, that the myth of Zeus and Semele rests on the same foundation as the tales of Psyche and Tullisa, and that 'consequently all three are only different versions of one and the same incident. Zeus, like Amor, is unwilling that his beloved should see him in his proper form, just as Basnak Dau does not wish Tullisa to know his name; Zeus and Basnak Dau gratify the curiosity of

¹ Cp. R. Köhler, *Über die europ. Volksmärchen in Weimarer Beiträge zur Litteratur und Kunst* (1865), p. 189; Rohde, *Über griechische Novellistik und ihren Zusammenhang mit dem Orient in Verhandlungen der Rostocker Philologenversammlung* (1875), p. 56; G. Meyer, *Essays und Studien* (1885), p. 222.

² Cp. my essay, *Griechische Mythologie in Deutsche Rundschau*, October, 1887, p. 96.

Semele and Tulisa with the greatest unwillingness. The mother of Basnak Dau corresponds exactly to Hera ; as the latter assumes the form of the nurse Beroe to persuade Semele to make her foolish request, so Basnak Dau's mother's accomplice, Sarkasukis, visits Tulisa in the form of an old woman and persuades her to ask her lover his name ; he pronounces it as unwillingly as Zeus shows himself in his proper form to Semele, for both of them are aware (like Amor) that only misfortune can follow the granting of the request, although Zeus feels himself compelled by his oath and Basnak Dau by a higher power to grant it. Consequently, Semele, Psyche, and Tulisa act contrary to the wish or command of their lovers, and all three have to undergo punishment, but only for a while ; when it is over, Semele and Psyche ascend to Olympus, Tulisa becomes queen and is reunited to her lover as Psyche to Amor. We may here inquire whether, in the older version of the Psyche myth, Psyche's punishment was not death like Semele's ; her long life and search, in the course of which she herself has to go down to Proserpina in the underworld, may perhaps contain a hint of this'.

Another series of myths or tales (to which the Urvaçi-myth forms the transition) is also discussed, in which the wife or beloved disappears from the man, since he desires to see her (naked) in spite of her prohibition ; but its consideration, as any further prosecution of the subject in the domain of comparative mythology, is beside my purpose, and beyond my range.¹

[I am indebted to Dr. Andrew Lang for the following communication.—Tr.

I am not sure that I understand Dr. Friedländer's objections to my view that close resemblances in the *Märchen* of races most widely sundered in space, speech, and civilisation are the result of the uniformity of human nature, and of human superstitions, as in certain nuptial taboos. For Cupid and Psyche I may refer to my essay on the subject in *Custom and Myth*. The close resemblances in the construction and plots of *Märchen* are not confined to the tales of Europe and Asia ; they extend to those of the Egypt of the fifteenth century B.C., and are common in North and Central American, Samoan, and Maori *Märchen*. To derive these last from India is more than hazardous. Since the date (1888) when Dr. Friedländer's excursus was written, great additions have been made to our knowledge of savage *Märchen*. But the question as to how they so closely, in several cases, resemble those of Europe and Asia in plot, remains obscure.

A. LANG.]

XVIII. THE USUAL AGE OF GIRLS AT BETROTHAL AND MARRIAGE.

(Vol. I, p. 232, l. 27.)

BETROTHAL frequently took place long before marriage. Dio, liv, 16 : ὡς δ' οὐν βρέφη τιτὲς ἐγγυώμενοι, τὰς μὲν τιμὰς τῶν γεγαμηκότων ἔκαρ-

¹ Zinzow's *Psyche und Eros* : ein milesisches Märchen, in der Darstellung und Auffassung des Apuleius beleuchtet und auf seinen mythologischen Zusammenhang, Gehalt und Ursprung zurückgeführt (1881) is based upon views radically different from my own, which have entirely failed to convince me.

ποῦντο, τὸ δὲ ἔργον αὐτῶν οὐ παρείχοντο, προσέταξε μηδεμίαν ἐγγύην ἰσχύειν, μεθ' ἣν οὐδὲ δυοῖν ἐτοῖν γαμήσει τις, τούτέστι, δεκέτι πάντως ἐγγυᾶσθαι τὸν γέ τι ἀπ' αὐτῆς ἀπολαύσοντα, δώδεκα γὰρ ταῖς κόραις ἐς τὴν τοῦ γάμου ὥραν ἔτη πλήρη, καθάπερ εἶπον, νομίζεται: cp. lvi, 7 and Suetonius, *Augustus*, 34. Modestinus, *Digg.*, xxiii, 1, 14: in sponsalibus contrahendis aetas contrahentium finita non est, ut in matrimonii: quapropter et a primordio aetatis sponsalia effici possunt, si modo fieri ubi utraque persona intelligatur, id est, si non sint minores quam septem annis. But apparently, during the early empire, girls were frequently betrothed even when still younger. Vipsania Agrippina, daughter of Agrippa and Pomponia, was betrothed to Tiberius before she was two years old (Nepos, *Athicus*, 19). One of Sejanus' daughters, who was put to death after his fall by decree of the senate, was betrothed to Drusus, son of Claudius, who a few days afterwards was choked by a pear; both were still children (Tacitus, *Ann.*, v, 9; Dio, lvi, 11; Suetonius, *Tiberius*, 61 and *Claudius*, 27. On the difference between *destinare* and *despondere* see Nipperdey on Tacitus, *Ann.*, iv, 7). Claudius first betrothed his daughter Octavia (born in 43) to Lucius Silanus (Tac., *Ann.*, xii, 3), and in 49 to Nero (*ib.*, c. 19). Orelli, 2647: Dis manibus Valeriae M. f. Fortunatae vixit annos VIII (not VIII according to Hirschfeld) menses VIII dies XVIII M. Valerius Aniceus vix. ann. XX qui fuit spon(sus) ejus. In Juvenal, iii, 111 the *sponsus levis* appears to be still living in his father-in-law's house.

Although the proper marriageable age was not till the end of the twelfth year and puberty did as a rule not begin till the fourteenth (cp. the passage quoted below from Macrobius, *Comm. in Somn. Scip.*, i, 6, 70), girls were sometimes married even younger. Plutarch, *Lycurgus et Numae Comp.*, 4. 2: τῶν δὲ Ῥωμαίων δωδεκαετείς καὶ νεωτέρας ἐκιδόντων· οὕτω γὰρ ἂν μάλιστα καὶ τὸ σῶμα καὶ τὸ ἥθος καθαρὸν καὶ ἄθικτον ἐπὶ τῷ γαμοῦντι γενέσθαι. But they did not become regular wives till the twelfth year; till then they remained *sponsae*. Pomponius, *l. iii ad Sabin.*, *Digg.*, xxiii, 2, 4: minorem annis duodecim nuptam tunc legitimam uxorem fore, quum apud virum explesset duodecim annos. Ulpianus, *l. xxxiii ad Sabin.*, *Digg.*, xxiv, 1, 32 § 27: si quis sponsam habuerit, deinde eandem uxorem duxerit, quum non liceret, an donationes quasi in sponsalibus factae valeant, videamus. Et Julianus tractat hanc quaestionem in minore duodecim annis, si in domum quasi mariti immatura sit deducta; ait enim hanc sponsam esse etsi uxor non sit. Ulpianus, *l. ii de adulteriis*, *Digg.*, xlviii, 5, 13 § 8: si minor duodecim annis in domum deducta adulterium commiserit, mox apud eum aetatem excesserit coeperitque esse uxor, non poterit iure viri accusari ex eo adulterio quod ante aetatem nupta (? nuptiarum) commisit, sed vel quasi sponsa poterit accusari ex Rescripto Divi Severi, quod supra relatum est. Octavia, daughter of Claudius and Messalina, was in her twentieth year when she was murdered (A.D. 62; Tac., *Ann.*, xiv, 64); consequently, she was eleven when she married the sixteen-year-old Nero (A.D. 53; Tac., *Ann.*, xii, 58). Examples of such marriages are also found in inscriptions, some of which have been collected by Fabretti. *Inscr. dom.* 586 C (at Rome, epitaph on a wife, who died at the age of 22, and had

been married 12 years, 30 days) : 586 E (epitaph on a wife who died aged 11 years, 1 month, 26 days—*sched. Barb.*) : 325 H (cum qua vixit annos xxxxi tulit annos lii, Venice). A ten-year-old wife in *CIL*, v, i, 630. Jahn, *Spec. epigr.*, p. 84 : D. m. Sabinae Carpus Ac. (?) conjugis suae incomparabili fecit cum quem convixit ann. xx m. v quae vixit an. xxx m. vi. *Anthologia latina*, ed. Meyer, 1370 (Muratori, p. 1689) : Julia C. l. Aphe virguncula annorum xi deducta jam ad C. Julium Apollonidam pia et sancta suo et parentibus vixit annos xv. {Murat., 1368,9 (= Orelli, 2653) : D. m. Luciae Redemptae vixit annis xxxv N. Cassicius Phoebus fecit conjugi benemerenti cum qua vixit ann. xxxviii. Orelli, 2654 = *CIL*, vi, 3, 18412 (marriage at the age of eleven). *CIL*, iii, i, 3572 (Aquincum) : hic sita sum matrona genus nomenque Veturia, Fortunati conjux de patre Veturio, nata ter novenos (misera) et nupta bis octo per annos, unicuba, unijuga, quae post sex partus uno superstite obii. *Bull. comun. di Roma*, 1877, p. 174, 158 = *CIL*, vi, 3, 21273 : Dis m. L. Licinius Lucrio Telesphoridi conjugi carissimae bene merent. fecit cum quaa (*sic*) vixit an. xiii. Vixit ann. xxxiii. *CIL*, ix, 900 = *IRN*, 1020 (Luceria) : Vitoriae Urbice—vixit. a. xxxxi con conjugue xxx a. *Ib.*, 3710 (Marruvium) : que vixit ann. xxxi m. vi NN. cum qua vixit ann. xxiii m. xi. *Ib.*, x, 1, 155 = *IRN*, 404 (Potentia) : died at the age of 38 years and 9 months, having been married 27 years and 11 months. *CIL*, ix, 3011 (Ortona) : married at the age of 11 years and 6 months. *Oesterreich. Mittheil.*, viii, 1884, p. 11, 24 (Salona) : at 10 years. Gruter, 710, 3 (Rome) : Ti. Claudio Chrysanthio vix. an. xi fecit Helvia Salvia conjugii suo. b. m. and 788, 8 = Muratori, 1357, 4 (where also an eleven-year-old husband is mentioned) cannot be correct.

We may assume fourteen to have been the average age of girls at marriage, as is expressly stated by Epictetus, *Encheiridion*, 40 : αἱ γυναῖκες εὐθὺς ἀπὸ τεσσαρεσκαίδεκα ἐτῶν κυρίαί καλοῦνται. τοιγαροῦν ὁρῶσαι ὅτι ἄλλο μὲν οὐδὲν αὐταῖς πρόσεστι, μόνον δὲ σιγχοιμῶνται τοῖς ἀνδράσιν, ἀρχονται καλλωπίζεσθαι. We must also certainly assume that as boys (*pueri alimentarii*) were supported in the charitable institutions up to the age when they were able to earn their living,¹ so the girls (*puellae alimentariae*) were kept till they were old enough to claim the care of a husband. The institution founded by Caecilia Macrina at Terracina was for the support of boys up to the age of 16, of girls up to 13 (*BdI*, 1869, p. 153 = *CIL*, x, 6328) ; that of a certain Publius Licinius Papirianus at Sicca Veneria (Africa, about A.D. 177 ; Henzen, *BdI*, 1863, pp. 140, 231 = *CIL*, viii, 1641), for boys from 3 to 15 and girls from 3 to 13. Hadrian fixed the age for boys at 18, and for girls at 14, which was confirmed by Caracalla (imperator noster in Ulpianus l. ii *Fideicommissorum*, *Digg.*, xxxiv, i, 14 § 1). Literature supplies examples from different periods of these early and even earlier marriages. Agrippina, Nero's mother, born on the 6th of November, 16, married Cn. Domitius Ahenobarbus in 28, when hardly twelve years old (Preuner, *StRE*, i², 613) ; Augustus' daughter Julia,

¹ These regulations by no means contradict the higher average ages of men at marriage assumed in vol. i, p. 233.

born in 39 B.C. married M. Marcellus in 25, in her fourteenth year (Höck, *R.G.*, i, 343, 347). Agricola's daughter, whom he betrothed to Tacitus during his consulship (76) and gave her to him in marriage in the following year (ac post consulatum collocavit, Tacitus, *Agric.*, 9), was born while Agricola was quaestor in Asia (65; cp. Tacitus, ed. Haase, 1855, p. viii); consequently, she can hardly have been more than 13 at her marriage). The daughter of Minucius Fundanus died before she had completed her thirteenth year, shortly before her marriage. In 33 Tiberius, after long consideration, found husbands for Julia and Drusilla, the daughters of Germanicus, postquam instabat virginum aetas (Tac., *Ann.*, vi, 15). Julia was born in 18 (*Ann.*, ii, 54), and was thus about 15 years of age; Drusilla perhaps two years older (*Ann.*, ii, 41; Suetonius, *Calig.*, 7). Aemilia Lepida (born 2 B.C.) was the daughter of Augustus' granddaughter Julia (born 18 B.C.), who thus had married when 15 (Mommсен, *Ephem. epigr.*, i, 57): cp. Ausonius, *Epitaph.*, 32, in tumulum sedecennis matronae, who had died a mother. Quintilian's wife died nondum expleto aetatis undevicesimo anno duos enixa filios (*Inst. Or.*, vi, proem. 4), who were not twins (filius minor, *ib.*, 6); consequently she cannot have been more than 17 at the time of her marriage.

Here follow a number of inscriptions, in which the age of women at marriage is either directly stated, or can be arrived at by deducting the years of their marriage from those of their life. They are nearly all from Italy, and a large proportion have been communicated by Messrs. Nissen and Hirschfeld, who have specially investigated the matter.¹

Age at marriage	12-13	in 15 inscriptions.
"	" 13-14	" 18
"	" 14-15	" 17
"	" 15-16	" 14
"	" 16-17	" 10
"	" 17-18	" 7
"	" 18 and over	" 31
Maidens who died between the ages		
of 12 and 19 and 10 months	11	"

There is no reason to assume that a larger collection would give essentially different results. No doubt many, if not the majority, of the women who are recorded as having married when more than eighteen years old, had been already married before that age. Naturally, the earlier marriages would only be exceptionally mentioned in their epitaphs: as *CIL*, v, 2, 7453 (Vardagate): epitaph on a woman who died at the age of 36, who had been twice married, the second time at the age of sixteen.² It must also be remembered that most of these women belonged to the middle and lower classes, whose poverty, want of a dowry, etc., would be more likely to postpone marriage than in the case of the upper classes, amongst whom marriage soon after the completion of the twelfth year was pro-

¹ [The references to the actual inscriptions are not given here, but only the results: the references will be found in the sixth edition of the original work, vol. i, p. 366. Tr.]

² In the inscriptions set up by widowers to their wives earlier marriages are sometimes, but rarely, mentioned (*CIL*, vi, 3, 15488, 20116, 20564).

bably the rule. If we may draw any conclusion as to the Roman practice from Terence, *Eunuchus*,¹ ii, 3, 27, where a young woman is described as being in her prime at sixteen, we must certainly assume a later average age for the earlier times. 'In modern Italy the age of marriage, according to a six years' estimate, has risen to 23 years and 10 months for the woman, and 30 years and 7 months for the man. Marriages before the end of the fifteenth year take place even now, but only in the minimal proportion of 1.29 per 1000 for the female, .02 per 1000 for the male sex. Further, they chiefly occur in Sicily and the southern provinces, where the figure rises to about 2 and .03 per 1000' (Nissen, *Ital. Landeskunde*, p. 411).

I am acquainted with very few epitaphs from the provinces, in which the years of marriage are given in addition to those of life. Unless I am mistaken, the only Spanish inscription with a statement of age is *CIL*, ii, 2752 (Segovia): Herenniae Paternae nurui an. xiv L. Fab. Sigerus. For Africa and Egypt a still earlier age of marriage might probably be assumed.¹ Of course there are exceptions, *Inscr. de l'Algérie*, 3863 = *CIL*, viii, 9686 (Cartenna): Varia Honorata, virgo decora et innocens, que prope novos obiit toros. vixit ann. xxi. *CIL*, viii, 9638 (Zuccabar, Mauret. Caesar.): tradita marito annorum xviii. Also the following from *Inscr. de l'Alg.* in which ages are given: 321 (Lambaesis—quinto decimo anni mariti [read -ae] nomen accepit. 322 (*ib.*—marita an. xvi). 528 (*ib.*—d.m. Clodiae Ligose fecit Antonia filie a. v. mater v. a. an. xvii). 564 (*ib.*—d.m.s. Julia Fortunata v. a. xxviii m. x cum sponso suo an. xii). 727 (*ib.*—died at the age of 16 years and 2 days). 815 (*ib.*—vix. an. L—mecu[m] an. xxx). 2616 (Thibilis—matr[ona] v. a. xv h. s. e.). 3868 = *CIL*, viii, 9670 (Cartenna, a wife of 17 years, 3 months, 19 days, quae brevi ne quidem impleto biennii tempore crudo mortis interventu maritali vinculo disjuncta est). *Ephem. epigr. (additamenta to CIL*, viii), p. 568, 1323 (Ammaedera): Lucilla vix. ann. xiii m. v, ex quo tempore v(ix) ter senum mensum in diem mortis suae cum marito egit. A married couple of Eastern origin (Orelli, 4720: Rome): D. m. Harnes q. vix. an. xx Bariammas conjugii b. m. f. cum qua vix. an. viii et sibi. Of the Jewish inscriptions edited by Garrucci, mostly from the cemetery in Vigna Randanini (*Cimitero degli antichi Ebrei*, etc., Rome, 1862, and *Dissertazioni archeologiche*, ii [1865], p. 150) only three give the age of women at the time of their marriage. *Cimitero*, p. 32: Βερεπυσα αρπυρ (annorum) xvii εκου (?ειχε) μαρτυρουσ μηνσις (menses) xv, *ib.*, p. 50: Sabine conjugii benemerenti que vixit annis xviii dies iii Germanus coiigi benemerenti fecit cum virginium sun^a que vixit annis iii dies iii (Jerome on Joel, i, 8: vir pubertatis, sive ut LXX transtulerunt παρθενικὸς, quem vulgo virgineum vocant, eo quod primus florem virginittatis abstulerit); *ib.*, p. 60: ἐνθάδε κεῖτε Μαρμαρίτα (sic: Margarita), ἥτις ἐξησεν ἐτη ἰδ, μετὰ τοῦ συμβίου αὐτῆς ἐτη δ (?). ἐν ἰρήνῃ ἡ κοίμησις σου. The following (*ib.*, p. 58) also

¹ On the marriage of Moorish, Berber, Arab, and Jewish women in north Africa (at the age of 12-15, sometimes earlier), see Schwarz, *Algerien* (1881), p. 361; Hesse-Wartegg, *Tunis*, pp. 101, 165; Maltzan, *Drei Jahre im Nordwesten von Afrika* (1868), i, 251; iii, 44, 240.

^a *I.e.* fecit cum virginio suo = vixit in conjugio.

deserves mention : Μετίτῳ μητρὶ γλυκυτάτῃ Δουλικίᾳ θυγάτρῃ ἀνέθηκα ἥτις ἐξησεν ἔτη κθ. (A Δουλικίᾳ παρθένος μελλονύμφῃ occurs p. 69, without mention of age.)

We may assume the same age limits for Greece and Greek Asia as for Italy, without going counter to the earlier custom (in Xenophon, *Oecon.*, vii, 5, the young wife is not yet 15 years old; the recommendations of Hesiod, Plato, and Aristotle [Rein, *StRE*, iv, 1648] prove nothing as to the actual practice). In Longus' romance Daphnis and Chloe at the beginning of the narrative are respectively 15 and 13, at their marriage at most 16 and 14 years of age; there are special reasons why the daughters of the Messaliote Zenothemis (Lucian, *Toxar's*, 24) and of Germanos (Procopius, *Anecdota*, 5) were unmarried at eighteen. No doubt, however, marriages at this and even at a later age were by no means uncommon (a nineteen-year-old wife in Lebas-Waddington, v, 116 [Teos]; a maiden who died at 15, ii, 85 [Crommyon]). Greek physicians give 14 as the age at which menstruation begins. T. Gomperz (*Ein Brief Epicurs* in *Hermes*, v, 393, 1) quotes the following from Soranus of Ephesus, *De muliebribus affectibus*, 4, ed. Ermerins, p. 20, 10 : τὸ δὲ ἔμμηρον ἐπιφαίνεται τὸ πρῶτον περὶ τὸ τεσσαρεςκαιδέκατον ἔτος κατὰ τὸ πλείστον ὅτε καὶ τὸ ἥβαν καὶ τὸ διογκοῦσθαι τοὺς μαστοὺς : cp. p. 41, 15 and a very similar passage from Paulus Aegineta (reign of Constantine Pogonatus, 668–685) : ταῖς πλείστας ἢ καθαρὰς γίνεται περὶ τεσσαρεςκαιδέκατον ἔτος, ὀλίγαις δὲ θάσσον, κατὰ τὸ τριςκαιδέκατον ἢ δωδέκατον, ὅκ ὀλίγαις δὲ βράδιον τῶν δεκατεσσάρων. ἐτῶν (iii, sect. 60, Basle edition, p. 113, 44). The statement of Soranus, who practised at Rome under Trajan and Hadrian (Ermerins' *praef.* v) : εὐφύως δὴ πρὸς σύλληψιν διακείσθαι σημειώτιον τὰς ἀπὸ πεντεκαδεκαετοῦς ἡλικίας ἕως τεσσαρακονταετοῦς κατὰ τὸ πλείστον (p. 43, 4), would certainly have applied to other women besides Greek. Yet, from inscriptional and other evidence, we may assume that they were frequently married a considerable time (often two years) before puberty, just as the Roman women, of whom Macrobius expressly says (*Comm. in Somn. Scip.*, i, 6, 70) : post annos bis septem—purgatio feminarum—de (tutela) tamen propter votorum festinationem maturius biennio absolvuntur. Girls in modern Greece frequently marry at an equally early age. Fahrenheid (*Reise durch Griechenland* [1841], p. 24) saw young wives of 13 with children at the breast. The following are the age specifications known to me. *CIG*, 3118 = Kaibel, *Epigr.* 227 (epitaph on a 14-year-old maiden at Teos) : ἐν δὴ ἐλαχον σῆμα τὸδ' ἀπὲ γάμου. *Anthol. Graeca*, ed. Jacobs, ii, 5 (epigram of Perses, VI—older than Meleager—on the death of a girl of 14 before her marriage); ii, p. 175 (Leonidas Alexandrinus, under Nero, VII) : γρήνῃ ἐγγυε Φιλίνος, ὅτ' ἦν νέος ἥνικα πρέσβυς, Δωδεκέτιν. ii, p. 182 (*ib.*, XXXVIII, a father mourning for his daughter) : κατέστνε δ' οὐχ Ὑμεναίω, ἀλλ' Αἰδᾷ νύμφαν δωδεκέτιν κατὰγων. According to Phlegon, *Mirabilia* (Müller, *FHG*, iii, 618) in the year 45 a maiden of 13 years, shortly before her marriage, changed into a man. *Ephem. epigr.*, v, p. 29, 51 (Ancyra in Galatia, second half of the second century) : conjugii b.m. ann. xv mens. v dieb. xviii quae partu primo post diem xvi relicto filio decessit. *Oester. Mitth.*, viii (1884), p. 11, 24 (near Kustendje) :

ἡλικία δὲ ἐτῶν ιγ. In Greek epitaphs the years of marriage are never given, except in the case of a few Greek women who died in Rome; but for these instances we may draw conclusions as to Greece:—

Age at marriage, 12 years, <i>CIG</i> , 6631	
" " 13 " " 6252	
" " " " " 6263	
" " " " " 6462	
" " 15 " " 6437	

In northern and north-western countries girls of course married later (Tacitus, *Germ.*, 20: nec virgines festinantur). I can only cite two inscriptions from Lugdunum: Orelli, 4803 = Boissieu, *Inscr. d. L.*, 429 (age at marriage over 13) and Henzen, 7376 (age 16); one from Arelate (Henzen, 5223 = *CIL*, xii, 690: died at the age of 14 years, 2 months, 5 days); *CIL*, xii, 2398 (Augustum): died at the age of 34, quae mecum vixit ann. xx m. x d. xii; one from Celeia (Gruter, 839, 12: thirty-year-old mother of a fifteen-year-old daughter); from Siscia (*CIL*, iii, 1, 3989: a woman who died at the age of 39, who had been married 19 years, 9 months); from Carnuntum (*Ephem. epigr.*, iv, 155, no. 532: twenty-four-year old mother of a ten-year-old son); from Brigetio (*CIL*, iii, 1, 4314: over 17 years); and two from Dacia (*CIL*, iii, 1, 866 [Napoca]: D. m. Aurelia Marina vix. ann. xvii Aur. Marinius, fil. ejus vix. anno i; *CIL*, iii, 1, 1315: vixit annis xxvi efecit (*sic*) in matrimonio ann. xi m. x). The British sepulchral inscriptions contain no age specifications. Further, Weinhold (*Die deutschen Frauen*, p. 91) observes: 'Amongst the Lombards marriages of twelve-year-old boys and girls were perfectly valid, and similarly according to Saxon and Frisian law; also in the French feudal law twelve was a regular age for the marriage of a girl'. 'In general, fifteen appears to have been the usual age for marriage according to Norwegian law'. Moldavo-Wallachian girls as a rule are already married at thirteen (*Land und Leute in Rumänien in Preuss. Jahrbücher*, July, 1866, p. 72); the princess of Montenegro was married at thirteen and a half (S. Kapper, *Montenegrinische Skizzen in Deutsche Rundschau*, December, 1876, iii, 363). The Saxon girls in Transylvania (according to Bergner, *Siebenbürgen*, 1884) often marry between fourteen and fifteen.

Cavedoni, in *Dell' età consultata nelle nozze degli antichi Cristiani* (from which I have here borrowed something; cp. *Acad. Alb.*, ii, 1864), exhaustively proves that the custom of girls marrying at or soon after the age of puberty continued to exist in Christian times. 1 Corinthians, vii, 36: ἐὰν τις ἀσχημονεῖν ἐπὶ τὴν παρθένον αὐτοῦ νομίζει, ἴαν ἢ ἐνέτακμος καὶ οὕτως ὀφείλει γίνεσθαι, ὃ θέλει ποιεῖτω, οὐχ ἁμαρτάνει· γαμεῖτωσαν, leads to no conclusion. Canon law fixes female puberty at 12, male at 15 years, and the inscriptions in the catacombs confirm the continuance of early marriages in the case of females. Cavedoni found mention of 8 females who were married between 12 and 13, 9 at 13, 11 at 14, 16 at 15, 13 at 16, 11 at 17, 9 at 18, 8 at 19, 9 at 20, 6 at 21, 5 at 22; a few married later. Some of the older of the above may have been married before. *CIL*, v, 1, 4850 (Christian inscription at Brixia; age at marriage 15): *ib.*, 1620, 1636, 1647,

R.L.M.

K

1678, 1710 (Christian inscriptions at Aquileia; age at marriage 16 to 21). A number of Christian inscriptions (Boldetti, p. 385, 417, 461; Fabretti, 269, 130) show that girls under 12 married, but of course were not regarded as legitimate wives until after the completion of their twelfth year. Here may be mentioned the inscription from De Rossi, *Inscr. Christ.*, 107, wrongly doubted by Cavdoni (p. 18): Constantiae benemerenti Birginus castae conpari cum qua fecit annis viii que vicsit annis xviii menses viiii dies xvii, ibit in pace vi kal. Decembres Limenio et Catullino cons. (A.D. 349); cp. the editor's note. Augustine, *Confessions*, vi, 13, 23: jam petebam (uxorem—Mediolani), jam promittebatur, maxime matre dante operam, quo me jam conjugatum baptismus salutaris acciperet—puella petebatur cujus aetas ferme biennio minor quam nubilis erat; et quia ea placebat, expectabatur; *ib.*, ix, 9, 19: (Monnica) ubi plenis annis nubilis facta est tradita viro servivit velut domino. St. Agnes is said to have suffered martyrdom at the age of 12 (Ambrose, *De Virginibus*, 2, 7) or 13 (Augustine, *Serm. de diversis*, 101).

I append two epigrams by Agathias and Paullus Silentiarius (both under Justinian), which give the same results for the Eastern Roman empire.

Agathias, 94 (*Anth. Pal.*, iii, p. 68):—

Ἐπτά με δις λυκάβαντας ἔχουσιν ἀφῆρπασε δαίμων,
ἦν μούνην Διδύμῳ πατρὶ Θάλεια τέκεν.

οἱ μὲν γὰρ γονέες με γαμήλιον εἰς Ἱμέβαιον
μέλλον ἀγειν, στυγεροῦ δ' εἰς Ἀχέροντος ἔβην.

Paullus Silentiarius, 83 (*ib.*, p. 102: ἐπὶ τῇ ἰδίᾳ θυγατρὶ, ἥς ὄνομα Μακηδονία):

Λέκτρα σοι ἀντὶ γάμων ἐπιτύμβια, πάρθενε κούρη,
ἱστόρεσαν παλάμαις πενθαλείαις γενέται.

δωδεκῆτιν γὰρ μοῖρα, Μακηδονίη, σε καλύπτει,
κάλ्लειν ὀπλοτέρην, ἥθεσι γηραλέην.

Anth. Pal., iv, 278 ep. 729^a (of uncertain date):—

Μαρκέλλης τάφος εἰμὶ· τίς αὐτῇ, γράμματα λέξει.
ἀρτίγαμος κούρη εἴκοσιν οὐσ' ἔτιών.

I may further mention that in Petrarch's *De obedientia et fide uxoria mythologia* (a translation of the rooth novella in Boccaccio's *Decamerone*), the daughter of Griseldis, whom the margrave Walter allows to come as his supposed bride, is 12 years old (*Opera*, Basle edition, p. 604). Charlemagne's wife Hildegard, mother of Rotrud, had been married to him in her thirteenth year (Dahn, *Paulus Diaconus*, p. 47). Lucrezia Borgia, born 1480, married Giovanni Sforza in 1493 (Gregorovius, *Lucrezia Borgia*, i, 36, 49). Sixtus the Fifth married the twelve-year-old Mar' Antonio Colonna to the ten-year-old Orsina Peretti (Hübner, *Sixtus V.*, ii, 176). According to Galateo de Lecce (a friend of Pontanus) girls in Terra di Otranto used to be married at 12 (Gothein, *Culturentwicklung Süditaliens*, p. 390). Anna Melanchthon married Georg Sabinus, the first rector of the university of Königsberg, at 14 (*Programm der Universität*

Königsberg, 1874, p. 6). Madame de Caylus, born 1673, married in 1686 (Sainte-Beuve, *Causeries du lundi*, third ed., Paris, 1858, iii, 58); Henriette Herz, born 1764, married in 1779 (Fürst, *Henriette Herz*, p. 25). By the law of the 20th of September, 1792, every lad of 15 and every girl of 13 in France were empowered to contract marriage (Sybel, *Geschichte der Revolutionszeit*, iv, 10). Sadler (*Law of Population*, ii, 281 in Quetelet's *Physique sociale* (1869, i, 181), in a survey of the marriages of English peeresses, gives 32 marriages concluded at the age of 12 to 15, from which 141 children were born; in a survey of the births in the principal charitable institutions of London, 74 marriages between 13 and 16 years, and 376 children. Quetelet himself remarks (p. 381): en Belgique les femmes se marient déjà entre 14 et 16 ans.

XIX. THE USE OF HOMERIC PERSONAL NAMES FOR APPELLATIVES.

(Vol. I, p. 248, l. 17.)

Menelaus, Helena, Paris for husband, wife, and lover. Cicero, *Ad Att.*, i, 18, 5: Nam M. Luculli uxorem Memmius suis sacris initiavit. Menelaus aegre id passus divortium fecit. Quamquam ille pastor Idæus Menelaum solum contempserat, hic noster Paris tam Menelaum quam Agamemnonem liberum non putavit. Martial, i, 62, 5: juvenemque secuta relicto conjuge Penelope venit, abit Helene. Lucillus, *epig.* 9 (*Anthol.*, ed. Jacobs, iii, 30 (ἐἰς γραμματικὸν κεραφόρον):

Ἐξω παιδεύεις Πάριδος κακὰ καὶ Μενελάου,
ἐνδον ἔχων πολλοὺς σῆς Ἑλένης Πάριδας.

(*Penelope.* Martial, xi, 7, 5: Penelope licet esse tibi sub principe Nerva.)

Deiphobus. *Ib.*, iii, 85:—

Quis tibi persuasit nares abscindere moecho?
non hac peccatum est parte, marite, tibi.
stulte, quid egisti? nihil hic tibi perdidit uxor,
cum sit salva tui mentula Deiphobi.

(cp. Virgil, *Aen.*, vi, 494, where also the deceived husband is imagined as Menelaus). (*Cassandra.* Cicero, *De Orat.*, ii, 265: cum S. Titius se Cassandram esse diceret, multos, inquit Antonius, possum tuos Ajaces Oileos nominare.) *Atrides.* Of Domitian: Juv., iv, 65: itur ad Atriden; of the husband, who murdered his wife, *ib.*, vi, 660: si praegustabit Atrides Pontica ter victi cautus medicamina regis. *Talthybius.* Seneca, *Apocol.* 13: incit illi manum Talthybius deorum. *Automedon.* Cicero, *Pro Roscio Amer.*, 35, 98: non suis manibus in curru collocat Automedontem illum, sui sceleris acerbissimi nefariaeque victoriae nuntium; Varro, *Sat. Menip.*, 257 Bücheler: Automedo meus, quod apud Plotium rhotorem bubulcitarat, erili dolori non defuit; Juvenal, i, 60: dum pervolat axe citato Flaminiam puer Automedon, nam lora tenebat ipse; Ovid, *A. am.*, i, 8: Tiphys et Automedon dicar amoris ego; cp. i, 5, ii, 738. *Machaon.* Martial, ii, 16, 5: Quid tibi cum medicis? dimitte Machaonas omnes. *Podalirius.* Ovid, *Remed. Am.*,

313: Curabar propriis aeger Podalirius herbis; Martial, x, 56, 7: Enterocelarum fertur Podalirius Hermes; Firmicus Maternus, *De Math.*, vii, 24: Medicorum Podaliriorum geniturae; *ib.*, 25; Callioporum musicorum geniturae. *Irus*. Ovid, *Tristia*, iii, 7, 42: Irus est subito, qui modo Croesus erat; Martial, xii, 32, 9, Irus tuorum temporum; so in *Vita Gordianorum*, 19: Priamus sui temporis. *Nestor*. Cicero, *Ad Fam.*, ix, 14: non alienum est dignitate tua, quod ipsi Agamemnoni, regum regi, fuit honestum, habere aliquem in consiliis capiendis Nestorem. Although as in some of the other cases the following use of the name is not purely appellative, I may mention its use in the sense of 'old man', although it was probably usual; cp. Juvenal, xii, 128: vivat Pacuvius, quaeso, vel Nestora totum. *Prometheus*. Juvenal, iv, 133: debetur magnus patinae subitusque Prometheus. *Lynceus*. Cicero, *Ad Fam.*, ix, 2, 2: quis est tam Lynceus, qui in tantis tenebris nihil offendat, nusquam incurrat? *Endymion*. Juv., x, 318: Sed tuus Endymion dilectae fiet adulter matronae. *Ucalegon*. *Ib.*, iii, 198: jam poscit aquam, jam frivola transfert Ucalegon (Virgil, *Aen.*, ii, 311).

XX. ROMAN FINDS IN THE NORTH.

(Vol. I, p. 310, l. 7.)

By Dr. Otto Tischler, of Königsberg.

A VERY brisk trade was carried on between the Romans and northern Europe (north Germany, Denmark, south Sweden, and the southernmost part of Norway). Numerous manufactures of Roman origin, especially metallic vessels,¹ and, less frequently, statuettes are to be found throughout this region from Hanover to the Vistula, whereas in East Prussia up to the present only a Roman stewpan and fragments of two tin-plated silver dishes have been discovered. Some of the ornaments, such as dress-pins, buckles, and, later, various enamelled articles point to a direct importation, that is to say, from the frontier provinces of the Roman empire on the Rhine and the Danube. The majority, however, have been manufactured in imitation of Roman models in the north itself, and different districts show different local types. Therefore, in addition to direct importation we must also take into consideration the Roman influence implied by these models, which certainly was all important throughout the north and materially encouraged the artistic skill of the northern barbarians, which is generally rated far too low. We can accurately distinguish the vessels of the early empire (to about the end of the second century) from those of later date. The former are partly far more artistically decorated and often bear trade-marks, which recur in Italy, especially at Pompeii.² While glass vessels

¹ These finds (up to 1880) are described in I. Undset, *Das erste Auftreten des Eisens in Nordeuropa* (German edition, Hamburg, 1882).

² On the Roman stamps and inscriptions on metal vessels and other articles in the north, see Undset, *Iscrizioni latine ritrovate nella Scandinavia* in *Bullettino dell'Istituto di Correspondenza archeologica* (Roma, 1883, pp. 234-236). The difference was first clearly pointed out by Sophus Müller: *En Tidsadskillelse mellem fundene fra den ældre Jernalder i Danmark* in *Aarbøger for nordisk Oldkyndighed* (Copenhagen, 1874).

of the earlier centuries of the empire occur, though rarely, in the north, glass beads of this period are found in abundance, and in forms which can be accurately classified as to date, but occur, absolutely identical, in the Caucasus and from Egypt to France. In the north they are certainly imported articles, as they were in the greatest part of the world as known to the ancients; in the south also they have been imported from a central source, probably in Egypt.¹ Hence they afford us little information as to the commercial routes, especially as they could easily be transported into the most distant countries, as at the present day to the savage peoples of Central Africa.

But it is not yet clear what kind of productions the Romans received in exchange from the north.

On the trade between the peoples of the south and the north works have been written by Wiberg,² Genthe,³ and v. Sadowski,⁴ the second of which is especially concerned with Etruscan trade. At the time when these publications appeared (1867, 1874, 1877), the archaeological relations of northern Europe and the pre-classical age of Italy were not so well understood as now; hence many articles found in the north were entered in the catalogues as Etruscan importations, which are now recognized beyond doubt as native, or at least northern productions. On finds thus incorrectly judged, on unsafe linguistic and historical foundations, a system of commercial routes has been constructed, which in many respects is opposed to the results of modern research. Sadowski, in particular, has in many cases assumed the roads for eastern Europe only on *a priori* grounds; he goes much into details, but bases his conclusions on foundations that are all uncertain, and sometimes absolutely false. In all three works far too much importance is attached to amber in reference to trade. For in the north undoubtedly imported articles, particularly metal vessels, are frequently found, but not so much in the amber countries as in other regions (*e.g.* the west coast of Jutland); while on the other hand they are hardly met with at all in East Prussian Samland, the chief modern centre of the amber production. We must accordingly assume productions of another kind, as return gifts for the metal articles so common in the north, which we can trace not only radially to the coast, but over extensive tracts of northern Germany.

There is no doubt, however, that amber at different times was greatly in request (see the evidence collected by von Helbig).⁵ Yet we find that the Greeks during the classical period and the Italian peoples (Etruscans, Romans) from about 400 onwards showed

⁴ J. N. von Sadowski, *Die Handelsstrassen der Griechen und Römer* (German edition, Jena, 1877), with which F. Waldmann, *Der Bernstein im Alterthum* (Stettin, 1883) is in complete agreement. For the imported articles in north Germany, see Undset, p. 521.

⁵ W. von Helbig, *Osservazioni sopra il commercio dell' ambra in Atti dell' Acc. dei Lincei*, 3rd ser., *Memorie, classe stor.*, i (1877), pp. 415-435.

little desire for it, although northern gold was much sought after, even before that date, both north and south of the Apennines, where it is found in graves in enormous, though somewhat varying, quantities. The jugs with spouts from Etruria proper belong to the fourth century; they are extraordinarily numerous in southern Germany as far as central Germany and Champagne, but not on the Baltic coast, so that they cannot have reached the north in exchange for amber, but are rather evidences of brisk commercial relations. In the last four centuries B.C., amber is found throughout Germany and France much less frequently than before, so that we cannot assume an increased market for it during this period. It was not till the beginning of the imperial period that north European gold again came greatly into favour in Italy. But while in earlier times only the west coast of Jutland¹ had furnished the south with this valuable material, it was now chiefly supplied from East Prussian Samland, which in the pre-Christian era imported hardly anything from Italy. During the reign of Nero a Roman knight of Carnuntum was sent to these eastern shores to investigate the newly discovered Eldorado,² whence he brought home enormous quantities of amber. But it reached the Romans not so much directly as through the trade between various tribes, being brought by the Germans themselves as far as Pannonia. Nothing has been found to show how far Roman merchants penetrated to the north by way of Bohemia; a cinerary urn with a Roman inscription, said to have been found at Massel in Silesia, which has frequently been regarded as the cinerary urn of a Roman knight, is more than doubtful.³ The most important Roman trade route ran from Carnuntum up the March valley into the district of the Oder, where it branched off to the Elbe and the Vistula. The Rhine route cannot have been nearly so important for east Germany and the amber trade. Wide depressions between mountain ranges and river valleys, large navigable rivers or dry, gently sloping rising ground, leading round the marshes, the risks of which have often been somewhat exaggerated, had been from time immemorial the most natural channels of communication and trade between different peoples. Hence in such districts the inhabitants are more numerous and more prosperous.

The manner in which Sadowski has conjectured the chronological development of trade from the coins occurring in eastern Europe is incorrect. For the period before the empire a supposed find of 40 Greek coins at Schubin (in Posen) was the cause of much confusion, until the investigations of Julius Friedlaender proved the absolute unimportance of this find and the baselessness of the hypothesis⁴ of commercial relations between the Baltic east coast and Greece, especially the Greek colonies on the Black Sea.

¹ C. V. Müllenhoff, *Deutsche Alterthumskunde*, ii (Berlin, 1870-1883), p. 476.

² Pliny, *Nat. Hist.*, xxxvii, 45.

³ Undset, p. 62.

⁴ First put forward by C. von Levezow in *Abhandlungen d. Berliner Ak. d. Wiss.*, 1833, p. 181. J. Friedlaender's refutation in *Märkische Forschungen*, iii; *Zeitschrift für Numismatik*, v, p. 213; *Zeitschrift für Ethnologie*, xiii (Berlin, 1881), p. 234; where he shows that these coins are an artificial mixture of different finds, and that their provenance is probably northern Greece. He further shows that they are for the most part Athenian coins, while Sadowski derives them from Olbia (*Handelsstrassen*, p. 72) and regards them

For the imperial period also, the Roman coins, both silver and bronze, found in such enormous quantities throughout northern Europe, especially East Prussia, must be accounted for quite differently; above all, they appear to have had no connexion with the amber trade. Consequently, at this period amber must have played only a subordinate part, as one of the many articles of exchange. For it is just in the modern amber district that the better Roman articles are scarcely found at all, with the exception of the glass beads which occur everywhere, while they appear in ever increasing quantities from the Vistula to Mecklenburg and Denmark.¹ Now these articles, in conformity with the nature of the carrying trade, might certainly have been kept back amongst the tribes living nearer to the centre; but their occurrence just in the districts lying between both amber coasts would be difficult to explain, unless we are to assume a general trade, comprehending the whole of northern Germany, not however restricted to that limit, but also extending to Sweden and especially to the island of Gotland.

The finds of Roman coins in large numbers in northern Germany,² as already mentioned, play quite a different part from that formerly ascribed to them; in East Prussia, especially, the amber country, which, as regards the first four Christian centuries, has been more thoroughly investigated than any other district of Europe outside the Roman empire, their presence can be most clearly explained;³ it has been proved that they arrived in the district at a tolerably late date, long after the beginning of the amber trade. The single coins found here and there, the majority of them of bronze, are for the most part sepulchral,⁴ and are extremely numerous, even far from the coast. But they only occur in a certain class of graves, mostly of the third century (some at the end of the second at the earliest). For although in the graves of this period coins of the earlier emperors (Trajan, Hadrian) are found, as a rule they are those of the Antonines and the two Faustinas, and in addition, amid precisely similar

as the chief argument for trade relations between Olbia and the lowlands of the Vistula. Similar forgeries (i.e. admixtures of native and foreign articles) are a Greek statuette and Greek coins from the chapel of St. Peter at Koltzen on the gulf of Riga, published in F. C. H. Kruse, *Necrologica* (heft 21) and elsewhere. Their spuriousness is established almost beyond doubt by C. A. Berkholz, *Des Grafen Ludwig August Mellin bisher unbekannter Originalbericht über das angebliche Griechengrab an der livländischen Meeresküste* (Riga, 1875). Greek coins seem really to have been found here and there in the north (Lissauer, p. 57). But their number is extremely small.

¹ In Undset, as above; cp. the contents of the several chapters.

² The relation of these coins to Sweden is clearly explained in O. Montelius, *Die Cultur Schwedens in vorchristlicher Zeit* (German tr. by Appel, Berlin, 1885). On the Roman coins occurring in Scandinavia, especially in Gotland, see O. Montelius, *Remains from the iron age of Scandinavia* (Stockholm, 1869). For West Prussia: A. Lissauer, *Die prähistorischen Denkmäler der Provinz Westpreussen* (Leipzig, 1887), p. 134. For Pomerania: Kühne, *Die in Pommern gemachten römischen u.s.w. Münzfunde*, in *Baltische Studien*, 27 (Stettin, 1877), p. 203. On the finds in other districts of northern Germany: Veltmann, *Funde von Rötermünzen im freien Germanien* (Osnabrück, 1886). For East Prussia, a brief summary in Bender, *Beiträge zur Geschichte des preussischen Geld- und Münzwesens* (Braunsberg, 1878; reprinted from *Zeitschrift für Geschichte und Alterthumskunde des Ermlands*, v, 521).

³ O. Tischler, *Das Gräberfeld von Oberhof: Schriften der physikalisch-ökonomischen Gesellschaft zu Königsberg*, xxix (1888), *Verhandlungen*, p. 19.

⁴ [Various objects, such as clothes, jewellery, arms, agricultural implements and tools, toilet articles, food and drink, and coins were placed in the tomb for the use of the deceased in another world. Tr.]

objects, coins of Alexander Severus and Gordianus Pius, down to Philip the Arab ; and it is these later coins, which although not so frequent are yet fairly common, that show by their particularly well-preserved stamp, that they were most recently in circulation. Hence we must take them as the basis of our reckoning, especially as finds in the south establish the fact that during a considerable part of the preceding period coins were not placed in graves. By the side of such sepulchral coins, found in smaller numbers or isolated, large finds have been discovered of bronze, but chiefly silver coins (more than 1000 in one place), which may be regarded as directly imported. Although older coins from the time of Nero onwards are found in these hoards, the latter all extend to the end of the second, but mostly to the beginning of the third century ; hence we see that in addition to the more recent coins quite a number of older ones entered the country, which makes it probable that none of the Roman coins found in East Prussia made their way thither till after 200 or at most shortly before. Hence it would be wrong to draw specific conclusions as to the shifting course of trade from the nature of the coins.¹ Consequently, these coins have no connexion with the east Baltic amber trade that began about the time of Nero, which is also confirmed by the fact that they are found in larger numbers in graves north of Memel than in Samland, the amber district proper, where, however, they are tolerably frequent.

In any case the coins did not reach the north till after the Marcomannic war, which may be looked upon as the beginning of the great migration of the nations. At that time the peoples of the north forced their way in greater numbers into the Roman empire and maintained permanent relations with the inhabitants who remained in the country. Hence, all the masses of coins now made their way to the north, as far as Sweden, especially Gotland (where certainly no amber was found) ; and a more or less complete alteration, pointing especially to the south-east of Europe as far as the Black Sea, took place in the form and decoration of ornamental wares, both those that were imported and those that were manufactured in the country. Splendid sepulchral finds of this period, with altered forms of metal vessels and numerous glass vessels of a new style, have been discovered in graves in Scandinavia as far as Seeland (Zealand) and Scania, further in Mecklenburg,² Thuringia, Silesia,³ east Galicia, and north Hungary.⁴ These graves were originally supposed to be genuine Roman graves, whereas the admixture of late Roman and barbaric articles clearly shows that we have to do with native graves. The most brilliant find of this kind is the grave at Sackrau

¹ Hence Sadowski's attempt must be regarded as unsuccessful, and in particular the chronological dating of brooches according to finds of coins (*Handelsstrassen*, p. 178) as absolutely false.

² G. C. F. Lisch, *Römergräber in Mecklenburg* (*Jahrb. d. Vereins für Mecklenburg. Geschichte und Alterthumskunde*, Schwerin, 1870). The assumption is false ; they are not Roman, but German graves. Bibliography of these graves in Mecklenburg and Scandinavia in Undset.

³ Grempler, *Der Fund von Sackrau* (Brandenburg-Berlin, 1887).

⁴ Amongst other places, at Osztrópataka in Hungary : J. Hampel, *Der Goldfund in Nagy Szent Miklós* (Buda-Pesth, 1885), in which work extremely important aspects of the middle and later Roman empire are elucidated.

near Breslau, containing beautiful bronze vessels, gold ornaments, splendid *millefiori* glass dishes, the date of which is shown by a coin of Claudius Gothicus (268-270).

In East Prussia the import of coins ceases almost entirely after the middle of the third century; only a few isolated specimens of the time of Constantine have been found. But several valuable fifth century finds have been made, consisting of East Roman gold coins, mostly as late as the reign of Anastasius (518), in addition to isolated gold coins, frequently found in the low-lying districts of the Vistula, to the north as far as the south of Sweden and the islands of the Baltic.¹ The most easterly find was made at Klein Tromp near Braunsberg, and was unjustifiably connected with an embassy, sent by the Aestyes to King Theodoric. But it is only one of many, which point to the connexion at this late date of north-east Germany and especially Scandinavia with the Eastern Roman empire.

Consequently, although the details still remain obscure, we find that trade was briskly carried on between the north and the Roman empire, and that after the Marcomannic war it took a more and more easterly direction.

XXI. TOURISTS' INSCRIPTIONS ON THE PYRAMIDS.

(Vol. I, p. 362, l. 28.)

A GREEK inscription in the schol. Clem. Alex. ed. Klotz, iv, p. 113 (Osann, *Syll. inscr.*, p. 413):—

Μνήματα Καίφρῳός τε καὶ ἀντιθέου Μυκερῆνου
καὶ Χέωςος κατιδὼν Μάξιμος ἡγασάμην.

The inscription given in Mommsen (*CIL*, iii, 21) as copied by the Lüneburg nobleman Otto von Neuhaus called Wilhelm of Boldensele, who in 1336 undertook a pilgrimage to the Holy Land, was also copied by Felix Fabri, the preacher-monk of Ulm, who twice made the same pilgrimage (1480, 1483). In his *Evagatorium in Terrae Sanctae, Arabiae et Aegypti peregrinationem* (ed. C. D. Hassler in the *Bibliothek des litterarischen Vereins in Stuttgart*, vol. iii (bibl. vol. iv), p. 43, he says: *Sunt autem duae pyramides valde eminentes, mirae magnitudinis et latitudinis, sicut montes, ita quod a longe visae apparent turres esse. In his invenimus diversas litteras et scripturas nobis ignotas, in uno tamen latere hos subscriptos invenimus versus, insculptos latinis litteris et scriptura. Then follows the inscription with the following deviations from the text of Boldensele: 1, pyramides; 3, memoriam; 4, centanni, pyramis; 5, tyranne; 6, inter. In addition, at the end of the lines the last letters of the words are repeated except in line 6, where, instead of E, S is written (no doubt by inadvertence). Cp. my 'programm' *De titulo latino in pyramide Aegyptiaca insculpto* (Acad. Alb. Regim. 1869, ii).*

The only improvement in Fabri's copy is *pyramis* for *pyramide* (Boldensele) in line 4. For it is probable, as already conjectured by C. L. Grotefend, in *Zeitschrift des hist. Vereins für Niedersachsen*

¹ Collected in Lissauer, p. 134; Montelius, *Remains from the Iron Age*, p. 19; Kühne, p. 126.

an. 1852 (Hanover, 1885), p. 251, that the first word was not *sil*, but *scil*, so that the line ran :—

Scit nomen Decimi Gentiani pyramis alta.

Perhaps the name was carved above or below the inscription. Mommsen has shown (*CIL*, iii, p. 967) that it refers to Terentius Gentianus (from his inscription *CIL*, iii, 1463, from Sarmizegetusa) : . . . (Te)rentio Gentiano trib. militum quaestori trib. pl. pr. leg. Aug. consuli pontif. cens. provinc. Maced. colonia Ulpia Trajan. Aug. Dac. Sarmizegetusa patrono. From this it is clear that the alteration *censoris* (= censoris) in line 6 (Mommsen, Hirschfeld, and myself) is correct. The following is the probable text of the inscription :—

Vidi pyramidas sine te, dulcissime frater,
et tibi quod potui lacrimas hic maesta profudi,
et nostri memorem luctus hanc sculpo querelam.
Scit nomen Decimi Gentiani pyramis alta,
pontificis comitisque tuis, Trajane, triumphis
lustra sex intra censoris consulis esse.

Cp. Mommsen, *StR*, i⁸, 577, 2. Line 3 is a reminiscence of Horace, *Odes*, iii, 11, 50: i secundo Omine et nostri memorem sepulcro Scalpe querellam.

XXII. THE USE OF THE WORD *ROMANTIC* AS APPLIED TO NATURAL SCENERY.

(Vol. I, p 395, l. 19.)

I AM indebted to H. A. J. Munro (died 1886) for a communication, in which he points out that in England the word 'romantic' was used about the middle of the seventeenth century not only of persons (e.g. in Evelyn's *Diary*, 23rd of September, 1680, of Queen Christina of Sweden), but also of natural scenery, and in the modern sense: 'that which fills the mind with wonder and delight, by uniting the strange and uncommon with the beautiful or grand'. The very interesting passages which show the feeling of that age in regard to nature are the following :—

Pepys's *Diary*, 26th of February, 1665 (describing his first visit to Windsor Castle): 'This being done, to the king's house and to observe the neatness and contrivance of the house and gates: it is the most romantique castle that is in the world. But Lord! the prospect that is in the balcone in the queene's lodgings, and the terrace and walk are strange things to consider, beeing the best in the world, sure!' Evelyn's *Diary*, 27th of June, 1654: 'But what appeared most stupendous to me was the rock of St. Vincent, a little distance from the town (Bristol), the precipice whereof is equal to anything of that nature I have seen in the most confragose cataracts of the Alps, the river gliding between them at an extraordinary depth. . . . There is also on the side of this horrid Alp a very romantic seat'; *ib.*, 3rd of August, 1654: 'Hence to Sir Guy's grot (near Warwick) where, they say, he did his penances and died. 'Tis a squalid den made in the rock, crowned yet with venerable

oaks and looking on a goodly stream, so as, were it improved as it might be, 'twere capable of being made a most romantiq and pleasant place'.

In his *Remarks on several parts of Italy*, etc., in 1701-1703, Addison says of the wild country near the little harbour of Cassis (between Marseilles and Genoa), where according to the legend Mary Magdalene spent the end of her life in sorrow amidst solitary rocks and mountains: 'It is so romantic a scene that it has always probably given occasion to such chimerical relations'. Here the word 'romantic' is used as an entirely objective designation of the wild and fantastic, without any idea of pleasure. On the other hand, the use of the word in Thomson's *Seasons* (1729) leaves no doubt that the poet feels attracted by the romantic nature of the scenery. In *Spring* (1025) the lover

restless runs
To glimmering shades and sympathetic glooms
Where the dun umbrage o'er the falling stream
Romantic hangs;

Autumn (789):—

and here awhile the Muse
High hovering o'er the broad cerulean scene
Sees Caledonia in romantic view.

Lady Mary Wortley Montagu is fond of the word 'romantic': to the quotations in vol. i, p. 404 add the letter to Pope (1st of April, 1717): 'I no longer look on Theocritus as a romantic writer; he has only given a plain image of the way of life amongst the peasants of his country'.

According to Breitingen, *Classisch und Romantisch in Gegenwart*, 1885, no. 5, p. 71, the English 'romantic' is derived from the form *romant* for *roman*. In Philips's *New World of Worlds* (London, 1706) 'romantick' is styled a neologism. Up to the eighteenth century the French only knew the word *romanesque* (*Dict. de l'Acad.*, 1694; *romanesque*: qui tient du roman, etc. Madame de Sévigné: je vous écris romanesquement au bord d'une rivière). Saussure and Diderot use the same word: c'est une vue romanesque, dont on suppose la réalité quelque part (Salon de l'année 1767: *Œuvres*, ed. Naigeon, xiv, 188). Marmontel and Rousseau have *romantique* from the English.

Evidently the form *romanisch* was the first that made its way into German. *Neues ausführliches Dictionarium oder Wörterbuch in drei Sprachen; Teutsch, Französisch, und Englisch* (Geneva, 1695); *Romanesque*: fabelhaft, romanisch (cp. Breitingen as above). Kant uses this form only. Although in Schubert and Rosenkranz's edition (xi, 1, 224) *romantisch* is given in a note on Cervantes, I am convinced by an examination of the original MS. that Kant undoubtedly wrote *romanisch*. In his *Beobachtungen über das Gefühl des Schönen und Erhabenen* (1764) Kant speaks of the knights of the Middle Ages as 'eine seltsame Art heroischer Phantasten, welche Abenteuer aufsuchen, Turniere, Zweikämpfe und *romanische* Handlungen' (*Werke*, iv, 461-463); in a note to this treatise (iv, 407) he says: 'When sublimity or beauty exceeds the recognized mean,

it is usually called *romanisch*. Consequently, in the *Anthropologie* (vii^b, 254): '(der Spanier ist) von romantischer Stimmung des Geistes, wie das Stiergefecht . . . beweist', we should read *romanischer*.

According to Ludwig Hirzel (*Romanisch*, in Haupt's *Zeitschrift für deutsches Alt.*, xxvi, 1882, p. 192) *romantisch* first occurs by the side of *romanisch* in the Berne *Speculateur* (to which Haller contributed) of 1734 in an anonymous essay called '*Historie*'. In this the writer says the *historici* are fond of introducing something *romantisches*, and that Curtius borrows *romanische* sentiments from others. In an essay *Romanes* by the same writer authors of romances are sometimes called *Romanisten*, sometimes *Romantisten*. In Haupt's *Zeitschrift*, xxxii, 1888, pp. 223-226) Hirzel also refers to Gotthard Heidegger's *Mythoscopia Romantica* (a discourse on the so-called romance; Zürich, 1698) in which the word *romantisch* (by the side of *romanisch* and *romanzisch*, though much more common than these) already occurs (but not applied to natural scenery). The time at which the word assumed its different forms appears in fact to have been the end of the seventeenth and the beginning of the eighteenth century.

That the form *romantisch* found its way from England 'to Germany through Switzerland' is also confirmed by the following communication from S. Hirzel (died 1877):—

'As far as I can ascertain with the help of Tobler and Hildebrand, the earliest passage (in German literature) in which the word *romantisch* occurs dates from 1740. In J. J. Breitinger's *Fortsetzung der Kritischen Dichtkunst*, we find (p. 283): "Je mehr dergleichen Beiwörter in einer Redensart sind, desto schöner und wahrhaftig *romantisch* ist sie auch." In Goethe the word occurs in a letter belonging to the Leipzig period: "Wenn Ihr kleines Stübgen, das so oft der Zeuge unsrer seeligen Trunkenheit war . . . wenn diese liebe *romantische* Höhle nun auch künftig den Schauplatz der Freuden eines neuen Liebhabers abgibt" (Schöll, *Briefe und Aufsätze*, 25).

'It is not improbable that Goethe became acquainted with the word from Tobler's translation of Thomson's *Seasons* (Zürich, 1765), where it first occurred to me to look for it. Thomson's "Where the dun umbrage o'er the falling stream romantic hangs" is translated by Tobler: "Wo die schwarz-braune Umlaubung *romantisch* über den fallenden Strom hängt". Brockes in his translation (1744) gives *romanisch*. In the passages in Thomson's *Summer* (459) and *Autumn* (880) Tobler also uses *romantisch*. The word occurs in Adelung (1777), although he does not seem to have known that the word was of English origin, but connects it with the French *romanesque*'.

But even if the word became naturalized in German literature mainly as the result of translations of Thomson, individual writers may have borrowed it directly from the English. One of these perhaps was Georg Forster, who is fond of the word, e.g. in his *Reise um die Welt in den Jahren 1772-1775* (published 1777), i, 136 (ed. Brockhaus, 1843): 'Der bezaubernde Gesang (der Vögel) machte die Schönheit dieses wilden romantischen Flecks (in New Zealand) vollkommen'.

XXIII. ON THE MEANING OF THE NAMES *VIOLA* (*τοῦ*),
ANEMONE, *NARCISSUS*, *HYACINTHUS*.

(Vol. I, p. 425, l. 9 from bottom.)

By Prof. Ferdinand Cohn of Breslau.

APART from the incompleteness of the information that has come down to us, the chief reason why previous attempts to refer the names of plants in ancient writers have produced such unsatisfactory results, is the inaccurate use of words. Only the language of science endeavours to establish a special name for every kind of plant, which shall be exclusively appropriate to it and distinguish it from all others; and even the language of science did not attain this exactness until the time of Linnaeus. The language of ordinary life does not hesitate to give entirely different names to the same plant at different times, or in different countries, or, *vice versa*, to give the same name to entirely different plants. Thus, for example, the name chestnut (like the German *kastanie*) is given to two totally different trees, *Castanea vesca*, and *Aesculus Hippocastanum*; the Indian fig is a cactus; the sycamore is a fig, *Ficus Sycomorus*, or more commonly a maple, *Acer pseudo-platanus*; while the trees called by Americans and Australians oak, cedar, pine, etc., are quite different from those bearing these names in Europe. It was the same in ancient times, especially in the poets, who always abused their licence to perpetrate all kinds of inaccuracies; the botany of the poets has hardly anything in common with that of the natural philosophers. But, in antiquity, even the latter had no clear ideas of the relation of genus and species; still less did they trouble themselves about expressing this relation in nomenclature as in modern terminology; of Theophrastus and Dioscorides alone can we as a rule suppose that they attached to their plant-names definite conceptions of plants, with which they were themselves acquainted. Certainly, we must not be content, as is usually the case, to pick out single quotations at our own discretion, and to draw hasty conclusions from them; we must collect all the passages in ancient authors, which refer to a plant, arrange them systematically, and compare them with one another and with nature. If this be done, in numerous cases we shall be able to identify the plant in question. This is especially true of the much disputed *violae* (*τοῦ*, *viola*).

1. Theophrastus discusses *τοῦ* under the *ornamental plants* (*σπερματώματα*, plants used for making garlands), which as a rule are shrubby (*φρυγανικά*) and hence are treated of immediately after trees, since like them they are woody (*ξύλῳ*, *Hist. Plant.*, vi).¹ Most shrubs grow wild, only a few being cultivated, such as roses and violets (vi, 1, 1); the latter are propagated from seeds (vi, 6, 11).

The shrubby violets are also called white (*τοῦ τὸ λευκόν*); they have leaves on the stem (*ἐπικαυλόφυλλον*), but no root leaves; the roots are woody (vi, 6, 11); they bloom for a considerable time (vi, 8, 3). There are many varieties of them; they vary especially in colour, although not so much as the lily (*κρίνον*), of which there

¹ [Unless otherwise specified, the references to Theophrastus are to the *Historia Plantarum*. Ta.]

are also said to be purple varieties (vi, 6, 3). The life of the violet plant (*βίος ιωνιάς*) is three years; when old it produces smaller and paler (*λευκότερα*) flowers. The passages here quoted agree perfectly with the interpretation already given by the earliest commentators, that the *white* violet of Theophrastus is the stock, *Matthiola incana*, the *Leukoje* of the Germans.

But Theophrastus is also acquainted with a black violet (*τον τὸ μέλαν*). This is distinguished from the white by the fact that it is not shrubby (*οὐ φρυγανώδες*), but a herbaceous ornamental plant (*στεφανωτικὸν ποιῶδες*, vi, 6, 1); it has only root leaves (*προσριζύφυλλος*), but no stems or branches (*ἀκλῶν*); its leaves are broad (*πλατύφυλλον*), growing close to the ground (*ἐγγειόφυλλον*); the leaves are also alleged to be fleshy (*σαρκόφυλλον*, vi, 6, 7); this is unintelligible, but as Pliny (*Hist. Nat.*, xxi, 27) in the parallel passage speaks of a fleshy *root*, probably *σαρκόρριζον* should be read. The roots of the black violet are numerous and bulbous (*πολλὰν ἔχουσα ῥίζαν. κεφαλόρριζα*), and enable it to survive; it grows wild and thrives on poor soil (*De Causis Plant.*, vi, 20, 2): as a rule it is not cultivated like the rose (*ἀγριον, οὐχ ἡμερον καθάπερ τὸ ῥόδον, De Causis Pl.*, vi, 20, 1); if it is cultivated in a particular manner, it is said to bloom throughout the year (vi, 8, 2): *ὥς δὲ τινὲς φασὶ καὶ δυναμένη δι' ὅλου φέρειν τὸ ἄνθος, ἐὰν τρόπῳ τινι θεραπεύηται, τοῦτο μὲν ἴδιον ἂν ἔχοι. τὸ δὲ δὴ μέλαν ἰον . . . δι' ἐνιαυτοῦ θεραπείας τυγχάνειν (διαμένει).*

In the black violet also the flowers alone are sweet smelling; there is, however, only *one* kind, not many varieties as in the case of the white (vi, 6, 3); yet double flowers are found, which contain one flower in the centre of the other (i, 15, 2).

There is no doubt that the *black* violet of Theophrastus is our 'violet', *Viola odorata* L.

But Theophrastus knows of yet a third violet, also white; he does not however call it *τον τὸ λευκόν*, like the stock, but *λευκόνιον*; it is the first of the flowers of spring, in warmer climates it even blooms in winter; it has a little bulb, like *bolbine*, *kyi*, *sisyrinchion*. This is evidently a kind of snowflake or snowdrop, probably the *Leucojum vernum* which is found not only in Central, but also in Southern Europe. Elsewhere certainly Theophrastus states that the *λευκόνιον* has leaves on the stem (vii, 8, 3), which can only refer to the stock. Perhaps the text is wrong, or he has not been consistent in distinguishing *λευκόνιον* and *τον τὸ λευκόν*.

Theophrastus describes the smell of his violets at great length; he has devoted a whole book (vi) of his *Causae Plantarum* to the philosophy of perfumes. Only the blossoms of the violet have a sweet smell (vi, 2), the other parts have none (*Caus. Plant.*, vi, 11, 4); their smell is pleasanter at a distance than near (*C. Pl.*, vi, 17, 1); in time the smell becomes pungent and unpleasant; it does not last when the blossoms are dry, like that of the rose, which certainly when dry cannot be smelt so far off as when fresh (*C. Pl.*, vi, 14, 11). In mountainous districts the smell of violets and roses is not nearly so pleasant (vi, 8, 6). In a very dry and poor soil, and when the air is hot and dry, the violet loses its smell (*C. Pl.*, vi, 20, 2); violets from Cyrene smell the sweetest (vi, 6, 5), while the blossoms are

said as a rule to be scentless in Egypt (vi, 8, 5) ; in that country also roses and violets are said to blossom two months earlier than in Greece ; nevertheless, they last as long or longer (*ib.*).

Pliny's account of the *viola* is for the most part borrowed from Theophrastus ; he also distinguishes the *viola alba* ; it is reared from seeds (*Nat. Hist.*, xxi, 27) ; but he ascribes to the *viola* simply what Theophrastus says of the smell of the white violet ; and, on the other hand, the long period of bloom and the three years' duration to the *viola alba*, which consequently is to be understood as the stock.

Theophrastus' black violet is called *viola purpurea* by Pliny, *τορρυροῖον* by his contemporary Dioscorides, which is not without interest for the history of the designation of colours. Violet-blue clothes are called *vestis ianthina* (xxi, 27 ; in xxi, 45 this chief colour is described as *amethystinus*, the undertone of which passes from violet into purple and violet-blue : *amethystinus qui a viola et ipse in purpureum (sc. trahitur), quemque ianthinum appellavimus*).

According to Pliny the purple violet grows wild (*silvestre*, xxi, 130 ; *sponæ apricis et macris locis proveniunt*, xxi, 27). The ever-blooming and double violets of Theophrastus are unknown to him.

Dioscorides (cxvii) gives a good description of the purple violets, the leaves of which he compares with those of the ivy, and of the very pleasant smelling little blossoms that spring from the centre of the root on long stalks.

On the other hand Dioscorides (xxi) calls the white violet *λευκόνιον* ; he says that it is a universally known shrub, which however does not always bear white, but also purple-red, blue, or yellow flowers.

Matthioli (1554) in his famous commentary on Dioscorides observes that the blue stock is not known in Italy and that the text is perhaps corrupt ; that the other kinds are very common in gardens, and that women are fond of keeping them outside the windows in pots. White and violet varieties of the stock are also generally known among us (in Germany) ; the yellow variety is perhaps the yellow stock (*Matthiola ochroleuca*), which is sometimes found in Italy.

Pliny also speaks of a yellow violet (*viola lutea*) unknown to Theophrastus ; it is reared from seed. Since Pliny and Dioscorides both state that the yellow violets are used especially in medicine (*e sativis maxima auctoritas luteis*, xxi, 27), we may assume that they are speaking of the same plant ; but from their statements we cannot gather with certainty what plant this is, nor the meaning of the other kinds of violets mentioned by Pliny—*maxima*, *Tusculana*, and the scentless *Calatiana* ; the latter flowers in autumn, the others in the spring (*munus autumnæ, ceteræ veris*) ; perhaps the *viola Calatiana* is the same as the *viola serotina*, whose colour is said to be a deep red, the liveliest of the *conchylia* colours (xxi, 46).

The commentators usually identify the yellow *λευκόνιον* of Dioscorides and the *viola lutea* of Pliny with the wall-flower,¹ *Cheiranthus Cheiri* of the botanists. It is nearly akin to the stock, and can be shown to have been cultivated since the fifteenth century in southern

¹ *Ger. Goldlack, Gelbviolen, Gelbveilchen.*

Europe, and on the further side of the Alps as a common ornamental plant in gardens and in pots ; it is also frequently met with, *e.g.* in the Rhine valley, on old masonry, especially in ruined castles, apparently wild, but probably in reality a relic, run wild, of vanished castle gardens. It is also possible that the wall-flower was introduced into Rome at the beginning of the empire, while in Alexander's time it was not yet cultivated ; however, the name by which it was known to the physicians of the Middle Ages and which is concealed in the Linnaean *Cheiranthus*, is not Greek but Arabic, and points to its being an oriental importation. According to my late colleague Schmölder, *Cheiri* or rather *Chairi* is certainly used in Arabic, but is probably of Persian or rather of Sanskrit origin ; in the latter language it is written *Gairi* and means 'growing in the mountains' ; in the Persian lexicon, yellow, white, violet and black varieties of *Chairi* are mentioned, from which it is clear that *Chairi* is identical with *Ion* and *viola* ; the rocket or dame's violet (*Hesperis matronalis*) is also called *Chairi* or *Hairi*.

The ancient authorities contain interesting statements as to the flowering period of their *violae*. Pliny (*Nat. Hist.*, xxi, 64) has translated the passage referring to it in Theophrastus almost word for word :—

Τῶν ἀνθῶν τὸ μὲν πρῶτον ἐκφαίνεται τὸ λευκόν, ὅπου μὲν ὁ ἀὴρ μαλακώτερος εὐθὺς τοῦ χειμῶνος . . . ἀμα δὲ τῷ ἰσθμῷ ἢ μικρόν τι ὕστερον καὶ τὸ φλόγιον καλούμενον τὸ ἀγριον· ταῦτα γὰρ ὧν οἱ στεφανηπλόκοι χρῶνται, πολὺ ἐκτρέχει τῶν ἄλλων.

Florum prima ver nuntiantium viola alba, tepidioribus vero locis etiam hieme emicat. postea quae ion appellatur et purpurea, proxime flammum quod phlox vocatur, silvestre dumtaxat.

Consequently in this passage, Pliny by the *viola alba* does not, as elsewhere, mean the stock but the snowflake ; φλόγιον (= *flammeum*) cannot be identified ; it is certainly not the same as the φλόξ of Theophrastus, which is a *scenitless*, cultivated ornamental flower (στεφανωτικὸν ὄσμον, vi, 6, 2, 11 ; cp. Pliny, *Nat. Hist.*, xxi, 59). Therefore *flammeum* or *phlox* is certainly not the wall-flower (*viola lutea*), which has a sweet smell.

Amongst the plants that bloom in the late spring, after the cyclamen, narcissus, lily, and oenanthe, Theophrastus again mentions the black violet (τὸ μέλαν ἰον, vi, 8, 1). Here the text is evidently corrupt, since this flower is one of the earliest spring flowers after the snowflake. In Pliny (xxi, 65) the passage runs : sequitur oenanthe ac melanthium (Sillig, melanion ; *vv. ll.*, melianthum, melanthium) ; certainly some other flower is meant.

The following is the result of our investigations.

The meaning of *Ion* and *viola* by themselves is uncertain, and can only be determined from the context : among the Romans, however, according to Pliny *Ion* was applied to *Viola odorata* alone (*Nat. Hist.*, xxi, 27). On the other hand where *violaria* (violet gardens and beds) are mentioned, the stock is certainly meant, which alone (and not the purple violet) appears to have been cultivated in gardens amongst the Romans.

Ion τὸ μέλαν of Theophrastus, *viola purpurea* of Pliny, *Ion πορφυροῦν* of Dioscorides, is the violet (*Viola odorata*).

τὸν τὸ λευκόν, *leuon* of Theophrastus, *viola alba* of Pliny, λευκῖον of Dioscorides is the stock (*Matthiola incana*).

Λευκῖον of Theophrastus is the snowflake (*Leucojum vernum*).

Λευκῖον of Dioscorides, *viola lutea* of Pliny may be the wall-flower (*Cheiranthus Cheiri*), although this is not absolutely certain; the modern and mediaeval name points to a plant of oriental origin, introduced by Persians or Arabs.

It is a remarkable fact that, although the *violae* play a great part in the literature of the ancients, and according to Pliny (*Nat. Hist.*, xxi, 14, 27) are almost the only flowers (with the exception of roses) used for garlands, their characteristic forms, as far as I know, are not represented in art. In the very complete list of the plants figured at Pompeii (70 species) published by Prof. Comes (*Illustrazione delle piante rappresentate nei dipinti Pompeiani*, 1879), neither stocks nor violets are mentioned.

[To the above I add the following. In the *Lex Collegi Aesculapi et Hygiae* (Wilmanns, *E. I.*, 320, 43-46 — Orelli, 2417) the 22nd of March (xi kal. apr.) is indicated as *dies violaris*, the 11th of May (v Id. Mai.) as *dies rosae* (in Wilmanns 313, also from the city of Rome, the 21st of May is *dies rosationis*, the date of [*dies viola*]tionis has fallen out). No doubt, we cannot in this case decide with certainty whether the *viola*, from which the earlier day took its name, was the violet, or the stock (or the wall-flower). According to Herr Carl Köhler, gardener at the German embassy in Rome, the (uncultivated) violet chiefly flowers there in February¹ and March (also, particularly in gardens, in October and November); the wall-flower and the winter-stock bloom, according to the state of the weather, at the end of March and April, usually about Easter (hence the name *viola di pasqua*); yet in isolated instances there are flowers throughout the winter, especially in sheltered spots (the summer-stock, which is hardly ever cultivated, flowers according to sowing in June or July). But although on the *dies violaris* there were violets as well as stocks and wall-flowers, they were more probably named after the new than the old flowers. Where *violae* are mentioned together with roses and lilies, they can of course be only stocks (or wall-flowers), e.g. Martial, x, 32, 1: haec mihi, quae colitur violis pictura rosisque; Statius, *Silvae*, i, 2, 22: tu modo fronte rosas, violis modo lilia mixta excipis. The many-coloured violets can only be stocks: Juvenal, xii, 90: tura dabo atque omnes violae jactabo colores. L. F.]

On *Anemona* Theophrastus observes that there are several kinds, which grow wild on mountains and in meadows: the first (τὸν ἀγρίων ἀνεμώνης γένος τὸ ὀρεῖνόν καλούμενον) blooms very early, at the same time as the narcissus and the lily; the meadow-anemone (ἡ λειμωρία καλουμένη) later, shortly before the rose (vi, 8, 1). Elsewhere he mentions an anemone, which blooms in winter (vii, 10, 2); its leaves are on the ground (grow immediately from the

¹ The *violae* offered to the Manes (19th-21st of February) are consequently violets; cp. Nissen, *Ital. Landeskunde*, i, 404, according to whom (p. 400) winter in Italy was colder than it is now. But cp. Olck, *Hat sich das Klima Italiens seit dem Alterthum geändert?* in *Neue Jahrbücher für Philologie*, 1887, pp. 465-475.

root; vii, 8, 3) and sprout soon after the flowers (vii, 7, 3). He says nothing of an anemone cultivated in gardens.

On the other hand, Pliny and Dioscorides distinguish the wild and the cultivated anemone (*silvestris et in cultis nascens*); the wild has scarlet (*phoeniceus*) flowers and is mistaken for the wild poppies (*papaver, rhoeas, argemone*), from which, however, it is to be distinguished by its earlier flowering, the absence of milky juice and calyx; the cultivated, which is used for garlands (*anemone coronaria*) has scarlet, purple, or milk-white flowers, the first being the commonest. It has smaller leaves than the wild variety, like *apium* or coriander, and rarely grows higher than half a foot (*Nat. Hist.*, xxi, 164, 165). Dioscorides (*C.*, clxxii) gives a more accurate and detailed explanation. However, it is difficult to say which of the many species of anemone are meant by the wild and cultivated anemones of the ancients; certainly *Anemone coronaria* is included, probably also *A. hortensis* and *pavonina*, all of which adorn south European gardens.

Νάρκισσος in Theophrastus is the same as *λείριον* (vi, 6, 9: *οἱ μὲν τοῦτο, οἱ δὲ ἐκείνον καλοῦσι*). The leaves are numerous, narrow, with an oily gloss (*λιπαροί*), similar to those of the asphodel, yet much broader, like those of the *κρινωνιά*—all bulbous plants have narrow leaves (vii, 13, 1). The leaves of the narcissus grow on the ground, the stem is leafless, grass-green (*πρώτης*), and bears only a single flower at the top (vi, 6, 9); only flower-stalks are produced from the fleshy, large, round root (bulb; vi, 6, 9; vii, 13, 2; *C. Pl.*, i, 4, 1); first the flower-stalks are developed, and then later the leaves, the flower is monopetalous, united below, only divided above into angular segments (*ἀποφύσεις γωνιώδεις*) (i, 13, 2); it has a sweet smell; it forms large black seeds in membranous capsules. There are two kinds of narcissus; one flowers in spring soon after the violets (*μετὰ δὲ ταῦτα [τα] ὁ νάρκισσος καὶ [?] ἡ τὸ λείριον*; the other in autumn at the same time as the saffron (*κρόκος*) *μετόπωρον δὲ τὸ λείριον τὸ ἕτερον* (viii, 2, 3) *ὅψιον δὲ σφόδρα· μετὰ γὰρ ἀρκτουρον καὶ περὶ ἰσημερίαν* (vi, 6, 9).

It is highly probable that Theophrastus is here speaking of two species of the genus *Narcissus*; the species, however, cannot be determined, since no colour is given; the kind that flowers in the autumn may be *Narcissus serotinus* L., which flowers in the district of Naples and the neighbouring islands in September, or *Narcissus elegans*, which flowers from September to November in Tuscany, Naples, Sicily, and Corsica. In the *Flora Italiana* of Cesati, Passerini and Gibelli, among winter narcissi, which begin to flower in November and last till January, *Narcissus unicolor, siculus, Bioniae* and *Tazetta* (December–April) are mentioned; on the other hand *N. poeticus* and *Pseudonarcissus* flower in the spring near Naples.

Pliny's account of the narcissus is confused, except where it is borrowed from Theophrastus; according to him, it is a kind of purple lily, often with double stalk (Theophrastus mentions that of the *κρίνον*). Alterum genus flore candido calyce purpureo is certainly *Narcissus poeticus*; tertio generi cetera eadem, calyx herbaceus (grass-green) may be *N. Tazetta* (*Nat. Hist.*, xxi, 25); *calyx* appears to mean the inner crown (tube or paracorolla) of the nar-

cissus. Pliny's statements as to its flowering period are contradictory ; in Greece they flower after the violets (*seriores supradictis narcissus et lilium trans maria*, in Italia post rosam (xxi, 64) ; in another passage : *omnes serotini, post arcturum florent et per aequinoctium autumnum* (xxi, 25). In the parallel passages of Theophrastus different varieties are distinguished.

Dioscorides describes *N. poeticus* very distinctly : in the wall-paintings of Pompeii according to Comes (pp. 42, 43), *N. poeticus* and *Pseudonarcissus* are represented : Comes also identifies Pliny's narcissus with grass-green calyx with *N. Pseudonarcissus*.

In Theophrastus *δάκνθος* is the latest of the spring flowers used for garlands ; it flowers immediately before the rose, grows wild, is cultivated, blooms for a long time, its blooms are coloured, like the Phrygian *amaracus*, which is also called *pothos* (vii, 8, 1-3). This does not tell us much. Pliny, who in the parallel passage (*Nat. Hist.*, xxi, 67) distinguishes *pothos* from *amaracus*, gives the *hyacinthus* a bulb (xxi, 170) ; the veins on the flower show the Greek letters AI, according to the fable a sign of mourning for Ajax or Hyacinthus ; this description, like that of Dioscorides (iv, 63) suits a gladiolus ; yet the latter occurs in Pliny (xxv, 137) also under the name *xiphion* (*ἔλφιον* or *φάσγανον* in Theophrastus, vi, 8 ; vii, 12, 13 ; Dioscorides, iv, 20). Bissinger, who has recently collected all the literature on *δάκνθος*, also thinks of an iris (*Programm der Studienanstalt zu Erlangen*, 1880). *Delphinium Ajacis* also appears to be called *hyacinthus* (Dioscorides, iii, 77). [*Hyacinthinus* of a colour (*hyacinthina laena*, Persius, i, 32) is to be derived from the precious stone called *hyacinthus* (Pliny, *Nat. Hist.*, xxxvii, 125.)

VOL. II

XXIV. THREE INSCRIPTIONS ON CHARIOTEERS.

(Vol. II, p. 23, l. 15.)

THE two most comprehensive inscriptions on charioteers (*CIL*, vi, 2, 10047 = Orelli, 2593 and 10048 = Gruter, 337) deserve detailed treatment for two reasons: (1) the numerous difficulties which they present, which, however, can nearly all be removed, although in part only by conjecture; (2) the manifold details of chariot-driving, which we learn from them. In the second inscription, some parts which I had understood wrongly or not at all, have been explained by a third, recently discovered: the inscription on the charioteer Crescens, published with commentary by the Countess Ersilia Lovatelli in the *Bullettino della commissione archeologica comunale*, iv (1878), p. 164, which has been used by Mommsen (*Ephem. epigr.*, iv, pp. 247-252), O. Hirschfeld (*Arch. epigr. Mitth.*, ii, 188) and myself (*Festschrift der Königsb. Universität zum fünfzigjährigen Jubiläum d. arch. Inst.*, p. 7) to elucidate Gruter, 337.

1. The inscription *CIL*, vi, 2, 10047 (= Orelli, 2593), is from the MS. of the Anonymus Einsiedlensis, fol. 75^b and 76^a. Cp. Wilmanns, *Exempla inscr. lat.*, 2600 (ii, p. 181):—

The mention of the palmae supra scriptae (6) shows that the Einsiedeln monk has not copied all the inscriptions on the memorial; probably he has even omitted the most important. It is doubtful whether the memorial contained lists of the victories of the Whites and Reds, as well as those of the Blues and Greens. Perhaps, as Mommsen thinks, the former were omitted, since at the time only the latter were valued. In addition, on the site of the memorial, fragments of a large circus relief have recently been discovered, which appears to have belonged to it (Visconti e Vespignani, *Dalle scoperte avvenute per la demolizione della Porta Flaminia*, in *Bull. d. commiss. archcol. comun.*, iii [1877], p. 201).

Mommsen had published some remarks on the inscription (*Ber. d. sächs. Gesch.*, 1850, p. 312); I had discussed it in the *Programm Acad. Albert. Regimont.*, 1886, ii, where however I was mistaken on some essential points.

The memorial is a sepulchral monument (21), erected to himself during his lifetime by Publius Aelius Gutta Calpurnianus, son of Marius Rogatus, on the Via Flaminia, probably after his retirement from his career as a charioteer. The inscription cannot be earlier than the second century, as is shown by the name Publius Aelius, which appears to have been equally common in the time of the Severi (cp. Aelia gens in *StRE*, i², 339). From the horse's name Saxo we should rather ascribe it to the third or fourth century. The earliest mention of the Saxons is in Ptolemy, ii, 11, 11 and 31; but they must have been long known, and intercourse with them must have been considerable, for horses to have been imported from them or named after them (Saxo was an African horse).

Gutta was one of the charioteers, who had gained more than a thousand victories (a so-called *miliarius*: 5, 6, 23, 24). According to 6, he had gained 1127 prizes (not identical with the *praemia* of 5).

From 6 to 21 the 1127 victories are classified; although those enumerated apparently amount to 10 short of the total, this may be accounted for by the omission of a figure (in a place which, as will be seen, can be specified).

The 1127 victories are classified according to the four factions, subdivided again according as they were gained in contests of four,

¹ Mommsen, *loc.*, p. 250: lxi.

eight, twelve, or sixteen chariots, in ordinary races, or in certain unusual contests specially named. I will deal with the subdivisions first, as offering least difficulty. It is clear from the inscriptions that, as was to be expected, the contest of four chariots, *i.e.* one from each faction (*certamina singularum sc. quadrigarum*) was by far the most common; according to the inscription on Diocles (*CIL*, vi, 10048) the victory in this must have been considered one of the most honourable. Contests of two chariots from each faction, that is, eight in all (*certamina binarum*) were tolerably frequent; of three from each, that is, twelve in all (*ternarum*), rare; of four from each, that is, sixteen in all (*quaternarum*), extremely rare. Of the 1127 victories of Gutta only one, of the 47 of Crescens and the 1462 of Diocles not one was gained in the last named (*cp.* Marquardt, *StV*, iii, 513, 1). Now, according to the text of the *Anonymus Einsiedlensis*, Gutta gained the following victories:—

	Whites.	Reds.	Blues.	Greens.
In contests of 1 chariot ..	83	42	334	116
" " 2 chariots ..	7	32	184	184
" " 3 chariots ..	2	3	65	64
" " 4 chariots ..	0	1	0	0
	92	78	583	364

The above totals give a grand total of 1117. The difference between this and the grand total 1127 given above, shows that x has fallen out somewhere. It can be shown that it has done so in the first total.

A glance at the numbers which in 7, 10, 13, 18 follow immediately upon the names of the four factions shows that they are arrived at by addition; and doubtful or incorrect figures can be checked by comparison. Since, in 7, in *factione albata cii* (prizes) are mentioned, the 10 wanted to make up the total must have fallen out in the list of the White victories, where addition only gives 92: probably we should read xvii for vii in 9. According to the same enumeration, the Red victories are 78; consequently, in 10, *lxxix* should be read instead of *lxxii x*.

The numbers following these four sums are consequently not to be added together with them; they are only intended to bring into prominence victories in exceptional kinds of races, which are already included in those sums.

This makes it probable that the numbers xxx, xl, l and lx, which in 7, 10, 13, 18, 19 follow the totals in the enumeration of the special classes, also indicate classes of contests. This conjecture is rendered certain by other inscriptions. In the inscription of Diocles, it is said of another charioteer (line 17): *primus omnium urbis conditae ad HS l vicit vii*: of three others (18): *[qui] ad HS l vicissent xl*; of Diocles himself (21): *l vicit x, lx, i*. It is clear that the amounts xxx, xl, l, lx denote the value of the prizes contested. No doubt *sestertia* is to be supplied, so that *e.g.* *vicit xxx i* = *vicit ad triginta HS* (*i.e.* in a race for a stake of 30,000 sesterces) *semel*. It may be supposed that only the most experienced drivers were allowed to take part in these contests, which probably presented special difficulties.

Similarly, in the inscription on Marcus Aurelius Polynices (Hen-

zen, 6179 = *CIL*, vi, 2, 10049), after the classification of his 739 victories according to factions (Red, 655; Green, 55; Blue, 12; White, 17): *praemia* xxxx n. iii xxx xxvi pura n. xi octojug. n. viii dec. n. viiii sejug. n. iii, i.e. three prizes of 40,000 sesterces, 26 of 30,000, 11 pure (i.e. simple, perhaps also those of 15,000 in the inscriptions of Diocles and Gutta). The six, eight, and ten in hand races were perhaps always such prize races, the amount of the prize being perhaps fixed once for all, so that they were not specially stated. Probably such races brought the largest income to the victors, although part of the prize money went to the faction funds. Such a victory is no doubt referred to in Martial, x, 74, 5:—

Cum Scopus una quindecim graves hora
ferventis auri victor auferat saccos.

If now the inscription of Polynices shows that in that of Gutta figures written together must in many cases be separated (e.g. in 7, xxx i (ad xxx HS semel), xl i must be written for xxxi and xli); it is further clear that in 5 and 25 f. the numbers of the *praemia* of 30,000, 40,000, and 50,000 sesterces won in the Blues and Greens are stated. The *m* in 5 is probably nothing but *majora*, possibly *milia* (HS).

The *praemia majora* in 5 and 25, won by Gutta for the Greens and Blues, are at variance with the corresponding figures in the central section. But as it is impossible to ascertain where the error lies, all emendations of individual figures are worthless, and the amount of the *praemia majora* won by Gutta must remain doubtful.

The other varieties mentioned offer no difficulty. *Remissus* evidently = *revocatus* (Orelli, 2594 = *CIL*, vi, 10,055: *vicit ii, revocatus ii*). The meaning is clear from Ovid (*Amores*, iii, 2, 73), where the poet, despairing of the victory of the charioteer in whom he is interested, exclaims:—

favimus ignavo. sed enim revocate, Quirites,
et date jactatis undique signa togis.

75 en revocant.

77 jamque patent iterum reserato carcere postes.

evolat admissis discolor agmen equis.

nunc saltem supera, spatioque insurge patenti;

sint mea, sint dominae fac rata vota meae.

sunt dominae rata vota meae; mea vota supersunt.

ille tenet palmam, palma petenda mihi est.

Evidently a race, which had been undecided or interrupted, was run again at the wish of the people, signified by napkins or togas; the victor in this repeated contest was *revocatus* or *remissus* Seneca, *Controv.*, i, 3, 10: Varus Quintilius . . . dixit . . . : (dii) incestam, ne cito supplicium transcurreret, revocaverunt. Cestius multa contumeliose dixit in hanc sententiam: sic, inquit, quomodo quadrigas revocaverunt? nam et ante posuisti similitudinem, quia et haec de carcere exierat. The figures show, that such repetitions were rare at that time.

A *pompa*. Bianconi (*Descr. de' cerchi*, p. xxxviii) conjectures that a *pompa* denotes a victory in which the charioteer started from the door near the central or proceSSIONAL gate. But (to say nothing

of the singularity of such nomenclature) this is improbable, since this was evidently an advantage, while in other cases only obstacles and difficulties are stated, the overcoming of which enhanced the glory of the victory. Perhaps a *pompa* denotes the first race, which directly followed the procession, permission to enter for which may have been an honour granted only to experienced charioteers. This race also 'put both horses and drivers to the severest test, especially if they had been exposed for hours to the fatigues of the procession.' G(ustav) F(reytag), *Sportbericht eines römischen Jockeys*, in *Grenzboten* (1869), ii, p. 451.

Equorum anagouum. Of course a victory with horses which had never run before, was especially honourable.

Sejuge and *triga* or *trigas* need no explanation. Consequently, while victory with the *biga* was only an honour for novices, experts competed for that with the *triga*; of course the prizes were smaller than in the six-in-hand races. Whether the prize in 15 was 20,000 or 25,000 sesterces (in the former case Gutta received it six times, in the latter once) cannot be decided.

Sacro quinquennalis certaminis. No doubt victory in the *agon Capitolinus* is meant (see last section). When the monument was erected, it must have been the only *quinquennale certamen* in Rome.

Pedibus ad quadrigam. According to this specification, which, as far as I know, only occurs here, the kind of racing described by Dionysius of Halicarnassus (vii, 73) was still common: *ὅταν γὰρ τέλος αἱ τῶν ἵππων ἀμιλλᾷ λάβωνται, ἀποκηδῶνται ἀπὸ τῶν ἀρμάτων οἱ παροχούμενοι τοῖς ἡνίοχοις—τὸν σταδίαον ἀμιλλῶνται δρόμον αὐτοὶ πρὸς ἀλλήλους*. Thus in this case there was a double victory (by the runner and the charioteer) to be won. *Pedibus ad quadrigam*, therefore, does not mean that Gutta gained a victory in this manner (i.e. running), but it indicates the variety of the race, in which as in the rest he gained a victory by chariot-driving. I do not agree with Mommsen in referring the number lxi to the number of victories won in this class of contest, since it must have been very rare, to judge from the total absence of further mention of it. I believe that the copyist has wrongly combined the value of the prize (60,000 sesterces) with the number of victories won (i, i.e. semel): accordingly I read *lxi*.

The list of Gutta's victories was accordingly as follows:—

	Whites.	Reds.	Blues.	Greens:
Class of contest	102	78	583	364
Remissus	2	1	1	0 times
ad xxx HS	1	1	17	1 "
ad xl HS	1	0	0	2 "
a pompa	4	0	35	6 "
equorum anagouum	1	0	1	0 "
sejuge ad xl HS	0	0	1	0 "
sejuge ad l HS	0	0	9	0 "
sejuge (ad lx HS ?)	0	0	1	0 "
trigas ad xv HS	0	0	2	0 "
triga ad xx HS	0	0	6	0 "
sacro. quinq. cert.	0	0	1	0 "
pedibus ad quadr. ad lx HS. .	0	0	0	1 "

Although the middle section can thus be almost completely explained, the figures in the first and third are so corrupt that no certain restoration is possible. Two lists are here given: one of the prizes which Gutta won in the Blues and the Greens, the other of the number of times he was victorious for both parties with the same horses. I have already observed that the amounts of the former cannot be ascertained with certainty. But even in the numbers of the latter those of the victories with the Greens (23-25 in the third section) must be wrong. Gutta had won in all 583 victories for the Blues, 364 for the Greens. Consequently, the totals of the victories won for these two parties with the same horses could at most equal these two totals; we should expect the number to be considerably smaller. For it is hardly conceivable that so many victories should have been won for the Blues and Greens with the same four principal horses¹ (3, 4 and 23-25). It was especially honourable to have gained a large number of victories with *one* principal horse, but of course almost impossible always to win with one and the same. Now Gutta had won most victories for the two parties whom he chiefly served with four principal horses in each case, and therefore the numbers of these victories are only fractions of all his victories for the Greens and the Blues. Of the 583 victories for the Blues he had won:—

92	with Geminator	} as principal horse of the four-in-hand.
105	„ Silvanus	
52	„ Nitidus	
60	„ Saxo	

309

The remaining 274 victories for the Blues had evidently been distributed among so many different principal horses, that it did not seem worth while to give the individual figures. There is no reason to doubt the correctness of the numbers.

For the Greens Gutta had won 364 victories, but the numbers of the victories won give a far larger total:—

19	with Danaus	} as principal horse of the four-in-hand.
209	„ Oceanus	
429	„ Victor	
157	„ Vindex	

814

There is consequently no doubt that C has been written at least five times too often owing to a misunderstanding. Perhaps the total number of victories with these four horses was 314.

The totals 309 and 814 added together give 1123, that is to say, a number almost identical with the grand total of Gutta's victories (1127). At first sight this might lead us to suppose that all the victories (only differently distributed) are again enumerated here, those for the Whites and Reds being reckoned in with those of the two chief factions, and that the inscription belongs to a period when the union of the former with the latter had already taken place. But,

¹ The left outside horses.

apart from all other considerations, this conjecture is shown to be quite erroneous by the addition of the undoubtedly correct totals.

Victories for the Whites and Greens, 102 + 364 = 466
 „ „ Reds „ Blues, 78 + 583 = 661

The numbers 309 and 814 vary so greatly from these figures, which are required if the union be supposed to have taken place, that this fact alone would be sufficient to exclude any such idea. Freytag (as above, p. 455), who takes the 1123 victories to include all Gutta's victories except four which were not gained by the two four-in-hands named, assumes that 'in factione veneta' (3) and 'in factione prasina' (24) only mean 'that the first four horses belong to his earlier, the latter to his later period'. I cannot admit this assumption.

2. The charioteer Diocles of Gruter, 327 = *CIL*, vi, 2, 10,048 is further known from an inscription of Praeneste (Gruter, 76, 4 = *CIL*, xiv, 2884):—

C. Appuleio Diocli
 agitatori primo fact.
 russat. natione Hispano
 Fortunae Primigeniae
 d. d.

C. Appuleius Nymphidianus
 et Nymphidia filii.

This inscription may refer to the later lifetime of Diocles, who, having realized a considerable fortune, had abandoned the dangers and exertions of the Circus for the retirement of Praeneste.

The monument Gruter, 337 = *CIL*, vi, 2, 10,048) was perhaps also erected by his admirers or supporters, after he had given up his career as a chariot-driver, while still in the prime of life. The stone has long been lost, but we possess the text of the inscription in an admirable copy by Smetius, whose accuracy is shown by the fact that all the figures which can be checked by comparison with each other are correct. Although the text of Smetius may contain some trifling errors, it is a perfectly satisfactory foundation for elucidation. With the exception of the insertions to supply the gaps and a few unimportant emendations mentioned in their place, I give it as it stands, only that the figures indicating the amounts of the prizes are in all cases marked with a stroke above (frequently omitted in Gruter): cp. Wilmanns, *Ex. Inscr.*, 2601.

NOTES.

1-6. In the year 122 Diocles, probably while still very young, appeared for the first time in the Whites (3), gained a victory for them in 124 (line 4), drove for the Greens for the first time in 128 (line 5), won a victory for the Reds (probably at his first appearance) in 131 (line 6), to whom he appears to have remained attached from that time. According to 11 he had won 216 victories for the Greens, 205 for the Blues, 81 for the Whites; the remaining 960 victories were consequently won for the Reds.^a When the monument was erected, he was 42 years, 7 months, 23 days old (2) and had won 1462 victories (20). Now, since 100 victories in a year were considered very glorious (14) and, in addition, Diocles in his first years of driving cannot of course have won nearly as many victories as at a later date, his last 1400 victories were probably distributed over the years 130-146. He drove the four-in-hand for 24 years (6); as he began his career in 122, the memorial, as Hirschfeld observes, must have been erected after 146, or at the earliest in that year. Then Diocles was born in 104 and began driving four-in-hands at the age of 18, whereas Crescens did the same when only 13.

6. Summa: quadriga agitavit annis xxiiii. missus ostio $\overline{\text{iiii}}$ cclvii.

7. vicit ∞ ccc]clxii. a pompa cx.

Summa, as Hirschfeld observes, stands for *summa summarum*; cp. Wilmanns, 2599, l. 16: sum(ma) sum(marum) quadri(ga) vic(it) vii. The meaning of *missus ostio* is shown by the inscription on Crescens, 13: miss(us) ost(io) dclxxxvi vicit xxxvii. *Ostio missus* being equivalent to taking part in the racing, $\overline{\text{iiii}}$ cclvii is the number

^a Mommsen: duabus autem q^{um}; Hirschfeld: cum primus omni]um.

^b Perhaps inter singulares (i.e. missus) is correct, or inter singularum, as in the inscription of Crescens (15).

^c A charioteer named Musclosus had gained 682 victories: 672 for the Reds, 3 for the Whites, 5 for the Greens, 2 for the Blues: *CIL*, vi, 2, 10063.

of all the races in which Diocles took part ; this was followed by the number of victories won (1462), the last figures of which are still preserved, so that the restoration of line 7 is certain. On a *pompa* see above. Here it is only stated how often Diocles took part in these difficult and honourable races, the number of which (110) is consequently included in that of the total number of his races (4257) ; but there is no indication how many times he was successful.

The enumeration of the victories begins with :—

7. singularum vicit ∞ lxiii ; inde praemia majora vicit lxxxii. xxx xxxii, ex his sejuges iii ; xxxx xxviii,

8. ex his sejuge]s ? ii ; Γxxviii, inde septejuge i ; Γx iii. binarum vicit cccxxxvii. trigas ad HS xv iii. ternarum vicit li.

The total number of Diocles' victories was 1462 ; and the addition of the three first numbers gives this total.

(in certaminibus)	singularum	(quadrigarum)	1064	times
"	binarum	"	347	"
"	ternarum	"	51	"
			1462	

These figures, which can be proved correct, again show the preponderance of races of one team at a time, and also that races of more than three teams at a time were extremely rare (cp. also line 9) ; and finally, that the remaining victories mentioned here must already be included in the larger sums. In the 1064 victories in races of one team at a time Diocles also won *praemia majora* to the number of 92. Of these there were :—

32 prizes of 30,000 sesterces =	960,000 sesterces
(amongst them three for races with six-in-hands).	
28 prizes of 40,000 sesterces =	1,120,000 sesterces
(amongst them two for races with six or seven-in-hands).	
29 prizes of 50,000 sesterces =	1,450,000 ¹ sesterces
(amongst them one for a race with a seven-in-hand).	
3 prizes of 60,000 sesterces =	180,000 sesterces
92	3,710,000 sesterces.
Also, 4 prizes of 15,000 in races of	
two three-in-hands at a time	60,000 "

Grand total of the *praemia majora* 3,770,000 sesterces.

It is easy to understand that it was in the *certamina binarum* that the races with *trigae* took place, in which 24 horses (in 8 chariots) had not much less room in the course than 16 horses (in 4 chariots) in the *certamina singularum* ; also, that the prizes for these victories were much lower (ad HS xv), than those with six and seven-in-hands.

As Diocles (according to line 10) had won on the whole 35,863,120 sesterces, after deducting the amount of the extraordinary prizes (3,770,000), we obtain 32,093,120 sesterces as the amount of the ordinary prizes. In accordance with this, Mommsen has attempted to ascertain the prizes for the different classes of ordinary races. From

¹ These are also mentioned in line 20.

the passage of Martial quoted above (p. 151) he assumes that the ordinary first prizes in races of a four-in-hand at a time (which were certainly smaller than the lowest extraordinary prize of 30,000 sesterces) amounted to 15,000 sesterces. This is not improbable, but, as Mommsen himself observes, there are so many possibilities that such calculations cannot be made with any degree of certainty.

8. ad honorem venit ∞. 9. tulit secundas dccclxi. tertias dlxxvi. quartas ad HS ∞ i. frustra exit ∞ cccli. ad venetum vicit x. ad albatum vicit lxxxxi. inde ad HS xxxii (xxx ii?). 10. retulit quaest]um¹ HS ccclviii lxiii cxx. praeterea bigas M vicit iii, ad albatu i, ad prasinu ii.

With the exception of certain victories (line 9), which in any case are already included in the larger numbers, the races here enumerated are those in which Diocles had received only second, third and fourth prizes, or none at all. Hence the addition of these totals to the total of the victories (1462) must give the number (4257) of all the races in which Diocles took part. The following sum gives 4251 to start with:—

Victories	1,462
Second prizes	861
Third prizes	576
Fourth prize	1 ²
No prizes	1,351
	4,251

The question now is, which are the 6 missing races. Hirschfeld thought of reading 'ad honorem venit vi' in 8, against which Bormann observes (*CIL*, vi, 10,048): at titulo infra 10,055 videtur probari, agitatore dictum ad honorem venisse, quotienscumque non frustra exierit, sed vel vicerit vel tertias vel secundas tulerit. The inscription 10,055 (Orelli, 2594) contains the following list: vic. quadri. xlvii secund. cxx . . . tertias cxlvi. bigas vic. viii secundas iix terti(as) iix adgente quadrig. (pedibus ad quadrigam?) vicit ii revocatus ii instauratiam (instauratitio die?) tertias i ad honore(m) veni(t) cccli.iii. If the figure of the second prizes be restored by the addition of xi, the addition of all the prizes won actually gives the total 354. If then 'ad honorem venit' means 'gained prizes of some kind or other', in line 8 (of the Diocles inscription) these words must have been followed by ∞ ∞ dccc, since Diocles had only failed in 1351 races, and 6 are apparently specially included in line 10. The only objection to Bormann's proposal to place the required number after 'ad honorem venit' is, that the assumption of so serious an error in the copy at the end of a line where there is no vacant space is suspicious.

Mommsen and Bormann are right in looking for the six missing races in line 10: praeterea bigas M vicit iii, ad albatu i, ad prasinu ii. We may, with Mommsen, take M to mean *miliarias*, i.e. races in which the prize was 1000 sesterces. Mommsen understands 'ad albatum

¹ This restoration is shown to be correct by the Crescens inscription (line 19).

² Unless the last of four chariots exceptionally obtained a prize, there must have been races, although of very rare occurrence, in which five chariots took part. Philo, *De Animal.*, 58, mentions a seven-chariot race in Alexandria.

vicit' of a race in which Diocles defeated two charioteers, but was himself defeated by the White. It seems better to understand a race in which he ran a dead heat with the White, otherwise 'vicit' would hardly have been admissible. It is uncertain whether in such a case the two victorious charioteers received first or second prizes; the latter is more probable. In any case, the 10 races, in which Diocles (with the four-in-hand) 'ad venetum vicit', and the 91, in which 'ad albatum vicit' (9) with the same, are included in one of the earlier totals. If all the figures in 10 are correct, after 3 full victories with the two-in-hand, an equal number of incomplete victories are enumerated—in all, 6 races in which he was not unsuccessful.

The number of races in which Diocles took part (4257) in 24 years gives about 177 a year, while on the whole in each year, reckoning only 50 circus days with 16 races on each, 800 took place, consequently in reality certainly much more. In ten years Crescens only took part in 686 races with the four-in-hand.

10.	occupavit et vicit dcccxv		815
	successit et vicit lxxvii		67
11.	praemisit et vicit ? xxxvi		36
	variis generibus vic. xxxxi		42
	eripuit et vicit dii		
	prasinis ccxvi,		
	venetis ccv		
	albatis lxxxi		502
			1,462

The total shows that here again all Diocles' victories with *quadrigae* etc., are enumerated, and that they are classified according to the various issues of the races. The sums 'in prasinis albatis venetis' are parts of the total in 'eripuit et vicit' (502), as the addition shows. This has already been observed by Anton Elter (*Die Gladiatoren-tesseeren*, in *Rhein. Mus.*, xli [1886], p. 537), who on this ground has rightly corrected my interpretation of the passage: as *eripuit* implies some one from whom the victory was 'snatched', the one who at the critical moment was next, *eripuit* must mean 'won with difficulty, after a hard struggle'. From 25 this appears to have been the most honourable victory of all. Elter's explanation of 'occupavit et vicit', 'easily gained' agrees in the main with my own: a victory, in which the victor took the lead from the outset and kept it. Pliny, *Nat. Hist.*, viii, 160: *excusso in carceribus auriga albatu (equi) Corace (equo) occupavere, primatum (Jan: prima tum, Sillig) optinuerunt, opponentes, effundentes, omniaque contra aemulos quae debuissent peritissimo auriga insistente facientes*. On the other hand, the meaning of 'praemisit et vicit', and of 'successit et vicit' (probably 'was second at first'; Elter's 'kept the lead brilliantly' is improbable) is doubtful. I had explained the former of a victory, in which the victor had allowed his competitors a considerable start (a handicap); to this Elter rightly objects 'that such exceptional cases, which alter the character of the competition, if they occurred, could not lead to a terminology, which adapted itself to the rest'. 'Praemisit,' therefore, probably

means: 'at first (purposely dropping behind) let the others get ahead'. But Elter's explanation—'a victory resulting from the others coming to grief, refusing to race, or otherwise retiring from the contest', appears to me quite untenable. For admitting that 'allowed to come in front' would be a suitable expression for a victory in which the victor 'drives alone over the course', it by no means follows from 'praemissus vicit' (15) in the Crescens inscription (*CIL*, vi, 2, 10,050) that 'praemissus vicit' was the original form. Rather, on the analogy of the other expressions and the fully written 'praemissit et vicit' (*CIL*, vi, 2, 10,053), *praemissit* should be supplied (missit, *CIL*, vi, 2, 14,338 = i, 1012; cp. Quintilian, i, 20, 7; Corssen, *Aussprache und Vocalismus*, i, 2, p. 282). But that *praemissit* 'in the language of the turf is the same as and derived from *praemissus*', can only be believed by one who believes the *spectavit* of the gladiatorial *tesserae* to be derived from *spectatus*, which I look upon as not only not proved, but as absolutely impossible. A transference of *praemissit* from the falling charioteer to his follower who was allowed to get ahead (so Meier, *Die Gladiatorentesseren*, p. 6, 6) appears to me as incredible as an 'abrupt change' of *praemissus* into *praemissit*.

11. equos centenarios fecit n̄. viiii et ducenar. i. equos centenarios, ducenarios fecit of course means: he won 100, 200 victories with them. Two *centenarii* in Gruter, 338, 5: Aquilo n. k. Aquilonis. vicit cxxx. secund. tulit lxxxviii ter. tul. xxxvii. Hirpinus n. Aquilonis vicit cxliiii. secundas tulit lvi tert. tul. xxxvi.

Insignia ejus.

.....]to sibi, quo anno primum quadrigis victor exstitit bis, eripuit bis.

The restoration of the beginning of the line is uncertain (see above). The two first victories of Diocles with four-in-hands were also the most difficult to obtain (eripuit et vicit).

13. actis continetur Avil. Teren factionis suae primum omnium vicisse ∞ xi ex quibus anno uno plurimum vincendo vicit.

14. . . . singularum . . . at Diocles quo an]no primum centum victorias consecutus est (victor ciii), singularum vicit lxxxiii.

Avilius Teres is no doubt identical with the Teres whose name occurs in the very fragmentary inscription *CIL*, vi, 2, 10,054 (whether the words 'temporibus Neronis' refer to him, is at least doubtful). He was a freedman, if not of the same man, at least of the same family, one of whose slaves was 'Thallus agitator L. Avilli Plantae ser(vus)', mentioned below. The patron of Teres and the master of Thallus was a 'dominus factionis russatae', to which Thallus belonged. This is shown by the inscription *CIL*, vi, 10,077: D. m. L. Avilio Galatae fact. russ. lib. item Juliae C. l. Ampliatae, etc., and 10,069: L. Avill(io) Dionysio cond(itori) gr(egis) russatae. Diocles is thus compared first with previous charioteers of his own party, then from line 17 with those of the other. We cannot say for certain in what *acta* the 1011 victories of Teres were recorded, since evidently the factions also kept *acta*, from which the precise statements made here and in the Teres inscription as to the performances of former charioteers are no doubt derived. But considering the importance attached to circus affairs, it is at least possible that the

acta diurna are meant.¹ Even Cassius Dio gives the number (certainly incorrectly recorded) of the victories of a charioteer murdered by Caracalla: *καὶ ἐν Ῥώμῃ δὲ αὕτῃ ἀνδρὰ μὲν ἄλλως οὐκ ἐλλόγιμον, διὰ δὲ τὴν ἐπιτήδευσιν ἐπιφανέστατον ἐξεργάσατο. τὸν γὰρ Εὐπρεπὴ τὸν ἀρματηλάτην, ἐπειδὴ τοῦναντία αὐτῷ ἐσπούδαζεν, ἀπέκτεινε. καὶ ὁ μὲν οὕτως ἐν γῆρᾳ ἀπέθανε, πλείστοις ἀγῶσιν ἰππῶν στεφανωθεὶς. δύο γὰρ καὶ ὀγδοήκοντα καὶ ἑπτακοσίους ἀνείλετο, δσοὺς οὐδεὶς ἄλλος. (lxxvii, 1).* Dio must have been well aware that 782 was not a large number of victories, especially for an old charioteer; unless the number is wrongly given (according to line 19 it might have been 3782), he perhaps had before him a similar list to ours, and erroneously substituted the total of a certain class of victories for the grand total. The grand total of the victories of Musclosus mentioned above (p. 156, n. 3) is 682, those of a certain Scorpionian 700 (Hirschfeld, *Arch. epigr. Mitth.*, ii, 187), of Avilius Teres 1011. M. Aurelius Polynicus who died in his thirtieth year had won 739 victories: M. Aurelius Mollicius Tatianus who died in his twenty-first year, 125 (*CIL*, vi, 2, 10,049); yet Scopus, who died at the age of twenty-seven (Martial, x, 53) had won 2048, and Pompeius Musclosus mentioned with him in line 19, 3559. Consequently, Mommsen was wrong in believing (*CIL*, vi, 2, 10,058: M. Aurelio Libero—agitatori factionis prasinæ nn. ob ill palmarum hoc donum vovit), that 3000 was an improbable number of victories for a charioteer.

Of course it was particularly honourable to have won 100 victories in a year; but we see from 14, that the larger the number of victories in *certamina singularum*, the greater the honour; so that victories of this kind must have been the most highly prized (cp. also 27 and 28).

15. *Adhuc augens gloriam tituli sui praecessit Thallus factionis suae, qui primus in factione russata (15) . . . at Dio[cles] omnium agitatorum eminentissimus, quo anno alieno principio victor cxxxiii, singularum vicit cxviii; quo titulo praecessit omnium factionum agitadores, qui unquam (16) [certaminibus ludorum c]ircensium interfuerunt.*

Here again it is emphasized as particularly honourable, that of the 134 victories of Diocles in one year 118 were *singularum*, a figure which neither Thallus (who obviously was able to show the proportionally largest number of *singularum*) nor any other charioteer had reached. The 134 victories were no ordinary ones, but *alieno principio*, the meaning of which can only be conjectured. It is said that 'alieno principio, Cotyno et Pompeiano vicit'. Hence I should be inclined to believe that, since Cotynus and Pompeianus are the names of the two middle horses in harness (*introjugi*), *principium* is the chief horse on the left (qui demonstrabat quadrigam). Now charioteers sometimes showed their prowess by winning with the horses of another faction. Flavius Caper, *De Orthographia*, GL, vii, p. 104, 12: *inversis armis gladiatores pugnasse non est dicendum, sed versis, h. e. transmutatis, sed nec inversis pannis agitasse aurigas, sed versis.* The description (appendix xxv) of the variety of race called *diversum* in Constantinople shows that the charioteers, when they changed their colours, also changed the chariots and

¹ *CIL*, vi, 2, 10054, line 6: . . . [actis ?] script(um) fuit: grex prasinus vic(it) ∞ clv. R.L.M.

horses, which carried the colours. But it must have been evidence of the highest excellence to win with a strange near-horse. Thallus (14) is no doubt the charioteer mentioned by Martial, iv, 67, 5 (praetor ait: 'scis me Scorpo Thalloque daturum'). According to the inscription set up by Thallus himself in A.D. 90 and quoted on line 14, Scorpus (whose name occurs in 19) was a slave of L. Avilius Planta.

16. omnium admiratione merito notatum est, quod uno anno alieno principio, duobus introjugis Cotyno et Pompeiano vicit lxxxxviii l̄x i l̄ iii x̄l i xxx ii, i.e. he was victorious in the manner specified 99 times in one year—in one race for a prize of 60,000 sesterces, in four for 50,000, in one for 40,000, in two for 30,000.

17. nn. fact]ionis prasinæ, victor ∞ xxv, primus omnium urbis conditæ ad HS l̄ vicit vii. Diocles præcedens eum, introjugis tribus, Abigeio Lucido Parato l̄ vicit viii. See above, p. 158. Consequently, in these difficult contests Diocles had won more victories than the unknown rival, with the same three horses, two of which on each occasion ran as *introjugi*.

18. præcedens C]omnunem (read Communem) Venustum Epaphroditum, tres agitadores miliarios factionis venetæ, [qui] ad HS l̄ visissent xi, Diocles Pompeiano et Lucido duobus introjugis l̄ vicit (19) [xii ?].

The need for the restorations qui and xii (or a larger number) is obvious.

19. nn.] factionis prasinæ, victor ∞ xxv, et Flavius Scorpus victor iī xlviii et Pompeius Musclosus, victor iiī dlviii, tres agitadores victores vī dcxxxii, ad HS l̄ vicerunt xxviii; (20) [at Diocles omnium agitatorum emi]nentissimus, victor ∞ ccclxii, l̄ vicit xxviii.

Consequently, Diocles was inferior to the two last-named charioteers in the number of his victories, but was superior in that he alone in racing had won 29 times for 50,000 sesterces, while they had only been victorious on the whole 28 times together with a third *miliarius*. The unknown driver of the Greens (in line 17) cannot be the Fortunatus of line 20, who with his horse Tuscus had already gained 9 victories for 50,000 sesterces alone in racing, whereas the driver whose name is missing had only won 7 times (according to 17). Addition shows the correctness of the numbers of the victories.

Victories of the unknown		1,025
„ of Flavius Scorpus ¹		2,048
„ of Pompeius Musclosus		3,559
		6,632

20. nobilissimo titulo Diocles nitet, cum Fortunatus factionis prasinæ in victore Tusco victor ccclxxxvi, l̄ vicit ix, Diocles (21) in [Pompeiano victore victo]r clii, l̄ vicit x, l̄ x i. Thus, while Fortunatus, with 386 victories had only won 9 times for 50,000 sesterces with the victorious racer Tuscus, Diocles, with 152 victories, had

¹ Martial (x, 53, 3) says of Scorpus:—

invida quem Lachesis raptum trieteride nona,
dum numerat palmas, credidit esse senem.

won 10 times for 50,000, once for 60,000 sesterces with Pompeianus (the restoration is clear from line 21).

21. novis coactionibus et numquam ante titulis scriptis Diocles eminet, quod una die sejuges ad HS $\bar{x}$ missus bis, utrasque victor emineuit, adque amplius (22) suisque septem equis in se junctis, numquam ante hoc numero equorum spectato, certamine ad HS $\bar{x}$ emineuit, et sine flagello alis certaminibus ad HS xxx (23) [vicit, adque? cum prim]um visus esset his novitatibus, duplici ornatus est gloria.

Although the restorations are not certain, the general sense is clear. The only word of doubtful meaning is *coactiones* (*coactor* a *theatro* Marcelliano (?): *Bull. com. d. R.*, 1886, p. 310, 1336); I believe, however, that it can mean 'receipts, revenues', so far as the victors collected them from the factions, which furnished the stakes for such prize-contests. Certainly we have no information as to such stakes, but Mommsen's assertion that the 'factions' would never have given money for prizes, seems to me very hazardous, considering the little we know about the circus games. I certainly do not believe that the passage he quotes from Gaius (iv, 15: *causae coniectio quasi causae suae in breve coactio*) proves that *coactiones* can mean *comparationes victoriarum*. Further, of the successes of Diocles here recorded, it was not the prize of 40,000 sesterces that could be described as 'new', but only the fact that *two* such prizes were offered for two races with six-in-hands on *one* day; Diocles conquered in both. Nor could the number of seven horses to one chariot be anything new; the novelty was that they were put to *in se juncti*, i.e. without a yoke.

23. inter miliiarios agitadores primum locum obtinere videtur Pontius Epaphroditus factionis venetae, (24) [qui temporibus imp. nostri Anto]nini Aug. Pii solus victor ∞ cccclxvii, singularum vicit dccccxi. ad Diocles praecedens eum victor ∞ cccclxii, inter singulares (*read* inter has singularum) vicit ∞ lxiv. isdem temporibus (25) [Pontius Epaphroditus eripuit] et vicit cccclxvii; Diocles eripuit et vicit dii.

Here, after the greatest charioteers of the past, the greatest of the present is compared with Diocles. Although he had gained five more victories than Diocles, the latter gained a far greater number of those that were most highly prized (singularum and eripuit et vicit). The figures in these two classes are the same as in lines 7 and 11.

25. Diocles agitator quo anno vicit cxxvii (Abigeio Lucido Pompeiano introjugis tribus victor ciii) inter (26) [inter em]inentes agitadores introjugis Afris plurimum vicerunt Pontius Epaphroditus factionis venetae (in Bubalo vicit cxxxiii) Pompeius Musclosus factionis prasinae (27) [in vicit] cxv. Diocles superatis eis in Pompeiano, victor clii, singularum vicit cxxxiii. ampliatis titulis suis, Cotyno Galata Abigeio Lucido Pompeiano introjugis quinque (28) victor ccccxv, singularum vicit cccclxxxvii.

In the main there is no doubt as to the sense of what has fallen out. In 25 the number of a certain class of victories amongst the 127 in a certain year must have been given, e.g. 'inter [has singu-

larum vicit cx]'. In 27 the name of the horse was mentioned, with which Pompeius had gained 115 victories, possibly also a third charioteer with the number of his victories with one horse. The length of the part that has fallen out cannot be accurately determined.

As for the matter of this last section, this much is clear, that it was considered as great an honour to have gained a large number of victories with the same *introjugi*, as with one chief horse. Only the last named five *introjugi* were evidently not always put to at the same time, since so large a number of races with six or seven-in-hands is inconceivable; it is much more probable that Diocles won the 445 victories with these five *introjugi* alternately. The same may be said of the three *introjugi* in 24.

3. The frequently mentioned Crescens inscription, like others of the same kind, was found near the stadium of Domitian, and is hence rightly interpreted as an honorary inscription by its editress, Countess Lovatelli. It is as follows:—

Crescens agit(ator)
factionis ven(etae)
natione Maurus
annorum xxii.

5. quadriga primum
vicit L. Vipstano (8th of November, 115)

Messalla cos. natale
divi Nervae miss(u) xxiiii
equis his: Circio, Accep-

10. tore, Delicato, Cotyno. (10th of May, 124)

ex Messalla in Glabri-
onem cos. in natale
divi Claudii miss(us) ost(io)
dclxxxvi vicit xxxvii.

15. inter sing(ularum) vic(it) xix binar(um)
xxiii, tern(arum) v; praemiss(it) i,
occup(avit) viii, eripuit xxxviii.
secund(as) tulit cxxx; tert(ias) cxi.
quaest(um) ret(ulit) HS $\overline{\text{xv}}$ $\overline{\text{lviii}}$

20. cccxxxxvi.

The only mistake made by the editress is in the restoration *praemiss(us)* in 16. Mommsen gives *praemiss(u)*, i.e. *alius aurigae*, but the following perfects and the standing form in expressions of this kind lead us to expect *praemisit*. Consequently, there is little doubt that we should read *praemiss(it)*; see above, p. 160.

XXV. *DIVERSIUM*.

(Vol. II, p. 31, line 7.)

(See the *Programm Acad. Alb. Regimont.*, 1872, ii.)

THE kind of race mentioned by Flavius Caper (*De Orihographia*, GL, vii, p. 104, 12; cp. above p. 161) in which the charioteers strove to outdo each other *versis pannis*, was evidently the same as, or very similar to, the *diversium* of Constantinople. It has been

shown by G. Kaibel (*De monumentorum aliquot Graecorum carminibus*, Bonner Doctordissertation, 1871, p. 18; *Epigr. Gr.*, p. 338) that the epigram on the famous charioteer (φακτιονάρης), Porphyrius (*Anth. Plan.*, v, 340 = Jacobs, *Anthol. Gr.*, iii, p. 239 vi),¹ partly preserved on the base of his statue at Constantinople, refers to it. The horses of the four-in-hands of Porphyrius there represented are : Nicopolemus, Radiatus, Pyrrhus, Euthynicus; Halieus, Anthypatus, Cynagus, Pelorius; Aristides, Palaestiniarches, Pyrrhus, Radiatus. The epigram is as follows :—

Ἄλλοις παυσαμένοισιν, δεθλεύοντι δὲ μούνῳ
 Πορφυρίῳ βασιλεὺς τοῦτο δέδωκε γέρας.
 πολλαίκι νικήσας γὰρ εὐὸς πῶρεν ὠκίας ἵππους,
 λάξετο δ' ἀντιπάλων καὶ πάλιν ἐστέφετα.
 ἔνθεν ἔην Ἰπράσινοις ἔρις ἀσπετος, ἔνθεν αὐτῇ.
 ὡς Βενέτους, τέρψῃ, κόρανε, καὶ Ἰπράσινοις.

That this epigram refers to the *diversium* (διβέρσιον) is clear from the passage quoted by Kaibel from Constantine Porphyrogenitus, *De Cerimoniis Aulae Byzantinae*, i, 69, p. 336 Bonn edition.² From this somewhat obscure passage³ it appears that at that time the exchange of colours and teams, although not greatly in vogue, took place between Greens and Blues, on the one hand, and Whites and Reds, on the other. I do not understand what is meant by the *σκεύη* which were not exchanged. There were two kinds of *diversia*. In the one the servants and assistants remained with the charioteers of their party, in the other with the team, that is to say, they went over to the charioteer of the other party. In the latter case the victorious charioteers received the prizes in the faction with whose team they had won; in the former, in their own. At the end of the passage a third kind appears to be mentioned, in which the teams ran without the charioteers (who had gone over to the opposite party), probably urged on by the shouts and whips of the assistants. The victory won in this manner by the horses alone was put down to the party, by whose charioteers they were trained. Although in the time of Claudius⁴ a victory won by a team without a driver was still regarded as wonderful, it is quite conceivable that in later times circus horses were trained for this kind of race, as is suggested by the following

¹ Mordtmann, *Das Denkmal des Porphyrius*, in *Mith. d. deutschen archäol. Instituts in Athen*, v, 1880, pp. 295–308, Taf. xvi. He places the erection of the memorial shortly before the accession of Anastasius or the beginning of his reign (491–518): Porphyrius received the title ὁ εὐδόκιμος, which was given to charioteers at Constantinople.

² The so-called χορευτικοί on the N.W. side of the pedestal of the statue of Porphyrius is as follows (Mordtmann, p. 304): ὁλοὺς ὠδε, ὁλοὺς ἐκεῖ καὶ διβέρσια δεύτερον Μόρος ἐνίκησε Πορφυρίῳ ὁ εὐδόκιμος Σὺ βίγκας Πορφυρί.

³ Quoted in full in the German text (ed. 6).

⁴ Claudii Caesaris saecularium ludorum circensis excusso in carceribus auriga albatī equo Corace occupavere, primum obtinuerunt oppoſites, effundentes omnia contra aemulos quae debuissent peritissimo auriga insistente facientes, cum puderet hominum ar es ab equis vinci, peracto legitimo cursu ad cretam steterē (Pliny, *Nat. Hist.*, viii, 174); equi destituti ab auriga—tendebant—in cursus sollicitationem—ita ut—quasi per lineam directe currentes expedite medium tenerent stadii, ne forte post se qui sequebantur, praecedentes praecederent excederentque circulum; eo vero loco ubi multi gyri aguntur apte commodeque sese vertentes obviabant aliis; perpendendo illud quoque ut circulum propius contingeret temo cum equo a sinistra existente, ne videlicet gyrys maioris periodi longitudinem relinqueret et qui post veniebat et ceteris (Philo, *De Animalibus*, 58).

anecdote told by Libanius (ed. Reiske, iv, p. 150, repeated in Tzetzes, *Chiliades*, vii, 23): παράσιτος ἐπὶ δειπνῶν κληθεὶς βουλόμενος θάπτον ἀπαντῆσαι, ἵππον λαβὼν ἐξ ἵπποδρόμου ἦλθεν εἰς τὴν οἰκίαν τοῦ κεκληκόςτος. βωμὸς δὲ ἦν πρὸ τῆς αὐλῆας θύρας. νομίσας δὲ καμπτὸν εἶναι τὸν βωμὸν ὁ ἵππος ἔκαμψε καὶ συναρπάσας τὸν παράσιτον ἀπήγαγε καὶ μέγας ἀδειπνὸς τῇ ὑστεραίᾳ αὐτὸν προσαγγέλλει. *ib.* p. 154: τὸ σύνθημα δὲ οἶμαι τοῖς τοῖς περὶ τὰς ἀμίλλας καὶ τοὺς δρόμους ἀσκουμένοις, ἐπειδὴν θορυβοῦσιν τῶν θεατῶν ἀκούωσι, πάσῃ δυνάμει συντελεῖν αὐτοὺς εἰς τάχος.

The *πανία* (*panni*) exchanged by the charioteers are no doubt the *tunicæ* themselves; cp. the tenth epigram on Porphyrius (*Anthol. Graeca*, ed. Jacobs, iii, 240)—χρώμασι καὶ πέπλοις συμμετέβαλλε τύχας, which Kaibel (p. 25) rightly refers to the *diversium*. The agreement between the charioteers who made the exchange (*e.g.* not to damage the other party's chariot wilfully) is alluded to in the third epigram on Porphyrius:—

ὅς καὶ τοὺς ἵππους καὶ ὁ μὲν φρονος ἥνιοχ' ἦος
ἐξ ἐτέρων ἐτέρους αἰὲν ἀμειβόμενος.

It is uncertain whether the forms of the *diversium* in vogue at Constantinople existed in the Roman circus-games of the early empire. It is not clear whether the younger Pliny in the following passage (*Epp.*, ix, 6, 2) is speaking of a fact or only assuming a possible case: si tamen aut velocitate equorum aut hominum arte traherentur, esset ratio nonnulla; nunc favent panno, pannum amant, et si in ipso cursu medioque certamine hic color illuc, ille huc transferatur, studium favorque transibit et repente agitatores illos, equos illos, quos procul noscitant, quorum clamitant nomina, relinquunt.

According to the passage from Constantine Porphyrogenitus the *diversium* took place in the afternoon; cp. also the 50th epigram on the charioteer Constantinus (*Anthol. Graeca*, ed. Jacobs, iii, p. 250), who gained 25 victories in the morning, and afterwards 21 with exchanged horses. In the Roman circus also the show had probably been for a long time divided into an *ante-meridianum* and a *pomeridianum spectaculum* (Augustine, *Conf.*, viii, 6) by an interval at noon, after the first ten or twelve races; the passage in Cicero (*Orator*, 47, 137: et 'posmeridianas quadrigas' quam 'postmeridianas' libentius dixerim, already read by Velius Longus, *De Orthographia* in *GL.*, vii, 79 refers to this. Hence there is no difficulty, and the alteration of Döderlein (cp. Fleckeisen, *Krit. Miscellen*, progr. des Vitzthumschen Gymn., 1864, p. 48), who inserts *quadrijugas* after *postmeridianas* is no improvement.¹

XXVI. REPRESENTATIONS OF GLADIATORS (AND VENATORES) IN WORKS OF ART.

(Vol. II, p. 51, line 17.)

I HAVE no idea of giving a complete list of such monuments; my only intention is to illustrate the different classes of them by the aid of the most important examples known to me.

¹ [See also article by Pollak in Pauly-Wissowa's *Realencyclopädie der classischen Altertumswissenschaft*, v, pt. 1 (1905). Tr.]

Lamps. On these, as is well known, representations of gladiators, owing to their being intended for graves, are very frequent: Henzen, *Expl. mus. Borgh.*, p. 82. Cp. *Bull. Nap.*, ii, p. 139; *Lucerne Ercolanesi*, tav. 8; Jahn, *Alterthümer von Vindonissa*, p. 16, taf. 2; *Revue archéol.*, xvi, 371 (lamp from Constantine); Hübner, *Antiken von Madrid*, p. 621 (lamp; a *venator* fighting with four boars; inscribed SAECUL; for similar lamps, intended for illuminations at the secular festival of 248, cp. De Rossi, *Bull. di archeol. crist.*, ii, serie 1, 1870, p. 87). Lamps, resembling a gladiator's helmet in form, are frequent (P. J. Meier, *Gladiatorendarstellungen*, etc., in *Westdeutsche Zeitschr. f. G. u. K.*, i, p. 165).

Earthen vessels. On red ones, according to Leemans (*Rev. arch.*, ix, p. 71) *retiarii*, and shows generally, are frequently represented in the Leyden museum; cp. Janssen, *Monuments grecs étrusques et rom.*, ii, 2056, 2099; *Sammlung röm. Denkm. in Baiern*, ed. by the Academy (1888, heft ii, taf. 5 and 7). An earthen vase at Colchester with a bear-baiting, tamed deer, a hare and a dog, and pictures of a *secutor* and a *retiarius*, together with the inscriptions: Memnon sacviii (?) and Valentinu(s) legionis xxx (erected in lower Germany by Trajan; the writing is of the end of the first or beginning of the second century); Hübner, *Monatsber. der Berl. Akad.*, Feb. 3, 1868.

Glasses. See Henzen as above and *Vetri raccolti dal cav. Bartoldi*, tav. i. Trimalchio (Petronius, 52) had 'in poculis Hermerotis pugnas et Petraitis' (so cod. Tragur.). From the Pompeian *graffito*, representing a gladiatorial combat with the names Prudes and Tetrates inscribed (Avellino, *Atti di soc. Pontan.*, iii, p. 194 = *CIL*, iv, 538), I had conjectured 'Tetratus' for 'Petraius'. The same names recur on a green glass vessel in the Vienna museum (Arneth, *Kameen*, taf. 22, 5), also on a gladiatorial scene: (Tetr)aites Prudes Calamus (*CIL*, iii, 2, 6014, 2), and on two glass vessels, found near Chambéry (Tetrates, Prudes, Spiculus, Columbu(s), Gamus, Merops, Calamus, Hermes: F. Lenormant, *Rev. archéol.*, 1865, pp. 305-310, taf. xx - *CIL*, xii, 5696, 32) and in La Vendée (Hübner, *Eph. Epigr.*, iv, p. 209; cp. Allmer and Terre-basse, *Inscr. de Vienne*, iii, p. 220). But at Lillebonne, in the *Cimetière romain du Catillon* a vessel of greenish glass has been found, with a gladiatorial combat in relief, on which are the names Petrahes and Prudes (Cochet, *Rev. archéol.*, xvi, 1867, p. 151); and the epitaph of a *retiarius* at Makri (Telmissus) in Lycia runs: 'Επειὶ Παιτραίτης μετὰ τῶν συγκαταπαιτρῶν (Benndorf-Niemann, *Reise in Lykien*, i, 41, 157). This confirms the form Petraitis (Παιτραίτης as cognomen of the god Men: Lebas-Waddington, 668, 676; cp. *CIA*, iii, 73), of which Petrahites and Petrahes may have been vulgar by-forms: cp. Bücheler, *Rhein. Mus.*, 1872, p. 474.

Gems. See e.g. Lippert's *Dactyliotheek*; cp. also *Impr. gemm. dell' Inst.*, vi, 79; *BdI*, 1839, p. 112.

Reliefs. At Pompeii, of stucco, on the monument usually called the monument of Scaurus (Nissen, *Pomp. Stud.*, 392; *Mus. Borb.*, xv, tav. 27). Another of marble (16 palms wide, 5½ high) from the *necropoli marittima* (*Bull. Nap.*, iv, tav. 1). Near Aeclanum (memorial of a certain Celsus): *IRN.*, 1194 = *CIL*, ix, 1037. At Abella:

IRN, 1952 = *CIL*, x, 1211. At Venafrum (6 pairs, belonging to a Cassius and a Julius, the combatants indicated by V and M; IRN, 4649 = *CIL*, x, 4920. In regard to the Roman Torlonia relief with contests with wild beasts (*Mon. d. Inst.*, iii, tav. 38), Henzen (*AdI*, xiv, p. 12) conjectures with probability that it comes from the theatre of Marcellus; cp. *BdI*, 1853, p. 130; 163, p. 67 (terracotta relief, bronze figurettes, lamp).

The custom of exhibiting in public pictures of gladiatorial shows dates from the time of the republic; the first who did so being a certain L. (? C.) Terentius Lucanus, who set up his picture in the 'nemus Dianae' (Pliny, *Nat. Hist.*, xxxv, 52; Henzen, as above, p. 15). Perhaps this is the same person whose name appears in a group of frequently occurring silver and copper coins, which according to Mommsen (*Gesch. d. v. Münzw.*, p. 554, 164) belong to the seventh century rather than the sixth. During the empire, when large paintings of remarkable events were generally in favour, it was evidently very common; cp. O. Müller as above, 211, 2. In IRN, 1439 = *CIL*, ix, 1666, the picture of a *munus* is mentioned, which was exhibited in a *porticus* at Beneventum. The paintings in the amphitheatre at Pompeii are well known (Overbeck-Mau, *Pompeii*, ed. 4, p. 181).

Mosaics. The *Musaico Massimi* (cp. Marini, *Atti fr. Arv.*, p. 165) edited by Winckelmann (*Mon. In.*, i, 197) is now at Barcelona (Hübner, *Aniken von Madrid*, p. 196); De Rossi (*Bull. crist.*, v, 87) assigns it to the fourth century, since the *editor* (the giver of the show) is a certain Symmachus. The most important is the Borghese, from the floor of a Tusculan villa (Canina, *BdI*, 1834, pp. 9-96), ed. by Henzen (*Diss. dell' Acad. pontef. di Roma*, xii, 1852); according to De Rossi, it is also a fourth century work. In Germany a mosaic at Augsburg, on which there are also circus games (Gruter, 336). Further, that at Nennig (von Wilmowsky, *Die röm. Villa zu Nennig und ihr Mosaik*, i, 1864, ii, 1865), which the editor (i, 13) endeavours without sufficient reason to put back to the time of Hadrian; cp. also Gerhard, *Denkm. u. Forsch.* (1854), p. 434 and *Revue archéol.*, xii (p. 106) with illustrations. In England, at Bignor in Sussex (*Archaeol. Britan.*, xviii, 1, p. 203). In France, discovered at Rheims in 1860; Desjardins, *BdI*, 1861, no. 6 (chiefly *venationes*; between Caracalla and Constantine); Loriguet, *Mosaïque de Reims*, 1861 (not procurable). See further appendix xxix.

XXVII. THE GLADIATORIAL TESSERAE.¹

(Vol. II, p. 57.)

RITSCHL, in his treatise *Die Tesserae gladiatoriae der Römer* (1864), expressed the opinion that these *tesserae* were medals for bravery, which also at the same time served as documentary evidence in claims for pensions. His solution of SP as *spectatus* was proved untenable by the discovery of six genuine *tesserae* on which *spectavit* was written in full, which has been explained in various ways

¹ See my discussion on the games in Marquardt's *StV*, iii, 560, 6-8.

(cp. Haug, *Die tesserae gladiatoriae. Bericht über römische Epigraphik* in Bursian's *Jahresber.*, lvi, 1888, pp. 103-107).

1. Bücheler (*Jen. Litt. Z.*, 1877, p. 736) has (after Mommsen, *CIL*, i, p. 195) again disputed the necessity of identifying these *tesserae* as gladiatorial. He regards them as 'mementos, hung up in temples on the images of the gods' by slaves, who, exceptionally admitted to the performance of certain sacred acts from which they were usually excluded, had been allowed for once to enjoy the sight of the divinity.

2. Mommsen (in Hübner, *Tesserae gladiatoriae* in *Ephem. epigr.*, iii, p. 163) assumes, with Hübner's approval, that the possessor of the *tessera* had been removed from the arena to the spectators (i.e., had been free from the obligation of fighting) on the day whose date it bore. Similarly Henzen and De Rossi (*BdI*, 1882, p. 8), the latter of whom remarks that the SP occurring in the list of gladiators (*CIL*, vi, 631) together with VET and TIR might mean *spectator*.

3. P. J. Meier (*De gladiatura Romana*, 1881, p. 53, 1) supplies *populus* as the subject of *spectavit*, 'ita ut tesseris indicetur, quando primum spectavit populus gladiatorem, i.e. tiro in ordinem gladiatorum sit receptus'.

4. Mommsen (*Die Gladiatorentesseren*, in *Hermes*, xxi, 1886, p. 266). The *tesserae* (an institution of the private gladiatorial schools) entitled the gladiator to look on as a spectator at the exercises of the school, in which he had hitherto been obliged to take part. With this was perhaps combined the right of superintending and examining the others by the presentation of the *rudis* (the wooden sword presented to gladiators on their discharge). Every gladiator who possessed the *rudis* was *spectator*, but not *vice versa*. The reason why the calends and ides are the favourite dates on the *tesserae* is, that the owners of gladiators were in the habit of striking out the names of combatants at the beginning or in the middle of the month (p. 271). Perhaps freedom from service also brought with it a certain retiring pension (p. 275).

5. A. Elter (*Die Gladiatorentesseren*, in *Rheinisches Museum*, xli, 1886, pp. 517-548) thinks *spectavit* must be identical with *spectatus* est, and consequently means, 'he has made his *spectatio*, is *spectatus*, can at any time appear as a qualified gladiator'. The *tesserae* are the diplomas, examination certificates of the *tirones* (for the issue of which the calends and ides seemed the most suitable times) or rather extracts from them (p. 526). They constituted the most important first step, the first official document in this career, the necessary certificate of qualification for the profession. They were a kind of passport or proof of identity, especially needed in private institutions with their frequently changing staff of qualified gladiators, officially issued by the authorities who superintended the games and exercised a sort of control over such institutions. On the other hand, they were superfluous in the imperial gladiatorial schools (p. 524). Consequently, in *spectare* we have to recognize the specific meaning 'to test, examine' (p. 530). Lebas (on Morcelli, *Delle Tessere*, p. 52) had already assumed the identity of *spectavit* and *spectatus*.

6. P. J. Meier (*Die Gladiatorentesseren*, in *Rheinisches Museum*,

xlii, 1886, p. 122) thinks that Elter's conjecture is only tenable if combined with his own. The sentence 'X (in this case *populus*) spectavit gladiatorem', the object being strongly emphasized and gradually becoming logically the grammatical subject, gave rise to the sentence 'gladiator spectavit'. The dates of the *lesserae* are those of the first public appearance of the recruits.

7. F. Haug (*Berliner philol. Wochenschrift*, 1888, p. 763): *spectavit* means 'he has tested, examined', and the gladiator previously standing in the nominative is not the examinee, but the examiner (against this Meier, p. 1004). Cp. also Haug, *Bericht über röm. Epigraphik*, in Bursian, lvi, 1888, p. 106, where he refers to *CIL*, ii, 4963 = Wilmanns, 2823 (Celer... Borea[e]... muneris tessera[m] dedit) in support of his view.

These various explanations are proof that our data are insufficient to solve the problem. I confess that they all seem to me to be based upon more or less hazardous suppositions. The assumption that an examination was necessary to acquire the right of practising the gladiatorial profession, is impossible for more reasons than one. At a time when the most important posts were obtained without examination (officials, teachers, physicians, advocates), the right to practise a dishonourable calling could not have been dependent upon an examination, if voluntarily entered upon. But it is well known that the combatants were slaves or little better, and no officials had the right to instruct their owners (or the contractors) as to the use they should make of them, provided that no breach of the law was committed.

Is it to be believed that all the owners of gladiators and contractors for the combats (at least in Italy) had agreed to allow only 'approved' gladiators to appear (in which case we should have to assume equally unanimous rules of examination)? For the gladiators, spoken of by Petronius (*Cena*, 45) would have owed their certificates to an excessive leniency on the part of the 'examination commissary'. Nor can I believe, with Meier (p. 16) that there ever existed a 'guild' of gladiators.

XXVIII. SUMMA AND SECUNDA RUDIS; PRIMUS AND SECUNDUS PALUS.

(Vol. II, p. 57, line 15.)

MOMMSEN (*Hermes*, xxi, 269) understands *summa* and *secunda rudis* of those gladiators who had been exempted from service by the bestowal of the *rudis*; they acted as first and second inspectors in a division or troop, and like the *lanistae* (*Passio Perpet. et Felic.*, 10: 'ferens virgam quasi lanista') carried as a badge a staff also called *rudis* (Gloss. Lab.: *rudis páβdos ἡ τῶν ἐπιστατῶν τῶν μοιραίων*), which always appears on monuments (Meier, *Rhein. Mus.*, xlii, 134: cp. also the inscription on the tomb of Flavius Sigerius: *summa rudis, vixit annis sexaginta*: *CIL*, viii, 10,983). Of course only a few of those who were freed from service (*rudarii*, Suetonius, *Tiber.*, 7; ἀποταξάμενοι Gloss. Lab.) became inspectors. They might

also be instructors (*doctores*), although this can hardly have been the rule.

On the other hand, *primus* and *secundus palus* can only refer to gladiators on active service. The former is clearly formed on the analogy of *primus pilus* (πρωτόπαλος in Dio, lxxii, 23 supposes a by-form *primopalus* as well as *primopilus*), the latter being of later origin. As the analogous formation implies an analogous meaning, *primus palus* can only mean the gladiator who was the best, at the head of his class; the combination with the genitive plural (*Vita Commodi*, 15, 8: '*palus primus secutorum*') is the original one, and that with the nom. sing. an abbreviation. The origin of the expression is obscure. Although the combatants who had become masters of their class of course continued their exercises, they certainly did not make use of the *palus*, which was only suitable for beginners. Hence it is inconceivable, that *primus* and *secundus palus* should have been names for the two 'exercise classes', into which all the gladiators (except recruits) were divided; and the assumption that *primus palus* = *veteranus* and *secundus palus* = *spectatus* (Meier, *Glad. Rom.*, p. 54; *Rhein. Mus.*, xlii, 136) is equally improbable and arbitrary.

XXIX. COSTUME AND ARMS OF THE GLADIATORS.

(Vol. II, p. 60.)

THE very numerous figured representations that have been discovered in modern times have greatly increased our knowledge of this subject, to which Henzen's admirable elucidation of the Borghesi mosaic is a special contribution. I have been unable to obtain Olenine's treatise *Sur le costume des gladiateurs*. Lastly, P. J. Meier has discussed the subject in a number of writings: *De gladiatura romana quaestiones selectae* (Bonn, 1881, pp. 13-46: *de gladiatorum armaturis*); *Gladiatorenarstellungen auf rheinischen Monumenten in Westdeutsche Zeitschr. f. Gesch. u. Kunst*, i, 153-177; *Gladiatorenreliefs des Berliner Museums in Archäol. Zeit.*, xl (1882), p. 147, taf. 6, 1; *Dei monumenti rappresentanti gladiatorii in BdI*, 1884, pp. 157-160. Of the monuments known to me I shall only mention those which are in any respect remarkable or informing.

1. **Retiarii.** Since this class of gladiators cannot possibly be confused with any other, our information in regard to it is most exact. Caylus (*Rec. d'ant.*, iii, pl. 24, 2 and 2: clay-figure, remarkable for the *galerus*). The mosaics referred to above (p. 168): Winckelmann, *Monum. ined.*, i, 197 (musaico Massimi). *Arch. Britan.* xi, p. 49 (cp. *Rev. archéol.*, ix, p. 183); xviii, p. 203 (mosaic from Bignor; cp. *Rev. arch.*, v, p. 562); *Atti dell' accademia ponteficia*, 1852, xii (the Borghese mosaic); *Archaeol. Brit.*, xix, p. 70 (relief of the *malus oculus*, repeated by Jahn in *Ber. d. sächs. G.*, 1855, taf. iii, 1); *Mus. Borb.*, xv, tav. 27 (so-called monument of Scaurus; cp. Mazois, *Ruines de Pompéi*, pl. 32); *Bull. Nap. n. s.* (1853), i, t. 7 (*Dipinti graffiti e bassirilievi pompejani*), ii (1854), t. 9, 20 and 21 (bone statuette); *Rev. archéol.*, viii, pl. 169 (gladiatorial weapons; cp. p. 147); ix, pl. 183 (reliefs of *retiarii*); Garrucci,

Graffiti di Pompei, tav. xii (combat between a *retarius* and a *Samnis*); Stevenson, *BdI*, 1883, p. 102 (the same); Benndorff-Niemann, *Reise in Lykien*, i (grave of a *retarius*).

The *retarii* were the only gladiators who appeared without a covering for the head (Suetonius, *Claud.*, 34; Juvenal, viii, 200-206). They wore a short tunic (Suetonius, *Calig.*, 30; Juvenal, ii, 142; vii, 207) or a simple *subligaculum* (a short apron above the hips), as usually on monuments (in the Mus. Borgh. white). With the exception of some bandages round the legs, their defensive arms were limited to the broad belly-band (*balteus*) and a sleeve on the left arm, with a kind of leather or metal shoulder-piece, rising above the left shoulder, to supply the place of the shield. This shoulder-piece (which is especially large on the Bignor mosaic and looks like a wing) was called *galerus*, as Henzen (*Mus. Borgh.*, p. 113) has recognized from the scholiast on Juvenal, viii, 208 (ed. Jahn): '*galerus est umero impositus gladiatoris*' (cp. *BdI*, 1853, p. 130). So unsuitable a name would certainly arouse suspicion, if it were not evidently a technical expression. Garrucci also in later times has recognized the *galerus* in the shoulder-pieces (*Bull. Nap.*, n. s., i, p. 101, 103 tav. 7, where such *galeri* found in Pompeii are represented; cp. *Rev. Archéol.*, v, 8, pl. 165). On the grave-stone of a *retarius* named Glaucus (*CIL*, v, 1, 3466) found at Verona the third object by the side of the dagger and trident, which Mommsen was unable to explain, is in all probability the *galerus*. In the passage of Juvenal, viii, 207:

Credamus tunicae, de faucibus aurea cum se
porrigat et longo jactetur spira galero,

Garrucci explains *spira* as a string fastened on one side to the *galerus*, on the other to the rope of the net, so that it fell from the former round the breast of the *retarius*. Scholiast: [*SPIRA*] hujusmodi aliquid, quo citius sparsum funem vel jactatum retium colligerent. According to Meier (*De gladiatura romana*, p. 30) the *spira* is rather the circular coiled up (Festus, p. 330 M: '*spira—funis nauticus in orbem convolutus*') rope of the net, which the *retarius*, when he wishes to throw, must guide to the left shoulder on which is the *galerus*; probably the *spira* was fastened to the *balteus*, but in such a manner that in case of need it could be detached.

A head-band, described by Galen, may also have been especially or exclusively used by *retarii*, who wore no helmet. Galen, *De fasciis*, 32, xviii a, 797: τὸ ἡμικρόβιον προσλαβὼν τὰ καλούμενα ὅσα οὕτως ὀνομάζεται. ἐπιδέχεται δ' ἥτοι εὐκρεπείας χάριν ἐν μονομαχίαις ἢ χάριν τοῦ κράττημα γίνεσθαι τῆς κεφαλῆς ἐπὶ προσώπου τινὸς συμπτώματος μεθοδευομένου· ἀλλ' εἰ μὲν εὐκρεπείας ἕνεκα ἐπιδέοιτο βραχέα εἶναι δεῖ ταῦτα καὶ ἐν μέσῳ τῷ μετώπῳ τετάχθαι. οὕτω γὰρ ἂν τὴν ἐμφέρειαν πρὸς τὸ ζῶον ἀποσώζῃ. The *retarius* on a Pompeian relief (*Bull. Nap.*, iv, tav. i; Meier, *Glad. rom.*, p. 29) wears such a band.

The offensive weapons of the *retarius* were in the first place the net (*jaculum*), which in Winckelmann (*Mon. ined.*, 197) appears so large as almost entirely to cover the figure of his opponent. It also appears in *Rev. arch.*, vol. ix. pl. 183, 2; *Archaeol. Brit.*, xviii, p. 203, and Gori, *Inscr.*, iii, p. 99, represented in *Bull. Nap.*, 1853,

tav. vii, 12). The reason of its rare occurrence on monuments is probably that the *retiaris* carried it folded together, before they flung it (Isidorus, *Origines*, xviii, 54 : ferebat occulte rete). It is not probable, as assumed by Meier (p. 32) and Henzen, that the *retiaris* did not always carry the weapon after which they were named and the clever handling of which must have constituted the chief interest of the combats in which they took part. If they missed their aim they retired, until they had made the net ready for another throw and were in a position to attack again ; hence the *retarius* is likened by Artemidorus (*Oneirocritica*, ii, 3) to a woman *καὶ φυγάδα καὶ ῥῆστα τῷ βουλομένῳ πλησιάζουσαν* : cp. Juvenal, viii, 204 ; *Gloss. Lab.*, RETIARIUS : δικτυοφόρος c. δικτυοβόλος.

His other weapons were the trident, the tunny-fish harpoon (*fuscina*) and the dagger (Valerius Maximus, i, 7, 8 and most of the monuments). The figure in *Rev. arch.*, v, 562, taken by Letronne for a *dimachaerus* is correctly explained by Chabouillet in *Rev. arch.*, viii, 416, as a *retarius* with dagger and trident : cp. Garrucci, *Bull. Nap.*, 1865, p. 134.

The throwing of the net may have been an old method of fighting, represented on an antique paste (Welcker, *Alle Denkmäler*, 2, tafel 16, 32) and occurring in the duel between Phrynon and Pittacus (Diog. Laërt., i, 74 ; Polyaeus, i, 25 ; cp. also Diod. Sic., xvii, 43, according to whom the Tyrians used tridents and fishing nets against their Macedonian besiegers). Strabo (xiii, 1, 38, p. 600 : see Welcker above) has evidently added the trident in his account of the duel in order, like the Roman archaeologists (Festus, s.v. *retarius*), to make this engagement the prototype of the *retiaris* combats. Whether the gladiatorial net and harpoon were really borrowed from fishing or not, such weapons were bound to suggest the idea of fishing. (Arnobius, *Adv. gentes*, vi, 12 : cum *fuscina* rex maris, tamquam illi pugna sit gladiatorii obeunda certaminis ; Martial, v, 24, 12 : *aequoreus tridens* ; *Aequoreus*, name of a *retarius*, *CIL*, x, 1927. One of the *galeri* found at Pompeii, *Bull. Nap.*, 1853, n. s. i, tav. vii, 2, contains a crab, a dolphin, and an anchor). In the joke told by Quintilian (*Inst. Orat.*, vi, 3, 61 : *Pedo de mirmillone qui retiarium consequabatur nec feriebat, Vivom, inquit, capere volt*), the only possible method of making sense seems to be the conjecture of Leemans (*Rev. arch.*, ix, p. 82 : de *retiaris* qui *mirmillonem*, etc.), although even then the joke is very poor. The fish, which is said to have been attached to the helmets of the *Galli* and *mirmillones*, who fought with the *retiaris*, is also found on those of other gladiators (Meier, p. 36, 3). The satirical song of the *retiaris* to the *mirmillones* : *non te peto, piscem peto, quid me fugi* ', Galle ? consists, as observed by Meineke (*Progr. des Joachimsth. Gymn.*, 1851), of *Ionici a majore*. From a similar (perhaps even the same) poem may be derived the mode of address (---o---o---o---) 'mortue Galle' mentioned by Martial, viii, 75, 16 :

hic mihi de multis unus, Lucane, videtur,
cui merito dici 'mortue Galle' potest.

These satirical songs were probably sung with appropriate rhythmic movement and to the accompaniment of music. It has been

observed that music was played during the combats. But of course they could not fight according to time; this would only be possible in sham fights. Of these Petronius (36) says: 'processit statim scissor et ad symphoniam ita gesticulatus laceravit obsonium, ut putares essedarium hydraule cantante pugnare (on the *essedarii* see below).

From the fact that the *retiarii* had no covering for the face (Juvenal, viii, 200) and were most lightly armed, Henzen (p. 113) concludes that they were the most despised of all the gladiators. Similar to them were the

2. **Laquearii**, who were armed with a noose instead of a casting-net. They are only mentioned in Isidorus, *Origines*, xviii, 56: 'quorum pugna erat, fugientes in ludo homines injecto laqueo imeditos consecutosque prosternere, amictos umbone pelliceo'. According to representations (on a gem and a clay-relief in Meier, p. 44) they also wore the *galerus*, but had no other defensive weapons.

The *retiarii* also fought in troops (*gregatim*; Suetonius, *Calig.*, 30), but evidently never against one another, but against the *Galli*,¹ *murmillo*nes (Valerius Maximus, i, 7, 8; Peto Albinovanus in Quintilian, vi, 3, 61), *Samnites* (who occur as opponents of the *retiarii* especially on the Bignor and Borghese mosaics, and also on that of Nennig, whose editor erroneously takes the *Samnis* for a *murmillo*) and *secutores*. The combats of the *retiarii* with the latter continued to a very late date (Meier, p. 22). The opponents of the *retiarii* are also represented by the term (originating in gladiatorial circles) *contraverele* [i.e. *contravetarius*] (Henzen, 6174 = Wilmanns, 2616 = *CIL*, vi, 2, 10, 180); this is also the meaning of >RET written by the side of six names of gladiators in *CIL*, vi, 1, 636 (A.D. 177).

3. **Secutores**. First mentioned in Suetonius, *Calig.*, 30; on Victorius' conjecture in Cicero, *ad Att.*, vii, 14, 2—*secutorum* for *scutorum*, cp. Meier, p. 19. They were the chief opponents of the *retiarii* (Isidorus, *Orig.*, xviii, 56: 'secutor ab insequendo retiarium dictus, διὰ γὰρ διώκει, says Artemidorus, *Oneirocr.* as above). Their arms were sword, shield, visored helmet, and a greave. The latter is evident from Philogelos (ed. Eberhard, 87): σχολαστικὸς ἐπὶ τῆς αἰκίας σεκούτωρος σχῆμα λαβὼν ἐπαιζεν. ἀφ' οὗ δὲ τινος ἀπαγγελλαντος αὐτῷ τὴν παρουσίαν τοῦ πατρὸς, βίψας τὸ δπλον, ἔλκε τὴν κρημίδα. φθάσαντος δὲ τοῦ πατρὸς αὐτῷ ἐπιστῆναι, ἔχων τὴν περικεφαλαίαν βιβλῶν ἀνεγίνωσκε. Dio, lxxii, 19, says of Commodus when fighting as a *secutor*: οὐδὲ ἐφίλει ὥσπερ εἶχε διὰ τοῦ κρᾶνους; schol. Juv. vi, 108: ATTRITUS GALEA: apparet eum secutorem fuisse; on the shape of the helmet, see Meier, p. 25. With this agrees the monument of a certain Urbicus secutor, poorly reproduced in Muratori, 617, 1, more accurately described by Cavedoni (*BdI*, 1846, p. 190) and Meier (*Gl. rom.*, p. 21); cp. also *AdI*, 1850, p. 125 (lamp from Salona). Isidorus (*l.c.*) gives them 'cuspidem et massam plumbeam', which is unintelligible; Leemans' conjecture 'cassidem et magnum clypeum' (*Rev. arch.*, ix, p. 80) cannot be supported.

The *secutores* were armed in exactly the same manner as the

4. **Samnites** (according to Meier, p. 14, the oldest class). As

¹ It is hazardous to conclude (with Meier, *Westd. Ztschr.*, i, 161), from lack of evidence that the combats between *retiarii* and *murmillo*nes ceased in the second century.

they are last mentioned by Horace, Meier (pp. 19-25) conjectures that later, as the opponents of the *reliarii*, they received the name of *secutores*, which first occurs under Caligula (Suetonius, *Calig.*, 30); as opponents of the *Thraeces*, that of *oplomachi*. The equipment of the Samnite soldiers as described by Livy (ix, 40) was somewhat modified in the case of the gladiators named after them. Their characteristic weapons were: the large oblong shield, often somewhat concave (Winckelmann, *Mon. ined.*, 199), but which on the monuments is only exceptionally (as in Livy's description) narrower at the bottom than at the top (so according to O. Hirschfeld's communication in the relief from Cavallargues mentioned in the note on ii, 61, 1, and in the gravestone described by Gurlitt in *Antike Denkmäler, Epigr. archäol. Mitth. aus Oesterreich*, i, 7; cp. the same i, 100); the sleeve on the right arm common to all gladiators, the greave on the left leg, the girdle, the visored helmet (worn also by other classes, Meier, p. 18), with crest and very long plume (Varro, *Ling. Lat.*, ii, 11), and a short sword. These arms are called by Juvenal, vi, 256: *balteus et manicae et cristae crurisque sinistri dimidium tegimen*. According to Cicero (*De Orat.*, ii, 325: *prolusio . . . Samnitium, qui vibrant hastas ante pugnam, quibus in pugnando nihil utuntur*) they carried lances only in sham fights; later, according to the monuments, perhaps also in serious combat (Meier, p. 34). The 'spongia pectori tegumentum' (Livy) was dispensed with, since as a rule the gladiator's breast was left unprotected (Meier, p. 17). Cp. Henzen (p. 107) and the particularly instructive representation of the figure of a Samnite from the Campana collection (tav. 7, 1). According to this Henzen has shown the Samnites on the Borghese mosaic as opponents of the *reliarii* (*secutores*), just as they appear on the Bignor mosaic; on the other hand, contending with *Thraeces* (*oplomachi*) in Bartoli, *Lucernae sepp.*, i, 22, Overbeck-Mau, *Pompeji*⁴, p. 182 (picture on the breastwall of the arena) and Boissieu, *Inscr. de Lyon*, p. 464 (terracotta vase). Other representations of Samnites: Guattani, *Mon. ined.*, 1787, tav. 3 (repeated in Clarac, *Mus. de Sculpt.*, pl. 866); *BdI*, 1850, p. 167; Bursian, *Zwei Bronzestatuellen aus Avenches in Anzeiger für schweizerische Geschichte und Alterthumskunde*, 1865, no. 1.

5. *Thraeces*. First mentioned in Cicero, *Phil.*, vi, 13; vii, 17; *Prov. Cons.*, 9; last in Ausonius, *Technopaeg.*, p. 488 Toll.; schol. Juvenal, viii, 201; Meier, p. 33. They carried the small shield (*parma*), with which they were opposed to the Samnites, who were armed with the large shield (*scutum*). According to Pliny (*Nat. Hist.*, xxxiii, 129) the *parma* was round and somewhat concave: 'plurimumque refert concava sint (specula) et poculi modo, an parmae Thraecidicae'; and so it appears on the monument of Scaurus. More frequently, however, it is not round, but square, like the *scutum*; see e.g. the monuments of the *Thraex* Priscus (*Mus. Veron.*, 444, 2) and of M. Antonius Exochus (Fabretti, *Col. Traj.*, 256 = *CIL*, vi, 10, 194). On the monument of a *Thraex*, described by Borghesi (*Bull. Nap.*, i, p. 95) the shield is 'grande e ricurvo' (large and bent round). The *parma* must also have been square, otherwise Martial (xiv, 213) could not have spoken of it as capable of being used as a *scutum* by a dwarf. Their characteristic

offensive weapon was the *sica* (the national weapon of the Thracians, Val. Max., iii, 2, 12), a short curved sword. *Corp. Glossar. Latin.*, ed. Goetz and Gundermann, ii, p. 183^b: *sica* ῥακικὸν ξίφος ἐπικαμπές. It is called 'falx supina' by Juvenal (viii, 201), and boars' tusks, 'dentium sicae,' by Pliny (*Nat. Hist.*, xviii, 2). This is the shape of the *sica* on a relief in the amphitheatre of Nîmes, representing a combat between a *Thraex* and a *Samnis* (Pelet, *Descr. de l'amph. de N.*, pl. iii, f. 1). But more frequently the blade is not curved, but forms an angle about halfway down, as on the monument of Exochus (Overbeck-Mau, *Pompeji*⁴, p. 182), on the trophies of gladiatorial weapons in the gladiators' school at Pompeii (*Bull. Nap.*, 1853, tav. vii, 13 and 14; cp. also p. 114). The want of the large shield was compensated by a more complete equipment; hence Artemidorus attributes to them τὸ ἐσκεπάζθαι τοῖς ὅπλοις. Like other gladiators, particularly the *Samnites* (from whom, however, they are distinguished by having, in addition to the *parma* and *sica*, greaves on both legs), they wear the visor and the sleeve on the right arm; cp. Henzen, *Mus. Borgh.*, p. 112, *Bull. Nap.*, i, p. 95. By this the *Thraeces* on the monument of Scaurus, whom Mazois (*Ruines de Pompéi*, pl. 32) takes from Samnites, may be identified. In Seneca (*Quaest. Nat.*, iv, praef. 8) Haase's emendation 'quamvis staturam habeas [Thraecis cum] Thraece compositi' is impossible; the sense requires something like 'staturam—nani cum Thraece compositi'. It was natural that these heavily-armed combatants should generally be recruited from men of great stature; but in Petronius (45): 'unus alicujus *staturae* fuit Thraex', Scheffer's conjecture *staturae* is to be rejected. On monuments *parmati* are also seen with lances and straight swords (Meier, p. 34; Pacho, *Voyage dans le Cyrénaïque*, p. 53); on the other hand, a *scutatus* with a *sica* in a Pompeian graffito (Avellino, *Osservazioni*). In regard to this it must be observed that it would be idle to attempt to distribute all the representations of gladiators amongst the classes known to us. For in the first place they had no regular uniforms, but their equipments were undoubtedly subject to countless modifications that varied according to time and place; and in the second place the representations are certainly not always true. The *Thraeces* also fought with one another (according to the monuments), and with the *murmillones* (Meier, p. 33). But their chief opponents were the

6. **Oplomachi** (the usual form in inscriptions and good MSS.; Meier, p. 22, 4). Lipsius supposed that it was a later name for the *Samnites* (taken from their *scutum* [ὄπλον]). The occurrence of *Samnis* together with *oplomachus* in the list *IRN*, 737 (= *CIL*, ix, 466) may be explained by the assumption that the former name for the opponents of the *reliarii* had not yet been superseded by the later *secutor*, whereas the opponents of the *Thraeces* were already called *oplomachi* (see above). In the Pompeian list (*CIL*, vi, 2508) they appear not only as opponents of the *Thraeces*, but also of the *murmillones* and *dimachaeri* (Meier, pp. 22-25).

7. **Galli** and 8. **Murmillones** (apparently the only inscriptional form; Meier, p. 35, 1). According to Festus, p. 285 M (*murmilonicum genus armorum Gallicum est ipsique murmillones ante*

Galli appellabantur in quorum galeis piscis effigies inerat) the second name (derived from the fish *μορμύρος* or *μορμύλος*) also denoted the Gallic combatants; both names, however, occur together in the list *IRN*, 737 (= *CIL*, ix, 466). Certainly, the only other place where the *Galli* are mentioned is the satirical song of the *retiararii* (see above), whereas the *murmillo*nes are frequently referred to down to the latest times. Their chief opponents were the *retiararii*, also the *Thraeces* (Meier, p. 37); it cannot be concluded with certainty from *CIG*, 2164 (Meier, p. 41) that they fought against each other. The passages in Ammianus Marcellinus (xvi, 12, 40: seque in modum murmillonum opperens; xxiii, 6, 83: pedites in speciem murmillonum contacti) throw no light upon their equipment. Lipsius, who concluded from them that they were heavily armed, identified them with the *cruppellarii* of the Aeduians, slaves intended to serve as gladiators, 'quibus more gentico continuum ferri tegimen' (Tacitus, *Ann.*, iii, 43). Meier, on the other hand, thinks that they were lightly armed, and identifies them on a number of monuments (pp. 38-42).

9. **Dimachaeri**. Artemidorus, *Oneirocr.*, ii, 32 ed. Reif.: *διμάχαιρος δὲ καὶ ὁ λεγόμενος ὀρβήλας*. For the last word (so in V [Marcianus 268], in L [Laurentianus 87, 8] *ἀρβήλας*) which is evidently corrupted, Hercher gives *μορμύλων*; but this is very improbable, since the two classes have nothing in common. I conjecture that *βήλης* (*veles*) is the true reading, and that the corruption may have arisen from *ὁ καὶ βήλης* (καὶ in an abbreviated form) being written in the margin. Dymachero sive assidario in Orelli, 2584 = Boissieu, *Inscr. de Lyon*, p. 469). The figure in *Mus. Borb.*, viii, pp. 7, 8 has been wrongly explained as a *dimachaerus* (see p. 173).

10. **Vellites**. Isidorus, *Origines*, xviii, 57: velitum pugna erat ut ultro citroque tela objectarent; according to Cicero (*Brutus*, 78, 271) they had 'hastae amentatae' (spears with straps or thongs attached); 'hasta velitaris evolsa corpori hominis (Pliny, *Nat. Hist.*, xxviii, 134). In Nonius Marcellus, *De Propri. Serm.*, i, p. 56 M, ed. Quicherat, p. 57, 1: PETAUURISTAE: idem (Varro) de Vita Populi Romani lib. ii: 'nec minus in alio genere sunt ludii vellites (ludi velitis, Kraner, Varro *De v. p. R.*, ii, 21, p. 33) Galli, Germani, petauristae'. It is clear from Seneca, *Apocol.*, 6: 'ad xvi lapidem natus est a Vienna, Gallus germanus) that in this obscure passage we should write 'Galli germani'. Can 'Galli germani', no doubt a popular expression, mean real Gallic tumblers as opposed to the gladiators called *Galli*? (cp. the *Programm Acad. Alb. Regiment*, 1873, v, p. 3). Ovid, *Ibis*, 45: utque petit primo plenum flaventis harenae nondum calfacti velitis hasta solum; cp. Cicero, *Orator*, ii, 78, 316 and Marquardt, *StV*, iii², 562, 2. Perhaps also the 'veles bonu' sub vitem qui subicit hastas (Lucilius, ed. Gerlach, fr. inc. 44; cp. Festus, p. 310, Paul., p. 328 ed. O. M.) is a gladiator. Spears are to be seen on the gladiatorial trophies of Pompeii (*Bull. Nap.*, 1853, p. 115) and on graffiti.

11. **Provocatores** (Cicero, *Pro Sextio*, 64). The monument of a certain Anicetus provocator (Henzen, 6173 = *CIL*, vi, 10, 183) exhibits, according to Meier's description (*BdI*, 1884, p. 158) a gla-

diator equipped with *scutum*, sword, and greave (the Samnite accoutrement). On the other hand, in Garrucci (p. 13) there is an inscription: Mansuetus provocator victor Veneri parmam feret (unless we should read *palmam*; cp. Garrucci, *BdI*, 1865, p. 79). From the inscription of a prov(ocator spat(arius) (= *CIL*, vi, 7659) Garrucci assumes a special class of *provocatores*, who were armed with the 'gladii minores, quos spatas vocant' (Vegetius, *De re mil.*, ii, 15). Wilmanns (*E. I.*, 2609, 1) and Meier (*BdI*, 1884, p. 158 note) consider 'spat.' to be a mistake for 'spect'.

12. **Essedaril** (Cicero, *Ad Fam.*, vii, 10), probably introduced by Caesar. No doubt they imitated as closely as possible the British fighters in chariots, thus described by Caesar (*De Bell. Gall.*, iv, 33): *mobilitatem equitum, stabilitatem peditum in praeliis praestant; ac tantum usu quotidiano et exercitio efficiunt ut in declivi ac praecipiti loco incitatos equos sustinere, et brevi moderari ac flectere, et per temonem percurrere et in iugo insistere et inde se in currus citissime recipere consueverint*. Burmann quotes this passage and Seneca, *Epp.*, 29, on Petronius, 36: *ita gesticulatus laceravit obsonium, ut putares essedarium hydraule cantante pugnare, from which it is clear that the *essedarii* sometimes carried out their artistic movements in musical time*. Lipsius (*Saturn.*, ii, 12) rightly concluded from Suetonius (*Calig.*, 35), where the *essedarius* Porius sets his slaves free 'ob prosperam pugnam', that on every chariot (as amongst the Britons) there was a driver as well as the combatant. The mention of a 'mulier essedaria' in Petronius (45) cannot be accidental. The *essedarii* may have come especially into vogue as the result of the wars in Britain under Claudius and Nero; British women appear to have frequently taken part in battle (Tacitus, *Ann.*, xiv, 35): *Boudicca, curra filias prae se vehens—solum quidem Britannis feminarum ductu bellare testabatur*. *Esse(darius)* in the list *CIL*, ix, 466. Inscription on an *essedarius* named M. Bostorius in Garrucci, *Graffiti*, p. 66; *CIL*, vi, 631; cp. Meier, *Gl. rom.*, p. 43.

13. **Equites**. 'Equi gladiatorum' are mentioned in Cicero (*Pro Sestio*, 59, 126); *IRN*, 736 = *CIL*, ix, 465; eq. vet. lud. mag. (*CIL*, vi, 10,167); Artemidorus, *l.c.*; Galen, *De Comp. med. p. gen.*, iii, 2 ed. Kuehn, xiii, p. 601: *θεασάμενος γὰρ τινα μονομάχων τῶν καλουμένων ἱππέων*. Isidorus (*Origines*, xviii, 53): *genera gladiatorum plura, quorum primus ludus equestrium. duo enim equites praecedentibus prius signis militaribus, unus a porta orientis alter ab occidentis procedebant in equis albis cum aureis galeis minoribus et habilioribus armis, sicque atroci perseverantia pro virtute sua inibant pugnam*. The horsemen fighting with one another on the monument of Scaurus have long coats of mail, small round shields, brassards on the right arm, tunics, visor-helmets, and spears; cp. also Meier in *Westd. Zeitschrift*, i, 165.

14. **Andabetae**. Occurs in Cicero (*Ad Fam.*, vii, 10); also the title of one of Varro's satires (Petronius, ed. Bücheler³, p. 165). From the gloss in Mai (*Class. Auct.*, vii, 551): *andabetae gens quoadam* and the mention of *ἀνδραβάραι* (*ἀνδαβάραι*?) amongst the legionary soldiers in Lydas (*De Magistratibus*, i, 46) Meier conjectures that they were gladiators who, like the *Samnites*, *Galli*, and *Thraeces*

appeared in their national armour. Nothing further is known of them except that they fought without being able to see, *i.e.* they probably wore a visor without eye-holes (Jerome, *Adv. Jovin.*, i, 37, *Adv. Helvid.*, 3, p. 3A, *Contra Rufin.*, 3, p. 101A; cp. the 'combat à l'aveuglette' in Lacroix, *Mœurs*, etc., *au moyen âge*, p. 236). Lipsius (*Sat.*, ii, 12) without reason took them for horsemen, chiefly because, according to Artemidorus (*l.c.*) the *ἵππεύς* means *γυμναῖα* . . . *φρένας οὐκ ἔχουσιν*; but it is quite inadmissible to conclude from this, not only that the horsemen could not see, but that the *andabatae* and *equites* were identical. Turnebus (*Adv.*, ii, 20) with as little reason identified *andabates* with the Greek *ἀνδάρης*, according to which he fought from a chariot. What Orelli (2569) says is correct. They are rarely mentioned on inscriptions or monuments, and by no writer of the imperial period (Jerome probably only draws from Varro); so perhaps this method of fighting fell into disuse at the end of the republic.

15. **Paenularii.** Orelli, 2566 = *CIL*, vi, 631 (inscription of the colleg. *Silvani*) and Henzen, 6176 = *CIL*, vi, 10,168 (a 'paegniarius ludi magni', who lived to nearly 100); Wilmanns, *E.I.*, 2617; *CIL*, vi, 10,182. Suetonius, *Calig.*, 26, ed. Roth: *tabidis feris vilissimos senioque confectos gladiatores*, "quoque paegniaris patres familiarum notos sed insignis debilitate aliqua obiciebat (*cod. Mem. pegniaries*, other *codd.* *pegmares*, for which Scutilli [*De coll. gladi.*] and Marini [*Iscr. alb.*, p. 12] had already conjectured *paegniarios*). That they were dwarfs, as conjectured by Cavedoni (*BdI*, 1846, p. 191) is improbable. Perhaps they carried *arma lusoria* (arms incapable of causing death). The mosaic found at Nennig represents a fight between two *paegniarii*; they are protecting themselves with small shields, and carry in the left hand a staff bent round at the top with a large knob, in the right a whip. Meier (*Westd. Ztschr.*, i, 157) believes that they appeared at the midday interval, according to Seneca (*Epp.*, 7): *casu in meridianum spectaculum incidi lusus expectans et sales et aliquid laxamenti*, and Tertullian (*Ad Nat.*, i, 10 = *Apolog.*, 15) *risimus et meridiani ludi de deis lusus* (? a pantomime). The assumption of Henzen (*Mus. Borgh.*, p. 117) that *meridiani* was the name of a special class of gladiators, is based on an inscription (Orelli, 2587 = Gruter, 335, 4) which is not genuine. Other classes of gladiators are erroneously assumed or at least cannot be certainly shown to have existed. The *manicarii* in the colleg. *Silvani* (*CIL*, vi, 631) are not gladiators but makers of brassards, which is the less remarkable, as an *uncior* was also a member of this *collegium*. The *velarii* who drew up and pulled to the awning of the amphitheatre may also have belonged to the gladiatorial 'families' (the whole troop of gladiators under one trainer was often called *familia*): Orelli, 2569, *Ind.* p. 189; Herzog, *Gall. Narb. App.* 315 (Antipolis = *CIG*, 6776): *Ἀντιπολὶς καὶ οἱ πολλοὶ τὸ γενικὸν μισθολόγων καὶ οὐδ' ἀρ[ιστο]* . . .

16. **Scissores.** Only in the list *IRN*, 737 = *CIL*, ix, 466, where a Marcus Caecilius scisso(r) is mentioned, as a *tiro*, killed or dead (Meier, p. 43, 2).

17. **Sagittarii.** *IRN*, 737 = *CIL*, ix, 466. Meier concludes from the following passages that not only those who fought with wild

beasts, but also gladiators proper used bow and arrows: Persius (iv, 42): *caedimus inque vicem praebemus crura sagittis*—*ilia subter caecum vulnus habes, sed lato balteus auro praetegit*; cp. schol. *Nux*,¹ 171: *corpora praebemus plagis, ut saepe sagittis, quem (codd. cum) populus manicas deposuisse vetat (i.e., quem populus non mittit)*. In the latter passage gladiators may be meant, whose death was demanded by the people, and who were obliged to serve as targets for archers. In the former *caedimus* leads to the assumption that gladiators differently equipped (? horsemen) were matched with the archers.

Gladiators might be skilled in more than one mode of fighting. Boissieu, *Inscr. de Lyon*, p. 469 = Muratori, 613, 3: *dymachaero sive assidario p. vii rv(di)*; Martial, v, 25, 11:—

Hermes belligera superbus hasta,
Hermes aequoreo minax tridente,
Hermes casside languida timendus.

Hermes was a *velox* and a *retiarius*: the third class cannot be defined with certainty.

Venatores. To these belonged the *taurocentae* and *taurarii* (*IRN*, 2378 = *CIL*, x, 1074); the same inscription mentions *succursores* and *ponlarii* (? *contarii* from *κοντῆς*; cp. *κοντοκυνήγιον*, *CIG*, 3422). *Succursores* probably, like *successores* (a successor Augusti in *IRN*, 4785 = *CIL*, ix, 2369), appear to have been persons who irritated the bull and then took to flight (Henzen, *Mon. Borgh.*, p. 151). On monuments the figures of men badly armed or quite unarmed are probably condemned criminals (*bestiarii*), the well-equipped trained *venatores*, whose chief armament was the *manica*. Fronto, *Ad M. Caesarem epp.*, v, 23: *consul populi Romani posita praetexta manicam induit, leonem inter juvenes quinquatribus percussit populo Romano spectante*. Whereupon Marcus inquires: *quando id factum et an Romae? num illud dicis in Albano factum sub Domitiano?* In Juvenal, iv, 99: *cominus ursos figebat—nudus arena venator, nudus = wearing nothing but the simple tunica*. Well-armed *venatores* may be seen in Bartoli, *Pitt. antiche*, ii, 27, especially on the Torlonia relief (see above, p. 168), where Henzen's (*Mus. Borgh.*, p. 117; cp. *AdI*, 1841, p. 15) recognition of a Parthian equipment receives additional support from the fact that the Parthians were experts at shooting wild animals with arrows: Tirdates distinguished himself in this manner (Dio, lxiii, 3), and Commodus took lessons in archery from Parthians, in javelin-throwing from Moors (Herodian, i, 15). A *venator* on horseback, pursuing a deer in flight, already wounded by a spear, in Garrucci, *Graff.*, pl. xiv, 5 (cp. p. 74); mounted *venatores* on contorniates (Sabatier, *Descr. gén. des c.*, pl. iv, 1 and pl. ix). Slings as weapons of *venatores* (P. J. Meier, in *Bonner Jahrbücher*, lxi, p. 111). On the whole they appeared variously equipped, sometimes without any defensive weapons, only armed with a hunting spear (*Bull. Nap.*, iv, tav. 1). Yet *venatores* appears to have been the general name for all who

¹ [An elegy on a 'nut-tree' sometimes ascribed to Ovid (printed in Bährens, *Poetae Latini minores*, i, 90). It is probably not by him, but at any rate belongs to the Augustan age. Tr.]

fought with wild beasts (except condemned criminals); P. J. Meier's conjecture (*BdI*, 1884, p. 159) that only those were so called 'che facevano uso di brache ed erano muniti completamente d'arnesi da caccia', the heavily (in Samnite fashion) armed *provocatores*, is at once arbitrary and improbable.

XXX. ON THE ANIMALS USED FOR THE ROMAN *VENATIONES*
(Vol. II, p. 62.)

OF the treatises on this subject with which I am acquainted the most complete, the best arranged and most instructive (in spite of errors in detail) is that of Mongez, *Mémoire sur les animaux promenés ou tués dans les cirques* in *Mémoires de l'Institut*, tom. x (1833), pp. 360-460. In the following survey I have as far as possible preserved the chronological order and discussed the animals in the order in which they became known at Rome or are mentioned by ancient writers. Three periods may be distinguished.

a. From the introduction of the *venationes* to the games of Scaurus (186-58 B.C.).

Elephants. The Romans first became acquainted with elephants in the war in Lucania against Pyrrhus, whence they were popularly called 'Lucanian oxen', an expression first occurring in Plautus (Marcellinus, *Chronic.* ad a. 496 p. C.: India Anastasio principi elephantem, quem Plautus poeta noster misit; L. Müller in *Rhein. Mus.*, xxi, p. 299), and last used by the Christian writer Claudianus Mamertus in the fifth century (*ib.* in *N. Jahrb. f. Phil.*, 1886, p. 391). They were first exhibited in Rome at the triumph of Manius Curius Dentatus (275 B.C.; Seneca, *De Brevitate Vitae*, xiii, 3). Lucius Caecilius Metellus, the victor over the Carthaginians, who triumphed 250 B.C., caused 120 (or 140 or 142) elephants to be driven into the circus; according to Verrius they were killed, according to other authorities, not (Pliny, *Nat. Hist.*, viii, 16; Seneca, *De Brev. Vit.*, 13, 8). A coin of the *gens Caecilia* (Ursini, *Fam. rom.*, p. 37) exhibits, in commemoration of this triumph, an elephant with a bell round its neck. They were first made to fight in Rome 99 and 79 B.C. against bulls (Pliny, *l.c.*; Gran. Licinian., xxxi). Pompey, who first rode in a chariot drawn by elephants, at his African triumph in 81 B.C. (Pliny, *ib.*, viii, 4; according to Plutarch, *Vit. Pomp.*, 14, 3, however, the gate being too narrow, he was obliged to use horses), was also the first to set them fighting (20, 17, or 18 of them) with men (at the dedication of his theatre, 55 B.C., Seneca, *ib.*; Pliny, *ib.*; Dio, xxxix, 38; Cicero, *Ad Fam.*, vii, 1).

Under the empire, when elephants were chiefly used for drawing imperial triumphal and processional chariots (also for heavy loads, e.g. the colossus of Nero in Hadrian's reign was drawn from its place by 24 elephants; *Vit. Hadr.*, 19), their appearance in the circus was generally limited to the performance of tricks; they were only rarely given up to the *venationes*. Even at the dedication of the Flavian amphitheatre only four fought (Dio, lxvi, 25; one with a

bull, *Lib. Spect.*, 17) ; one (against a rhinoceros) in A.D. 5 (Dio, lv, 27) ; Commodus killed two (Dio, lxxii, 10) ; one was killed in 202 (Dio, lxxvi, 1) ; one in 212 (Dio, lxxvii, 16) ; one in 218 (Dio, lxxix, 9). On coins of Titus, Antoninus Pius, Commodus, Severus, of the years 80, 149, 183, 197 the elephant appears dressed in a coat of mail resembling net-work. A coin of Gordian, representing an elephant (accompanied by a mahout) fighting against a bull in the amphitheatre, is repeated on a contorniate (Sabatier, *Descr. gén.*, t. viii, 11).

African wild animals (Africanae, Ὀνπία Λιβυκά, i.e. various species of the genus *Felis*, especially spotted, such as *panthers* and *leopards*, which the Romans, according to Brehm, *Illustr. Thierl.*, i, 257, rightly regarded as two distinct species ; the name *leopardus* first occurs in the *Scriptores historiae Augustae* ; see Mongez, p. 379, and cf. Keller, *Thiere d. kl. Alterth.*, p. 144) were seen at Rome as early as the first *venatio*, 186 B.C. (Livy, xxxix, 22), and (63 in number) at a second in 169 B.C. (Livy, xlv, 18). The tribune Gnaeus Aufidius (according to Pighi, *Ann.*, iii, p. 106, probably in 140 B.C.) contrary to an old decree of the senate, exceptionally allowed their introduction. During his aedileship Scaurus exhibited 150, all spotted ; Pompey 410 ; Publius Servilius, when praetor in 25 B.C., 300 (Dio, xiii, 27) ; Augustus 420 (Pliny, *Nat. Hist.*, viii, 64), according to Dio, at the dedication of the theatre of Marcellus (13 B.C.), as many as 600 at once (Dio, liv, 26), altogether some 3500 during his reign (*Mon. Ancyr.*) ; Caligula 400 at the dedication of the temple of Augustus A.D. 37 (Dio, lix, 7) ; Claudius, A.D. 41, 300 (Dio, lx, 7). These were the most commonly used of the non-European animals at *venationes*, in Rome and in the *municipia* (at Verona, Pliny, *Epp.*, vi, 34 ; Allifae, *IRN*, 4768 = *CIL*, ix, 2350).

Hyaenas. Only mentioned once (*Gordiani Tres*, 33 ; belbi, id est, hyaenae decem) ; cp. *Edict. Diocl.*, viii, 19, 59 : *pellis hyaenae infecta . . . confecta*. They seem to have been little suited for *venationes*.

Lions. Exhibited at the first *venatio* of M. Fulvius (Livy *l.c.*), but probably without fighting ; Quintus Scaevola (consul B.C. 95) during his aedileship first gave a fight with a number of lions, even these being probably chained up ; they were first let loose in the circus by Sulla at a show given by him during his praetorship ; javelin-throwers were obtained from King Bocchus to fight with them (Pliny, *Nat. Hist.*, viii, 53 ; Seneca, *De Brev. Vit.*, xiii, 6). According to Pliny these were 100 lions with manes (*jubati*), also distinguished elsewhere (e.g. *Vit. Prob.*, 19) from the rest ; Mongez (p. 390) conjectures that only those with manes were real lions, the others being Indian leopards (*chasseur des Indes* : *Felis jubata* Linn.). However, there is a maneless kind of lion in India, in Gujrat (*Felis leo Goojratensis* ; Oken, *Allg. Naturgesch.*, vii, 2, p. 1658 ; Brehm, *Illustr. Thierl.*, i, 213) : it is also found in other parts of India, and perhaps the south Persian is to be included in this variety, which may have been commoner in antiquity than at the present day. Pompey exhibited 600 in the circus, 325 of them with manes (according to Dio, xxxix, 38 ; Plutarch, *Pomp.*, 52, gives only 507) ; Caesar 400 (Pliny, *l.c.*) ; Augustus, at the dedica-

tion of the temple of Mars Ultor (2 B.C.) 200 (Dio, lv, 10) ; Germanicus (A.D. 12) 200 (Dio, lvi, 27) ; Nero (A.D. 56) 300 (Dio, lxi, 9). Hadrian (*Vita*, 18) is said to have frequently provided 100 lions for the circus ; in the year 118 on his birthday, 100 lions and 100 lionesses (Dio, lxi, 8). Antoninus Pius (*Vita*, 10) also exhibited 100 lions at once, probably at the secular games celebrated with great magnificence in the year 900 of the city (A.D. 147 ; Victor, *Caes.*, 15), and in like manner Marcus Aurelius (Eutropius, viii, 14 ; cp. Eusebius, *Chron.*, 181). Commodus is said to have slain the same number at a single show (Herodian, i, 15 ; Ammianus Marcellinus, xxxi, 10, 19). Probus (*Vita*, 19) caused 100 maned lions, whose roaring was like thunder, and 100 lionesses, to be slain in the amphitheatre.

Ostriches. Exhibited at the first *venationes* in the circus. Plautus, *Persa*, ii, 2, 17 : *vola curriculo. istuc (?) marinus passer per circum solet*. Commodus shot them as they were running with arrows, the points of which were crescent-shaped (Herodian, i, 15, 5 ; cp. Dio, lxxii, 20). The first Gordian, when aedile (*Vit.*, i, 3), at his sixth show exhibited 300 Moorish ostriches dyed red (in the inscription *CIL*, x, 3704 : *venatione pass., denis bestis et iiii feris dent., pass.* is not to be taken with Lipsius for *passerum*, but = *passiva*, i.e. *promiscua* ; Mommsen, *Mith. d. arch. Inst.*, 1888, p. 82). Trained *Cranes* are the only other birds which are mentioned in connexion with *venationes* (Dio, lxvi, 25). *Parrots* and other rare birds were, however, used at exhibitions, probably also to adorn the forum on the occasion of the spectacles (Varro, *R.R.*, iii, 9, 7 : *gallinae rusticae . . . in ornatibus publicis poni solent cum psittacis et merulis albis, item aliis id genus rebus inusitatis*).

As far as we know, these were the only non-European animals used in *venationes* before the aedileship of Scaurus. Of European animals, the following are mentioned :—

Bears. From Lucania (Varro, *L.L.*, v, 100 ; Martial, *Spect.*, 8 ; Galen, *De alimentor. facultatibus*, iii, 2 ed. Kuehn, vi, 666 : *ἐν Λευκανίᾳ δὲ τῆς Ἰταλίας τὸ μεταξύ πρὸς ἄρκτου τε καὶ οὐός* ; ? Petronius, 66 : *ursina . . . ipsum aprum sapit*). From Apulia (Symmachus, *Epp.*, x, 13 and 15). From Dalmatia (*ib.*, x, 20). Caledonius ursus (Martial, *Spect.*, 7, 3). Lucius Domitius Ahenobarbus when curule aedile (B.C. 61), first exhibited 100 Numidian bears. There can be no doubt that bears were found in Numidia ; this is attested by numerous passages in ancient writers (Herodotus, iv, 191 ; Pliny, *Nat. Hist.*, viii, 131 ; Martial, i, 104, 5 ; Juvenal, iv, 99 ; Dio, liii, 27, etc.), and also by the fact that Charlemagne received a bear from that country (Monach. Gall., *Gesta Karoli*, iii, 8). Shaw (*Voyages*, 1723, i, 323) says that the bear is found in Barbary, cp. Oken, *Allgemeine Naturgeschichte*, vii, 2, p. 1670 ; Brehm, *Illustr. Thierl.*, i, 580, doubts this. Cp. on the other hand Keller, *Thiere d. klass. Alt.*, p. 365, 3 ; and on the diffusion of the bear in Spain, Gaul, Germany, Noricum, Pannonia, Thrace, northern Greece, anterior Asia, *ib.*, p. 106. As early as 169 B.C. 40 bears were exhibited (Liv., xlv, 18) ; in later times, their number equalled or exceeded that of the *Africanæ bestiae*. Thus, Publius Servilius during his praetorship (25 B.C.) exhibited 300 bears (Dio, liii, 27) ; Caligula 400 (Dio,

lix, 7) ; Nero 400 (Dio, lxi, 9). Commodus slew 100 (Dio, lxxii, 18) ; the first Gordian (*Vit.*, 3) exhibited on one day 1000 together with 100 *Africanæ bestiae* ; Probus 300 (*Vit.*, 19). Minturnæ (*CIL*, x, 6012), A.D. 249 : cum ursis ii (et ?) herban.

Bulls. Very frequently mentioned ; as early as 79 B.C. fighting with elephants (so often, e.g. Martial, *Spect.*, 17), later in particular with men. Varro, *R.R.*, iii, 5, 3 : ostium habere (ornithona oportet) humile et angustum et potissimum ejus generis quod cochleam appellant, ut solet esse in cavea in qua tauri pugnare solent. The numbers are not given as a rule, since they were evidently too common. Theodosius is said to have forbidden bull-fights at Rome (Prudentius, *Adv. Symmachum*, ii, 1122). *Zebus.* First mentioned at one of Nero's shows : Vidimus et tauros quibus aut cervicē levata deformis scapulis torus eminet (Calpurnius, *Ecl.*, vii, 60) ; carici quoque in parte Asiae foedi visu tubere super armos a cervicibus eminente (Pliny, *Nat. Hist.*, viii, 45). They were especially common in Cyprus (Κύπριοι βόες, tauri Cypriaci ; Keller, pp. 66-72, who wrongly put the show described by Calpurnius in the reign of Carinus).

Boars. Martial, v, 65, 10 : quod tua Maenaliος collocat hasta sues ? Tamed : *ib.*, i, 104, 6 : et quantum Calydon tulisse fertur, pareat purpureis aper capristis. At the *decennalia* of Severus (A.D. 202) 60 boars had to fight with one another (Dio, lxxvi, 1) ; 150 boars (*Gord. Tres.*, 3) ; 1000 (*Probus*, 19).

Wild and tame animals of various kinds, included under the general title of *animalia herbatia* (*Vit. Probi*, 19 ; *BdI*, 1859, p. 51 = *CIL*, viii, 7969 [Rusicade] venat. vari gen. dentatar. ferar. et [man]suet. item herbat). The same are meant by *herbanæ* (Mommsen, *IRN*, 4063 = *CIL*, x, 6012 ; cp. Henzen, *AdI*, xxv, 118), *herbariæ* (*CIL*, x, 7295 [Panormus] . . . omni genere herbariarum et numerosas orientales ; pp. herbariarum, Henzen, 6177 = *CIL*, vi, 10,209). Varro (*R.R.*, iii, 13) describes the preserves of Quintus Hortensius on his Laurentine estate, where at a blast of the horn ' tanta circumfluxit nos cervorum aprorum et ceterorum quadrupedum multitudo, ut non minus formosum mihi visum sit spectaculum quam in circo maximo aedilium sine Africanis bestiis cum fiunt venationes ; Plautus, *Persa*, iii, 3, 30 : citius extemplo a foro fugiunt quam ex porta ludis quum emissus lepus ; Ovid, *Metam.*, xi, 25 : structoque utrinque theatro ut matutina cervus periturus harena. Such animals were especially baited at the Floralia (Ovid, *Fasti*, v, 371 : imbelles capreae sollicitusque lepus) ; foxes at the Cerialia (cp. Preller, *RM*, ii³, 43). Augustine, *De Civ. Dei*, x, 35, 57 : canem currentem post leporem jam non spectro cum in circo fit.

Of course they were also often seen in large numbers in the *venationes* of the imperial period (*Gordiani Tres.*, 3 : cervi palmati ducenti mixtis Britannis). In the latest as well as the earliest times, the *venationes* appear to have been again chiefly supplied with such animals as were more readily obtainable and were less dangerous ; at least they are particularly frequent on diptychs (so also Millin, *Voy. d. l. midi*, p. 100, pl. xxiv, 3 and *BdI*, 1851, p. 92) and contorniates (Morelli, *Thes.*, vol. iii, p. 1, tab. 33, 19 [vol. i, p. 335], vol. iii, p. ii, tab. 18, 19 [vol. ii, 79] ; other *venationes* (*ib.*, tab. 20 and 49).

All these European animals were also common at the games of the *municipia* (bulls and boars, e.g. in the Pompeian relief, *Bull. Nap.*, iv, tav. 1).

b. From the games of Scaurus to the dedication of the Theatre of Marcellus (58–11 B.C.).

Egyptian animals. First exhibited in Rome by Marcus Aemilius Scaurus, when curule aedile, at his famous shows (58 B.C.). They may have been procured by him during his inroad upon the country of the Nabataeans in Petra (Mommsen, *Rom. Münzw.*, p. 627, note 468).

The Hippopotamus, then exhibited for the first time, (Pliny, *Nat. hist.*, viii, 96; *Ammian. Marcel.*, xxii, 15, 21) was probably first killed at the celebration of Augustus' Egyptian triumph (29 B.C.; Dio, li, 23; Mongez, p. 428). Of course it was rarely seen, even in imperial times; one occasion was the games of Nero described by Calpurnius (*Ecl.*, vii, 66). Several are said to have been exhibited at the shows given by Antoninus Pius (*Vita*, 10), and Elagabalus owned some (*Vita*, 28). There was one at Rome during the reign of the third Gordian (*Vita*, 33).

The *Crocodile* also was exhibited for the first time in Rome by Scaurus; five of them, together with the hippopotamus, were kept in a reservoir dug for the purpose (Pliny, *l.c.*). At the dedication festival of the temple of Mars Ultor (2 B.C.) Augustus had the circus Flaminius flooded and 36 crocodiles killed (Dio, lv, 10). Strabo (xvii, 1, 44, p. 815 c) seems to be describing a different show. By the side of the reservoir was a stand, on which the crocodiles could bask in the sun. Some Tentyrites (men from Tentyra) pulled them up with nets from the water and let them down again; these men mingled freely with the animals without being injured. Domitian also exhibited crocodiles (A.D. 90; Martial, v, 65, 13: *saepe licet Graiae numeretur belua Lerna, improba Niliacis quid facit hydra feris?*), as did Antoninus Pius (*Vita*, 10); Elagabalus had one (*Vita*, 28); Symmachus intended to exhibit several at his shows, but they all died (*Epp.*, vi, 43; ix, 132).

The first *Rhinoceros* was seen in Rome at the games given by Pompey (55 B.C.; Pliny, *Nat. Hist.*, viii, 71). Lucilius had already heard of it (*Sat.*, 3, 21: *dente adverso eminulo hic est, rhinoceros velut Aethiops*). A rhinoceros was first killed by order of Augustus (29 B.C.; Dio, li, 23), after it had been exhibited in the *septa* (Suetonius, *Aug.*, 43). A rhinoceros fought with an elephant (A.D. 5; Dio, lv, 27). Strabo, who describes the fight (p. 775), had seen it himself. Pliny (*l.c.*) says the one-horned species had been often seen. Domitian was perhaps the first to exhibit the two-horned rhinoceros (Martial, *Spect.*, 22 ed. Friedländer); it is immortalized on his coins (Eckhel, vi, 393). Pausanias (ix, 21, 2) also saw one at Rome; it was called the Ethiopian bull. Commodus is said to have slain several (Dio, lxxii, 10); Caracalla had one killed (*ib.*, lxxvii, 6); Elagabalus possessed one (*Vita*, 28). One was exhibited at the secular games of Philip the Arabian (*Gordian. tert. Vita*, 33).

The *Chama* from Gaul (*Gallic rufus*) was first seen at the games of Pompey; it was shaped like a wolf and spotted like a pard (Pliny, *Nat. Hist.*, viii, 70); also called by the Romans *lupus cervarius* (*ib.*,

84). It is the lynx (*loup-cervier* of the French). Cp. Mongez, p. 401, who quotes the following from Thevet, *Cosmographie du Levant*: 'Les loup-cerviers sont trop plus cruelz que ceux dont nous avons maintenant parlé, et de cette espèce on en vit un en France, n'y ha pas long temps; lequel sortant de la forest d'Orléans, au pays de Berry, l'an 1548, dévora plusieurs personnes.' It is now extinct in France. Probably Caesar had sent this animal to Pompey from Gaul. *Edict. Diocl.*, viii, 35: *pellis lupi cervarii infecta . . . confecta*.

Lastly, at these games there was seen for the first and apparently the only time the Ethiopian *Cepus* (Pliny, viii, 70), a sort of ape with a tail (Aristotle, *Hist. Anim.*, ii, 8), according to Mongez (pp. 402-404) belonging to the class 'des singes-macaques habitans de la Guinée et de l'intérieur de l'Afrique': since Pliny says that their hands and feet are very like those of human beings, Keller (*Thiere des class. Alterth.*, p. 16) thinks they may be gorillas.

The Giraffe was first exhibited by Caesar at the triumphal games (46 B.C.; Dio, xliii, 23; Pliny, *Nat. Hist.*, viii, 69). It is spoken of by Varro (*L.L.*, v, 20: *Alexandrea camelopardalis nuper adducta*) and Horace (*Epp.*, ii, 1, 194). Pliny says that the animal, which the Greeks and Romans called *camelopardalis*, or wild sheep (*ovis fera*, no doubt a popular name), was known to the Ethiopians as *nabun*. On the Palestrina mosaic Νάβου and Καμηλοπαρδαλις are different but similar animals (Barthélemy, *Mos. de Palestrina*, p. 40). Cp. Brandt, *Bull. de l'ac. imp. de St.-Petersbourg*, 1860, t. i, p. 353: Is the *Nabus* of Pliny identical with his *camelopardalis*? The Arabic name is *zarāfa* (the lovely); modern Greek ζοράφι; in Albertus Magnus, *seraph*. See Mongez, pp. 413 and 418, who (pp. 411-422) has given the most complete collection of the statements of ancient and modern writers on the giraffe with which I am acquainted; cp. also Jahn, *Columbar. der Villa Pamfili*, p. 45). The first description of it by an eye-witness, subsequent to the Augustan age, is that of Pausanias, who saw one in Rome and calls it the Indian camel (ix, 21, 3); Florentinus, who is said to have lived under Macrinus, next saw one there (*Geopon.*, xvi, 22) and Dio (lxxii, 10) who saw one slain by Commodus. Under the third Gordian there were ten at Rome, which were led in procession at the secular games of Philip the Arabian (A.D. 247; *Gordian. III.*, 33); some also took part in Aurelian's triumph over Zenobia (A.D. 278; *Vit. Aurel.*, 33); two were sent from India in 496 to Theodosius (Marcellinus Comes, Chron. of the year). Ancient representations of the giraffe in Jahn as above (taf. i, 1 and *BdI*, 1858, p. 125: sarcophagus with the Indian triumph of Bacchus); cp. p. 173; *AdI*, 1863, p. 375; *Mon. d. I.*, vi and vii, tav. 80).

c. From the dedication of the theatre of Marcellus (11 B.C.) to the latest times.

The Tiger was first seen at Rome during the reign of Augustus. Varro (*L.L.*, v, 20) declared that it was impossible to capture it alive, although Seleucus I, towards the end of the fourth century, had already presented one to the Athenians, mentioned by Philemon and Alexis in Athenaeus (xiii, p. 590); cp. *Ausland*, 1860, p. 833 (*Der Tiger im Alterthum*). According to Dio (liv, 9) the first tigers

were presented to Augustus by an Indian embassy, which met him on the island of Samos (19 B.C.) ; according to Pliny (*Nat. Hist.*, viii, 65) he exhibited the first tiger at Rome on the 4th of May, 11 B.C., at the dedication of the theatre of Marcellus ; it was tame and kept in a cage. Claudius exhibited four. A tame tiger also mentioned in Martial (*Sp.*, 18 ; i, 104, 1-3). Domitian presented a large number of tigers (probably at the shows given to celebrate the Sarmatian triumph, at the beginning of the year 93 ; cp. Martial, viii, 26 ed. Friedländer) ; so also Antoninus Pius (*Vita*, 10) ; ten were slain at a show given by Septimius Severus in 203 (Dio, lxxvi, 7). At the wedding of Elagabalus (A.D. 218) (who, attired as Bacchus drove teams of deer, lions and tigers, *Vita*, 28) 51 tigers are said to have been killed (Dio, lxxix, 9). Gordian III possessed ten (*Vita*, 33) ; Aurelian, four (*Vita*, 33).

In addition to the above, the following animals are mentioned as having been exhibited in Rome during the imperial period at the *venationes* or on other occasions.

The *Bubalus*, at the shows of Domitian. According to Pliny (*Nat. Hist.*, viii, 38) the ignorant vulgar ('imperitum vulgus') gave this Greek name of the *antelope* to the *aurochs* (urus, *Bos urus*, *primigenius*), and the confusion was kept up : 'when buffaloes made their appearance in Italy under the Lombards, the name was ready to hand' (Hehn, *Culturpft.*⁴, p. 502). Also, the other wild ox found in Germany, the *Bison* (a name borrowed from the Germanic *wisand* by the Greeks and Romans), *Bos bison* (first occurs in Seneca, *Hippol.*, 65 : villosi . . . bisontes latisque feri cornibus uri). Tame, in Martial (*Spect.*, 23, 5 ; i, 104, 8 : turpes esseda quod trahunt bisontes) ; Mongez, p. 433 ; also Calpurnius (*Ecl.*, iii, 61) and at the games of Severus in 202 (Dio, lxxvi, 1) ; accurately described in Mongez, p. 450. Pausanias calls these animals, elsewhere called βόες ἄγριοι (Keller, *Thiere des cl. Alt.*, p. 53), 'Paeonian bulls' (they were especially common in Paeonia), and describes in detail the method of hunting them (x, 13, 2) ; he saw one in Rome (ix, 21, 3). At the present time this animal, 'the largest of the mammalia of continental Europe', is only found in the primeval forest of Bialowicza in the Russian province of Grodno (Brehm, *Illustr. Thierl.*, ii, 636). Cp. the comprehensive article 'Wisunt' in Schade's *Alld. Wörterb.*⁵, 1173-1185 and Keller as above, pp. 53-65. Further, the *Damma* (Martial, *Spect.*, 30), according to Cuvier an African antelope called *nanguer* (Mongez, p. 434) ; cp. Martial, iv, 35, 74, xiii, 94. It is often mentioned later, 200 in *Vita Gordiani III* (3), 2000 in *Vita Probi* (19). The *Oryx* (Martial, xiii, 95 : matutinarum non ultima præda ferarum, saevus oryx), a one-horned (Pliny, *Nat. Hist.*, xi, 255) animal from the African deserts (*ib.*, x, 201). Martial (xiii, 100) also mentions the *Onager* (Cicero, *Ad Att.*, vi, 1, 25) as seen at *venationes*. It was formerly identified with the zebra (Gibbon, *Decline and Fall*, ch. 20). Mongez (pp. 443-446) rejects this view, not only because the ancients mention that the *onager* was tamed, which the zebra never could be (cp., however, Brehm, *Illustr. Thierl.*, ii, 378), but also because it would have been truly extraordinary if they had said nothing about the characteristic stripes when describing the animal. The zebra is first described by Philostorgus (*Hist.*

Ecl., iii, 11) under the name *ὄνος ἄγριος*. Cuvier identified the onager of the Romans with the jagatai (*Equus hemionus* Pallas), others with the wild ass. It is frequently mentioned later (Dio, lxxvi, 1; *Gordiani Tres*, 3 [30]: *Gord. III*, 33: xx onagri, 1 equi feri).

At the shows of Antoninus Pius, where 'animals from every part of the world were' to be seen (*Vita*, 10), the following, not yet mentioned, were exhibited: the *Strepsiceros* (an African variety of antelope: Mongez, p. 439) and the *Crocota*. The latter, described by Dio, lxxvi, 1, at the games of Severus in 202 under the name *κοροκόττας* (Haupt, *Opuscula*, ii, 187 note; elsewhere used for an Ethiopian animal, Rohde, *Gr. Rom.*, 229, 2), which in his opinion had never been seen before that time, has been taken for a hyaena (Mongez, p. 436). According to the coins in Eckhel (*D.N.*, vii, 19), which for the first time exhibit the inscription *Municipientia* with reference to *venationes* and on the reverse a lion passant or an elephant in a coat of mail, these shows took place in the year 149.

Besides the above, Pausanias saw *white Deer* at Rome (viii, 17, 3) and the Gallic *Alces* (*ἄλκη*, ix, 21, 3), 'resembling in appearance both a stag and a camel', the elk. Gordian I and Gordian III had ten elks; and Aurelian a certain number (*Gordiani Tres*, 2; *Gordianus III*, 33: *Aurelian.*, 33). Henzen (*Ann. d. Inst.*, xxv, p. 118) thinks he can recognize the animal (Calpurnius, *Ecl.*, 7, 58: *raram silvis etiam quibus editur alcen*) on a diptych (*Mon. dell' Inst.*, v, 51).

The *Hippotigris*, mentioned by Dio (lxxvii, 6) as having been slain at the games of Caracalla is certainly the zebra, which was so called from uniting in itself the characteristics of the horse and the tiger, as the *camelopardalis* those of the camel and the pard: cp. Brehm, *Illustr. Thierl.*, ii, 373.

At the games of Gordian I mention is also made of: *oves ferae* C, *tauri Cypriaci* C, *ibices* CC. *Oves ferae* (here of course not giraffes) are animals of the class mentioned by Columella (*R.R.*, vii, 2, 4: *nam cum in municipium Gaditanum ex vicino Africae miri coloris silvestres feri arietes sicut aliae bestiae munerariis apportarentur*); *Edict. Diocl.*, viii, 25: *pellis obiferi (ὀβιφέρι)*; cp. Apicius, viii, 4 and Ducange, s.v. The wild maned sheep (*Ovis tragelaphus* Desm.), small flocks of which inhabit the high plateaux of Algeria, stands one metre high up to the withers, is very shy, and characteristically distinguished by a splendid mane on the underside of the neck, a much shorter one reaching over the withers, and thick knee-tufts (Schwarz, *Algerien*, 1881, p. 320). *Tauri Cypriaci* are zebus (see p. 184). The *ibex* is mentioned by Pliny (*Nat. Hist.*, viii, 214: *caprarum* genus). *Ibices* and *oves ferae* in *Vit. Probi* (19).

In the description of the shows in Calpurnius (*Ecl.*, 3, 57) the following animals are also mentioned: the *white Hare* (*Lepus variabilis* Pall.), the *horned Boar* (probably the babiroussa) and the *Phoca* (cp. also Aegae in Cilicia in the list of the amphitheatres); Mongez, pp. 448-453. *Pellis vituli marini infecta . . . confecta* (*Edict. Diocl.*, viii, 37).

Symmachus (*Epp.*, ix, 125) procured for his games some *Addaces* (a kind of gazelle) and *Pygargi* (perhaps *Capra aegagrus* Pall; Mongez, p. 456), also dogs from Scotland (*Epp.*, ii, 77), already

exported in Strabo's time (iv, 5, 2 p. 199) ; British hounds (Grat. Falisc., *Cyneg.*, 174 ; Nemesianus, *Cyneg.*, 124).

Snakes are never mentioned in the accounts of the *venationes* at Rome and were only used for show (see appendix ii). Philo (*De Animal.*, 52) saw a fight between a poisonous snake and one of another kind at Alexandria.

XXXI. HOW ANIMALS WERE CAUGHT FOR THE AMPHITHEATRE.

(Vol. II, page 69, line 5.)

THE animals were often captured in pits. Paulus, *Lib. x ad Sabinum. Digg.*, ix, 2, 28 : qui foveas ursorum cervorumque capiendorum causa faciunt ; cp. Pollux, v, 81 ; Festus, p. 87 (Keller, *Thiere d. klass. Alt.*, 372, 151) ; also in nets. Nets with feathers tied to them for catching bears, sows, deer, wolves and foxes are described by Oppian (*Cyneg.*, iv, 534 ; Keller, 120) and Nemesianus (*Cyneg.*, iii, 303). Panthers caught in Mauretania with snares, with rotten meat for bait (Aelian, *Nat. An.*, xiii, 10) ; differently, in Oppian (iv, 320). The hippopotamus caught in pit-falls (Achilles Tatius, iv, 2) ; a hippopotamus hunt with harpoons Diod. Sic., i, 35), as still in the Sudan (Brehm, *Illustr. Thierl.*, ii, 776). Cp. the representations on the Palestrina mosaic and Gerhard, *Archäol. Anzeiger*, 1858, p. 169*. The crocodile caught in nets, Diod. Sic., *l.c.* The manner of catching the bison, Pausanias, x, 13, 2. The *βοι δγριοι* (?) lassoed in Numidia by horsemen, Arrian, *De Venat.*, 24, 3. For the fabulous tiger-hunt, in which mounted huntsmen took the tiger cubs from their lair and saved themselves by dropping them in front of the mother in pursuit, see Pliny, *Nat. Hist.*, viii, 66 ; Pomponius Mela, iii, 5 ; Martial, viii, 26 ; Bartoli, *Sepolcro de' Nasoni* ; Keller, p. 132. A different method in Oppian, iii, 353.

XXXII. MODERN ANIMAL FIGHTS.

(Vol. II, page 71, line 14.)

FIGHTS between animals are a very favourite amusement in Asia at the present day, as in the time of the caliphs (especially dog, cock, and ram fights ; Kremer, *Culturgesch. d. Or.*, ii, 75 and 203, 1). Fights between broad-tailed rams, camels, and buffaloes in Armenia (Brugsch, *Reise nach Persien*, i, 122, 125, 140). In Bokhara and Turkestan generally, ram-fights (Vambery, *Skizzen aus Mittelasien* p. 139). Animal fights are the diversion and often the only occupation of Indian princes. In Bharatpur antelopes, rams, cocks, and quails are trained to fight ; male elephants formerly at Lucknow (Orlich, *Reise in Indien*, pp. 195 and 207). One of the favourite amusements of the Javanese is a fight between a tiger and a native buffalo ; the former has often to be urged on by prodding it with sharp-pointed sticks, pouring boiling water over it, or pelting it with lighted straw (Selberg, *Reise nach Java*, 1846, p. 154).

In Europe also animal fights seem to have been by no means uncommon in earlier times. Queen Christina of Sweden arranged a fight between a lion and a bear and an aurochs (Grauert, *Königin*

Christine und ihr Hof, i, 421). On the 20th of January, 1701, at the celebration of the first coronation of a Prussian king, a baiting was held in the presence of the court, in the *Hetzgarten* (place for baiting wild beasts) at Königsberg, at which, in an hour and a half, 14 wolves, 1 aurochs, 3 bears, and 1 wild boar were slain (*Erläutertes Preussen*, v, 332). Such exhibitions also took place in Warsaw under Stanislaus Augustus (E. von der Brüggen, *Polens Auflösung*, pp. 151 and 159—fight between an elk and a bear—and 295). At Vienna, up to 1796, when the *Hetzhaus*, which held more than 3000 spectators, was burnt down with most of the animals, this kind of show was a very favourite one (hence *Hetz* was used in the sense of 'amusement'). Nicolai (*Beschreibung einer Reise durch Deutschland und die Schweiz*, 1781, iv, p. 630) represents these baitings as in the highest degree disgusting.

More barbarous than any animal fight is a custom which (according to the *Augsb. Allgem. Ztg.* (*Beilage* of the 18th of December, 1864) existed in the country towns of the States of the Church. 'On a fixed day in the year a bull is tied up in the market-place and all the inhabitants are allowed to amuse themselves by ill-treating it. It is beaten with sticks, pelted with stones, stabbed and hacked with knives, until it is dead.'

XXXIII. EXECUTIONS AND OTHER PUNISHMENTS CARRIED OUT IN THE AMPHITHEATRE.

(Vol. II, p. 72, line 6.)

IN addition to the shows, the amphitheatre was often used for carrying out sentences and executions. Suetonius (*Calig.*, 27): Atellanæ poetam ob ambigui joci versiculum media amphitheatri harena igni cremavit; cp. *ib.* (*Tiber.*, 75): corpus ut moveri a Miseno coepit, conclamantibus plerisque Atellam potius deferendum et in amphitheatro semiustulandum. Suetonius (*Titus*, 8): (delatores) assidue in foro flagellis ac fustibus caesos ac novissime traductos per amphitheatri harenam, partim subici ac venire imperavit, partim in asperrimas insularum avehi; cp. Martial, *Lib. Spect.*, 4, 4 b. Similarly, Trajan ordered the *delatores* (informers) who had been sentenced to deportation to be exhibited in the amphitheatre (Pliny, *Paneg.*, 34). *Vit. Hadrian.*, 18: decoctores bonorum suorum, si suae auctoritatis essent, catomidiari in amphitheatro et dimitti jussit. The amphitheatre in Constantinople was also used for executions: Bock, *Sur l'amph. de C.* (Suidas, s.v. κυρήγιον); Justinian ordered pagan books to be burnt there (Malalas, xviii, p. 48, 1; cp. also commentators on Ammianus Marcellinus, xxvi, 3, 2).

XXXIV. ON THE VELARIUM OF THE AMPHITHEATRE.

(Vol. II, p. 79, line 22.)

IN a short treatise (pp. 38) entitled *Del Velario e delle vele negli anfiteatri, specialmente nell'anfiteatro Flaviano* (Roma, n.d., Topografia di G. Menicanti), the architect Efisio Luigi Tocco contests the view (put forward by H. Barbarus and illustrated by a drawing by C.

Fontana, p. 8), that the perforated stone slabs in the cornices of theatres and amphitheatres could have been intended for holding masts or poles. The system of cordage would have exerted a considerable strain in the direction of the centre upon the entire periphery, and the slabs, being without any *point d'appui* outside, might easily have driven in the edge of the wall, especially during a strong wind; in order to support masts, they ought to have been constructed on the inner side of the periphery, where the edge of the wall would have acted as a support (p. 17). The slabs were, he considers, really intended to serve as supports for an uppermost wooden storey (p. 19). The author assumes, as the chief and absolutely indispensable *point d'appui* of the *velarium* a large mast in the centre of the arena. Consequently, the *velarium* was in the form 'di un gran padiglione, il quale avesse il suo centro alquanto acuminato, e tenacemente appoggiato al grand' albero di cui abbiamo parlato (a large pavilion, or bell-tent, the centre of which was somewhat pointed and firmly supported by the tall mast of which we have spoken). A construction like Fontana's would have been severely damaged by a sudden storm.

But the careful examination, kindly undertaken at my request by Mr. Paul Laspeyres (died 1881) in Rome, shows Tocco's assumption to be completely untenable. 'The old theory appears to me unassailable, although I am not quite clear as to the manner in which the awning was spread. But I have no doubt whatever that the necessary ropes were attached exclusively to the exterior upper periphery of the amphitheatre, by a ring of firmly planted masts. By using the corbels preserved in so many amphitheatres, with corresponding apertures in the cornice, the masts were fixed with complete security; for in the first place a stone corbel in which a mast is inserted at the point where it projects from the wall is capable of supporting weights far more enormous than any which could be required here, and secondly the four surfaces presented by the sides of the apertures in the cornice at the top of the wall afford effective resistance to the pressure. The tension of the rope only draws the mast inwards towards the centre of the building, and this pressure is entirely counteracted, just as in an arch, by the curve of the wall. Any tendency to sway from side to side is effectively checked by the compact mass of the cornice. The outer side of the aperture is no doubt somewhat weak, but owing to the constant strain of the mast towards the centre pressure will never be exerted outwards. The lower the point at which the rope is attached to the mast (and I know no reason why it should be particularly high), the shorter will be the lever which exerts pressure inwards and the less will be the strain on the structure generally. But in my opinion Tocco's theory requires these masts for the attachment of the lower ends of the ropes supporting the pavilion he assumes, for in any case, to avoid inconvenience, the ropes must have been attached above the heads of the spectators.

'The suspension of the *velarium* in the form of a pavilion with a central column would certainly have a pleasing appearance, but the construction would be impossible, because sufficient stability could not be given to the lofty mast in the centre of the arena, on

which the whole structure would depend. This central support would therefore have to take the form of a firmly braced towerlike scaffolding which would seriously interfere with the view of the arena'. Apart from many other considerations, the mere notion of such a central support 200 feet high (the outer wall having a height of 180 feet) is 'a monstrosity which ought to have roused Tocco's suspicions, and made him perceive that his whole idea is untenable'.

XXXV. ABOLITION OF THE GLADIATORIAL SHOWS. GLADIATORIAL SHOWS IN THE MIDDLE AGES AND MORE RECENT TIMES.

(Vol. II, p. 80, line 22.)

DE ROSSI (*Epigrafe storica scoperta in Porto alludente agli ultimi spettacoli gladiatorii ed alla loro abolizione*, in *Bull. crist.*, 1868, vi, p. 84) conjectured that the inscription on the front of a stone at Portus (*CIL*, xiv, 300): Arpagius Lupus v(ir clarissimus) petentibus civibus locum ca. ad splendorem nynfi sua om(ni pecunia)a solo constructum popu(lo . . .) largitus est; qua celerit(ate) publica est vota (exequutus) referred to the erection of a new building in place of a gladiatorial school. The inscription on the back (*CIL*, xiv, 157), in which a certain (Ac)holius Abydus v. c. probably (praef. annonae urbis) Romae is named, he restores as follows: (hic)miseri in dirum saevanecessitate certamen (ad oblectandos sua morte populos) armabantur ---- (aedificio autem con)dito sed sine usu ab initio der(el)icto ----. The gladiatorial school, which is said to be meant here, according to De Rossi's conjecture must have been built shortly before the abolition of the gladiatorial games in 404 (or rather of the gladiatorial schools in 399; see note on vol. ii, p. 81), and therefore have remained unused from the very beginning. The second line of the inscription on the front he restores as follows: locum ca(stri) or ca(mpi) (gladiatorii sordentem) ad splendorem, etc. He places the inscriptions somewhere about the time of Cassiodorus. But the uncertainty of all this is increased, since there is no proof either (1) that the stone was formerly in the place where it was set up by Acholius Lupus or (2) that the two inscriptions refer to the same building (cp. Dessau's remarks).

As to gladiatorial shows in the Middle Ages and in more recent times, I can only give the following references. Petrarch, *Epist. fam.*, v, 6: (in Naples) luce media inspectantibus regibus ac populis infamis ille gladiatorius ludus—celebratur plus quam barbarica feritate. Sons fall before their parents' eyes, juguloque gladium cunctantius accepisse infamia summa est. He describes a gladiatorial combat that took place near the city in the presence of the court, before a large and brilliant public: formosissimus juvenis rigido mucrone transfossus ante pedes meos corruit, whereat a tremendous shout of applause was raised. Brantôme, *Mém. de Henry II*: The Cardinal of Ferrara gave a festival in honour of the king at Lyons. Cette entrée donc fut accompagnée de plusieurs très belles singularitez, l'une d'un combat à l'outrance et à l'antique, de douze gladiateurs vestus de satin blanc les six, et les autres de satin

cramoisi fait à l'antique romaine . . . la troisième belle chose aussi fut cette belle naumachie, ou combat de galères tout à l'antique (between these two combats a tragedy was played by Italian actors). Macaulay, *Hist. of England*, ch. 3 : multitudes assembled (c. 1685) to see gladiators hack each other to pieces with deadly weapons, and shouted with delight when one of the combatants lost a finger or an eye.

XXXVI. LIST OF ROMAN AND PROVINCIAL AMPHITHEATRES.

(Vol. II, p. 85, line 12 from bottom.)

A LIST, as far as possible complete, of all the amphitheatres whose existence can be demonstrated with tolerable certainty throughout the empire, would afford the most vivid idea of the widespread popularity of gladiatorial shows and *venationes*. But of course it must not be forgotten that stone amphitheatres, the only kind of which fragments have been preserved to modern times, were only built where such shows were given regularly and with comprehensive equipments. Express testimony that people in many cases had to be content with wooden buildings is found in the inscription (time of Antoninus Pius) *CIL*, v, 2, 7637 (Ad Saluzzam inter Sturam et Padum) : (pecuniam)—reliquam—in munus gladiatorium et saepa lignea : and this *munus* was to be an annual affair. Consequently, we have no more right to assume for certain the existence of amphitheatres in all places where there is evidence for *munera* and *munerarii* (cp. e.g. Wilmanns, *Exempla*, v, ii, p. 624 and 654), than to conclude from the absence of amphitheatres that there were no amphitheatrical games (see vol. ii, p. 84).

But the attempt to give a survey of the amphitheatres that can be shown to have existed, can only lead to imperfect results. The evidence is founded either on tradition or still existing remains ; in both cases the danger of error is obvious. The written authorities are sometimes ambiguous and untrustworthy ; this is especially the case with the (partly apocryphal) *Acta Martyrum* and *Acta Sanctorum* (Maffei, *Degli anfiteatri*, second ed., p. 90). The existence of a supposed amphitheatre at Perugia, for example, spoken of by native writers, appears to be supported by no other evidence than apocryphal *Acta* of St. Herculanus (Vermiglioli, *Iscr. Perugine*, pp. 254-259). Some other information from the *Acta Sanctorum*, for which I am indebted to my colleague H. Jordan (died 1886) is given below. The statement of Anonymus Valesianus (Ammianus Marcellinus, ed. Wagner-Erfurdt, p. 623, 71), that Theodoric built an amphitheatre at Pavia, is rejected by Maffei (*l.c.*) on the ground that such a building is inconceivable, so long after the abolition of the gladiatorial shows ; certainly, the statement appears remarkable. But we certainly cannot deny that it is possible, considering that the *venationes*, for which the amphitheatres were specially used at that time, still took place ; and, further, that Theodoric is known to have taken great interest in the shows in Rome (*ib.*, 260, 60). Again, it is hazardous to conclude that amphitheatres existed *only* from the occurrence of names by which they were designated in the Middle Ages. The most frequent of these

R.L.M.

is *Arena*. Du Cange *s.v.* cites from mediaeval documents *Arenae* Petracoricenses, Remenses, Parisienses, and Arènes de Bourges. On the other hand, Maffei (p. 76) observes that during these times ' nè si sapea che fosse anfiteatro nè si usavano si fatti nomi nel suo vero e antico significato '. Certainly amphitheatres can be proved to have existed in all those places, but they cannot with certainty be assumed when supported only by this name (or as in Valesius, *Notitia Galliarum*, p. 332, by the name *Cavea*) ; when, for instance, the existence of an amphitheatre at Aquileia is inferred by Bartoli (*Antich. d'Aquileja*, p. 254) only from the frequent mention of a *torre d'Arena* in old civic documents. At Naples even, according to Giovanni Garrucci (*Sull' origine e sulla costruzione dell' anf. di Catania*), a *vico dell' anfiteatro*, a *platea amphitheatri* in the *regio Thermensis* are mentioned, although it cannot be proved that there was really an amphitheatre there.

The name *Colosseum*, also, was given to amphitheatres at least here and there in Italy, not only in Rome. The best known is the Capuan, called *Colossus* by the Benedictine monk Erchempert, who wrote his history of Lombardy at Capua in the ninth century. Mazzocchi and Maffei (p. 31) have concluded from this that the Flavian amphitheatre also received its name, not from the colossus of Nero hard by (as *e.g.* Scribe on Martial, *Sp.*, 2, assumes), but from its size. On the other hand, Jordan (*Topographie*, ii, 510) is of opinion that the name *colossus*, by which the Flavian amphitheatre was known in the tenth century, was transferred, after the destruction of the colossus, to the building that stood near, and from this to the Capuan amphitheatre. Benvenuto Cellini says of the amphitheatre at Florence (*Vita*, cap. 1 ; Goethe, *bd.* 28, p. 6) : *trovasi scritto nelle chronache da' nostri Fiorentini molto antichi ed uomini di fede, che la città di Firenze fu fatta ad imitazione della città di Roma, e ciò si vede di alcune vestigie del Colosseo e delle Terme*. Travels of S. Kiechel (1585-1589 ; *Bibliothek des litt. Vereins zu Stuttgart*, 1866), p. 236 : Verona has a *colosseo*. Promis (*Memorie della città di Luni*, p. 225) says that the amphitheatre there was called *colosseo* by the country people, ' nome propagatosi da quello celebre di Roma, e frequente sopra tutto nella Italia inferiore '.

Yet a third name, common in some places in Italy, deserves mention. Erchempert calls the amphitheatre of Capua also *Berolais*, *Berelasis*, *Berolassi*, names which according to Italian savants are of Arabic origin and date from the time when this district was occupied by the Saracens (Rucca, *Capua Vetere*). My former colleague J. Zacher (died 1887), however, is of opinion that the word *berolais* (properly *bero-laz*) is Lombard and derived from *ber* and *lāzan*, which, on the analogy of *stole-saz*, *scult-heiz*, *mare-paiz*, though properly used of a person, might also denote a place, properly a ' bear's house '. This explanation is remarkably confirmed by the local names *Berlich* in Cologne and *Perlach* in Augsburg. The latter, in the *Vita Oudalrici* (end of the tenth century), is spoken of as ' *collis qui dicitur Perleihc* ', and in the appended treatise *De signis Oudalrici*, *Perleihc* ; later forms are *Perleich* and *Perlatch*, in chronicles of the fourteenth and fifteenth centuries, *Pernlaich*,

Bernlaich, Perleig, Perlach, Berlaich (J. Grimm, *Teutonic Mythology*, Eng. tr., i, pp. 293, 295, cites the etymology : eo quod legio ibi perierit). Düntzer (*Jahrb. f. Alterthumsfr. der Rheinl.*, xx, 21) had already conjectured, that a place was meant, where bears are kept (from *leih*, Gothic *laiks* : ludus, munus). It is obvious that these local names are identical with that of the Capuan amphitheatre, and also, on the other hand, 'that a designation, originating in the mouth of German peoples, for a Roman work that became known to them in the north of the empire, might have been transplanted by them during their wanderings also to Italy, used there in a similar manner to denote the same kind of Roman buildings, and held its ground, although its meaning was unknown to later generations' (J. Becker, *Der Berlich zu Köln und der Perlach zu Augsburg*, *ib.*, xlii, p. 64). The amphitheatre of Vindonissa is called by the people *Bärlisgrub* (bear-pit). Consequently, there is no need to suppose an Arabic derivation.

In Italy the name is found in the now usual form *Verlasci*, not only at Capua (now *li Virilasci*, Beloch, *Campanien*, p. 352), but also at Minturnae (*ai Virilasci*, *CIL*, x, 6054 a) and at Venafrum; the remains of an amphitheatre exist in the latter place 'nel così detto Vorlascio' (Cotugno, *Memorie storiche di Venafrò*, p. 264); in Arezzo and Florence the name has become *Parlagio* in the course of time. It is not uninteresting to trace these changes, and some information from Dom Maria Manni's *Notizie istoriche intorno al Parlagio ovvero anfiteatro di Firenze* (Bologna, 1746, 4), found by me in Otto Jahn's library, will perhaps be the more acceptable, as this work is very rare in Germany. The remains of the amphitheatre, called *Colosseum* by Benvenuto Cellini, in documents of the eleventh, twelfth, thirteenth, and fourteenth centuries, are called *Perilasium*, *Perlasium*, *Perlagium*, *Perlascio*, *Pierlascio*, *Piarlagio*, *Piarlascio*; these forms seem to me absolutely to exclude Jordan's explanation (*Topogr.*, ii, 402) of the name as a corruption of *palatium*. In a document of 1701, *Peribasium* also occurs, perhaps a slip of the pen, perhaps a learned attempt at explanation; Manni (p. 18) considers it the original, correct form. The variant *Pratolascio* in two documents of 1085 and 1086 is striking. The unintelligible word naturally changed into the apparently intelligible *Parlagio*; as soon as the change had taken place, the derivation from *parlare* appeared certain, and from that time the building was regarded as one intended for councils of the people. Villani (*Storie*, i, cap. 33) already tells of its building by Julius Caesar: 'Comandò a' suoi, che dovessero andare nella villa di Camarti presso il fiume d'Arno; ed ivi edificassero Parlatorio per poter in quello fare suo parlamento e per una sua memoria lasciarlo. Questo edificio in nostre volgare avemo chiamato Parlagio. Fu fatto tondo e in volte molto maravigliose e con piazza in mezzo; e poi si cominciavano gradi da sedere tutto al torno, e poi di grado in grado sopra volte andavano allargandosi infino alla fine dell' altezza, ch' era alto più di 60 braccia, e avea due porte, ed in questo si ragunava il popolo a far parlamento. E di grado in grado sedeano le genti, al di sopra i più nobili, e poi digradando secondo la dignità delle genti; ed era per modo che tutti quelli del parlamento si vedean l'un l'altro in

viso; ed udivasi chiaramente per tutti ciò che uno parlava, e capeavi ad agio infinita moltitudine di gente e'l diritto nome era Parlatorio'. This was believed till the sixteenth century: Crusca's dictionary has: Parlagio, dove si tenea Parlamento. Du Cange, who quotes Villani, says: Parlatorium appellant in Italia et Lombardia praesertim locum seu cameram, ubi de rebus seriis civitatis cujuspiam disceptatur. The first Florentine writer who recognized the purpose of the building was Borghini (1578). In an Aretine chronicle (fourteenth century) the amphitheatre of Arezzo is also called i *Parlagi*, and Guazzesi (*Supplemento alla dissertazione intorno agli anfiteatri degli antichi Toscani*, p. lxxv) still connects the name with assemblies. But the name also occurs in Pisa. Guazzesi, p. lxxxv: ed in Pisa la Porta a Lucca si chiamava la Porta del Parlascio per esservi stato ne' tempi antichi l'Anfiteatro, che serviva nel 800 di Xpto al popolo di Pisa per adunarvisi. In a cronaca manoscritta si legge che nel 1534 nel far le mura della città fu trovata non procul ab amphitheatro moles peregrina diruti balnei marmorei et ibi reperti tubi plumbei ad aquae ductum. But the entire absence of information as to the form of this ruin should make us hesitate to assume the existence of an amphitheatre, especially as according to Manni (p. 12) by this name 's'intendeva la gran Fabbrica delle Terme, secondo che scrive il canonico Giuseppe Martini' (*Theat. Basil. Pis.*, p. 5). Perhaps the word had become a popular term for all ancient ruins, just as according to P. S. Bartoli the people at Rome 'soleva chiamar Terme tutti i grandi edifizii, dalla grandezza delle Terme di Antonino e di Diocleziano' (Fea, *Miscellanea*, i, p. ccxlix).

Even the statements based upon remains of buildings are frequently erroneous. A supposed amphitheatre at Doué in Poitou, copied and described by Lipsius (*De amph.*, vi), was, according to Montfaucon (*Antiq. expliq.*, iii, p. 258), the remains of an old French royal palace. Moreover, in the case of undoubtedly ancient ruins, the most superficial similarity has often been held to justify the assumption of an amphitheatre: ogni apparenza di rotondità o di oval figura all' immaginazione d' alcuni ricorda anfiteatro (Maffei, p. 93). Consequently all such statements, if not further supported, should be received with caution, especially if they date from the Middle Ages or the early centuries of modern times. In the case of many ruins it is impossible to determine whether they are those of an amphitheatre.

If then, on the one hand, the statements concerning amphitheatres must be considerably discounted, on the other it is evident that our knowledge of those which existed in ancient times can only be partial. Very many of them must have disappeared during the Middle Ages without leaving a trace behind or have been destroyed beyond recognition. It is only exceptionally and as the result of a concurrence of special circumstances that more or less important ruins of a considerable number have remained standing, or information concerning them has reached us from the period that preceded their total destruction. A certain, perhaps even a considerable amount of similar information might no doubt be gathered from the writings of earlier centuries, especially city records, topographi-

cal descriptions and books of travel, and students of the literature of those times would render a service to the knowledge of Roman antiquity by making it known. Even in more remote countries many amphitheatres may be awaiting discovery.

The first attempt at a list was made by Lipsius in his treatise *De amphitheatris quae extra Romam*. He enumerates 15, two of which, however, the ruin at Doué already mentioned, and one supposed to have existed at Athens, are apocryphal. Montfaucon (*Antiq. expliquée*, iii, p. 258) mentions 18 outside Rome, all in France and Italy, with the exception of the ruin of Italica. Maffei's work *Degli Anfiteatri* (*Verona illustrata*, second ed., Milano, 1826, vol. 5) caused a healthy reaction against slovenly and uncritical statements about amphitheatres; certainly Maffei in his hypercriticism went too far in admitting the existence of only three amphitheatres (Rome, Capua, and Verona); that of Pola he declared to be a theatre and at least doubted that of Nîmes. Clérissieu (*Antiquités de la France*, 1804, pp. 90-96) gives a list of 62 amphitheatres, Promis (as above, p. 225, 1) reckons 62 in Italy alone, 55 of which he assumes as beyond all doubt (?). In his *Storia dell' antica Torino* (1869), p. 190, he increases the number by 23: 'nè ho dubbio di asserire che una diligente perlustrazione della parte men percorsa d'Italia, come la Puglia e l'ultima Calabria ne porterebbe il numero almeno a cento, non contando quelle delle isole'. I have accepted all those given by Promis, but I am the less able to regard his statements as beyond all doubt, since as a rule he does not state whether they are based upon remains or written information; thus, for example, I do not know whether the latter does not include simple mention of gladiatorial shows. The most recent list with which I am acquainted of all the known amphitheatres, that of Emil Hübner (*Iscrizioni esistenti sui sedili di teatri ed anfiteatri antichi*, p. 23; *Annali dell' Inst.*, 1856, p. 67) contains 83 to 85.

A complete list can only be obtained by the continuous investigations of a number of people; what follows here will have fulfilled its purpose, if it should serve as a basis for such complementary efforts; certainly it will suffice to give an approximate idea of the number of the amphitheatres whose existence can be proved. For a considerable part of the notices, especially of Italian ruins, I am indebted to the library of Otto Jahn (died 1869), which is especially rich in monographs on the subject. Further, for the list of the amphitheatres in Italy, I have been able to make use of information from Rudolf Bergau, Otto Hirschfeld, and Nissen; to Hirschfeld I am further indebted for bringing to my notice a number of French local treatises on amphitheatres in Gaul. The statements on Spanish amphitheatres are from Emil Hübner, on those of Switzerland from Konrad Bursian (died 1883). The statements of measurements of the chief dimensions, so far as they are accessible to me, are collected at the end of this list. Other notices are only given incidentally, when they appear to be of special interest; but more frequently, when they verify the existence and degree of preservation of these ruins in earlier times. The fact that so much has disappeared only during the last few centuries makes it very probable that far more amphitheatres existed in the Roman empire

than can be ascertained at the present time; so that many even ill-accredited items of information appear not altogether unworthy of notice.

The first stone amphitheatre in Rome, built by Statilius Taurus in 30 B.C. was not the oldest in Italy. It is now generally recognized (Garrucci, *Bull. Nap.*, n.s., i, p. 145) that the amphitheatres in Etruria were not, as was formerly believed, built by the Etruscans, but by the Romans. On the other hand, Henzen has already referred the amphitheatre at Pompeii to the earliest period of the Sullan colonization, arguing from the antiquated letters and forms of words in the following inscription, which occurs twice in the amphitheatre (*CIL*, i, 1246 = *CIL*, x, 852): C. Quinctius C. f. Valgus M. Porcius M. f. duovir quinq. coloniai honoris caussa spectacula de sua pec. fac. coer. et coloneis locum in perpetuom deder. (Henzen, *AdI*, 1859, p. 211). The same C. Quinctius Valgus, when duumvir, with his colleague M. Porcius built the Odeum at Pompeii (*CIL*, x, 844) and restored the walls of Aeclanum that had been destroyed by Sulla (*CIL*, i, 1230 = ix, 1140). All the inscriptions (as well as that from Casinum, *CIL*, x, 5282) belong to the Ciceronian age; but the date of the building of the amphitheatre at Pompeii (according to Nissen, *Pompej. Studien*, p. 118, 70 B.C.) is still uncertain (Mommson on *CIL*, x, 844). Valgus (perhaps the father-in-law of Rullus mentioned in Cicero, *Leg. Agrar.*, ii, 26, 69; iii, 1, 3: a Valgi genero, corr. C. F. W. Müller, earlier reading, Valgii, MSS. Vulgi) was certainly an old adherent of Sulla, who had raked his property together at the time of the proscriptions (Dessau, *C. Quinctius Valgus, der Erbauer des A. von Pompeii*, in *Hermes*, xviii, 1883, pp. 620-622). Promis (*Storia dell' antica Torino*, p. 188) also considers the amphitheatres of Pompeii and Aosta to be the oldest of those preserved. It is probable that, even in republican times, others were in existence besides the Pompeian (Henzen, *Atti della pontif. accad. di arch.*, xii, p. 74, cp. p. 88, note 16), but such high antiquity cannot be proved for any of those known to us. The inscription on the amphitheatre at Puteoli (*IRN*, 2541 = *CIL*, x, 1789) is restored by Garrucci (*Sull' epoca e sui frammenti dell' iscriz. dell' anf. Puteol.*, Naples, 1851) as follows: colonia Flavia Augusta Puteolana fecit pecunia sua, which is approved by Henzen (*BdI*, 1851, pp. 93-95). According to this, it was not built before the time of the Flavian dynasty. The inscription *IRN*, 3593 = *CIL*, x, 3792 restored by Mazzocchi proves nothing as to the date of the Capuan amphitheatre: col. Julia Felix Augusta Capua fecit divus Hadrianus Augustus restituit imagines et columnas addi curavit imp. Caes. Aelius Hadrianus Antoninus Aug. Pius dedicavit.

After the building of the first stone amphitheatre in Rome (30 B.C.), others were probably soon erected in Italy, not only in Campania. Vitruvius (i, 7) recommends that temples of Hercules should be built near the circus in towns, which have neither gymnasia nor amphitheatres; however, gladiatorial games frequently took place in the forum. Vitruvius, v, 1: in Italiae urbibus (forum) non est eadem ratione faciendum ideo quod a maioribus consuetudo tradita est gladiatoria munera in foro dari. Yet Propertius (v, 8, 76) has: tu neque Pompeia spatiabere cultus in umbra, nec cum

lascivum sternet harena forum ; certainly this might be an earlier poem, subsequently admitted into the fifth book by its editors. Lachmann's assumption (*Rhein. Mus.*, vi, 107), that Vitruvius wrote before the middle of January, 27 B.C., since otherwise he would not only have said 'imperator Caesar' at the beginning of the address and elsewhere 'imperator' and 'Caesar' alternately, but would also have made use of the name Augustus as well, is untenable ; apart from the fact that Vitruvius himself mentions an *aedes Augusti* at Fanum, it should be remembered that 'Auguste' as a form of address was very uncommon, *Caesar* and *imperator* being the forms generally in use. In the Augustan age (besides Suetonius, *Augustus*, 58 : [Messalla] quod bonum, inquit, faustumque sit tibi domuique tuae, Caesar Auguste) perhaps the only instance is Horace, *Odes*, iv, 14, 3 : quae cura patrum quaeve Quiritium plenis honorem muneribus tuas, Auguste, virtutes in aevum per titulos memoresque fastos aeternet. Throughout the entire literature of the first century it perhaps only occurs in Martial (iv, 27, 1 ; v, 15, 1 ; 65, 15 ; viii, 11, 36, 11 ; 80, 7 ; 82, 1 ; ix, 3, 13 ; 18, 7 ; 80, 3 ; xi, 20, 9). If the temple of Quirinus mentioned by Vitruvius (iii, 2, 7) is the one dedicated by Augustus in 19 B.C. (Becker, *Topogr.*, p. 569), Vitruvius wrote about 14 B.C. Cp. Teuffel, *Hist. of Roman Lit.*, Eng. tr., § 264, 1).

In the provinces also the number of amphitheatres increased very rapidly. At Alexandria there was one as early as 24 B.C., since it is mentioned by Strabo (xvii, p. 795), who was in Egypt during that year. He also mentions one at Nysa in Caria (xiv, p. 643). That at Cyrene was already in existence in 13 B.C. (Böckh, *CIG*, 5361 ; cp. below).

The name *amphitheatrum* (for which Ovid, *Metam.*, xi, 25, has 'structum utrimque theatrum') first occurs in Vitruvius (i, 7, 1) : Herculi, in quibus civitatibus non sunt gymnasia neque amphitheatra, ad circum ; then in *RGDA*², p. 94 : (venationes) in circo aut in foro aut in amphitheatris. Mommsen observes : equidem . . . crediderim vocabulum, quod Augusto principe demum videtur usurpari coeptum esse nec vere Graecum est, initio plurali numero solo usurpatum esse, cum essent amphitheatra tamquam theatra duo. Rather ἀμφιθέατρος is an adjective (ἀμφιθέατρος πηρόδρομος, Dion. Halic., iii, 68, iv, 44), which strictly follows the analogy of adjectives formed from ἀμφι and a substantive, such as ἀμφάκανθος, ἀμφιάλος, ἀμφιθάλαμος, ἀμφιθάλασσος, ἀμφίθυρος, ἀμφιπρόσωπος ; consequently ἀμφιθέατρον, i.e. οἰκοδόμημα, the neuter being used substantially. Dio, xliii, 22 : θέατρον τι κυνηγετικὸν ἐκρίνωσας, ὃ καὶ ἀμφιθέατρον ἐκ τοῦ περὶ πανταχόθεν ἔδρας ἀνευ σκηνῆς ἔχειν προσεεργήθη. Augustus no doubt found support for the plural *amphitheatra* in the native *spectacula* as observed by Nissen (*Geschichte des Amphitheatres von Pompeii*, in *Pomp. Studien*, p. 108, which may be generally consulted). The form of the amphitheatre is derived by Nissen from that of the circus.

A. THE WEST.

ITALIA.

Campania. *Capua.* *CIL*, x, 3792, 7 (A.D. 387) iii Idus Mai. rosaria ampieatetri (sic). De Laurentiis, *Descrizione dello stato antico e moderno dell' anf. Campano* (1835). Rucca, *Capua vetere* (1828), pp. 136-291; *ib.*, *Anf. Capuano* in *Mus. Borb.*, xv (1856), tav. 37-39 and 41. Minervini (*Bull. Nap.*, n. s., vi, p. 184) says nothing worth mentioning about the most recent excavations. Beloch, *Campanien*, p. 351. Rucca thinks that the accommodation for the spectators was as large as in the Colosseum; that the amphitheatre equalled, if it did not surpass, the latter in size, since according to his definite statement it had four stories, all of the Doric order, the lowest, still preserved, being a Neapolitan *palma* higher than the lowest story of the Colosseum (35½-36½). It also contained 80 arched entrances, marked by images of the gods; only two arches adorned with the busts of Jupiter and Diana, still remain. (According to Bergau, six others have been let into the façade of the town-hall of new Capua; one into the campanile of the cathedral. Both buildings, according to Rucca, are built of stones from the amphitheatre.) Here also were found the statues of Adonis, Venus Victrix, Psyche, etc., now in the *Mus. Borb.* (*Capua Vet.*, p. 138). On the very large subterranean vaults see Rucca, pp. 272-280 and his treatise: *Su l' ipogeo dell' anf. Puteolano*, p. 11. Parker, *Archæology of Rome*, p. vii (1875), pl. 27, 35. According to this, besides machines and beast-cages, there would have been room for 1000 people, who could have gone in and out unseen through four subterranean entrances under the main gates. The underground passages of the arena correspond to those in the Pozzuoli amphitheatre, except that, in conformity with the larger dimensions, we have here three open corridors along the great axis of the arena, while a fourth runs round along the periphery. There are in addition six arched corridors, lighted by square openings. Two arched passages, running for a considerable distance underground, run into the middle of the two. The material of the arcades of the arena is travertine, elsewhere brick; there is an entire absence of reticulated work. It was destroyed in 840, when the Saracens devastated Capua. It next served the Lombard leaders as a fortress, and in later times it was also used as a quarry for obtaining building material.

Atella. Suetonius, *Tiber.*, 75: corpus ut moveri a Miseno coepit, conclamantibus plerisque Atellam potius deferendum et in amphitheatro semiustulandum (see p. 190).

[**Neapolis.** The assertion of Promis (*St. d. a., Torino*, p. 190) that there was an amphitheatre here, is probably only based upon the names of the streets given by Garrucci: 'vico dell' anf.' and 'platea amphitheatri'. It is clear from the account of its chief buildings in Statius (*Silvae*, iii, 5, 81-104) that none existed at the end of the first century. Inscription on a certain C. Herbacius Romanus demarchisanti iivir, etc., qui ob promiss. venat. phetris divisit quina mil. num. (*IRN*, 2454 = *CIL*, x, 1491). Beloch also (p. 72) assumes that no amphitheatre existed.]

[*Pausilypum*. Schulz, *Scavi di Nocera e del Posilippo*, in *BdI*, 1842, p. 145, p. 59: un piccolo anf. da nessuno sinora descritto—trovasi positivamente a mano manca dell' entrata della grotta (del Posilippo). But this supposed amphitheatre is evidently the theatre or *odeum* described by Beloch, p. 86.]

Cumae. The statement of Jorio (*Guida di Pozzuoli e contorni*, third ed., p. 85) that an amphitheatre, certainly entirely destroyed and in ruins, can easily be recognized there (in a vineyard) is confirmed by Bergau, who adds that, according to C. M. Riccio (*Cenni storici della città di Cuma*, Naples, 1846, p. 25), frammenti de' gradini, de' vomitori e corridori should be visible, but that he saw nothing of them. Beloch (p. 163) says: 'in the entire circumference only a number of arches are preserved in the outer wall'.

Puteoli. According to Rucca (*Su l' ipogeo dell' anf. P.*, 1851, p. 9) it had 72 arched entrances, of which d' Ancora (*Guida di Pozzuoli*, p. 59) gives a representation; cp. Schulz, *BdI*, 1841, pp. 183-185, p. 184: secondo pretende Mazella (*Sito ed antich. della città di Pozzuoli*, Naples, 1806, p. 37) l' anf. poco tempo prima di lui era pressochè intiero. Tanto questo edificio quanto una porzione del teatro Puteolano, che ancora nel secolo xvi sussisteva (Capacio, *Puteolana historia*, Naples, 1604, p. 31) avranno ricevuto sì notevole danno nella famosa eruzione della Solfatara nel 1538. Cp. also Romanelli, *Viaggio a Pompei e Pesto* (Naples, 1817), pp. 118-123; Jorio, *Guida di Pozzuoli* (Naples, 1830), p. 49. On the subterranean passages see Rucca (*l.c.*); they were laid open by careful excavations in the years 1838-1848. The results of recent excavations (*Not. d. Scavi*, 1880, pp. 64 and 96; 1882, p. 375) are unimportant. 'The façade rose in three storeys; under the *cavea* was a corridor. Before the two main entrances there was an entrance-hall with a triple row of columns. The *cavea* ascends in three rows, separated by two *præcinctiones*. The substructures beneath the arena are almost completely preserved. Along the longitudinal axis runs an open corridor, which divides the arena into two parts: two overarched passages follow the ellipse of the arena, communicating with each other, lighted and accessible by means of sixty square openings. The construction of the subterranean passage differs from the rest of the building in being entirely of brick, which Promis rightly regards as a later addition of the age of the Antonines'.

Since, according to the inscription quoted above, the amphitheatre cannot have been built before the time of Vespasian, Beloch (p. 137) assumes that there was an earlier amphitheatre as well. In the representation of the coast on the glass vessel from Odemira (H. Jordan, *Die Küste von P. auf einem röm. Glasgefäß in Archæol. Ztg.*, 1868, p. 91) Beloch, p. 125) two amphitheatres are given one above the other.

Pompeii. Cp. Overbeck-Mau, *Pompeii*⁴, 1884, pp. 176-186; also the works quoted by O. Müller, *Hdb. d. Arch.*, § 260, 2 and Nissen (*Pompej. Studien*, p. 97), together with the analysis (by R. Schöne), and history of the amphitheatre (*l.c.*, pp. 97-128). For the inscriptions there, *CIL*, x, 852-859. According to Goro von Agyagfalva (*Wanderungen*, p. 171) there was room for 20,000 spectators; Nissen (p. 116) regards this estimate as correct. 'It is certain for many

reasons that the *cavea* was in process of restoration, when it was overwhelmed' (p. 106). R. Schöne (*Wandinschriften vom Amphitheater zu P.*, in *Hermes*, iv, 138) rightly attributes the inscriptions painted outside (such as *Permissu aedilium Cn. Aninius Fortunatus occup[avit]* and the like: *CIL*, iv, 1096, 1096 a, 1097 b, 1115) to hawkers, who 'set up their movable stalls in the niches of the outer wall' (Kiessling, *Neue Jahrb. für Philologie*, 1872, p. 10); they were consequently only good for the time a show lasted; cp. Zange-meister in the *Addenda*. In 1869, on the wall of the peristyle of a house opening upon the street from the temple of Isis to the amphitheatre a picture was discovered placed upon an older painting already destroyed; it represents the amphitheatre with the surrounding localities, and the bloody fray between the Pompeians and Nucernians in 59 (Tacitus, *Ann.*, xv, 17). See G. de Petra, *L'anf. Pompejano rappresentato in un antico dipinto*; *Giornale degli Scavi di Pompei*, n. s., i, 186 foll. and tav. viii.

[*Sorrentum*. Promis (*St. dell' a Torino*, p. 190); Beloch, p. 266. It is doubtful whether Sorrentum had an amphitheatre.]

Nola. Nissen remarks: 'Corcia (*Storia delle due Sicilie*, ii, 416) states, according to the municipal inscriptions [rather, according to Ambrogio Leone, *De Nola*, Venice, 1514 F, in Burmann, *The-saurus*, ix, 4; Beloch, p. 389] that Nola had two amphitheatres, one of marble and one of brick, the latter before the gate towards Naples. The first, judging from the intimations as to situation, style of architecture, etc., is certainly a theatre. The second has vanished from the earth's surface, but in the locality stated peasants have shown me in a cornfield the pillars just above or below the earth, forming a large oval at regular intervals. In many places the ground was hollow; in short, I have no doubt in my own mind that the tradition, which removes the amphitheatre to this spot, is correct'. 'In Leone's time the walls could still be seen above the arches of the lower storey and the additions of the second' (Beloch, p. 404).

Abella. Of its amphitheatre 'the oval, some 300 *palmi* long and 200 *palmi* wide, can be seen; the *cavea* is marked off as a hollow in the ground. On the west side can be seen five arched chambers; the place is now called from these 'Le grotte d' Antonello' (Beloch, p. 415). Below the inscription of a certain L. Egnatius Juventius (qui obliterato muneris spectac. impetrata editioe ab indulgentia max. principis diem gladiatorum et omne(m) apparatus pecunia sua edidit in the year A.D. 170, *CIL*, x, 1211) an amphitheatre is shown, the rows of seats, windows, and gates of which are visible; within fighting gladiators are represented.

[*Cajatia*. Promis, *St. d. a. T.*, p. 190.]

Cales. Nissen: 'The extensive ruins of Calvi contain, in addition to a theatre, an amphitheatre. Corcia, i, 507: l'arena qual si vede oggidì, comprende unoggio e mezzo di terreno; la sua lunghezza è di palmi 334, la larghezza di p. 226, e tutto il circuito di p. 990: così che era alquanto più piccolo di quello di Casino'.

[*Teanum*. Nissen considers it more likely that the supposed amphitheatre (e.g. Corcia, i, 519) is a theatre.]

[The supposed amphitheatre at *Capreae* (Anacapri; see, e.g.

Donaldson, *Architect. Numism.*, p. 303) appears to be apocryphal. 'In the *Richerche topogr. ed archeol. sull' isola di C.* by Rosario Mangoni (Napoli, 1834), where the ancient remains of the high plateau of Anacapri (pp. 231-262) are described at length, there is no hint of ruins of any such building'. Bursian, *Litt. Centralbl.*, 1869, no. 17.]

Latium. [*Sinuessa.* Promis, *St. d. a. T.*, p. 190.]

Suessa Auruncorum. The inscription (De Masi, *Storia degli Aurunci: alla torre di S. Imato*), according to which a certain Sex. Caecilius Sex. f. Quir. Birronianus Scriba librar. quaest. iii decuriarum quinquen. p. c. Sinues. gratissimis podium amphitheatri a solo fecit (= *CIL*, x, 4737 is probably interpolated, but genuine).

Minturnae. Lipsius (*De amph. quae extra Romam*, 2) : exstat hodieque ad Lirim Campaniae fluvium (Garigliano nunc dicunt) juxta Minturnas (hodie Trajecto) pars amphitheatri latericii bene conspicua. This building, mentioned also by Montfaucon (*Antiq. expl.*, iii, p. 258), De Brosses (letter dated 2nd of November, 1739), and Guattani (*Mon. in.*, 1784, Oct. p. 82), and to which the name i *Virilasci* (*CIL*, x, 6054 1; p. 195 above) refers, is no doubt the one meant by Kephallides (*Reise*, ii, 204) and Westphal (*Die römische Campagna*, p. 67), according to whom only some unimportant remains of a theatre are preserved at Minturnae.

Casinum. *CIL*, x, 5183 = *IRN*, 4236 : Ummidia C. f. Quadratilla amphitheatrum et templum Casinatibus sua pecunia fecit. The building consequently belongs to the second half of the first century (see Pliny, *Epp.*, vii, 24). Volkmann (*Hist. Krit. Nachr. über Italien*, 1771, iii, p. 346) : 'The arena is 200 feet long, the seats, which are an utter ruin, not included. The walls are 57 feet high. The five large entrances are 26 feet high and 13 feet wide. The places where the animals were kept and the canals, which perhaps brought in the water for the *naumachiae* are still visible. The walls are of brick outside and lozenge-shaped (*opus reticulatum*)'. J. Burckhardt, *Der Cicerone*, p. 45 : At St. Germano there is a circular amphitheatre, the only one of its kind (in Italy).

Aquinum. The remains of an amphitheatre of simple and beautiful construction are mentioned amongst other ruins by Westphal (p. 92). It is called by the people 'Grotte de' Pagani' (Pellegrino, *Capua*, i, 282).

[*Atina* ? 'In the *acta* of St. Prudentius, which, however, are only known from a chronicle of the fourteenth century in Ughelli (vol. i; *Acta Sanctorum*, Aprilis, vol. x, 1st of April, p. 12), forum Antonini non longe ab amphitheatro is mentioned'. Jordan.]

[*Arpinum.* Promis (*Città di Luni*, p. 225, note 1) credits this town with an amphitheatre, which Westphal (p. 90) does not seem to know.]

Frusino. Westphal (p. 85) asserts that not even a trace of old buildings remains; on the other hand, Deminici (*Giorn. Arcad.*, iv, p. 160) mentions this town as one of those in which there was an amphitheatre. Mommsen (*Epigr. Analekten in Ber. d. sächs. Ges.* 1849, p. 286) : *Tessera* from the amphitheatre at Frusino (*BdI*, 1830, p. 265). On the one side : Cvnv. i (Cvn. vi ?) in (feriori ?) x (gradu decimo); on the other : viii (loco octavo). 'If, as we may assume, the amphitheatre at Frusino had only two storeys, *cuneo*

sexto inferiori might perfectly well be substituted for *maeniano priori*, *cuneo sexto*; or, if we prefer to assume three storeys, *infimo* (Momm-
sen).

[*Valeria* (Vara). *Deminicis, loc. cit.*]

Tibur. According to Promis (*Città di Luni*, p. 225) an amphitheatre was in existence till the time of Pius II.

Praeneste. Ceconi (*Storia di Palestrina*, p. 70) quotes the following inscription of the time of Claudius (now *CIL*, xiv, 3010): *M. Jarenus clari l. tyrannus amphitheatri partem dimidiam in solo.* An inscription of *M. Varenus Clarus* from A.D. 21 in *CIL*, x, 1333. *Cn. Voesius Aper, flamen divi Augusti*, built a *ludus* and a *spoliarium* for the Praenestines (Or., 2532 = *CIL*, xiv, 3014).

Roma. On the amphitheatres of Rome cp. Becker, *Hdb. d. röm. Ant.*, i, 680 foll.; *Beschr. der Stadt Rom*, iii, i, 319 foll., Becker, p. 549 foll.; on the other hand, Preller, *Regionen Roms*, p. 132; also C. Thierry in Daremberg and Saglio's *Dictionnaire des Antiquités*, s.v. 'amphitheatrum'. For the history of the excavation and restorations in the Colosseum since 1814, see Parker, *Archaeology of Rome* (part vii, 1876, pp. 31-39).

Lanciani (*Bull. comun.*, 1876, p. 189), arguing from the inscription Orelli, 22 (= *CIL*, vi, 130) of the year A.D. 241, rightly regards the *amphitheatrum castrense* as one belonging to the *cohortes praetoriae* and *urbanae*. Water-pipes for the same were laid down by Severus and Caracalla (202/3; see Lanciani, *Acque*, pp. 217, 307).

Lanuvium. *Vit. Commod.*, 8: 'appellatus est etiam Romanus Hercules, quod feras Lanuvii in amphitheatro occidisset. An inscription (*CIL*, xiv, 2127) found there: *ex s. c. de sua pec. theatrum refec.*, is perfect on both sides. According to O. Benndorf (*BdI*, 1865, p. 226) 'alcuni scrittori antichi citati dal Volpi' (*Vet. Lat.*, v, p. 87 ?) attest the existence of an amphitheatre at Lanuvium.

Tusculum. According to Canina (*Descr. dell' antico Tuscolo*, p. 130, tav. 22 and 23) the building, generally called 'Scuola di Cicerone', was an amphitheatre, capable of holding about 3000 spectators. The arena had substructures; there still remained traces of the *podium* (in questo anf. rimane visibile soltanto l'ambulacro di mezzo). Tav. 23 shows an elliptic arena, on one part of which a slight eminence, on the other rooms here and there are visible. According to Hirschfeld, the amphitheatre is now pretty well exposed; something of the rows of seats is preserved, also a large entrance gate, a staircase leading to the first *praecinctio*, the passage running underground through the middle of the arena.

Albanum. According to Westphal (p. 24) the great ruins of the amphitheatre (in the upper part of the modern town) are shown by the style of architecture to belong, not to the time of Domitian (to which they are ascribed by Nibby, *Analisi della carta de' contorni di Roma*, i, p. 99), but to a later period; perhaps to the time when the 'legio ii Parthica' formed by Severus had its permanent quarters here (De Rossi, *Bull. di archeol. crist.*, vii, 1869, p. 67).

Vulturnum. According to an inscription (Orelli, 2538 = *CIL*, x, 6565; cp. Henzen, iii, p. 225), which is only partially intelligible, the amphitheatre was restored under Valentinian and Valens.

Setia. According to Westphal (p. 53) there are some scanty remains of an amphitheatre, consisting of a few arches on the left of the road to Sermoneta.

Circeii. Suetonius, *Tiber.*, 72: *Circeios pertendit. Ac . . . castrensibus ludis non tantum interfuit, sed etiam missum in harenam aprum jaculis desuper petit.* With this is connected the inscription in Murat. (612, 7), found at 'Paola in Maritima' = *CIL*, x, 6429:—

S. Montanus iiii vir i. d. m. o.

nivm amphitheatrv m sva

emque mvnere gladiatorio

et venatione dedicavit. l. d. d. o. (?)

[*Fundi. Promis, St. d. ant. Torino*, p. 190.]

Sannium. *Venafrum.* *IRN*, 4625 = *CIL*, x, 4892:

vibi s. c. f. m.

Q. Flamen

amphitheatrum pec. sua fac. curavit

pro parte dimidia

According to Cotugno, *Memorie storiche di Venafrò* (Naples, 1824), p. 260 foll., the amphitheatre, the ruins of which are to be found 'nel così detto Vorlascio' (see p. 195), had room for 8000 spectators.

Allifae. Henzen, *Exempl. Mus. Borgh.*, p. 82: 'according to Corcia (i, 318) there are no remains of an amphitheatre, although its existence is to be assumed from the inscription *IRN*, 4768 = *CIL*, ix, 2350 (where only the shows are spoken of); on the other hand he mentions the ruins of a theatre' (Nissen). Trutta (*Antichità Allifane*, p. 29) also assumes that an amphitheatre existed here, on the authority of the same inscription.

Saeplinum. This is probably the place, to which a patron presented the buildings mentioned in the following inscription: *ac adfectionis erga rem publicam sicut ludum gladiatorium omni impensa sua ita spoliarium a fundamentis instructum ornatumque pro nitore civitatis rei publicae dono dedit.* As Lanciani observes (*Bull. comun.*, ii, 1874, p. 87), the builder of the *ludus* and the *spoliarium* is probably one Neratius, whose family came from Saeplinum and still exercised the *patronatus* of that town in the fourth century. The inscription found in the neighbourhood of the baths built in Rome by Neratius Cerialis (consul in 358) is no doubt from the family palace.

Telesia. The ruins of the amphitheatre (according to Corcia, i, 345) are to the west of the old town' (Nissen). Cp. *CIL*, ix, 2197 (ad portam amphitheatri), 2235.

[**Beneventum.** The 'bei ruderi' (beautiful remains) of an amphitheatre, mentioned by Promis (*C.d.L.*, p. 225), according to Nissen certainly belong to a theatre; he found no trace of an amphitheatre. Tacitus (*Ann.*, xv, 34) mentions a *munus* of Vatinius there.]

[**Aeclanum.** 'According to Corcia (ii, 508), the amphitheatre there was called *Jócolo* from the games which took place in it (?)' (Nissen).]

Lucania. Paestum. Winckelmann (*Anmerk. über die Baukunst der Alten, Vorbericht*, § 12) says that 'the lower arches' and 10 rows of seats of an amphitheatre still exist. Paoli (*Ruine dell' antica*

città di Pesto, 1784) gives the dimensions. Romanelli (*Viaggio di Pompei a Pesto*, ii, p. 42): 'Oggidì restano gli avanzi di 10 gradini e le indicazioni delle cavee dove le fiere erano ristrette'. G. Bamente di Capaccio, *Le antichità Pestane*, Naples, 1819, p. 62: 'Il luogo che si vuole anfiteatro Pestano, è posto nel centro della città ed è coverto di rottami e di terra; è un concavo circolare adesso alla semina'.

Grumentum (alla Saponara, Promis *loc. cit.*). Roselli, *Storia Grumentina*, p. 50. *Memorie dell' inst. archeol.*, p. 237: Sono tuttavia in piedi diversi pezzi di mura reticolata dell' altezza di 20 piedi ed alcuni corridoi a volta, alti palmi 9 e larghi altrettanto, non che l'arena a forma ovale'.

Calabria. *Lupiae*. Promis (*Storia dell' ant. Torino*, p. 190, 3): Tralascio l'a. di Lictia o Lupia ora Lecce in Calabria, di cui fa motto Guido Geografo (ed. Pinder and Parthey, p. 468). Egli veramente lo dice teatro, ma per contenere il nuovo piccolo caseggiato sostituito all' antica, chiaro è che doveva esser un' a. *CIL*, ix, 21 (Lecce nuper rep.): Otacilia M. f. Secundilla amphitheatrum.

Apulia. *Venusia*. St. Aloe (*BdI*, 1842, p. 126 and *Bull. Nap.*, i, 1843, p. 62): 'Fu costruito con tutta magnificenza.—Il suo portico e tutto il lato esterno era composto di grossi pezzi di travertino duro—le colonne che ornavano la decorazione esterna erano tutte di marmi colorati bigi e cipollini con capitelli di marmo bianco d'ordine dorico e composito.—Le fabbriche—si mantennero in parte salde sino al secolo xi, quando i monaci Benedettini—distrussero quasi al suolo que' preziosi avanzi per rizzarvi con essi il magnifico tempio della ss. Trinità'. 'At the present day only some depressions in the ground are visible, probably the ancient entrances; I have been assured on credible authority that in the course of subsequent excavations several years ago (which however were only carried on for a few days) important *sotterranei* were found, which were again filled up with earth' (Hirschfeld). On the inscription forged by Lupoli see Mommsen (*BdI*, 1847, p. 118).

[*Tarentum*. 'The so-called amphitheatre (e.g. in Förster) may well have been a circus. Its circumference can still be clearly recognized, but only few remains of the wall-work, chiefly *opus reticulatum*, are preserved' (Hirschfeld). Nissen (*Pomp. Stud.*, 110) regards this view as unfounded, and holds that there are no proofs of the existence of circuses in Italy except in Rome. Beloch, however (*Campanien*, p. 142) expressly mentions a circus at Puteoli.]

Frontani. *Larinum*. Marangoni (*Delle mem. sacre e profani dell' anf. Flavio*, p. 30): 'Di pietra ancora si è l'anfiteatro di Larino nel regno di Napoli, il di cui accuratissimo disegno e descrizione delle sue parti è uscito alla luce l'anno 1744 nel erudito libro delle memorie istoriche di quella città di Mons. Andrea Tria già vescovo della medesima, ed ora arcivescovo di Tiro'.

Sabini. [*Marrubium*. Promis, *Città di Luni*, p. 225.]

[*Superaequum*. Promis, *St. dell' ant. Torino*, p. 190.]

Alba Fucentina. According to Westphal (p. 116) very dilapidated. Promis (*Le antichità di Alba Fucense negli Equi*, p. 243): 'una vasta cavità nel terreno che dalla sua forma e soprattutto dagli avanzi dei muri cuneati si palesa per un anfiteatro; p. 248: le dimensioni

molto prossime a quelli dell' anf. di Amiterno danno una capacità di circa 20,000 spettatori. La cavità dell' anf. porta ora il nome di fossa di giudizio'.

Amiternum. The amphitheatre is represented in Guattani (*Mon. Sab.*, iii, 14). Cp. *CIL*, ix, 4208 = *IRN*, 5789 (on a *biga*, to be set up in the amphitheatre).

Reate. According to Promis (*C.d.L.*, p. 225), the amphitheatre was not destroyed till the year 1283.

Trebula Mutuesca 'near Montelione della Sabina has ruins of an amphitheatre' (Nissen).

Picenum. *Ancona.* Rinaldini (*BdI*, 1865, p. 11) considers the existence of an amphitheatre (già contrastato dal Peruzzi) confirmed by the inscription: D. M. Ti. Clau. Dio Celeri preconi ex la(?) C(?) ini(?) A. Cl. Saturnini Beryllus secunda rudis et officiales cunti (cum tironibus?) b. m. Nissen (p. 14) adds: 'Riguardando gli avanzi tuttora superstiti in una casa private benchè di piccola estensione, ed insieme considerando che vi fu una scuola gladiatoria, nessuno potrà più dubitare, ch'era veramente tal edificio grandioso in Ancona situato in mezzo della città sotto quel colle, che secondo la giusta opinione dei dotti Anconitani formava l'antico Capitolio ed ora è celebrato dal famoso tempio di S. Ciriaco. Un altro argomento vedi Colucci, *Ant. Pic.*, xv, p. 100.' Promis (*loc. cit.*) also mentions an amphitheatre at Ancona.

[*Auximum.* Henzen (*Expl. Mus. Borgh.*, p. 82?). 'I heard nothing of an amphitheatre at Osimo: nor does Colucci (tom. v) know anything of one' (Nissen).]

Ricina. 'Hard by the left bank of the Potenza, between Macerata and Recanati, is a well-preserved amphitheatre of about the time of Septimius Severus. Cp. Orelli, 915: L. Septimio Severo—p. C. 205—colonia Helvia Ricina conditori suo' (Nissen).

Urbs Salvia. Guattani (*Mon. Ined.*, i, 83). 'Considerable ruins; the dimensions were variously given to me (axis 60 × 59 or 80 × 60 m.)' (Nissen).

[*Firmum.* According to Adami (Chronicle of Fermo, sixteenth century), the amphitheatre was a large and magnificent one. Colucci, however (*Ant. Pic.*, ii), in describing Fermo, where he himself lived, only mentions a theatre, to which also Nissen considers the ruins (ascribed to an amphitheatre in *AdI*, 1846, p. 54) to belong.

Faleria (near the modern Fallerone). According to Deminiciis, *Giorn. Arcad.*, lv, p. 160 *sqq.*, p. 168, the amphitheatre is in the form of an ellipse, and has 12 entrances, 4 leading to the arena, 8 to the rows of seats, which are divided into 3 sections by 2 *praecinctions*. The arena is choked up with earth as far as the edge of the *podium*, and the outside wall, still preserved, is only 45 Roman *palmae* high.

Asculum Picenum. 'In the Orto delle comitrici (?) the circuit of an amphitheatre (I myself certainly did not take it for a circus) can still be traced with accuracy; at an earlier date arcades are said to have been standing, but were destroyed some 20 years ago' (Hirschfeld).

Interamnia Praetutiorum. Delfico (*Dell' Interamnia Petrusia*, p. 80): 'Miserabili avanzi d'un grand' anfiteatro di cui si veggono varj archi e varie altre reliquie se ne scorgono in alcuni sotterranei'.

Cp. *Bull. Nap.*, ii, p. 64: 'Cita Corcia (*Storia delle due Sicilie*, i, 20) gli avanzi di un anf.—e dice che esser doveva magnifico e di grandi proporzioni, esistendone una muraglia, cui vedesi poggiata una serie di volte sostenuta da grandi pilastri, che sorreggevano il più basso corridojo per gli spettatori a due ordini di archi . . . nel circondario di Nereto in Garufo si veggono avanzi di un bell' anfiteatro'.

Interpromium. *CIL*, ix, 3044 = *IRN*, 5330 = Henzen, 6939 (inscription on one Sextus Pedius Hirrutus, prim. pil. leg. xxi. ivvir i. d. praef. Germanici Caesaris quinquennalici juris ex s. c. quinquenn. iterum, who built an amphitheatre at his own expense); cp. Mommsen's remarks.

Umbria. Oriculum. P. S. Bartoli in Fea, *Miscell.*, i, p. 272: 'vi si scorgono i vestigi di un piccolo ma bello anfiteatro'. According to Guattani (*Monumenti inediti*, i, p. 83) it was three-storeyed.

Interamnium (Terni). Promis (*C.d.L.*, p. 225). According to Giuseppe Ricardi, *Sulla caduta delle marmore* (ed. 5, Rome, 1825), p. 84, there is an amphitheatre 'al giardino dell' episcopio', also given in the plan annexed. According to Hirschfeld, the remains are still considerable.

Spolegium. Procopius (*Bell. Goth.*, iii, 23): ἐτόγγανον δὲ Γότθοι ἡλίκᾳ Ἡρωδιανοῦ ἐνδιδόντος Σπολιτίων εἶλον, τῆς μὲν πόλεως τὸν περίβολον ἐς τὸ ἑδαφος καθελόντες, τοῦ δὲ πρὸ τῆς πόλεως κυνηγεσίου, ὅπερ καλεῖν ἀμφιθέατρον νενομίκασι, τὰς τε εἰσόδους ἐς τὸ ἀκριβὲς ἀποφράζαντες κ.τ.λ.

Carsulae. Promis (*C.d.L.*, p. 225) states that there is an amphitheatre 'all' antica Carsulum presso Acqua Sparta'; according to Nissen none exists, and Promis means the ruin mentioned by P. S. Bartoli (Fea, *Miscell.*, i, p. 272) in 'Carsoli sotto Porcheria vicino Acqua Sparta': il bel portico di un bellissimo tempio corintio di grosse colonne ed intiero, un circo ovvero ippodromo con un arco di travertino.

Mevania. Promis (*Antichità di Aosta*, p. 170, 2). 'The considerable remains of the amphitheatre are all built over' (Nissen).

Fulgineum. 'An amphitheatre, the existence of which is testified by local writers (e.g. Mengozzi in Colucci, *Ant. Pic.*, xi, p. 75, is still spoken of in the town. I have certainly not been able to examine the ancient site properly, but in this case I am content to trust the tradition' (Nissen).

Hispellum. An amphitheatre is mentioned by Guattani, Deminici, Promis; cp. Henzen 5580. 'The ruin on the high road leading from Assisi past Spello to Foligno' (Nissen).

Asisium. 'Di Costanze (*Disamina*, etc., p. 170 not.) endeavours to prove the existence of an amphitheatre, but all his evidence goes to show that there was none' (Nissen). Nevertheless, the statement of Promis (as above) and O. Müller (*Handb. der Arch.*, § 260, 3, according to Schorn, *Reisen*, p. 462) that there was an amphitheatre at Asisium, finds confirmation in the report of Johannes Dondi, a philosopher and mathematician of Padua, who visited Rome in 1375 and declares that he found the ruins 'duarum arenarum parvarum in modum Colixei' between Spello and Assisi. Henzen, *CIL*, vi, p. xxvii. Consequently the amphitheatre, like that of Spello, was outside the town.

[*Suasa*. Promis, *St. dell' a. Torino*, p. 190.]
Ariminum. Tonino (*Rimini*, p. 218). The arena is surrounded by four walls, the outside one of which had 60 arch-shaped entrances. The whole building was of brick, the rows of seats of marble. It could not be used for *naumachiae*. Hardly any remains are preserved except the foundations. Tonini thinks it was destroyed between the third and sixth centuries.

Etruria. [*Baccanae* ?? 'In the *Acta S. Alexandri episcopi* 21 Sept. (*Acta Sanctorum* Septemb. t. vi) the emperor Antoninus betakes himself to a villa on the Via Claudia, 17 miles from Rome. It is said on p. 232: *Confusus autem Antoninus jussit amphitheatrum sibi parari et sedens ibi pro tribunali Alexandrum episcopum ad feras subrigi praecepit*. Mention is then made of a vicus *Baccatensis* (v.l. *Baccanensis*) in the neighbourhood (according to the *Itin. Antonini*, p. 286, *Baccanae* is 21 miles west of Rome)'] (Jordan.)

Lucus Feroniae. Orelli, 4099 = *CIL*, xi, 1, 3938: M. Silio Epa-phroditō patrono sevirum aug. magistro iuvenum iterum iuvenes lucoferonenses patrono ob merita quod amphitheatrum col. iul. felici lucofer. s. p. f. dedicavitque l. d. d. d. h. c. i. r. De Rossi (*AdI*, 1883, pp. 266, 269): 'Del anfiteatro in Civitucola, per quanto io vidi, ora non appare vestigio'.

Sutrium. Dennis (*Cities and Cemeteries of Etruria*, i, 1878, p. 71) believes this building to be Etruscan. It is in the form of an ellipse; several *praecinctiones* still remain. Cp. also Westphal, p. 151. Urlichs (*BdI*, 1839, p. 75): 'come ci si raccontò sul luogo, prima che si formasse dell' anfiteatro un bel giardino, si vedevano canali grandi di mattoni che non saranno stati altro che i sotterranei servienti alle machine ed a ricettacolo delle bestie'. Plan, section, and view in Canina (*Etruria marittima*, i, tav. 21 and 22); cp. also Micali (*Antichi popoli Italiani*, i, 145).

Falerii (S. Maria di Falleri near Città Castellana). Ad. Michaelis in Gerhard's *Archäologische Zeitung* (1862, pp. 343* seqq.) says: Outside the well-preserved north wall of that great square, which indicates the site of the Roman town, a beginning has recently been made in excavating the tolerably large amphitheatre lying East and West. An inscription on two stones found there (apparently belonging to the early empire) runs as follows (*CIL*, xi, 1, 3112):

C. f. Voltinia (?) p. p. leg. viiii H(isp.)

Hor. Priscus patroni municipi
 confere(?)ntibus Faliscis amphitheatrum
 pro parte dimidia(?) peq. sua fecerunt.¹

The emendations are due to Garrucci (*Dissert. archaeol.*, Rome, 1864, p. 42). On p. 44 not. he gives the axes as about 210 and 60 palms; Hirschfeld those of the arena as 54.3 and 32.7 metres. According to the latter it appears to be very old; its chief material is large travertine blocks, although tufa and coffer-work of *opus incertum* are found.

¹ See *CIL*, xi, 1, 3139 for another fragment of an inscription from the same place, in which occurs the words: amphitheatr. pecunia.

Vulci. On the amphitheatre found there cp. *BdI*, 1835, p. 77.

Arretium. According to Guazzesi (*Suppl. alla dissertazione intorno agli anfiteatri degli antichi Toscani*, p. 69) it was large, but only of bricks, without any ornamental columns or statues. In Charlemagne's time it was called *gymnasium*; its arches were the abode of prostitutes, which caused him to present it to the Arretine church, 'per togliere da quel luogo questa pestifera infamità'. In the Arretine chronicle of Girolamo Eusebi (Muratori, tom. 24) we read: Mense Maji 1333 inceptus est locus S. Bernardi ordinis montis oliveti, et celebrata est ibi missa ubi prius vocabantur i Parlagi (see p. 195), et ibi stabant publicae meretrices civitatis. Owing to the erection of this building the amphitheatre, which was used as a quarry, was completely destroyed. Noris (*Nell' ipocausto Pisano*): ita summa imis dies miscuit, ut amph. Aret. nostra aetate in meritum rudentium animalium stabulum versum sit. Dennis is uncertain whether the ruins really belong to an amphitheatre, since they are more like baths, and no seat remains in the *cavea*; Nissen, however, regards this doubt as unfounded.

Volaterrae. Dennis (ii, p. 150) mentions the ruins of the amphitheatre, which appears to be a Roman building. Only a semicircle of seats remains, apparently cut in the slope of the mountain. Dennis doubts whether it was ever more than a theatre, since the other half of the structure has totally disappeared. Guazzesi (as above, p. 44) says: 'Volterra ancora può vantarsi d'aver avuto l'anfiteatro, parlando delle sue vestigie l'Inghirami nella risposta alle opposizioni, ove dice che ivi fu trovata la statua riportata dal dottissimo Sgr. Gori al num. 4 del suo museo Etrusco; così il Bcrghini nell' origine di Firenze e il Sgr. Gori nel 2 tomo delle Iscr. di Toscana'.

[*Vetulonia.* According to Dennis (ii, p. 206) Leandro Alberti in 1550 first gave a detailed account of some ruins, which he concluded to be the remains of Itulonium (Vetulonia), amongst which he mentions the remains of a splendid amphitheatre. Later investigations, however, led to no result, which made Inghirami (*Ricerche di Vetulonia*, p. 40) declare that it was a pure invention of Alberti. Dennis also considers that there is not the least evidence that it was the site of the ancient Vetulonia.]

[*Rusellae.* Dennis (ii, p. 229) mentions some Roman arches, regarded by some (though in his opinion erroneously) as the remains of an amphitheatre.]

Florentia. Dom M. Manni (see p. 195), p. 2, says: 'collocato era il Parlagio dietro alla fianca sinistra della chiesa di S. Simone fino alla piazza de' Peruzzi per la sua lunghezza, è par larghezza dalla via dell' Anguillaja alla piazza di S. Croce; e quindi è che la chiesa stessa di S. Simone si disse del Parlagio'. On p. 4 he quotes Borghini: 'dalla parte di fuori non v'ha dubbio alcuno veggendosi tuttavia con gli occhi. Molto più malagevoli son le parti interiori a rinvenire, essendo mutate oggi quasi tutte in abitazioni private e all' uso moderno accomodate'. P. 8: 'la sua vastità ascende per la larghezza braccia 173 e girava braccia 573'. P. 28: 'le burelle, i. e. spezie di prigionie e forse segrete—altre esser non potevano che cavee poste sotto le scalinate dell' anfit. e del teatro'.

Dennis (ii, p. 75, note) also mentions the ruins of the amphitheatre near the Piazza di Santa Croce; according to Nissen the enclosing wall can be clearly recognized in the course of the Via Torta. According to Hartwig (*Quell. u. Forsch. zur. ältest. Gesch. von Florenz*, p. 79), the amphitheatre, the remains of which are still visible near the Perruzzi palace, appears to have been situated outside the ring wall of ancient Florence.

Volsinii. Dennis (ii, p. 25) mentions the ruins of a small amphitheatre, rather more than a mile from Bolsena: 'It is in ruins, hardly anything of the rows of seats can be recognized, some arcades (of *opus incertum*) are preserved, the foundation is covered with earth; the arena is said to lie about 15 palms deeper. The two large entrances are still clearly recognizable; twenty years ago there is said to have been a gate still in a complete state of preservation' (Hirschfeld). Cp. Henzen 5580 and vol. ii, p. 80 (on the shows to be given at Florence and Hispellum alternately).

Pisa. See above, p. 196.

Luca. *CIL*, xi, 1, 1527. O. Vibio I . . . ex quinqu[e] dec. praef. alae] Hispanorum al[ae] . . . hic HS Ć in opus amphithea[tri] dedit] is annos decem et cum [perfici res] publica decrevisset pec[unia] publica, ex testament[o] opere] a quinquennialibus [probato s]ua impensa fecit t . . . ique rett . . . sima. . . The emendations (Mommsen's) are unsatisfactory. Pr sident de Brosses, October 14, 1739: 'On trouve au centre de la ville les restes informes d'un a. des Romains, dans lequel on a b ti de m chantes cabanes qui ach vent de la d figurer'. 'A large amphitheatre converted into dwelling-houses, the arena into a vegetable market. The entrances and some pieces of the enclosing wall of a good period are still visible' (Nissen). Burckhardt (*Cicerone*, p. 45) also speaks of the remains of the amphitheatre as important.

Luna. Promis (*Citt  di Luni*, p. 222) calls the amphitheatre 'la pi  celebrata e meglio conservata fabbrica di Luni. La pi  antica memoria che se n'abbia   quella che trovasi in un diploma di Federico I a Pietro Vescovo di Luni nel 1185 nel quale   detto: aedificium quod circulum vocatur aut arena'. The inscription L. Svetius L. L. amph. f. v. s. l. m. is a clumsy forgery. According to Cyriac of Ancona it was a ruin in 1442, the marble columns broken, only fragments of the statues remaining (p. 228): 'quest' anf. non poteva avere che 2 cavee non essendovi che una sola precinzione;   pure improbabile che la cavea superiore fosse coperta da soffitto come era nel Flavio di Roma, ma piuttosto doveva il muro esterno al di sopra delle arcuazioni inferiori essere tutto solido e decorato di pilastri anche nel interno, come vedesi all' anf. di Sutri'. Promis (p. 228) concludes from the style of architecture that it belongs to the age of the Antonines; cp. Dennis, ii, p. 65.

Gallia Cispadana. [*Ravenna.* Promis, *St. dell' ant. Torino*, p. 190.]

Bononia. Tacitus (*Hist.*, ii, 67; in the year 70): tertiadecimani struere amphitheatra jussi. nam Caecina Cremonae, Valens Bononiae spectaculum gladiatorum edere parabant. Perhaps, however, these were of wood (Maffei, as above, p. 86).

Parma. Lopez, *Lettera al Braun intorno alle rovine d'un antico*

teatro scoperto in Parma, 1844, p. 25: l'anf.—sarebbe stato eretto come usavasi da' Romani presso le mura. P. 26: il nostro anf. (which in his opinion was built in the time of Trajan, certainly not before the burning of the amphitheatre at Placentia; see Tac., *Hist.*, ii, 21) poté resistere per molti secoli ad onte delle vicende guerresche a cui andò soggetto,¹ alla voracità del tempo ed alle barbarie degli uomini, dappoichè si trova bella memoria non solo ne' nostri statuti del 1255 (Pezz., *Stor. di P.T.S.*, App., f. 36, no. 30), ma eziandio nel codice terzo delle nostre leggi municipali di 1317, which forbid the pollution of the amphitheatre: quod cum multi forenses quando sunt in civitate Parma vadant ad videndum Palatium domini Imperatoris, quod est in Arena, et in ipsa arena deferantur multa turpia et inepta, videlicet animalia mortua, lutum de andronis, et alia quam plurima turpia, quae redundant in dedecus maximum Communis Parmae et vicinorum morantium circa et penes ipsam Arenam et Palatium supra dictum. Inscription on a *retiaris*, *CIL*, xi, 1, 1070.

Placentia. Tacitus, *Hist.*, ii, 21; (in A.D. 70): in eo certamine pulcherrimum amphitheatri opus, situm extra muros conflagravit —municipale volgus, pronum ad suspiciones, fraude illata ignis alimenta credidit a quibusdam e vicinis coloniis, invidia et aemulatione, quod nulla in Italia moles tam capax foret.

Velleia. Hübner (as above) and Promis (*Ant. di Aosta*, p. 170. Smaller than the amphitheatre at Aosta).

Liguria. *Libarna*. Promis (*C. di Luni* and *Ant. di Aosta*, p. 170. Smaller than the amphitheatre at Aosta).

Alba Intemelium. A very small amphitheatre (according to the *Illustr. Zeitung*, 1877, p. 370, 31 to 35 m. in diameter) was discovered here in 1877.

Venetia et Histria. *Hadria*. Promis (as above). Deminicus (as above).

[*Ateste*? *CIL*, v, 1, 2529: De (pec.) pub. C. Rubenius C. f. ludum gladiator. fecit; cp. *ib.*, 2541 M. Etti Boebiani liberti et famil. venatoria.]

Palavium. Pignorius (1571–1631) assumed the existence of an amphitheatre in an elliptical *recinto*, called *arena* since the Middle Ages (so in a document of date 1090; cp. a bill of sale of 1300: *arenam muris circumdatam ab omnibus lateribus excepto a latere fratrum heremitanorum de Padua*), on which the little church *St^a Mariae de Caritate de Arena* (dell' Annunziata) was built in 1306, and gave a plan and illustrations of the same.² Maffei (*Degli anfist.*, p. 80) regarded the remains of walls as only about 400 or 500 years old. But the excavations carried on since 1880 have completely confirmed Pignorius' assumption: cp. the detailed account by Ghirardini (*Notizie degli Scavi*, 1881, pp. 225–242 with tav. iv). They have

¹ Agathias (*Hist.*, i, 15): Βουτιλίνος ὁ τῶν Θράγγων ἡγεμὼν ἐς αὐφιθέατρον τι οὐ πόρρω τῆς πόλεως ἰδρυμένον (ἀνεῖτό δὲ τοῦτο ἀνδρασιν οἷς ὁ βίος θεωμένον τοῦ δήμου πρὸς θηρία διαγωνίζεσθαι), ἐνταῦθα δὴ—μεγίστην ἐνέδραν καταστήσαντος κ.τ.λ. (in A.D. 552).

² Burckhardt, *Cicerone*, p. 45: In Padua there is merely the outline of an amphitheatre near S. Maria dell' Arena.

brought to light remains of three elliptic walls surrounding the arena, the outside one of which (2 m. wide, 2.62 m. high) had 26 entrance arches. This, however, was not the outside wall of the building, but was surrounded by yet another wall, which served to support the *summa cavea* (pp. 230 and 235). The area of the arena (2410.32 sq. metres) is not much smaller than that of the arena of Verona (2638.50; p. 225). The extremely careful style of construction (pp. 229 and 236) indicates a good period.

[*Aquileia*. Cp. p. 194. Kenner and Hauser (*Mittheil. der Central-commission*, 1875) in a report of the excavations: 'that vast semi-circular depression, which is called the arena, in which Baubella found a stone slab bearing the name Julius, perhaps belonging to one of the spectators' seats'. It is clear that this is not sufficient to justify the assumption (Jung, *Die roman. Landsch. d. röm. Reichs*, p. 504, 1) that the existence of an amphitheatre at Aquileia is proved.]

Tergeste. Stancovich [Anfit. d. Pola, 1882, p. 78) mentions an amphitheatre at Tergeste: fuori di porta di Riborgo, di cui F. Ireneo dalla Croce (*Hist. di Trieste*, p. 245) ci dà l'asse maggiore di piedi geometrici 157 ed il minore di 136.

Pola. According to Stancovich (p. 36) 43 marble rows of seats were still in existence. P. 64: the amphitheatre had room for 22,000 spectators. P. 135: the entire building was of stone (with the exception of the top storey, which was of wood), ornamented above with a row of columns. P. 137: nel registro dei diritti del Patriarca di Aquileia nell'Istria (anno 1303) it is stated: in civitate Polae habet duo antiqua Palatia Iadrum et Arenam—et quicumque accipit aliquem lapidem de dictis Palatiis Iadri et Arenae, pro quolibet lapide quam accipit, solvit domino patriarchae bizantina centum. But the amphitheatre was continually used as a quarry, until it was dedicated to him in 1584. Loca certis hominibus attributa, nominibus indicata (*CIL*, v, 1, 86).

Gallia Transpadana. *Verona*. Maffei (*Degli anfiteatri*, ed. 2, p. 120), gives the following fragment of an inscription, which probably refers to the dedication: S. CON. The letters are very large and evidently of a good period. P. 159: its height was 110-120 Veronese feet, as it certainly had 4 storeys. According to Maffei it had 22,000 seats and (p. 261) in the highest parts (built of wood) room for almost the same number of standing-places; there were 72 entrances (p. 170), all numbered. The wall of the *podium* (p. 213) was decorated with valuable kinds of marble, of which fragments still remain. Subterranean channels were intended to receive the rubbish that was carried down, and to prevent flooding the arena. For the gladiatorial inscriptions see *CIL*, v, 1, 3466 sqq. (3471: familia gladiatoria). The treatises of Conte Antonio Pompei (*Sugli scavi eseguiti intorno all'anfiteatro*, 1874, and *Studj intorno all'anf. d. V.*, 1877), who puts the erection of the amphitheatre in the time of the Etruscan domination, are only known to me from a notice by Engelmann in *Jen. Litt.-Ztg.*, 1879, p. 94.

Cremona. Tac., *Hist.*, ii, 67; cp. Bononia. *CIL*, v, 1, 4399 (Brixia): N N VI vir Flaviali Cremon. et munerar.

Ticinum. Anonym. Valesii (Ammianus Marcellinus, ed. Wag-

ner-Erfurdt, i, p. 623, 71): Theodericus Ticenum (*sic*) Palatium, Thermas, Amphitheatrum, et alios muros civitatis fecit; cp. above, p. 193. Mommsen, *CIL*, v, 2 p. 707^b: habemusque inde etiam titulum regis Atalarici no. 6418 (= Orelli, 1161) pertinentem ad sedes spectaculi, i. e. ni fallor ad amphitheatrum: Dn. Atalaricus rex gloriosissimus has sedes spectaculi anno regni sui tertio (A.D. 528) fieri feliciter praecepit.

Brixia. *CIL*, v, 1, 4392 = Wilmanns, *Ex.*, i, 2170: P. Atilio Philippo ornamentis decurion. Brixiae Veron. Cremon. honorato et iure quattuor liberor. usq. anulor. a divo ex postulatione populi ob liberalitatem ejus quod in opus amphitheatri dedit. . . .

[*Bergomum*. Promis (*C. di Luni*, p. 225).]

Augusta Praetoria Salassorum. Promis (*Antichità di Aosta*, 1862, tav. ix, p. 168): ruderi non oltre l'ordine terreno, e questi spettanti alla bassa cuneazione della somma cavea con nove cunei ed otto pilastri. P. 169: 60 erano gli archi esterni, no *souterrains*. P. 171: tutto spira l'epoca Augustea. For this reason (p. 172) it is supposed to have been built in 24 B.C. (the year of the foundation of the colony) or soon afterwards. In a document of the year 1235 it is called 'Palatium rotundum'. The ruins at Aosta formerly supposed to belong to an amphitheatre cannot be such (Kephallides, *Reise*, ii, 334; Deycks, *Antiquar. Alpenwanderungen: Bonner Jahrb.*, Bd. xi, Jahrgang vi, 1, 1847, p. 27).

Augusta Taurinorum. Promis, *Storia dell' antico Torino*, 1869, p. 188. The amphitheatre, which lay outside the Porta marmorea, somewhat towards the west (see tav. i) is called by Maccaneo (in 1508) pulcherrimum illud a. extra portam marmoream evanescens et obsoletum. Panciroli (professor at Turin 1570-1582) says: Fuor di T. nella strada verso Pinarolo si vedono i vestigi di un a. se bene non di quella perfettione dell' a. di Verona. Pingone, mentioning the four suburbs destroyed in 1536 by the French speaks of 'amphitheatrum cum orchestra et area in orbem, qua comoedi et tragoedi olim dabant spectacula et edebantur ludi. lacus colliculis cinctus, fragmenta Romanarum inscriptionum innumera'. 'La Guida di Torino del 1753 nota per tradizione che in quel sobborgo disfecero i Francesi l'an., opera d'Augusto, con rimasugli d'antiche fabbriche che ancora erano in piedi'. 'Gli anfiteatri di pressochè tutte le città d'Italia son posti vicino alle mura, ma fuori di esse; per quasi tutti l'età n'è quella degli Antonini, quando più fiorirono i municipi, cosicchè la frequenza de' cittadini e de' pubblici edifici più non lasciava spazio entro l'area urbana a siffatte moli. Tengo dunque che il nostro a. sia stato eretto nel ii secolo, come pure che laterizia ne fosse la costruzione'.

[I have not been able to ascertain any details of *Cimitino*, which, according to Promis (p. 225) was one of the places in Italy which had amphitheatres.]

SICILIA.

Syracuse. Serradifalco (*Antich. di Sicilia*, iv, tav. 13-15, pp. 108, 128-131). (Valerius Maximus, i, 7, 8: Tac., *Ann.*, xiii, 49 mentions gladiators and gladiatorial shows at Syracuse, but no

amphitheatre.) P. 154 : it is elliptic, the wall round the *podium* 10-6 *palmi* high (oltre il poggiuolo di marmo). Besides the two main gates at the ends of the longitudinal axis there are 8 other entrances into the arena. It has no *souterrains*. Inscriptions of the seat-steps, *CIL*, x, 7130.

Catana. Serradifalco (v, tav. 7-9, pp. 19-21). Giovanni Garuccio, *Sulla origine e sulla costruzione dell' anf. di Catania* (Napoli, 1854), p. 20 : the amphitheatre is 'alla porta Stesicorea, ora detta di Aci', for the most part buried under alluvial matter and covered by houses. Theodoric (in 498) allowed the people of Catania to use 'saxa de amphitheatro longa vetustate collapsa', to repair the town walls (Cassiodorus, *Var. epp.*, iii, 49). P. 29 : fino 1505 troviamo concesso al patrizio Giov. Gioenio, che avesse investito i preziosi avanzi dell' a. a comodo di private abitazioni e la sua arena ad uso di domestico erbajo. P. 30 : during the eruption of Etna in 1669 a stream of lava overwhelmed it. After the earthquake of 1693 Prince Biscari excavated one side.

Thermae Himcrenses. Serradifalco (v, tav. 44) gives a sketch of an amphitheatre at Termini. The remains (of *opus incertum*), although scanty and used in building houses, are according to Hirschfeld beyond doubt, and the curve of the amphitheatre is clearly recognizable.

SARDINIA.

Caralis. De la Marmora (*Voyage en Sardaigne*, i, p. 529, pl. 38) only casually mentions the amphitheatre. E. Luigi Tocco (*A. di Cagliari*, *BdI*, 1867, p. 121-123) gives more details; Spano's *Anfiteatro di Cagliari* (1868) I have been unable to consult. I give the description of H. von Maltzan (*Reise nach Sardinien*, 1869, p. 72) who visited it in 1868 after Spano's excavations. 'This amphitheatre can hardly be properly called a building—it is the rock itself, merely hollowed out into a wide, funnel-shaped oval, over the arena of which rise stairs, galleries and seats, 100 feet high, all hewn in the rock, like the arena itself and the roomy *souterrains* beneath it'. 'The two lowest storeys are still visible, by far the larger half in a perfect state of preservation; of the third, the top storey, a considerable part is destroyed, as this part of the rock was used as a quarry in the previous century'. In each storey there are about 20 steps, that is, 60 in all, very well preserved and lofty; the stairs cut in the rock have been decomposed by the action of the atmosphere. The *ballei* are almost as high as a man; the *podium*, inaccessible from the arena, is preserved in its full height. The labyrinthine underground passages and the rooms below the seat-steps, some very large and deep and not yet all uncovered, are all hewn out of the rock. Some have certainly been used as cages; in one of them rings (for holding the chains of wild animals) are very cleverly cut out of the lime-stone, which forms the walls. One of the seat-steps contains the letters C. N. P. V. E. The amphitheatre had room for 20,000 spectators.

DALMATIA.

Salonae. Lanza (*Della topografia dell' antica Salona in Ann. dell' Inst.*, 1849, p. 282, tav. d'agg. K and *Scavi di Salona in ib.* 1850,

p. 140). It is almost entirely destroyed: pochi avanzi di piloni e di arcuate . . . ancor ne rimangono. Style and situation point to the period after Marcus Aurelius. Carrara (*Topografia e scavi di Salona* (Trieste, 1850) gives on a 'mappa topografica dell' antica S.' the remains of the building enclosed by the line of the fortifications and information concerning them (p. 92). As no trace of stone steps has been found, he believes that they were of wood. A subterranean passage ran in the direction of the smaller axis. Hirschfeld (*Bericht über eine Reise in Dalmatien in Österreich. Mitth.*, ix, 1885, p. 16) gives a sepulchral inscription of a gladiator (Sil[v]ianus an. x . . . pug. vii. de suo sibi cui dolet posuit) and a stamp (presumably of a purveyor, perhaps of bread, for the gladiators), which contains between two gladiators the words (in inverted letters): Miscenius Ampliatius facit Salonas (= Salonitanus).

Aequum. *Archaeologia Britannica*, iii, 344: Mr. Fortis observes that he saw some vestiges of an ancient Roman amphitheatre on the hill of Aequum.

Epidaurum. The position of the town on the site of Ragusa vecchia is shown, amongst other things, by 'amphitheatri ex ipsa rupe excisi reliquiae' (Mommsen, *CIL*, iii, p. 287).

GALLIAE.¹

(a) Narbonensis.

Cemenelum (Fr. Cimiez, Ital. Cimella). Millin, *Voyage dans le midi de la France* (ii, 544; cp. *Voyage en Savoie*, ii, 122). The elliptic arena, although planted with corn and olives, was in a good state of preservation; there was room for about 8000 spectators; the sea could be seen from the upper rows of seats. Those who lived near called the ruins 'la Tino de Fati' (Cave de fées). Il en existe plusieurs massifs et une arcade, sous laquelle passe le chemin; le mastic, qui la recouvrait, subsiste encore. On y voit plusieurs autres arcades ou des restes d'arcades. The description given by Deycks (*Alterth. von Nizza und Cimiez in Jahrb. d. Alterth. Fr. im Rheinl.*, xxxii, p. 33) entirely agrees with this. Mommsen, *CIL*, v, 2, p. 916^b: Cemenelum—rueribus vetustis, maxime amphitheatro adhuc conspicuo antiquum oppidum refert. 'St Pontius (under Valerian and Gallienus) is said to have been thrown to wild beasts in the amphitheatre at Cimella. De S. Pontio Romano martyre Cimellensi in Alpius maritimis: *Acta Sanctorum Maii*, t. iii. (14th of May), p. 277' (Jordan).

(*Antipolis* (?). See *CIG*, 6776 on p. 179.)

Forum Julii. The amphitheatre is mentioned by Valesius (*Notitia Galliarum*, 1676, p. 200), Montfaucon (*Antiq. expl.*, iii, p. 258), De Brosses (28th of June, 1739: les restes d'un a. des Romains, dont l'enceinte est encore entière et un des côtés passablement conservé), and Millin (as above, ii, p. 483: restes d'un ancien cirque; son plan est elliptique. L'enceinte est encore assez bien conservée, mais les sièges sont détruits). After the excavations in 1828 it was

¹ Information marked H. is due to Hirschfeld.

described in detail by Texier (*Mém. sur la ville et le port de Fréjus* in the *Mém. prés. p. div. savants à l'Acad. des inscr.*, 2 série, t. ii, 1849, p. 192, pp. 212-239, with plate iii). It is half built on the slope of a hill (p. 212), had in the interior three storeys, divided by *præcinctiones*, of 6, 6 and 5 rows of steps respectively (p. 238), and was probably crowned by a *porticus*, on the outer wall of which projected the pierced corbels intended to support the masts used for the awning (p. 238 and Millin). Its circumference was broken by 52 arcades, 3 of which led to the arena, 22 into the circuit of the ground floor, and the rest to the first storey: 24 gates led from the ground floor to the seat-steps of the lowest division (p. 238). The *podium*, 8 feet high, was separated from the arena by a deep trench. Beneath the rows of steps of the lowest division of the southern half of the amphitheatre there are underground receptacles for the wild animals; a small room by the side of a gate in the small axis was for the dead bodies (p. 237). The amphitheatre could hold 9095, including the *porticus* 12,000 spectators at most (p. 239).

Apta Julia. Martin (*Antiquités et inscr. des villes de Die, d'Orange, de Vaison, d'Apt et de Carpentras*, Orange, 1818, p. 85: l'amph. d'Apt, dont il ne reste peut-être que les fondemens sous une couche épaisse de terre et de décombres. From the traces discovered he assumes that it was about 60 toises in diameter. Boze (*Hist. d'Apt*, 1813, p. 61): on l'a découvert en différentes occasions, dans le vestibule de la maison curiale, le cimetière de la paroisse, dans les caves de quelques maisons. (H.)

[*Aquæ Sextiæ.* *CIL*, xii, 522: aedili m(u)nerario.]

Arelate. According to a tessera (Ritschl, *Die tess. glad.*, p. 20) a gladiatorial show took place here as early as 63 B.C. Estrangin (*Études sur Arles*, 1838) without any reasons dates the amphitheatre soon after the foundation of the colony in the time of Julius Caesar; Stark (*Städteleben in Frankreich*, p. 76) assigns it to the second half of the second or the beginning of the third century. Like the amphitheatre of Nîmes, it has 2 storeys and an attic; each storey has 60 arches. The number of spectators it could accommodate is estimated by Estrangin (p. 13) at 25,000. The arena could not be flooded, since it is in the highest part of the town (p. 31); nor have any traces of a *euripus* been discovered. In the animals' cages only stags' horns and boars' teeth have been discovered. There is no doubt (p. 40) that arrangements were made for covering the amphitheatre with canvas. On the fortunes of the amphitheatre in the middle ages see Estrangin and Millin (p. 616; cp. pl. xlviii, fig. 9). I am not acquainted with the monographs by Jacquemin and Henry referred to by Caumont (*Cours d'antiquités monum.*, iii, 466-474), nor with the treatises by Vêran (*Mém. des antiquaires de France*, ix, 1832, p. 231) and Henry (xiii, 1837, p. 1). Inscriptions on the steps *CIL*, xii, 714, 715. Inscription on a 'negotiator familiae gladiatoriae' *CIL* xii, 727.

Nemausus. Pelet (*Description de l'amph. de Nîmes*, 1853) conjectures that it was built in the reign of Hadrian or Antoninus Pius, but on very insufficient grounds (p. 138). He asserts that it was never finished (p. 139): les aqueducs, qui devaient amener les eaux dans l'arène, ne sont même revêtus de ciment; ce qui n'aurait pas

eu lieu, si le monument avait déjà servi aux jeux nautiques, auxquels il était destiné. Grangent Durent and Durand (*Monum. du midi de la France*, p. 68 ; cp. Pelet, pp. 118-127) also believe that the building was originally intended for *naumachiae*. Pelet (p. 87) estimates the number of spectators at 24,000, Millin (iv, p. 220) at only 17,000. *Ibid.* : La façade est composée d'un rez-de-chaussée, d'un étage au-dessus et d'un attique. It had 60 arches, not numbered (some of them bearing *phalli*) and 4 chief gates. Pelet, p. 73 : les gradins étaient au nombre de 34, divisés en 4 précinctions par un pareil nombre de baltei, hauteur totale de la façade 21.52 mètres (p. 183). From the uppermost edge of the wall projected 120 pierced corbels, some of which are preserved, for the reception of masts (p. 127). Pelet and Millin give the history of the amphitheatre (cp. also Reveil, *Mémoires lus à la Sorbonne, Archéologie*, 1867, p. 163. H.). The inscription T. Crispus Reburus fecit (*CIL*, xii, 3315) probably does not refer to the architect. Inscriptions on the steps (3316-3322) ; gladiatorial inscriptions found in the neighbourhood (3323-3332).

Baeterrae. Caumont (as above, p. 495) : (L'amph.) de Beziers offrait encore de belles ruines au xvii^e siècle ; il ne reste plus aujourd'hui qu'une partie des constructions qui supportaient le podium et les premiers sièges de l'ima cavea. L'Arène avait 234 pieds sur 180. Une partie de la cavea était taillée dans le roc, l'on avait ainsi épargné les travaux en maçonnerie, d'un côté de l'édifice. [The street is called *rue des arènes*. Cp. S. . . in *Bull. d. l. Soc. archéol. de Beziers*, i série, t. 4 (1845), pp. 142-145 and pl. ii, no. 4. H.] Stark as above, p. 139 : 'Reste eines amphitheaters'.

Narbo. Millin (iv, p. 392) states that in certain underground rooms ('dans le quartier Saint-Just', Caumont, p. 497) of the modern town there are vaults, 'qu'on croit avoir appartenu à un ancien amphithéâtre'. [Tournaï, *Catalogue du musée de Narbonne*, 1864, to no. 177, p. 36 : 'les ruines de l'ancien a. de N. furent exécutées sur ce point . . . mais . . . on ne mit à jour que la partie inférieure de ce monument, tout le reste avait été détruit. Le diamètre extérieur de l'a. de N. était moins grand que celui de Nîmes, mais l'arena était plus vaste. H.] It certainly no longer existed in the time of Apollinaris Sidonius, since he does not mention it in his careful enumeration of the buildings of Narbo (*Carm.*, 23). Cp. Stark, pp. 146 and 602 (reliefs referring to the amphitheatre).

Tolosa. Millin (p. 455) says that two of the 24 arches of the amphitheatre still exist ; the arena was about 180 feet long, 50 feet wide. Caumont, p. 406 : Some antiquaries conjecture that Tolosa had another larger amphitheatre (Raynal, *Hist. du Toulouse* ; Du Barry, *Recherches sur les a. du midi de la France*. Valesius (*N.G.*, 620) says, however : Erat ibi Capitolium, Amphitheatrum, et Palatium, quorum trium operum Romanorum nullae supersunt reliquiae.

Arausio. Lapse (*Histoire d'Orange*, 1640, p. 29) describes the amphitheatre, which lay outside both the old and the new town, as follows : J'ai vu les arènes autrefois ayant les murailles presque tout autour, de la hauteur de douze pieds en aucuns endroits, en d'autres moins, avec les formes ou naissances des portes au nombre de vingt-

quatre. Elles ont été depuis peu abattues et quasi rasées à fleur de terre. Les fondements paraissent tout autour avec les ouvertures des portes, et la forme de l'ovale relevée en dehors par la terre, laquelle vraisemblablement a été tirée du dedans. At the beginning of the nineteenth century traces of the foundations were still to be seen, but according to Gasparin (*Hist. de la ville d'Orange*, p. 105) they had disappeared in 1815.

Vasio Vocontiorum. According to Millin (iv, p. 140) two arches still in existence were considered to be remains of an amphitheatre. Cp. *Voyage de deux Bénédictins* (1717), i, p. 293 and Martin as above, p. 71: Sur une éminence . . . on voit les débris d'un a., où l'on montait par un chemin creusé dans le roc. Les Jacobins voisins de ces ruines trouvèrent en bâtissant de longues caves, ayant des voûtes très-hautes, et des deux côtés, de distance en distance, il y avait des conduits.

[*Dea Vocontiorum*? Martin, p. 17: On remarquait, non loin des ruines de l'ancienne église de St. Pierre, hors de la ville, au cimetière des calvinistes trois voûtes, débris d'un . . . théâtre, propre aux exercices des gladiateurs. Son quartier se nomme encore Palais. H. Herzog (*Gallia Narbonensis*, App. 453 = *CIL*, xii, 1585 (flamen divi Aug.—curator muneris gladiatori Villiani); 468 = *CIL*, xii, 1590 (collegium venatorum Deensium); 489 = *CIL*, xii, 1529 (muner[is] publ. curat[or] ad Deam Aug.); inscription on a *secutor*, 1596. Cp. Hirschfeld, *ib.*, p. 161^b, and *Gallische Studien*, p. 30.]

Vienna. Valesius (*N.G.*, 605) assumes the existence of an amphitheatre here, although apparently he does not know of any remains of one. The passage from Eusebius (*Hist. Eccl.*, v, 1), to be quoted under *Lugdunum*, does not justify the assumption. According to Chorier (*Antiquités de Vienne*, p. 416) some vaults (diverses voûtes) of one were still in existence; the rest was razed by the inhabitants, who used the ruin as a quarry. Almer and Terrebasse, *Inscr. antiques de Vienne*, ii, 413: Un a. était adossé à la colline de Pipet. Schneider (appointed director of the drawing school at Vienne in 1775: Stark, *Städte.*, p. 576) qui en a vu des restes très-apparents et même des gradins encore en place et qui a pu les mesurer dans la longueur, estime qu'il était plus grand que ceux de Nîmes et d'Arles. Cp. also Stark, p. 21. Inscription on a T(h)r(aex) *CIL*, xii, 1915.

(b) *Aquitania*.

[*Lugdunum Convenarum*. M. Dumége indique un a. à Saint-Bertrand. Caumont, p. 496.]

[*Aginnum*. Il ne reste que de faibles vestiges de l'a. d'Agen. *Id.*, *ib.*]

Burdigala. Valesius (*N.G.*, 502). A. extra muros, quod Palatium Gallieni vocant. Lipsius as above. Montfaucon as above: autant que je puis me souvenir, le champ où les arènes de cet amphithéâtre étaient des plus grandes et ne le cédaient peut-être pas à celle du Colisée. When Millin (iv, p. 623) saw the ruin, the arena was covered with buildings, and the scanty remains had almost disappeared. According to representations of earlier date the arena was 225 feet

long, 165 wide. L'élévation extérieure était de 60 pieds. Le rez-de-chaussée était décoré de l'ordre Toscan, 4 galeries placées l'une sur l'autre regnaient autour, 15 portiques conduisaient à l'arène ainsi que deux portes principales, plus grandes et plus ornées que sont aujourd'hui les parties de l'édifice mieux conservées. It is assigned to the reign of Gallienus, since bricks are employed in the construction—a material which is said not to have been in common use before that period in the Roman buildings in Gaul. (?) Caumont as above, p. 477. Cp. also Stark, *Städteleben*, p. 228.

Mediolanum Santonum. Valesius (*N.G.*, 502): Supersunt hodieque amphitheatri rudera ac reliquiae nobiles extra muros. Montfaucon as above. Millin, iv, p. 679. Chaudruc de Crazannes (*Antiquités de Saintes*, p. 72) on most insufficient grounds assigns the amphitheatre to the period between Hadrian and Marcus Aurelius. According to him it had room for 5000 sitting places (60 arcades—il en existe 2 principales—un seul étage de voûtes inclinées vers l'arène et une seule précinctio). No traces have been found of arrangements for an awning; the lowness of the parapet of the arena makes it improbable that *venationes* took place in it. Caumont (pp. 486–490) doubts (and certainly with justice) whether it could have been flooded for *naumachiae* (Chaudruc, p. 81).

Limonum (Pictavi). Bourgnon de Layre (*L'amphithéâtre ou les arènes de Poitiers*, in *Mém. de la soc. des antiquaires de l'Ouest*, 1843, pp. 137–273 and pl. 1–6), who on insufficient grounds (p. 157) assigns the erection of the amphitheatre to the time of Hadrian or Antoninus Pius, gives a survey of the older literature (cp. also Valesius, *N.G.*, p. 502). Bouchet (born 1475) says in his *Annales d'Aquitaine*: les arènes joignaient le palais Gallien (he thinks it was built by Gallienus)—les arènes—c'était le lieu pour faire joustes et tournois (p. 173). According to the description by the Benedictine Dom Fontenau, who visited Poitiers in 1740, the only remains were those of some surrounding arched passages, some entrances to vaults, and some arcades of the upper storeys—all much built over. Volckmann (*Neueste Reisen durch Frankreich*, 1787, ii, p. 48: 'Nothing can be seen but the shape of the old amphitheatre, which is covered inside with gardens and small houses'). According to Millin (iv, 712) some vaults still remained (engagées dans des constructions modernes). De Layre, as the result of very minute investigations, gives the dimensions (which show the amphitheatre to have been one of the largest known) and a detailed reconstruction. According to this, the building was three-storeyed, had no *praecinctions* (said to be generally unknown in Gallic buildings) in the interior, seats for 40,000 spectators, and standing room for at least 12,000 more. Cp. also Caumont, *Cours d'Antiq.*, pp. 483–486. Stark, *Städteleben*, p. 251: The amphitheatre (now 'les Arènes', also called 'palais de Galliène') directly adjoins the old city walls on the outside; its masonry and the little stone rhombi with which it is covered point to late-Roman workmanship; a triple-arched gate still serves as a street-gateway.

Fines, according to A. Tardieu (*La ville Gallo-romaine de Beauclair*, 1882) was situated on the road from Augustoritum to Augustonemetum on the site of Beauclair. P. 9.: on reconnaît à Beauclair les

traces d'un a., placé—sur le bord de la voie romaine. Il est probable qu'il était agencé en bois—les gradins seuls étant en terre.

Augustoritum (*Limovices*). Valesius (*N.G.*, 268), from the mention of an arena in mediaeval documents (e.g. 1314 ecclesia Sct. Mariae de Arenis), had already assumed the existence of an amphitheatre outside the town : hodieque inter vii portas una est Lemo-
vici porta Arenarum ; there was also 'un cimetière des Arènes' there. Mérimée (*Notes d'un voyage en Auvergne*, p. 97) : il ne reste des arènes que leur nom conservé à un quartier de la ville. Caumont (1838) states that the foundations had recently been laid bare on an eminence on the west of the town. It is said to have remained intact till the time of Louis the Pious, who gave the monks of St. Martial permission to use the material for building a church. Considerable ruins existed up to 1581 ; the last visible remains were removed in 1713 when a promenade was laid out (*Cours d'antiq.*, pp. 477-479).

Vesunna (*Petricorri*). Du Cange s.v. Arena : Meminit Chronicon Episcoporum Petracoricensium Arenarum Petracoricensium sub anno 1517 : sub hoc Boso comes Petracoricensis super locum Arenarum Petracoricensium excelsam turrem exaedificavit. According to Lipsius (as above) there was at Petricorii 'amphitheatrum pulchrum et satis integrum extra moenia—e lapide quadrato—et arenae ejus longitudo xxx perticarum, latitudo xx. Valesius (*N.G.*, 446). Gruter, 1159, 7 : in ruinis amphitheatri quod vocant Cacarottas. Cp. *Mém. de l'Acad.*, xix, 710. Caylus, *Recueil d'antiquités* (vii, 1767, p. 305, pl. lxxvii) : le contour que formait autrefois cet amphithéâtre, est très bien marqué par les ruines—il subsiste encore 6 masses informes ou plutôt 6 mesures de ce bâtiment ; elles sont considérables, isolées et fort éloignées l'une de l'autre—des portions de voûtes et de piliers formant les souterrains. Cet édifice paraît avoir eu 1200 pieds de circonférence.—Il subsiste encore dans l'arène à 15 pieds de profondeur un aqueduc ou plutôt un égout de 5 pieds de largeur et de 6 de hauteur. Il était coupé et traversé par un autre dont les proportions étaient les mêmes ; l'un et l'autre servaient apparemment à écouler les eaux de l'arène. [Caumont, *Abécdaire d'archéologie*, ed. 2, p. 344 : 'à Tours et à Périgueux les Gallo-Romains utilisèrent leurs amph. pour leur défense et les avaient transformés en énormes bastions'. H.] According to Caumont (*Cours d'antiq. monum.*, iii, pp. 480-483) little was left of the amphitheatre (in 1838) ; but on the basis of the results of excavation (De Taillefert, *Antiquités de Vesone*) he gives a detailed description of it.

Divona (*Cadurci*). Valesius (*N.G.*, iii) : in ea urbe vestigia aqueductuum, rudera amphitheatri et rupes perfossas hodieque cerni aiunt. Volckmann (as above, ii, p. 482) : 'Remains of an amphitheatre built of small squared stones are still to be met with'.

Segodunum Rutenorum. 'L'a. de Rhodéz n'offre plus comme celui d'Avenches qu'une grande concavité elliptique, autour de laquelle se voient quelques débris de murailles ; leur solidité a lassé les efforts des destructeurs. Caumont, *Cours d'antiq.*, p. 496.

(Near Tulle.) Caylus (*Rec.*, vi, p. 356) quotes the following from Baluze, *Histor. Tulliens.* (1717), p. 8 : in extrema parte hujus capitis adnotabo olim iv m. p. a Tutela (Tulle) nobile oppidum in parochia Navensi et agro Tintinniacensi, cujus multa adhuc vestigia super-

sunt; imprimis vero amphitheatrum, habens cc p. in longitudine, cl in latitudine, cujus caveas et rudera, quae etiamnunc supersunt, ego vidi in juventute mea.—Etiam hodie locus, ubi rudera amphitheatri, vocatur Arenae Tintinniacenses, vulgo les Arènes de Tintinniac. He erroneously considers the town to be the *Rastiatum* of Ptolemy. Caylus, understanding that the remains had greatly diminished since the time of Baluze, contented himself with reproducing the representation given by the latter in pl. cxiii. Montfaucon, who mentions the amphitheatre and gives the same dimensions, no doubt drew upon the same authority.

Aquae Neri (Néris). Caylus (iv, pl. cx) gives the plan of a theatre, not an amphitheatre; cp. *ib.*, p. 368. [Mérimée, *Notes d'un Voyage en Auvergne*, p. 73, who gives a description of it, takes it for a circus; I myself am inclined to agree with him. H.] The remains are described in detail by L. Esmonnot in *Néris, vicus Neriomagus* (1885; only known to me from Chambalu's notice in the *Berliner philol. Wochenschrift*, May 14, 1887), according to which it remains uncertain, whether the building was a theatre or an amphitheatre.¹

Bituriges. Du Cange, s.v. Arena: In consuetud. Bituric. tit. ii art. 20 fit mentio de la fosse des Arènes de Bourges. Unde conficitur amphitheatrum olim ibi exstitisse. According to Valesius (N.G., 86) this 'fosse des Arènes' was filled up in 1619, and its place taken by a market, la place Bourbon. Cp. Volckmann, ii, 458.

[*Ernodurum*? Caumont, *Cours d'ant.*, p. 497, mentions an amphitheatre 'de Levroux, près d'Issoudun.]

(c) Lugdunensis.

Lugdunum. In 69 Vitellius was present here at some gladiatorial shows. Dio, lxxv, 1. The Boian Mariccus was thrown to the wild beasts in 70 (Tac., *Hist.*, ii, 61). The execution of the martyrs of Vienne and Lyons in 177, described at length in the letters of these communities in Eusebius (*Hist. Eccl.*, v, 1), probably took place at Lugdunum, although this is not explicitly stated. The passage is as follows (ed. Schwegler, p. 162, 37): ὁ μὲν οὖν Ματούρος καὶ ὁ Σάγκτος καὶ ἡ Βλανδῖνα καὶ ὁ Ἀτταλὸς ἤγοντο ἐπὶ τὰ θηρία εἰς τὸ δημόσιον καὶ εἰς τὸ κοινὸν τῶν ἐθνῶν τῆς ἀπανθρωπίας θέαμα, ἐπὶ τῆς δὲ τῆς τῶν θηριομαχιῶν ἡμέρας διὰ τοὺς ἡμετέρους διδομένης. ὁ μὲν Ματούρος καὶ ὁ Σάγκτος αὐτοῖς διήσαν ἐν τῷ ἀμφιθεάτρῳ διὰ πάσης κολάσεως. . . καὶ . . . ὑπέφερον πάλιν τὰς διεξόδους τῶν μαστίγων καὶ τοὺς ἀπὸ τῶν θηρίων ἐλκυσμοὺς καὶ πάνθ' ὅσα μαινόμενος ὁ δῆμος ἄλλοι ἀλλαχόθεν ἐπεβόων καὶ ἐπεκελεύοντο, καὶ ἐπὶ πᾶσι τὴν σιδηρὰν καθέδραν, ἐφ' ἧς τηγανίζοντο τὰ σώματα κλίσης αὐτοῖς ἐνεφόρει. In 1561 remains of what was probably the amphitheatre still existed in the district of the *jardin des plantes* laid out under the first empire in the *quartier des Terreaux*; and before 1793 Artaud saw some arcades belonging to it, built of small stones, which were then destroyed, 'comme étant un signe de féodalité'. During the course of his excavations (about 1820) some steps with inscriptions came to light, indicating the seats of honour of the deputies of the 60 *civitates*. Martin-Daussigny, conservator of the museum, as the result of fresh investigations undertaken by him after 1857, arrived at the conclusion that the amphitheatre (the arena of which could be

¹ [Alleged remains of both exist.—Tr.]

flooded for *naumachiae*) was situated in the neighbourhood of the *ara Romae et Augusti*, and not, as formerly assumed (as by Valesius, N.G., p. 295 and Boissieu), on the site of Ainay (Atanacum), but in the *quartier des Terreaux*; here in ancient times the Rhone and Saône joined, although they have since altered their course. See Martin-Daussigny, *Notice sur l'amph. et l'autel d'Auguste à Lugdunum in Congrès archéol. de France*, 29th session, 1862, Paris, 1863, pp. 418-454; and cp. his letter to Henzen (*AdI*, 1860, p. 215); also O. Hirschfeld, *Lyon in der Römerzeit* (Vienna, 1878, p. 16). Other antiquaries (e.g. Allmer in 1864) thought the amphitheatre was to be looked for on the right bank of the Seine at Fourvière, either ascribing the remains in the *quartier des Terreaux*, to another building, or assuming the existence of two amphitheatres—the one by the *ara Romae et Augusti* for the imperial festival at the meetings of the deputies at the Gallic diet, the other for the city shows (cp. J[ules] V[ermorel] in the notice of Hirschfeld's treatise in *Rev. crit.*, July 12, 1879, p. 29, and Renan, *Marc-Aurèle*, p. 331, 1). The latter is now believed to have been discovered by the excavations of M. Lafon in Fourvière—a building in the erection of which the declivity of the hill has been utilized, three concentric walls being still standing. According to another view (shared also by Duruy and Renan) it is supposed to have been situated at the foot of the declivity, its chief axis being parallel to the Saône. Deseilligny as below, pp. 23-26. Cp. Bazin, *Rev. archéol.*, July-August, 1887, p. 35, and J. Pierrot Deseilligny, *Notice sur l'amph. de Lyon*, Caen, 1888.

Aquae Segeste (Segeste). The amphitheatre at Châtillon-sur-Loing already known from Caylus (iii, pl. 412, p. cxiij) is described in detail and illustrated by Jollois (*Mém. sur les antiquités du dép. du Loiret*, 1836, pp. 1-10, *Description de l'amph. de Chenevière*, with plates i-vii); like d'Anville before him, he regards it as belonging to Aquae Segeste (Ukert as above, p. 465). The elliptical arena (fosse aux lions) has accommodation for spectators on only one side, occupying less than the half of an ellipse and according to Jollois capable of holding 3000-4000. Caylus assumed that it could be transformed into a complete ellipse with the aid of wooden buildings. Nothing now remains of the rows of steps that were still visible before 1758.

Augustodunum. On a 'Vue générale d'Autun vers 1600' in Edme Thomas (died 1660), *Hist. de l'antique cité d'Autun—illustrée et annotée* (Paris-Autun, 1846), p. 32, the amphitheatre appears as an important ruin; the illustration (p. 61) shows it as a building, of the circuit of which $\frac{3}{4}$ to $\frac{2}{3}$ is preserved, at least three storeys high, with complete rows of seats. With this agrees the illustration (rightly declared to be imaginary by Millin, i, 307) in Montfaucon (iii, ii, p. cli, after Aubéri), in which (as in Thomas) the third storey exhibits large figures in relief on the outer side between the arcades, and part of a fourth storey also is given. Thomas says: je découvre les vestiges d'un a. caché par les ronces, les épines et la terre, mais dont on voit sans grands peine les sièges. Il . . . est bâti . . . de briquetage en grès, lié d'un ciment ferme. *Voyage de deux Bénédictins* (1717), i, p. 164: L'a. est hors de la ville, fait en demi-cercle

fort élevé, autour duquel on remarque plusieurs cavernes affreuses, où l'on enfermait les bêtes, . . . qu'on lâchoit pour dévorer les chrétiens dans une grande plaine, qui fait comme une demi-lune environné de murailles. This description, like that of Volckmann (ii, p. 206): 'the amphitheatre outside the town has the form of a semicircle,' appears to refer to the theatre (*Hist. d'Autun*, p. 63 and p. 217). According to Millin, the amphitheatre was used as a quarry in the eighteenth century and completely destroyed. Excavations since 1832 and 1842 have rendered possible an approximate estimate of the two axes (157 × 131 m.; *Hist. d'Autun*, p. 215). [Cp. *Comptes rendus de la soc. fr. de numismatique et d'archéologie*, i, 1869, p. 14. H.]

Autisiodurum. Leblanc-Davau, *Recherches sur Auxerre* (2nd ed., 1871), p. 51. In documents of the fifteenth century mention is made of a 'champ des Arènes'. In the centre of the same, before 1830, a considerable elliptic depression could be seen. The digging of a well revealed 'une galerie conduisant dans l'intérieur du cirque, garnie de petites loges et fermée à son entrée par une porte en pierres de taille' (p. 52). The site is now entirely altered. The author assumes that the amphitheatre was built of wood.

Agendicum (*Senones*). Valesius (*N.G.*, p. 332): *Senonici amphitheatri meminit Passio beatae Columbae virginis et martyris* (alleged to have occurred under Aurelian). The *Bulletin de la soc. archéol. de Sens* (ii, 1851, p. 70) containing a treatise on the amphitheatre (with plan) was not available.

Lutetia (*Parisii*). An article in the *Grenzboten* (1870, ii, p. 189), *Der antike Circus zu Paris* (after the *Bulletin de la soc. impériale des antiquaires de France*, 1858, p. 152) gives an account of the earlier notices of the amphitheatre. The statement of Gregory of Tours in his *Hist. Franc.*, v, 17: (*Chilpericus rex*) apud *Suessionas* atque *Parisios* *circos aedificare praecepit eos populis spectaculum praebens*, is referred to a restoration of the amphitheatre. Alexander Neckam, who taught about 1180 in Paris, in his *Laus sapientiae divinae* calls the amphitheatre 'theatrum Cypridis,' 'vasta ruina'. A hundred years later it was laid out as a vineyard; according to a document of 1284 the Sorbonne owned 'tria quarteria vineae in loco qui dicitur les Areinnes ante St. Victorem'. The whole district was called Faubourg Saint-Victor from an abbey now destroyed. The same vineyard 'ad Arainas', 'Clos des Arennes', is mentioned in maps as late as 1307 and 1399. In May, 1870 (*Rev. archéol.*, xi, 1870, p. 349), in the rue Monge west of the Pantheon, some investigators came upon the curve of the walls surrounding the arena and some seat-steps. The smaller half of the amphitheatre is laid bare; a cloister occupies the site of the larger. The declivity of the Montagne Ste. Geneviève (mons Lucotitius) has been utilized in the construction. The masonry consists of irregular stones, laid in cement; the side turned towards the arena is covered with squared stones. Two quadrangular chambers at the bottom of the ascending rows of steps may have been used as cages. The amphitheatre was used as a quarry in the middle ages and its material removed to a considerable distance, especially to the Île de la Cité; cp. Longpérier, *Les pierres écrites des arènes de Lutèce* in *Journ. des*

sav., 1873, pp. 641-656. The inscriptions on three blocks: (1) Cas(siani) Latini, (2) Postumi, and (3) Pii Esuvi Thtrici, according to Longpérier, were cut soon after the construction of the amphitheatre, which consequently should be assigned to the third century. I have been unable to procure Du Seigneur's *Les arènes de Lutèce* (1886).

[*Jatinum* (Meldi). Valesius (*N.G.*, p. 332), arguing from the name Cavea (Cagia) at Meaux, which comprises an extensive district and contains a church Scta Maria in Cavea, assumes the existence of a large amphitheatre outside the town.]

Cenabum (*Civitas Aurelianorum*). According to the *Histoire d'Orléans* (p. 178) by Vergniaud-Romagnoli (quoted by Hübner but unknown to me), there was an amphitheatre here. According to Jollois (*Sur les antiquités rom. et gallo-rom. de Paris*, 1840, in Longpérier, p. 641) it is half hidden in the ground.

Caesarodunum (*Turoni*). Cp. *Vesunna* above. *Revue archéol.*, x, p. 376. The 'Arenae Turonenses' are mentioned in a diploma of King Charles the Simple (D. Bouquet, *Script. rev. gall.*, ix, p. 534). M. André Salmon first indicated the site of the amphitheatre, on which the *Soc. archéol.* carried out successful excavations. 'On a reconnu d'abord 4 couloirs, servant de communication du podium à l'extérieur de l'amph. De plus on a trouvé des loges accolées et un fragment de mur extérieur curviligne. L'amph. de Tours est un peu plus grand que ceux de Saintes et de Nîmes. After exhaustive investigation, a commission arrived at the result that the dimensions of the axes of the building were 124 × 144 m., the area of the whole amphitheatre 6200, that of the arena 2250 square metres. *Rapport de la commission chargée d'examiner des substructions présumées appartenir à l'ancien a. de Tours* in *Mém. de la soc. archéol. de Touraine*, v, 1855, pp. 237-255 (with plan).

Vindinum (*Cenomani*). According to Caumont, *Cours d'antiq.*, p. 495, there was said to have been an amphitheatre at Le Mans. [Daudin, *Exposé des objets d'antiquité trouvés au Mans* en 1809, p. 3, cp. p. 18: on a vu en 1791 un a. de 338 pieds de diamètre, des arènes de 252 pieds, 4 estrades circulaires, de 17 pieds de largeur chacune, coupées par de murs de refend de 16 pieds d'épaisseur, qui soutenaient les galeries voûtées qui regnaient autour de ses cirques. . . Il ne reste plus aucun vestige de ce monument (which is said to have had room for 7000 spectators). H.]

[*Juliomagus* (*Andecavi*). According to Godard-Faultrier, *Monuments antiques de l'Anjou*, 1864, p. 50, there are traces of an amphitheatre at Angers (rue Hanneloup¹), which was called Grohan and was supposed to have had room for 10,000 spectators. H.]

Crocitonum (*Portus Unellorum*). Caylus, vii, p. 314 (pl. xc, xci), *Sur les ruines situées près de Valogne en Normandie*: En 1691 Mr. Foucault . . . y fit fouiller, on y trouva divers monuments, . . . un château de bains, un amphit. élatre et tous les ornements d'une grande ville. . . Quant à l'amph., on en a déjà beaucoup démolí pour bâtir aux environs, mais son plan circulaire aide à en retrouver l'enceinte. Il paraît qu'il y en avait une double, l'une extérieure de 20 toises de rayon, l'autre intérieure de 18 toises . . . on ne pourra guère sup-

¹ [? Rue Hanneloup, close to which is a Rue des Arènes.—Tr.]

poser de places pour plus de 6000 spectateurs. Il ne reste que peu de partie de l'enceinte extérieure et presque rien de l'enceinte intérieure.

(d) **Belgica.**

(Helvetii.) The following information as to the amphitheatres of Switzerland is due to C. Bursian.

Oclodurum (Martigny). The ruins of the amphitheatre, called by the people 'le Vivier' (*vivarium*) consist of an enclosing wall, tolerably circular, still almost in a complete state of preservation; constructed of boulders, rubble and tufa stones, it is still more than three feet thick and in many places its height is more than a man's. The larger axis, from N. to S., is 214 feet long; the smaller, from E. to W., 201. No trace is preserved of the arcades on which the seats rested, nor of the seat-steps themselves; hence we may conjecture, that the interior arrangement was only of woodwork.

Aventicum (Avenches). On the amphitheatre cp. Bursian, *Aventicum Helvetiorum* in *Mittheilungen der antiquarischen Gesellschaft in Zürich*, bd. xvi, i, heft 1, p. 20. It is situated in the N.W. part of the old town, directly east of the little modern town of Avenches, and, although transformed into an orchard, can be recognized at the first glance from the elliptic depression in the interior. On the east side of this depression rises a lofty tower, the foundation of which is formed by an ancient double vault; it was built in the seventeenth century as a granary, and is now used as a museum; outside, the arch-shaped springs of several such vaults together with the party walls that support them can still be seen on the N.E. and on the S., while on the S.W., W., and N.W. nothing of the old building remains. The length of the larger axis of the ellipse of the building from S.E. to N.W. is 314 (including the masonry of the arcades 326) feet, of the smaller 282 (or 294); the upper circumference of the whole is about 880 feet, the height of the upper surface of the modern terrace constructed near the tower over the deepest part of the soil that covers the arena $29\frac{1}{2}$ feet; the seat-steps of sandstone, some of which are still preserved in the terrace wall, are $1\frac{1}{2}$ feet high. The number of spectators which the amphitheatre could hold has been estimated by A. Caspari, the conservator of the Museum at Avenches, on the assumption of 20 rows of seats, at 8780; but according to Bursian's view the present height of the building (the upper surface of the terrace with the tower) affords no sufficient grounds for calculating the original height and the number of the rows of seats; the latter was probably considerably larger than 20, and there is in addition an upper circuit with standing places for the lower classes, such as are preserved in amphitheatres in Italy and the south of France, so that the number of the spectators can be estimated at twice the number given above.

Vindonissa (Windisch in Aargau). The amphitheatre of Vindonissa, on the W. of the village of Königsfelden, now appears as an oval depression, resembling a sandpit, but covered with grass and corn, without any traces of walls; by the people it is called the 'Bärlisgrub' (bear-pit). The greater axis of the ellipse (from N.E. to S.W.) was about 230 feet long; the entrances were opposite one

another on the narrow side of the building. There is no trace of the seat-steps, nor of the vaults on which they rested. Cp. F. Keller, *Statistik der römischen Ansiedlungen in der Ostschweiz*, in *Mittheilungen der antiquar. Gesellsch. zu Zürich*, bd. xv, heft 3, p. 142), in whose opinion the statements of Haller (*Histor. und topogr. Darstellung von Helvetien unter römischer Herrschaft*, ii, 390) are to be considered purely fictitious. Haller speaks of remains of this 'theatre' (as he calls it), which were still visible above ground in the second half of the eighteenth century, especially the ruins of the east gate, and of a 'large, rectangular block of granite, right in the centre of the former arena, to which the wild animals intended for the *venationes* and also persons condemned to death were fastened with chains, the double holes of which were still visible'.

[*Augusta Rauricorum*. No trace of an amphitheatre has been found at Baselaugst; what has been taken for such (e.g. by Müller, *Hdb. der Archäol.*, § 265, 1) is rather a theatre; see Bruckner, *Versuch einer Beschreibung historischer und natürlicher Merkwürdigkeiten der Landschaft Basel*, xxiii. Stück (1763), p. 2772. Schoepflin (*Alsatia illustrata*, i, 160) gives an illustration of this theatre (e saec. xvi, e schedis Amerbachii). Mommsen (*Die römische Schweiz*, p. 16) also speaks of the ruins of the amphitheatre of Augst. According to the paper by Th. Burckhardt-Biedermann (*Das römische Theater zu Augusta Raurica*, in *Mitth. d. histor. u. antiquar. Gesellschaft zu Basel*, n.f., ii, 1882), only known to me from a notice by Blümner (*D.L.Z.*, 1882, no. 44), the theatre (of about the first century) was later purposely altered, and the orchestra made into an arena.

[*Aquae Vicus* (Baden in Aargau). According to F. Keller (*Die röm. Ansiedlungen in der Ostschweiz*, Abtheilung i, in *Mittheilungen der antiquar. Gesellsch. in Zürich*, bd. xii, heft 7, p. 297) there was still to be seen there, 'at the beginning of this (nineteenth) century, a circular depression, which was not without reason regarded as the *cavea* of a theatre' (? the interior of an amphitheatre); but no traces of it are now visible.]

Maxima Sequanorum, Vesontio. Valesius (*N.G.*, p. 600: *Amphitheatrum olim Vesontio extra muros habuit, latum passus circiter cxx, cuius fundamenta et porticus maiore ex parte dirutas spectari ait Chifetius ubi nunc est extra murum sacellum Scti Jacobi. Superest in urbe hodieque vicus Arenarum, qui ad portam amphitheatri ducebat, et porta ipsa amphitheatrici, una ex v Vesontionis portis, porta Arenarum olim cum aliis tum Callisto pp. ii in litteris anno MCXX datis nuncupata, quae nunc intra muros urbis integra conspicitur. Quin et una de vii civitatis tribubus tribus Arenarum dicitur*. Volckmann, iii, 162: 'Outside the town may still be seen remains of an amphitheatre, about 120 feet in diameter.' Castan (*Le capitole de Vesontio*, in *Mém. lus à la Sorbonne. Archéol.*, 1869, p. 53) says: 'Les ruines (de l'a.) ont été noyées, il est vrai, dans l'un des bastions construits par Vauban; mais nous en avons des images (Prost, *Hist. de Besançon*, ms. 2 plans of the *Arènes*); et le nom de notre rue d'Arènes en conserve la mémoire.

(Town of the *Leuci*.) Caylus, vii, p. 349: Le village de Grand (Gran) en Champagne entre Joinville et Neufchâteau (ad Fines ?—Novioma-

gus, Ukert, as above, p. 505) était une de ces anciennes villes, dont il ne reste qu'une faible tradition, elle était de la cité du peuple des Leuci . . . Son amph. était adossé à une colline. Son élévation du côté du midi est encore de 18 pieds 6 pouces; l'arène a encore 30 toises de longueur et 10 de largeur. Il y avait 3 portes de chaque côté de l'arène, qui conduisaient aux souterrains de l'amph. et aux gradins destinés pour les spectateurs. Les habitants appellent l'amph. le château de Julien, on croit que Ste Libaire, vierge, y souffrait le martyre. Yet it seems, from the outline on pl. cxi rather to have been a theatre. [Jollois, *Antiquités de Gran* (extract in Dufresne, *Mém. de l'Acad. de Metz*, 1842, p. 247) believes (in accordance with excavations in 1822), that it was capable of accommodating 2000 spectators; like the building at Nérès (see above) it was used both as a theatre and as an amphitheatre. Dufresne (p. 250) gives as the dimensions—large axis of the whole building 137·60, small 61 metres, and says (p. 251): ces belles ruines sont maintenant converties en carrière publique et disparaissent chaque jour. P. 249: au dessous du sol de l'orchestre à 2½ m. de profondeur on a trouvé un aqueduc parfaitement conservé. H.]

Divodurum Mediomatricum. Valesius (N.G., p. 174) quotes the following from a MS. life of St. Clement: 'cum pervenisset B. Clemens Mediomatricam civitatem, in cavernis ut ferunt amphitheatri quod extra eandem urbem situm est, hospitium habuit'. *Ibidem* 'fluvius Saliae juxta decurrere' dicitur, nimirum juxta amphitheatrum. Ch. Abel (*Notice sur la Naumachie de Metz* in *Mém. de la soc. d'archéol. et d'hist. de la Moselle*, 1860, p. 49) says: 'L'existence de l'arène en ce lieu (between the porte St. Thiébaut and Mazelle) est confirmée par le nom d'une église que saint Clément y éleva près de la Seille en l'honneur de saint André et que le peuple appela toujours St. André-aux-Arènes. A en croire les Bénédictins, auteurs de l'histoire de Metz, les ruines de l'a. subsistèrent jusqu'en 1562, époque à laquelle les pierres et les colonnes en furent dépécées pour construire les murs de la citadelle de Metz. C'est une erreur, puisque Sébastien Leclerc, vers 1650, en a pris un croquis qu'il grava à l'eau forte et qui fait partie de ses œuvres sous le no. 205. C'est après cette estampe rarissime de Sébastien Leclerc (elle se trouve à la Bibliothèque impériale de Paris—Collection des gravures et estampes) que M. Migette a donné une vue des arènes de Metz dans l'*Histoire de Metz* par Bégin, t. i. Elle représente encore l'enceinte avec une partie de ses contreforts et une portion des galeries du premier étage et du rez-de-chaussée éclairées par deux rangées de colonnes superposées comme à Nîmes et à Arles. On y voyait aussi l'escalier d'un des vomitoires par lesquels s'écoulait la foule au travers d'une porte centrée formée par deux colonnes d'ordre ionique. Un plan de Metz de 1574 nous montre le débris d'une de ces arcades avec une colonne. En 1719 Montfaucon faisait dessiner, pour son bel ouvrage des *Antiquités expliquées*, ce qui restait de l'a. de Metz, et le publiait, t. iii, planche 103. Les Bénédictins reproduisaient dans leur histoire de Metz t. i, planche ii ce dessin, qui nous apprend que les galeries dessinées par S. Leclerc avaient été démolies et qu'en 1719 il ne restait plus debout que le vomitoire et

son escalier, sa porte et l'enceinte circulaire de l'arène. Au 17. siècle P. Ferry qui a encore vu ces ruines debout, supposait que l'a. de Metz avait dû être construit sous Auguste (?). See Hübner, *Römische Alterthümer in Lothringen* (*Bonner Jahrb.*, liii-liv, 1873, p. 159), p. 161 : supposed seat-steps of the amphitheatre with the inscription ho[li]tores ; p. 163, gladiatorial relief ; p. 171, visor.

Augusta Treverorum. Wytttenbach (*Neue Forschungen*, p. 70) and Steininger (*Gesch. d. Trevirer*, i, p. 285) assign the construction of this amphitheatre to the time of Trajan ; the second of the spurious inscriptions of Nennig (Mommson, *Grenzboten*, 1866, p. 407) is based on this assumption. As F. Hettner (*Das römische Trier*, in *Verhandl. d. Philologenvers. zu Trier*, 1879, p. 16) observes, the extremely careful architecture of the amphitheatre shows it to have been certainly older than the other Roman buildings of the city. 'It is in the extreme S.E. of the town ; the eastern semicircle leans against a natural hill, the western on the other hand (as is shown by the excavations of Herr von Wilmowsky in the 'sixties) is artificially constructed'. Nothing now remains but 'the arena, together with a wall leading to the beginning of the rows of seats, part of the animals' cages, and further at the end of each side of the arena an entrance with three gates. The entrances are flanked by strong towers, which relieve the pressure of the masses of earth. The central gate led into the arena, the two others to the spectators' seats. The latter could also be reached by two tunnel-like entrances on the city side' (Hettner). According to Quednow (*Beschr. des A. zu Trier*, p. 24) the arena is elliptical, its floor of rock ; in the latter is cut a *euripus* 3 feet wide and 4 feet deep, used for flooding at the *naumachiae*, water for the purpose being conducted into the amphitheatre by an aqueduct (?). The *podium*, now 7 feet high, appears formerly to have been 10 feet high ; it had 10 doors, leading to the animals' cages. The number of places for the spectators, estimated by Steininger at 8000, cannot be settled, in Hettner's opinion. On the 'collegium arenariorum consistentium Col. Aug. Trev.' see Orelli, 2773 = Brambach, *CIRh.*, 770. Perhaps it was here that the Bructeri were destroyed by wild beasts (before the year 306) ; see Steininger, i, 231, 1. According to the *Gesta Trevir.* the Vandal prince Crock besieged the Treviri 'in arena civitatis' (i.e. in this amphitheatre, fortified by them) in the year 406, but without success (Wytttenbach, *Neue Forsch.*, p. 53). Perhaps it was at that time that the semicircular towers were built, remains of which are still to be seen (*ib.*, p. 60).

Durocortorum (Remi). Du Cange s.v. Arena : Arenas Remenses commemorat Marlotus in metropoli Remensi lib. i cap. 5. Valesius (*N.G.*, p. 181) : Extra portam Martis sunt Arenae seu mons Arenarum, amphitheatri seu duplicis hemicycli figura. Volckmann, iii, p. 172 : 'Two hundred paces from the town are the remains of an amphitheatre'.

Augusta Suessionum. Gregory of Tours, *Hist. Franc.*, v, 17 : see above under Lutetia. Valesius (*N.G.*, pp. 58 and 332) infers the existence of an amphitheatre from the name Cavea (monasterium Scti Crispini in Cavea, St. Crépin en Chaye). Yet according to Leroux, *Hist. de Soissons* (1839), i, p. 108, the amphitheatre was

not there, but in the west part of the town, where a semicircular depression in the ground in his opinion affords undoubted evidence of its site; this view is said to have been confirmed by occasional excavations in the 'twenties and 'thirties. But their results are so small that it remains doubtful whether the building was elliptic or semicircular; Leroux considers the latter to be more probable. He assumes that its remains were choked up with earth in the time of Chilperic (576).

Augustomagus (Silvanectes). [Mayne, *Mémoires lus à la Sorbonne*, 1867, p. 155: *Note sur la découverte des arènes de Senlis*. Some years before, in a field not far from the modern town but at a considerable distance from the circuit of the Gallo-Roman town, a circular depression and remains of buildings were still to be seen; a Fontaine de Raines in the vicinity is called in mediaeval documents 'fontaine d'Airaines' and 'fons Arenarum'. Then follows a description of the very trifling remains recently discovered. H.] Caix de Saint-Aymour (*Congrès archéol. de France*, 44^e session, Paris, Tours, 1878, pp. 69-78) gives the dimensions of the building (75 × 68 m.) and ascribes its construction to the third century. Detlefsen in Burasian's *Jahresber.*, viii (1880), p. 104.

[*Caesaromagus (Bellovaci)*. According to Caumont, *Cours d'ant.*, p. 495, there was an amphitheatre at Beauvais.]

[*Rotomagus*. Here also Valesius assumes the existence of an amphitheatre for the same reason as at Soissons.]

[*Julibona*. Caylus (vi, 394) thinks that the theatre (pl. cxxvi) was also used as an amphitheatre; cp. Merivale, *Hist. of the Romans under the Empire*: iv, 418, 1: 'Lillebonne . . . had . . . a miniature Colosseum in architecture and masonry'. Theatres, shown by the unusual size and form of their orchestra to have been intended to serve a double purpose (amphithéâtres facultatifs, as Letronne calls them), are also said to have existed at Valognes (cp. Volckmann, iii, 354) and the village of *Vieux* near Caen. See A. de la Mare (*Excursions aux ruines de Khremissa* in *Rev. archéol.*, xii, 644), who refers to the treatise by Charma on the excavations at Vieux (*Mém. de la Soc. des antiquaires de la Normandie*, vol. xxii).]

(e) *Germaniae*.

(G. inferior.) *Colonia Agrippinensis*. 'Earlier investigations have established beyond doubt the existence of an amphitheatre near the Berlich' (see above, p. 194; and *Beiblatt zur Kölnischen Zeitung*, 1829, no. 17). Düntzer, *Das Berlich zu Köln, in Jahrb. der Alterthumsfreunde im Rheinlande*, xx, p. 26). 'Between the Berlich and the Appellhof the traces of a Roman amphitheatre have been found. Like the simple buildings near Vetera, Bonn and those described by Caumont (*C. Archéologie, a. de Chenevières* [Loiret], Caen, 1860), which exhibit a uniform type, it possessed an arena with round terraces for the spectators, 100 m. long and 60 m. wide, open towards the East'. C. von Beith, *Das römische Köln* (Bonn, 1885, Winckelmannsprogramm), p. 16. Cp. the subjoined plan of the town. 'Immediately before the Berlich was undoubtedly the Roman camp. Here probably also was the *vivarium*, enclosed by a centurion of the sixth legion, according to a votive tablet (in

Lersch, *Centralmuseum*, nr. 9 = Brambach, *CIRhen.*, 336), found in the foundation of a monastery built on the castle wall into the Roman wall. There is a remarkable similarity with Rome, where on the Viminal, near the *castra praetoria* (later enclosed by the wall but projecting considerably), there are an *amphitheatrum castrense* and a *vivarium*, both before the old city', Düntzer as above, p. 31. Inscription on an *ursarius* (Lersch, *Centralmuseum*, iii, 196 = Brambach, 211).

Castra Vetera.¹ Ph. Houben and Fr. Fiedler, *Denkmäler von Castra Vetera and Colonia Trajana* in Ph. Houben's *Antiquarium zu Xanten* (Xanten, 1839), p. 6: 'According to the oldest information the remains of an amphitheatre or an *arena campestris* near the village of Birten, also belonged to the old camp. On the field rises an oval earth rampart overgrown with copsewood and some fir-trees, with 4 entrances, exactly facing the four cardinal points. The outer circuit is about 350 paces. In the interior the rampart runs to a depth of about 30 feet obliquely downwards, so that a space, the arena, 120 paces in circumference, is formed below. The distance from the last to the west entrance is about 120 paces'. Pighi had already taken this circumvallation for the remains of a Roman amphitheatre of the garrison at Vetera. At the end of the seventeenth century aged people could still remember having seen in the arena a column consisting of millstones laid one upon another, which the author perversely takes for a *meta*. He assumes that the amphitheatre was built of wood. On a field not far distant a large number of simple urns with human bones have been found. The country people usually call the arena 'Victors Lager' or 'Victorsgelag'; according to the legend St. Victor, a captain of the Theban legion, suffered martyrdom with his Christian soldiers near the marshes of Colonia Trajana by the orders of the emperor Maximian.

BRITANNIA.

There is no doubt that in Britain also the legions kept gladiators in their permanent quarters (Hübner, *CIL*, iii, 1335, 3; *Monatsber. d. Berl. Acad.*, 1868, 89), and some monuments relating to them have been preserved (Greek inscription on a *reliarius* in London, *CIL*, vii, p. 20; probably also *ib.* 830: *venatores Bannies[es]*); but no ruins of amphitheatres have been found. On the other hand, English archaeologists believe that they have discovered, in the vicinity of different Roman towns and permanent quarters, traces of so-called *amphitheatra castrensia*, that is to say, circular depressions corresponding to the arena, enclosed on all sides by the declivities of hills and thus presenting more or less the form of natural amphitheatres. John Strange, *An Account of some Roman and other Antiquities in Monmouthshire* (read May 11, 1755) in the *Archaeologia Britannica*, v, 1779, p. 67: 'the hollow circular spot known at Caerleon (*Isca Silurum*) by the name of Arthur's Round Table, which is generally supposed to be a Roman work, and to have served by way of amphitheatre. In this case it must be considered as one of the Caestresian kind, like that at Richborough Castle, not far

¹ I am indebted to Prof. Friedrich Leo for the above.

from Sandwich in Kent, and many others (cp. Wright, *Wanderings*, p. 88 : Rutupiae). Stukeley (*Iter Curiosum*, i, p. 156) mentions one at Silchester and another 3 miles from Redruth in Cornwall. Probably the round entrenchment between Penrith and Shap in Westmorland, described by Salmon (*Survey*, p. 637) and compared by him to a cock-pit or wrestling-ring is of the same kind. It also goes by the name of Arthur's Round Table, as does that on the castle wall at Winchester. Such temporary amphitheatres were probably the only ones used by the Romans in those distant provinces'. P. 68 : 'It is observable that the castrensian amphitheatres in general preserve no signs of *subsellia* or seats, so that the people must have stood on the grassy declivity. I saw no signs in that of Caerleon, nor in the more perfect one near Dorchester (Wright, *ib.*, p. 95), that Stukeley (*ib.*, p. 166) has also observed. Nor do I recollect that any such have been discovered in any other castrensian amphitheatre, at least in our island, where they seem to have been rather numerous. For it may reasonably be supposed that there were many more of them in Britain than are known to us at present, though the number of the latter is by no means inconsiderable'. That at Caerleon (on which see also *Archaeol. Brit.*, ii, 6) is more accurately described by Lee (*Isca Silurum*, 1862, p. 128), as E. Hübner informs me. According to the same scholar, traces of amphitheatres are believed to have been found at Bath (*Aquae Sulis*), Silchester, and Cirencester. Cp. also *Archaeol.*, xvii, p. 171 (near Llandrinolt, Wales) and Gough's *Camden*, i, p. 158 (Chasebury, Wiltshire). Collingwood Bruce (*The Roman Wall*, 3rd ed., 1867, p. 158) believes he can recognize in a very rude relief at Chesters (Cilurnum) a scene from the amphitheatre, and hence conjectures that one existed there : decided traces of one still exist at the station of Borcovicus (a fort in the wall of Hadrian, now Housesteads). An illustration of this is given on p. 190—a circular depression, about 100 ft. in diameter, 10 ft. deep. It is obvious that all these observations are very uncertain.

Th. Wright, *A History of Domestic Manners and Sentiments in England during the Middle Ages* (London, 1862), p. 64 (*Homes of Other Days*), p. 77 : 'In the glossaries *plegere* (a player) and *plegaman* (a playman) are used to represent the Roman gladiator, and *plega-hus* (a playhouse) and *plega-stow* (a play-place) express a theatre or more probably an amphitheatre'. Wright assumes that the Saxons denoted the walled-round amphitheatres of the Roman towns still existing in their times by the first name, and those which were only formed by depressions in the ground by the second name. Among the illustrations of an Anglo-Saxon MS. of the Psalms (Ms. Harl. 603, perhaps of the ninth century) there is one, which according to Wright evidently represents an amphitheatre (reproduced on p. 65) : a bear-leader with a bear, which pretends to be asleep, a dancer, a player on a double flute—all on an arena at the foot of a depression in the ground, with many spectators in the background.

THE REST OF THE NORTHERN PROVINCES.

Rætia et Vindelicia. *Augusta Vindelicorum.* J. Becker (*Der Berlich zu Köln und der Perlach zu Augsburg*, in *Jahrb. d. Aller-*

thumsfr. im Rheinlande, xlii, p. 71; cp. above, p. 194) writes: 'The keen-sighted Welser has claimed to recognize an amphitheatre in the circular, amphitheatral form of some streets near the church of St. Stephen and in the general form of the gardens there, but his conjecture has not as yet received more definite confirmation. Further, the great distance between the churches of St. Stephen and St. Peter (where the Perlach is situated) makes a combination of the two localities inconceivable; thus it only remains to conjecture that the amphitheatre of the Roman Augsburg was in the vicinity of the modern Perlach'. For the mosaic excavated in gardens near the church of St. Stephen (circus-scenes and gladiatorial combats) see Gruter, 336; cp. *CIL*, iii, 2, 5835a.

Pannonia Superior. Carnuntum. In the *Bericht des Vereins Carnuntum für die Jahre 1887 und 1888* (Wien, 1889, pp. 22-33 with pll. viii and ix), Alois Hauser has given a provisional description of the amphitheatre partly excavated by him in 1888 at Deutsch-Altenburg. The great axis of the arena measures 72·2, the small one 44·25 m.; its surrounding wall, 1·5 m. thick, still rises to a height of 2½ m.; its squared stones facing the arena have been furnished with a coloured coating (chiefly red). At a distance of ½ m. parallel with this wall runs a second wall ½ m. thick, to which the spoke-like walls of the *cavea* were attached. The outer surrounding wall, also elliptical, by reason of its considerable height is provided with strengthening pillars on the long side towards the Danube, where the terrain sinks decidedly. The spoke-like walls connecting the outer and inner wall and intended to bear the rows of seats, are neither equidistant from each other nor of equal strength. Nothing remains of the rows of seats. Of the entrances of the amphitheatre, the eastern, completely laid open, is divided into three parts (the centre part 3·4, the outer parts 1 and 1·11 m. wide. Close by was a narrow passage (a supplementary construction), perhaps with cross divisions, which were used as animals' cages, the animals being gradually pushed into the arena by pulling and inserting the cross-bars. At the point most favourably situated for spectators seems to have been an enclosed box. The arena appears to have been unpaved. It is not clear what purpose was served by a channel constructed of stone slabs carried in the direction of its lower axis below its level through the surrounding wall. To judge from its dimensions, the amphitheatre was a very imposing building. Its area is between those of the amphitheatres of Pola and Verona; on the other hand the whole building, considering the relative narrowness of the *cavea*, is not nearly so extensive as those two amphitheatres; its two axes measure 97·66 and 75·25 m. (against 137·8, 112·6 in Pola and 153·18, 122·89 in Verona). According to Hauser's estimate it contained above 8000 spectators. If, as he assumes, the last row of seats was about 13 m. above the arena, the outlook over the amphitheatre from the camp that lay about 14 m. higher was unobstructed, especially from its walls and towers. The camp appears to have been considerably enlarged by degrees, the enlargement being surrounded by a new fortified wall, inside which was the amphitheatre. 36 silver *denarii* (from a bag of

money lost under L. Verus) and 97 coins (from Augustus to Valens and Valentinian, pp. 33-37) were found there. Among the inscriptions, VM on a stone-block with letters 25 cm. high may belong to the architectural inscription; IIII VIR on another in all probability served to indicate the seats of the *quattuorviri* of the *municipium* of Carnuntum; a *cippus* bears the inscription: Junoni Nemesi Eppius Martinus et Mem(mius) Esper (t)ub(icen ?) leg. xiii g. et Iul(ia) Rodo et . . ; an *ara* : (I)ovi (S)erap(i) Iulius. (Borrmann, pp. 36-41).

Pannonia Inferior. *Aquincum.* The amphitheatre excavated there in 1880 was described by Karl Torma in 1881 in a publication in the Hungarian language, from which a plan of the building appeared in *Oesterreich. Mitth.*, viii (1884), plate iv, and an exact explanation in ix (1885), pp. 233-7. Several parts of the building showed traces of repeated painting. A small sanctuary of Nemesis had been built against the outer wall of the amphitheatre, and the dedications of two votive altars found there date from 162 and 259. For these and the other inscriptions see *op. cit.* vii (1883), pp. 92-7 (nos. 23-34); and for the inscriptions on the benches p. 97 f., 1-11, among them 4. Val(erii) Juliani et Ae(lii ?) Quinti, and 6. G. Valeria Nonia.

[*Cibalis.* The statement of Muchar (*Das römische Noricum*, i, 365) that there was once a large amphitheatre there, seems to be erroneous; at all events there is no mention of it in the text cited, Zosim., ii, 18.]

Dacia. *Porolissum* (Mojgrad). In 1858 the following inscription, now in the Klausenburg museum, was found there (*CIL*, iii, 836); Imp. Caes. T. Ael. Hadri|anus. Antoninus. Aug. Pi|us p. m. trib. pot. xx. imp. ii. cos. iii. p. p. amphitheatrum vetus; tate dilapsum denuo fe|cit curante Tib. Cl. Quinti|liano proc. suo (A.D. 157).

Sarmizegetusa. Neigebaur, *Dacien* (1851), p. 17: Without the *castrum* on the east side of the village of Várhely which covers part of the old city the amphitheatre can still be very easily recognized, and fifteen years ago still retained several stone benches. Pfarrer Aukner and Dr. Fodor, two antiquaries well known here, saw five such at that time. The arena measures 80 paces E. and W., and 50 N. to S. The surrounding wall is still 15 feet high and is everywhere covered with débris: only a few years ago large hewn stones lay about everywhere, and the form of the rubbish heaps still shows the position of the former vaults beneath the seats. The four entrances in the wall surrounding the oval arena are indicated by depressions. Cf. p. 37, no. 105 = *CIL*, iii, 1522 (in scamno amphitheatri). Champagny, *Les Antonins*, i, 292: un amphithéâtre dont le sable rouge garde selon les paysans hongrois qui le montrent aujourd'hui la trace ineffaçable du sang qui y fut versé. O. Bendorff and O. Hirschfeld, who saw the amphitheatre in 1873, found the arena covered by a maize plantation, which only permitted an approximate estimate of its size. They estimated its longer axis at 60-65 paces, its shorter at 32-35. The ends of the axes corresponded with the main entrances of the building, which are clearly indicated by four deep gaps in the buried wall, which forms the

cavea. A double row of small isolated depressions, equidistant from one another, undoubtedly marking the gangways to the first and second tiers, runs round the arena at the top of the wall and at its lower edge. Nothing is now to be seen of substructures beneath the arena or of benches.' Benndorf and Hirschfeld, *Vorläufiger Bericht über eine archäologisch-epigraphische Reise in Dacien*, reprint from *Mittheilungen der Centralcommission vom J. 1873*, p. 14. Carl Gross (*Archiv. d. Vereins f. Siebenbürg. Landeskunde*, n.f., 13 [1876], p. 319) describes the remains of the amphitheatre as "an oblong rubbish-heap 450 paces long in which at the beginning of this century benches of hewn limestone were still preserved."

HISPANIAE.

The following notices by E. Hübner are based partly on his own observations (cf. his *Antiquarische Reiseberichte*, i, 1860-2) partly on better sources in MSS. and print (cf. the reports on epigraphic explorations in the *Monatsberichte der Berliner Academie*, 1860-1). The Spanish works on the antiquities of the country are entirely uncritical and untrustworthy, especially on account of the tendency to exaggerate the importance of all national treasures. The best known is D. Juan Augustin Cean-Bermudez, *Sumario de las antigüedades romanas en España, en especial las pertenientes a las bellas artes*, Madrid, 1832 fol. (cf. thereon Hübner, *Die antiken Bildwerke in Madrid*, p. 277). See also Florez, *España sagrada*, Madrid, 1752-1850, xlvii, 4 vols.; D. Antonio Ponz, *Viage de España*, 1772-94, xviii, 8 vols.; Laborde, *Voyage pittoresque de l'Espagne*, Paris, 1806-20, 2 vols. fol. For the Roman remains of Lusitania see Bellermann, *Erinnerungen an Süd-Europa*, p. 249 ff. (Berlin, 1851).

(a) *Tarraconensis*.

Tarraco. Since Luis Pons de Ycart (*Grandezas de Taragona*, 1572, 8, f.p. 215) affirmed that the ruins near Na. Sa. del Milagro (now a prison) belong to the theatre, all subsequent Spanish writers have followed him, e.g. Cean, p. 6; Florez, xxiv, p. 229; Albiñana, *Tarragonae monumenta*, p. 128. Where, however, these writers speak of the amphitheatre of this city (Cean, p. 7; Florez, xxiv, p. 228; Albiñana, p. 124) they refer to the same ruins, which did undoubtedly belong to an amphitheatre. (Of the theatre, which probably lay on a hill in the upper city near the so-called *torre del Patriarca*, there still exist several benches; for the inscriptions on them cf. Hübner in *Monatsber. d. Berl. Acad.*, 1860, p. 239). For a view of the amphitheatre, of which now only a small part of the *cavea* remains, see Laborde, i, plates 53, 54, 56.

Ercavica (Cabeza del Griego). Very indistinct remains according to Cornide (*Memorias de l'academia de Madrid*, iii, 1796, p. 172), described by Cean, p. 59.

The amphitheatres mentioned by Cean at *Barcino* (p. 15), *Carthage* (p. 34) and *Toletum* (p. 118) are quite uncertain. Also Hübner has shown by an investigation of the site that Kiepert was in error in alleging (*Lehrb. d. alt. Geogr.*, p. 497) the existence of the 'ruins, now almost destroyed' of an amphitheatre at *Saguntum*.

(b) **Baetica.**

[*Corduba*. The very doubtful ruins, found in 1730, which Ruanes (*Historia general de Cordoba*, i [1761], p. 289) described, are said by Cean, p. 340, to have belonged to an amphitheatre. Hübner saw nothing of the kind. An inscription by a flamen provin(ciae) Baet(icae), who erected statues there edito ob honorem flaminatus munere gladiatorio et duabus lussionib(us), is recorded in Huebner, *Ephem. epigr.*, iii, p. 37, 16. (See note on ii, 77, 30.)]

Carmona (Carmona). The MS. report on the excavation in 1885-6 of an amphitheatre here, is to be found, with a plan, in the library of the Academy of History in Madrid; cf. the *Boletín* of the academy, x, 1887, p. 174.

Italica (Santiponce near Seville). According to Montfaucon, *Ant. expl.*, iii, p. 262, the amphitheatre was in great part destroyed by order of the municipality of Seville to provide material for embankments. Cf. Cean, p. 283. It is most accurately described from the latest excavations by Demetrio de los Rios, *Memoria arqueológico-descriptiva del a. de Italica*, Madrid, 1861, with a large plan. Cean has also asserted the existence of amphitheatres at Belonia (Baelo, p. 232) and Malaca (p. 317), but these are quite uncertain.

(c) **Lusitania.**

Emerita. Cf. Huebner, *BdI*, 1862, p. 173, L'a. riconoscibile dal profondo avvallamento del terreno e da pezzi difforni di muri ed archi (Laborde, t. 156). L'arena è un campo seminato, il muro esteriore in gran parte venne suppleto dalle circostanti colline. Laborde erroneously considers it a *naumachia*.

[*Bracara Augusta* (Braga). Very uncertain; the remains are described, after Portuguese authors, in Bellermann, p. 252.]

MAURETANIAE.

Ad Mercuri (Djar Djedid). Tissot, *Itinéraire de Tanger à Rbat* (*Bullet. d. l. société d. géogr.*, vi, 12 [1876]), L'amphithéâtre ou plus exactement, je crois, le théâtre qu'avait signalé Davidson et que Mr. Drummond Hay, consul général de l'Angleterre à Tanger, a encore vu en 1842, n'existe plus aujourd'hui, à moins que l'enceinte sémicirculaire qu'on remarque non loin d'Aïn Kheil n'en représente les derniers vestiges.

Portus magnus. Near Arseu remains of an amphitheatre. Maltzan, *Drei Jahre in NW. von Africa*, ii, 6 (who erroneously identifies Arseu with the ancient Arsenaria).

Julia Caesarea (Jol). De Blinière, *Antiquités de la ville de Cherchel (Algérie)*, in *Rev. arch.*, v, p. 344: L'enceinte extérieure de l'a. est mieux conservée, j'ai gravi 17 gradins encore en bon état. Cf. *Explor. scientif. de l'Alg.*: *Beaux-Arts*, iii, plate 21, where the amphitheatre is given in the plan of the town, and plates 29, 30 where it is figured as *Hippodrome romain*.

Sitifis. Renier, *Inscr. de l'Alg.*, 3287 = *CIL*, viii, 8482: four very mutilated fragments of an inscription, among them ANFIT HEATRI.

The theatre (not amphitheatre) at Cuicul (Djemila), *Expl.*

Beaux-Arts, i, plate 47, is thought by Ravoisié, p. 60, to have been used also for gymnastic games and fights with beasts. See below (Khremissa).

NUMIDIA.

Cirta. Renier, 1825 = *CIL*, viii, 6995 : Divo, Pertinaci Aug. patri L. Scantius L. fil. Quir. Julianus eq. pub. exornatus statuum quam promisit, ex redivis locorum amphitheatri diei muneris quem de liberalitate sua ob honorem iuviratus edidit dedit.

Rusicade (Philippeville). *Expl. scientif. de l'Alg., Beaux-Arts*, ii, plates 56-9. Cf. *Rev. arch.*, i, 814 (only one tier of galleries). This amphitheatre is mentioned in the local inscription, Renier, 2175 = *CIL*, viii, 7983.

Tipasa? Dureau de la Malle, *Recueil des renseignements sur la province de Constantine*, p. 204 : Entre Tiffereh et Guelma Hebenstreit (*Nouv. Ann. de Voy. A.*, 46, p. 58) a vu les débris d'une grande ville ancienne, de superbes portiques bien alignés, des colonnes de marbre, des palais encore debout, un amphithéâtre de 150 pas de diamètre, dont 10 rangs sont intacts, le tout en grosses pierres de taille. Les Maures appellent ce lieu Hamisa, probablement parce qu'il est situé sur l'Hamise; c'est je crois la colonie romaine de Tipasa.

[In the Arab village of Khremissa (S. of Bona, E. of Constantine, about 40 miles from both places) are the ruins of a Roman town, including a theatre, in which, just as at Cuicul, an arena for beasts and athletic contests might have been provided by removing the *proscenium*, which was presumably built of wood. (Cf. Juliobona.) So A. De la Mare, *Excursion aux ruines de Khremissa*, in *Rev. archéol.*, xii, p. 644.]

Lambaesis. *Mémoire de la société nationale des antiquaires de la France*. Troisième série, t. i (1852). De La Mare, *Recherches sur la ville de Lambèse*, p. 34 : À 800 mètres du pretorium se trouve l'amphithéâtre. Ce monument assez bien conservé, n'a pu être étudié; il a 104 mètres de diamètre; ses gradins, de forme elliptique et au nombre de 15-20, sont un peu dérangés et inclinés vers le centre, comme s'ils avaient été légèrement secoués par un tremblement de terre. On y compte 14 portes cintrées de 2 à 3 mètres de large, plusieurs ont conservé leurs arceaux en bon état. On y voit aussi deux passages en voûtes inclinées, qui conduisent de l'extérieur au sol intérieures de l'édifice, lequel se trouve en contre-bas du terrain environnant. Cet amphithéâtre a été vu par Peyssonel, qui estime assez bien sa circonférence à 300 pas. On the benches are inscriptions of curule names (Antoniniana Augusta Saturnia Trajana) Renier, *Inscr. de l'Alg.*, 185 = *CIL*, viii, 3293.

Thamugadi. *CIL*, viii, p. 951 ad 2392. Bruce, 1765, 'between the arch and amphitheatre are the remains of a temple'.

'Dans les ruines près du caravanseraï d'El-Outaïa entre Batna et Biskara' (*Masarfella*?) : Imp. Caesares M. Aurelius Antoninus et L. Aurelius Commodus (*nomen abrasum*) Augg. Germanici Sarmatici fortissimi amphitheatrum vetustate corruptum a solo restituerunt per coh. VI Commag. A. Julio Pompilio Pisone Laevilio leg. Aug. pr. pr. curante Aelio Sereno praef. Henzen, 6597 = *CIL*, viii, 2488.

Theveste. Annuaire de la société archéologique de la province de Constantine, 1858-9 (in a paper by Moll, *capitains du génie*, Tébessa = Theveste), p. 40 ff.: le cirque est situé du côté seul de l'ancienne ville . . . une arène circulaire de 45-50 mètres de diamètre était environnée d'un massif de maçonnerie, qui se terminait intérieurement par 15 ou 16 rangées de gradins en pierres de taille . . . deux entrées conduisaient dans l'intérieur de l'arène, elles étaient placées vis-à-vis l'une de l'autre, aux extrémités d'un même diamètre . . . au général le cirque de Th. est dans un mauvais état de conservation . . . sans avancer une date précise, nous pouvons affirmer, que l'amphithéâtre de Th. a été construit entre les années 75 et 80 après J.-C.

AFRICA.

As the work of V. Guérin, *Voyage archéologique dans la régence de Tunis*, 1862, contains by far the most numerous and important statements regarding the amphitheatres of this province, I follow his order.

Carthago. Guérin, i, p. 37, Dans le petit village de Malga on passe auprès des ruines d'un a., ruines fort peu importantes actuellement, mais qui par la configuration même du terrain, laquelle offre une excavation évidemment artificielle, ne laissent aucun doute sur la nature du monument dont il s'agit. G. considers the estimate of Falbe, *Sur l'emplacement de Carthage* (1833), p. 39 (longer axis of the inner ellipse 240 ft.) more exact than that of Sir Grenville Temple, *Excursions in the Mediterranean*, i, p. 106 (300 x 230 ft., arena 180 x 100). According to Davis, *Carthage and her Remains*, p. 497, it could easily have been filled with water for *naumachias*. At the time of Abu-Obaid-el-Bekri (*Description de l'Afrique septentrionale*, trad. par Mr. de Slane, p. 105), i.e. in 1082 it was still well preserved: G., p. 39. Guérin and Davis (*op. cit.*, p. 490) give a description by Edrisi in the twelfth century, according to which it was still a magnificent ruin; even Ibn-Alouardi in the fourteenth century and Ibn-Ayas at the beginning of the sixteenth testify to its good preservation (cf. Dureau de la Malle, *Recherche sur la topographie de Carthage*, p. 190). *Expos. tot. mundi*, 62 (*Geogr. l. min.*, ed. Riese, p. 123): In delectabilibus unum solum spectaculum exspectant habitantes (Carthagine), munus. The epigram of Luxorius de eo qui podium amphitheatrici saliebat (Meyer, *Anthol. lat.*, ii, p. 149, 380) probably refers to the amphitheatre here. For the spectacles of the *sacerdotes provinciae Africae*, which were given here, see the end of this section.

Thysdrus (El Djemm). Guérin, i, p. 91 gives a detailed description of the amphitheatre; cf. Pellissier, *Lettre à Mr. Hase*, in *Rev. archéol.*, i, 816. Aimé Rochas, *ib.*, ix, 90 (plate 185). P. Coste and Canina in *Ann. d. Inst. arch.*, 1852, 241 ff. (*Mon. dell'Inst.*, vol. v, tav. xlii-xliv and tav. d'agg. U.). Davis, *Carthage and her Remains*, p. 492 ff. Canina thinks that this amphitheatre was begun by Gordian I., and finished by Gordian III.; Pellissier considers that it was never completed. Guérin gives on p. 93 El-Bekri's description: Il est construit de pierres, dont plusieurs ont à-peu-près 25 emfans de long. Sa hauteur est de 24 toises, tout l'intérieur est disposé en gradins depuis la bas jusqu'au haut. According to the

Arabian tradition, the destruction began about 1695 (according to Coste, p. 245, in 1710). Under Mohammed Bey the Arabs had entrenched themselves here during a revolt, and almost entirely destroyed the upper part of the amphitheatre, in order to hurl down the stones upon the besiegers. After the defeat of the rebels, the bey ordered several arcades of the main entrance on the south to be blown up to the level of the ground, so as to prevent a repetition of such acts. Since then the Arabs have continued the demolition, using the stones to build the houses, tombs and marabouts of the adjacent village of El Djemm; and Rochas says they believe that these stones possess the power of expelling scorpions. There are 68 arches in the elliptical wall of the amphitheatre, and three storeys adorned with Corinthian half-columns, and above was formerly an attic with rectangular openings, corresponding to the axes of the arches beneath them. The style is simple and noble. The interior is so choked with rubbish that it is impossible to determine whether it was used for *naumachiae*. There is indeed an opening in the centre, connected with a subterranean channel, which was probably destined to carry off rain-water. The Arabs allege that this channel extends 8 leagues and communicates with the sea. According to Barth, *Wanderungen durch die Küstenländer des Mittelmeeres*, i, 170 f. a Berber prophetess, who entrenched herself here in the year 73 of the Hejira, and from whom the amphitheatre is called *K'as'r el Kânsa* 'the fortress of the prophetess', is said to have constructed this channel ('along which a great number of horsemen could ride abreast') that she might be able to provision herself from the sea during the siege. Guérin asserts that beneath the arena there is a large vaulted subterranean passage, along which he succeeded in creeping with difficulty about 30 paces, beyond which it was choked up. He thinks it may have led to the cages of the beasts, and he regards (rightly, no doubt) its alleged extension to the sea as fabulous.

Hadrumetum (Sousa). Guérin, i, p. 108, quotes the following passage from El-Bekri (*trad. citée*): Deux autres portes de la ville sont du côté de l'occident et regardent le Melâb. Ce vaste édifice de construction antique est posé sur des voûtes très-larges et très-hautes. . . . Autour du Melâb se trouvent un grand nombre de voûtes, communiquant les unes avec les autres. . . . Ce monument tel que El-Bekri le décrit, était très-certainement (?) un amphithéâtre (Barth, *op. cit.*, p. 154, on the other hand inclines to regard it as a theatre.) Il n'en reste plus aujourd'hui le moindre vestige.

Leptis parva (Lemta). Guérin, p. 127: Les ruines d'un édifice très-considérable . . . sont désignées par les Arabes sous le nom de Henfra-m'ta-sedjen (le fossé de la prison). En réalité c'était jadis un amphithéâtre. Il avait 340 pas de tour, l'arène mesurait 50 pas de long sur 32 de large. Les galeries sont complètement détruites.

On the east coast of Zeugitana between Leptis minor (Lemta?) and Turrus Hannibalis (El Mohedieh?) near a village Dimas an amphitheatre is preserved (43 × 32 metres); it had only one story, and was in the style of that at Philippeville in Algeria. Pellissier, *Lettre à Mr. Hase*, in *Rev. arch.*, i, 814. The same writer (*op. cit.*,

ii, 498) mentions the ruins of a small amphitheatre at Kénais (Tunisia) five miles from Muredina, in the style of that at Dimas.

Thapsus. Guérin, i, p. 130 : . . . plus au sud sont les débris d'un amphithéâtre. Il a 460 pas de tour. L'arène mesurait 62 pas de long sur 44 de large ; elle est cultivée, les gradins n'existent plus.

Oppidum Botrianense or *Ruspae* (now henchir-Badria, Batria or Botria). Guérin, i, p. 161 : j'aperçois d'abord les restes d'un amphithéâtre. Il est aujourd'hui presque entièrement démoli ; la forme néanmoins est encore très-reconnaissable. L'arène, qui est maintenant cultivée, avait 50 pas de long sur 32 de large. Des espèces de contreforts appuyaient la muraille d'enceinte, qui mesurait environ 320 pas de circonférence.

Colonia Suffetula (Sbéitla). Guérin, i, p. 383. L'amphithéâtre . . . est presque circulaire, l'ellipse qu'il détermine, étant peu prononcée. Tous les gradins ont disparu, et il est ruiné de fond en comble. Néanmoins la configuration générale en est encore reconnaissable. Il mesurait 80 pas de long sur 76 de large. *Eph. ep.*, vii, 53 (rep. in *moenibus amphitheatri*).

Oppidum Maclaritanum (henchir-Makter). Guérin, i, p. 409 : L'amphithéâtre construit en blocage mesure seulement 160 pas de tour. Les voûtes et les gradins qu'elles soutenaient, n'existent plus.

Utica (Bou-Chater). Guérin, ii, p. 6 f. : Un vaste amphithéâtre a été pratiqué dans un ravin naturel, qui offrait de lui même par sa forme elliptique celle qui convient à ces sortes de monuments. Tous les gradins ont été enlevés et quelques débris insignifiants subsistent seuls de cette puissante construction. Elle avait environ 360 pas de circonférence, l'arène mesurait 52 pas de long sur 42 de large. Cf. Pellissier, *Lettre à Mr. Hase, 2de partie*, in *Rev. archéol.*, iii, 399, who makes the circumference 266 metres, and Davis, *Carthage and her Remains*, p. 507, according to whom the arena might easily have been flooded.

Thuburbo minor (Tebourba). Guérin, ii, p. 188 : Il ne subsiste plus que la forme encore reconnaissable de son amphithéâtre, dont tous les gradins ont été enlevés, et dont l'arène est actuellement hérissée de broussailles et de cactus.

(*Meraissa*, the name of the ancient city is unknown.) Guérin, ii, p. 214 f. : Creusé dans les flancs d'une colline l'amphithéâtre est, sauf quelques pans de murs, complètement démoli. L'arène mesurait 40 pas de long sur 22 de large.

Putput ? (Souk-el-Abyâd). Guérin, ii, p. 262 : on reconnaît les contours d'un amphithéâtre, dont l'arène mesurait environ 55 pas de long sur 45 de large.

Aurelia Vina (henchir-el-Meden). Guérin, ii, p. 265 : les vestiges d'un amphithéâtre.

Uthina (Oudenah). Guérin, ii, p. 282 f. : Les ruines d'un amphithéâtre. L'arène avait 72 pas de long sur 50 de large. Quatre portes principales donnaient entrée dans ce vaste monument. On avait profité pour le construire d'un bassin naturel formé par un vallon elliptique. Alfonse Rousseau, *Lettre à M. Amédée Jaubert*, in *Revue arch.*, iii, p. 146 : L'amphithéâtre qui est de forme ovale, est placé sur une éminence . . . j'ai estimé sa circonférence 240

pas environ. L'amphithéâtre paraît avoir été creusé par la main d'homme ; son élévation actuelle, qui peut être de 70 m. environ, arrive au niveau du sol. Il ne serait pas impossible qu'il eût servi aussi à des naumachies. . . . Ses restes permettent aisément au visiteur de reconnaître la place des galeries, des tribunes, des vomitoires, etc. Cf. John Jackson, *Account of the Ruins of Carthage and of Udenah in Barbary* (1803), in *Archaeol. Brit.*, xv, p. 151 : 'The (2) principal entrances have been very broad ; there are 16 other entrances for the spectators, 8 on each side, perfectly uniform . . . the whole has been built with hewn stone'.

Seressita (henchir-Oum-el-Abouab). Guérin, ii, p. 356 : La forme de l'amphithéâtre est encore reconnaissable ; mais le monument en lui même est presque entièrement détruit, l'arène mesurait 38 pas de long sur 31 de large.

Tuburbo majus (henchir-el-Kasbah). Guérin, ii, p. 370 f. : L'amphithéâtre . . . dont la forme seule est reconnaissable, car il est presque entièrement détruit, mesurait 206 pas de circonférence, l'arène avait 40 pas de long sur 25 de large. Tous les gradins ont disparu, ainsi que les voûtes qui les soutenaient. Ruinart, *Acta mart.*, p. 78 : 'the martyrdom of SS. Perpetua and Felicitas is transferred by Valesius to Carthage, and by most writers to Tuburbium'. In these *Acta* the amphitheatre is repeatedly called the scene of the martyrdom.

Oea. An amphitheatre must have existed in the town or in its immediate vicinity, according to Apuleius, *Apol.*, c. 98, where he says of his stepson : in ludo quoque gladiatorio frequens visitur, nomina gladiatorum plane quidem aut puer, honeste, ab isto lanista docetur. This is supported by the inscription on a triumphal arch at the place, which was erected by a curator muneris pub. munerarius IIvir qq. flamen perpetuus (*CIL*, viii, 24). Perhaps the spectacles took place in the amphitheatre described by Castiglione, *Mémoire . . . sur la partie orientale de la Barbarie*, p. 18, from the report of an English traveller : à Zavia (Tripoli vecchia) village placé à une journée de marche de Tripoli du côté de Tunis, se trouve un amphithéâtre, qui est encore entier et qui a intérieurement 148 pieds de diamètre.

In these provinces also the most important spectacles must have been those organized by the *sacerdotes provinciae*. *Sacerdotes* and *sacerdotales provinciae Africae* often occur : O. Hirschfeld, *I sacerdoti dei municipii Romani nell' Africa*, *AdI*, xxxviii (1866), p. 69 ff. Because of the spectacles that had to be given the *sacerdotium provinciae Africae* was a great burden (Henzen, 6904 = *CIL*, vi, 1, 1736 [A.D. 362]). That among these were amphitheatral shows is expressly testified by Augustine, *Epp. ad Marcellin.*, 138(5) : Apuleius, cui sacerdoti provinciae permagno fuit, ut munera ederet venatoresque vestiret. These spectacles were at Carthage : *Cod. Theod.*, xii, 1, 145, 176 ; xvi, 10, 20 ; at what intervals they were repeated is unknown, but they took place late in October, probably beginning on the 26th ; cf. Hirschfeld, *op. cit.*, p. 71. Besides these there were evidently very frequently *munera* in the several cities on various occasions. *CIL*, viii, 24 (*Oea*) : curator muneris pub. munerarius IIvir qq. flamen perpetuus. 1270 (*Chisiduo*) : aedilis

(b) THE EAST.

For these provinces I have not only catalogued the scanty records of amphitheatres, but also the notices known to me of amphitheatrical games. Cf. *Programm der Königsb. Universität*, 1860, vi, *De propagatione munerum ac venationum per Graeciam et Orientem*.

ACHAIA.

Corinthus. The only city of Greece in which there is certain proof of an amphitheatre; for the notices of Cyriacus, that an inscription (pp. xviii, 129, *CIG*, 1108) ad amphitheatrum has been found at Sicyon, and another (*CIL*, i, 526) in pariete amphitheatrici at Delphi, are by no means trustworthy. Curtius, *Peloponnes.*, ii, 222 also mentions a small brick building at Sparta, the inner diameter of which is about 100 ft., and the whole 180 ft.; 'it seems to have been an amphitheatre of Roman Sparta, intended for musical and other performances'. Cf. Welcker, *Tagebuch einer griech. Reise*, i, 217 (in Kiepert's map a circular circus in a corner of the Issorion) and ii, 113. Bursian, *Geogr. v. Griechenl.*, ii, 126 regards it as an Odeion belonging to the *temenos* of Dionysos. Pausanias, as Maffei remarks (*Verona illustr.*, iv, p. 59), mentions no amphitheatre in Greece, not even at Corinth, and it must at least remain uncertain whether the one there was yet built in his time. It lies, according to Curtius, *op. cit.*, ii, 527, east of the new town at the foot of the hill, and is 'entirely built into an artificially enlarged depression in the rocky surface, so that one does not see it until one stands immediately above the top of the benches'. Bursian, *Geogr. v. Griechenl.*, ii, 15. Cf. the full description by Vischer, *Erinnerungen und Eindrücke aus Griechenland*, p. 264 f. Curtius thinks that it was already mentioned by Dio Chrysostom, who says (*Or.*, xxxi, p. 591, 78, ed. Dindorf, p. 385) that the Corinthians saw gladiatorial games ἐξω τῆς πόλεως—ἐν χαράδρᾳ τιῇ, πλῆθος μὲν διναμένων δέξασθαι

τόπω, ὅπου αὐτὸ δὲ ἄλλως καὶ ὅπου μηδεὶς ἂν μὴδὲ θάψει μὴδὲνα τῶν ἐλευθέρων. That Dio refers to the place where the amphitheatre stands may be true, but he would hardly have expressed himself thus if the building were already in existence, which according to the *Exp. lat. mundi*, 52 (*Geogr. l. m.*, ed. Riese 118, 19) was an *opus praecipuum* in the fourth century. For the spectacles here cf. also Apuleius, *Metam.*, x, c. 18, where a *thiasus* promises a three days' *munus* at the festival celebrating the beginning of the *quingennalitas*; also Julian, *Epp.*, 35 (the Argives were compelled to contribute to the cost of the gladiatorial games and *venationes* of the Corinthians, who are not ἐς χορήγησιν ἀγώνων γυμνικῶν ἢ μουσικῶν τῶν πολλῶν δέονται χρημάτων. ἐπὶ δὲ τὰ κυνηγία τὰ πολλὰ ἐν τοῖς θεάτροις ἐπιτελούμενα ἀρκτοὺς καὶ παρδάλεις ὠοῦνται). Cf. the inscription of Corinthian *venatores*, CIG, 1106, quoted below in note on ii, 56, 24).¹

Athenae. Lucian, *Demon.*, 57: 'Ἀθηναίων δὲ σκεπτομένων κατὰ γῆλον τὸν πρὸς Κορινθίους καταστήσασθαι θέαν μονομάχων, προελθὼν εἰς αὐτοὺς, Μὴ πρότερον, ἔφη, ταῦτα, ὦ Ἀθηναῖοι, ψήφισθηθε, ἂν μὴ τοῦ Ἑλέου τὸν βωμὸν καθέλητε. When Dio of Prusa delivered his Rhodian oration², gladiatorial games had already been introduced into Athens. Dio, *Orat.*, xxxi, p. 630 R.: οὐκ εὐθὺς τὰ περὶ τοὺς μονομάχους οὕτω σφάδρα ἐξηλώκασιν Κορινθίους, μᾶλλον δ' ὑπερβεβλήκασιν τῇ κακοδαίμονι κἀκείνους καὶ τοὺς ἄλλους πάντας, ὥστε οἱ Κορινθιοὶ μὲν ἔξω τῆς πόλεως θεωροῦσιν ἐν χαράδρῳ τινί, πλῆθος μὲν δυναμένῳ δέξασθαι τόπω, ἡνικαὶ δὲ ἄλλως καὶ ὅπου μηδεὶς ἂν μὴδὲ θάψει μὴδὲνα τῶν ἐλευθέρων, Ἀθηναῖοι δὲ ἐν τῷ θεάτρῳ θεῶνται τὴν καλὴν ταύτην θέαν ὑπ' αὐτὴν τὴν ἀκρόπολιν, οὐ τὸν Διόνυσον ἐπὶ τὴν ὀρχήστραν τιθέασιν· ὥστε πολλάκις ἐν αὐτοῖς τινα σφάττεσθαι τοῖς θρόνοις, οὐ τὸν ἱεροφάντην καὶ τοὺς ἄλλους ἱερεῖς ἀνάγκη καθίζειν. 'In the theatre of Dionysos there runs before the steps on which the thrones stand a marble balustrade of rough construction about 3 ft. 5 in. high, probably dating from the Roman period when gladiatorial games were held in the orchestra'. A. Müller, *Scenische Alterthümer*, in *Philologus*, xxiii, 494. Dio continues, καὶ τὸν εἰπόντα περὶ τούτου φιλόσοφον καὶ νοιθετήσαντα αὐτοὺς οὐκ ἀπεδέξαντο οὐδὲ ἐπήνεσαν, ἀλλ' οὕτως ἔδισχέραν, ὥστε ἐκείνους ὄντα μὲν γένει Ῥωμαίων μηδενὸς ὑστερον, δοῦσαν δὲ τηλικαύτην ἔχοντα ἡλικίαν οὐδεὶς ἐκ πάντων πολλοῦ τετύχηκεν, ὁμολογοῦμενον δὲ μόνον μάλιστα μετὰ τοῖς ἀρχαίοις ἀκολουθῶν βεβιωκέναι τοῖς λόγοις, καταλείπειν τὴν πόλιν καὶ μᾶλλον ἐλεῖσθαι διατρίβειν ἀλλαχόσε τῆς Ἑλλάδος. The philosopher referred to here cannot possibly be Demonax, if the latter's period is to be dated between 50 and 150 or even later. Zeller, *Gesch. d. Philos. d. Griechen*, iii, 1, 691, 6. It might, however, be Apollonius of Tyana, to whom Philostratus, *Vit.* i, 4, attributes a very ancient lineage. *Ibid.*, iv, 22: Διωρθοῦτο δὲ κἀκεῖνο Ἀθήνησιν· οἱ Ἀθηναῖοι ξυνιόντες ἐς θεάτρον τὸ ὑπὸ τῇ ἀκρόπολει προσείχον σφαγαῖς ἀνθρώπων καὶ ἐσπουδάξτε ταῦτα ἐκεῖ μᾶλλον ἢ ἐν Κορίνθῳ νῦν, χρημάτων τε μεγάλων ἐνημέτοις ἦγοντο μοῖχοι καὶ πόρνοι καὶ τοιχωρίχοι καὶ βαλαντιοτόμοι καὶ ἀνδραποδισταὶ καὶ τὰ τοιαῦτα ἔθνη, οἱ δ' ὥπλιζον αὐτοὺς καὶ ἐκέλευον ξυμπέπειν. ἐλάβετο δὲ καὶ τούτων ὁ Ἀπολλώνιος καὶ καλούντων αὐτὸν ἐς

¹ For the plan of the Venetian *Provveditore* F. Grimani to use the amphitheatre of Corinth as a plague lazaretto (1701), cf. Spyr. P. Lampros, *Das korinthische Amphitheater*, in *Mith. d. d. archäol. Instituts zu Athen*, ii (1877), pp. 282-8, with plate xix.

² Marquardt, *StV.*, ¹², 349, 2.

ἐκκλησίαν Ἀθηναίων, οὐκ ἂν ἔφη παρελθεῖν ἐς χωρίον ἀκάθαρτον καὶ λύθρου μεστόν. ἔλεγε δὲ ταῦτα ἐν ἐπιστολῇ. If this happened under Nero, according to the quite untrustworthy narrative of Philostratus, it would be necessary to assume that Demonax only attempted to deter the Athenians from a reintroduction of the spectacle, which had been discontinued for a considerable time.

Megara. *CIG*, 1058 = Lebas-Waddington, ii, 43 (with a few certain restorations of the text: Γάϊον Κούρτιον Πρόκλον . . . Κουρτίου Πρόκλου υἱὸν ἡ βουλὴ καὶ ὁ δῆμος ἀγωνοθέτην Πινθαίων καὶ συστράτηγον καὶ ἀγορανόμον φιλοτιμησάμενον μονομάχων ζεύγη κ— πρῶτον Πανέλληνα (i.e. president of the deputies of Megara to the council of Panhellenes set up by Hadrian. The inscription is of the time of Antoninus Pius).

Plataeae. Apuleius, *Metam.*, iv, c. 13: *Ibi famam celebrem super quodam nomine Demochare munus, edituro gladiatorium deprehendimus. Nam vir et genere primarius et opibus pluribus et liberalitate praecipuus, digno fortunae suae splendore publicas voluptates instruebat. . . Gladiatores isti famosae manus, venatores illi probatae pernicitatis: alibi noxii perdita securitate suis epulis bestiarum saginas instruantes. . . Qui praeterea numerus, quae facies ferarum? Nam praecipuo studio, forensi etiam, advexerat generosa illa damnatorum capitum funera, etc.*

Thessalia. Hither journeys Thiasus, nobilissimas feras et famosos inde gladiatores comparaturus. Apuleius, *Metam.*, x, c. 18.

Larissa. *Id. ib.*, i, c. 7: a pedlar goes there to see a gladiatorium spectaculum satis famigerabile.

MACEDONIA.

Dyrrhachium. *CIL*, iii, 1, 607: . . . gladiatorib. p[aribus] xii edi[dit]. Heuzey et Daumet, *Mission archéol. en Macédoine* (1876), p. 383 (pl. 27, p. 4 and 30): reliefs of gladiators.

Thessalonice. Heuzy, *op. cit.*, p. 274, no. 112 (inscription of 143 A.D.): announcement of three days' *κυνήγια* and *μονομαχίαι*, in accordance with the will and testament of a certain Herennia . . . Hispana, to begin on the 13th of March. Lucian, *Lucius s. asinus*, 49: ὁ δὲ Μενεκλῆς ὁ δεσπότης ἡμῶν . . . ἐκ τῆς Θεσσαλονίκης δεῦρο ἐληλύθει ἐπ' αἰτία τοιαύτη· ὑπέσχετο τῇ πατρίδι θέαν παρέξειν ἀνδρῶν ὅπλοις πρὸς ἀλλήλους μονομαχεῖν εἰδόντων. *Ἀθέατρον* is the scene of the spectacle, in which one of the performers is to be a woman, *ἥτις κατεκέρκιστο θηρίοις ἀποθανεῖν* (52), and the narrator fears *μὴ που ἄρκτος ἢ λέων ἀναπηθήσεται* (53). That there was no amphitheatre here is inferred by Maffei, *Verona illust.*, iv, 67 from the *Acta S. Demetrii* (Mabillon, *Annal.*, cf. Tafel, *De Thessalonice*, p. xlii ff.) where it is said of the gladiatorial games of Maximianus; *illic enim parabatur per quasdam tabulas circulus circumseptus*. Ad. de Longpérier, *Rev. archéol.*, vi, p. 198 describes the *stèle* of a *retiarius* found here. According to the emendation of Kaibel, *De monumentor. aliquot Graecor. carminib.*, p. 40, the inscription runs *Εὐφράτης παῖς ἦλθον, ἐθ' αἱ πλοκαμίδες ἐπῆσαν, Ἐξάκι νικήσας πατρίδ' ἐπηυκλείσα*. Tombstone of a *secutor* in *Mith. d. deutsch. archäol. Inst. in Athen*, x (1885), p. 15, 1: *Τ. Φλαούος Σάτυρος Νεικηφόρος Συνέτου Λακεδαιμονίῳ τῷ καὶ Ναρκίσῳ σεκούτορι τὸ ἡρώων κ.τ.λ.*

Philippopolis. The sepulchral inscription found here, *CIL*, iii, 1,

659 = Orelli, 3746, was erected by a *IIvir et munerarius* to his son ; cf. *CIL*, iii, 1, 660 (muner[arius] iterum [fla]men D[ivi] Vespasi[an]i) Kaibel, *Epigr. Gr.*, 529 : sepulchral inscription of a gladiator—*Βίκτωρ Σκαεῦς* (Scaeva, see note on ii, 57, l. 16). He was of Thessalonica, and fell at the hands of *Πίννας*, who in his turn was slain by the *σύνοπλος Πολυελέης*.

THRACIA.

Constantinopolis. Bock, *L'amph. de Constantinople* (Bruxelles, 1849) assumes, apparently without reason, that the amphitheatre which according to the *Chronicon Paschale*, i, p. 495 was built by Severus at Byzantium (*κυνήγιον* (sic) *μέγα πόντι*) was only a theatre with arrangements for gladiatorial combats. In Codin., *De Signis*, 6, p. 31, ed. Bonn (cited by Suidas, s. *κυνήγιον* : *ἐν τῷ κ. τὸ πρῶτον ἐρρίπτοντο οἱ βιοθάνατοι κ τ.λ.*), mention is made of *Μαξιμῖνος ὁ κτίσας (τὸ κυνήγιον)*. In the old description of the city in Panciroli, *Notit. dign. utr. imp.*, p. 259 the amphitheatre in the *regio secunda* is mentioned (at the end of the Golden Horn ; cf. Fries, *Byzantium*, *SIRE*, i³, 2620). Cf. *Cod. Theod.*, xiv, 6, 5 (419 A.D.) : *inter amphitheatrum et D. Juliani portum per littus maris*. According to Bock, p. 36, the latest mention of the amphitheatre occurs in the twelfth century : Banduri, *Imp. orient.*, ed. Paris, p. 26. Sepulchral relief of a *Samnis* (*Πορλάρις τῷ ἰδίῳ πατρὶ μετὰς χάρις* from the Dardanelles : Gurlitt, *Antike Denkm., etc.*, in *Epigr. archäol. Mitth. aus Oesterreich*, i, 7).

CRETA AND THE OTHER ISLANDS

Creta. Maffei, *Verona ill.*, iv, p. 62, cites a MS. *Trattato dell'isola di Candia* by Onorio Belli Vicentino, who went thither in 1583 as physician to the *provveditore generale* (l'opera è scritta con erudizione e con senno, e non si ha sopra quel paese alle stampe cosa di gran lunga paragonabile). According to Magrini, *Scritture inedite in materie di architettura* (Padova, 1847), p. 10, this treatise is lost ; the two letters of Belli there printed only deal with theatres and temples. He maintained that besides seven theatres he had discovered five amphitheatres, and he gives views of two. Of the one at *Gortyn*, ch'ei rappresenta secondo il costume con pianta affatto simile a quella del Coliseo Romano nel portico raddoppiato e nelle quattro vie diametrali, benchè poi di soli archi 56, dice ch'era tutto di mattoni e senza nissun ornamento d'architettura. L'altro dice ch'era a *Gerapetra* (*Hierapytna*). It is said to be partly hewn out of two hillsides, and completed in elliptical form with six contraforti di muraglia soda senza ornamento. Maffei, who was generally inclined to call in question even the most trustworthy reports on amphitheatres, admitted that this information might be correct, as he relied on the judgment 'd'un uom si intendente e sensato'. The existence of the amphitheatre at *Hierapytna* is confirmed by G. Perrot (*Rev. des deux mondes*, 1864, p. 1004, and *L'île de Crète* [1867], p. 123). It is 60 paces in diameter. No tiers of seats now exist. Bursian, *Geogr. von Griechenland*, ii, 578.

Melos. The statement in *CIG*, 2432 : In Melo in marmore supra amphitheatrum, is hardly worth notice.

Lesbos. Inscription on the common tomb of a gladiator *familia*

at Mitylene (*CIG*, ii, *Add.*, 2194 b, p. 1028): *φαιμία μονομάχων πατρ. (?) Κλαυ. Τριφωνιανού νέου καὶ ἀρχιερείας Ὀρφίας Λαίλιας* [Σ or Ζ] *ωρίου γυναικὸς αὐτοῦ*. Probably Claudius Tryphonianus was a chief priest, and that they provided games in Lesbos, as elsewhere, is shown by inscriptions 2184-94. According to Conze, *Reise auf der Insel Lesbos*, p. 5, there are to be seen in the bell-tower of the castle of Mitylene four stones, each with the figure of an armed gladiator holding his shield before him, and with illegible inscriptions. Two other stones in the same place show sculptures in relief of *bestiarii* fighting with lions. By the *thermae* (where also is the inscription quoted above) there is a stone which beneath the name "Ἐλιξ displays a rude relief of a bull goring a prostrate man. *Ann. d. Inst.*, 1842, *lav. d'agg.* Q. Tombstone of Πολυδρομος, a gladiator *Mith.* d. *Archäol. Instit. zu Athen*, xi (1886), 273, 17.

Thasos. *CIG*, 2164: inscription of the gladiators (*myrmillones* and *essedarii*) of a certain Hecataea, from which, however, it can by no means be concluded that gladiatorial games were held here, as islands (e.g. Cos, *CIG*, 2511) were often chosen for the residence of 'families' of gladiators.

ASIA AND THE OTHER ANATOLIAN PROVINCES.

In the Asiatic countries, as elsewhere, the most important spectacles were those organized by the provincial associations (*Communia*, κοινά) of the separate provinces under the lead and at the cost of the priests who presided over them: cf. Marquardt, *StV*, i², 503 ff., and Kuhn, *Verfassung des Röm. Reichs*, i, 111-115.¹ The last mention of these games is in the year 465, when the gladiatorial combats had long ceased: *Cod. Just.*, l. un. de officio comit. Orientis (*Cod. I.T.*, xxxvi). There is ample evidence that gladiators were exhibited at these games in earlier centuries. A document written by the emperor Alexander Severus (*Cod. Just.*, x, 61) expressly mentions gladiatorial games given by the high priests of the provinces, as does the account of the martyrdom of St. Polycarp (in the year 155; cf. Marquardt, *op. cit.*, p. 514 note), in Eusebius, *Hist. eccl.*, iv, 15, p. 135, 27, ed. Schwegler; Ruinart, *Acta mart.*, p. 42; Rufinus translates *ἀσιάρχης munerarius* (Kuhn, *loc. cit.*). Hence gladiatorial families are often found in the inscriptions as possessions of these priests (*CIG*, 2511, 3213, 3677; ii, 2194b, 2759b). Galen relates that after the completion of his medical studies at Alexandria he was appointed by the high priest of Pergamus (158-164) physician to his gladiators, and employed a new method of treatment: *κατὰ τύχην δὲ πολλῶν τεθνεώτων ἐν τοῖς ἐμπροσθεν ἔρεσιν ἐμοὶ δὲ ὅτε τῶν ὡς εἰρηται τετρωμένων ἀποθανόντος τινὸς οὐτ' ἐξ ἄλλου τραύματος*. In consequence of this, he says he was chosen for the same office by succeeding high priests: *De compos. medicam. p. genera*, lib. iii, cap. 2, ed. Kuehn, v. xiii, p. 599; cf. ed. Kuehn, xiii, 564; xviii B, 561 (which shows that these games took place in summer).

¹ According to Monceaux, *De communi Asiae provinciae* (Paris, 1885), pp. 56-67, the *ἀσιάρχης* was the *ἀρχιερεὺς τῆς Ἀσίας* holding office in the year of the great provincial games, which he organized at his own expense. These games were held at the same periods as the Olympic and Actian games.

The gladiatorial schools were doubtless generally in the cities in which the provincial festivals were held. Such schools were found in fact at Smyrna, Philadelphia, Cyzicus and Pergamus, all cities of this kind; cf. Marquardt, *op. cit.*, p. 513; *id.*, *De concil. et sacerdotibus prov.*, in *Ephem. epigr.*, 1872, p. 209; Monceaux, *l.l.*, p. 38. But citizens of other cities belonging to the festal association were also eligible for the priesthood, and they could keep and train their gladiators at their own places of residence or at other convenient places. If therefore monuments relating to gladiators are found in a place, the most that can be asserted is that there was a school there, but not that gladiatorial games were held there. There is no doubt that in many cities gladiatorial games took place on many other occasions besides the festivals of the provincial associations. On the imperial gladiators in these provinces and in Cyprus, cf. ii, 54, 26 and note.

The following places, arranged according to provinces, are those for which there is evidence of amphitheatral shows or of matters connected therewith.¹

Caria. *CIG*, 2511: *φамиλία μονομάχων καὶ ὑπόμνημα κυνηγεσιῶν Νεμερίου Καστρικίου, Λευκίου, Πακωνιανού, Ἀσιάρχου, καὶ Ἀνρηλίας Σαπφούς, Πλάτωνος, Λικιννιανῆς, ἀρχιερείας, γυναικὸς αὐτοῦ.* Biagi rightly refers this to a common burial-place of the gladiators and *venatores* belonging to the married couple, such as are to be found elsewhere (*CIG*, 3942 and *IRN*, 736 = *CIL*, ix, 465). Presumably the residence of the Asiarch was Halicarnassus, and he had merely chosen the island of Cos as a place of abode or of burial for his gladiators.

Halicarnassus. *CIG*, 2663, inscription of a *retaliarius* regarding gifts which he offered to the goddess Nemesis.

Stratonicea. *CIG*, 2719, inscription of one T. Flavius, Leontis f. Quir. Aeneas, *ἀρχιερατεύσαντος μεγαλοπρεπῶς, ἐν ᾗ ἀρχιερωσίνῃ καὶ μονομαχίας καὶ κυνηγεσίας ἐπετέλεσεν*, according to Böckh of the age of the Antonines. What highpriesthood is here meant is uncertain; cf. Marquardt, p. 513.

Caryanda. The inscription here, mentioning a bull-fight and a *κυνήγιον* is referred by the editor, Lebas-Waddington, 499, to the pre-Christian period.

Mylasa. Cousin and Diehl, *Inscr. de M.* (in *Bull. de corresp. Hellén.*, 1888, p. 11 f.). A very mutilated honorary decree for an *ἀρχιερεὶς* (l. 19 *ἐν τῷ τῆς ἀρχιερατείας χρόνῳ*) who among other things had given gladiatorial games. L. 8: *πάντες τοὺς ὑποπεσόντας μονομά-* (9) *[χου τοῦ]ς τε σὺν τοῖς ἐν ταῖς ἐξοπλάσiais (sic) ἀναλωμέ[το]νοις . . . διὰ τῶν καὶ ἄλλων μονομάχων τριῶν (?) τοῖς μὲν κ.τ.λ., L. 16 . . . διδαχῇ ποιικλῇ καὶ ἐκ παντὸς ὀπλισμοῦ διακρί[τους(?)] . . .*

Miletus. *CIG*, 2880, inscription of a prophet of the temple of Branchidae, a son *ἀρχιερέων τῶν Σεβαστῶν* (probably = Asiarchs, cf. Marquardt, *loc. cit.*) *ποιησάντων θεωρίας ἐπὶ ἡμέρας δέκα καὶ μονομαχίας ἀποτόμους ἐπὶ ἡμέρας δεκάδιό* (Also in *CIG*, 3422 a wild beast fight is praised as *ἀπότομος*, as in the inscription at Minturnae, *CIL*, x, 6012, see vol. ii, 83, l. 37. *CIG*, 2889 contains a list of three *murmillo*nes, two *Thraeces* and one gladiator who fought from a chariot, belonging apparently to two masters, Samia and Eucarpus;

¹ As the documents are mainly taken from the *CIG*, I follow the order of that collection.

the numbers of their victories (NI) and crowns (ΣΤ) are added to their names; ΕΛΕΤ which occurs twice does not, I think, denote ελεύθερος (Böckh) but ἐλευθερωθεῖς (liberatus); see note on ii, 51, l. 26). An epitaph: Ἀβάσκαντε πρωβοκάτωρ χρηστὲ χαῖρε. Rayet, *Inscr. inéd. d. trouvées à Milète*, in *Rev. archéol.*, N.S., xv, 28 (1874), p. 112.

Tralles. Inscription in a burial-place for gladiators: Μονομάχαι Ποπλίου Λουκίλου Πεισιωνίνου. Lebas-Waddington, 615. Epitaphs on individual gladiators, CIG, 2942 b and c = Kaibel, *Epigr. Gr.*, 290 and 291.

Nysa. The amphitheatre, described by Strabo, xiv, p. 639, lay, like that of Corinth, ἐν χαράδρῳ.

Aphrodisias. CIG, ii, *Add.*, p. 1109, no. 2753 b: φαμίλια Ζήνωνος τοῦ Ὑψικλέους τοῦ Ὑψικλέους τοῦ φύσει Ζήνωνος Ὑψικλέους, ἀρχιερέως, μονομάχων καὶ καταδίκων καὶ ταυροκαθαπτῶν. Texier, *Asie mineure* (Didot, 1862), p. 647: à l'une des extrémités (of the *stadion*) on voit a fleur de terre un mur circulaire, qui paraît avoir formé un petit amphithéâtre, dont la construction est du temps de la décadence. Je ne mentionne ce fait que parceque j'ai trouvé de semblables constructions dans deux autres stades que j'ai mesurés sur les côtes d'Asie, celui de Perga et celui d'Aspendus. I am indebted to my colleague G. Hirschfeld for this notice.

Lydia. Smyrna. CIG, 3123: φαμίλια μονομάχων Λ. Τιμῶνος Ἀσιάρχου νεωτέρου; also inscriptions of individual gladiators: 3275 (*retiarum*); 3291 ἱπποδιώκτης seems to be rightly taken by Böckh for a gladiator); 3368; 3374 (*Thraeces*); 3392 (*murmiliones*). Also a relief, found in Spiegelthal's excavations, a wild-beast tamer with a panther (*Programm der Acad. Alb. Regim.*, 1860, vi) seems to have been found near Smyrna. A representation of *venationes* and gladiators ("Ἰστρος, Εὐρώτας) in the Conzenbach collection. Stark, *Nach d. griech. Orient*, pp. 173 ff., 374 ff. Keller, *Thiere d. klass. Alterth.* p. 70. According to Eusebius the martyrdom of St Polycarp took place in the στάδιον (according to Jerome *De viris illustribus*, xvii, ed. Villars ii, 858, in amphitheatro). Maffei, *Degli anfit.*, p. 91: Equivoco però prese, com'è solito, nelle reliquie d'antichi edifizj Tomaso Smith, che nelle notizie delle chiese d'Asia disse vedersi a Smirna avanzi di tale anfiteatro.

Philadelphia. CIG, 3422 (apparently of the age of the Aurelian emperors):—ἀρχιερασάμενον καὶ δόντα κοντροκυνηγέσιον ἐνόδῳ γον ἀπότομον ἐκ θείας φιλοδωρίας. Francke explains rightly as I think: fight of a single wild beast fighter or of several individuals with one beast each, the men being armed with κοντάρια or hunting javelins. Cf. p. 180.

Cyzicus. Texier, *Description de l'Asie mineure*, ii, p. 174: Une rivière qui prend sa source dans un des acrotères du Dindymon, forme à l'ouest une vallée assez profonde, sur laquelle est placée l'amphithéâtre, qui s'appuie sur les deux mamelons inférieurs. Il n'est guère possible que dans l'antiquité ce ruisseau ait eu un autre cours; par conséquent il passait sous l'arène de l'amphithéâtre, ce qui me porte à penser qu'elle était construite en bois. . . . Les vomitoires sont au nombre de 32; la plupart de ceux du rez-de-chaussée sont encore conservés; ils sont construits en blocs de granit à bossage; mais cet ouvrage est très-peu soigné, et annoncerait

plutôt l'époque de Gallien, qui celles des Antonins . . . cet édifice est indigne de la renommée de Cyzique. Il n'y avait pas de portique extérieur ; les vomitoires conduisaient directement aux précincts. Plate 106 gives a view (Il ne reste plus dans l'intérieur que les massifs que supportaient les gradins. . . . L'amphithéâtre de Cyzique ressemblait beaucoup, comme disposition, à celui de Fréjus). Perrot and Guillaume, *Explor. de la Galatie et de la Bithynie*, p. 74 : On distingue encore deux rangs d'arcades superposées. The building was erected in haste, chiefly with older materials including *stelae*, the examination of which gives the date of erection at about the middle of the third century, at which time the Romanization of the city had proceeded very far, as is shown by the extant lists of names. On the exterior it seems not to have had the slightest architectural ornament, yet it was one of the largest amphitheatres. According to Texier (ii, 227) the amphitheatres of Cyzicus and Pergamus are the only ones in Asia Minor. The ruined circus which could be flooded, mentioned by Marquardt (*Kyzikos*, p. 148) is probably the amphitheatre. *CIG*, 3677 monument of a *familia* of gladiators belonging to an Asiarch, Aurelius Gratus and his wife, who was a highpriestess. Inscription of a *Thraex* in *Rev. arch.*, 1846, 2 ff. Epitaph on a certain Danaus δεύτερος πάλος Θρακων (ἐννεάκις πυκτεύσας ᾤχετο εἰς Ἀθήναι). Lebas-Waddington, 1757.

Mysia. *Pergamus*. Detailed description of the amphitheatre in Texier, ii, pp. 227-230, cf. pls. 120, 121. The natives call the ruin Gun-ghel-mess, i.e. le jour n'y vient point, à cause des galeries souterraines. . . . Il est établi sur un ravin profond, dans lequel coule un ruisseau qui forme un des affluents du Selinus ; all this proves that the arena could be flooded. It has the same proportions as that of the small amphitheatre at Cimiez (Cemenelum), an indication of the unpopularity of amphitheatral shows in Asia Minor. There are no traces of stone benches, although the rock-walls on both sides of the ravine are slightly cut into steps ; probably the wooden benches rested on these steps. L'édifice est bâti avec une simplicité toute rustique ; mais . . . dans son ensemble cet amphithéâtre devait présenter une belle et sévère composition. Cf. Donaldson, *Architectura numism.*, p. 149. Welcker, *Tagebuch einer griechischen Reise*, ii, 195, also the passages from Galen cited above (p. 246), and Aristides, *Orat.*, xxv, p. 324, ed. Jebb : θεωρία τις ἦν ἐν τῇ πόλει πάνυ λαμπρά, ἥ ταύρων θήρα μοι δοκεῖν ἦ τι τοιοῦτον. Epitaph on a gladiator, Kaibel, *Epigr. Gr.*, *Add.*, 333 a.

Phrygia. *Laodicea ad Lycum*. *Cic.*, *Ad Attic.*, vi, 3, 9. *CIG*, 3935 : Νεικόστρατος Λευκίου τοῦ Νεικοστράτου νεώτερος τὸ ἀμφιθέατρον λευκόλιθον ἐκ τῶν ἰδίων ἀνέθηκεν . . . καθιερώσαντος Μάρκου Οὐλπιανοῦ τοῦ ἀνθυπάτου (father of the emperor, 79 A.D.). Cf. 3936 and 3982 : μνημα μονομάχων τῶν δοθέντων ὑπὸ ἀρχιερέως καὶ στεφανηφόρου Διοκλέους τοῦ Μηραφίλου.

CIG, 3905 is said to have been found at *Hierapolis* 'inter rudera amphitheatri'. Kaibel, *l.l.*, 389 (epitaph) εἰδείω ἀνδρὶ θηροτρόφῳ.

CIG, 3847 b (vol. iii, *Add.*), of uncertain origin, ascribed to the city of *Nacolea*, contains the words κυνῆγιον πολυτελὲς καὶ παρὰδοξον.

Bithynia. *Nicaea*. *CIG*, 3674 (monument to a *retiarus*), probably also the similar inscription 3675. Cf. Nicomedia.

Nicomedia. Pliny, *Epp. ad Traj.*, 31 sq.: to Trajan regarding the criminals who were condemned in *ludum* here and at Nicæa. See vol. ii, 44, l. 14.

Galatia. *Ancyra.* On the left door-post of the temple of Augustus is a list (CIG, 4093) of the five years' games which Γαλατῶν τὸ κοινὸν ἱερασάμενον θεῷ Σεβαστῷ καὶ δεῖ 'Ρώμῃ held in honour of the Emperor. The names written before the several years are those of the Galatarchs. The principal festivities mentioned are public banquets (δημοθουναίαι), spectacles (θεαίαι), gymnastic and gladiatorial contests, wild beast baiting, bull-fights (θηρομαχίαι, ταυρομαχίαι, ταυροκαθάψια). At the first festival, which, according to the probable supposition of Franz, took place in the year 10 A.D., the giver of the entertainment provided μονομάχων ζεύγη τριάκοντα and κινήγιον ταύρων καὶ θηρίων. Gladiators fought also at the third, fourth and fifth festivals, but the numbers of the pairs are not stated. CIG, 3847 b = Lebas-Wad., 1011: κινήγιόν τε πολυτελές καὶ παράδοξον μετὰ πάσης σπουδῆς παρασχόμενον.

Paphlagonia. *Amastris.* Lucian, *Toxaris*, 57s., makes the Scythian Sisinnus fight here with a gladiator for a prize of 10,000 *drachmae*, in order to support his friend. A wild beast baiting precedes the gladiatorial combat. See vol. ii, 49, l. 1.

Pontus. *Sinope.* The inscription of a Pontarch, CIG, 4157 (for Franz's restoration p. 4 πο[ντάρχης] is undoubtedly right) mentions ταυροκαθάψια καὶ κινήγισιον καὶ — — — μαχίαν.

Lycia. [*Xanthus.* Remains of an alleged amphitheatre, see *Monum. d. Inst.*, iv, pl. 2. Cf. *AdI*, 1844, p. 134. But according to G. Hirschfeld this statement is based on an error. In Spratt and Forbes, *Travels in Lycia, etc.* (London, 1847) there is no trace of it, either in the text (i, 13) or plan.]

Telmisos (Makri). Tombstone of a *retaliarius* with the inscription: Ἑρμεῖ Παιτραεΐτης μετὰ τῶν συγκελλαρίων. (There was therefore certainly a school for gladiators there.) Benndorf-Niemann, *Reise in Lykien und Karien*, pp. 41 and 157.

Pisidia and Lycania. *Sagalassus.* CIG, 4377 (epitaph in the form of a eulogy):—

πάντη μὲν κῦδος Τερτύλλου . . .
 ἐκ τε σοφῶν ἔργων ἐκ τ' ἀγαθῶν πατέρων.
 νῦν δ' ἔτι που καὶ μᾶλλον, ἀρηιφίλων ὅτε φωτῶν
 τόσσην ἐν σταδίοις ἐστόρεσεν στρατιῇν,
 ἀρκτοὺς παρδάλιδας τε κατέκτανεν ἡδὲ λέοντας
 σφῶν κτεάνων πάτρην πρεσβυτέρην θέμενος.

Εστόρεσεν is Franz's restoration, for ΕΞΕΝ which is said to be the reading on the stone; perhaps, however, it has been copied erroneously and should be ἐστόλισεν. With O. Müller, Welcker and Franz, one can understand στάδιον to include an amphitheatre such as is mentioned in the case of Aphrodisias.

Antiochia Pisidiae. Henzen, 6156 = *CIL*, iii, 1, 293: Cn. Dottio Dotti Marullini fil. Ser. Planciano patr. col. flam. IIvir IIqq. vir muner. II (munerario iterum) et agonothes. perp. certam. qq. talant. asiarch. templ. splend. civit. Ephes. etc.

Iconium. Ammianus, xiv, 2: (Isauri) apud Iconium Pisidiae

oppidum in amphitheatrali spectaculo feris praedatricibus objecti sunt.

Pamphylia. *Perge* and *Aspendus*: cf. remarks on Aphrodisias above.

Cilicia. *Aegae*. Philostrate, *Vit. Apoll.*, II, xiv, ed. Kayser, p. 31, 21 makes Apollonius say: *φώκη μὲν, ἣν εἶδον ἐγὼ ἐν Αἰγαίᾳ καθειρμένην εἰς κυνήγια, οὕτως ἐπέβησεν ἀποθανόντα τὸν σκύμνον, ὃν ἐν τῷ οἰκίσκῳ ἀπεκύθησεν, ὥς μὴ προσδέξασθαι τριῶν ἡμερῶν σίτον, καίτοι βορωτάτῃ θηρίῳ οὕσα.* 'According to the *Acta S. Thallelaei* (*Acta Sanctorum Maii*, T. v, p. 14* [20 May], St. Thallelaeus was thrown to the wild beasts in the στάδιον here; the place is also called τὸ θέατρον.' Jordan.

Tarsus. The martyrs Tarachus, Probus and Andronicus are said to have suffered here in the year 304. *Acta Mart.*, ed. Ruinart (1731), p. 391: ὁ ἀνοσιώτατος Μάξιμος (governor of Cilicia) μετακαλεσάμενος Τερεντιανὸν Κιλικάρχη, αὐτὸν φιλοτιμῶν (?) ἐκέλευσε τῇ ἐξῆς πάνδημον θέαν ἐπιτελεῖν τῶν κυνηγίων τῇ πόλει. Καὶ ὁ Τερεντιανὸς παραχρῆμα τοῖς ἐφεστώσι τῶν θηρίων ἐτοίμοις γίνεσθαι διέταττεν. Ἡρώας δὲ γενομένης πᾶσα ἡ πόλις σὺν γυναιξὶ καὶ παιδίοις ἐξῆρσαν ἐπὶ τὸ στάδιον· ἦν γὰρ ὁ τόπος τοῦ θεωρίου τοῖτοισι ἀπὸ μῆλλου μικρὸν πλεονος ἐνός· πληρωθέντος δὲ τοῦ ἀμφιθέατρος τῶν ὄχλων κ.τ.λ.

SYRIA WITH PHOENICIA AND PALAESTINA.

Antiochia. An amphitheatre, alleged to have been built by Caesar on the acropolis (Malalas, p. 217, 91, V) is said to have been turned by Valens into a place for wild beast fights, and to have been destroyed by Theodosius. O. Mueller, *Antiq. Antiochenae*, p. 79 (ii, 2, note 10). But there seems to have been more than one amphitheatre: Libanius, *Orat. Antioch.* (i, p. 345 Reisk): *τις δ' ἂν ἐφίκοιτο διεξίτων ἑτέρα θεάτρων εἶδη, τὰ μὲν ἀθληταῖς ἐναγωνίασθαι πεποινημένα, τὰ δ' ἀνδράσι πρὸς θηρία*; Gladiators must have appeared at Antioch a few years after Constantine's prohibition of bloody spectacles (325), as Libanius, who was born about 314, boasts (*De vita sua*, p. 3, ed. Morell.) that at the age of 15 he despised this spectacle. He often mentions gladiatorial games, as in *Epp.*, 218 (cf. 220), where he laments that his cousin had wasted his fortune with the purchase of beasts and beast-baiters. Other passages are cited by Gothofredus, *ad Cod. Theodos.*, xii, 1, 103 (wild beast fights more popular at Antioch than the shows of the theatre or the race-course: *Epp. ad Caesarium*, 1454 Wolf. Kuhn, *op. cit.*, i, 113). He accuses Tisamenus of having brought an entertainer from Beroea to Antioch with all the apparatus of beast-baiting (*In Tisam.*, ed. Reisk., ii, p. 447). That the prohibited certamina pugilum in which the Caesar Gallus took delight at Antioch (Amman., xiv, 7, 3) were gladiatorial games, as Lipsius thought, has been rightly contested by Valesius, *op. cit.*, and Gothofredus, *ad cod. Theodos.*, xv, 13, 1.

Phoenicia. *Berytus*. Agrippa, king of the Jews, built an amphitheatre here, in which he caused two troops of 700 criminals each to fight one another (Josephus, *Ant. Jud.*, xix, 7, 5). At the same place Titus had a large number of Jewish prisoners killed in a gladiatorial show (*B.J.*, vii, 3, 1). Josephus does not say that this took place in an amphitheatre; and Maffei, *Degli anf.*, p. 85, supposes that Agrippa's amphitheatre was only of wood. Gothofredus

remarks (*ad cod. Theodos.*, xv, 12, 1) that it is no accident that Constantine's prohibition of bloody spectacles (325) was published here.

Palaestina. *Tiberias.* 'The ruins of an amphitheatre are still to be seen in the neighbourhood'. K. Furrer, *Wanderungen durch Palästina* (1865), p. 316.

Caesarea. Herod built an amphitheatre here, πολλὸν δχλον δέχεσθαι δυνάμενον καὶ κείμενον ἐπιτηδείως ἀποκτείνειν εἰς τὴν θάλατταν. Josephus, *Ant. Jud.*, xv, 9, 6. He there celebrated the periodic ἀγών, which he founded (Ol. 192 = 8 B.C.) in honour of Augustus, παρεσκευάκει δὲ πολὺ πλῆθος μονομάχων καὶ θηρίων, ἱππων τε δρόμον καὶ τὰ πολυτελέστερα τῶν ἐν τῇ Ῥώμῃ καὶ παρ' ἄλλοις τισὶν ἐπιτηδεύματων. Cf. *B.J.*, i, 21, 8; vii, 2, 1; vii, 3, 1, and Euseb., *De Martyr. Palaest.*, iv, 13, *Acta mart.*, ed. Ruinart, p. 283.

Hierosolyma. Joseph., *Ant. Jud.*, xv, 8, 1: παρασκευὴ δὲ καὶ θηρίων ἐγένετο (at the celebration of the above-mentioned ἀγών) λεόντων τε πλειστων αὐτῷ συναχθέντων καὶ τῶν ἄλλων, ὅσα καὶ τὰς ἀλκὰς ὑπερβαλλούσας ἔχει καὶ τὴν φύσιν ἐστὶ σπανιώτερα· τούτων αὐτῶν τε πρὸς ἄλληλα συμπλοκαὶ καὶ μάχαι πρὸς αὐτὰ τῶν κατεγνωσμένων ἀνθρώπων ἐπετηδεύοντο, τοῖς μὲν ξένοις ἐκπληξίς ὁμοῦ τῆς δαπάνης καὶ ψυχαγωγία τῶν περὶ τὴν θέαν κινδύνων, τοῖς δ' ἐπιχωρίοις φανερά κατάλυσις τῶν τιμωμένων παρ' αὐτοῖς ἐθῶν. Maffei, *op. cit.*, p. 75 considers that these two amphitheatres were also built of wood. Oros., vii, 30, 5, ed. Zangemeister = p. 546 Hav.: (Julianus) amph. Hierosolymis extrui iussit. As Zangemeister observes, the source of this statement is unknown; for it is not in the authors used here by Orosius, viz. Jerome, *Chron.*, 2379; Eutrop., x, 16; Rufinus, *H.E.*, x, 36.

Canatha. An amphitheatre here is mentioned in the inscription CIG, 4614.

Gerasa. The foundations of an elliptic amphitheatre without the city were seen by Count Bertou, *BdI*, 1837, p. 166. R. Dörrens, *Das Báb-el-Ammán in Gerasa* (Erbkam, *Ztschr. f. Bauwesen*, xvi, p. 350) mentions two amphitheatres.

Hiericus (Jericho). After Herod's death (4 B.C.) Σαλώμη καὶ Ἀλεξὰς συναγαγόντες τὸ στρατιωτικὸν εἰς τὸ ἀμφιθέατρον τὸ ἐν Ἱεριχοῦντι πρῶτον μὲν ἐπιστολὴν ἀνέγνωσαν πρὸς τοὺς στρατιώτας γεγραμμένην κ.τ.λ., Josephus, *A.J.*, xvii, 8, 2; *Id.*, *B.J.*, i, 33, 8: Σαλώμη . . . συνήγεν αὐτοὺς (τοὺς στρατιώτας) εἰς ἐκκλησίαν μετὰ τοῦ λοιποῦ πλῆθους ἐν τῷ καθ' Ἱεριχοῦντα ἀμφιθέατρῳ.

ARABIA.

Bostra. From the time of Trajan the location of the legio III Cyrenaica (Lebas-Wadd., p. 461). Wetzstein, *Reisebericht über Haurán und die Trachonen*, p. 59, mentions amphitheatres at S'uhbe and Bosrá. (Burckhardt, *Reise in Syrien*, p. 368 ff., where the ruins of the latter city are described, mentions no amphitheatre.) Inscriptions in the amphitheatre at Bosrá, Mordtmann in *N. Rhein. Mus.*, 1872, p. 148.

AEGYPTUS.

Alexandria. The amphitheatre in the suburb Nikopolis must have been built immediately after the occupation of Egypt by the

Romans in 724, as Strabo, who was in Egypt in 730, already knows it. (xvii, p. 795: ἀμφιθέατρον καὶ στάδιον καὶ οἱ πεντετηρικοί ἀγῶνες [see note on vol. ii, p. 113, l. 35] ἐκεῖ συντελοῦνται.) There was also an imperial school for gladiators here as early as the time of Augustus (see note on vol. ii, p. 54, l. 14). It was from this amphitheatre that the *papyrus amphitheatre*, so called a *confecturae loco*, Pliny, *N.h.*, xiii, 75 and 78, took its name (Birt, *D. antik. Buchwesen*, 248). Josephus, *B.J.*, ii, 18, 7: καὶ δὴ τῶν Ἀλεξανδρέων ἐκκλησιαζόντων περὶ ἧς ἐμελλον ἐκπέμπειν πρεσβείας ἐπὶ Νέρωνα, συνερρήσαν μὲν εἰς τὸ ἀμφιθέατρον ἄμα τοῖς Ἕλλησι συγχοί Ἰουδαίων.

CYRENAICA.

Cyrene. Beechey, *Proceedings of the Expedition to explore the N. Coast of Africa from Tripoli eastward 1821 and 1822* (1828), p. 529. The amphitheatre seems to have been circular, and the diameter of the arena more than 160 ft. The entrance was from above, and the seats on the slopes of the hill, as at Ptolemais. P. 530: 'The seats seem to have occupied a space of above 80 feet in depth; if we reckon the level space (or platform) inclosing the amphitheatre at 20, the whole building will have stood upon 300 feet of ground'. It seems to have had no subterranean rooms. C. Pachó, *Voyage d. l. Marmarique*, pls. 52, 53 gives representations of beast-baitings and gladiators in the necropolis.

Ptolemais (Ptolemeta). Beechey, *op. cit.*, p. 381: 'The amphitheatre has been chiefly excavated in the quarry in which it stands, and a small portion of it only has been built, where the rock could not be made to serve. There appear to have been no interior communications, and the approach to the seats was probably from above as well as from below by means of the staircases between the several cunei only, no passage being anywhere observable'. The diameter of the whole building (which, it appears, was circular, like the last, including the arena and the seats is about 250 ft.

Berenice, *CIG*, 5362: Δέκιμος Οὐαλέριος Γάλου υἱὸς Διονύσιος τοὺς οἴκους ἐκονίασεν καὶ τὸ ἀμφιθέατρον κατεσκεύασε τοῖς ἰδίῃς δαπανήμασιν Βερενικῶν τῷ πολιτεύματι *Id.*, 5361: Ἐτους νῆ Φαῶφ κε a monument raised by the Jewish community to a certain Μάρκος Τίττιος Σέξτον υἱὸς Αἰμιλία—παραγενθῆς εἰς τὴν ἐπαρχίαν ἐπὶ δημοσίων πραγμάτων κ.τ.λ., which is to be set up εἰς τὸν ἐπισημότατον τόπον τοῦ ἀμφιθέατρον. Böckh considers that the first year of the local era was 67 B.C., so that the date of the decree is 22 Oct. 13 B.C.

DIMENSIONS OF 71 AMPHITHEATRES.

The following measurements, even when they are given for the internal as well as the external axes, cannot give more than an approximate idea of the size of the buildings. For, in spite of apparent precision, the various measurements of the same amphitheatre hardly ever agree. Taking, for instance, the amphitheatre at Thysdrus, we find that Pellissier gives the following dimensions of the long and short axes of the whole building: 137.65 metres, 115.90 m.; Pelet gives 130.35 m. and 119.53 m.; Coste 150 m. and 130 m.; Guérin, 149 m. and 129 m. For the amphitheatre at Puteoli

Pelet gives the following dimensions of the axes of the building and of the arena: 190·95 × 144·87 and 111·95 × 65·85, which are greater than the corresponding dimensions of the Colosseum. On the other hand, Beloch, *Campanien*, p. 138 gives: 147 × 117 and 72 × 42, with the remark that the larger dimensions commonly given are false. I have in every case reduced the measurements to metres, following the tables in Silber, *Die Münzen, Masse und Gewichte aller Länder der Erde*. The measurements marked P are taken from Pelet, *Description de l'amphithéâtre de Nîmes*, 54, and the rest from the most trustworthy sources cited in the foregoing list.

XXXVII. THE PERFORMANCE OF COMEDIES UNDER THE LATER EMPIRE.

(Vol. II, p. 95, 2 lines from bottom.)

Down to the beginning of the second century the performance of comedies is attested by Quintilian and Juvenal (*e.g.* 5, 157). The continuance of the practice in that century is proved by M. Antonin., *Comm.*, xii, 36, where a *κωμῳδός* is mentioned as playing in a five act comedy (*τὰ πέντε μέρη*; Epictet., *Diss.*, i, 24, 17: *περὶ τρίτον ἢ*

¹ From Gsell-Fels, *Oberitalien* (1872), p. 1, 144.

τέταρτον μέρος, in the third or fourth act). Cf. also Phrynichus, p. 163 Lobeck, s. θυμέλην—: ἐνθα μὲν κωμῳδοὶ καὶ τραγῳδοὶ ἀγωνίζονται λογιὸν ἐρεῖς· ἐνθα δὲ οἱ αἰλῆται καὶ οἱ χοροὶ ὀρχήστραν· μὴ λέγε δὲ θυμέλην. For the beginning of the third century cf. Dio, lxxvii, 12 : οὐδ' ἐν ταῖς κωμῳδαῖς οἱ ποιηταὶ ἐτι αὐτῷ (Getae nomine) ἐχρῶντο, where the ποιηταὶ can only be adapters of older pieces for the stage. The passage lxxix, 2 : ὥσπερ γὰρ προσωπεῖον τι ἐς τὰ θέατρα ἐν τῷ διακένῳ τῆς τῶν κωμῳδῶν ὑποκρίσεως εἰσέφερετο (read εἰσφέρεται) κ.τ.λ. . . . is not clear. Most of the texts cited by Welcker, *op. cit.*, p. 1477 ff., are too vague to serve as proofs for contemporary public performances of entire comedies. Evidence for the fourth century is found in Donatus, *Ad Andr.*, iv, 3 : sive haec (persona feminea) personatis viris agitur, ut apud veteres, sive per mulierem, ut nunc videmus, where one can hardly suppose that mimes are meant. For the beginning of the fifth century, Augustine, *C.D.*, ii, 8 (*op. cit.*, p. 1481) : et haec sunt scenicorum tolerabiliora ludorum, comoediae scilicet et tragoediae, hoc est fabulae poetarum agenda in spectaculis, multa rerum turpitudine, sed nulla saltem sicut alia multa (mimes) verborum obscenitate compositae. *Id.*, *Epp.*, 202 : tot locis pingitur, funditur, tunditur, sculptur, legitur, cantatur, saltatur Juppiter adulteria tanta committens. *Cantatur* refers to the tragic actors, *sallatur* to the pantomimes, *agitur* suggests the comic actors in such pieces as the *Amphitruo* of Plautus (the acting of which at this period is not however proved by Arnob., vii, 33), but the word may merely refer to mimes and Atellan actors.

XXXVIII. THE PERFORMANCE OF TRAGEDIES UNDER THE LATER EMPIRE.

(Vol. II, p. 97, l. 16.)

EVIDENCE, in my opinion irrefutable, for the really dramatic performance of tragedies at Smyrna under Antoninus Pius is afforded by Philostratus, *Vitt. Sophist.*, i, 25, 3, ed. K., p. 229 (cf. Suidas, s. ἐφίεναι) : ὑποκριτοῦ δὲ τραγῳδίας ἀπὸ τῶν κατὰ τὴν Ἀσίαν Ὀλυμπίων, οἷς ἐπεστάται ὁ Πολέμων ἐφίεναι φήσαντος, ἐξελαθῆναι γὰρ παρ' αὐτοῦ κατ' ἀρχὰς τοῦ δράματος κ.τ.λ. In Lucian, *Nigrin.*, c. 8 : ἤδη τραγικοὺς ἢ καὶ νῆ Δία κωμικοὺς φαῖλους ἑώρακας ὑποκριτάς, τῶν συριττομένων λέγω τούτων καὶ διαφθειρόντων τὰ ποιήματα καὶ τὸ τελευταῖον ἐκβαλλομένων, καίτοι τῶν δραμάτων πολλάκις εὐ ἐχόντων τε καὶ νενικηκότων, one might think of the representation of single scenes from dramas which had won prizes in earlier times. Also in Pausanias, i, 3, 2 : τοῖς πολλοῖς . . . ὅποσα ἤκουον εὐθὺς ἐκ παίδων ἐν τε χοροῖς καὶ τραγῳδαῖς πιστὰ ἡγουμένοις the word τραγῳδαῖς might be interpreted as recitals of single choric scenes by τραγῳδοί, just as in the numerous passages quoted in Welcker's *Die Griechische Tragödie*, which do not prove the performance of entire tragedies. Cf. e.g., Philostratus, *l.l.* ; Dio Chrysost., *Or.*, xxiii, p. 336, 15 and Welcker, *op. cit.*, p. 1319. The passage in Dio Chrys., *Or.*, xix, p. 261, reads with the correct punctuation given by Welcker p. 1320 : καὶ τὰ γε πολλὰ αὐτῶν (the words recited by actors) ἀρχαῖά ἐστι καὶ πολὺ σοφωτέρων ἀνδρῶν ἢ τῶν νῦν· τὰ μὲν τῆς κωμῳδίας ἀπαντα, τῆς δὲ τραγῳδίας τὰ ἰσχυρά, ὡς εἴκοι, μένει· λέγω

δὲ τὰ λαμβεία · καὶ τούτων μέρη διεξέλασιν ἐν τοῖς θεάτροις · τὰ δὲ μαλακώτερα ἐξεβρόνκε τὰ περὶ τὰ μέλη. Perhaps by μέλη Dio only meant the choruses, which indeed had no existence in the later comedy, and had begun to be abandoned in tragedy centuries before Dio's time, for the lists of τεχνίται appearing in the Σωτήρια, or commemorative festival at Delphi, soon after its foundation in 279 B.C., show that even at that time the tragic companies only consisted of three actors with a flute-player and a διδάσκαλος (Lüders, *Die Dionys. Künstler*, p. 112 ff.; Anhang, no. 112). The recitation of the iambic pieces is designated as λέγειν as well as εἶδεν, and was therefore probably a kind of recitative; cf. vol. ii, p. 337 ff.; Plutarch, *De sera num. vind.*, c. 11: τῆς Ἰνούς καὶ ἐν τοῖς θεάτροις λεγοῦσθαι ἀκούομεν; followed by an iambic passage. On the other hand, Lucian, *Saltat.*, 27, says of the tragic actor: ἐνὶ οἷς καὶ περὰ δὴ τὰ λαμβεία καὶ τὸ δῆλοισχιστον μελωδῶν τὰς συμφορὰς καὶ μόνης τῆς φωνῆς ὑπεύθυνον παρέχων ἑαυτὸν. Sueton., *Nero*, c. 46: observatum etiam fuerat, novissimam fabulam cantasse eum publice Oedipodem exulem atque in hoc desisse versu: Θανεῖν μ' ἄνωγε σύγγαμος, μήτηρ, πατήρ. Also the passage in Libanius, iii, p. 375, ed. Reiske, cited by Welcker, p. 802, and by P. E. Mueller, *De gen. aev. Theodos.*, ii, p. 137, as showing the continuance of the acting of tragedies, is no proof that entire plays were put on the stage: λέγε δὲν κεκλείσθαι τοῖς ὑποκριταῖς τὸ θέατρον, ἵνα μὴ τραγωδὸς εἰσελθὼν Πασιφάνη μυθήσῃται τὴν ἐξοκειλάσαν εἰς ἀλλόκοτον ἔρωτα, μηδ' αὐτὴ κωμωδὸς τὰς παρὰ Μενάνδρῳ τικτούσας καὶ πολλὰ ἕτερα.

XXXIX. ON THE FREQUENT USE OF FAMOUS ARTISTS' NAMES.¹

(Vol. II, p. 107, line 12 from bottom.)

THE well-known passage in Seneca, *Q.n.*, vii, 32, 3: at quanta cura laboratur, ne cujus pantomimi nomen intercidat? stat per successorum Pylades et Bathylli domus, harum artium multi discipuli sunt multique doctores, was interpreted by Scaliger on Euseb., 1995, as if the pupils of Pylades were called Pyladae, and those of Bathyllus Bathylli; similarly Salmasius, on *Scr. Hist. Aug.* (L.B., 1679), ii, p. 829 sqq.; Lessing, *Abhandlung v. d. Pantomimen der Alten*, xi, 14 (Lachmann); and Mommsen, *ad CIL*, v, 2, 7753. We know a pantomime Theocritus, who also bore the name Pylades. *Or.*, 2629 = Wilmanns, *E.I.*, 2623 = *CIL*, v, 2, 5889 (Mediolani): D. M. | CVRANTE CALOPODIO LOCATORE | THEOCRITI | AVGG. LIB | PYLADI | PANTOMIMO | HONORATO | SPLENDIDISSIMIS | CIVITATIB. ITALIAE | ORNAMENTIS | DECVRIONALIB. ORNAT. | GREX | ROMANVS | OB MERITA EIVS | TITVL. MEMORIAE POSVIT. Ab altera parte SVI TEMPORIS PRIMVS | TROADAS. A tertia IONA. The words Theocriti Augg. lib., which are written in larger characters than the rest, give the name of the person commemorated, who was later called Pylades; but in this case the older name had not been so fully ousted by the new one that it could not have been used as a designation. Pylades and Bathyllus are however by no means the only names which

¹ Cf. two 'programme' of Königsberg University (1859), *De nominibus clarorum artificum frequentatis*.

R. L. M.

were assumed by later pantomimes or attached to them. In the biography of L. Verus (c. 8) it is said: *habuit et Agrippum histrionem, cui cognomentum erat Memphi, quem et ipsum e Syria veluti tropaeum Parthicum adduxerat: quem Apolaustum nominavit, and further, histriones eduxit e Syria, quorum praecipuus fuit Maximinus, quem Paridis nomine nuncupavit.* (Cf. *CIL*, xii, 3347, p. 624, 1.) It is clear that as L. Verus gave these dancers the names of famous artistes, so the names Pylades and Bathyllus were given to other pantomimes by their masters or patrons, friends or admirers, to encourage or honour them, or were assumed by the mimes themselves out of respect for their patterns and teachers, or in the feeling that they had themselves attained pre-eminence. These names then often acquired such general vogue that they quite superseded the original names.

One of the most celebrated pantomime names was Paris. The earliest dancer known to us who bore it lived at Nero's court, and was executed in 67 A.D. (vol. ii, 114); on his art see ii, 102. The second lived under Domitian (ii, 114 f. and i, 247 and n.); he is mentioned in Juv., vi, 87 (*utque magis stupeas ludos Paridemque reliquit*; Statius sold his *Agave* to him (vol. ii, 100), and Martial wrote an epitaph on him (xi, 13). Cf. on the two Eckstein in Ersch and Gruber's *Encykl.*, sect. iii, pt. xii, p. 104. The third is the above-mentioned favourite of L. Verus (see ii, 115), referred to by Galea (see vol. ii, 106). The Paris mentioned Grut., 332: Athenodorus xysticus Paridi thymelico benemerenti fecit, seems to have been a fourth. A fifth is mentioned by Libanius, ed. Reiske, iii, p. 362, 13: *καὶ μὴν καὶ τὸν παρ' ἡμῖν (at Antioch) ποτὲ λάμψαντα [καὶ] τὸν ὁμώνυμον τοῦ παλαιοῦ βουκόλου, παρ' ᾧ καὶ τοῦ κάλλους ἐκρίθησαν αἱ θεαί, σοφιστῆς Τύριος (ὅς τῃ γλώσσῃ τὰ τοῦ Ποσειδῶνος ἰσχυρε, σελων τε καὶ τινάσσων ἅπαντα) τοῦτον οὕτως ἐβήρησε κείμενον καὶ μεγαλοπρεπεῖ ἐντάφιον αὐτοῦ τὸν λόγον ἔδωκεν, ὥστ' οὐκ οἶδ' ὅτι ἂν ἐξήγησε μείζον, εἰ σοφιστὴν οἰχόμενος εἶμα, ὅς γε καὶ τοῦτ' αὐτὸ προσειπεῖν ἤξιωσε τὸν ὀρχηστὴν.*

It may be supposed that Memphis or Memphius was a celebrated pantomime name from the fact that the above-mentioned Agrippus assumed it. Perhaps it was this Memphis whom Athenaeus (i, 20 C.) calls τὸν ἐφ' ἡμῖν φιλόσοφον ὀρχηστὴν (cf. vol. ii, 104 bottom). There is another in *Anthol.*, xi, 255, Pallad. 57:

Δάφνιν καὶ Νιόβην ὀρχήσατο Μίμφος ὁ σιμῆς
ὥς ξύλινος Δάφνην, ὥς λίθινος Νιόβην.

Apolaustus, the second name that Agrippus assumed, was also famous. The first distinguished dancer known to us who bore it was a freedman of Trajan. Grut., 331, 6 = *CIL*, vi, 2, 10, 114: M. Ulpius Aug. lib. Apolaustus maximus pantomimorum coronatus adversus histriones et omnes scaenicos artifices xii. (A certain M. Ulpi Apolausti ser. Dionysius, *IRN*, 5194 = *CIL*, ix, 709; a M. Ulpius Apolaustianus, Or., 2598). The second Apolaustus (freedman of the emperors Marcus Aurelius and Lucius Verus) is mentioned with his earlier name Memphius in the following inscription in Rome (Orelli, 2160 = *CIL*, vi, 2, 10, 117): Aurelio Apolausto Memphio Augg. lib. hieronicae coronato et ton diapandon Apollinis sacerdoti soli vittato, archieri synodi et Augg. L. Aurelius Panniculus

qui et Sabanas. Patrono optimo. So also at Tibur, *CIL*, xiv, 4254 (beneath three wreaths and the list of some of his rôles, of which *Ῥωσίον* and *Ὀπίστη* are still legible): L. Aurelio Augg. | lib. Apolausto | Memphio | pantomimo hieronicae ter te(m)|poris sui primo | vittato Augg. | sacerdoti Apollinis Herculano | Augustali | s.p.q.T. | item ornamentis decurionatus honorato. On the side of the base: . . . Aug. edente | L. Aurel. Augg. l. Apolaus(to) | Memphio | magistro. So again in an inscription erected by himself near Fundi, *IRN*, 4140 = *CIL*, x, 6219: L. Aurelius Alpolautus pantomimus Memfius Mercurio invicto votum solvit,¹ and in a fragment at Veli, *CIL*, xi, 1, 3822: pantOMIMO | . . . O PROVECTO | ab imp. anTONINO | et | aurelio CAESARE | . . . apolausTI. MEMPHI | . . . SENIORIS | . . . IN VRBE | . . . dom | . On the other hand, in two other inscriptions, which attest his public appearance in the cities of S. Italy, he is called only Apolaustus. *IRN*, 652 = *CIL*, ix, 344 (Canusii): L. aELIO AVG. LIB. | aurELIO APOLAVSTo | PaNTOMIMO | augVSTALIVM QQ hierONICE TEMPORIS | SVI PRIMO | colonia AVRELIA | auG. PIA CANVSIVM | D.D., cf. Mommsen's note. Orelli, 2628 = *CIL*, x, 3716 (Laternum): . . . AVREL . . . APOLAVSTO HIERONICO BIS CORONATO | ET DIAPANTON, PARASITO ET SACERDOTI APOLLINIS | AVGVST. CAPVAE MAXIMO. At court he was naturally only called by the name bestowed on him by Verus. Fronto, *Epp. ad L. Ver. Aug.*, i, 2: et te si spectaveris teste revincam, Pyladem magistro suo istum tanto meliorem esse, quanto sit Apolausto similior. And in general this name superseded his earlier name, as he is certainly the person of whom it is said in *Vit. Commod.*, c. 7: Apolaustus alique liberti aulici pariter interempti sunt. Cf. Casaubon on this passage, and Mai on Fronto, *loc. cit.*

The Pylades mentioned by Fronto is the third of this name known to us. The second was a favourite and presumably a slave of Trajan — Dio, lxviii, 10: καὶ τοὺς ὀρχηστὰς ἐς τὸ θέατρον ἐπαγγάγε' καὶ γὰρ ἐνὸς αὐτῶν τοῦ Πυλάδου ἦρα. Hadrian manumitted him Grut., 331, 1 = *CIL*, v, 7753 (Genua): P. Aelius Aug. lib. Pylades pantomimus hieronica instituit; L. Aurelius Augg. lib. Pylades hieronica discipulus consummavit. He was therefore the instructor (also mentioned by Fronto) of the third Pylades, who evidently took the name from him. This third Pylades, originally named Theocritus according to *CIL*, v, 2, 5889, quoted above, p. 257, and *Augg. lib.*, i.e. a freedman of Marcus Aurelius and Verus, was a tragic dancer specially distinguished in the *Ion* and *Troades*, and according to Galen, ed. K., xiv, 631 (cf. vol. i, 247), was, with Morphus and a third (probably the second Apolaustus), the most celebrated artist of this class in his day. An inscription erected by him near the amphitheatre at Puteoli (*Millh. d. Arch. Inst.*, 1888, p. 79) reads: L. Aurelio Aug(ustorum) lib. Pyladi pantomimo temporis sui primo, hieronicae coronato iiii, patrono parasitorum Apollinus, sacerdoti synodi, honorato Puteolis d.d. ornamentis decurionalib. et duum-

¹ *CIL*, xii, 3347 (Nemausus: D. M. | Afrodís . . . | symmele(s) ?) | grex Gall. | Memphi et | Paridis p.m. (pantomimorum ? Publio Marco ?) et | Sextis administrantibus is enigmatic in several respects.

viralib., auguri, ob amorem erga patriam et eximiam liberalitatem in edendo muner(e) gladiatorum venatione passiva ex indulgentia sacratissimi princip(is) Commodi pii felicis Aug. centuria Cornelia. Cf. Mommsen's notes, pp. 79-83. Probably it was he with whom, according to Dio, lxxiii, 13, Didius Julianus played at dice after the murder of Pertinax. It is perhaps no accident that the name Theocritus, which occurs in the above inscription, appears again as that of a dancer, who was a favourite of Caracalla (Dio, lxxvii, 21).

In addition to the first Bathyllus (for whom see also Phaedrus, v, 7, 5; cf. Jahn on Persius, v, 123) we only know one of this name, the one mentioned by Juvenal, vi, 63 as a dancer of the part of Leda, who therefore lived under Domitian or Trajan (cf. vol. ii, 106). This Leda may have belonged to the humorous kind of dance, invented by the first Bathyllus, but it may well be that famous names were assumed by artists who could claim no distinction in the specialities of the original bearers.

The practice thus attested was by no means confined to pantomimes, but was common among artistes of all kinds. Of course here also many names often recur, simply because they were popular, e.g., Eutyclus, a charioteer under Caligula (vol. ii, 25); another charioteer, Grut. 340, 4; a third, Zangemeister, *Ril. de Foligno*, in *Adl.* 1870, p. 257 n.; a mime L. Acilius Eutyclus, Orelli, 2625 = *CIL*, xiv, 2408; an Aurelius Eutyclus stupidus gregis urbani, Orelli, 2645 = *CIL*, xi, 1, 433. Fortunatus and Felix, Gruter, 342; a M. Vipsanius Felix, Gruter, 340, 3, and the Felix mentioned by Pliny, *N.H.*, vii, 186 (vol. ii, 29 bottom), all charioteers. Gladiators of this name, Gruter, 334, 3; Orelli, 2566 = *CIL*, vi, 631, and on tesserae, Faustus, Felix and Fortunatus. Also such names as artists chose in special reference to their art or their successes, as Lepos (a dancer in Horace, *Sat.*, ii, 6, 70), Favor (archimimus, Sueton., *Vespas.*, c. 19), Crotus (choraules, Martial, vi, 39, 19) may have been adopted just as well by later artists, without allusion to their predecessors. Thus we find in a list of mimes, *CIL*, xiv, 2408, a Petronius Favor and a Volumnius Favorabilis. The same may be said of the name Thymele (Juv., i, 36; vi, 66; viii, 197) which is also found in a *columbarium* in the Vigna Amendola: Thymele Anni Pollionis. The assumption that this Thymele was also a performer on the stage is rendered plausible by the occurrence of another inscription in the same *columbarium*: C. Annus C. l. | Lepos. vixit an. xxviii | obiit vii Idus April. C. Caesare | L. Paullo cos. (754) hic situs adquiescit (Borghesi, *Oeuvres*, iv, 477)—perhaps the epitaph of the dancer mentioned by Horace. As for the occurrence in the list *CIL*, xiv, 2408 of an Aelius Hylas, the identity of his name with that of a famous pantomime (vol. ii, 105) probably is merely due to the frequency of the name. On the other hand, the name of Apolaustus' freedman Panniculus, Orelli, 2160 = *CIL*, vi, 2, 10, 117, who was certainly a stage artist, is perhaps borrowed from Panniculus the well-known mime under Domitian (Martial, ii, 72, 4; iii, 86; v, 63). So too in the above list an Aelius Latinus may have borrowed the name of a more celebrated mime, who was a favourite of Domitian (vol. ii, 114; i, 60), and an Aelius Urbicus the name of that Urbicus who in Juvenal, vi, 71 exodio risum movet

Atellanae gestibus Autonoes. (A *secutor* Urbicus, p. 174.) Perhaps also it is no accident that two dancers bear the name Septentrio (Orelli, 2607 = *CIL*, xii, 188, Orelli, 2627 = *CIL*, xiv, 2977, see n. on ii, 107, l. 40).

The runner Ladas mentioned by Martial, ii, 86, 7; x, 100, 5 and Juvenal, xiii, 97, may indeed be the famous Olympic victor of that name (cf. Krause, *SIRE*, iv, 721) whose swiftness of foot was proverbial among the Romans (Catullus, lix, 3, etc.), but it is more natural, especially in the case of Martial, to attribute the name to some contemporary foot-racer. The name Artemidorus perhaps first became celebrated among athletes through Artemidorus the *pancratiastes* of Tralles, who in Ol. 212 (69 A.D.) was victorious in the contest for men at Olympia (Pausanias, vi, 14, 1). The same name is borne by T. Flavius Artemidorus (mentioned below, app. xlii), a citizen of Adana and Antioch, who also was a *pancratiastes* and victor in the *Agon Capitolinus* in 86 A.D. (*CIG*, 5806 = *Bull. d. Inst.*, 1877, p. 110); also by M. Aurelius Artemidorus of Settae in Phrygia, who among other victories gained the *Κύζικον Κομμόδεια ἀγέλεω*, and died 26 years old, about the beginning of the third century. For his inscription found at Capua, cf. Sauppe, *Gött. gel. Anz.*, 1864, sect. 24, p. 958.

The *citharoedus* Amoebeus (Athen., xiv, p. 622 D.) took his name from a celebrated predecessor (*SIRE*, i³, s.v.) whose name, according to Philostratus, *Apollon. Tyan.*, v, 7, ed. K., p. 88, seems also to have been assumed by a *citharoedus* of the first century. The name of the two Theban flute-players Antigenidas (*SIRE*, i³, s.v.) was borne by a P. Aelius Antigenidas, whose inscription has been edited by Minervini in *BdI*, 1859, p. 73: *Δόγματι βοι[λῆς ἡ πόλις] Π. Αἰλίου Ἀντιγεγίδα[ν τὸν ἴδιον πολίτην] δημαρχήσαντα . . . ἀρχιερέα ἱερᾶς συνόδου θυμεικῆς τῶν περὶ τὸν Διόνυσον] πρώτον καὶ μόνον ἀπ' αἰῶνος νεικήσαντα [τὸ διηγεῖς πάντας τοὺς] ἀγῶνας οἷσπερ καὶ μόνους ἡγωνίσαστο, ἀλειπτος Ῥώμῃ β', Νεάπολιν γ', καὶ τὸν διὰ πάντων καὶ Ἰοτιόλους τὰ πρώτα διατεθέντα ὑπὸ τοῦ Κυρίου αὐτοκράτορος Ἀντωνεῖνου Εὐσέβεια, καὶ ὁμοίως τὰ ἐξῆς ἔχει [δύο] (?) καὶ τὰ ἐν Νικομηδείᾳ, τῇ αὐτοῦ πατρίδι ἐπιλεγόμενα Ἀσκληπεία τῷ αὐ[τῷ] ἀγῶνι ποθαύλας χοραύλας· ἐπαύσατο δὲ ἐτῶν μέ, αὐλήσας δὴμῳ Ῥω[μαί]ων ἑτεσιν ἑκοσι. Minervini has already remarked the borrowing of the name, and also mentions a still later flute-player, M. Aurelius Septimius Nemesianus Antigenides (*κύκλιος αὐλητής*, *CIG*, 1587). Further, Glaphyrus, a famous musician under Domitian (Martial, iv, 5; Juvenal, iv, 77), bears, hardly by accident, the same name as the flute-player whom Antipater of Thessalonica (*Epigr.*, 28 and 29, *Anthol.*, ed. Jacobs, ii, 102 sq.) compares with Orpheus. This latter Glaphyrus is perhaps identical with one mentioned in Orelli, 2633 = *CIL*, vi, 2, 10, 120; Heriae Thisbae monodiariae Ti. Claudii Glaphyri choraulae Actionicae et Sebastonicae. An Ibycus psalter occurs in Gruter, 331, 2 = *CIL*, vi, 2, 10, 100.¹*

This custom seems also to have existed among the gladiators (cf. vol. ii, p. 57). Doubtless here too many names are repeated without any intentional reminiscence of a famous predecessor, e.g., Trium-

¹ *CIL*, vi, 1, 10, 124^b = Grut., 580, 3: Dis Manibus. Amphion C. Salari Capitonis citharod. vixit ann. L. Zethus fratri piissim. Hic situs est,

phus in Seneca, *Prov.*, iv, 4, and Martial, *Spect.*, xx, 1; Carpophorus, *ib.*, xxiii, 27, and Orelli, 2566 = *CIL*, vi, 631 (a bearer of this name in Juv., vi, 199). Similarly, on the gladiatorial *tesserae* A.U.C. 683–701 Pilodamus (Philod.) occurs thrice (a fourth in 681 is doubtful). Philargurus (684–695) thrice, Antiocus twice (693, 701), Hermes (813 = 60 A.D.) a namesake of the man celebrated in Martial, v, 24 (90 A.D.), not to speak of other examples (cf. p. 167). On the other hand, the Pacideianus mentioned in Horace, *Sat.*, ii, 7, 97, apparently as a well-known gladiator of his day, takes his name from the contemporary of Lucilius, optumu' multo post homines natos gladiator qui fuit unus (Cic., *Tusc. quaest.*, iv, 21, etc.).

It is also well known that physicians often assumed the name Asclepiades, even as their sole designation, e.g. *CIG*, 4566: Ασκληπιάδης Ιατρός λεγέω[νος] β. Τρα[ιανῆς] Ιαχυράς, A.D. 147; *ibid.*, iii, *Add.*, 4778d: Ασκληπιάδης Ιατρός. *CIL*, ix, 5462: 'Οστρά Ασκληπιάδου Περγαμηνού Ιατροῦ. Cf. the treatise of Harless, *Medicorum veterum Asclepiades dictorum lustratio historica*, Bonn. 1828, 4 (unknown to me), in which thirteen, and Fabricius, *Biblioth. Gr.*, xiii, p. 89 sq., in which eight physicians of this name are enumerated. A certain C. Calpurnius Asclaepiades (*sic*) Prusa ad Olympum medicus, born 5 March, 87, resident at Capena, studiorum et morum causa probatus a viris clarissimis, etc. (*CIL*, xi, 1, 3943 = Orelli, 3039), was born in the same city (Pliny, *N.h.*, vii, 124) like the first famous physician of this name (vol. i, p. 183).¹ Hippocrates is found as the name of a physician, Martial, ix, 94, 2, and *CIL*, viii, 9618, Hippocratis medici Bodmilcaris f. The well-known physician Thessalus of the time of Nero (cf. i, pp. 170, 182) took his name perhaps from a son of Hippocrates (Galen, xvii a, 314, 579). Similarly a contemporary of Galen, the physician Antigenes, bore the name of a famous predecessor in his art (*StRE*, i³, p. 1108). Apuleius, *Apol.*, c. 33: Themison servus noster, medicinae non ignarus; c. 48: Themison medicus, probably the same. Lips., *El.*, i, 18: Themisones aliquot inter primores medicos: ideo medicorum pueri amabant id nomen. A physician under Domitian (Martial, vi, 70, 6) called himself Alcon, like the celebrated surgeon of the time of Claudius (vol. i, p. 171); the same name designates an unskilful physician in Ausonius, *Epigr.*, 73, 74. Among the names often borne by physicians was probably also Metrodorus (cf. *StRE*, s.v., 7–9); it was the name of a freedman of Cicero's who was a physician (*Ad Fam.*, xvi, 14, 20; *Attic.*, xv, 16; Drumann, *RG*, vi, 405). *CIL*, xiv, 2652 (Tusculum): A. Clodius Metrodorus mdicus (*sic*). So also Heras, a name perhaps first made illustrious by the immediate predecessor of Andromachus (Cels., v, 22). *CIL*, v, 2, 6064 (Mediolani): M. Petronius Herasmidicus (read Heras medicus, Gruter). Martial, vi, 78, 3: Huic Heras medicus 'bibas caveto'.

That this custom also existed among sculptors and painters cannot be proved, as Löwy (*Inschr. griech. Künstler*, p. 318) remarks, as names like Praxiteles and Leochares were common, and besides a family of artists descended from the celebrated Praxiteles may

¹ A certain G. (*sic*) Licinius Asclepias medicus, *CIL*, x, 6471. *CIG*, ii, 2987 = Lebas-Wadd., iii, 161, p. 53 (cf. 68), Ephesus: [Ἰ]ατρ[ὸν] Ἀσκληπιάδου Πρεῖσκον φιλοσέβαστον ἀρχίατρον διὰ γένους.

perhaps have existed for centuries. Considering, however, that in the imperial age artists and craftsmen often belonged to the slave class or had risen from it, one cannot be surprised that their masters should choose famous names for them, just as they might confer the name Amphion on a *citharoedus* or Themiso on a surgeon. It is then at least a plausible supposition that a family of artists is referred to in the inscription on the figure of an Egyptian monkey erected 159 A.D., and now in the Vatican: Φιδίας καὶ Ἀμμώνιος ἀμφότεροι Φιδίου ἐπόλου (Brunn, *Kunstlergesch.*, i, 610 f.; Löwy, no. 382), although considering the frequency of the name Phidias (Löwy on no. 536), this must remain a mere supposition. I also adhere to my opinion, in view of all the examples quoted, that the *decurio* and *duumvir* Q. Lollius Alcamenes, who appears in the relief in Zoega, *Bassir. ant.*, i, 23, holding a bust in his hand, was at least a *dilettante*, if not an artist.

XL. THE PYRRHIC OF ASIA MINOR.

(Vol. II, p. 108, l. 7.)

SUETONIUS, *Caesar*, c. 29: pyrrhicham saltaverunt Asiae Bithynicae principum liberi. Josephus, *Ant. J.*, xix, 1, 14; Sueton., *Calig.*, c. 58; Dio, lx, 7 and lx, 23; Sueton., *Nero*, c. 12. I think these passages make it certain that the following passage of Lucian refers to the Pyrrhic, which here was chiefly Bacchic; *De Saltat.*, 79: ἡ μὲν γε Βακχικὴ ὀρχοῖσις ἡ ἐν Ἰωνίῳ μάλιστα καὶ ἐν Πόντῳ (part of the province of Bithynia, which was also called Bithynia et Pontus or Bithynia-Pontus) σπουδαζομένη, οὕτως κεχειρώται τοὺς ἀνθρώπους τοὺς ἐκεῖ, ὥστε κατὰ τὸν τεταγμένον ἕκαστοι καιρὸν ἀπάντων ἐπιλαθόμενοι τῶν ἄλλων κἀθηται δι' ἡμέρας τιτάνας καὶ κορύβαντας καὶ σατύρους καὶ βουκόλους ὀρώπτες καὶ ὀρχοῦνται ταῦτα ὁ εὐγενέστατος καὶ πρωτεύωντες ἐν ἑκάστῃ τῶν πόλεων κ.τ.λ. In Philostrat., *Apoll. Tyann.*, iv, 2 ed. K., p. 66, the inhabitants of Ephesus are ὀρχηστών ἡττημένοι καὶ πρὸς πυρρίχαις αὐτοὶ ὄντες, αὐλῶν μὲν πάντα μεσὰ ἦν, μεσὰ δὲ κτύπων. It appears from Plutarch, *Qu. conv.*, ix, 2, that in his time in Greece as elsewhere the Pyrrhic was danced by boys of good family. Also the dances performed in Athens at the Dionysia (Philostrat., *Apoll. Tyann.*, iv, 21, p. 73, ed. K.) seem to have been Pyrrhics. Two prizes for Pyrrhics in a pentaeteric *agon* at Aphrodisias: Lebas-Waddington, 1620 d.

XLI. THE CONTESTS IN THE ACTIAN AGON AT NICOPOLIS.

(Vol. II, p. 118, l. 20.)

EVIDENTLY all the usual gymnastic and musical contests took place here. The former are mentioned generally in Stat., *Silv.*, ii, 2, 6 (cf. vol. ii, p. 118):—

Huc me post patrii laetum quinquennia lustrī,
quum stadio jam pigra quies, canusque sederet
pulvis, ad Ambracias conversa gymnade frondes, etc.

Cf. also Henzen, *AdI*, 1865, p. 99, *Inscr. Ailet. Napol.* (ἐπιστάρχης Ἀκτίων κ.τ.λ.; cf. p. 105). *CIG*, 2723 (Stratonice)—παγκράτιον? Ἀκτία ἀγ[ε]λων. Lebas-Waddington, 1540 (Erythrae): πυγμῆν. *CIG*, 4472 = Lebas-W., 1839—παίδων πυγμῆν (time of the Severi, *CIL*, iii, 730). *CIG*, 5913, 24 (Alexandria) παγκράτιον. Ditten-

berger, *Inscr. v. Olympia in Archæol. Ztg.*, xxxv, 190, 90: a victor in the *διαυλος* and *ὀπλίτης* δρ. at Olympia *καὶ τὴν λοιπὴν περίοδον σὺν Ἀκτίοισιν*. *Ibid.*, xxxviii, p. 164, 366: *Ἀκτίους ἀνδρας παγκράτιον*.

Musical contests. *CIG*, 1420 = Lebas-W., ii, 179 A. (Sparta)—*Ἀκτια τραγῳδοῦς*. 1719 (Delphi)—*Ῥώμην Πυθαύλας Ἀκτια χοραύλας*. 1720 (Nicomedia)—*τὸ β' Ἀκτια κατὰ τὸ ἐξῆς πιθαύλας καὶ χοραύλας*. 2810 (Aphrodisias)—*κυκλ. αὐλήτ. Ἀκτια*. 3208 (Smyrna)—*κιθαριφδ. Ἀκτια β'*. 4801 (Pessinus)—*κυκλ. αὐλήτ. Ἀκτιόνεικος*. *CIL*, vi, 2, 10, 120. Ti. Claudi Glaphyri choraulae Actionicae et Sebastonicae. —*CIG*, 1068 (Megara)—*Ἀκτια ἐν Νικοπόλει β'*.

Contest of heralds. Dittenberger, *op. cit.*, p. 100, 68. Inscription of a *κῆρυξ* who was victorious at Olympia in 137/8, see below, p. 266.

XLII. THE CONTESTS IN THE CAPITOLINE AGON.

(Vol. II, p. 120, l. 12.)

WHEN Suetonius wrote his lives of the emperors, in 120 A.D., several of the original contests had already been discontinued, especially (Sueton., *Domit.*, c. 4):—

(1) The contest in Greek eloquence.

(2) The contest in Latin eloquence. The praise of Capitoline Jupiter had been a regular theme in this contest, Quintilian, iii, 7, 4; Palfurius Sura had once received the prize. Sueton., *Domit.*, c. 13. Haupt, *Colloq. ex cod. Montepess.*, s. ix, *Ind. lect. Berolin. hib.*, 1871, p. 6, 7: *Ἐγκώμιον ἔγραψα. Τίνος; Ζηνὸς Καπιτωλίνου. Ἀνάγνωθι. . . Μεγάλως εἶπας. ἄρον τὸν στέφανον. οὐδεὶς σοὶ ἀντιλέγει*. Cf. also the passage Auson., *Proff.*, v, 5, quoted in the next appendix.

(3) The contest of the *Chorocitharistae*.

(4) The contest of the *Psilocitharistae* (*cithara* playing without accompaniment).

(5) The girls' race.

There remained the following:—

The contest in Greek poetry. For this the poet Diodorus wished to travel from Alexandria to Rome in the year 94 (Martial, ix, 40). In that year no less than 52 Greek poets competed, among them the Roman boy Q. Sulpicius Maximus with 43 improvised hexameters on the theme "How Zeus spoke, when he rebuked Helios for lending his chariot to Phaethon" (see vol. iii, p. 45). The Latin inscription on his monument (C. L. Visconti, *Il sepolcro del fanciullo P. Sulpicio Massimo*, p. 5) reads: *Deis manibus sacrum. Q. Sulpicio Q. f. Cla. Maximo domo Roma vix. ann. xi. m. v. d. xii. Hic tertii certaminis lustro inter Graecos poetas duo et L professus, favorem quem ob teneram aetatem excitaverat, in admirationem ingenio suo perduxit et cum honore discessit. Versus extemporales eo subjecti sunt ne parent(es) adfectib(us) suis indulsisse videantur. Q. Sulpicius Maximus et Licinia Januaria parent(es) infelicissimi f. piissim. fec. et sib. p. s.*

The contest in Latin poetry. In the year 86 Collinus, celebrated by Martial, iv, 54, obtained the prize; cf. also Morcelli, *De agone Cap.*, p. 21. Statius was an unsuccessful competitor in 90, or perhaps 94, cf. Appendix LVII. The rhetorician P. Annius Florus says that the audience had unanimously demanded the prize for him, invito

quidem Caesare et resistente, non quod sibi puero invideret, sed ne Africa coronam magni Jovis attingeret (*P. Anni Flori fragm.*, in Jahn's edition of Jul. Florus, p. xli). If the subject of his poem was the Dacian triumph (*op. cit.*), this need not as Jahn thinks (p. lxxv) be that of Trajan (102 A.D.), since Domitian also held a Dacian triumph at the end of 89, so the poem might have been composed in the year 90. Martial, ix, 35, 10, alludes to the approaching *agon* of the year 94: *Destinet aetherius cui sua certa pater*. In the year 106¹ the prize for Latin poetry was given by a unanimous vote of the judges to L. Valerius Pudens of Histonium, a boy of thirteen: Mommsen, *IRN*, 5252 = *CIL*, ix, 2860 (cf. n. on ii, 120, 22). The tragic poet Memor, a brother of the satirist Turnus, is called by Martial, xi, 9 (cf. 10), *clarus fronde Jovis, Romani fama cothurni* (cf. vol. iii, p. 45 and n.), and must have obtained the prize in one of the first three *agones*, for the eleventh book of Martial appeared soon after Domitian's death. (In *Numerian.*, c. 11: Olympius Nemesianus . . . *quique omnibus coloniis illustratus emicuit*, Casaubon emends the meaningless *coloniis* to *coronis*.)

Singing. Inscription of one Aurelius Charmus of Philadelphia, *CIG*, 3425: *ψδὸν παράδοξον, περιδοιέειν στεφανωθέντα λερούς ἀγῶνας τοὺς ἀπὸ τῆς οἰκουμένης πάντας ἀπὸ Καπετωλείων ἕως Ἀντιόχειας τῆς Συρίας*.
Citharoedic contests. Juvenal, 6, 387:—

Ianium Vestamque rogabat,
an Capitolinam deberet Pollio quercum
sperare et fidibus promittere.

Cf. on Pollio, Martial, iv, 61, 9. *Bull. de corr. Hellén.*, ix, 1885, p. 124 (Nyasa). II. Ἀλλίου . . . Κυζικηνοῦ κιθαρωδοῦ καπετωλονέικου.

Flute-playing. Monument of a *Pythaulos* of Nicomedia, who obtained the prize ἐν Ῥώμῃ. Καπετώλεια πυθαύλας, *CIG*, 1720. Cf. *CIG*, 1719, quoted above, p. 264. *CIG*, 6788 (Nemausus): — — χοραΐλης γ Καπετ. According to Minervini the words Ῥώμην β' in the inscription of Antigenidas (above, p. 261) refer to the Capitoline games. The question must however remain unanswered whether the fairly common statement in inscriptions of Greek musicians and athletes that they were victorious 'at Rome' always has this meaning. If it is true, as is reported, that in an inscription on the Appian Way (*CIG*, 5919) the words Ῥώμην τραγῳδούς are enclosed in a laurel wreath, this inscription cannot refer to the Capitoline *agon*, in which the prizes were wreaths of oak.

Organ-playing? Quintilian, ix, 4, 11: In certaminibus sacris (organorum soni) non eadem ratione concitant animos ac remittunt.

Dramatic representations and recitations. In the inscription *CIG*, iv, 6829 (193-210 A.D.) occur the words: Καπετωλιονέικου παράδοξον . . . Ἐφεσίου κωμικοῦ. Artemidorus, *Onirocr.*, iv, 33: Ἡρακλείδης δ' ὀνατηρητὸς δ' τραγῳδὸς μέλλων ἀγωνίζεσθαι ἐν Ῥώμῃ τὸν τῶν τραγῳδῶν ἀγῶνα. It is possible (as Morcelli thought, *Sull' agone Cap.*, p. 16), that certain expressions occurring in inscriptions relating to pantomimes—*coronatus contra omnes scaenicos*, *hieronica coronatus* (in urbe coronato, Orelli, 2627)—refer to the Capitoline *agon*.

¹ I follow Mommsen in explaining *lustrum sexto* as the beginning of the sixth *lustrum* i.e. the sixth *agon*.

In the inscription *CIL*, vi, 2, 10,114 (see above, p. 258): M. Ulpius Aug. I. Apolaustus | et maximus pantomimorum | coronatus adversus histriones | et omnes scaenicos | artifices xii, the number xii, may, as Wilmanns, *E.I.*, 2619, supposes, mean the twelfth agon, 130 A.D.

Contest of Heralds. Dittenberger, *Inscr. aus Olympia in Archäol. Ztg.*, xxv, p. 100, 68: II. Αἰλιος Ἀρτεμῆος Λαοδικεὺς (sic) νικήσας Ὀλυμπιάδι σκδ (Ol. 229, 1 = 137/8) Ὀλύμπια κήρυκας καὶ τοὺς ὑπογεγραμμένους ἀγῶνας τὰ ἐν Ῥώμῃ Καπετώλ[εια . . .] Ἀκτια κ.τ.λ. . . . ὑπὸ φωνασκῶν Λ. Τυρρώνιος Λόγγος Εἰκονία τῶν καὶ Λαοδικία. *CIA*, iii, 129:—T. Αἰλ. Αὐρήλιος Ἀπολλώνιος Ταρσεὺς καὶ Ἀθηναῖος κωμῳδοὺς καὶ κήρυξ περιοδοδείκῃ σὺν Καπετωλίοις κ.τ.λ. *Id.*, 129: Οὐαλέριος Ἐκλεκτος Σινωπεύς . . . κήρυξ διςπερίοδος νικήσας ἀγῶνας ἱεροῦ οἰκουμενικοῦ τοῦ ἐν ὑπογεγραμμένους . . . Καπετώλεια ἐν Ῥώμῃ γ', Ἀθηναῖς Προμάχου ἐν Ῥώμῃ γ', τὸν χειλιετὴ ἐν Ῥώμῃ, ἐφ' ᾧ ἐτειμήθην χρυσεῖ βραβεῖν μόνος καὶ πρῶτος τῶν ἀπ' αἰῶνος κηρύκων, Εὐσέβεια ἐν Ποσιόλοις δ' Σεβαστὰ ἐν Νεαπόλει δ' κ.τ.λ. The inscription was erected between 253 and 257, as is shown by a later inscription of the same herald, put up at Olympia about 261, wherein he is called κήρυξ τριςπερίοδος, and his victories in Rome are enumerated as above, the last with the designation Ῥώμης αἰώνια. Dittenberger, *op. cit.*, xxxviii. (1880), p. 165 f., 369.

Gymnastic contests. All those usual in the sacred games in Greece, both for men and boys, as may be certainly assumed from the existing evidence.

Long distance race. *CIG*, 2682 = Lebas-Waddington, 301: inscription of T. Flavius Metrobius of Iasos, who won the victory τὴν περίοδον ἀνδρῶν δόλιχον Ἰασέων πρῶτος καὶ τὰ ἐν Ῥώμῃ Καπετώλεια πρῶτος ἀνθρώπων (86 A.D.).

Boxing. *CIG*, 237, inscription of a boxer M. Τόλλιος of Apamea (not earlier than Hadrian).

Wrestling. Dio, lxxix, 10: Αὐρήλιος Αἰλιξ δ' ἀθλητὴς . . . τοσοῦτον τοὺς ἀνταγωνιστὰς ὑπερῆσεν, ὥστε πάλην τε ἅμα καὶ παγκράτιον ἐν τῇ Ὀλυμπίᾳ ἀγωνίσασθαι ἐθέλησαι, κὰν τοῖς Καπετωλείοις καὶ ἄμφοι νικήσαι, . . . ὁ μὴδεὶς ἄλλος ἐπεποιήκει (218 A.D.). Cf. n. on ii, 129, 5.

Pancration. *CIG*, 5806. T. Flavius Artemidorus of Adana (see above, p. 261) won τὸν ἀγῶνα τῶν μεγάλων Καπετωλείων τὸν πρῶτον ἀχθέντα ἀνδρῶν παγκράτιον (86 A.D.). Martial, vi, 77:—

Cum sis tam pauper, quam nec miserabilis Irus,
tam juvenis quam nec Parthenopaeus erat;
tam fortis, quam nec, cum vinceret, Artemidorus,
quid te Cappadocum sex onus esse juvat?

There can be little doubt that the same Artemidorus is meant here, as Martial's sixth book appeared in the year 90. It seems from v. 3 that Artemidorus had been beaten shortly before (in the agon of 90).

CIG, 5804. T. Flavius Archibius of Alexandria: τὰ μεγάλα Καπετώλεια τὴν τρί[την] Ὀλυμπιάδα ἀγενεῖων παγκράτιον στεφανωθέντα, κα[ὶ] τὴν τετάρτην ἀνδρῶν παγκράτιον νικήσαντα καὶ τὴν πέμπτην ἀνδρῶν παγκράτιον στεφανωθέντα καὶ τὴν ἕκτην ὁμοίως ἀνδρῶν παγκράτιον στεφανωθέντα πρῶτον ἀνθρώπων (94, 98, 102, 106 A.D.).

Aelius Aurelius Menander of Aphrodisias won ἐπὶ θεοῦ Ἀρτυνείου,

ὡς οὐ μόνον στεφανωθῆναι ταῖς ἰκείνου χερσὶν ἀλλὰ καὶ τειμαῖς ἐξαιρέτοις τιμηθῆναι. Lebas-Waddington, 1620 a. Καπετώλεια Ὀλύμπια ἀνδρῶν παγκράτιον πρῶτον Ἀφροδεισιῶν. *Ib.*, 1620 b = *CIG*, 2180 b. As the seventh Panathenais, in which Menander had apparently won before, falls in the year 150/1 (Dittenberger, *Die attische Panathenaidenāra*, *Comment.* Mommsen, pp. 244, 253), the Capitoline *agon*, in which he won, must be either that of 154 or of 158.

CIG, 3674. M. Aurelius Corus of Cyzicus won Ῥώμῃ Καπετώλεια ἀγρεῖαν παγκράτιον (perhaps 166 A.D.).

Ib., 5913. M. Aurelius Asclepiades, apparently of Hermopolis in Egypt, a very famous pancratiast, won (line 21) Καπετώλεια ἐν Ῥώμῃ δῖς, τὸ δεύτερον μετὰ πρῶτον κλήρον στήσας τοὺς ἀνταγωνιστάς (?) (178 and 182 A.D.).

Artemidorus, *Onirocr.*, iv, 42: Μένιππος ὁ Μάγνης οὐ πρὸ πολλοῦ τοῦ ἐν Ῥώμῃ ἀγῶνος, ἔδοξε παγκρατιάσαντος αὐτοῦ νύκτα γενέσθαι: οὐ μόνον ἐλείφθη τὸν ἐν Ῥώμῃ ἀγῶνα, ἀλλὰ καὶ πληγῇ τῇ χειρὶ ἀπώλεσεν.

In the inscription of a victor from Megara, *CIG*, 1068, who won thrice in the Capitoline *agon*, there is no indication of the contest; nor in that of a certain M. Aurelius Thelymitres (καπετωλωνεῖτης). Rayet, *Inscr. inéd. de Milet*, in *Rev. archéol.*, xv, 28 (1874), p. 113.

Chariot-racing. Inscription of a charioteer P. Aelius Gutta Calpurnianus: — In factione Veneta vici . . . sacro quinquennialis certaminis I. Cf. p. 152.

It may be concluded from the gentile names Flavius, Aelius, Aurelius, that the Capitoline victors received civil rights from the emperors, unless, like the boxer M. Tullius of Apamea, they already possessed them.

XLIII. CONTINUANCE OF THE CAPITOLINE AGON.

(Vol. II, p. 121, l. 22.)

THE ordinance of Diocletian and Maximian (*Cod. Just.*, x, 53) regarding the athletes who were coronis non minus tribus certaminis sacri, in quibus vel semel Romae seu antiquae Graeciae coronati is certainly to be referred to the *agon Capitolinus*. Bock, *Les dernières solennités des jeux Capitolins de Rome* (Bruxelles, 1849), p. 6, wrongly refers the passages in Firmic. Matern., iii, 6, 12 and vi, 31 to the same games. The 'coronarum insignia' mentioned in the first passage are priestly insignia, as the collocation with 'praetexta vestis' shows (cf. praetexta et aureae vestes atque aurearum insignia coronarum, vi, 31). The second passage speaks quite generally of sacred games: athletam faciet ista genitura, sed qui in sacris certaminibus victor, gloriosa et digna reportet insignia coronarum. This passage no more necessarily proves the continuance of the *agon Capitolinus* than iii, 12, 3: sacris certaminibus praepositos, iii, 14, 3: facit in sacris certaminibus esse victores . . . aut sacri certaminis principes; iv, 7 *in f.*: sacri certaminis palmas aut coronas largitur aut sacris certaminibus faciet esse praepositos aut templorum fabricatores aut sacrorum confectores. It is probably right with Scaliger to refer to the *agon Capitolinus* the certainly rather obscure passage Ausonius, *Proff.*, v, 5: Tu paene ab ipsis orsus incunabulis Dei poeta nobilis Sertum coronae praeferens Olympiae puer celebrasti

Jovem; cf. e.g. *Καπετώλεια Ὀλύμπια* in *CIG*, 2180 b. The scholiast to Juv., 6, 387 speaks of the festival as of a thing of the past (Pollio quercum: coronam dicit; inde enim solebant coronari); Bock (p. 31) thinks it ceased after the laws in *Cod. Theod.*, App. I. x, ed. Ritter, vi, p. x; lxix, 16, 10 (de paganis sacrificiis et templis) in the year 407/8.

I add notices of some obscure or only partially intelligible pictorial representations, which Bock refers to the *agon Capitolinus*. A diptych from Monza (Gori, *Dipl.*, ii, 243 ss., pl. viii) shows a Muse with a lyre and a bald man with a scroll and a book. Two similar painted glass vessels in Buonarrotti, pl. xxx s, p. 216: three Genii fly up to a man depicted as a river-god (which Bock thinks is an allusion to the Blue faction); one Genius holds a vase over the man's head, with ΚΑΙΘΕΘ below; beneath the Genii is written, [HILA]RIS VIVAS VALEAS VINCAS. In Garrucci, *Vetri ornati*, etc., pl. xxxiv, 1: a flute-player in a long striped sleeved gown, in his left hand two flutes, in his right a palm (?), to the left a mask on a staff, to the right a basket. On the staff, in addition to a wreath, is the inscription: ILIA CAPITOLIA. Bock describes a similar glass vessel after Boldetti, *Osserv. sopra i cimeli de' SS. Martiri*, I, c. xxxix, p. 205; he thinks that Ilia stands for Aelia, which he supposes alludes to the alleged descent of Theodosius from Hadrian.

XLIV. THE EXTENSION OF GYMNASIC CONTESTS IN THE WESTERN PROVINCES.

(Vol. II, p. 122, l. 21.)

NEAPOLIS was the chief centre from which gymnastic contests spread through Italy, beginning with Campania (see vol. ii, p. 118). The Neapolitan games, which first attained to great importance under Augustus, were called Ῥωμαία Σεβαστὰ Ἰσολύμπια, and were celebrated in the third year of each Olympiad. Till the founding of the *agon Capitolinus*, they were the most important Italian festival of the kind. At Olympia has been found a fragment of a document recording the permission granted there to make the Neapolitan festival 'isolympic', that is, to observe the order of the Olympic festival; see G. Hirschfeld, *Zu griech. Inschr.*, in *Ztschr. f. österreich. Gymnas.*, 1882, pp. 491-499. At Naples the *gymnasiarchia* was one of the most honoured magistracies, it took precedence of all the municipal offices, except the *demarchia*.

Puteoli. Antoninus Pius founded in memory of Hadrian (Ἀδριανεία, *CIG*, 3208) a sacrum certamen iselasticum (*CIL*, x, 515 [142 A.D.]) quinquennale (*Vit. Hadrian.*, c. 27), generally called Εὐσέβεια (ἀγῶνες Πλοῖ), *CIG*, 1068, 1720, 5810, 5913; Artemidorus, *Onirom.*, i, 26; *CIG*, 5853; Mommsen, *CIL*, x, p. 183; Dessau, *BdI*, 1881, p. 141, 1.

At Pompeii gymnastic games are recorded as early as Augustus: *CIL*, x, 1074 d = *IRN*, 2378 (vol. ii, p. 82 f.); *CIL*, i, 1251 (Ib. vix post Augustum) NN. Ilv. j. d. Laconicum et districtarium faciund. et porticus et palaestr. reficiunda locarunt ex d. d. ex ea pecunia quod eos e lege in ludos aut in monumento consumere oportuit faciun. coerarunt eidemque probarunt. *CIL*, iv, 1177 (at a spec-

tacle given by Cn. Alleius Nigidius Maius under Tiberius, p. 70) : . . . venatio athletae sparsiones vela erunt ; cf. 1181. In electioneering appeals, Pyramus Olympionica (*Ephem. epigr.*, i, no. 151 ; *CIL*, iv, 3291, p. xvii). Fructus pyceta, *CIL*, iv, 387.

Beneventum. Inscription of a poeta latinus coronatus in munere patriae suae. At the end : Esterti, primus Beneventi studium orchestopales instituisti. *CIL*, ix, 1663.

Dalmatia. Epidaurus (Ragusa vecchia). Pugilum spectaculum, *BdI*, 1857, p. 46 ; cf. *CIL*, iii, 1, 1745.

Galliae. Here Massilia must have been the centre from which the practice spread. *CIG*, 3413 = Herzog, *Gall. Narb. App.*, 618 (from Boeckh) : ὁ δῆμος Δημήτριον Δημητρίου Γάλλον τὸν πρῶταν καὶ στεφανηφόρον τῆς Μασσαλίας τὸ γί, ἥρωα, ἐπιμεληθέντος τῆς γυμνασιαρχίας καὶ τῶν . . . ὡν τεμῶν Λουκίου Λουιδίου λειτουργίας . . . *CIL*, xii, 410 ib. : agnothet(ae) agoni(s) Iobiani ; cf. p. 812. *CIL*, v, 2, 7914 (Nicaea) : NN. q̄ Ilvir Massil.—agnothetae, episcopo Nicaeensium amici (cf. p. 916).

Arelate. *CIL*, xii, 670 ; NN. (dona) vit, item HS n. cc̄, (ex quor. usur)is omnibus annis . . . (ludi) athletar. aut circen(ses ederen)-tur.

Nemausus. *CIL*, xii, 3232 : ψήφισμα τῆς ἱερῆς θυμелиκῆς Ἀδριανῆς συνέδου τῶν περὶ τὸν αὐτοκράτορα Καίσαρα Τραϊανὸν Ἀδριανὸν Σεβαστὸν τὸν νεὸν Διόνησον συναγωνιστῶν. Archiereus sacrae synodi 3183, xystarchus 3132.

Vienna (Vienne). Pliny, *Epp.*, iv, 22 (a. 102–105) : interfui principis optimi cognitioni in consilium adsumptus, gymnicus agon apud Viennenses ex cuiusdam testamento celebrabatur : hunc Trebonius Rufus, vir egregius nobisque amicus, in duumviratu tollendum abolendumque curavit ; negabatur ex auctoritate publica fecisse. egit ipse causam non minus feliciter quam diserte . . . placuit agona tolli qui mores Viennensium infecerat, ut noster hic omnium. *CIL*, xiv, 1923 : D. m. Niciae citharoedo Iulia.

Minnodunum. Orelli, 339 = Mommsen, *Inscr. Helvet.*, 149 : Pro salute domus divin. J.O.M. Junon. regin. aram Q. Aelius Aunus sevir Aug. de suo ; item donavit vicinis Minnodunens. den. DCCCL. ex quorum usur. gymnasium in per(petuum) c(urarent).

Hispaniae. Balsa (Lusitania) *CIL*, ii, 13 : edito barcarum certamine et pugilum.

Barcino. *CIL*, ii, 4514. Legacy of a centurion under Marcus Aurelius to the city of den. vii. D. ex quorum usuris semissibus edi volo quodannis spectac. pugilum die iv Iduum Juni : usque ad den. CCL, etc.

Africa. Carthago. Tertullian, *Scorpiace adv. Gnosticos*, c. 6 : Adhuc Carthaginem singulae civitates gratulando inquietant donatam Pythico agone post stadii senectutem. Cf. for athletic exercises *id.*, *De pallio*, c. 4. The *agon*, which had probably been founded by Severus, was renewed in the year 376 : *Cod. Theodos.*, xv, 7, 3, cf. Gothofred. Tertullian, *loc. cit.*, mentions the appearance of musicians as well as athletes (corporum et vocum praestantiam). Among the victories of one of the two *CIL*, xiv, 474 (Ostia) : Pythia Karthaginis, Asclepia Karthaginis ; which Dessau, *BdI*, 1881, pp. 137–

141, considers to refer to only one festival, dedicated to the two gods. Cf. vol. iii, 47, 4-8 and n.

In the cities of the *provincia proconsularis*, gymnastic games (always called *gymnasium*) often combined with banquets (*epulum*) of the *decuriones* and citizens, were among the most common festivities: *CIL*, viii, 754, 769, 858, 860, 895 (spectaculum pugilum et gymnasium),¹ 937, 1323, 1353, 1361, 1414, 1449, 1501, 1574, 1577. Cf. the index, p. 1117. *Ephem. epigr.*, v, p. 283, n. 293; p. 291, n. 320; vii, n. 127, 238, 256, 258, 714.

Numidia. Theveste. *CIL*, 1858 sq.: will of C. Cornelius Egrilianus praef. leg. xiii geminae, who left a fund that on certain days every month gymnasia populo publice praeberentur in thermis.

Mauretaniae. Caesarea. *Eph. epigr.*, v, p. 477, 1036: Greek epitaph on an athlete (παγκράτιον νικήσας).

XLV. THE TAXES OF THREE ROMAN PROVINCES.²

(Vol. II, p. 133, l. 2.)

JOSEPHUS gives the following account of the division of Palestine between the sons of Herod the Great, which Augustus effected in 4 B.C., and of the revenues which they drew from their allotted districts (*Ant. Jud.*, xvii, 11, 4; cf. Marquardt, *StV*, I³, 409 f.): 'Ἀρχέλαον . . . τοῦ . . . ἡμῶς τῆς χώρας ἥπερ Ἡρώδης ὑπετέλει, ἐθνάρχην καθίσταται . . . τὴν δὲ ἑτέραν ἡμῶσιαν . . . παρεδίδου Φιλίππῳ καὶ Ἀντίπῳ· καὶ τοῦτω μὲν ἦ τε Περαιά καὶ τὸ Γαλιλαῖον ὑπετέλουν, φορὰ τε ἦν διακόσια τάλαντα τὸ ἐπ' ἔτος, Βατανάα δὲ σὺν Τραχωνίτιδι καὶ Ἀβραυτίτι σὺν τινὶ μέρει ὅκου τοῦ Ζηνοδώρου λεγομένου Φιλίππῳ τάλαντα ἑκατὸν προσέφερε, τὰ δὲ Ἀρχελάῳ συντελοῦντα Ἰδουμαία τε καὶ Ἰουδαία τὸ τε Σαμαρειτικὸν, τετάρτου μέρους οὗτοι τῶν φόρων παρετέλυντο . . . προσῆι δὲ Ἀρχελάῳ φορὰ χρημάτων τὸ κατ' ἑνιαυτὸν εἰς τάλαντα ἑξακόσια ἐξ ἧς παρέλαβεν ἀρχῆς. If then to the 900 talents which the sons of Herod received between them, we add the 200 from the payment of which Augustus released the subjects of Archelaos, it results that the districts in question had previously paid 1100 talents annually in taxes. To this must be added the 60 talents which Augustus assigned as a yearly allowance to Herod's sister Salome (*A.J.*, xvii, 11, 5) and perhaps further revenues used for contesting the legacies which Herod left to his relatives. Palestine then paid about 1200 talents a year to the successors and heirs of Herod. If, as Marquardt (p. 408, 2) and Mommsen (*RG*, v, 511, 1) assume, Hebrew talents are to be understood (equivalent, according to Hultsch, *Metr.*³, p. 606, to 7830 marks or £383 5s.) the revenue would amount to £459,895. However this may be, Herod the Great's grandson, Herod (or M. Julius) Agrippa, who in the last years of his reign (37-44 A.D.) ruled as king over the whole kingdom of his grandfather (Marquardt, p. 411), derived from it a revenue of 12,000,000 drachmae, or £461,633. Josephus, *A.J.*, xix 8, 2: προσωδεῖσάτο δὲ οἱ πλείους αὐτῶν προσφοράς, διακοσίας ἐπὶ χιλιάς μυριάδας. It may be assumed with certainty that under the administration of Roman procurators the country had to pay at least as much, which quite agrees with the statement of Josephus,

¹ Cf. Heuzen, 6599 (ex agro Tunetano): pugilum certamina . . . et populo gymnasium.

² Cf. my Königsberg 'programm', *Acad. Albin. R. gym.* 1880, l.

that in the spring of the year 64 the arrears of taxation amounted to 40 (Hebrew) talents. Josephus, *B.J.*, ii, 17, 1: *καὶ οἱ βουλευταὶ μερισθέντες τοῖς φόροις συνέλεγον, ταχέως δὲ τὰ τεσσαράκοντα τάλαντα (τεσσαῦτον γὰρ εἶπεν) ἡθροίσθη.*

On this basis can be reckoned the approximate amount of the money taxes of Egypt under Vespasian, for according to the speech which, as Josephus relates, Agrippa made to the Jews in the year 64, they amounted (apart from the contribution in grain) to more than twelve times the taxes of Palestine. Josephus, *B.J.*, ii, 16 (ed. Bekker, v, p. 186 f.): (*ἡ Αἴγυπτος*) τοῦ ἐνιαυτοῦ παρ' ὑμῶν φόρου καθ' ἓνα μῆνα πλεον' Ῥωμαίοι παρέχει, καὶ τῶν χρημάτων ἐκωθεν τῇ Ῥώμῃ σίτων μηνῶν τεσσαῦρον. I have already shown (Appendix V, p. 22) that the statistical statements in this speech are drawn from an official document, a *Breviarium totius imperii*, compiled on the same plan as that of Augustus. Josephus would hardly have an opportunity of using such a document before his residence in Rome, where he wrote the history of the Jewish war about 75 A.D. Therefore at that time the annual payment in specie on the part of Egypt amounted to more than 24,000 Greek talents, or £5,540,000.

The annual Egyptian contribution of grain, which under Augustus had amounted to 20 million modii or 600,000 quarters, must have been considerably higher under Vespasian (cf. Rodbertus in the present work, App. v, p. 22). Now as the average price of wheat, as I have already shown (*Ind. lect. Regim.*, 1866, v) amounted in the period from Nero to Trajan to 4-5 sesterces the modius, the value of the Egyptian contribution of grain must have been rather above than below 100 million sesterces or £1,065,000. But, as Mommsen remarks (*RG*, v, 560), part of this contribution must have come from the domains, and another part perhaps was delivered in return for payment, so that it is impossible to calculate the total amount of the Egyptian revenues. It may however be safely said that it exceeded the sum of £5,530,000 in modern money. For in the first place part of the corn contribution was undoubtedly payment of taxes in kind, and secondly, as Josephus tells us, the taxation in specie amounted to more than twelve times that which was due from Palestine. Supposing the total taxation amounted to £6,000,000, the contribution per head of the population would be less than 15s., for Egypt certainly had more than 8 million inhabitants under Vespasian.

Diodorus, i, 31, gives the total population of Egypt (undoubtedly including Alexandria) as seven millions, Josephus, *B.J.*, ii, 16, 1, excluding Alexandria, as seven millions and a half. In Diodorus's time Alexandria had 300,000 free inhabitants (xvii, 528). Its prosperity had greatly increased since his time, and the ease with which a livelihood could be made, together with the pleasures which the city offered, must have allured a constant stream of immigrants from the country districts and the other towns. We may therefore conclude that in the time of Josephus its population, inclusive of slaves, was rather above than below a million. That the 'gens fecundissima' (Pliny, *N.H.*, vii, 33; Pliny, *Paneg.*, 31) in nearly a century had only increased from 7 to 8½ millions (while that of Germany, for instance, increased by nearly 54 per cent. between 1815

and 1865) is probably to be explained on the supposition that at the time of Diodorus the density of the population had nearly reached the limit fixed by the quantity of land available for cultivation. Even if we make a very high estimate of the land capable of cultivation in Egypt in Roman times (cf. Klöden, *Handb. der Erdkunde*, iii, 472), e.g. 11,000 to 12,000 English square miles, we find that when Diodorus wrote the density was 580-640 per square mile, and when Josephus wrote 710-770.¹ At the present time it exceeds 500 in Middle and Upper Egypt (Wagner-Guthe, *Lehrb. d. Geographie*, p. 229).² It may be noted that if what Diodorus says about Egypt is to be understood literally (i, 31: πολυανθρωπία . . . καθ' ἡμᾶς . . . οὐδενὸς τῶν ἄλλων δοκεῖ λείπεσθαι), there were other countries as thickly populated. In any case Wietersheim's (and still more Beloch's) estimates of the population of the Roman provinces are in many cases too low.³

A total fiscal burden of about 15s. per head of the population is exceptionally low, judged by modern standards; for at the present day it stands in France at £2 18s. 8d., in England at £2 5s. 5d., in Italy at £2 3s. 10d., and in Germany at £2 2s. 3d. (E. Reclus, *Géog. univers.*, iii, 948, 2).

Although this estimate of the total amount of the Egyptian taxes may arouse doubts as to its correctness on account of the relative lowness of the figures, it agrees very well with a statement of the taxes of Egypt under Ptolemy Philadelphus. He received, according to Jerome, *In Dan.*, xi, 5 s, 1122 (Bened.) from Egypt annually quatuordecim milia et octingenta talenta argenti (£2,790,000) . . . et frumenti artabas (quae mensura tres modios et tertiam modii partem habet) quinquies et decies centena milia (203,000 quarters). Cf. Marquardt, *StV*, ii², 193, 3, and for this and the other data for the Egyptian revenues see F. Rühl, *Der Schatz des Ptolemäus Philadelphus*, in *N. Jahrb. f. Philol.*, 1879, p. 621 ff. It is not at all surprising to find that the country with a considerably increased population was able and obliged to bear, when under the Romans, money taxes twice as high as under Ptolemy Philadelphus, and a tax in corn about thrice as high.

Now Velleius says that the revenues which the Roman treasury derived from Egypt were almost as high as those from the Gaul which Caesar conquered. Velleius, ii, 39: Divus Augustus praeter Hispanias aliasque gentes quarum titulis forum ejus praenitet, paene idem facta Aegypto stipendiaria quantum pater ejus Gallis in aerarium reditus contulit. Equally well known are the statement of Suetonius (*Caesar*, c. 25, where according to Marquardt, *StV*, ii², 242, 4 instead of CCCC, the reading of the Vatican MS., we should read [CCCC]), and the statement of Eutropius (undoubtedly based

¹ Mommsen, *RG*, v, 578, assumes a maximum cultivable area of 700 German sq. m., or 15,335 English, with a density of about 500 to the English sq. m.

² [The density of population in Egypt is now, according to the census of 1907, estimated at 939 per sq. m., exclusive of desert. This gives a non-desert area of about 12,000 sq. m., but of this less than 10,000 are regarded as cultivable under present conditions. Tr.]

³ Hartel's estimate (*Græch. Papyri des Erzhersogs Rainer*, pp. 22 f. and 58 f.) drawn from the Arab conscriptions, that the population of Egypt amounted to 15 millions in the year 640 appears to me impossible.

on Suetonius), vi, 17, that Caesar 'Galliae . . . tributum nomine annuum imperavit sestertium quadringenties'. Therefore according to Velleius Gaul paid more than £6,000,000, and according to Suetonius and Eutropius only about £350,000. O. Hirschfeld (*Antiquar. krit. Bemerk. z. röm. Schriftstellern*, in *Wiener Studien*, 1880, p. 110 f.) regards the passage in Velleius as corrupt, and for 'paene idem' reads 'paene vicies' (or 'p. v. tantum'). I am more disposed to think that Velleius means the taxes paid in his own day by the Gallic provinces, a revenue for which the treasury was indebted to the conqueror of Gaul, although he had not himself raised it. It is not improbable that Velleius derived his information from the *Breviarium totius imperii* of Augustus, as he also seems to have used the latter's *Index rerum gestarum* (Mommsen, *RGDA*², p. 3 s.). It may well be supposed that Caesar imposed very light taxes on the exhausted country; and it may be taken for granted that sixty years later they were very much heavier. As early as the time of Augustus Gaul was one of the most wealthy provinces, and its population must have considerably exceeded that of Egypt. If we estimate the mean density of the population of Gaul in Caesar's time at only 46 per square mile (Mommsen, *RG*, iii², 216, 1000 per sq. German m.), the whole of Roman Gaul had then already more than ten million inhabitants, and in sixty years the population must not only have made good the losses caused by the war, but must have increased very materially.

Finally, it may be noted that the sum which, according to Philostratus, *Viſ. Soph.*, ii, 3, was to be paid as φόρος by the province of Asia under Hadrian, amounted to seven million drachmae (i.e. 28,000,000 sesterces, or less than £300,000), a sum far too low, as the above results show, to be accepted as the total fiscal contribution of this province. For it is hardly conceivable that this populous flourishing country with five hundred cities paid much less than Palestine.

XLVI. RODBERTUS ON THE COMPARISON OF ANCIENT WITH MODERN WEALTH.

(Vol. II, p. 139, l. 19.)

I HAVE often corresponded with Rodbertus (d. 6 Dec. 1875) on economic and statistical questions which arose in the course of my studies, and his letters were sometimes complete dissertations. I insert here the letter of 4 December, 1871, which he wrote on the receipt of the first edition of this volume. I preface it with the remark that I greatly doubt whether it is possible to prove, as he maintains, that the value of money measured by wheat alone was six times as high in Rome as it is to-day, and that I not only entirely dissent from his opinion that the income of Narcissus exceeded an average income of his day in a far higher degree than that of [W. B.] Astor exceeds an average modern income, but that I do not know on what this opinion is based.

'Your comparison of private wealth in Roman times and our own was extraordinarily interesting to me, for such a comparison is one of the most difficult questions known to political economy. It is

R.L.M.

T

not covered by the question of the real value of precious metal (in so far as that is only measured by a wheat standard), in other words the value of money measured in terms of wheat at different periods is no true standard for the comparison of private wealth at the respective periods. I am confident that I can prove from the sources that the value of money, measured merely by *wheat* was at least six times as high in Rome as it is to-day, but I do not consider the conclusion justified that the real value of money *in general* was six times as high, or that the same sum of money would have represented six times as much *private wealth*. For wheat alone does not make wealth, indeed one must first turn it into bread to be able to use it.

‘But measured by *bread* the difference in the value of money at the two periods is not nearly so great as it is when measured by the raw material, for the manufacture of flour was enormously more laborious in ancient times than it is to-day. Moreover it was just the same with *all manufactured articles*, and these are the material of *wealth*. The labour of manufacture and transportation very much diminished the real value of money *in general* in antiquity, and if the same sum of money purchased six times as much wheat, it did not represent anything like six times as much *wealth*, for this consists in the *manifold* means of enjoyment ready for use, which one person has at his command as compared with other persons at a given time. For example, measured by silken fabrics, the same sum of money, which purchased six times as much wheat as to-day, would be worth many times less than it is now. All this of course tells in favour of your view, that even if the value of money on a wheat standard was six times as high as it is now, a private income measured by the same standard would nevertheless not have exceeded a modern one in the same proportion.

‘And now, how shall we decide the question of comparative private wealth at different periods, even supposing we know the real value of money *in general* at two periods, if the material of wealth, *viz.* the means of enjoyment, is to a great extent of different kinds? Here the money standard is of no use.

‘I have therefore always thought that the question as to the difference in wealth at *different* times must be put in another form, and so I will formulate the question as follows:—

‘Which enjoyed an income surpassing in a higher degree the *average income* of his day, Narcissus or Astor?’

‘Whichever it was, he was the richer man of the two. I may say that I believe, compared thus, Narcissus would beat Astor by many incomes’ lengths.

‘Perhaps one might object to such a method of comparison that the chief of a Kaffir tribe that knows next to nothing of agriculture might conceivably receive an income surpassing the average income of a fellow-tribesman an infinitely greater number of times than Mr. Astor’s income surpasses that of the average American, and yet one would not call the Kaffir chief richer than Astor. The objection would be valid, were it not based on an *impossible* premiss. Great individual wealth *can* only arise when, as an accompaniment, relatively great productivity of labour or dense population, social institutions (slavery or property in land and capital) exist, which bring

about the result that the wages of individual labour do not absorb the whole profits of that labour, but that the surplus accumulates in the hands of other persons, relatively few in number. In times of barbarism, which are always times of scanty productivity and scanty population, it is on these grounds impossible for many and high surpluses to accumulate in the hands of individuals, just as they could not accumulate if the above-mentioned institutions came to an end.

'I believe also that this method of comparison which I have suggested is the only one of historical, ethical and economic interest, and I need not add that by using it we should entirely avoid the insoluble problem of the *universal* real value of money, and in each of the periods compared we could apply the money standard as commonly accepted. You, my dear Sir, know better than I whether the science of Roman antiquities has the data at its command to answer the question I have raised regarding Narcissus and Astor.

'You are too modest in your preface.¹ In Heaven's name do not believe in the wisdom of us modern political economists. No science makes bricks with less straw nowadays than ours. There are but few who have even tried to cast a glance *behind* that wall of metal currency which has been built up on property in land and capital, and only too effectually conceals from us the real nature of economic relations. We have, so to speak, always been looking at the facts through distorting spectacles, and almost contracted cataract in the effort. What is called capitalism—it would be better to say 'capitalistics' on the analogy of chrematistics, which according to Aristotle broke up the older economic order, for in the same way capitalism is breaking up our modern political economy which is based on property in land and capital and on the freedom of labour—what, I say, is called capitalism is entirely based upon these optical illusions, which are due to the wall of metal currency. Only the social question will cough the cataract—unless it kills us first'.

XLVII. THE DISSOLUTION OF PEARLS IN VINEGAR.

(Vol. II, p. 140.)

KING, *Natural History of the Precious Stones and of the Precious Metals*, p. 273, says with regard to the pearl worth ten million sesterces, which Cleopatra swallowed dissolved in vinegar: 'It is unfortunate for this good story that no acid the human stomach can endure is capable of dissolving a Pearl even after a long maceration in it. Barbot has found by actual experiment, that one layer was reduced to a jelly, whilst the next beneath was completely unaffected. No doubt, the wily Egyptian swallowed her Pearl safe and sound, and in some more agreeable potation than vinegar, secure of its ultimate recovery uninjured: and invented the story of its complete and instantaneous dissolution, which be it remembered, rested entirely upon her own testimony, in order to gain her wager.' Also Ernst v. Baer, (*Historische Fragen mit Hilfe der Naturwissenschaft beantwortet*, 1873, p. 3 ff.) declares on the ground of an experiment either

¹ Not included in the translation.

that the story is a myth or that Cleopatra swallowed the pearl whole.

The former of these statements appeared to me so decided and apparently trustworthy that I applied to my former colleague Prof. C. Gräbe for information on the subject, and he declared the statement to be entirely erroneous. I am indebted to him for the following communication.

‘A 5 per cent. solution of acetic acid, equivalent in acidity to a strong vinegar, when used cold, dissolves pearls very slowly; several hours are required to make them disappear. Boiling immediately induces a fairly strong development of carbonic acid, and after 8–15 minutes small pearls are dissolved. A 3 per cent. solution acts in almost the same way, but the effect is noticeably slower with a 1 per cent. solution. The pearls are dissolved more quickly if the liquid is boiled or agitated; by these means the bubbles of carbonic acid, which are evolved and hinder the contact of the liquid with the pearls, are removed. Vinegar produced by fermentation contains from 2½ to 8 per cent. of acetic acid.’

XLVIII. A CATALOGUE OF TABLE DELICACIES FROM A GREEK COMEDY.¹

(Vol. II, p. 147, l. 19.)

THE following passage from Clement of Alexandria contains a slightly altered fragment from the New Comedy, which has escaped the notice of Meineke. Clemens Alex., *Paedagog.*, ii, 1, 3, p. 164 Pott (ed. Klotz): Καὶ μοι μὲν ἔλεος ὕπνῳ τῆς νόσου, οἱ δὲ ἐξυμνεῖν. οὐκ αἰσχύνονται τὰς σφετέρας ἡδοναθείας, τὰς ἐν τῷ πορθεῖ τῷ Σικελικῷ σμύρνανας πολυπραγμονοῦντες καὶ τὰς ἐγγέλεις τὰς Μαίανδρείους (sic Kl.) καὶ τὰς ἐν Μήλῳ ἐρίφους καὶ τοὺς ἐν Σκιάθῳ κεστρεῖς καὶ τὰς Πελωρίδας κόγχας καὶ τὰ βύτρεα τὰ Ἀβυθηνά, οὗ παραλείποντες δὲ τὰς ἐν Λιπάρα μαινίδας οὐδὲ τὴν γογγύλην τὴν Μαντικὴν, ἀλλὰ οὐδὲ τὰ παρὰ τοῖς Ἀσκραίοις τεύτλα, κτένας τε ἐκζητοῦσι Μηθύμναιους καὶ ψήττας Ἀττικὰς καὶ τὰς Δαφνίους κίχλας Χελιδονίους τε Ἰσχάδας, δι' ἃς εἰς Ἑλλάδα πεντακοσίαις ἀμα μυριάσιν ὁ κακοδαίμων ἰστεύλατο Πέρσης· ὄρνεις ἐπὶ τούτοις συνωποῦνται τοὺς ἀπὸ Φάσιδος, ἀτταγὰς Αἰγυπτίους, Μῆδων ταῶνα. Lehrs (d. 1878) restored the fragment as follows:—

ἐκ Σικελικοῦ πορθεῖ μὲν ἡδιστὴν ἔχει
σμύρναναν, ἐγγέλεις δὲ τὰς Μαίανδρείους,
Μήλου δ' ἐρίφους, τοὺς ἐν Σκιάθῳ κεστρεῖς,
κόγχας Πελωρίδας, ἐξ Ἀβύδῳ δ' βύτρεα·
οὐ δ' αὖ παραλείψει ἐκ Λιπάρας τὰς μαινίδας,
οὐ Μαντικὴν τὴν γογγύλην, οὐ τεύτλα
Ἀσκραία μὰ Δία· τοὺς δὲ Μηθύμνης κτένας
ζητήτεον, ψήττας τε μάλα τὰς Ἀττικὰς,
Δαφνίους κίχλας Χελιδονίους τ' Ἰσχάδας.

Kock, *Com. Att. fr.*, iii, 426, quotes two lists, Athen., i, 4 c, and Pollux, vi, 63, in support of his view that the above catalogue is not derived from a single passage, but from several united, and that therefore no restoration is possible. But the list in Athenaeus is evidently identical with that in Clement, for it contains not only the

¹ Already published in *Program. Acad. Alb. Regimont.*, 1869, v.

first nine articles enumerated by the latter, exactly in the same order (only omitting the sixth the *δοτρεα* 'Αβυδηνά), but also the correspondence in the expressions of the two authors in the seventh cannot be accidental (τὰ παρὰ τοῖς Ἀσκραίοις τεύτλα Clem., τὰ παρ' Ἀσκραίοις τεύτλα Ath.), seeing that in every other case the place of production is given with *ἐν* or with an adjective. The articles not found in Clement, but mentioned by Athenaeus (τῶν Παχυνικῶν θύνην τὰς ἡτριάδας between the second and third, and τὰς ἐκ Θηβῶν βουνιάδας between the eighth and ninth of Clement), as well as the addition of *πλωτάς* to *ἐγγέλεις* (with the omission of *Μαιανδρίους*) are certainly derived from the original catalogue, for they naturally fit into the iambic metre (e.g. *πλωτάς ἐγγέλεις Μαιανδρίους, Θύνην μὲν ἡτριάδα τῶν Παχυνικῶν, Ἐκ Θηβῶν—βουνιάδας*).

Also the list of the first ten articles in Pollux is derived from the same source, although the divergence in expression and forms (e.g. *κόγχαι Πελωριαί, τεύτλον ἐξ Ἀσκρης, μαινίδες ἐκ Λιπάρας*) make it appear at least possible that Pollux quoted not from the original, but from some secondary source. The order is deranged, but not essentially: articles 2 and 6 of Clement are absent from Pollux, 4 stands before 3, and 9 before 7; the addition to 1 (*καὶ μύραινα Ταρτησία*) and the designation of the *θύνη* as *τύριοι* (perhaps a mistake, at least such tunny are mentioned nowhere else)—these discrepancies are of no great importance.

That Athenaeus and Clement quote from a prose paraphrase of a passage from a comedy, is shown by their verbal correspondence in expressions which do not fit into the iambic metre. Traces of the elegiac metre, which Kock, p. 427, recognizes 'in haud paucis', I can only find in the passage in Clement: *δι' ἃς ἐς Ἑλλάδα πεντακοσίαις ἡμέραις ὁ κατοδαίμων ἐστεύλατο Πέρσης*, which is of quite a different character and is obviously derived from another reminiscence. It is not in Athenaeus, and in Clement it is immediately followed by a passage which easily falls into iambic rhythm (*ὄρνεις ἐπὶ ταύτοις — τοὺς ἀπὸ Φάσιδος, Μήδων ταύρων τ' ἀτταγᾶς τ' Αἰγυπτίους*).

The catalogue of table delicacies given by these three authors differs widely from other well-known lists. It agrees neither with the fragment of Antiphanes (*ἐν Προβατεί*), Meineke, iii, 108 (*ed. min.*, i, 544):—

*Βουπτίας μὲν ἐγγέλεις, μὲν Πορτικοί,
γλαυκοὶ Μεγαρικοί, μαινίδες Καρίστιαί,
φαγροὶ δ' Ἐρετρικοί, Σκύριοι δὲ κάραβοι,*

nor with the fragments of Archestratus of Gela, in which, it is true, oysters of Abydos occur, but also cockles of Mitylene (Athen., iii, 92D, *Ennii Heduphag.*, ed. Vahlen, p. 106, 2, 3). *Σύκα Χελιδόνεια* (*edd. χελιδόνεια*) are known from Epigenes (*ἐν Βακχάα*, Athen., iii, 7, p. 75 c, d). Varro's list (Gell., vi, 16) is quite different: *pavus* e Samo, Phrygia *altagena*, *grues Melicae*, *haedi ex Ambracia*, *muraena Tartesia*, *ostrea Tarentina*, etc.).

XLIX. SPECIFICATION OF SILVER PLATE ACCORDING TO THE WEIGHT.¹

(Vol. II, p. 209, l. 31.)

MARTIAL repeatedly speaks of presents of gold and silver in such a way that one might think he was referring to ingots. So xiii, 48 :

Boleti.

argentum atque aurum facile est laenamque togamque
mittere : boletos mittere difficile est.

This is specially the case in those passages where the weight of gold and silver presents (at the Saturnalia) is stated. vii, 86, 6 : nulla venit a me Argenti tibi libra pustulati. (Sueton., *Nero*, c. 44 : exegitque ingenti fastidio et acerbitate nummum asperum, argentum pustulatum, aurum ad obrussam.) x, 14, 7 : Quando brevis gelidae missa est toga tempore brumae ? Argenti venit quando selibra mihi ? x, 57 : Argenti libram mittebas ; facta selibra est, Sed piperis : tanti non emo, Sexte, piper. xi, 105 : Mittebas libram, quadrantem, Garrice, mittis. Saltem semissem, Garrice solve mihi. xii, 36 : Libras quatuor aut duas amico Argentemque togam brevemque laenam, Interdum aureolos manu crepantes—Quod nemo, nisi tu, Labulle mittis, Non es, crede mihi, bonus. vii, 58 he complains that he has received such a quantity of worthless Saturnalia presents from Umbricius, that eight slaves had to carry them, and he concludes, line 11 :

quanto commodius nullo mihi ferre labore
argenti potuit pondera quinque puer.

The same kind of expression is found where purchases and bequests are spoken of. Martial, ii, 44 : Emi seu puerum togamve pexam Seu tris, ut puto, quattuorve libras, etc. ii, 76 : Argenti libras Marcus tibi quinque reliquit. Cui nihil ipse dabas, hic tibi verba dedit. *Vita Persii* : scriptis . . . ad matrem codicillis Cornuto rogavit ut daret sestertia, ut quidam centum, ut alii volunt* et argenti facti pondo viginti. Silver plate of the weight of twenty pounds might be worth 100,000 sesterces, but only if its artistic merit was unusually great. Martial, iii, 62 :—

Centenis quod emis pueros et saepe ducenis,
quod sub rege Numa condita vina bibis ;
quod constat deciens tibi non spatiosa supellex,
libra quod argenti milia quinque rapit

haec animo magno credis te, Quinti, parare ?

In fact, however, in all the above quoted passages silver and gold plate are meant, just as in xii, 66, 7 : argentum atque aurum non simplex Delphica portat. The designation by the mere statement of the weight is to be explained by the fact that it was regularly engraved on the plate, and could be stated at once as its most obvious property.

Numerous passages show that at the Saturnalia it was not really

¹ Cf. *De donis saturnaliis aureis et argenteis*, *Progr. Acad. Alb. Regimont.*, 1876, iii. W. Gilbert, *Zu Martialis*, in *N. Jahrb.*, 1882, p. 131f., has reached the same conclusions by the same arguments, without having seen my treatise.

unwrought silver or gold, but always plate, that was presented. Poor people gave larger or smaller silver spoons (Martial, viii, 33, 3: *quid tibi cum phiala, ligulam cum mittere possis, Mittere cum possis vel cochleare mihi*; cf. the passage quoted below, viii, 71, 9; v, 8, 2: *graciles lingulae*; xiv, 120: *lingula argentea*); richer or more liberal people gave dishes and goblets (Horace, C., iv, 8, 1: *Donarem pateras*, etc.; Martial, vii, 72, 4: *tibi . . . December . . . lances ferat et scyphos avorum*). It is shown most clearly by Martial, viii, 71 that silver plate is always to be understood when a certain weight of silver is mentioned. Here Martial laments that the Saturnalia presents of a certain Postumianus grow smaller from year to year; ten years before he had received four pounds of silver from him, soon after only about two, in the fifth year a pound of Septician silver. (This, which is also mentioned iv, 88, 3, evidently took its name from a manufacturer or dealer, like the Furnian, Clodian and Gratian vessels [Marquardt, *Priv.*, 696, 1].) Martial continues:—

Bessalem ad scutulam sexto pervenimus anno,
post hunc in cotula rasa selibra data est.
octavus ligulam misit sextante minorem,
nonus acu levius vix cochleare tulit.

Similarly, v, 19, 11:—

Saturnaliciae ligulam misisse selibrae
e lamnisve Tagi scripula tota decem,
luxuria est, tumidique vocant haec munera reges.

I have written the second line according to Munro's emendation; $\frac{1}{2}$ libra = 163.73 grams, 10 scripula = 11.37 grams. As at that time the value of gold was more than twelve times that of silver (Hultsch, *Metrol.*, p. 238), a *selibra* of silver and ten *scripula* of gold were of about the same value. Embossed golden bowls were among the lottery prizes of the rich at the Saturnalia, Martial, xiv, 59; that the gold was sometimes extremely thin is shown by viii, 33. Cf. also *CIL*, viii, 1858 (Theveste):— — *datasque ? a]d Kapitol. arg. lib. clxxx id est lances iiii [et au]ri lib. xiiii id est pihal[as (sic)] iiii scyposos ii.*

Σονάνιος οἰκοδόμος. Ἦτους σμέ (Bostra era 245 = 350 A.D.)

Ἀνελόθ[η] *den.* μύρια.

To all appearance the sums here, with the exception of 2037, are given in *denarii* of Diocletian. According to the latest investigation of Hultsch (*Der Denar Diocletians*, in *N. Jahrb. f. Philol.*, 1880, p. 27 ff., and *Metrol.*², p. 333) 36,000 of them go to the pound of gold, i.e. they are equivalent to 2981 d. or 3.133 centimes. The reduction of the sums to English money therefore gives:—

No. 1999.	130,000 <i>den.</i> of Diocl.	= c. £161 10s.
" 2000.	71,000 " "	= c. £88 4s.
" 2036.	15,000 " "	= c. £18 13s.
" 2053.	10,000 " "	= c. £12 8s.

The value of the Syrian *drachmae* (2037) has not yet been determined. Hultsch, *Metrol.*², 338, 1: 'At the lowest these *drachmae* were equal to those of Diocletian, possibly they were somewhat higher'.

The price of a piece of ground bought for the erection of a monument is mentioned in *CIL*, vi, 3, 23,851—(emerunt) locum HS C; further Wilmanns, 2573 = Marini, *Atti*, ii, p. 712 (Roma): LVCRINAE IVCVNDAE | P. LUCRINVS P. L. THALAMVS | A. CORINTHIS FABER | LOC. ENP. EST *den.* C M. ARGENT | SIBI. ET. SV. POS.

I am indebted to Prof. Hultsch for the following communication :
 'The rendering of $\overline{\text{M}}$ by *minutulus* is I think open to serious objection ; I explain it as a numeral, reserving the inquiry whether this letter occurs elsewhere combined with the ideogram for $\overline{\text{C}}$. The price of the piece of land would then amount to :—

'£4,500 if the *argenteus* is reckoned at its nominal value of $\frac{1}{16}$ of the *aureus* of Caracalla (*Metrolog.*² 323 ff.) or at

'£2,545 at the metallic value of the *argenteus* under this emperor, or at

'£1,762 at its metallic value under Elagabalus.

'The later the period assigned to the inscription, the lower will the value have to be reckoned ; but I do not think one would in any case have to put it as low as £500, still less £170 as might be reckoned from the passage cited from my *Metrologie*, but I suppose one might stop at the X of the Diocletianic system (i.e. $\frac{1}{100}$ of the *aureus* : *Der Denar Diocletians*, p. 28). At that rate the *argenteus* = 1.79 d. and the price of the ground at about £750.'

According to the two inscriptions from Narbo, *CIL*, xii, 4354—*inlatis arcae seviror. ob locum at tuitionem statuæ HS n. IIII l.d.d. IIIII viror. and 4397*—*inlatis arcae IIIII viror. ob tuitionem statuæ HS n. M l.d.d.d. IIIII viror.*, there seem to have been paid 3000 sest. for the ground in the first case.

LI. LATRINES IN ROME.

(Vol. II, p. 224 ff.)

PERHAPS the ancient Italian towns excelled the modern in nothing more than in their sanitary arrangements.¹ Latrines (*amphorae in angiportis*) are mentioned in Rome as early as the speech of Titius for the *Lex Fannia* 593 = 161 B.C. ; *Macrob. Sat.* iii, 16, 15 ; cf. *Lucret.*, iv, 1026 ; *Martial*, xii, 48 ; 77, 9 (*sellae Patroclianae*) ; *Schol. Juv.*, 3, 38 ; *Cujac.*, *Obs.*, xxiii, 34 ; *StRE*, s.v. *Dolium*, *Latrina*, *Lavatio* ; *Jordan*, *Topographie*, i, 445 f. Beside the latrines erected by private enterprise, there were, it seems, public ones as early as *Tiberius*, *Sueton.*, *Tiber.*, c. 58 ; cf. *Preller*, *Reg.*, 234 ; certainly under *Nero*, *Sueton.*, *Vit. Lucani*, ed. Roth, 299, 27. One such appears to have been discovered near the *castra Praetoria*. *Bulletino municip.*, 1878, p. 243, pl. ii, 3. We do not know which kind of convenience was provided by the *conclavia*, which, according to *Martial*, v, 44, 6 ; xi, 77, were evidently much frequented. *Rodbertus* points out (in *Hildebrand's Jahrb. f. Nationalökonomie*, v, 1865, pp. 309–314, n. 81) that *Vespasian* taxed the private latrine industry (sale of excreta to gardeners, etc.).² Similar arrangements may be assumed at least in the cities of Italy, as they existed at *Pompeii* ; cf. *Overbeck-Mau*, *Pompeji*³, p. 72 (public closet in the

¹ According to *Baudrillart*, iii, 228, in the seventeenth century, in the majority of European cities, not even the houses had privies. Francis I ordered that new houses in Paris should be provided with them. Charles III was the first to purify Madrid. 'L'insalubrité était si épouvantable, que l'on la sentait six lieues à la ronde. Il n'y a sorte de difficultés et d'oppositions qu'il n'éprouvât dans son projet. Il fallut faire venir des Napolitains pour établir de force des latrines'.

² Auction of the contents of the latrines at Bassora under the Khalif : *Kramer, Culturgesch. d. Orients*, ii, 332.

forum civile), 133 (in the building of Eumachia), 201, 233-235 (in the older, newer and central baths), in the great theatre 162. Cf. Michaelis, *Arch. Anz.*, 1860, 115 f.; Jordan, *Topogr.*, ii, 169. The Aurelian wall, restored by Honorius in 403, had, according to the description of the monk of Einsiedeln, 116 privies in it (*necessariae cxvii*), *ibid.*, 158, 580.

That in addition to the sewers, carts were used for removing excreta from the latrines is not (as Pöhlmann, *loc. cit.*, p. 131 remarks) to be inferred from the passage in the *lex Julia municipalis* in which an exception is made from the prohibition to drive vehicles by day, in favour of 'plostra stercoris exportandae causa', for undoubtedly these carts that were driven through the city by day were not used for cleaning out the latrines, but for removing filth from the streets. The former object was effected by means of the *cloacae*, and 'the juridical sources prove the great extent of the private drains, by means of which the latrines of the houses were emptied into the public sewers'. The latter were continuously and abundantly flushed, so that in the imperial age Rome possessed a most efficient system of sewerage. Frontinus comments on the extraordinary improvement in the cleanliness of the city and purity of the air which Rome owed to the application of the surplus water from the aqueducts to the flushing of the drains. Besides Rome, we know of several cities in which a sewerage system was carried out, and there can be no doubt that it was not uncommon (Pöhlmann, pp. 123-126). This conclusion is further supported by the following passages. Columella, *De cult. hortor.*, 81 sq.: *Pabula nec pigeat fesso praebere novali Immundis quaecunque vomit latrina cloacis*. Galen, ed. K., xvi, 360: *δεῖ μέντοι φυλάττεσθαι τὸν ἐπὶ τοῖς κήποις ἀέρα διὰ τοὺς ὀχετούς, ὥς τὰ πολλὰ τοὺς ἀποπάτους ἐκκαθαίροντας εἰς τοὺς κήπους, καὶ τὴν μεγάλην δυσωδίαν*.

LII. CIVITATES MUNDI.

(Vol. II, p. 232, l. 10.)

THE following notice following a list of the provinces of the empire in a Paris MS. of the ninth century, has not yet been satisfactorily explained: S[unt in] hoc mundo civitates VDCXXVII (Mommsen, *Die Städtezahl des römischen Reichs*, in *Hermes*, xxi, 1886, p. 491). K. J. Neumann's attempt (*Civitates mundi*, in *Hermes*, xxii, p. 160) to connect this sum with the figures of the Anonymus Ravennas is mistaken, as Kubitschek (*Civitates mundi*, *ibid.*, p. 465 ff.) remarks, who seeks the source of the statement in Ptolemy's Geography. Here he counts 'rather less than 5675' names of cities and tribes. It may be added that the number 5627 will not be found too great even for the cities of the Roman empire, if one considers the facts that in the political handbook (Append. v. p. 22) used by Josephus, 500 cities were assigned to Asia and 1200 to Gaul; also that a similar work, or indeed the same, may be the source of the statement in Aelian that there were 1197 cities in Italy (*Var. Hist.*, ix, 16: *καὶ οἱ πόλεις ὅκισαν τὴν Ἰταλίαν πάσαι ἐπὶ καὶ ἐνεήκορα καὶ ἑκατὸν πρὸς ταῖς χιλιάς*); and further that Ptolemy speaks of 248 cities in *Tarraconensis* and 324 in the African provinces (vol. ii, pp. 232 and 237).

LIII. MARBLE AND BRONZE AS MATERIALS FOR STATUES.

(Vol. II, p. 319 f.)

ACCORDING to the investigation by Max Fraenkel, *De verbis potioribus, quibus opera statuaria Graeci notabant* (Berlin 1873), *ἀγάλμα* generally signifies a marble statue and *ἀνδριάς* one of bronze, hence a mention of the material is only quite exceptionally added, as *ἀγάλματι μαρμαρίνῳ* CIG, ii, 3085 (Teos); on the other hand *ἀνδριάντα μαρμάρειον* CIG, ii, 2384 in an inscription from Paros, where also *ἀνδριάντες* were exceptionally of marble (p. 34 sq.). *Εἰκὼν* is used both of statues and paintings, in the former case as an equivalent of *ἀνδριάς*, Fraenkel, p. 37; of busts or herms, e.g. Lebas-Waddington, ii, 194 c. l. 3 (*εἰκὼν* est un buste en forme de Hermès); *εἰκὼν ἐνοπλος* a bronze medallion in relief; of paintings, *εἰκὼν γραπτὴ τέλεια* a full-length portrait, *εἰκὼν γραπτὴ ἐν ὀπλῳ* or *ἐνοπλος*, a half-length portrait. Where *εἰκὼν* is used of sculptures the material is generally mentioned, and, except in Paros, it is almost always bronze (Fraenkel, p. 34).

That in Greece bronze was practically always the material for honorary statues is shown for the earlier period by the expression *χαλκοῦν τινα στήσαι* or *ἀναθεῖναι*, and by the passages cited by Fraenkel, p. 32, from Aristotle and *Anthol. Pal.*, ii, 727: *ἐπερέ μιν χρυσῶ ἐν ἀγάλματι μήδ' ἐνὶ χαλκῷ* Τούτων τοῖς ἄλλοις εἰκλον ἐστάμεναι, and for the later period especially the Rhodian oration of Dio of Prusa, *Or.*, 31, p. 313 M., 340, 343 (of Athens, Byzantium, Lacedaemon, Mytilene): *ἀλλ' ὅμως ὅταν δέξῃ τινα στήσαι χαλκοῦν ἱστᾶσι κ.τ.λ.*, 344 s., 346 (Athens). That in Rome also in the earlier period public statues were generally of bronze is shown by a passage of Lucilius (*frag.* ed. L. Mueller, xv, 2): *ut pueri infantes credunt signa omnia athena Vivere et esse homines*. Augustus ordered that the erection of a bronze statue should accompany the honour of a triumph, Mommsen, *StR.*, i², 436 f.¹ Horace, *Sat.*, ii, 3, 183: *Laetus ut in circo spatieri et aeneus ut stes*. At a later date bronze remained the usual material for honorary statues. Apuleius, *Florida*, iii, 165: *Quid igitur superest ad statuæ meae honorem, nisi aeris pretium, artificis ministerium? quae mihi ne in mediocribus unquam civitatibus defuere, ne ut Carthagine desint, etc.* Ammianus Marc., xiv, 6, 8: *Ex his quidam aeternitati se commendari posse per statuas existimantes eas ardentem adfectant quasi plus praemii ex figmentis aeriis sensu carentibus adepturi quam ex conscientia honeste recte factorum: eas auro curant imbractari, etc.* The *Breviarium* of Zacharias mentions in Rome only the 3785 aenea simulacra regum et ducum. Jordan, *Topographie*, ii, 576.

From the beginning of the empire, especially from the time when the Carrara quarries began to be used for sculpture, marble was used for statues of all kinds. The various kinds of marble, as of bronze, differed of course in price (see vol. ii, p. 297). When both bronze and marble statues of the same person were erected (see vol. ii, p. 297), probably, when executed in the usual style, both cost about

¹ Cf. *Vit. Alexandri Severi*, c. 28: *exemplo Augusti qui summorum virorum statuas in foro suo [e marmore] collocavit additis gestis*. The words in brackets must be a gloss.

the same price and were equally esteemed. This was the case in Rome, where Claudius *e.g.* among the honours decreed him only accepted a bust of silver and two statues in bronze and marble (Dio, lx, 5); and we find the same thing in the provinces (cf. the Langres will, vol. ii, p. 297, and the inscription of Teos, *CIG*, 3085: *εἰκὼν χαλκῇ καὶ ἀγάλματι μαρμαρίνῳ καὶ εἰκὼν χρυσῇ*). At the present day statues of bronze and marble can be made at about the same prices. As I am informed by my friend Prof. R. Siemering, the prices at Berlin for a statue 6 ft. high were in 1870 as follows: bronze £42, Tirolese marble £35, Carrara marble, second quality, £35, first quality £66-73 (if very clear, as much as £82). The carriage of the Tirolese marble to Berlin costs about £12.

The frequency of marble honorary statues, especially in the *municipia*, and sepulchral statues of the same material is shown by the extremely abundant remains of them. The material, as has been said above, is comparatively seldom mentioned in inscriptions. Statuas . . . aenearum, *CIL*, xii, 2231 (Gratianopolis); st. aereae duae, *CIL*, ii, 1459 sq. (Ostippo, Baetica); st. aerea cum basi marmorea, 105 A.D., *CIL*, vii, 875 (Aquileia); st. marmorea, *BdI*, 1886, p. 250 (Castel di Sangro); *CIL*, ii, 4020 (Tarraconensis); st. marmorea equestris, *CIL*, ii, 1972 (Malaca); st. marmorea, *CIL*, v, 1, 2174 (Altinum).

As a rule only statues of emperors (besides those of deities) were made of silver and gold (Preller, *Röm. Mythol.*, i³, 239, 2; Sueton., *Vespas.*, c. 23; Dio, lxxviii, 12; Victor, *Caess.*, 40, 28); but there are exceptions, *e.g.* Pliny, *Epp.*, iv, 7, 1 (vol. ii, p. 296, l. 27), and *CIL*, iii, 2, 6308 (Moesia superior, Semendria):—ab ordjine in se conlatam statuam arg. ex p. lib. xl; *CIL*, xi, 1, 364 (Arimini):—sign. arg. vi et imagine(m) ex auri p. ii, etc.; *ib.*, xii, 5864: posito simulacro Viennae argenteo HS n. CCCIOOO CCCIOOO (200,000 sest.); *Eph. ep.*, vii, n. 426 (Hippo Regius): statuam argenteam ex HS LCCCCXXXV tribus libel(lis), sing(ula), terr(uncio) et aeris quad(rante) (51,335 $\frac{1}{4}$ sest.); *Eph. ep.*, v, 756 (Lambaesi): (st)a-tuncula argen[tea adjecta] Mercuri ex HS XIII m. *Εἰκόνας χρυσῇ* (Fraenkel, p. 34) are with the exception of statues of emperors and deities) probably as a rule *ἐν χρυσοῖς*.

LIV. PRICES OF STATUES.

(Vol. II, p. 319 f.)

THE earliest of the Greek notices of the prices of statues known to me is the fragment of an Attic inscription, *CIA*, 318, 319, mentioned by U. Köhler in *AdI*, 1865, p. 325, if his view is correct that it refers to the same object as the fragment on p. 315 s. with the date Ol. 89, 4 = 421 B.C. The former inscription specifies the costs for material, work and erection of two statues (*ἀγάλματα*, but probably of bronze), together with all that belonged to them, as scaffolding and pedestals. The total amount is 5 talents 3310 *drachmae* = £1281 5s. A talent (= 26·20 kil.) of copper cost in this case 35 *drachmae* = £1 6s. 11d; a talent of tin 230 dr. = £8 17s.¹ For

¹ In 1870 an equal weight of Paschkoff copper cost £3 5s. to £3 14s., of Swedish copper £2 1s. 6d., of Banca tin £3 1s. 6d. to £4.

a decoration, apparently consisting of leaves (*ἀνθεμῶν*) beneath or upon the shield (*ὁ[πλὸς]*? *τῇν ἀσπίδα*) of one of the two figures 1½ talent 23½ minae = 49·4 kil. of tin were employed. A comparison with the ancient prices immediately to be quoted, shows at least that these statues were colossal, and perhaps that the material and artistic execution were especially costly.

In the account of the cost of the frieze of the Erechtheum in Ol. 93 (Böckh, *Staatshaushalt*, i², 150, cf. Löwy, *Inscr. griech. Bildhauer*, p. 356 f.) the sum for a single figure without accessories is 60 dr. = £2 6s. 2d., for a man on horseback 120 dr., for a chariot with two horses and a youth 24 dr., for a woman with a child 80 dr. The figures are 2 ft. high, very finely worked in front, but left flat behind. The low price makes it certain that only the work and not the material is included.

Diogenes is reported to have said (Diog. La., vi, 2, 35; Schol. Pind., *Nem.*, 6) that the most precious things are sold for the lowest prices and *vice versa*; a statue for 3000 *drachmae* (£115) and a peck of meal for two small copper coins. Of course an honorary statue is meant. An express confirmation is afforded by the inscription *CIA*, ii, 251 (307–301 B.C.): *στήσαι τὸν δῆμον εἰκόνα χαλκῇν ἐν Βυζαντίῳ Ἀσκληπιδίου ἀπὸ τρισχιλίων δραχμῶν*. Cf. the Cnidian inscription (of about the Christian era) in Newton, *Discoveries*, p. 763, n. 49: *ἐλεσθαι δὲ καὶ ἀνδρα ὅστις ἀποδεξάμενος παρὰ τοῦ ἐν ἀρχῇ ἀφιστήρης* (president of the *βουλή*) *>γφ* (3500 dr.). *τὰν ἐπιμέλειαν τὰς εἰκόνας τὰς ἀναστάσεις ἐν τάχει ποιήσειται*. So when the citizens of Oreus in Euboea promised to erect a bronze image (*χαλκῇν εἰκόνα*, undoubtedly a statue) of Demosthenes, if he would release them from their debt of a talent (6000 dr.; Aeschin., *In Ctesiphont.*, p. 495 sq.; Köhler, *Ges. Schr.*, vi, 346), they would have saved half the sum they owed.

When Dio of Prusa in his Rhodian oration, in which only honorary statues of bronze are dealt with (cf. 286 above), says that they can be erected for 1000 or even for 500 *drachmae* (Dio, *Or.*, xxxi, p. 597 R.), the statement is fully confirmed by the records on the bases of statues. For probably Dio did not reckon by Attic *drachmae* (in which the two prices would correspond to £38 10s. and £19 5s.), but by denarial *drachmae* (Hultsch, *Metrol.*², 250–253), and meant prices of 4000 and 2000 sesterces (£42 12s. and £21 6s.), the latter of which occurs sometimes. The great difference between these prices and that mentioned by Diogenes is no doubt to be explained not by a rise in the value of money, but chiefly by the mechanical execution of the ordinary decorative and honorary statues turned out under the empire. Also some estimates in an account of the expenditure on certain spectacles at Aphrodisias (*CIG*, ii, 2758) agree with the other notices of the imperial age. Here we find twice *ἀνδριάντος*—*δην.* α., and once *ἀγαλματοποιαίς*—*δην.* [α.] φ. (1000 den. = 4000 sest., 1500 = 6000). Similarly in the inscription from Philadelphia in Lydia, Lebas-Waddington, 648 = *CIG*, 3422 (see vol. ii, p. 229):—*φυλαῖς ἐκτὰ ταῖς ἐστακυλαῖς τοῖς ἀνδριάντας πρὸς δηνάρια χεῖλια*. In general agreement with these facts are the statements that equestrian statues could be delivered for 6000 sest. (*Ephem. epigr.*, vii, n. 247 [Africa procons., 196 A.D.] *statuas*

equestres [dua]s ex HS ~~XII~~ n.—posuit), and portrait herms for 400. At the Leonidea at Sparta, the victors received by a foundation of C. Julius Agesilaus, about the time of Nero, 100 *drachmae* each for such herms (*op. cit.*, ii, 194 c. l. 3 : καὶ εἰκόνα λαμβάνοντες > ρ.).

Prices under 2000 sest. must refer to statuettes, even when it is not expressly stated.

100 sest. *CIL*, iii, 633 (catalogue of temple gifts at Philippi) : — — tabula picta Olympum *den.* xv, sigillum marmurium Liberi *den.* xxv.

Homolle, *Bull. de corr. Hellén.*, v, 1881, p. 468 (Delos) : — — *πρὸς Σαρπηδόνα ἀγάλμα τῷ Διονύσῳ ΔΔΓ'* (middle of the third cent. B.C., Löwy, *Inscr. griech. Bildh.*, no. 530).

CIL, vii, 180 (on the basis of a very elegant, small figure of Mars, found near Lincoln, from the lettering probably of the second cent.) : Deo Mar(ti) et nu(mini)b(us) ? Aug(usti) Col(l)asuni Bruccius et Caratius de suo donarunt ad sester(tios) n(umos) c(entum). Celatus aerarius fecit et aeramenti libr(am) donavit factam *den.* iii.

248 sest. *CIL*, ii, 1163 (Hispalis, basis marmorea parva) : Genium Baetis, sig(num aere)um L. Julius de salario suo annuo ex denariis lxii cum base d.d.d.

400 sest. *BdI*, 1882, p. 38 (Rome) : — — A de suo dedit manipularibus suis in genium centuriae suae ponendum HS CCCC n., ad quam summam adjecit A ejus HS CCC n. eisdem qui mensam aeream et protectum fecerunt (118 A.D.).

1100 (1200 ?) sest. *CIL*, ii, 2006 (Nescania, Baetica) : Genio municipi Nescaniensis L. Postumius Stico Nescaniensis signum cairae (ex aere) pecunia sua ex HS M n. fieri et Nescaniae in foro poni iussit ; quot donum ut consummari posset, M. Cornelius Niger Nesc(aniensis) h(eres) ejus adjectis de suo ad impensas operis HS C. n. (CC n ?) dedicavit.

1300 sest. *Ephem. ep.*, vii, n. 242 (Africa procons.) : Minervae Aug. sacr. — statuam ex HS DCCCC n. adjectis a se HS CCCC n.d.d. faciend. cur.

1500 sest. ? *CIL*, xii, 3058 (Nemausus) : ? signa . . . Isis] ex [HS . . .]—Serapis Vestae Dianae Somni (Dianaes omnia mavult Mommsen) [ex]—HS n. vi (numero sex milibus).

In the following records of prices from 2000 sest. upwards I put those in square brackets in which the monument is not expressly called a statue. It remains doubtful whether the price of the pedestal is as a rule included in the figures. Express mention of it (as above, 248 sest., and *CIL*, viii, 8310 : statuam cum basi ; *Eph. ep.*, vii, 757 : statuas cum basibus, etc.) is not frequent. But considering that a very large pedestal only cost 400 sest. (*Eph. ep.*, vii, 792, p. 290), and consequently an ordinary one about 300,¹ the difference arising from the addition and subtraction of this sum is not very considerable. (An *ara* for 1000 sest., *Eph. ep.*, v, p. 452, 931).

2000–3000 sest. (£21 6s. to £31 19s.).

CIL, viii, 1401 (Thignica) : statuam quam pater eorum ex HS ii

¹ As the erection of a statue for 3200 sest. is twice enjoined in wills (*CIL*, ii, 2150, viii, 924) it may plausibly be supposed that 200 sest. were for the pedestal.

suo et liberorum suorum nomine promiserat, ampliata pecunia posuit.

statue.]

VOL. III.

LV. BORROWING FROM THE *CONTROVERSIAE* OF THE ELDER SENECA IN THE *GESTA ROMANORUM*.¹

(Vol. III, p. 16 bottom.)

It seems not to have been observed by the earlier editors of the *Gesta Romanorum*, that Seneca's *Controversiae* are frequently drawn upon, indeed, as far as one can judge from Grässe's account of the sources, more than any other ancient source; although Seneca is expressly mentioned as an authority in cap. 134, *De innocenti morte Christi*: Seneca narrat, quod lex aliquando erat, quod quilibet miles in armis suis sepeliri deberet, et qui tantum defunctum armis spoliaret, morte moreretur etc. The relation is borrowed from *Controv.*, iv, 4. Grässe, who only thought of Seneca the philosopher, remarks (*Das älteste Märchen- und Legendenbuch des christlichen Mittelalters oder die Gesta Romanorum*, second ed., 1847, p. 272) that the passage is not to be found in Seneca, and describes the other borrowings from the *Controversiae* as cases of conscience invented by the author of the *Gesta*. I have noted the following: G.R., c. 2 (*Controv.*, i, 2); 3 (i, 3); 4 (i, 5); 5 (i, 6); 6 (ii, 2); 7 (ii, 4); 14 (vii, 4); 73 (iii, 1); 90 (vi, 3); 100 (i, 4); 134 (iv, 4). Also the invention of c. 117 seems based on a reminiscence of the invented laws of the *Controversiae*. As far as I have compared them, only the *themata* have been used, and not what Seneca relates of their treatment by the orators. A few examples may illustrate the mode of treatment.

Seneca, *Controv.*, i. 1.

Liberi parentes alant aut vinciantur. Duo fratres inter se dissidebant; alteri filius erat. Patruus in egestatem incidit, patre vetante adulescens illum aluit. Ob hoc abdicatus tacuit. Adoptatus a patruo est. Patruus accepta hereditate locuples factus est. Egere coepit pater. Alit illum. Abdicatur.

Gesta Romanorum (ed. Keller)
c. 2. De misericordia.

Titus regnavit, qui statuit pro lege sub poena mortis, quod filii parentes suos alerent. Accidit casus quod erant duo fratres ex uno patre: Unus filium habebat, et vidit avunculum suum egentem; statim secundum legem eum aluit contra voluntatem patris et ideo pater ejus a societate sua eum expulit. Verum tamen

hoc non obstante non dimisit quin avunculum suum egentem aleret et necessaria ei in omnibus dedit. Post haec avunculus ejus

¹ Cf. *Ind. lect. lib. acad. Alb. Regimont.*, MDCCCLXXI. Oesterley, who, without knowing this dissertation, has in his edition of the *Gesta Romanorum* (Berlin, 1872) demonstrated (p. 714ff.) the borrowings from Seneca's declamations, calls the latter (p. 251) 'a hitherto entirely unknown source of a number of the most characteristic stories in our collection.'

dives factus est et pater ejus coepit egere. Filius vero hoc videns patrem aliut prohibente avunculo et ideo a societate avunculi expulsus est dicensque (*sic*) ei : Carissime, tibi constat, quod aliquando egenus eram et contra voluntatem patris tui mihi necessaria in omnibus ministrasti, et ideo jam te in filium meum et haeredem accepi. Ingratus filius haereditatem non sequitur sed filius adoptatus, etc. (All the rest is original.)

Seneca, *Controv.*, i. 3.

Incesta de saxo dei ciatur. Incesta damnata, antequam deiceretur de saxo, invocavit Vestam. Vixit dejecta. Repetitur ad poenam.

G. R., c. 3. Justum iudicium.

Quidam imperator regnavit, qui statuit pro lege, quod si mulier sub viro adulterata esset, sine misericordia de alto monte praecipitaretur. Accidit casus quod quaedam mulier sub viro

suo erat adulterata, statim secundum legem de alto monte fuit praecipitata. Sed de monte tam suaviter descendit, quod in nullo laesa erat. Ducta est ad iudicium. Iudex videns, quod mortua non esset, sententiam dedit, iterum deberet praecipitari et mori. Ait mulier : Domine, si sic feceritis, contra legem agitis, quia lex vult quod nullus debet bis puniri pro uno delicto. Ego eram praecipitata quia semel adulterata, et deus me miraculose salvavit, ergo videtur quod iterato contra legem non debeo praecipitari. Ait iudex : Satis prudenter respondisti. Vade in pace ! Et sic salvata est mulier.

LVL THE CHRONOLOGY OF THE EPIGRAMS OF MARTIAL AND STATIUS.

(Vol. III, p. 59.)

THE chronology of the epigrams of Martial and of the *Silvae* of Statius demands connected treatment, because some of the poems of the two were composed on the same occasions. The results of the investigation of the dates of composition of Martial's epigrams, which will be found in the introduction to my edition, pp. 50-67, are as follows :—¹

Liber spectaculorum 80, second enlarged edition under Domitian ?

XIII, XIV published	December 84/85
I, II "	85/86
III "	87/88
IV "	December 88
V "	autumn 89
VI "	summer or autumn 90
VII "	December 92
VIII "	middle of 93
IX "	middle or end of 94
X ¹ "	December 95
XI "	December 96
X and XI (anthology) published	97
X ² published	middle of 98
(departure of Martial from Rome).	
XII published	beginning of 102

¹ The section in the 5th edition, pp. 424-440 'Chronology of Martial's epigrams,' is here omitted.

Dau, *De M. Valerii Martialis libellorum ratione temporibusque. Pars I* (Rostochii, 1887) has raised several objections to these dates. He has tried to prove that the greater part of the poems in the *Liber spectaculorum* were composed under Domitian and refer to the triumphal shows after the Dacian war (therefore after 89), and further that the epigrams of Books XIII and XIV were written gradually between 84 and 92. I showed in my review of this dissertation in the *Berliner philolog. Wochenschrift*, 1889, no. 88, that both these assertions are entirely untenable. Dau then undertook to demonstrate the correctness of Schneidewin's supposition (ed. maj., p. 111 f.) that we possess Books I to VII in a second edition. The argument is principally based on the fact that in I, 2 the fourth forum, the forum Palladium, which was built by Domitian, is already mentioned, while there is no mention of four forums, instead of the three older ones, before x, 28, 51, and in a poem composed by Statius in 94/95 (*Silvae*, iv, 1, 14 sq.) the forum Palladium is called new, and the peace which the Janus dwelling in this forum was bidden by Domitian to conclude and maintain is, as Dau remarks on p. 62, the peace following the Sarmatian war (92). Dau thinks it so improbable that the building of the forum Palladium was already begun in 85/86, was afterwards suspended, and not taken up again with energy until 92/93, that he considers he can with certainty date the composition of Martial i, 2 in 93/94.

Now the history of architecture in all ages affords countless examples of buildings completed after long interruptions. It is well known that this was the case in the centre of ancient Rome. The forum Julium begun 54 B.C., which was dedicated while yet unfinished by Caesar in 46 B.C., was finished after his death by Augustus. Also the building of the forum of Augustus lasted a very long time (Richter, *Topogr. v. Rom.* in Iwan Müller's *Handbuch*, iii, 804 f.). It is therefore antecedently far from improbable that in 85/86 a beginning had already been made of the forum Palladium which was only finished by Nerva.

On the other hand, it cannot be denied that there is much to be said for the assumption of a second edition of the first seven books. The confident tone of the poet in i, 1, compared with the hesitating tone in i, 3, the announcement of a parchment edition in i, 2, which was to be bought of a different bookseller from the one who sold the elegant separate edition of i (117)—both these facts are to be explained most naturally on the supposition that i, 1 and 2 were added in a second edition, as also the fact that Martial sent a copy of the first seven books, corrected by his own hand, to Julius Martialis, who already possessed the sixth, and certainly also the rest (vii, 17; vii, 1). No proof to the contrary is afforded by viii, 3, 4: *teritior noster ubique liber*, which in view of Martial's preference for the singular with a plural signification (see my note on iv, 64, 16), is certainly to be rendered, 'my books are read everywhere'. Also the plural (*libelli*) is found in passages referred to the second edition, *viz.* i, 2, i; vii, 17, 5.

But if only one edition be assumed, these passages are by no means inexplicable. On the other hand, in the epigram i, 1, which stood beneath his portrait at the head of the volume (Crusius, *Rhein. Mus.*,

xliv, 454) Martial might very well boast of the applause which his poems had won as they circulated in small collections, and yet in i, 3 express his anxiety as to the reception which would be accorded to the complete book, now made public for the first time, and filled out as he thought (i, 16) with a good deal of indifferent and bad verse. A parchment edition does not necessarily imply a book of great length, it had a great advantage over the scroll editions which required the use of both hands, in the ease with which it could be held, and was thus specially adapted for travel (*me manus una capit*). Nor is it surprising that Martial, at the request of friends to whom he had presented copies from the book-shop, corrected them with his own hand, or sent new copies he had corrected.

The hypothesis of a second edition of the first seven books could only be proved by demonstrating that many of the epigrams were supplementary. But Dau has completely failed to prove this, as Gilbert has remarked in his review (*Wochenschr. f. klass. Philol.*, 1888, p. 1072). A second edition cannot therefore be regarded as proved, although one may regard it as more or less probable, according to the weight one attaches to the arguments based on i, 1, 2 and vii, 17. But if the edition in which we possess these seven books, is a second, it only differs from the first, so far as we can judge, by the addition of the two epigrams i, 1 and 2. Apart from these, none of my dates will be affected by the assumption.

Dau has also failed in his attempt (p. 86) to support by the help of i, 111, the theory of Borghesi and Stobbe, based on ii, 93, that ii appeared before i. If Martial gives Regulus a book, it is, I admit, most natural to suppose it is a work of his own, but that it is not, as everywhere else, designated as such, is enough to arouse doubt, which is much increased by observing that Martial describes the book as an appropriate present in view of the achievements (*merita*) of Regulus, and the fame of his wisdom, although elsewhere he refers with great modesty to his own '*nugae*'. From the manner in which Martial speaks of the present, I should be inclined to think of such a book as Cicero's *Orator* or *Brutus*.

As a test of the correctness of my dates, we may use the contemporary poems in the *Silvae*. The following refer to the same objects, persons or events.

Mart., vi, 21	Stat., <i>Silv.</i> , i, 2.	Marriage of Stella and Violentilla.
" vi, 42	" " i, 5.	Baths of Etruscus. ¹
" vi, 28 sq.	" " ii, 1.	Death of Glaucias, freedman of Ateidius Melior.
" vii, 21-23	" " ii, 7.	Birthday of Lucanus.
" vii, 40	" " iii, 3.	Death of the father of Claudius Etruscus.
" ix (11-13), 16, 17, 36	" " iii, 4.	Dedication by Flavius Earinus of his hair to Æsculapius at Pergamus.
" ix, 43 sq.	" " iv, 6.	The Lysippic Hercules of Novius Vindex.

¹ The poem by Statius was composed or revised after the composition of Martial's

As Statius, *Silv.*, iv, 1, refers to Domitian's seventeenth consulate (95), not only the first three books of the *Silvae*, but also books vi-viii of Martial, which were published at the same time, must have appeared before this year; we know in fact that Martial viii was published in 93. It must be admitted that this correspondence in the order of the poems of Martial and Statius is by no means necessary, for as will be seen below Statius sometimes left his poems unpublished for a considerable time, so that there is in some cases a much greater difference between the dates of their composition and publication than with Martial.

Martial's sixth book, not published before the summer of 90, contains poems written from the autumn of 89 up to this date, so the composition of the above mentioned poems of Stat., *Silv.*, i, falls within the same period. As Stobbe (*Philol.*, 26, 57 f.) has shown, no poem in this book contains a trace of composition after the Dacian triumph (end of 89), an assumption which is not even probable for a single poem in the book, with the exception of i, 5, corresponding to Martial, vi, 42, which was possibly composed in the year 90. *Silvae*, i, 1, on the erection of the colossal equestrian statue of Domitian,¹ was probably written about the time of the triumph, or indeed earlier, most likely before the death of Julia, which occurred at the end of 89. For among the ghosts of the deceased relatives which hover by night around this statue, hers is not found. In line 95 sqq.: *Ibit in amplexus natus fraterque paterque et soror*—if Julia were already dead, she would hardly have been left unmentioned. The sister is the elder, Domitilla, who had already died before Vespasian's accession (Eckhel, vi, 349), the son, who was born to Domitia in 73, the year of Domitian's second consulate (Sueton, *Domit.*, c. 3) was already mentioned as dead by Martial in iv, 3 (October, 88): *Quis siccis lascivit aquis et ab aethere ludit?* *Suspitor* has *pueri Caesaris esse nives*; also Silius Italicus mentions him in his poem which was already (Martial, iv, 4) partly, if not entirely written, *Punica*, iii, 627 sqq.: *sidereum . . . natum*. Eckhel has wrongly referred Martial, vi, 3 to this boy. Kerckhoff dates the poem after the death of Julia (who, he says, is called Domitian's sister in l. 98!), but his objections (pp. 6-8) are not serious; it does not follow from the words of Statius, that the relatives, whose ghosts hover in the air are all *divi*. Flavia Domitilla was not such. The poem on the marriage of Stella and Violentilla was written about the time of the triumph, for Venus (174-181) promises the bridegroom among other forthcoming honours that the emperor '*purpureos habitus juvenique curule Indulgebit ebur Dacasque (en gloria major!) Exuvias laurosque dabit celebrare recentes*'. The celebration of these games is nowhere mentioned (for those given by Stella to celebrate the Sarmatian triumph cf. Martial, viii, 78, 4: *Hyperborei celebrator Stella triumphi*). The recent celebration of the Secular Games (Sept. ? 88) is alluded to in

epigram. (See n. on vol. ii, p. 190, l. 8.) That this could only have been done after the publication of the latter is maintained without sufficient reason by Kerckhoff, *Duae quæst. Papin.*, 1884, p. 11 sq.

¹ Martial, viii, 44, 7 (colossus Augusti!) does not refer to this statue, as I assumed in my edition, but to the colossal statue of Augustus on the Palatine (see vol. ii, p. 301).

Stat., *Silv.*, i, 4, 17: *Nec tantum induerint fatis nova saecula crimen Aut instaurati peccaverit ara Terenti*; also l. 96: *neque enim frustra mihi nuper honora Carmina patricii pueri sonuistis in ostro*. (Nohl, *Quaest. Stat.*, 1871, p. 11.) Probably therefore we must also place in the year 88 the wanton nocturnal festival which Domitian gave on the 1st of December (i, 6), and this date is corroborated by the allusion in Martial, v, 49, 8: *Hic error tibi profuit Decembri. Tum cum prandia misit imperator Cum panariolis tribus redisti*. None of the grounds on which Kerckhoff (p. 12 sq.) assigns the poem to the year 83 are valid.

Now even if all the poems in *Silvae* i, except perhaps 5, were composed before the end of 89, the publication must have taken place considerably later, at the earliest towards the end of 91. For as *Silvae* iii probably did not appear before 94 (see below), and iv and v followed at intervals of about one year, it is not likely that the intervals were very much longer in the cases of the first two books, especially as Statius, as I have remarked, is known to have published his poems in some cases a good while after their composition. Also the death of Rutilius Gallicus (*Silv.*, i, *praef.*) is, as will be shown, to be assigned at the earliest to the year 91, or preferably to 92.

Of the poems in the second book of the *Silvae*, which was published more probably in 93 than in 92, ii, i was written immediately after the death of Glaucias, the freedman of Atedius Melior (festinanter *praef.*) and therefore before the appearance of Martial's sixth book (summer or autumn 90), which contains two poems (28 sq.) on the same event (Nohl, *Quaest. Stat.*, p. 14 n.); while *Silv.*, ii, 2 was not written before the late summer or autumn of the same year. An invitation had brought the poet to Sorrento (*Silv.*, ii, 2, 6):

Huc me post patrii laetum quinquennia lustrī,
quum stadio jam pigra quies, canusque sederet
pulvis, ad Ambracias conversa gymnade frondes,
trans gentile fretum placidi facundia Polli
detulit.

Line 6 shows that Statius had been present at the *Augustalia*¹ at Naples (held in August, vol. ii, p. 118) undoubtedly in the year 90, in which fell the 23rd celebration of this *agon* (*Italica*). Franz, *CIG*, iii, 733.

The third book contains the poem (iii, 2) on the journey of Maecius Celer, composed, as Nohl, *op. cit.*, p. 16 f., has observed, on the evidence of lines 40 and 142, before the completion of the *Thebais*, which was published towards the end of 91 (see n. on vol. iii, p. 65, l. 30); further the elegy on the death of the father of Etruscus (iii, 3, corresponding to Martial vii, 40), which must have happened before the publication of Martial vii (Dec. 92), and after Martial vi (autumn 92). But as Statius in this poem speaks of the Sarmatian war, from which Domitian did not return till 93, as already ended (169: *quae* [*clementia*] *Marcomanos post horrida bella vagosque Sauromatas Latio non est dignata triumpho*), Stobbe (*Philol.*, xxvi,

¹ Kerckhoff (p. 14) remarks truly that he had received no prize; *laetis* is one of the favourite words of Statius (p. 53).

55) referred this passage to the unsuccessful expedition of the year 89 against the Marcomanni (Dio, lxxvii, 7), to whom the Sarmatians had sent auxiliaries, and thereby given a pretext for the war of 92; whereas I assumed that Statius added these verses in a revision of the text early in 93 (cf. Nohl, p. 16). But as Kerckhoff, p. 17, remarks, it is most probable that the father of Etruscus did not die till December 92 (vol. i, p. 52), and that Statius composed the poem in January 93. In the same year he must have written the poem on the hair of Flavius Earinus (iii, 4, corresponding with Martial, ix, 16, 17, 36), after the appearance of Martial viii in the middle of the year. The book cannot therefore have been published before the closing months of 93. But probably it did not appear till the second half of 94, for the *agon Capitolinus* in which Statius was defeated is probably that of this year; *Silv.*, iii, 5 (ad Claudiam uxorem), 31: tu quum Capitolia nostrae Infitiata lyrae, saevum ingratumque dolebas mecum victa Jovem; especially as this event is mentioned after the prize which he won in the *agon Albanus*, and may have given occasion to the resolve of Statius, mentioned in this poem, to leave Rome. In this poem Statius adduces further motives (the advantages of Naples and its environs) for his resolve, which in the preface he had attributed to his desire for the company of Pollius Felix, and if we accept the above date, it will be the latest poem in the book. Kerckhoff, p. 18; so also Nohl, *Quaest. St.*, who considers however that Statius was defeated in the year 86 (p. 26).

The fourth book, addressed to Vitorius Marcellus, was published by Statius after his removal to Naples (*praef.*). The first three poems are devoted to the glorification of Domitian: iv, 1 (xvii consulatus Imp. Aug. Germanici Domitiani on the 1st of Jan. 95); iv, 2 Eucharisticon ad Imp. Aug. Germanicum D. (probably, as Kerckhoff remarks, p. 19, written before his failure in the *agon Capitolinus*, after which Statius would hardly have written l. 62 'saepe coronatis iteris quinquennia lustris', a view agreeing with the supposition that the dining-hall here described is the same one that is praised in Martial, viii, 39, published in the middle of 93); iv, 3, via Domitiana. The construction of this road from Sinuessa to Puteoli, took place, according to Dio, lxxvii, 13, in the year in which Flavius Clemens was executed, i.e. in 95. In the dedication to Vitorius Marcellus he says of it: cujus beneficio tu quoque maturius epistolam eam accipies, quam tibi in hoc libro a Neapoli scribo (iv, 4, written in the summer). The poem on the Hercules of Novius Vindex, iv, 6, need not necessarily be of the same date as Martial's epigram (ix, 43) on the same subject, but is probably one of the earlier poems in the book, as well as iv, 9 (Risus Saturnalicus ad Plotium Grypum, cf. Hirschfeld, *op. cit.*, 1512; *praef.*: Hendecasyllabos, quos Saturnalibus una [therefore probably in Rome in December, 94—so too Nohl, p. 19] risimus, huic volumini inserui). The book appeared then in the course of the year 95, not earlier than summer.

The fifth book seems not to have been published by Statius, who left it unfinished (Nohl, p. 22; Baehrens, *Stat.*, i, p. 125; Kerckhoff, p. 24). The first poem to Abascantus (with the fragment of a preface in the form of a letter, referring to this poem, and not to

the whole book, Kerckhoff, p. 21) seems to have been composed before the poet's removal to Naples (end of 94); for I think it is only while he was still in Rome, and intended to remain there, that Statius could have written to Abascantus: *quam vis propiorem usum amicitiae tuae jam pridem cuperem* (Kerckhoff, p. 21). This agrees with the fact that the *templum gentis Flaviae* is first mentioned in Martial, ix (published middle or end of 94), i, 3, 34, and in Statius, *Silvae*, iv, 3, 18, where it is spoken of as lately finished (240: *Illius, aeternae modo qui Sacraia genti condidit*). The second poem, in which Statius alludes to a forthcoming recitation of his *Achilleis* (160 sqq.) is of about the same date as iv, 4 (94: *Troja quidem magnusque mihi temptatur Achilles*) and iv, 7 (23: *primis meus ecce metis Haeret Achilles*). See Kerckhoff, p. 21 sq. The third poem, the elegy on his father, who died not long after the eruption of Vesuvius, was begun three months after his death (l. 29), and is already mentioned in iii, 3, 39 sq.; it was revised later, it is in this enlarged form that we possess it (Kerckhoff, p. 22). There is no evidence that Statius survived Domitian (d. 18 Sept. 96); the fourth poem, in which he laments that sleep has fled him for seven nights, may have been written in his last illness; the fifth (Epicedion in *puerum suum*) he may have left unfinished. The edition of his poetic remains by his friends probably took place soon after his death (Kerckhoff, p. 23 sq.).

Synchronistic survey of the epigrams of Martial and the *Silvae* of Statius.

MARTIAL.
V published autumn 89.
VI published summer or autumn 90.
VII published December 92.
VIII published middle of 93.
IX published middle or end of 94.
X¹ published December 95.
XI published December 96.

STATIUS.
I written before the end of 89, and probably published 92.
II written at least in part 90, probably published 93.
III written 91-93, published (summer or) autumn 94.
IV written 94 and 95, published summer or autumn 95.
V written 94-96?, published perhaps 96 or a little later.

LVII. THE PATRONS AND FRIENDS OF STATIUS.¹ (Vol. III, p. 60.)

OF the patrons of Statius, C. Rutilius Gallicus is the one about whom we are best informed, the chief source of our knowledge being *Silv.*, iv, 1. But the allusions in this poem to his official career are so obscure that the attempts to elucidate it differ widely. The first was made by H. F. Stobbe (d. 1872) in a detailed paper, printed in the first edition of this work, 1871, iii, pp. 404-409, the chief results of which are as follows.

Rutilius Gallicus was at the time of his illness (after the Secular Festival of 88, l. 17 f.) during Domitian's absence in the Dacian War in the year 89 (ll. 91-93) rather more than 60 years old (l. 53), consequently he was born not later than the beginning of 29 A.D.;

¹ The section on the patrons and friends of Martial (fifth German edition, pp. 445-451) is here omitted.

according to l. 68 (*genus ipse suis*) he was probably a knight. If his military services are enumerated in ll. 72-79 in chronological order, he served first in Galatia, then nine years in Pamphylia, Pannonia¹ and Armenia; the last of these services being in the expedition of Corbulo, whose capture of Artaxata in April, 59 is alluded to (l. 79: *patiens Latii jam pontis Araxes*). Having returned to Rome, and having received the distinction of the *latus clavus*, he became praetor or *inter praetorios adlectus* (l. 80: *gemini fasces*), and *legatus pro praetore* to the proconsul of Asia, holding this office for two years, 62-64 (l. 80). Lines 83-88 may refer either to the command of the *legio III Aug.* in Numidia, or to the proconsulate of Africa. The former may have been held by Gallicus (before the consulate) in the years 64-66 or 74-76 (perhaps also 71-73); the latter not later than 76-77. There followed, l. 89 f., a governorship on the Rhine, and the capture of Veleda. If Gallicus had been from 64-66 *leg. leg. III Aug.*, he may have been the immediate successor in Lower Germany of Petilius Cerialis, who was transferred to Britain in 71; if he had been proconsul of Africa he cannot have gone to the Rhine before the end of 70, and the capture of Veleda would have to be placed in the last year of Vespasian's reign. Under Domitian Gallicus was, certainly in the year 89, urban prefect (ll. 5, 9, 16, 91-93). From the preface to the first book of the *Silvae* we learn that he had died before its publication. He died late in 91 or 92, for a fragment of the *fasti* of a priestly college (the *sodales Augustales*; ² Gruter, 300, 1 = *CIL*, vi, 1984) mentions him in the 27th *decuria* as co-opted in the year 68 in the place of the Emperor Nero, but in 92 mentions Tettienus Serenus as his successor. The vacancy created by his death can hardly have remained more than a few months.

A second attempt to construct the biography of Gallicus was made by E. Desjardins without knowing Stobbe's work on the subject (*Nécessité des connaissances épigraphiques pour l'intelligence de certains textes classiques*, in *Revue de philologie de littérature et d'histoire anciennes*, Janvier, 1877, pp. 7-24), in which he arrived at the following results. Gallicus, born in the year 27 at Augusta Taurinorum (l. 58 ff.), was about the year 45 *xvir silitibus iudicandis* (l. 71 f.), from 47-58 legionary tribune in the provinces mentioned in ll. 77-79, and probably present at the capture of Artaxata in 59. During this time *inter quaestorios* and then *inter tribunicios adlectus*, he became praetor and then legate of the proconsul of Asia (l. 89 ff.), and thereupon twice consul. In the year 84 he took part as *comes* of the emperor in Domitian's war against the Catti (l. 89 f.), and in the same year as legate in the Dacian war (ll. 90-93). In 85 he became urban prefect, and fell ill in 87, on the occasion of his recovery in the same year Statius composed his poem.

I have already in another place (*De C. Rutilio Gallico: Progy. Acad. Alb. Regimont.*, 1880, iii) drawn attention to some serious errors and misconceptions in this article. Desjardins is most un-

¹ Borghesi, *Opusculi*, v, 300, supposed that Gallicus had served in Pannonia towards the end of the reign of Claudius.

² H. Dessau, *De fastis sacerdotibus qui vulgo auguribus attribuntur*, in *Epist. epigr.*, iii, pp. 74-76.

happy in his treatment of lines 89-93. He translates *depositam Dacis perentibus urbem*: 'les Daces écrasés abandonnant leur ville'. The words really mean, as J. F. Gronov had already perceived, 'the city of Rome entrusted to Gallicus (as urban prefect) at the time of the destruction of the Dacians'. Further, to explain the mention of Veleda (who is known from Tac., *Germ.*, c. 8 to have been in Rome under Vespasian) in connexion with the war against the Catti in the year 84 (to which he refers l. 89: *Arctoas acies Rhenumque rebellem*), Desjardins assumes that by Veleda (a prophetess of the Bructeri) is to be understood Ganna a prophetess of the Catti or Senones, as a second Veleda! He says this although in a passage quoted in part by himself, Dio, lxxvii, 5, it is expressly stated that Ganna was in Rome with Domitian not as a prisoner, but as an envoy, and was honourably dismissed! Further, that 'togae virtus' (l. 71) does not refer to the decemvirate, which could not possibly be mentioned in a brief biographical summary, but to the achievements of Gallicus as an advocate. (The toga is known to have been a distinctive dress of advocates, see vol. i, p. 163, l. 3 and n.) Finally, Desjardins strangely transfers Domitian's Secular Festival to the year 87.

The results of an investigation by H. Nohl, which he kindly communicated to me (see pp. 453-456 of the 5th edition) are as follows.

C. Rutilius Gallicus of Augusta Taurinorum (l. 58), where two inscriptions which mention his second consulate (*CIL*, v, 6988, 6989),¹ and the base of an honorary statue of his wife (6990) have been found, was born not later than 28, for the words 'senecta) his senis vixdum orsa excedere lustris' (l. 53), which Statius wrote between the latter part of 89 and 92 (see above, pp. 301-2), could only apply to a man of the age of 61 to, at the most, 64. He began his career as an advocate (71). As he was not of noble birth, Gallicus probably owed his admission into the college of the *Sodales Augustales* in the year 68 (see above, p. 305) to the fact that he had already held the consulship (Tac., *Hist.*, i, 77; *Agric.*, c. 9), and owed the latter to his proved ability in the service of the state. Nohl understands 'geminos fasces magnaue iterata—Jura Asiae (l. 80) as referring to the proconsulate of Asia and the right of the proconsuls there to have twelve fasces (Mommsen, *StR*, i², 366, 6). This office was held by Silius Italicus (consul 68) in 77/78 (Borghesi, *Œuvres*, iii, 289), and if Gallicus was consul before him, he was also proconsul before him. If he held the latter office from 75 to 77, he would have been consul about 65 (in accordance with the usual ten years' interval in the years from 14 to 80, Waddington, *Fastes des prov. Asiat.*, p. 659), praetor about 55 (ll. 76-80), and his birth would have taken place about the year 25.

Nohl thinks the description of his military service too grandiloquent to suit the position of a subordinate officer, and therefore assumes that Gallicus was in Galatia as legionary legate, then nine years in Pamphylia, and then after his consulship (65 as *suffectus*) *leg. Aug. pr. pr.* in Pannonia (78), the governors of which are always of consular rank, and then (79) in a province bordering on Armenia,

¹ On a fragment of an inscription wrongly referred to Gallicus, see O. Hirschfeld, *Zu den Silvae des Statius*, in *Wiener Studien*, iii, 1881, pp. 269-274.

probably Cappadocia, which had previously been governed by procurators, but from Vespasian's time by consulars (Suetonius, *Vespas.*, c. 8; Tac., *Hist.*, ii, 8; Marquardt, *StV*, i², 367, 6). Gallicus would then have been one of the first of the consular legates there.

Then followed the proconsulate of Asia 75-77, which Gallicus held after Eprius Marcellus (71-74), and before Silius Italicus, and after that the second consulate (l. 82: sed revocant fasti majorque curulis Nec permissa semel, as Nohl reads for *promissa*); then an extraordinary mission (l. 85: qui mandaverat) to Africa, which was so successful that he could send rich tribute to Rome without war. Presumably his mission was connected with Vespasian's project of increasing the contributions of the provinces (Suetonius, *Vespas.*, c. 16; cf. Dio, cxvi, 8), and we may follow Mommsen (on *CIL*, v, 6989) in supposing that he was *leg. Aug. pr. ad census accipiendos*. He seems to have taken his wife Minicia Paetina with him, for the people of Leptis afterwards erected a statue to her at Turin (*CIL*, v, 6990).

Then Gallicus was *leg. Aug. pr. pr. prov. Germaniae inferioris*. The capture of Veleda (l. 89: Arctoas acies Rhenumque rebellem Captivaeque preces Velledae), is put by Stobbe under Vespasian (although the words of Tacitus, *Germ.*, c. 8: vidimus sub divo Vespasiano Veleadam, may be taken to mean that like Ganna she was in Rome as an envoy). Nohl, however, places this event in the reign of Titus, because otherwise both the African and German legations would fall in the two or three years between the second consulate of Gallicus and the death of Vespasian, and Gallicus would have been quite inactive during the remaining ten years. He obtained the urban *praefectura* not long before his illness (l. 90 sqq.; in l. 92 Nohl emends *lectu* to *lectus*).¹ His predecessor in this dignity was perhaps Pegasus (Juv., iv, 77), and with greater probability T. Aurelius Fulvus can be named as his successor. *Vit. Antonin.*, c. 1: avus ejus T. Aurelius Fulvus per honores diversos ad secundum consulatum et praefecturam urbis pervenit; he was cos. ii in 89, so he very probably became urban prefect soon after. Gallicus seems to have had no children, as Statius would hardly have left them unmentioned.

An examination of Nohl's conclusions by O. Hirschfeld, which he has kindly communicated to me, shows that for the most part they are untenable, and that Stobbe (and Desjardins in part) had already hit the mark in all essentials. The advocateship² of Gallicus was immediately followed by numerous campaigns (l. 72: mox innumerus exercita castris . . . jurata manus), which are evidently dealt with in detail in the following lines (ll. 74-79). That Gallicus was an equestrian officer for about ten years (the same period for which Trajan, a senator's son, was tribune) is no more surprising than that a poet like Statius used grandiloquent language about his patron's

¹ But undoubtedly we must read *lectu* here with Hirschfeld (*Wiener Studien*, iii, 1881, p. 272). I cannot, however, accept his emendation *Fortuna non adspirante for admirante*.

² In this capacity Gallicus distinguished himself again at a later date (l. 10 sqq.), so that Statius (l. 22 sqq.) celebrates him 'as a teacher and pattern of eloquence and judicial wisdom': Hirschfeld, *loc. cit.*, who reads in l. 24, *certumque* (for *centumque*) *dedisti Iudicium montemque viris*. I understand the passage, 'You who have given judgment and insight to the centumviral court (by your convincing speeches as advocate)'.³

service, especially if, as appears to be the case, the later military performances of Gallicus were insignificant, or even unfortunate, so that it was better to make no allusion to them. The 'gemini fasces' in l. 80 cannot be twelve, and cannot possibly mean anything but the urban praetorship (Mommsen, *StR*, i², 384, 2); 'iterata jura Asiae' cannot refer to the proconsulate, which 'terque quaterque' (l. 81) suits even less than 'iterata', but must mean such a post as that of *legatus proconsulis*, which might last as well one year as four, and which would give him judicial powers. (Cf. also *StR*, ii², p. 257 f., where 'Stobbe' should be read for 'Hirschfeld'.) That this post was praetorian is shown by l. 82: *sed revocant fasti m a j o r i q u e curulis*, which can only mean the consulate, the higher office as compared with the praetorship. In l. 83 *nec p r o m i s s a s e m e l* must be right, and as Borghesi (*Œuvres*, ix, p. 274) considers, must allude to the designation for the second consulship, which Gallicus probably obtained, as was usual, after the *præfectura*, in the course of the year 89 (so also Borghesi). I consider that Mommsen, with whom Nohl agrees, has correctly explained the African mission (p. 307 above, and *Wiener Studien*, iii, 1881, p. 269). Statius has evidently adhered to the chronological order in describing this career, and that being so the military services mentioned in l. 76 sqq. can only be equestrian. I follow Stobbe and Desjardins in referring l. 79 to the capture of Artaxata in the year 59. Whether Gallicus was then quaestor is doubtful; it is most natural to assume an *allectio inter tribunicios*, followed by the appointment to the urban praetorship. That the period after the consulate is summarily treated, is, as I have said, probably due to the fact that it contained no specially brilliant successes.

Maecius (edd. wrongly Metius) Celer, in Statius, *Silv.*, iii, 2 (not to be confused with the Celer mentioned in Martial, vii, 52 as *legat. Aug. pr. pr.*, or legate of such an official), had, as Stobbe remarks, according to l. 124, performed his military service as *trib. mil. latyclavius* in a Syrian legion,¹ and at the time when the poem was written had obtained the command of a Syrian legion (*praef. 1*: *juvenem a sacratissimo imperatore missum ad legionem Syriacam*). But if Stobbe assumed on the ground of l. 105: *Eoa signa Palaestinae cohortes*, that he had been *leg. Aug. pr. pr.* in Judaea, he was, as Nohl observes, not justified in the assumption, because Statius elsewhere uses *Palaestinus* for *Syriacus* (ii, 1, 160; v, 1, 213), and, what is more important, Statius only mentions one legion, which he would certainly not have done, if his patron had been governor. 'Majora daturus' (of the emperor, l. 127) seems to allude to the consulate, as the legates of legions were as a rule already praetorians. According to Stobbe the identification with L. Rosc. Ael. Maec. Celer, *cos. suff.* 100 is impossible, as the latter was *trib. mil. leg. ix* in Britain and Germany, and never commanded a legion afterwards (Henzen-Orelli, 3569 = 4952). The patron of Statius may, however, be the same as M. Maecius Celer, *cos. suff.* in April 101 (Henzen, *Acta fr. Arval.*, p. cxliii).

¹ In l. 124 (ed. Baehrens): *Notus adhuc tantum majoris m u n e r e clavi* (odd. *summe*) *lumine* should be read; cf. iv, 5, 42: *contentus artae lumine purpureae*. Quintilian, viii, 23. Nohl.

Plotius Grypus (not Gryphus) was also of senatorial rank, *Silv. praef.*, iv: majoris gradus juvenis, iv, 9, 17 ff.: priusquam Tē Germanicus arbitrum sequenti Annonae dedit omnibusque late Praefecit stationibus viarum. The Plotius Grypus, consul in 88, who is mentioned as an Arval in the Arval table (Henzen, *Scavi*, p. 43), cannot, as Mommsen and Henzen assumed, be the man celebrated by Statius, but was perhaps his father or brother, as Hirschfeld has observed in *Göttinger gel. Anz.*, 1869, 1512. He understands (*Philol.*, xxix, 29, 40) by the offices mentioned by Statius 'the superintendence of the supplies (*annona*) and quarters (*stationes*) for a particular campaign, probably the last Dacian (more probably the Sarmatian) under Domitian'. Cf. Hirschfeld, *VG*, p. 101, 2, and Mommsen, *StR*, ii³, 2, 1031, 2.

Vettius Crispinus, son of Vettius Bolanus (consul c. 67 or 68, cf. Waddington, *Asie mineure*, p. 704) received at the age of sixteen (*Silv.*, v, 2, 12) from Domitian the legionary tribunate, l. 173: en ingens reserat tibi limen honorum Caesar at Ausonii committit munia ferri; 177: cuique sacer primum tradit Germanicus ensem; cf. 8 sqq., 125 sqq. (Mommsen, *StR*, i³, 434 f.). He had already appeared as defendant in an action for adultery, l. 99 sqq., and was a *Satius*, 130 sqq. (Marquardt, *StV*, iii³, 427, 13). Cf. Teuffel, *RLG*⁴, 326, 11.

Manilius (so the codd. in the title of i, 3, edd. wrongly *Manlius*) Vopiscus, vir eruditissimus et qui praecipue vindicabat a situ literas fugientes (*Silv.*, *praef.* i), was the owner of the splendid *villa Tiburtina* (*Silv.*, i, 3), and certainly a relative of Manilius Vopiscus, consul in 114. Orelli 3787. [He himself seems not to have entered the public service; cf. i, 3, 22; 108, etc. Nohl.] On the frequent confusion between the names Manlius and Manilius cf. *StRE*, iv, 1481. [The cos. 114 was perhaps a grandson of the cos. suff. 60 at the time of the Neronian comet (cf. Tac., *A.*, xiv, 22); in Seneca, *Qu. nat.*, vii, 28: Paterculo et Vopisco. Stobbe.]

Flavius Ursus was, perhaps, as Teuffel *RLG*⁴, 326, 10, supposes, a son of Ursus who advised Domitian to divorce Domitia, and at Julia's request became consul in 84 (Dio, lxxvii, 3, 4). These intimate relations with the imperial house support the conjecture that he belonged to the Flavian gens. The Ursus mentioned by Statius was still young (ii, *praef.*: juvenem candidissimum et sine jactura desidia doctissimum) and seems to have held as yet no office, otherwise Statius would hardly have ignored the fact. He had, however, already appeared as an orator, ii, 6, 95, was rich and the owner of estates on Vesuvius, near Pollentia, in Lucania, on the right bank of the Tiber, in Crete, Cyprus and elsewhere (*ib.*, 60-68).

Vitorius (not Victorius) Marcellus, the friend of Quintilian, *Stat.*, *Silv.*, iv, *praef.*; iv, 4; cf. Nohl, *Zwei Freunde des Statius*, in *Hermes*, xii, 517 f., and Mommsen, *Vitorius Marcellus*, in *Hermes*, xiii, 428-430. He was probably, as Mommsen has shown, the son of a knight (his son Geta is called in Statius, *Silv.*, iv, 4, 75, *Stemmata materno felix, virtute paterna*), and after his praetorship he had obtained the superintendence of the Via Latina (*ib.*, 59), and the prospect of the command of a legion (61). He had married a lady of the family of Hosidius Geta, and his son Geta (Quintilian, i, pr.

6; Stat., l. 71: *parvoque exempla parabis magna Getae*) is the Arval, C. Vitorius Hosidius Geta, repeatedly mentioned in the *Acta* of 118-120). The Gallus mentioned by Statius (ll. 20-26) was not, as was formerly erroneously assumed, a son but a friend of Vitorius Marcellus.

Vibius Maximus (Martial, xi, 106), whose name, falsely spelt *Vinius* and *Vivius* in the Statius MSS., has been restored by Nohl (*Hermes*, xii, 517), belonged to the equestrian order. His father had held a command in the Sarmatian war (*Silv.*, iv, 7, 49-53), and he himself had been *praef. alae* in the East (l. 45). When *Silv.*, iv, 7 was composed, he was in Dalmatia, not, as Hirschfeld (*VG*, p. 85 n.) supposed, as *proc. avar. Delmat.*, but as Nohl proves from a military diploma of 93, as *praef. coh. iii Alpinorum*. In the year 104 he was, as is shown by an inscription on the column of Memnon (Nohl, *ibid.*), prefect of Egypt. [He also had literary tastes; he epitomized Sallust and Livy (*Silv.*, iv, 7, 55). Statius addressed a letter to him on the publication of the *Thebais* (iv, *praef.*, 7, 25-28), and perhaps he is the Maximus who admired Catullus (Martial i, 7). Nohl.]

Septimius Severus was also a knight, iv, 5, 41: *inter pignora curiae Contentus arcto lumine purpurae* (*praef.*: *inter ornatissimos secundi ordinis*), an orator and poet (Teuffel, *RLG*⁴, 326, 9), and the owner of three estates near Veii, Cures, and in the territory of the Hernici (54-57). No mention is made of his holding any office.

Novius (Nohl, *Qu. Stat.*, p. 45)¹ Vindex is praised by Statius for the purity of his morals, and for his fidelity towards a certain Vestinus, who, it seems, had then (94/95) died in the prime of life, and belonged to a noble family (iv, 6, 94: *scit adhuc florente sub aevo Par magnis Vestinus avis*). Probably, however, he is the man mentioned by Martial, iv, 73.

Pollius Felix, a rich Puteolan, lived in retirement at his villa near Sorrento (*Silv.*, ii, 2; iii, *praef.*; iii, 1); his wife was Polla, his son-in-law the Neapolitan Julius Menecrates.

LVIII. THE CHRONOLOGY OF JUVENAL'S LIFE AND SATIRES.

(Vol. III, p. 67 ff.)

THE statement, formerly very common, that Borghesi in his treatise *Sull' età di Giovenale* (1847, *Œuvres*, v, 49-76) placed the birth of Juvenal in the year 47, is, as far as I can ascertain, erroneous. So far as I know, Borghesi has nowhere expressly said it. The conclusion was merely drawn, because he had proved that Juvenal wrote his last book, in part at least, in the year 127. This year was then assumed to be that of his death, and as the ancient biographies unanimously state that he lived to be eighty, his birth was assigned to the year 47. Perhaps this was also Borghesi's view. Others put his death a few years later, and his birth about 50.

Borghesi's date for the composition of the 13th satire is quite certain; according to l. 17 it was written sixty years after the consulate of Fonteius. Of the four consuls named Fonteius Capito named in the *Fasti* (A.U.C. 721, 765, 812, 820) only the last three

¹ Baehrens: *novii ita A. novi C. Novii* edd.; but like Markland he writes Nonius.

are in question. Now Borghesi has shown that if a year was indicated by the name of only one consul, it was always the one whose name stands first in the *Fasti*. This is only the case with the name of that Fonteius who was consul in the year 820 = 67 A.D.

Now I thought that in the passage in question in the 13th satire I recognized an indication of Juvenal's birth-year. The poet comforts his friend Calvinus, who is troubled because a faithless friend has repudiated a sum of money given him in trust; the loss, says Juvenal, is not great, and one must not be so distressed at an everyday occurrence. Then he continues, l. 13 :

Tu quamvis levium minimam exiguamque malorum
particulam vix ferre potes, spumantibus ardens
visceribus, sacrum tibi quod non reddat amicus
depositum. stupet haec, qui jam post terga reliquit
sexaginta annos, Fonteio consule natus :
an nihil in melius tot rerum proficit usus ?

I still think, as before, that this passage, punctuated as above, may in itself very well be understood thus : ' one who (like myself) has already seen sixty years (and so has only too often had similar experiences) is astonished at such passionate grief over so ordinary a disappointment '.¹ But as O. Hirschfeld has pointed out to me, the poet's astonishment at the excessive grief of Calvinus would be no sufficient reason for appealing to his own sixty years' experience, while an admonition to his friend to take to heart the lessons of *his* experience, would be entirely appropriate. It is therefore most natural to refer l. 17 to Calvinus, and to place a mark of interrogation after *natus*.

All the same I am inclined to think that Juvenal has at the same time indicated the date of his own birth, because of the dating with the consul's name. For the date of one's own birth is familiar to every one, and falls naturally from the tongue, but not the date of another's birth. Juvenal would have called Calvinus a man of 60, but hardly one born in the year of Fonteius. But I admit that the argument is not convincing.

J. Dürr (*Das Leben Juvenals. Progr. d. Gymn. zu Ulm*, 1888) has edited a *Vita* from a Barberini Juvenal MS. of the fifteenth century, compiled ' in a very fanciful and arbitrary way ' with the help of the satires and some generally accessible sources (especially Jerome's Chronicle). It begins as follows : Junius Juvenalis Aquinas Junio Juvenale patre, matre vero Septumuleia ex Aquinati municipio, Claudio Nerone et L. Antistio consulibus (55 A.D.) natus est. Sororem habuit Septumuleiam, quae Fuscino nupsit. As this alleged brother-in-law of Juvenal is taken from *Sat.*, 14, 1, the suspicion arises that the latter's mother and sister owe their origin to the author's fancy. But also the statement as to the year of Juvenal's birth is suspicious, not only from the whole character of the compilation, but in particular because the writer of the notice found in the *vitae* ii and iii (in Jahn, in vii transferred to another place) that

¹ Cf. my review of Schwabe, *Juvenals Geburtsjahr*, in Burian's *Jahresb.*, xiv, 1886, 2, pp. 204-206. Merivale (Lewis in his edition of Juvenal, vol. II, p. 338) interpreted the passage in the same way.

Juvenal was born 'temporibus Claudii Neronis'. If now, in order to appear better informed than the old biographer, he wished to give Juvenal's birth-year, the most obvious thing to do was to choose a date when Nero was one of the consuls. It certainly cannot be maintained that their transference of the date of Juvenal's birth to the time of Claudius by an unknown humanist is of greater authority than the dating of it under Nero in the old *Vitæ*, which may very well derive it from the trustworthy ancient source.

In any case all the credible statements regarding Juvenal's life and writings, and all the data obtained with certainty or probability by Borghesi can be harmonized with the conjecture that he was born in the year 67. I consider the assertion of the old *Vitæ* (iv and vii in Jahn excepted), 'ad mediam fere ætatem declamavit' to be unquestionable, on account of the addition 'animi magis causa quam ut scholæ se aut foro præpararet' for no occasion or object can be imagined for inventing such a motive. 'Media ætas' (Phædr., *Fab.*, ii, 12; Plaut., *Aul.*, ii, 1, 37; Apuleius, *Met.*, v, 15: jam medium cursum ætatis agere, rara interspersa canitie; v, 16: nunc ætate media candenti canitie lucidus) may well mean the whole fifth decade of life. In no case would Juvenal, if he was born in 67, have applied himself to satire before 107. Those who dated his birth about 47 had to assume that some of his satires were composed under Domitian. It is true some scholars were formerly inclined to assume this of the 2nd and 3rd satires, as Heinrich and Synnerberg (*De temporibus vitæ carminumque D. Junii Juvenalis rite constituendis*, p. 59 ss.), or of the 1st and 2nd, as Lewis, ed. Juvenal, 1882/83. There is, however, not only not the least valid ground for it, but everything points to the conclusion that it was the freedom of speech which began with the death of Domitian, that called Juvenal's satirical poetry into life, being as it was a necessary condition for it.

A rough determination of the time of composition and publication of the first two books is afforded, as Borghesi has remarked, by the passage 6, 398 ss. in which the newsmongering woman is described:

Instantem regi Armenio Parthoque cometen
prima videt, famam rûmoresque illa recentis
exciplt ad portas, quosdam facit, isse Niphaten
210 in populos, magnoque illic cuncta arva teneri
diluvió, nutare urbes, subsidere terras,
quocumque in trivio, cuicumque est obvia, narrat.

Borghesi referred the events mentioned in ll. 409-411 to the great earthquake which in the year 115 destroyed Antioch, and l. 407 to Trajan's campaign in Armenia and Parthia. This conjecture is confirmed by the fact that the comet here mentioned was actually visible in Rome in this year.¹

In the hope of gaining the desired chronological certainty through an astronomical datum, I applied to my colleague Eduard Luther (d. 1887), director of the Königsberg observatory, with the question whether the comet to which Juvenal alludes could be identified, and

¹ Cf. *Progr. Acad. Alb. Regimont.* 1872, v: *De cometa à Juvenale in Satira sexta commemorato.*

learned from him that our knowledge of the comets between the years 611 B.C. and 1000 A.D. mainly depends on the astronomical observations of the Chinese, which are so accurate, that it has even been possible to calculate the orbits of the comets which they have recorded. From 98 to 117 A.D. five comets were observed by Chinese astronomers, in the years 102, 104, 110, 115 and 117, but these were not all visible in Rome. Of these only that of the year 115 can be taken into consideration, because it is the only one which could have been said to threaten the kings of Parthia and Armenia, who were then at war with Trajan. I am indebted to Luther for the following information on this comet. 'Biot in the *Additions to the Connaissance des temps pour l'an 1846* reports that the Chinese encyclopædia of Ma Twan Lin mentions an extraordinary star which was seen in the west on the 16th of November, 115, stood on November 21 south of α and β Aquarii and went to α Muscae and η Pleiadum. This comet (for that such it was is shown by its movement) culminated in November about 4 p.m. 36° above the Roman horizon. It set there at about 9.30, and can therefore have been seen in Rome'. As a fact then the Chinese, about whose proceedings the newsmonger pretended to be informed, did something at the time when Juvenal wrote his 6th satire, which enables us to date its composition exactly.

The earthquake which destroyed Antioch did not, as Clinton assumed, take place in the spring of 115, but as Gutschmid (*Zu Dierauers Geschichte Trajans*, in Büdinger's *Untersuchungen zur Römischen Kaisergeschichte*, i, 157 and 167 f.) has at least made very probable, on December 13. Trajan's Armenian campaign was already ended before September 114 (p. 163 f.), but he did not start from Antioch till the spring of 116, and entered Ctesiphon as conqueror in the summer. The comet seen in Rome in November 115 could therefore only have been connected with the war with the Parthian king, and not with that with the king of Armenia, but presumably Juvenal was not exactly informed about the chronology of the events in the east. The 6th satire must therefore have been written in the course of the year 116 or 117.

Weidner, who in his 2nd edition of Juvenal (1889) dates its composition in the year 111 or not much later (p. xvi), identifies the comet with that of 110 (note to 6, 407). I am obliged to my colleague, F. Peters, the present director of the Königsberg Observatory, for the following information about this comet. 'In the very trustworthy work of Williams, *Observations of Comets from B.C. 611 to A.D. 1640, extracted from the Chinese Annals* (1671) is to be found a notice, agreeing with that of Biot in the *Connaissance des temps pour l'an 1846*, according to which in January 110 a bright comet appeared in the constellation of Eridanus, which must certainly also have been visible in Rome'. This cannot, however, have been the one meant by Juvenal. For firstly Trajan's departure from Rome for the Oriental campaign took place, not as Weidner says in 112, but towards the end of 113 or 114 (vol. i, xiii, A.D. 113 and n.), secondly the juxtaposition as sensational novelties of two events separated by almost six years is improbable, if not inconceivable, whereas it would be natural if both had just occurred.

It follows from all this with complete certainty that the emperor on whom alone, according to Juvenal's 7th satire, the hopes of poetry rest, is, as Borghesi (*Œuvres*, v, 511) supposed, Hadrian, who had just ascended the throne, as he was in fact the first emperor since Claudius who took a serious interest in literature.¹ The passage in Pliny, *Paneg.*, c. 47, which K. F. Hermann (*De Juv. sat. vii temporibus*), O. Ribbeck (*Juv.*, p. x), Teuffel (*RLG*⁴, 330, 2) and others cite as evidence that Juvenal meant Trajan, by no means proves it. For the '*studia*', of which Pliny says that under Trajan they '*spiritum et sanguinem et patriam receperunt*', are the studies of philosophy and eloquence, persecuted and suppressed by Domitian, as Pliny expressly says, '*quem honorem dicendi magistris, quam dignationem sapientiae doctoribus habes!*' Also the expressions of Pliny in his letters, cited by Teuffel, 330, 2, on the revival of *studia*, *Epp.*, i, 10, 1; iii, 18, 5, etc., refer to the same sciences, and to the writing of history. But in times of tyranny poetry always provided a safe refuge, it had flourished under Domitian with a brilliance not forgotten in after times, and it owed nothing to the change of rulers.

But evidently Juvenal, who had completed his 7th satire before Trajan's death, added as an afterthought the introduction (at least ll. 1-21) addressed to the new emperor. This is most clearly revealed by the fact that there is no connexion between the introduction and the real subject of the poem. In the former it is said that a hope is offered by the emperor for noble intellectual efforts, the only hope, it is true, but instead of continuing '*hitherto we had no such hope*', the condition of all who choose literary or learned professions, especially poets, historians, rhetoricians and grammarians, is pictured as still desperate and comfortless. Even in a poet whose works display such structural weakness as Juvenal's one expects at least at the conclusion an allusion to the better future which has dawned. But of this there is no trace, only the past is praised, the age of a Maecenas, a Fabius and a Cotta, and it is praised as an age that cannot be expected to return. Then he says, genius received the reward of merit (ll. 94-97), as if the poet had quite forgotten that he had announced a prospect of the same reward for the present.

But if one were ready to admit the possibility of such extreme carelessness, there is another difficulty which could not be removed by such a supposition. The satire deals with the sad condition of all authors and scholars, but the introduction speaks exclusively of the hopes aroused in *poets* by the emperor's interest in their efforts. It is true that the general expression *studia* is used which singularly occurs nowhere else in Juvenal), but in each case it undoubtedly refers to poetical efforts.

1. Et spes et ratio studiorum in Caesare tantum.
solus enim tristes hac tempestate Camenas
respexit, cum jam celebres notique poetae
balneolum Gabii, Romae conducere furnos
temptarent etc.

¹ This, as I noticed later, was also K. O. Müller's view. He observes in his review of *Franchii Examen criticum D. Junii Juvenalis vitae* (1820), 'We know that Juvenal wrote his seventh satire in Rome in 871' (*Kl. Schr.*, i, 549).

17. Nemo tamen studiis, indignum ferre laborem
cogetur posthac, nectit quicunque canoris
eloquium vocale modis laurumque momordit.
hoc agite, o juvenes ! circumspicit et stimulat vos
materiamque sibi ducis indulgentia quaerit.¹

It is only the poets, then, who according to this introduction can reckon on the emperor's favour, and the youths are only incited to poetry, not to literary or learned efforts in general. Then, after expatiating (ll. 22-35) on the hopeless prospects of poetry without the protection and encouragement of the emperor, the author passes on with a strange transition (*accipe nunc artes*, l. 36) to another very lengthy description (36-97) of the sad lot of poets, adding some considerations on the other learned professions.

The first book of the *Satires* (1-5) was then published between 107 and 116, the second (6) 116-117, and the third 118-121, for in the latter year Hadrian started on his great travels through the provinces, and Juvenal would certainly publish the book which was in a sense addressed to him while he was still in Rome. Now as the second book is only separated from the third by a short interval, we can scarcely assume a much longer one between the first and second, consequently we shall put the publication of the first book nearer 116 than 107. It is also not unlikely that in the applause which Juvenal gained at the beginning (*vit. ii*: *magna frequentia magnoque successu bis ac ter auditus est*) he found an incentive to continue without long delay poetical productions which had been so favourably received. The five satires of the first book, the first of which was undoubtedly composed last as an introduction, contain no indications from which more can be gathered than that the book appeared under Trajan, which is quite natural, as Juvenal was principally thinking of the age before Trajan when he wrote it. If then the first book was published about 114 (as long before the second as the second before the third), Juvenal will have turned to the writing of satire about 112, as the composition of five satires would require a considerable time. The most natural meaning of 'media aetas' in which he then was, would be forty-five, which again brings us to 67 as the year of his birth.

That the fifth book was published soon after the year 127 is shown not only by 13, 17, but also by 15, 27 (*nuper consule Junco Gesta*). A military diploma, found in Sardinia, and dated 11 October, 127 (*CIL*, iii, p. 874, no. xxxi), shows that Aemilius Juncus and Julius Severus, under whom the *SC juncianum* was issued (Marcian, *D.*, xl, 5, 51, § 8; Ulpian, *ib.*, 28, § 4) were then consuls. From the 'nuper' in 15, 27, one must date the publication of the fifth book not earlier than 128, and consequently that of the fourth some time between 121 and 128.

I now come to the question of Juvenal's banishment. From the unanimous testimony of the biographies, and of Suidas, Malalas and Apollinaris Sidonius (Teuffel, *RLG*², 331, 2), we have no reason to doubt its real occurrence, but as to place and time we have nothing but conjecture. Nothing can be inferred from the fact

¹ A reminiscence of Statius, *Silv.*, v, 2, 125: *Ergo aere nam magni ducis indulgentia pulsat.*

that none of the books is separated from the preceding by a long interval. The first three were undoubtedly composed in Rome, the last two might have been written there or in exile (*Vit. iv.* in exilio ampliavit satyras et pleraque mutavit; cf. also the *Vita* edited by Rühl from a *cod. Harl.* in the *N. Jahrb. f. Philol.*, 1874, p. 808 f.). Martial's three epigrams, vii, 24, 91, and xii, 18, only show that in the years 92 and 101/2, when they were written, Juvenal was in Rome. They therefore by no means conflict with K. F. Hermann's conjecture (*praef. ad Juv.*), that Juvenal was banished by Domitian in the last four years of his reign. I am however now inclined to think with Vahlen (*Juvenal und Paris*, in *Sitzungsber. d. Berliner Acad.*, 1883, pp. 1176-1192; cf. my review in *Bursians Jahresh.*, xiv, p. 206 f.) that *Sat. 7*, 88-92 which was not inserted after the rest, but was part of the original poem, gave occasion for the invention of the cause of the banishment. That the dancer who is said to have applied these lines to himself is called Paris in the *Vitae* is evidently due to the fact that Juvenal had himself mentioned the latter a little before the passage ('esurit, intactam Paridi nisi vendit Agauen'); in *Vit. ii* indeed it is said that the lines referred to the poet Statius, who is also mentioned in the context. It may be added that if the banishment took the form of an appointment as prefect of a cohort on some distant frontier of the empire, it cannot, as Hermann (*praef. ad Juv.* 4) remarked, have taken place shortly before Juvenal's death, as some of the *Vitae* affirm; for a man nearly eighty years of age could hardly have been appointed to so important a post.

Now Borghesi has made the very plausible conjecture (*Œuvres*, v, 513-516; cf. above, p. 69), that Crispinus was prefect of the Praetorium under Domitian, as colleague of Cornelius Fuscus, and brought about this banishment of Juvenal, as indeed such military appointments were made through the prefects. Juvenal's passionate hatred of Crispinus would thus be most naturally explained. That Borghesi's conjecture conflicts with none of the existing data had been already remarked.

The 4th satire, which begins with the announcement that it will deal with Crispinus, consists of two heterogeneous pieces, most clumsily patched together. Only the first 27 lines correspond to the announcement, but in the story of the council which Domitian summoned on the Albanum, Crispinus is indeed once mentioned (l. 108 ff.), but he has not even a subordinate part to play. Perhaps Juvenal had written these twenty-seven lines as an introduction to a satire on Crispinus which remained unfinished; ¹ and in order not to throw them away he placed them, careless about the composition and even about the coherence of his poems, at the head of a satire in which at any rate Crispinus was mentioned, and which dealt with the extravagances of the luxury of the table, which seem to have been specially laid to the charge of Crispinus. Lines 28-36 were then inserted as a link, but serve this purpose very badly; for one expects a description of a gluttonous banquet of Domitian's, and not of a ludicrous consultation on the preparation of a dish.

¹ So Lewis, *Juvenal*, ii, p. 110: This is perhaps a draft introduction to an intended satire never completed.

Perhaps originally Juvenal had no intention of prefixing an introduction to the tale which begins at l. 37, at any rate it needs none.

The place of Juvenal's banishment is as uncertain as the time. Of the *Vitae*, iii mentions none, i, ii, iv, vii and that edited by Rühl mention Egypt or its furthest frontier, according to v and vi Juvenal was sent 'contra Scotos', in schol. i, i and xiv, 38 the place of exile is called Hoasis or Hoasa, in Suidas and Malalas it is the Pentapolis in Libya. Presumably therefore in the common source of all these accounts no place was mentioned, but it was only said that Juvenal received the prefecture of a cohort on a distant frontier. All the statements as to place are therefore alike untrustworthy; without doubt it was the 15th satire that suggested the mention of Egypt.

Nor does the inscription of Aquinum give any help towards the determination of the place of exile. It reads (*IRN*, 4312 = *CIL*, x, 5382): (Cere)ri sacrum | (D. Ju)nius Juvenalis (trib.) coh. (I) Del matarum | Ilvir quinq. flamen | Divi Vespasiani | vovit dedicavitque sua pec. The cohort here mentioned was stationed in Britain in 124 (Hübner, *D. röm. Heer in Britannien*, in *Hermes*, xvi, 566). It may be assumed with certainty that the military service, and the tenure of municipal offices and of the flaminiate belonged to Juvenal's earlier life.

Vitae i, iv, v, vi, vii and that edited by Rühl make Juvenal die in exile, ii and iii in Rome, iv says that he was very old under Antoninus Pius, i, ii and iii that he died at the age of eighty, or in his eighty-first year. The number of years seems to be taken from the good and ancient source of the *Vitae*, as a reason can hardly be found for its invention. If, as we may assume, it is correct, Juvenal died in the year 147.

If he finished the fifth book about 128, or nearly twenty years before his death, he certainly published it himself, and this edition doubtless contained the 16th satire as a complete poem. Its present incompleteness is to be most simply explained by supposing that one or more leaves have been lost at the end of the original manuscript; for as O. Ribbeck (*Symbola Philol. Bonnens.*, p. 26 ss.; *Der echte und der unechte Juvenal*, p. 175 ff.) and Bücheler (*Rhein. Mus.*, Bd. xxix, 1874, pp. 636-638) have remarked, the original manuscript had thirty lines to the page, from which it results that the last line of our present text was also the last line on a page.

If not only there is no objection to the view that Juvenal was born in the year 67, but also the approximately settled date of his 'media aetas' and of the beginning of his satire-writing lead to the same result, the conjecture is at least as justified as any other. The following dates may then be given for his life and writings.

Juvenal entered military service at the earliest ..	84
Held municipal offices at the earliest	92
Was in Rome	92
Was banished between	92 and 96 ?
Was in Rome	101 1/2
Applied himself there to rhetoric till about	112
Published Book I of the Satires between	112 and 116
" " II " "	116 " 118
" " III " "	118 " 121

Published Book IV of the Satires between	121 and 127
" " V " " " " " "	128 or later
Died " " " " " " " " " "	147

LIX. ON THE PERSONAL NAMES IN JUVENAL.¹

(Vol. III, p. 67 ff.)

THE first question that arises in an examination of the personal names in Juvenal is whether and how far the names which occur both in his works and Martial's are to be referred to the same persons. This can only be done with certainty in cases where the identity can be proved from other sources ; for in regard to personal names the practice of the two poets is entirely different. Although Martial probably always had in his mind's eye real, and indeed living representatives of the vices and follies which he derided and reprobated, yet, as he repeatedly assures us, he never named them by their real names, but always with fictitious or arbitrarily chosen names ; and as the choice of these names was determined mainly by the requirements of metre or euphony, and only very rarely by their signification, he has not hesitated to use the same name to designate the most various persons and types. Cf. my edition, Part I, pp. 21-23.

While Martial then gives the same name now to this person, now to that, Juvenal always designates the same person by a name. This fact alone warns us to be cautious in attempting to identify one of his characters with a homonym in Martial; and in fact it often proves impossible. The Naevolus of Juvenal's 9th satire has no resemblance to any Naevolus in Martial; no more has the fat advocate Matho of Juv., I, 32, a bad speaker II, 34, who became bankrupt 7, 32, with any of the persons whom Martial calls Matho. So we may not follow Borghesi (*Œuvres*, v, 509 ss.) in recognizing the Paullus mentioned in Juvenal, 7, 143 in one of Martial's epigrams in which the same name occurs; for this name is assigned by Martial now to this figure, now to that, and even where it is the name of a real person, his identity with the Paullus of Juvenal cannot be assumed (cf. Mommsen, *Ind. Plinian.*, s. Velius Paullus).

The constant use of the same name for the same person is in itself enough to suggest that Juvenal only introduces real persons into his satires, and calls them by their real names, an assumption which is entirely confirmed by my inquiry (*De nominibus personarum in Juvenalis satiris*, *Program. Acad. Alb. Regimont.*, 1872, iv). I did not learn till later that this was also Borghesi's view (*Œuvres*, v, 533 : *ama generalmente di usarne dei veri o almeno dei conosciuti*). I regard his conjecture as very probable, that the Atticus mentioned in 12, 1 (*Atticus eximie si cenat, lautus habetur*) is Tiberius Claudius Atticus, the father of the sophist Herodes Atticus. Perhaps it would be possible to identify some of the few other persons of whom Juvenal speaks respectfully, especially those to whom he addressed some of his satires, as Postumus 6, 21, Ponticus 8, 1, Corvinus 12, 1, Calvinus 13, 5, Fuscinus 14, 1, Volusius Bithynicus 15, 1, Gallus 16, 1. The possibility cannot be denied, that in exceptional cases

.¹ Cf. my programme, *De nominibus personarum in Juvenalis satiris*, Acad. Alb. Regimont., 1872, iv.

Juvenal used arbitrarily chosen names, but it cannot be proved in a single case. The name Censennia for a rich lady (6, 136) might be chosen on account of its signification, but it is certainly the real name of the person in question.

As Juvenal carefully avoided attacking or exposing under their real names persons who might injure him (1, 170 ss.), he could only make three classes of persons the objects of his ridicule, contempt, or condemnation, *viz.* persons who were dead, judicially condemned or of humble rank. And in fact among the persons disrespectfully mentioned by him, there is not one who cannot be proved or assumed to belong to one of these three classes.

All the persons of the age of Domitian, occurring in Juvenal, who are also mentioned by Martial, were either already dead or could not longer hurt him. They are Domitian's favourite Crispinus (Mart., vii, 99; viii, 48; Juv. 1, 27; 4, 1 ss.; cf. above, p. 69), the mime Latinus (Mart., i, 4; ix, 28 cet.; Juv., 1, 36; 4, 53; cf. vol. i, p. 60); the female mime Thymele (Mart., i, 5, 5; Juv., 1, 36; 6, 66; 8, 197), the dancer Paris (Mart., xi, 13; Juv., 6, 87; cf. vol. ii, p. 114), the citharists Pollio (Mart., iv, 61, 9; Juv., 5, 387; cf. above, p. 265), and Glaphyrus (Mart., iv, 5; Juv., 6, 77; cf. above, p. 261); the buffoon Gabba (Mart., i, 42; x, 101; Juv., 5, 3; cf. vol. i, p. 85); the informers Baebius Massa and Mettius Carus (Mommsen, *Ind. Plinian.*) whom Martial did not venture to attack earlier than in a book which appeared under Trajan (xii, 25, 29; Juv., 1, 35 s.); the jurist Chius Aufidius (Mart., v, 61; Juv., 9, 25; cf. Teuffel, *RLG*⁴, 328, 1). On the other hand the Sura of Mart., i, 49, 40 is not the Palfurius Sura of Juv., 4, 53, but the famous fellow-countryman of Licinianus, Licinius Sura, who was born in Hispania Tarraconensis.

Juvenal's fondness for reminiscences of the age of Domitian and of well-known personages of that time¹ lends support to a new explanation of the passage 12, 43. He says there of Catullus who when in danger of shipwreck, orders part of the cargo to be thrown overboard to lighten the ship:

Ille nec argentum dubitabat mittere, lances
Parthenio factas, urnae cratera capacem
et dignum sitiente Pholo vel conjuge Fusci.

According to the scholiast, Parthenius was the goldsmith who made the bowls. Sillig (*Catal. artif.*, p. 480) thinks the name fictitious. R. Rochette (*Lettre à M. Schorn*, p. 376) suggests identity with the 'C. Octavius Parthenion argentarius' mentioned in the inscription Gruter, 639, 5; Heinrich supposes the poet refers to an artist of Samos, which was originally called Parthenia. The last two conjectures need no refutation, and a fictitious name would be quite senseless here, where only the name of a universally known and recognized artist could indicate the value of the bowls. Besides, the following lines: multum Caelati, biberat quo callidus emptor Olynthi, deal expressly with artistically worked vessels; but here apparently only those gigantic silver vessels are alluded to, which were objects of luxury at that time (see vol. ii, p. 208). I have

See above, p. 316.

therefore little doubt that the bowls were made for Parthenius, the well-known chamberlain and murderer of Domitian (vol. i, p. 57 f.). It may be taken for granted that he was very rich, and it is just the names of imperial freedmen that Juvenal often uses for types of extreme riches:—1, 109: *possideo plus Pallante et Liciniis*; 14, 305: *praedives . . . Licinus . . . attonitus pro Electro signisque suis Phrygiaque columna Atque ebore et lata testudine*; 16, 329: *divitiae Narcissi*; 14, 91: *ut spado vincebat Capitolia nostra Posides*. It is also known that the value of an object was increased if it had belonged to a famous person (vol. ii, p. 331 f.), and that the subsequent owners were fond of drawing attention to the fact.

Of the criminals mentioned by Juvenal, whose condemnation had made them innocuous, the one who probably stood nearest to the poet's time was Marius Priscus (1, 49; 8, 120), who had been condemned in 99/100 for extortion in the province of Africa, of which he was governor (Mommsen, *Ind. Plinian.*) The others presumably all belong to an earlier period. Thus Cossutianus Capito mentioned in 8, 91 ff. as a plunderer of the province of Cilicia, had been condemned by the senate in the year 58 (Tac., *A.*, xiii, 33, with Nipperdey's note). The period of Numitor, mentioned in the same passage, who met with the same fate for the same offence, is unknown. The poisoner Pontia, 6, 638 (Martial, ii, 34), as the scholiast asserts, after the death of her husband (Drymion according to Valla), was convicted of the murder of her two sons, severed her veins after a luxurious dinner, and died dancing, being devoted to that art. She was (also according to the scholiast) the daughter of a certain P. Petronius, condemned by Nero for conspiracy, probably Petronius Priscus, who in the year 65 was banished to an island in the Aegean for his share in the conspiracy of Piso (Tac., xv, 71). Her death might therefore have occurred under Nero, or equally well under one of the following emperors. The Calpurnia who is stigmatized in 3, 133 (*alter enim quantum in legione tribuni Accipijunt donat Calpurnae*) was, according to a notice of the scholiast which appears to be quite trustworthy, the sister of a praetor, and committed suicide under Claudius, because her incest with her brother was divulged. Similarly the vicious women, against whom Juvenal makes Creticus declaim, Procula, Pollitta, Fabulla, Carfinia (*damnetur si vis etiam, Carfinia, talem Non sumet dampata togam*, Juv., 2, 67-70), as well as the others who are characterized as adulteresses or wantons, must be considered real persons, whose names were known to everybody through their condemnation. Their number need cause no surprise, as Domitian enforced the *lex Julia de adulteriis* with great severity.¹ In two cases the retention of the same name in two widely separated satires, shows that a real person is spoken of. Maura who scoffed at the temple of Pudicitia (6, 308) is evidently the same as she of whom it is said in 10, 224: *quot longa viros absorbeat uno Maura die*. The Catulla of 2, 49 is found again in 10, 323: *sive est haec. Oppia, sive Catulla deterior*. If in these two cases the repeated characterization leaves

¹ The identification of the Hispo mentioned in 2, 50 with M. Appuleius Proculus Tl. Caepio Hispo, cos. des. 103 or 104, procons. prov. Asiae (Mommsen, *Ind. Plin.*), although suggested by Borghesi (*Evetres*, v, 311), is extremely improbable.

no doubt as to identity, it is possible that in another case there were two distinct persons; the Hispulla who loves a tragedian 6, 74, may be the fat Hispulla who weighs as much as a bull 12, 11, or she may be another person. Juvenal also mentions two Pollios, the celebrated *Altharcedus*, 5, 387 (Martial, iv, 61, 9), and the prodigal *Crepereius Pollio*, who seeks a loan in vain, although he offers thrice the usual interest, 9, 6, and after losing his equestrian rank, is at last forced to go begging, 9, 43. In this case the mention of the gentile name excludes the idea of a fictitious or arbitrarily chosen name, and the same is true of *Pacuvius Hister*, the legacy-hunter, 12, 111, 125, 128; also a second *Hister* is evidently to be considered a real person, as he is mentioned as already dead in 2, 58: *notum est cur solo tabulas impleverit Hister Liberto, dederit vivus cur multa puellae*.

Juvenal had no occasion to introduce under other than their real names persons of subordinate social position, or indeed any whose displeasure would be indifferent to him. We have therefore every reason to regard as real the names of such persons as the *præco Machæra*, 7, 9, the rhetorician *Vettius*, 7, 180, the pleaders *Paullus*, *Gellius* and *Basilus*, 7, 142-145, 10, 212 etc., and the gladiators (*Euryalus*, 6, 81, *Sergius*, 6, 105, 112); all the more as many of the persons of this class are known from other sources as contemporaries of Juvenal. Those who also occur in Martial have been already mentioned. We know further *Demetrius*, the actor (Juv., 3, 93; vol. ii, p. 96 f.), and *Archigenes*, the physician (Juv., 6, 236; 8, 97; 14, 258; *Suidas*: ἐν τῷ Ἰππικῷ τὰ περὶ τῆς ἐν [Eudocia πρῶ], *Sprengel, Geschichte der Medicin*, ii, 104). In the 13th satire, which was composed in 127, a physician is described (l. 125) as a pupil of *Philippus*, who again was a pupil of *Archigenes* (*Sprengel*, ii, 112 ff.), but this perfectly agrees with the supposition that Juvenal wished to name that medical school, which at the moment enjoyed the highest reputation. Without doubt also *Heliodorus* the physician, 6, 373, and *Lyde* the fat medical woman, 2, 141, and *Themiso* the physician, 10, 221, were personages well known to the town. As the last-mentioned named himself after a famous predecessor, the *methodicus* *Themiso* (*Sprengel*, ii, 28), so perhaps the charioteer *Lacerta* (7, 113; note on vol. ii, p. 22, l. 26) and the runner *Ladas* (13, 97; see above p. 261), and according to the custom of the day assumed or received the names of famous masters of the same arts. Other town characters whom Juvenal could mention by their real names without hesitation are the drunken wife of *Fuscus* 12, 45, *Procula* the female dwarf 3, 203, *Rutila* the bearded woman 10, 294, and *Corbulo* the strong man 3, 251. Also *Hamillus*, the schoolmaster who abused the boys entrusted to him 10, 224, was no doubt known to the town, and probably no longer dangerous. If Martial in choosing this rare name for a man who wished to acquire a similar reputation, vii, 62, thought of the same person, which is not impossible, then Juvenal as in other cases was speaking of a character of the age of Domitian as of a contemporary.

LX. CHRONOLOGICAL NOTES ON GELLIUS.¹

(Vol. III, p. 80.)

THE only treatise known to me in which an attempt is made to fix exact dates for the life and works of Gellius is Bähr's article *Gellius* in Ersch and Gruber's Encyclopædia. The dates there given require, however, correction and completion.

When Gellius went to school (in scholis fui, xvi, 1, ad grammaticos itavi, vii, 6) Terentius Scaurus (divi Hadriani temporibus grammaticus vel nobilissimus, xi, 15, probably Hadrian's teacher, *Vit. L. Veri*, c. 2) was apparently already dead, for Gellius, not understanding a passage in one of his books, asked Sulpicius Apollinaris, whose pupil, he tells us, he was; xiii, 18: adulescens (xx, 6: adulescentulus) sectabatur discendi gratia, hominem nostrae memoriae doctissimum. This alone reminds us that the youth of Gellius did not fall in the reign of Hadrian (whom he always calls *Divus*), but in that of Antoninus Pius.

He seems to have attached himself in his seventeenth and eighteenth years to Sulpicius Apollinaris; xviii, 4: cum jam adulescentulus praetextam et puerilem togam mutasset magistrosque tunc sibi ipse exploratiores quaereret. The *toga virilis* was assumed between the fifteenth and seventeenth years (Marquardt, *Prl.*, i², 123-131). Adulescens Romae, cum etiamtum ad grammaticos itarem, audiavi Apollinarem Sulpicium, quem in primis sectabar . . . Erucio Claro, praefecto urbi, dicere etc. vii, 6. Erucius Clarus (cf. Pliny, *Epp.*, ii, 9; Fronto, ed. Naber, p. 6) was consul for the second time in 146, but the dates of his first consulate and urban prefecture (Gell., xiii, 18: qui praefectus urbi et bis consul fuit) are unknown.

In the same years he received instruction from the rhetoricians Antonius Julianus and T. Castricius, the latter of whom ('noster' in Fronto, *Ad am.*, ii, 2, ed. N., p. 190), according to Gellius, xiii, 22, vir a D. Hadriano in mores atque litteras spectatus, Romae locum principem habuit declamandi ac docendi, and was (xix, 9) docendis publice juvenibus magister. Gellius describes himself as an 'adulescentulus' at the time when he spent his summer vacation at Puteoli with this teacher and his fellow-scholars (xviii, 9). He had also already associated with Fronto; xviii, 8: Adulescentulus Romae priusquam Athenas concederem, quando erat a magistris auditionibusque obeundis otium, ad Frontonem Cornelium visendi gratia pergebam. His association with the poet Annianus (xi, 7; ix, 10, who was accustomed to hold a vintage festival on his estate in the Faliscan territory, xx, 8) seems also to belong to this time; for Annianus was old enough to have heard Valerius Probus, who is known to have flourished under Nero, but was probably still living under Domitian (Martial, iii, 2, 12—c. 87 A.D.; Jahn, *Proll. ad Pers.*, p. cxxxvii). It is uncertain whether at this time he was already acquainted with Julius Paullus (homo in memoria nostra doctissimus, i, 22; v, 4; xvi, 10). This 'vir bonus et rerum literarumque impense doctus' invited Gellius to his little property in the Vatican district, together with the Numidian Julius Celsinus, xix, 7, who was also Fronto's friend, xix, 10.

¹ Cf. my 'programm,' *De Auli Gellii vitae temporibus*, *Acad. Ab. Regimont.*, 1869, iv,

If Gellius began his course of instruction with Sulpicius Apollinaris about in his eighteenth year he probably continued it with him and his other teachers for about seven years. For immediately after the completion of his grammatical and rhetorical studies he was appointed a judge, and so was led to legal studies. xiii, 2, 1: quo primum tempore a praetore lectus in iudices sum . . . libros utriusque linguae, de officio iudicis scriptos, acquisivi, ut homo adulescens, a poetarum fabulis et a rhetorum epilogis ad judicandas lites vocatus (xiv, 1, 1: a praetoribus lectus in iudices sum, ut judicia quae appellantur privata susciperem. Mommsen, *StR*, iii, 1, 538, 4). xiii, 13: cum ex angulis secretisque librorum et magistrorum in medium jam hominum et in lucem fori prodidissem, quaesitum esse memini in plerisque Romae stationibus jus publice docentium aut respondentium etc. Now it is true that Suetonius says, in *August.*, c. 32: iudices a tricensimo (so *codd.*: the conjecture of Cujacius *vicensimo*, based on the passage from Ulpian quoted below, is inadmissible) aetatis anno adlegit, *i.e.* quinquennio maturius quam solebant (Mommsen, *StR*, iii, 1, 537, 5). But Suetonius is not speaking of the legally eligible age, but of that actually observed (quam solebant). At the age of thirty or more Gellius could not call himself 'adulescens', nor is it credible that he attended the school of rhetoric up to that age (see vol. i, p. 161). It must therefore be assumed that the legal age required for jurors, mentioned by Ulpian (*Digg.*, xlii, 1, 57: quidem consulebant an valeret sententia a minore viginti quinque annis iudice data etc.), was already at this time in force in Rome, and that Gellius was appointed as soon as he reached it.

For the elucidation of legal questions Gellius also applied to grammarians, one of whom addresses him as 'adulescens' (xx, 10), and to Favorinus, quem in eo tempore Romae plurimum sectabar (xiv, 2, 11). To the years immediately following belongs all that Gellius relates about his intercourse with Favorinus (cf. Hertz, *Ind. lect. aest. Vratisl.*, 1869), viz. a visit to Fronto, ii, 26, meeting with the grammarian Domitius Insanus xviii, 7, a walk by the baths of Titus iii, 1, another in the forum of Trajan xiii, 25, an excursion to Ostia xviii, 1, a visit to Antium xvii, 10.

Now as two conversations, in which Favorinus takes part, and which evidently belong to the same period, take place before the imperial palace, in a group which is waiting for the beginning of the *salutatio Caesaris* (iv, 1, 1 and xx, 1, 1, where the jurist S. Caecilius discourses), this intercourse of Gellius with Favorinus must have taken place before 161, in which year Antoninus Pius died, and two emperors ascended the throne, so that from that time onward one could hardly speak without further specification of a *salutatio Caesaris*.

Sulpicius Apollinaris was still living, when Gellius was a judge; for 'cum Romae a consulibus iudex extra ordinem datus . . . essem' (xii, 13, 1) he applied to him about the meaning of the words *intra Kalendas*. To the same time probably belongs the conversation xix, 13: Stabant forte una in vestibulo Palatii fabulantes Fronto Cornelius et Festus Postumius (an orator from Numidia, cf. Fronto, *Ad amic.*, ii, 10, ed. Naber, p. 200) et Apollinaris Sulpicius etc. But Apollinaris must have died soon after, in any case

several years before 163. For the later emperor Pertinax (born 126) was first his pupil and then his successor, *Vit. Pert.*, c. 1: post quem idem Pertinax grammaticæ professor est; where 'post quem' can hardly mean anything but 'after his death'. As Pertinax was not successful with his school, he applied for the office of a centurion, and obtained it. He served as prefect of a cohort in Syria, and afterwards distinguished himself in the Parthian war. Between his succession to the headship of the school, and the outbreak of the Parthian war in 163 a considerable interval must have elapsed. The dialectical studies of Gellius (xvi, 8, where he speaks of a book found in the library of the temple of Peace) may also perhaps be assigned to the period of his legal studies.

The journey of Gellius to Greece and his residence there certainly followed the period when he was a judge and studied the law. But he must have been in Athens before 165, or at the latest in that year, for Peregrinus Proteus, whom he saw (xii, 11) and heard (viii, 3) in Athens, died in 165. Now in referring to his sojourn here, Gellius speaks of himself (though indirectly) as 'juvenis', as regularly as he calls himself 'adulescens' in the preceding period. He calls his fellow-students in Athens 'juvenes' in ii, 21, vii, 10, xii, 5. In such a writer as Gellius this difference in expression cannot be accidental, but must mark a definite period of life. Now as Varro, according to Censorinus, *De Die Nat.*, c. 14, regarded the thirtieth year as the boundary between *adulescentia* and *juventus*,¹ it is extremely probable that Gellius followed this usage in writing of his own age, and had consequently passed this limit at the time of his residence in Athens.² If then Gellius' departure from Rome took place between 160 and 164, and he had just attained the age of thirty, his birth may be roughly dated between 130 and 134. It may be added that there is nowhere any indication that the accession of the two Augusti (161 A.D.) had taken place when Gellius left Rome. All this agrees very well with the conclusion already reached that he was at school soon after 137, so the date 140 to which his birth is assigned by Bähr (*op. cit.*, 48^b) is too late.

The further statements which Gellius makes with regard to his Greek journey provide no chronological data. Herodes Atticus (born c. 101, consul 143) to whom, as Bähr conjectures, Gellius was perhaps recommended by Favorinus, is mentioned as a consular in i, 2. Prominent among the instructors of Gellius in Athens was the Platonist Calvisius Taurus of Berytus, vii, 10: memoria nostra in disciplina Platonica celebratus, who had also taught Herodes (Philostratus, *Vitt. Soph.*, ii, 1, 34), and who according to Jerome flourished about 146 (Taurus clarus habetur), so that he was now an old man.

I find no warrant for the assumption that Gellius stayed two years at Athens, for, as Bähr (*op. cit.*, p. 45) remarks, all the seasons and events mentioned can very well find room in one year. Gellius

¹ So Augustine, *Conf.*, vii, 1, 1, says of his thirty-first year: Jam mortua erat adulescentia mea male nefanda, et itum in juventutem.

² He has, it is true, followed the general custom, which we find as early as Tacitus (*Vogel, De Nocturnis Atticarum A. Gellii compositionibus. Schriften für M. Hertz*, 1888, p. 7, 1), of calling the pupils in a school of rhetoric 'juvenes' without respect to their age (xix, 9: docendis publice juvenibus magister, see above, p. 322), but when he speaks of himself, he expresses himself more accurately.

alludes to excursions to Eleusis viii, 3, Aegina ii, 21, Delphi xii, 5, Patrae xviii, 9; the summer ii, 21, and its extreme heat xviii, 10, the very hot autumn 1, 2, the celebration of the Pythian games (in September, Bähr, 44^b) xii, 5, the winter xvii, 8, and its long nights *Praef.*, 4, the Saturnalia xviii, 2 and 13. He speaks thrice of the return journey: xix, 1 (stormy crossing from Cassiope to Brundisium), ix, 4, xvi, 6 (landing at Brundisium).

Of his later years Gellius hardly speaks at all. We gather from the preface that he married and had children (*Praef.*, 1). For the conjecture that in his later years he again settled at Athens, perhaps for the education of his children, and there elaborated his *Noctes Atticae*, I can find no foundation in the passage *Praef.*, 4: Sed quoniam longinquis per hiemem noctibus in agro sicut dixi terrae Atticae commentationes hasce ludere ac facere exorsus sumus; on the contrary I think that Gellius speaks here of the first outlines and notes (illis annotationibus pristinis) which he had made as a student and arranged and completed in his later years. That these notes were in part embodied in the later work in their original form, is shown by xviii, 2, 7, where he says that various questions were discussed 'nuper' at the Saturnalia at Athens, while an earlier passage leaves no doubt that this festival took place while Gellius was a student, 2: conveniebamus autem ad eandem cenam complusculi, qui Romani in Graeciam veneramus, quique easdem auditiones eosdemque doctores colebamus. This use of *nuper*, I admit, makes it impossible to assign with certainty the events which are distinguished as having happened 'nuper' to the time of the final composition of the work, for the sections in question might have been written several years earlier and inserted unaltered. xiii, 31: laudabat venditabatque se nuper quispiam in libraria sedens homo ineptus. xv, 4: in sermonibus nuper fuit seniorum hominum et eruditorum etc. ii, 24: legi adeo nuper in Capitonis Ateii conjectaneis. iiii, 3, 7: nos quoque ipsi nuperrime, cum legeremus Fretum etc. But it is equally possible that these passages were all or in part written during the actual composition of the book, and therefore that the events related happened shortly before. For that Gellius wrote his book, not in Attica, but in or near Rome, seems to me to follow clearly from the use of the present tense in the following passage, xi, 3: Quando ab arbitris negotisque otium est et motandi corporis gratia aut spatiamur aut vec-tamur, quaerere nonnumquam apud memet ipsum soleo res ejusmodi, parvas quidem minutasque—velut est ut forte nuper in Praenestino recessu vespertina ambulatione solus ambulans considerabam etc. It was perhaps during this stay in the country that the *opicus* asked the question about the title of Plutarch's treatise *περί πολυπραγμοσύνης*, which is also said to have happened 'nuper', xi, 16, 2; although of course Gellius may have met with *opici* in Rome. So then most of the stories of little happenings in Rome, introduced with *nuper*, probably belong to the time when the *Noctes Atticae* was composed. Also xvi, 10, 1: otium erat quodam die Romae in foro a negotiis etc., will refer to this time. It is striking that in this book written in a fairly advanced age Gellius relates so extremely little of his later years. We do not learn of what kind

(apart from *arbitria* and the management of his property) the business was, from which he had to steal time for his literary work (*Praef.*, 12: per omnia semper negotiorum intervalla, in quibus furari otium potui). At this time he spent his leisure on his estate at Praeneste.

He says, *Praef.*, 22: volumina commentariorum ad hunc diem viginti jam facta sunt. Quantum autem vitae mihi deinceps deum voluntate erit quantumque a tuenda re familiari procurandoque cultu liberorum meorum dabitur otium, ea omnia subsiciva et subsecundaria tempora ad colligendas hujusmodi memoriarum delectatiunculas conferam. Progredietur ergo numerus librorum, diis bene juvantibus cum ipsius vitae, quantuliquique fuerint, progressibus, neque longiora mihi dari spatia vivendi volo quam dum ero ad hanc quoque facultatem scribendi commentandique idoneus. Now as Gellius never published a continuation of his work, he seems not to have survived its completion for long. But it is clear he could only speak as he does after passing the prime of life. If then his birth is to be dated 130-134, the writing of his book cannot be placed between 150 and 160, but in the last years of Marcus Aurelius, or under Commodus, indeed Gellius may very well have written under Pertinax, like himself a pupil of Sulpicius Apollinaris, and may have outlived him. If, as Vogel, *loc. cit.*, remarks, the absence of any mention of the writings of Fronto suggests that he was dead when Gellius wrote, this agrees with the conjecture that he died about 180. It is also possible that, as Vogel also remarks (pp. 11-13), Gellius was surprised by death before he could put the finishing touches to his book, and especially bring the later sections into harmony with the earlier.

The following dates may, as a result of this inquiry, be regarded as probable—

Gellius is born		c. between 130 and 134
Assumes the <i>toga virilis</i>		" " 145 " 150
Begins to study under Sulpicius Apollinaris.		" " 146 " 151
Associates with Fronto (Erucius Clarus urban prefect)		at the same time.
Is appointed a judge		between 155 and 159
Attaches himself to Favorinus		at the same time.
(About the same time Sulpicius Apollinaris dies, and Pertinax (b. 126) succeeds to his school.)		
Travels to Greece		c. between 160 and 164
Completes the <i>Noctes Atticae</i> and writes the preface		c. between 175 and ?

A date given by F. Rühl (*Die Verbreitung des Justinus im Mittelalter*, p. 31 ff.) which came to my knowledge after writing the above, agrees very well with my conclusions. The book *De viris illustribus quo tempore scripserunt*, written by Radulphus de Diceto about 1210, and preserved in MS. in the British Museum, contains the following notice among others which appear to be drawn from a lost chronicle: Agellius scribit anno C.LXIX. This presumably refers to some event of that year mentioned by Gellius, but what it was I have not as yet been able to discover.

NOTES

The references are given (except in the case of the Chronological Table) by page and line, a catch-word being added in each case. If a graduated and numbered slip is used, it should be kept in the same position with the number 1 against the first line on the page, even where there is a blank space in the page. Thus in vol. 1, p. 33, the first line of § 1 counts as 9.

VOL. I

CHRONOLOGICAL TABLE

The years in the second column do not indicate the dates of the events mentioned, but merely the position on the pages of the notices commented on.

PAGE	B.C.	
viii	13	Agrippa's Commentaries (the chief source of Pliny's <i>Nat. Hist.</i> , especially iii-vi) are dated about this time because the survey of the Roman Empire is said to have been executed, in four parts, in the years 44-19 B.C. (Marquardt, <i>StV</i> , II ³ , 210).
	4	Read 'Birth of Christ, according to Cassiodorus and Clement of Alexandria. Julius Africanus dates it in the night between 3 and 2 B.C. and all the dates given by other early authors are merely variants of his.' Ideler dates the birth of Christ 7 B.C. R., i, 329, 14; οὐδενώποτε τὸν ἔξενον ἡραγκάσθημεν ἀδικῆσαι . . . καὶ τοὶ τὸ παράδειγμα τῆς Ῥώμης ἔχοντες, ἥτην τῶν ἀναγκῶν σπάνιν, ἥλκα δὲ τοῦτο συμπέσει, τῇ τῶν ἔξενων ἐλάσει πρὸς ἀφθονίαν μεθίστησιν. *Cod. Theodos.*, xiv, 3 (397): ne (corporati) tempore famis ceterorum peregrinorum more urbe expellantur. Such an expulsion in Ambrose, *De offic. ministr.*, iii, 7, 49.
- 27, 6. unhealthiness. Cf. Schweigler, *RG*, i, p. 454, 7; Gerlach-Bachofen, *RG*, i, 1, 43 ff.; *Beschr. Roms*, i, p. 82 ff.
- 27, 8. malaria. Tommasi-Crudeli, *Die Malaria von Rom und die alte Drainage der römischen Hügel*, German trl. by Schuster, 1882. Varro had some conception of the malaria bacilli: *R.r.*, i, 12: si qua erunt loca palustria—crescunt animalia quaedam minuta, quae non possunt oculi consequi, et per aera

in corpus—per os et nares perveniunt atque efficiunt difficiles morbos.

- 27, 12. houses. Tommasi-Crudeli, *Alcune riflessioni sul clima dell' antica Roma*, in *Mittheil. d. Archäolog. Inst. Röm., Abth.* ii (1887), p. 79, thinks that by it 'dentro la città di Roma la malaria fosse ridotta a minime porzioni'.
- 27, 15. relief. Ammian. Marcellin., xiv, 6, 23.
- 27, 15. fever. Preller, *RM*³, ii, 240.
- 27, 17. Galen. Galen, xvii a, 121. Cf. Cael. Aurelian., *De morb. acut.*, ii, 10.
- 27, 23. Hippocrates. *Id.*, xviii a, 347.
- 27, 29. complexion. Martial, x, 12.
- 27, 32. relief. Horace, *C.*, iii, 19, 12; cf. *Epp.*, i, 17, 6; Seneca, *Epp.*, 104, 6.
- 27, 32. Frontinus. See vol. i, p. 11.
- 27, 33. supply. According to R. Kobert, *Über den Zustand der Arzneikunde vor 18 Jahrhunderten* (p. 28 ff.), the misuse of lead in utensils and vessels for cooking and keeping food and drink, and still more the use of lead pipes for the water-supply (against which Vitruvius, viii, 7, protests) 'must have made lead-poisoning as frequent a malady in imperial Rome as tuberculosis and venereal disease together are at the present day'. It is really difficult to believe that the Romans, who in many respects were hygienically in advance of the moderns, should have laboured for centuries at enormous expense at their own poisoning, without being aware of it; all the more so as we see by Vitruvius' warning that the danger of leaden water-pipes was a subject of discussion. My colleague Lossen says the solubility of lead depends upon the quality of the water. Organic substances in decomposition specially promote its solubility. (Michaelis, *Ausführl. Lehrb. d. anorg. Chemie*, iii⁵, 1168.) The Romans would hardly have brought water saturated with such pernicious substances into their towns. If the aqueducts conveyed only hard water, the danger of poisoning by the leaden pipes was certainly exceedingly small.
- 27, 39. plagues. Dio, liii, 33; liv, 1.
- 28, 3. Libitina. Tac., *A.*, xvi, 13; Sueton., *Nero*, c. 39.
- 28, 9. 79 A.D. Probably Sueton., *Tif.*, 8 and Dio, lxvi, 23 mean the same disease as Eusebius, though Tillemont makes two of it.
- 28, 12. *ephemerides*. Euseb., *Chron.*
- 28, 13. ages. Ulpian gives a table of the probable duration of life at the different ages between 20 and 70 years: *D.*, xxxv, 2, 68. Cf. Hildebrand, *Bevölkerungsstatistik im alten Rom*, in *Jahrbb.*, vi, 91. Also the statement in Euseb., *H. eccl.*, vii, 21, 5, that in Alexandria under Gallienus in consequence of the plague the number of inhabitants from 14 to 80 years amounted to no more than the previous number of those from 14 to 70, presupposes exact statistical records.
- 28, 14. Palermo. This is the estimate of the population given by Adr. Balbi, *Abrégé de géographie*, Paris, 1834.
- 28, 16. 1803. Reuchlin, *Gesch. Italiens*, i, 264 ff. At the time of

- the plague in London, May, 1625, to March, 1626, there died in 20 weeks 40,000 people (out of about 600,000), and from the 11th to the 18th of August 4463. Stern, *Milton*, i, 61.

 46 14. Baiae. *Ib.*, xxxi, 5.
 46, 17. sand. *Ib.*, xxxv, 168.
 46, 19. pomp. Cf. on the burial of Priscilla, the wife of Abascantus Stat., *Silv.*, v, 1, 208 sqq. and on that of Etruscus' father Stat., *Silv.*, iii, 3, 196 sqq. and vol. ii, p. 212. The monument of L. Aurelius Nicomedes was also remarkable. *AdI*, 1857, p. 87.
 46, 24. Pliny. Pliny, *Epp.*, vii, 29.
 46, 32. servants. L. M. Hartmann, *De exilio apud Romanos* (Berol., 1887), p. 58, 3, concludes from Tacitus, *A.*, ii, 85, that as regards the penal law they belonged already at that time to the *humiliores*. On the right of the patron to their inheritance, cf. Mommsen, *StR*, iii, 1, 433; cf. ii², 2, 894, 2.
 46, 39. Ring. On the bestowing of the gold ring apart from knight-hood (first under Commodus and perhaps introduced by him), see Mommsen, *StR*, ii², 893.
 47, 3. Vespasian. Pliny, *Epp.*, viii, 6, 4; Suet., *Galba*, c. 14; Plutarch, *Galba*, c. 7; Suet., *Vitell.*, c. 12; Tac., *Hist.*, iv, 39;

- Stat., Silv.*, iii, 3, 143-145. Apparently Mommsen's opinion (*StR*, ii³, 2, 837, 1) is right, that all the freedmen who performed equestrian duties under the early empire were also knighted. The same was probably the case with Licinus (because of his equestrian *cognomen*) and Antonius Felix. Pallas declined the right of the ring, so that he could remain a freedman of the emperor, and the ring in its original signification would have destroyed the right of the patronate. Hence the decision of the Senate in Pliny, *Epp.*, viii, 6, 4: non exhortandum modo verum etiam compellendum ad usum aureorum anulorum. Mommsen, *StR*, iii, 1, 518, 3.
47. 6. Marcius. Suet., *Galb.*, c. 14; Tac., *H.*, i, 13: (Icelum) anulis donatum equestri nomine (Mommsen, *StR*, iii, 1, 209 and 426) vocitabant. Cf. Appendix iii.
47. 7. Avitus. Dio, lxxix, 16. His family was of Cotyaeum, where the name appears twice: Lebas-Waddington, 795, 798. M. Aurelius Verianus equo publico, whose parents Terpsilaus and Caria Aelii were apparently freedpeople of Hadrian or Antoninus Pius, was himself, it appears, a freedman of Marcus Aurelius or Commodus; *Bull. com. d. R.*, i, 73; Hirschfeld, *VG*, 244, 3; Mommsen, *StR*, iii, 1, 518, 4.
47. 8. quaestor. Tac., *A.*, xii, 53.
47. 9. praetorship. *Ib.* and Pliny, *Epp.*, viii, 6; Pliny, *H. N.*, xxxv, 201. The first knight who obtained praetorian rank was Sejanus: Dio, lvii, 19 sqq. Laco obtained quaestorian, Macro praetorian rank, *ib.*, lviii, 12. Suet., *Claud.*, c. 24: ornamenta consularia etiam procuratoribus ducenariis indulsit.
47. 11. Senate. Dio, lx, 16. The presence of freedmen in the Senate (mentioned by Dio, lxxiii, 8) was irregular.
47. 14. footing. Tac., *A.*, xii, 60. Cf. Hirschfeld, *VG*, 287; Mommsen, *StR*, ii³, 2, 1022, 2.
47. 17. generals. Mommsen, *StR*, i³, 435.
47. 21. spectacles. Sueton., *Claud.*, c. 28. On the former see the next section.
47. 22. person. Mommsen, *StR*, i³, 396.
47. 24. Posides. Sueton., *Claud.*, c. 28. *Stat., Silv.*, iii, 3, 140, also mentions the permission, which the father of Etruscus obtained from Vespasian, to take part in the Jewish triumph, as a distinction. Cf. Gell., v, 6, 4.

 51, 7. *waterways*. Orelli, 946.
 51, 11. *increase*. Mommsen, *StR*, iii, 1, 559, 2.
 51, 11. *sesterces*. Henzen, 6339 = *CIL*, vi, 246 = xiv, 2087.
 51, 14. *posts*. Hirschfeld, p. 255, 7; 256, 3.
 51, 23. *published*. *Ibid.*, p. 30 ff.
 51, 41. *successfully*. Stat., *Silv.*, iii, 3, 84. In line 78 for *longo* read *longum*, i.e., *diu*, as in *Silv.*, i, 3, 13; Martial, i, 31, 7; viii, 38, 15; ix, 181; Juv., 6, 65. Line 73 for *suis* read *subis*; line 99 for *exitus* read *anxius* (Hirschfeld, *Zuden Silvae des Statius in Oesterreich. Mitth.*, iii [1881], p. 273 ff.).
 52, 8. *administered*. The enumerated revenues belong essentially to the *patrimonium* (Hirschfeld, p. 31, 5; *Greges oviarici dominici*, which were farmed, *IRN*, 4916 = *CIL*, ix, 2348; cf. Cosinus among the officials *a rationibus*), but there are exceptions, e.g., the corn supplies from Africa (Hirschfeld, p. 15, 3); Mommsen, *StR*, ii², 2, 1006, 1) and the duties on ivory and pearls collected on the frontier of the empire (Marquardt, *StV*, ii², 275; supplies of glass from Egypt; *ibid.*, 234, 4).
 52, 13. *mint*. Stat., *loc. cit.*, v, 85-106. Mommsen, *StR*, ii², 2, 1003, 1. [Besides the imperial house on the Palatine (indicated by *laquearia*) and the Flavian Mausoleum (*vultus divom*) reference is made to the splendid villa of Domitian on the Alban mount. In general the enumeration is probably made with special regard to his buildings and undertakings: *templa* (Capitoline, Vespasian's, Minerva's etc. *Martial*, ix, 3, 10);

- pila* (increased pay, Marquardt, *StV*, ii^a, 96); *tribus* (restoration of *Minucia vetus*: *VG*, 63; Marquardt, *StV*, ii^a, 128, 5 and the great *congiaria*, *ibid.*, 138); *Ausonia moneta* (Momm-
sen, *R. Münzw.*, 754-757); *series viarum* (Schiller, *G. der R. Kaiserz.*, i, 533, 3; one must add the *via Domitiana* (Stat., *S.*, iv, 3) which was at least under construction when the poem was composed). H.]
- 52, 17. accompanied. Hirschfeld, p. 270, 1.
- 52, 19. old. Martial, vi, 83; Stat., *loc. cit.*, 146-161 (*curarum socius* equivalent to *adjutor*, as in Martial, vi, 68, 5).
- 52, 24. posterity. Besides the poem of Statius there is one by Martial (vii, 40).
- 52, 25. *libellis*. Hirschfeld, p. 207. Ed. Cuq, *Mém. sur le consilium principis d'Auguste*, in *Mémoires présentés à l'acad. des inscr.*, ix (1884), pp. 363-371.
- 52, 39. dry. Seneca, *Cons. ad. Polyb.*, c. 6.
- 52, 40. Polybius. *A studiis*, Sueton., *Claud.*, c. 28. Whether he held this office at the same time cannot be certainly inferred from Seneca *loc. cit.*, c. 5, 2: ab occupationibus tuis, id est a studio at a Caesare.
- 53, 9. envious. Seneca, *loc. cit.*, ii, 5; 8, 2; 2, 6.
- 53, 10. counsellorship. Cuq, *op. cit.*, p. 373 sqq. believes (referring to Gell., *N. A.*, iii, 16; *Vit. Alex. Severi*, c. 16) the purpose of the office *a studiis* to have been to furnish the emperor with precedents, indications and material of all kinds from history and literature for the decision of legal questions. Possibly this gradually became the chief duty of the official, but it was certainly never his exclusive function.
- 53, 11. Claudius. Hirschfeld, *VG*, 211 note; *CIL*, vi, 8636: *Ti. Claudius Lemnius Divi Claudii Augusti lib. a studiis*.
- 53, 11. constant. Orelli, 719, 2958, 6356 (magister a. st.; later procurator ducenar. stat. hered.) = *CIL*, vi, 8636-8638.
- 53, 12. staffed. *CIL*, vi, 8637: Terpsilaus Aug. lib. prox. a studiis scholam officii.
- 53, 13. 60,000. Inscription of Caelius Saturninus *CIL*, vi, 1704.
- 53, 14. reserved. *CIG*, iii, 5900; cf. the appendix. *AdI*, 1853, p. 57 (inscription of Lyons: Boissieu, i, 28, p. 43; Henzen, 6355): M. Aemilius Laetus a studiis Augusti. *CIL*, x, 1487 (magistro [studi]orum). *CIL*, vi, 1608 (magistro a studiis Augg. procuratori prov. Asiae). *CIL*, v, 2, 8972 (Aquilaia):—viro perfectissimo magistro sacrarum cognitionum a studiis et a consiliis Augg. (From the third century, and certainly not from its earlier decades, the office *a consiliis* is apparently here combined with the head office of *studia*; this title was not hitherto authenticated before the time of Constantine. Hirschfeld, *Archäol. epigr. Mitth.*, i, 57). Mommsen, *De C. Caelii Saturnini titulo*, in *Nuove mem. dell' Inst.*, p. 328 sq. names as the latest passage, in which *magistri studiorum* are referred to, a law of the year 338 (*C. Th.*, xii, 1, 26). But probably here *studiorum* is corrupt; cf. Gothofred., and Haenel on the passage. Hirschfeld, *VG*, 221 note. Mommsen's opinion that the office *a studiis* was called in later times *scrinium memoriae* is

- not tenable, because the latter existed already in Caracalla's time. Cf. Appendix viii, p. 48, and Hirschfeld, *VG*, p. 210, 2.
- 53, 16. Library. Mommsen, *StR*, i³, 330, 1.
- 53, 21. thoughts. Martial, v, 5.
- 53, 21. official. But certainly not '*Oberstudienrath für das ganze Reich*' as Hirschfeld thinks (*VG*, 211 note). Orelli, 6356 = *CIL*, x, 4721 : L. Vibio Fortunato L(aurenti Lavinati) haruspici Aug. n. magistr. a studiis proc. ducenatio stationis hereditarium. In the inscription *Eph. ep.*, v, 579, n. 1376 (*Add. ad CIL*, iii) : ar . . . sanct(issimi) domini n. Antonini Aug. ducenatio et a musio sac. perpet. dei Aesc(ulapi) pa. . . Mommsen, surely erroneously, thinks a *musio* identical with a *studiis*, because of the high salary.
- 53, 24. *epistolis*. Fronto, ed. Niebuhr, p. 81, *De Elog.*, 21 : Caesarum est . . . per orbem terrae litteras misitare.
- 54, 1. busier. Stat., *Silv.*, v, 1, 83.
- 54, 3. office. Cf. Appendix viii.
- 54, 7. extortions. Liban., ed. R., i, 565 sq.
- 54, 13. priests. Stat., *Silv.*, v, 1, esp. 83-107, and praef. *Domus divina* occurs here not for the first time in literature, but already in Phaedr., *Fabb.*, v, 7 extr. : superbiens honore divinae domus. Also in inscriptions it appears not only after 170, as Henzen first thought (*Ind.*, p. 57), but, as he remarked later (*BdI*, 1872, p. 105), earlier, especially in the Chichester inscription which undoubtedly belongs to the first century : *CIL*, vii, 11 = Orelli, 1338 (a *collegium fabrorum* erects a temple (pr)o salute do(mus) divinae (ex) auctoritate (Ti.) Claud. (? Co) gidubni r(egis) ? Tac., *Agr.*, c. 14) lega(ti) Aug. in Brit(annia) ; cf. Mommsen, *StR*, ii³, 2, 818, 2 [and Mowat, *Bull. epigr. B.*, 5, 6. H.].
- 54, 26. command. Cf. Hirschfeld, *VG*, p. 204, 4 (as against Marquardt, *StV*, ii³, 378, 3. Mommsen, *StR*, ii³, 2, 851, 3 reads in Stat., v, 94 quis centum valeat frenare maniplis Intermixtus equos, and understands the command of the legionary cavalry).
- 55, 2. remains. Canina, *Topogr. d. v. App.*, *AdI*, xxv, 148 and *Via Appia*, i, p. 63. About 5 *miglie* from these remains, near the sixth milestone of the *Via Appia* was found in 1485 in a sarcophagus without inscription an artificially preserved female corpse, which Pomponius Laetus supposed to be the body of Cicero's daughter, Tullia or Priscilla. Chr. Hülsen, *Die Aufindung der römischen Leiche vom Jahre 1485*, in *Mitth. d. österr. Inst. f. Geschichtsforsch.*, iv, pp. 433-449.

- the Messiah the children of Israel will return from the whole world to Jerusalem: qui autem senatoriae fuerint dignitatis et locum principum obtinuerunt . . . in carrucis venient.
- 133, 13. name. Mommsen *StR*, iii, 1, 471. This title is not however used everywhere, e.g. in the *Acta Arval.* it does not appear.
- 133, 14. censorial. Mommsen, *StR*, ii², 945-947; iii, 1, 469; iii, 2, 879 ff.
- 133, 18. regulations. Tac., *A.*, iv, 42.
- 133, 22. over. *Id. ib.*, vi, 3.
- 133, 24. suicide. *Id. ib.*, xii, 59.
- 133, 25. voluntary. *Id. ib.*, ii, 48; xi, 25.
- 133, 28. penury. *Id. ib.*, xii, 52.
- 133, 37. consequence. Dio, lx, 24.
- 133, 41. Antonius. Tac., *Hist.*, i, 77; ii, 86.
134. THE KNIGHTS. This section is based essentially on Mommsen's account, *StR*, iii, 1, 476-509 (*die Ritterschaft*). As a rule I have quoted documents only if lacking there.
- 134, 2. liability. *Digg.*, l, 1, 22, § 5 sqq.; Mommsen, *StR*, iii, 1, 473 f.
- 134, 11. Vespasian. Dio, lix, 9; Sueton., *Vespas.*, c. 9; cf. also the advice of Maecenas in Dio, lii, 19; Mommsen, *StR*, iii, 1, 489, 4 and 502, Bohn, (*Heimath der Prätorianer*, (1883) p. 7 note), believes that only from the time of Titus the *equo publico honorati* began to remain in the provinces; they are not frequent there till the time of Trajan and Hadrian.
- 134, 12. knights. Marquardt, *Hist. eqq.*, p. 88 sq.
- 134, 16. Rufus. Renier, *Inscr. de l'Algérie*, 3680 = *CIL*, viii, 9616 (Manliana Mauret. Caesar.). Cf. *CIG*, 2822, 3494.
- 134, 18. senators. Cf. e.g. *IRN*, 5369 = *CIL*, 3158 (apparently of the time of Augustus): tres ex eo superstites reliquit liberos . . . alterum castrensibus ejusdem Caesaris August[i] summis fun[ctum atque acceptis eques]tris ordini honoribus, etiam superiori destinatum ordini.
- 134, 20. provincials. Censorin., *D.n.*, c. 15.
- 134, 24. hereditary. Mommsen, *op. cit.*, pp. 496, 482 f.
- 134, 27. privileges. *Ib. id.*, 499.
- 134, 32. creditors. Apul., *Apol.*, 523.
- 134, 36. wore. Stat., *Silv.*, v, 316; cf. Marquardt, *Priv.*, i², 86, 1.
- 134, 37. rings. Martial, viii, 5.
- 134, 38. Pollio. Juven., xi, 42.
- 135, 3. horse. Mommsen, 489 f.
- 135, 3, 4. century. *Ibid.*, 496, 2.
- 135, 6. maintained. *Ibid.*, 495, 1.
- 135, 8. ceremony. *Ibid.*, 491-493.
- 135, 12. relaxed. *Ibid.*, 452. Cf. note on i, 99, 4, 5 of this work.
- 135, 14. knights. Juv., 3, 33 ss.
- 135, 15. adoption. Mommsen, 518 f.
- 135, 19. favour. Cf. this work, i, p. 46 f.; Mommsen, 519, 1.
- 135, 22. Mnsa. Sueton., *August.*, c. 27; Dio, xlviii, 45; liii, 30.
- 135, 27. tribune. Horace. *Epodes*, 4.
- 135, 32. unfree. Pliny, *H. N.*, xxxiii, 33. Cf. e.g. Orelli, 2176 =

- CIL*, vi, 1847; Mommsen, *Rhein. Mus.*, 1846, p. 21; Orelli, 3750 = *CIL*, v, 1, 4392.
- 135, 34. license. Mommsen, *StR.*, iii, 1, 519; cf. ii³, 893 f.
- 135, 39. suspicion. Dosith., *Hadrian. resp.*, 6; Pliny, *H.N.*, xxxiii, 152 (Arellium Fuscum motum equestri ordine ob signem calumniam).
- 136, 5. included. Mommsen, *StR.*, iii, 1, 508.
- 136-7. *turmae*. 'Ex equestribus turmis' as designation for the equestrian order, *CIL*, viii, 9754; *Arch. epigr. Mitth. aus Oesterr.*, viii, 1884, p. 243.
- 136, 13. *juventatis*. Mommsen, *StR.*, ii³, 2, 826-828.
- 136, 15. ascribed. *Ibid.*, iii, 1, 522-527.
- 136, 27. Augustus. Ulpian, *Digg.*, xlii, 1, 57; cf. i, 4, 8.
- 136, 28. Italians. See i, p. 100.
- 136, 31. East. Inscription from Attaleia (Pamphylia): *ἐπιλεκτὸν κριτὴν ἐν τῶν ἐν Ῥώμῃ δεκουριῶν*, *Bull. de corr. Hellén.*, x (1886), p. 149. Tralles: *τῶν ἐκλεκτῶν ἐν Ῥώμῃ δικαστῶν*; *ibid.*, p. 456, 8 = *Mitth. d. deutschen arch. Inst. zu Athen*, xi (1886), p. 204.
- 136, 32. years. Mommsen, *op. cit.*, 527-539.
- 136, 33. officers. *Ibid.*, 539-552.
- 136, 41. posts. *Ibid.*, 544.
- 136, 41. age-limits. Commodus appointed a boy of 14 years to the first *militia*, *CIL*, xiv, 2947; Mommsen, 1196, 2.
- 137, 6. apart. Mommsen, 547.
- 137, 9. posts. After performing this duty they are called 'omnibus equestribus militiis functi' or 'a (iii, iv) militiis'; Mommsen, 549; cf. 543.
- 137, 13. promotion. *Ibid.*, 550, 3.
- 137, 16. once. *Ibid.*, 551 f.
- 137, 16. remained. *Ibid.*, 552, 2.
- 137, 23. fleets. *Ibid.*, 553.
- 137, 30. Claudius. *Ibid.*, ii³, 981.
- 137, 33. Secretariate. Cf. p. 35.
- 138, 6. century. Hirschfeld, *VG*, 216-218; Mommsen, *StR.*, ii³, 1120 f.
- 138, 9. nobility. Tac., *Agric.*, 4; *CIG*, 2790: Γ. Ἰούλιον Φιλίππον τὸν κράτιστον, πατέρα συγκλητικοῦ, ἀπὸ ἐπιτρόπων.
- 138, 16. honour. Fronto, *Ad Anton.*, 9 (dignitatis suae in senectute ornandae causa); cf. Appian, *prooem.*, 15. Mommsen, *StR.*, iii, 1, 559, 2.
- 138, 17. eighteen. *Ibid.*, i³, 573.
- 138, 20. beardless. *Hadrian*, c. 10.
- 138, 21. importance. According to Mommsen, *StR.*, iii, 1, 564, the basis of their gradation dates from Augustus.
- 138, 34. libraries. Hirschfeld, *VG*, 258-265.
- 138, 41. flotilla. Lumbroso, *L'Egitto al tempo dei Greci e dei Romani*, p. 26; cf. *De bello Alexandrin.*, c. 13.
- 139, 6. Egypt. Renier, *Mélanges d'épigr.*, p. 88 ss. Henzen, 6928; cf. iii, 522. Hübner, *CIL*, ii, 1970. Hirschfeld, *Philol.*, xxxix, 30, 11. Other examples: Orelli, 3331, 3651, 5530; *CIL*, ii, 4135; *Pertinax*, c. 2, and in particular Wilmanns, *Ex. Inscr.*, c. vii.

- 139, 10. Africa. Seneca, *Epp.*, 31, 9; Hirschfeld, *VG*, 261, 1.
 139, 13. Spain. Hirschfeld, *VG*, 252, 1.
 139, 14. perhaps. Pliny, *H. N.*, xvii, 41: in Byzacio vidimus.
 139, 14. procuratorships. The following inscription, *CIG*, iii, p. 1178, n. 4536 sq.: [Ἀραδίων] ἡ βουλ[ὴ καὶ ὁ δῆμος | Γάδιον Πά]λινον Σέκου[δον | ἐπαρ]χον σπειρή[ς] [Θ]ρα[κῶν | πρ]ώτης, ἐπαρχον ΝΘ . . . | . . . ὡν ἀντεπίτρο[πον Τιβερί]ου Ἰουλιου Ἀλ[ε]ξ[άνδρου | ἐπ]άρχου τοῦ Ἰουδα[ικοῦ στρατοῦ | ἐπ]ι[το]ροπον Συρ[ίας]. . . . ὧι λεγέωνος ἐ (cf. Mommsen, *Add. ad CIL* iii, in *Eph. ep.*, v, p. 578; *Hermes*, xix, 644–648) can hardly, as Hirschfeld (*Mith. d. röm. Inst.*, ii (1887), p. 152) remarks, be referred to Pliny, as there is no mention of the procuratorship in Spain; while it is hardly credible that the Secundus L. Plin. et P. Mestri libertus, mentioned in a Bulgarian inscription (*Oesterr. Mitth.*, x, 204) was the father of Pliny.
 139, 17. literary. Teuffel, *RLG*⁴, 312.
 139, 23. back. Seneca, *Brev. vit.*, c. 20. The expression 'vacationem procurationis', however, makes Hirschfeld's identification (*Philol.*, xxix, 27) with *praefectus annonae* C.T. dubious.
 139, 27, 28. seven. Dio, lxix, 19; Hirschfeld, *op. cit.*, p. 30.
 139, 29. said. See i, p. 137.
 139, 32. rare. Mommsen, *StR*, iii, 1, 560, 4.
 139, 37. service. Hirschfeld, *VG*, 251.
 139, 38. praefects. *Ibid.*, 253 ff.
 140, 8. Literary. Mommsen, *StR*, iii, 561. [Cf. also the inscription not quoted there, *CIL*, xiv, 2916: T. Aelio T. f. Largo eq. R. proc. Aug. bybliothecaru[m] juris publici [et] privati p[er] [it-issimo].]
 140, 10. jurisdiction. A subpraefectus vigilibus juris peritus, Or., 3436; a Marinus eq. R. juri peritissimus (Sitifi), Henzen, 7234 = *CIL*, viii, 8489; *CIL*, xiv, 2916 (note 6); *CIL*, vi, 1, 1602: P. Carbetanio Rufo eq. R. magistro juris; Pompon., *De orig. jur.* (D., i, 2, 2 § 47): Fuit et alius Longinus ex equestri quidem ordine qui postea ad praeturam usque pervenit.
 140, 11. *consilium*. Hirschfeld, *VG*, 215 f.; see vol. i, p. 71 of this work.
 140, 16. equivalent. Hirschfeld, *VG*, 254 f. If, as Fronto relates (*Ad Anton.*, c. 9) Antoninus answered Fronto's petition for a procuratorship for Appian: futurum ut . . . causidicorum scatebra exoreretur idem petentium (Mommsen, *op. cit.*, 561, 5) the words certainly implied no objection to lawyers.
 140, 20. Modestinus. Bremer, *Rechtslehrer*, 61, 261.
 140, 23. Alexandria. Cf. Zimmern, *Gesch. d. r. Privatrechts*, i, 353; also Appendix xi, p. 72.
 140, 24. Praetorium. Zimmern, *op. cit.*, i, 356; Karłowa, *R. Rechtsgesch.*, 732; also Appendix vii, p. 46.
 140, 26. governors. Mommsen, *Hermes*, iv, 122 ff.
 140, 27. officials. Hirschfeld, *loc. cit.*
 140, 28. Hadrian. *Hadrian*, c. 20; cf. Haubold, *Opusc.*, i, 276; Mommsen, *De C. Caelii Saturnini titulo*, in *Mem. dell' Inst.*, ii, 331 s. Cf. *CIL*, v, 1, 4332; Philostrat., *Vitt. soph.*, ii, 29 and 32; Hirschfeld, 49–51; Schurz, *De mutationibus in imp.*

- roman. ordin. ab. imp. Hadriano factis (Bonn, 1883), pp. 25-27.
- 140, 31. Aurelius. Aurel. Victor, *Caes.*, 20, 30; not by Antoninus Pius, as stated in *H. A., Geta*, c. 2, because he was only 15 years old at that emperor's death. Cf. *Vit. Severi*, c. 1.
- 140, 36. assessors. Bremer, *Rechtslehrer*, 62. Hirschfeld, *VG*, 231, 234 f.

- 141, 4. Councillor. Orelli, 2648 = *CIL*, x, 6662; cf. Garrucci, *Rev. arch., nouv. sér.*, v, 393, and Mommsen, *op. cit.*, 330; Hirschfeld, 215, 4.
- 141, 10. frequent. Orelli, 3153 = *CIL*, vi, 1421: Aburnio Valenti pontifici praef. urbi feriarum Latinar. facto ab imp. Hadriano Aug. ii cos. (118) . . . tribuno plebis designato candidato Aug. eq. publ. c[larissim.] j[juveni] d.d.
- 141, 12. edict. Mommsen, *StR*, iii, 1, 565. In Juvenal, 10, 95 egregii equites are the tribunes of the Praetorians.
- 141, 23. hereditary. Hirschfeld, 272-275.
- 141, 26. quaestors. Mommsen, *StR*, i², 337, 3 and 4.
- 141, 28. played. Schol. Juvenal, 5, 3.
- 141, 29. knights. Mommsen, *De apparitoribus*, in *Rhein. Mus.*, 1846, p. 42 ff, no. 2. Cf. Henzen, 6023^a, 6565; *AdI*, 1865, p. 13, 1; *BdI*, 1865, p. 151 ss.
- 141, 38. immunities. Mommsen, *StR*, iii, 1, 566-569.
- 142, 4. life. Seneca, *Epp.*, 98, 13; Plutarch, *Prof. in virt.*, 5, p. 77 E; *CIL*, xii, 1783: Huic divus Hadrianus latum clavum cum quaest. optulit et petentis excusationem accep. Teuffel *RLG*⁴, 266, 5.
- 142, 11. fortune. Tac., *A.*, xvi, 17.
- 142, 13. pelf. Tac., *H.*, ii, 86.
- 142, 18. Terentius. Pliny, *Epp.*, i, 14; iii, 2; vii, 25.
- 142, 20. described. See p. 128 above.
- 142, 25. rank. Marquardt, *Hist. eqq.*, p. 60, 31; 65, 76; 87, 8. Cf. Henzen, 6790 note 3; 6747; *CIL*, vi, 1606, 1632.
- 142, 26. Misenum. Mommsen, *IRN*, 2567, cf. 1488. *Eph. epigr.*, iv, 97 (Salonis): Caeciliae Logianae e[gregiae] m[emoriae] v[iri] fil. et Tullio Callipiano eq. R. etc. 'Notabile est matrem propter hos ut videtur natales patri equiti Romano anteponi'. Mommsen.
- 142, 28. fortune. Ovid, *Trist.*, iv, 10, 7; *Amor.*, iii, 15, 6.
- 142, 32. Etruscan. Persius, 3, 9.
- 142, 35. tribunate. Martial, iii, 95; v, 13; ix, 49; xii, 26.
- 142, 37. Emperor. To Domitian v, 19; vi, 10; vii, 60; viii, 24; to Regulus vii, 60; to Stella vii, 36 etc.
- 142, 38. cloak. *Id.*, vi, 82.
- 142, 41. shabbiness. *Id.*, viii, 28; ix, 49.
- 143, 2. suborned. Pliny, *Epp.*, iii, 21.
- 143, 4. knighthood. Martial, i, 31 (cf. v, 48); iv, 13, 29; vi, 58; vii, 97, 3; viii, 63.
- 143, 5. epitaphs. *Id.*, i, 93; x, 26.
- 143, 8. Narcissus. Juv., 14, 316-331.
- 143, 10. wine. Gell., xi, 7, 3.
- 143, 14. rich. Sueton., *Nero*, c. 12; cf. vol. ii, p. 17.

- 143, 17. left. *Vita Persii*.
 143, 19. Alba. Teuffel, *RLG*⁴, 288, 1.
 143, 23. Livia. Dio, liv, 23; Ovid, *Fast.*, vi, 639; cf. Teuffel, *StRE*, vi, 2, 2419.
 143, 26. rates. Sueton., *Aug.*, c. 39.
 143, 27. merchants. Orelli, 4077: C. Sentius Regulianus Eq. R. diffusor olearius ex Bactica; cf. Marquardt, *Prl.*, ii², 469, 1.
 143, 28. shipping. Seneca, *Epp.*, 119, 5.
 143, 28. manufacturers. Marquardt, *op. cit.*, 258, 2375.
 143, 28. tax-farmers. Tac., *A.*, iv, 6; xiii, 50; Sueton., *Vespasian.*, c. 1; Marquardt, *StV*, ii², 313, 1; Rein, *StRE*, vi, 248.
 143, 30. Circus. Pliny, *H. N.*, x, 71.
 143, 34. formed. Seneca, *Epp.*, 101, 1-4.
 143, 34. investment. Mommsen, *StR*, iii, 1, 511.
 143, 37. follow. Quintilian, iv, 2, 45: cum praesertim lector non fere sit nisi eruditus, iudicem rura plerumque in decurias mitant, de eo pronuntiaturum quod intellexerit. Similarly Juvenal, 7, 116 (of the advocate): Dicturus dubia pro libertate, babulco Judice.
 144, 4. acquittal. Horace, *S.*, i, 5, 51-69. Schol. Juv., 5, 3.
 144, 8. *Visellia*. Pliny, *H. N.*, xxxiii, 32; Mommsen, *op. cit.*, 424, 2 and 3.
 144, 10. confiscated. Pliny, *loc. cit.*, Sueton., *Claud.*, c. 15.
 144, 13. stars. Petron., c. 32. The five golden rings which his statue is said to wear (c. 71), apparently belong to him as master of the games (like the tribunal and the *praetexta*); Mommsen, *op. cit.*, iii, 1, 514, 4.
 144, 13. Martial. Martial's Zoilus apparently wore the gold ring without opposition, xi, 37; cf. iii, 29.
 144, 15. unqualified. Martial, v, 14, 2: Tunc cum liceret occupare; cf. v, 8, 23, 25, 27, 35, 38, 41.
 144, 18. removed. *Id.*, v, 8.
 144, 21. equites. Martial, i, 84; Juvenal, 9, 9 s.
 144, 25. Sicily. Martial, vii, 64.
 144, 39. stature. *Id.*, ii, 53; cf. vol. i, pp. 4 and 5 of this work.
 145, 2. food. Martial, xi, 56. There is also here a reminiscence of Catullus, 5, 4: Et tristis nullo qui tepet igne focus Et teges et cimex; Catull., 23, 1: Furi cui neque servus est neque arca Nec cimex neque araneus neque ignis. Cf. Martial, xi, 32.
 145, 2. lunch. Martial, x, 48, 16; xiii, 13, 1.
 145, 3. garlic. Marquardt, *Prl.*, ii², 424.
 145, 3. *as*. Martial, ii, 104, 10; in Petronius, c. 14, Ascyrtos and Encolpius went to buy for a *dipondius* 'cicer lupinosque' for both of them.
 145, 4. fish. Juv., 14, 127 sqq.
 145, 5. pig's head. Pers., iv, 69.
 145, 5. luxury. Juv., 3, 292 sqq.
 145, 18. free. Martial, xii, 32, where in l. 5: Et cum lucerna corneoque cratere, should perhaps be read *corneaque laterna*. Cf. xiv, 61 (laterna cornea) and 62 (laterna de vesica): Cornea si non sum, numquid sum fuscior? On *pulejum* see Pliny, *H. N.*, xx, 152.

- 145, 18. bridges. Martial, xii, 32, 25: haec sarcinarum pompa convenit ponti.
- 145, 19. thresholds. Juv., 5, 8.
- 145, 19. beggars'. Seneca, *De vita beata*, c. 25.
- 145, 20. fora. Jahn, *Ueber Darstellungen des Handwerkes und Handelsverkehrs auf antiken Wandgemälden*, in *Abhandl. d. Sächs. Ges.*, iv, 287.
- 145, 21. wounds. Cf. the description of the lame, blind and ulcerated beggars in Prudent., *Peristeph.*, ii, 141-160.
- 145, 21. dog. Jahn, *op. cit.*, 288.
- 145, 22. pity. Seneca, *De clementia*, ii, 7.
- 145, 22. intoned. Schol. Hor., *Epp.*, i, 17, 48.
- 145, 25. dog's bread. Martial, x, 5, 5: Oret caninas panis improbi buccas; cf. iv, 53, 6: Cui dat latratos obvia turba cibos. Seneca, *Controuv.*, i, 7, 18 (Kiessling, *N. Jahrb. f. Ph.*, 1871, 716; Quintilian, viii, 3, 22); Juv., 5, 11.
- 145, 25. bran-bread. Phaedr., ii, 17, 3 sq. M. Voigt, *Die verschiedenen Sorten von triticum, Weizenmehl und Brot bei den Römern*, in *N. Rh. Mus.*, 1876, 105 ff.
- 145, 26. mat. Juv., 9, 140; Martial, iv, 53.
- 145, 26. salvation. Martial, x, 5; xiv, 81; Juv., 5, 8.
- 145, 33. candelabrum. Pliny, *H. N.*, xxxiv, 11; *CIL*, i, 805 = *CIL*, x, 6488 = Wilmanns, 1317 (Ulubris): Clesipus Geganus mag. Capitol. mag. Luperc. viat. tr. Cf. Mommsen, *StR*, iii, 1, 566, 3.
- 145, 37. price. Epictet., *Diss.*, iii, 17, 4.
- 145, 39. lord. Juv., i, 24, 15, 224.
- 145, 41. estates. Martial, ix, 73.
- 146, 4. centre. Blümner, *Gewerbl. Thätigkeit der Völker des kl. Alterth.*, 100, 6.
- 146, 3. Modena. Juv., 3, 36-40; Martial, iii, 16, 59, 99.
- 146, 6. advocates. Quintilian, i, 12, 17. According to Galen, *Προτρ. λόγ.*, c. 14, ed. K., i, p. 38: οἱ διοικοῦντες τὰ τῶν πλουσίων, οἱ τελῶναι, οἱ ἔμποροι gained wealth. Also, according to Seneca, *Brev. vit.*, 17, 5, 'alienorum honorum mercenaria procuratio' was lucrative.
- 146, 7. livelihood. Martial, iii, 10. This is the 6 per cent. interest of the equestrian census.
- 146, 11. poverty. Juv., 9, 140-147.
- 146, 18. known. Orelli, 4066: colleg. balistariorum. Also the colleg. centonariorum (4068) perhaps consisted of workmen employed on military works. Plin., *H. N.*, iii, 54. Cf. p. 13, ll. 1 and 2 above.
- 146, 24. porters. Marquardt, *Prl.*, ii², 379 ff. *Geruli* taxed by Caligula, Sueton., *Calig.*, c. 40. Cf. also De Rossi, *Le horrea sotto l'Aventino e la statio urbis Romae*, in *AdI*, 1885, p. 223 sqq. with *Tav. d'agg.*, i (delivery and weighing of the corn of the canon urbicus).
- 146, 25. money-lenders. Colum., *praef.*, 8, names *foeneratio* among the means of living preferable to agriculture. Pawnbrokers, see Martial, ii, 57, 7; cf. Marquardt, *StV*, ii², 62 ff.; also

- nummularii*, Petron., c. 56; Martial, xii, 57. Inscriptions of the *argentarii*, *CIL*, vi, 9155-9186.
- 146, 31. terms. Ambrose, *De Tobia*, c. 6, 23.
- 147, 6. oil shops. Preller, *Reg. d. St. R.*, p. 30 f.; cf. 111 and 236.

- 194, 9. *centurion*. Marquardt, *StV*, ii², 376.
- 194, 9. *position*. P. Ann. Flori fr., in Jahn, ed. Flor., p. xlv.
- 194, 14. *year*. Juv., 14, 194 (ut locupletem aquilam tibi sexagesimus annus adferat; cf. Marquardt, 354, 1). Revolts of Moors and Britons under Hadrian, see *Hadrian*, c. 5. and 12. On the inscription of Bulla regia (*CIL*, viii, 10,579); p.p. *prærogativo tempore factus* (a) d. Hadriano, cf. the note by Mommsen.
- 194, 17. *fair*. J. Karbe, *De centurionibus Rom. quaestiones epigr.* (Halis, 1880), pp. 1-8. Marquardt, *StV*, ii², 376 f.; *CIL*, xiv, 349 (Ostia): . . . p[rimi]p[ilaris] f[ilio] p[rimi]p[ilaris] n[e]poti]. It is at least doubtful whether the *primipilares* received the sum of 600,000 S: (Sueton., *Gai.*, 44; Karbe, p. 8, 15). Of their privileges we only know one that they received from Hadrian, 'vacatio a tutela' (Karbe, *ib.*).
- 194, 18. *knights*. J. Schmidt, *Die Rangklasse der Primipilaren* (*Hermes*, xxi. 1886, p. 90 ff.), is not successful in his attempt to prove that it always happened from the time of Augustus.
- 194, 18. *sons*. Karbe, pp. 10-12.
- 194, 19. *tone*. Cf. e.g. Horace, *S.*, i, 6, 72; Persius, 5, 189; 3, 77.
- 194, 22. *Decurio*. Appian., *B. civ.*, v, 128. Madvig, *Verf. und Verw.*, ii, 12.
- 194, 24. *patrons*. Karbe, pp. 12-14.
- 194, 26. *trustworthy*. *Id.*, p. 15. Cf. *Did. Jul.*, c. 5: Nigrum misso primipilario occidi praeceperat.
- 194, 35. *militiis*. Marquardt, *StV*, ii², 378-380; Mommsen, *StR*, iii, 543 ff.
- 194, 40. *procuratorship*. Marquardt, *op. cit.*, 379.
- 195, 1. *encouraged*. Mommsen, *op. cit.*, 547.

- 195, 3. appointed. Mommsen, *StR*, iii, 547, 4. Marquardt, 458 f.
 195, 8. veterans. Mommsen, 547, 5.
 195, 14. ways. For numerous examples see the German original, ed. 6, 1888, i, 378 f.
 195, 21. banished. Tac., *Hist.*, i, 4.
 195, 36. live. Horace, *Epp.*, i, 7, 46 sqq.
 195, 39. tradition. Marquardt, *Prl.* i², 204 ff.
 196, 4. chairs. Juv., 7, 144 sqq. In the epitaph of a certain Manlia T. l. Gnome (*CIL*, vi³, 21,975) are the words: *clientes habui multos*.
 196, 4. imputation. Marquardt, *op. cit.*
 196, 6. disposal. Manil., v, 61 sqq.
 196, 8. food. On this and on the signification of *sportula* cf. Appendix xiv.
 196, 12. Cottae. Aurelius Cotta, Tac., *A.*, xiii, 34 ?
 196, 12. times. Martial, xii, 36, 8 ; iv, 40, 1 ; Juv., 5, 108-113 (*modici amici*, as often, *clientes*).
 196, 16. clients. Colum., *praef. lib.*, i, 9 and 12.
 196, 19. valued. Juv., 5, 12-18.
 196, 20. cloak. Pers., i, 54.
 196, 21. sometimes. Martial, x, 11, 6.
 196, 22. land. Juv., 9, 59.
 196, 25. property. Cf. vol. iii, p. 61, also vol. i, pp. 160 and 161.
 196, 28. Lupus. Martial, v, 56 ; x, 48, 6.
 196, 31. must. *Id.*, xi, 18.
 196, 34. conducting. Columella, *praef. lib.*, i, 12 (the words '*qui vectigalis esse non possit*' Gesner recognized to be a gloss). The '*cotidianum tributum*' is the '*meritoria salutatio*' (Seneca, *Brev.*, v, 14, 6).
 196, 35. lodgings. *Digg.*, vii, 8, 2 § 1, 3 ; ix, 3, 5 § 1. Also *contubernium* (cf. Gierig, *Plin. Epp.*, ii, p. 545 sqq., de *contuberniis Romanorum*) implies sometimes a real client-relationship.
 196, 37. expected. Martial, ii, 32 ; x, 18.
 196, 39. clients. Tac., *A.*, xvi, 22.
 197, 1. pale. Martial, iii, 38, 11.
 197, 3. *toga*. *Id.*, x, 18.
 197, 4. paid. *Id.*, x, 75, 11.
 197, 5. barely. *Id.*, iii, 30 ; Juv., i, 119 sqq.
 197, 9. atrium. Seneca, *Epp.*, 22, 7.
 197, 13. call. Martial, x, 70, 5. A number of passages in Casaubon on Sueton., *Aug.*, c. 53.
 197, 14. digestion. Stat., *Silv.*, iv, 9, 48.
 197, 18. orbit. Juv., 5, 19.
 197, 20. sleep. Martial, x, 74.
 197, 22. repose. *Id.*, iii, 4 ; xii, 68 ; xiv, 125.
 197, 28. worn. *Id.*, ix, 100 ; x, 96, 11 ; xii, 18, 5.
 197, 32. school. *Id.*, xii, 57, 4 ; cf. Juv., 7, 225 ; Martial, xiv, 223.
 197, 32. home. Pliny., *Epp.*, iii, 12.
 197, 33. snow. Martial, iii, 36 ; x, 82 ; xii, 26 ; Juv., 5, 76.
 197, 33. deterred. Seneca, *Beneff.*, iv, 39, 3 (Kölle) *Rom. im Jahre 1833*, p. 197 : 'As soon as the snow lies, lawcourts and schools

- are closed. When it rains fairly heavily no hawkers or beggars are to be heard'.
- 197, 34. dirty. Juv., 3, 247.
- 197, 35. distances. Martial, i, 108; v, 22.
- 197, 38. waggons. *Id.*, v, 22, 7; Juv., 3, 243 sqq.
- 197, 40. gout. Martial, vii, 39.
- 198, 3. following. *Id.*, ii, 18, 5; iii, 46; x, 10, 7.
- 198, 4. visits. *Id.*, ix, 100, 3.
- 198, 6. Titus. *Id.*, iii, 36.
- 198, 7. elbow. *Id.*, iii, 46; Cic., *In Pisonem*, 122.
- 198, 9. chariot. Hor., *Epp.*, i, 7, 75.
- 198, 11. signal. Martial, x, 10.
- 198, 14. scullions. *Id.*, vi, 48; xi, 24. Persons who were not clients were of course also hired for this purpose: Quintilian, xi, 3, 131; Pliny, *Epp.*, ii, 14, 4; Juv., 13, 29-31.
- 198, 18. two people. Seneca, *De ira*, iii, 8, 6.
- 198, 25. relegation. Tac., *A.*, xiii, 19-21.
- 198, 26. elections. *CIL*, vi, 822, 933, 1011, 1016, 593.
- 198, 27. atrium. Pliny, *H. N.*, xxxiv, 17.
- 198, 34. porter. Columella, *praef. lib.* i, 9.
- 198, 37. out. Martial, v, 22.
- 198, 40. clients. Juv., iii, 184-189.
- 198, 41. inside. Seneca, *Benef.*, vi, 34, 1.
- 199, 1. frown. Seneca, *Ad Serenum*, 14, 1.
- 199, 4. return. Juv., *loc. cit.*
- 199, 6. answer. Seneca, *Brev. vit.*, 14, 4.
- 199, 9. name. Petron., c. 44.
- 199, 11. king. Mommsen thinks that the 'ordo regalium', who dedicated a statue at Formiae to a 'patronus coloniae' (*CIL*, x, 6094), was perhaps a collegium clientum, quale est Aeserninum cultorum statuarum et clipeorum L. Abulli Dextri (ix, 2654). Quod si quis cum hoc ordine mirum illum collegii ministrum interregem hominem libertinum (6071) componet, fortasse non errabit (?).
- 199, 12. reward. Martial, ii, 68; cf. i, 112; vi, 88; ix, 92. On the other uses of the address *Domine* at this time cf. Appendix xv.
- 199, 13. presence. Martial, x, 14, 9.
- 199, 14. change. *Id.*, iii, 36.
- 199, 15. enraged. *Id.*, iii, 37.
- 199, 16. generosity. *Id.*, xii, 13.
- 199, 17. client. Juv., 3, 125.
- 199, 18. burdensomely. Martial, xii, *praef. init.*
- 199, 19. expect. *Id.*, ii, 55.
- 199, 26. evident. Cf. also Sueton., *Caes.*, c. 48; Pliny, *H. N.*, p. xiv, 91; Musonius in Stob., *Floril.*, i, 298, 13, ed. Meinecke: $\delta \mu \eta \nu \epsilon \mu \omega \nu \iota \sigma \alpha \tau \circ \iota \varsigma \sigma \upsilon \nu \epsilon \sigma \theta \lambda \omicron \upsilon \sigma \iota \nu$. Petron., c. 31: vinum dominicum ministratoris gratia est.
- 199, 34. himself. Pliny, *Epp.*, ii, 6.

 230, 35. girl. Nissen, *Hermes*, i, 147; Anson., *Id.*, 4, 33 says in

his description of the school for his grandchild: *Haec olim genitorque tuus genetrixque secuti* etc. Cf. also Philostrate., *Imagg.*, i, 12. Rohde (*D. gr. Roman*, 146, 2) finds this passage almost unintelligible, considering the Greek custom, and he asks if slaves are meant; cf. 424, 1. However, in the case of a foundation of 34,000 *drachmae* for education in Teos (G. Hirschfeld, *Hermes*, ix, 1875, p. 502) co-education seems also to be intended, for it is arranged that three *γραμματοδιδάσκαλοι* (with yearly salaries of 600, 550 and 500 *drachmae*) *διδάξουσιν τοὺς παῖδας καὶ τὰς παρθένους*. Scipio the Younger mentions in his oration *contra legem judicariam* *Ti. Gracchi* the 'ludus saltatorius': plus . . . in eo ludo vidi pueris virginibusque quinquaginta, in his unum . . . puerum bullatum . . . non minorem annis duodecim (the others were therefore younger). Macrobi., *Sat.* (ii, 10), iii, 14, 7 Eyssenhardt. Also in the empire of the Khalifs boys and girls were taught in the same public schools, and had their love-affairs there (Kremer, *Culturgesch. d. Orients*, ii, 133).

- 247, 6. citharist. *Pertin.*, c. 13.
- 247, 7. dear. Juv., 6, 73–77 (solvitur his magno comoedi fibula etc.); Martial, xiv, 215.
- 247, 12. husband. Juv., 6, 379–397.
- 247, 18. partner. Seneca, *Qu. nat.*, vii, 32, 3.
- 247, 23. passed. Dio, lvii, 21: *ὅτι τὰς τε γυναῖκας ἤσχυον καὶ σπάρσεις ἤγειρον*. Tacitus (*A.*, iv, 4) mentions an expulsion of *histriones* in the following year (23). His words 'foedo per domos temptari' may allude to similar immorality. If he refers to the same expulsion, he must have quoted inexactly from the speech of Tiberius, as it would seem from the mention of the 'Oscum ludicrum' as if only or primarily actors of *fabulae Atellanae* were involved.
- 247, 26. Messalina. Dio, lx, 22, 28, 31; Tac., *A.*, xi, 4, 36.
- 247, 30. Domitian. Sueton., *Domitian.*, c. 3, 10; Dio, lxvii, 3; Aurel. Vict., *Caes.*, 11, 7; *Epit.*, 11, 1.
- 247, 33. pantomimes. *M. Anton.*, c. 23.
- 247, 37. betrayed. Galen, *De prognosi ad Epig.*, p. 457, K., xiv, 631 (cf. 626).
- 248, 5. modesty. Quintilian, *Inst. or.*, i, 2, 8: *omne convivium obscenis canticis strepit, pudenda dictu spectantur*. He was thinking perhaps of the *vasa adulterii caelata*, Pliny, *H. N.*, xiv, 140, or of pastry in obscene shapes (e.g. Martial, xiv, 69). The latter was also common in the Middle Ages (Baudrillart, *Hist. d. luxe*, iii, 462). I have not been able to see Rochholz, *Gebildbrot*.
- 248, 8. *alm's*. Juv., 11, 162 sqq.; cf. Jahn, *Ber. d. Sächs. Ges.*, 1851, p. 168. Jerome, *Adv. Helvid.*, 20 (ed. Vallarsi, ii, 228) says of Christian banquets: *ingrediuntur expositae libidinum victimae et tenuitate vestium nudae impudicis oculis ingeruntur*.
- 248, 10. present. Plutarch, *Qu. conv.*, vii, 8, 4, 4.
- 248, 12. Circus. Ovid, *A. a.*, i, 229 sqq.
- 248, 15. assenting. Pliny, *H. N.*, xiv, 141 (for 'marito' read 'mariti', which, however, is probably only a gloss).

- 248, 18. parties. Cf. Appendix xix.
- 248, 26. seem. *Epp.*, 16, 241 sqq., 225 sqq.; 17, 75-90.
- 248, 28. men. Marquardt, *Prl.*, i², 301; cf. *e.g.* ibis ut accumbas, Ovid, *Am.*, i, 4, 16.

- 257, 39. East. *Acts App.*, xvii, 4 (in Thessalonica), 12 (at Beroea), 34 (Damaris).
- 258, 8. attachments. Vol. i, p. 262. Cf. Tac., *A.*, xvi, 10; cf. my *programm*, *De Pomponia Graecina superstitionis externae rea*, in *Acad. alb. Regim.*, 1868, iv. When I wrote this I was ignorant of the discovery of the inscription of Pomponius Graecinus. That 'superstitio externa' does not necessarily mean Christianity is proved by the expression 'alienigena sacra' (Seneca, *Ep.*, 109, 22) which are the same rites of which Tacitus speaks in *Ann.*, ii, 85, and which are also called 'superstitio' by both authors. Similarly the words 'externa sacra' in Pliny, *H. N.*, ii, 21 refer to Egyptian and Jewish religion. V. Schultze (*Die Katakomben*, p. 315) inclines to the view that Pomponia Graecina was a Jewish proselyte.
- 258, 12. converts. De Rossi, *Roma sotteranea*, ii, 345s.; cf. tav. xlix, no. 27. On De Rossi's repeatedly expressed supposition (*R. s.*, i, 314, ss.) that Pomponia was identical with the eldest Lucina of the legend, I express no opinion, any more than upon his attempt to maintain the credibility of the tradition concerning a certain Plautilla, alleged sister of the consul Clemens, in the acts of SS. Domitilla, Nereus and Achilleus (cf. my *programm* mentioned above, p. 6 f.).
- 258, 14. Christian. Sueton., *Domit.*, c. 15.

- 258, 32. clothing. Tertullian, *De cultu fem.*, ii, 4; cf. Commodian., *Instr.* (238 A.D.), ii, 178.
- 258, 36. preference. Hippolyt., *De refutat. omn. haeres.*, ix, 12: ἐπέτρηνεν . . . ἔνα ἔχειν . . . σύγκοιτον εἰτε οἰκίτην εἰτε ἐλεύθερον, where De Rossi, *Bull. di arch. crist.*, 1866, p. 238, proposes (probably rightly) ἀπελεύθερον instead of ἐλεύθερον. In the Christian epitaph: D. m. Flaviae Sperandae conjugii sanctissimae . . . Onesiforus c. f. cojux benemerenti fecit, he believes he recognizes a [unique] example of such a marriage, explaining 'c. f.' as 'clarissimae feminae' (*Bull. crist.*, 1880, pp. 67-69). But these letters in the position where they stand cannot mean this; perhaps they mean (as Hirschfeld suggests) 'cum filiis'. The latter interpretation is supported by another Christian inscription, *CIL*, xi, 1, 4025: castissime femine Numisie Paule—Agrippa maritus cum filis benemerenti fecerunt. Hirschfeld, however, recognizes an example of the marriage of a Christian woman of rank with a Christian of humble birth (*Beitr. z. Gesch. d. Narbonens. Provinz, in Westd. Ztschr.*, 1889, pp. 21, 57) in the inscription *CIL*, xii, 675 (Arelate, third century): Hydriae Tertullae c(larissimae) f(eminae) conjugii amantissimae et Axiae Aelianae filiae dulcissime Terentius Museus hoc sepulcrum posuit (where the husband's standing is inferred from the *cognomen* Museus, and the absence of a *praenomen* and of a title).
- 259, 1. name. De Rossi, *R. s.*, i, p. 309; ii, p. 366 s.
- 259, 3. family. *Ibid.*, i, p. 3158. A Christian inscription: Luria Januaria c. f. Caelio Felicissimo v. e. conjug. kariss. is (according to De Rossi, *Bull. crist.*, 1880, p. 318. and 1018.) of about the third century.
- 259, 11. incite. Orig., *C. Cels.*, iii, 9 and 55, ed. Klotz.

- 259, 37. death. Porphyry, ἐκ λόγιων φιλοσοφίας, ap. Augustine, *C. D.*, xix, 23. 'Pessima in speciosis? ferro juncta mors' has not yet been adequately explained. Nauck, *Ztsch. f. Alterthumsw.*, 1855, p. 120, believes that the oracle translated by Augustine was already corrupt and meaningless at this point, perhaps δεινοτάτη ἐν εἰδεσσι σιδηρόδετος κτάνε μοῖρα instead of an original δεινοτάτη νηλής τε, or some words to that effect. G. Wolff, *Porphyry de philos. ex oraculis haer. ll. vell.*, 1858, p. 158, restores the end of the oracle thus: ὅν τε δικασπολίσαιον ὕπ'

- ὀρθονοῦσιν ἅλονται Δεινὸν ἐν ἐμφανέεσσι σιδηρόδετος μόρος ἔκτα, where ἐν ἐμφανέεσσι means 'on a hill'. Cf. also Cyprian, *Εφρ.*, 24.
- 259, 38. belief. Strabo, i, 7, p. 297: πάντες γὰρ τῆς δεισιδαιμονίας ἀρχηγούς οἰοῦνται τὰς γυναῖκας.

VI. MEANS OF COMMUNICATION.

- 268, 5. now. Heinrich Stephan, *Das Verkehrsleben im Alterthum*, in *Raumers hist. Taschenbuch*, 4. Folge, 9. Jahrg., 1868, p. 120.
 268, 11. century. Näher, *Die röm. Militärstrassen und Handelswege in Südwestdeutschland, Elsass-Lothringen und der Schweiz*, 1887, p. 33, says that the Middle Ages always maintained a high standard in road-making in these countries (and in Germany generally), and that the roads (many of which fell into decay in the Thirty Years' War) were constructed, ballasted and paved in the same fashion as those of the Romans (p. 42 f.). This no more contradicts the passage in the text than does the fact that the Roman roads were surpassed by those of the nine-

- teenth century (F. Berger, *Ueber die Heerstrassen d. röm. Reichs*, i, 1882, p. 20).
- 268, 15. traffic. Heinrich Stephan, *op. cit.*, p. 53.
- 268, 26. things. Newton and Pullan, *Discoveries at Halicarnassus*, i, p. 695.
- 269, 2. concentrated. Philo, *Leg. ad. Gai.*, p. 566 sq. The verbal correspondence in the praises of the beneficence of Augustus found in Philo and Suetonius, *Aug.*, c. 98 (per illum se vivere, per illum navigare, libertate atque fortunis per illum frui) is plausibly attributed by Lumbroso, *L'Egitto*, p. 159s., to hymns, which were sung to him in Alexandria.
- 269, 6. united. Plut., *De fort. Roman.*, c. 2; cf. Ranke, *Weltgesch.*, iii, 1, 53.
- 269, 9. prosperity. Appian, *praef.*, 6.
- 269, 11. countries. Philo, *loc. cit.*, p. 552 sq.
- 269, 12. pirates. Epictet., *Diss.*, iii, 13, 9.
- 269, 13. majesty. Pliny, *Nat. hist.*, xiv, 2.
- 269, 14. anchorage. Plut., *De fort. Roman.*, c. 2.
- 269, 16. eternity. Pliny, *op. cit.*, xxvii, 2 sq.
- 269, 25. locked. Aristid., *Εἰς βασιλέα*, p. 66 Jebb.
- 270, 2. bloom. Aristid., *Encom. Romae*, p. 224, 18 J. etc.
- 270, 14. remedy. Tertullian, *De anima*, c. 30. (For 'saxa panguntur' I suggest 's. franguntur'.)
- 270, 21. Rome. Stephan, *op. cit.*, p. 101.
- 270, 25. culture. *Id. ib.*, p. 118 f.
- 270, 35. at breast. Read 'abreast'.
- 270, 39. polish. Procop., *B. Goth.*, i, 14. Cf. the description in Statius, *S.*, iv, 3, 40 sqq. of the very solidly built and carefully paved *via Domitiana*.
- 271, 1. cost. Marquardt, *StV*, ii², 92 (in the year 123-124: *CIL*, ix, 6072, 6075). 'One German geographical mile of high road costs in Westphalia, where stone is cheap, an average of 30-50,000 thalers (£4,500-7,500) without the cost of the ground' (H. Delbrück, *Preuss. Jahrb.*, March 1885, p. 358). Five Roman miles = 0.998 German geographical mile, therefore with similar conditions the cost is almost the same.
- 271, 4. feet. Before the Latin graves only 3.87 m. The width of the raised side-walks varies very much, according to the proximity of the monuments to the kerbstone, and ranges from 2.15 to 3.50 m. Before the Latin graves it is 3.20 m. For all these measurements I am indebted to the courtesy of Herr F. O. Schulze.
- 271, 4. smaller. Cf. Nissen, *Pompejan. Studien*, p. 539. The road before the Herculaneum gate of Pompeii is at its narrowest about 9 metres broad (including the footways), the Via Valeria 7.25, the Salaria 6.1; *ibid.*, p. 526 f. In the Alpine passes a pavement of only 2-2½ metres is found. Near Avenches and Delémont the paved carriage-way of the Roman road was 2½ metres wide; the same at Ettlingen; the roads from Windisch to Regensburg (Switz.), and Breisach to Ehl 3, Strassburg to Zabern 4 metres. Therefore 'the Roman military roads were not broader than 4 metres, the trading roads 3 metres, with 3

- and 2 metres pavement respectively.' J. Näher, *Die röm. Militärstrassen u. Handelswege in Südwestdeutschland, Elsass-Lothringen und der Schweiz* (1887), pp. 37-42.
- 271, 5. track. The wheel tracks 1·4 m. wide in the Roman roads over the Alps were probably made by wagons (see Näher, p. 38).
- 271, 9. Gregory. Hübner, *Sixtus V.*, i, 84.
- 271, 11. to-day. Cf. Näher, pp. 37 f. and 42, also F. Berger, *Ueber die Heerstrassen des röm. Reichs*, i (1882), p. 19 f.
- 271, 14. gravelled. Plutarch, *Gracch.*, c. 7; Cic., *Ad Quint. fr.*, iii, 1, 2, 4; Strabo, iv, 1, 42 (he calls the main road between Spain and Italy *θέρους μὲν εὐβατον . . . χειμῶνος δὲ καὶ ἔσρος πηλώδη καὶ ποταμόκλυστον*) in Berger, *op. cit.*, p. 6. Näher says (p. 42) that the stone pavement of the Roman roads was 0·7 to 0·8 metres thick. A breach in the road from Breisach to Ehl 'shows that the ballasting is about 0·4 m. deep, and that the uppermost layer consists of coarse pieces of wacke'. Cf. also the description of the covering of the road from Augst to Mayence, p. 39.
- 271, 16. started. Stephan, *op. cit.*, p. 101 ff. I repeat in the text the essential part of his lucid description, verbally or summarily.
- 271, 19. Messana. *Itinerar.*, p. 490, 1 Wess.
- 271, 25. Puteoli. *Id.*, p. 493, 13: so stadia ∇ CCL cannot be right: ∇ CCCL would suit. The numbers in the Itineraries still await critical examination.
- 271, 28. hours. *Itinerar.*, p. 495, 5.
- 271, 35. Berenice. The Itineraries mention only the latter.
- 272, 5. hour. *Itin.*, 330, 10.
- 272, 38. miles. *It. Burdigal.*, pp. 563-571.

- 280, 19. Hercules. Seneca, *Apocol.*, c. 6, 1.
- 280, 26. six days. The distance from Antioch to Constantinople in the *Ilin. Antonini*, p. 139, 1 Wess.; cf. the note by Parthey

and Pinder, p. 65. Liban., *Or.*, 21, i, 685 R. Cf. H. F. Stobbe, *Z. Chronol. der Briefe des Plinius*, in *Philol.*, 1870, p. 381 ff.

- 280, 30. eight days. Plutarch, *Caes.*, c. 17.
 280, 31. miles. *Itin. Anton.*, Wess., p. 289, 3, Via Aurelia.
 280, 32. journey. Sueton., *Caes.*, c. 57.
 280, 37. required. Cic., *Pro Rosc. Am.*, c. 7, 19.
 280, 39. Clunia. Plutarch, *Galba*, c. 7.
 281, 1. counts. Pliny, *Nat. hist.*, xix, 4. Spanish ships came also to Pyrgi, the harbour of Caere (Martial, xii, 2, 1).
 281, 5. under. From Tarraco to Caesaraugusta 163 miles (*Itin. Anton.*, p. 451W.) thence to Clunia 169 (p. 441).
 271, 7. made. Cervantes, *La fuerza de la sangre* (*Novelas ejemplares*).
 281, 10. four days. *Hist. Aug., Maximin.*, ii, c. 25.
 281, 11. ridden. From Rome to Ariminum (*Itin. Anton.*, p. 126) 216; thence to Bononia (p. 126) 78; thence to Aquileia (p. 281) 217, a total of 511 mi. If one went from Ariminum to Ravenna (33 mi.), thence by water to Altinum, and thence by land again to Aquileia (62 mi., p. 126), the journey by land alone amounted to 311 miles. Casaubon, *op. cit.*, erroneously reckons 200 miles in 24 hours for this journey, and adds: magna sana diligentia, sed non incredibilis; constat hodiernos veredarios Roma Lutetiam saepe diebus sex septem commearae, quae longe major contentio est. *De mortib. persecutor.*, c. 47, (Maximinus) una nocte atque una die . . . Nicomediam alia nocte pervenit, cum locus proelii abesset milia CLX. Gibbon, ch. xiv, assumes that Maximin's flight from Heraclea to Nicomedia took only 24 hours; but according to the text, which is imperfect, it must have been more.
 281, 14. Galba. Tac., *H.*, i, 56.
 281, 16. minutes. Zangemeister, *Westd. Zeitschr.*, 1887, p. 240, 17.
 281, 16. Belgica. Tac., *H.*, i, 12, 18, 55; cf. iv, 59.
 281, 18. Rome. Marquardt, *StV*, i², 267 and 274, 2.
 281, 20. hours. All in Chambalu, *De magistratibus Flaviorum* (Bonn, 1882), p. 8. Statius, *Silvae*, iv, 112 sqq. says that by the new *via Domitiana* one could reach Baiae in one day from Rome (Qui primo Tiberim relinquit ortu, Primo vespere naviget Lucrinum); he must refer to the journey of a courier, for the distance of 141 *millia* (Rome to Sinuessa 108, thence to Puteoli 33) could not otherwise be covered in about 14 hours.
 281, 22. Chatti. So *Valer. Maxim.*, v, 5, 3. Pliny's statement (*Nat. hist.*, vii, 84) that this part of the journey was made in carriages is very unlikely. The distance from Mainz-Castell measured along the oldest roads by Hofheim, Bilbel, Friedberg, Butzbach, Frankenberg, Stadtberge (Marsberg), Haaren, Neuhaus (Elsen), through the Dörenschlucht to the Weser, amounts to 202 Roman miles, to Varenholz 203, to Rehme 207', Zangemeister, *op. cit.*, p. 238, 13.
 281, 31. nine. Cic., *Ad Brut.*, ii, 4, 1, where Sigonius has rightly emended 'a. d. VI Id.' to 'a. d. III Id.' O. E. Schmidt, *De opp. a Cassio et ad Cassium datis* (1877), p. 11.
 281, 32. ten. Ovid, *Epp. ex Pont.*, iv, 5, 3:

Quum gelidam Thracen et opertum nubibus Haemon
et maris Ionii transieritis aquas,
luce minus decima dominam venietis in urbem,
ut festinatum non faciatis iter.

The *Itin.* counts from Rome to Capua 136 miles (p. 612, otherwise p. 108, where the result is 124 mi.), thence to Beneventum 33 (p. 111), thence to Tarentum 157 (p. 120), thence to Brundisium 44 (*ib.*), a total of 370 mi. Strabo, vi, 3, p. 50, gives 75 (360); so also Pliny, *H. n.*, ii. 244.

281, 32. five. Martial, x, 104:—

Illinc (Tarracone) te rota tollet et citatus
altam Bilbilin et tuum Salonem
quinto forsitan essedo videbis.

Marquardt, *Prl.*, ii, 734, 5 supposes change of carriages at the chief stations. There were eight *mansiones* from Tarraco to Bilbilis. *Itin.*, pp. 391 and 437W.

281, 34. 317. Cic., *Ad Fam.*, xi, 6, 1; Bardt, *loc. cit.*, p. 14.

281, 39. Megara. Procop., *Bell. Vand.*, i, 18.

281, 40. foot. *Id.*, *B. Goth.*, i, 15; ii, 78.

281, 41. 136. *Id.*, *B. Goth.*, i, 14.

282, 2. three days. Philostrate, *Apollon.*, vii, 41.

282, 5. on foot. Bardt, *l. c.*, p. 8 sq.

282, 6. undertaken. *Digg.*, ii, 11, 1 (Gaius, l. i, ad edictum provinciale): Vicena milia passuum in singulos dies dinumerari praetor jubet, etc. *Ib.*, xxii, 1, 13, § 2: τῷ γὰρ ἐν αὐτῇ τῇ πόλει οὐκ ἐστὶν, ἐν ᾗ κεχειροτόνηται, ἢ ἐν τῷ ἐκατὸν μιλίων, πεντήκοντα ἡμερῶν ἔδωκεν ὁ νομοθέτης προθεσμίαν· τῷ δὲ ὑπὲρ ἐκατὸν μιλία διατρίβοντι καθ' ἐκάστην ἡμέραν δεῖν ἀριθμείσθαι εἰκοσι μιλία ἐκέλευσε, καὶ ἔξωθεν κ.τ.λ. If an ἀνὴρ εὐδῶνος could walk from Antioch to the sea (120 *stadia*) and back, starting at sunrise and returning in the afternoon (ἀμα ἡλῶ κινήσεις ἐνθένδε, κομῶι τι τῶν ἐκείθεν ἐτι μεσημβρίας ἐστώσης, Liban., ed. R., i, 286, 22–24), it was an extraordinary feat.

282, 10. century. Hübner, Sixtus v, p. 84. In the middle of the sixteenth century the journey from Paris to Venice took 9 to 15 days; but in 1509 a despatch from Blois reached the Doge's palace in 7 days (Yriarte, *Vie d'un patricien de Venise au XVI^e siècle*, p. 104), and according to Casaubon (see n. on 281/10–11) couriers even reached Paris from Rome in 6 to 7 days. Light carriages usually took 20 days from Rome to Milan (Montaigne, *Journ. d'un voy. en Italie*, iii, 179); in the eighteenth century they covered only 30 Italian miles a day (Volkmann, *Nachrichten von Italien*, i, 81 f.).

282, 12. Ravenna. Strabo, v, 217. Theoderic's food allowance for 5 days, for the ambassadors of the Heruli travelling by ship from Ticinum to Ravenna (Cassiodor., *Var.*, iv, 45) was therefore a very generous one, and one cannot with Nissen, *Ital. Landesk.*, i, 213, estimate the duration of the voyage from it.

282, 14. home. Philo, *Leg. ad Gai.*, 548M.

282, 15. abroad. *Acts of Apostles*, xxviii, 11.

282, 15. march. Veget., v, 9.

 307, 35. places. Lassen, *op. cit.*, pp. 5 and 6.
 307, 39. visitors. Ptolemy, *Geogr.*, i, 17.
 308, 5. distinguished. Mommsen, *Gesch. d. röm. Münzwesens*, p. 725 ff.
 308, 7. found. Lassen, iii, 82. The report in Pausanias, iii, 12, 3, of barter with the Indians is, according to Lassen (ii, 48), impossible for that time.

- 308, 8. rarely. Mommsen, *RG*, v, 618 f. According to *The Academy*, 1886, no. 730, p. 416, 13 Roman coins dating from the time of Tiberius to that of Aurelian were found not far from Si-ngan-fu.
- 308, 11. China. Cf. Hirth, *Zur Geschichte des antiken Orienthandels* (*Verhandl. d. Berliner Gesellsch. f. Erdkunde*, xvi, 1889, pp. 46–64). According to Pliny, *N. h.*, vi, 101; xii, 84, the Roman Empire only paid 45 million sesterces annually for Arabian and Seric (Chinese) wares together. We may conclude from the smallness of this sum and from the value of the wares that a large part of these imports were paid for with Roman products. Among these, Hirth, on the authority of Chinese records, includes Syrian carpets with sewn and woven patterns, glass ware (presumably including beads), all the metals used in antiquity, orpiment and realgar, jewels, gems and other objects used for ornament, such as amber and coral, and finally drugs. The so-called embassy of the year 166 was, he thinks, an attempt of Syrian merchants to establish direct relations with China by the sea-route, and to dispense with the Parthian carrying trade, which may have been interrupted by the great pestilence, which perhaps extended over the whole of Central Asia. Hirth places Cattigara in Anam. The goals of voyagers were here or in some port of the Bay of Bengal in the first period of the direct maritime intercourse of the West with China. But as early as the third century A.D. Canton must have been open to foreign trade, for according to a Chinese work on the plants introduced from overseas, composed 300 A.D., jasmine and *Lawsonia inermis* (the latter from Ta-Tsin) had been imported and planted there by foreign merchants, which clearly shows that the latter had been settled at Canton for a considerable time.
- 308, 11. Tokharistan. Peschel, *op. cit.*, p. 9.
- 308, 17. away. Pliny, *N. H.*, vi, 88.
- 308, 21. Issedon. "Sir Henry C. Rawlinson, on the ground of a journey made by Ney Elias, the results of which are still kept secret by the British government, places the silk-route more to the south than I have done, viz. along the Gund, by the Yashyl-Kul and Rang-Kul (two lakes in the Pamirs) to Kashgar, a road taken as late as 1759 by a Chinese army (*Proceedings of the Royal Geographical Society*, 1887, 89 f.; see also 1884, 503). The course of the silk-route will probably never be determined with certainty, especially as there certainly were several great roads across the Pamir highlands from W. to E. That which I have assumed from Hissar to Kashgar is the most direct and simple. Daraut-Kurgan, I may add, does not mean 'stone fortress', but 'fortress of the Karagu'. Daraut seems to be a proper name." Lullies, as below.
- 308, 30. Si-ngan-fu. Lullies, *Die Kenntniss der Griechen und Römer vom Pamir-Hochlande*, etc. (*Progr. des Wilhelmsgymnasiums zu Königsberg*, 1887), pp. 20–22; Ptolemy, i, 11.

- 309, 3. Huan-ti. Cordier, *Sur l'origine des noms que les Chinois ont donné à l'empire Romain* (*Mélanges Graux*, pp. 719-721), believes that the Chinese already knew of Rome through Mark Antony, who when residing at Tarsus sent Lycotas several times to Bactriana. Ta-Tsi was, he considers, originally the Chinese designation for Tarsus and was afterwards transferred to the Roman Empire, just as the designation for the triumvir was transferred to M. Antoninus.
- 309, 9. tortoise-shells. Reinaud, *Journ. asiatique*, series 6, vol. i. (1883), p. 374 ss. and Gutschmid, *Gesch. Irans*, p. 150 f., believe them to have been ambassadors; Letronne, *Mém. de l'acad. des inscr.*, *Nouv. série*, vol. x, p. 227, and Hirth, p. 167 sq., think they were merchants.

- 347, 37. impressions. Lucan, *Pharsal.*, ix, 901 sqq.; cf. Sueton., ed. Roth, p. 299, 20. K. B. Stark, *Nach d. griech. Orient*, p. 373, adduces the passage of Lucan, 'which one might think written to-day on the heights of Balidagh', as a proof 'that the conviction was far from universally prevalent that the later Ilion was the local successor of ancient Troy'. It is clear that Caesar himself could only look for Troy in Ilium; and one would require the strongest reasons for the assumption that Lucan looked elsewhere for it, as, to the best of my knowledge, there is no trace elsewhere in Roman literature of any doubt as to the identity of the two cities. Probably a great part of Ilium lay waste after Fimbria destroyed it, and Lucan's description refers to such ruins. A. Steitz, *Die Lage des Homerischen Troja* (*N. Jahrb. f. Phil.*, 1875, p. 255, 7), finds no trace of personal observation in Lucan's description, and sees in it only a rhetorical display.

 354, 22. existent. According to Schweinfurth, *Im Herzen von Afrika*, ii, 131-155, the Akka, who live south of the Monbuttu, approximately between 1° and 2° N., and have an average height of 1.5 metre, are a link in the long chain of dwarf peoples, which extends across Africa along the equator. These peoples present every sign of a primeval race, which is tending to dissolution. The Akka are hunters, and especially clever in the pursuit of the elephant. Their only domestic animal is the fowl. A Pompeian mosaic 'shows Pygmies surrounded by their small houses and huts, all full of fowls'.

 359, 7. impudence. Cf. vol. i, p. 37.

- 359, 11. dreaded. Dio, *ib.*, p. 367 M.
 359, 13. Egypt. Borghesi, *Œuvres*, iv, 422, believes that the governor of Egypt was L. Aemilius Rectus. So also Lumbroso, *Bdl*, 1877, p. 52. Letronne, *Rec. p. servir etc.*, i, 235, however, names Vitrasius Pollio.
 359, 14. government. Seneca, *Consol. ad Helv.*, 19, 6.
 359, 20. play. Sueton., *Vespas.*, c. 19; Dio, lxvi, 8.
 359, 23. Antinous. *Vita Saturnini*, c. 8. Verus was only adopted in the year 135, hence the doubt expressed in n. on 358, 37 of the genuineness of the whole letter.
 359, 24. massacre. Herodian, iv, 9, 2; Dio, lxxvii, 22.
 359, 27. nowhere. Dio, *loc. cit. init.*; p. 379 M.
 359, 27. *circenses*. *Id.*, 370 M. (the words *οὕτω γὰρ εἰρησθαι πολὺ βέλτιον* are apparently a gloss.).
 359, 28. amphitheatre. Strabo, xvii, p. 795.
 359, 31. contests. Lumbroso, *L'Egitto*, p. 103 ss.
 359, 32. people. Dio, *loc. cit.*, 361 M.
 359, 34. note. Athen., iv, p. 176 E.
 359, 35. adept. *Id. ib.*, p. 183 D.
 359, 37. influence. Cf. vol. ii, p. 344f. Alexandrian flute-players, Prop., iv (v), 8, 39; Tac., *A.*, xiv, 60. Cithara-players, *CIG*, 6651.
 359, 39. tumult. Dio, *loc. cit.*, 367 M.
 359, 40. people. *Id.*, 371 M. sqq.
 359, 40. fights. Dio, *loc. cit.*, 374 M. sqq. Lumbroso, *L'Egitto*, p. 103 s. On the riots on the racecourse of Alexandria, Philo-
 strat., *Apoll. Tyan.*, v, 26.
 360, 3. creating. Philo, *In Flacc.*, p. 519 M. *in f.*: τὸ Ἀλγυπτιακὸν . . . διὰ βραχυράτου σπινθήρος εἰωθὸς ἐκφυστῶν στάσεις μεγάλας. Cf. vol. i, p. 37, and Varges, *De statu Aegypti*, p. 48; Lumbroso, *L'Egitto*, pp. 67, 3 and 68; and on the *θίασοι* (σύνοδοι, συμπόσια, κλῶναι), p. 72, 3.
 360, 6. impertinence. Philo, *loc. cit.*, p. 537.
 360, 9. flew. *Hist. Aug.*, xxx tyr., c. 22.
 360, 10. songs. Dio, *loc. cit.*, p. 383 M.
 360, 11. troops. Cf. e.g. Dio, lxxviii, 35. On the Roman troops quartered in Alexandria cf. Varges, p. 67 s.; Marquardt, *StV*, i^h, 442.
 360, 14. stones. *Exposit. tot. mundi*, 37; Mommsen, *RG*, v, 484.
 360, 16. unrest. *Ibid.*, 580 f.
 360, 19. murder. Diodorus, i, 83.
 360, 21. tumult. *Hadrian*, c. 12.
 360, 22. practices. *Vita Saturnini*, c. 8, and n. on p. 358, 37.
 360, 30. perished. Josephus, *B. J.*, ii, 18, 7; Euseb., *Chron.*, ed. Schoene, p. 164, Hg. Vers. Arm.
 360, 34. consumptive. Cels., iii, 22; but cf. Pliny, *N. H.*, xxxi, 63; xxiv, 28, and vol. i, p. 321 of this work.
 360, 35. snow. Seneca, *Qu. n.*, iv, 2, 20.
 360, 35. roses. Martial, vi, 80; Becker-Göll, iii, 78.
 360, 36. sunshine. Ammian. Marc., xxii, 16, 8.
 360, 37. monsoons. Diodor., xvii, 52.
 360, 39. harsh. Pliny, *Epp.*, v, 19, 6.

 362, 23. camels. Philostrat., *Apoll. Tyan.*, v, 43, ed. Kayser, p. 104: (from Alexandria) ἐχώρουν εὐθὺς πυραμίδων ἐπὶ καμήλων ὁχοῦμενοι, δεξιὸν θέμενοι τὸν Νεῖλον.
 362, 23. stream. Germanicus sailed from Canobus up the Nile, Tac., *A.*, ii, 60.
 362, 29. monuments. Strabo, xvii, 1, 32, p. 807 sqq.
 362, 34. hills. Tac., *loc. cit.*
 362, 37. covered. Proved in detail by Letronne, *Mélanges d'érudition*, p. 377: sur le revêtement des pyramides de Gizeh (cf. *Rec. des inscript.*, t. ii, p. 487 ss., and Scheffele's article, *Pyramides in the SIRE*).
 362, 40. leaves. Cf. also Herodotus, ii, 125, 5; Diodorus, i, 64.
 363, 8. climbing. Pliny, *N. H.*, xxxvi, 76.
 363, 10. Ages. Abdallatif (Letronne, *Rec.*, p. 492).
 363, 12. height. Aristides, *Or.*, xlviii, p. 363 J.
 363, 12. Marienburg. Treitschke, *Histor. u. polit. Aufs.*, i, 44.
 363, 15. copied. Cf. Appendix xxi.
 363, 23. excavated. *CIG*, iii, *App.*, 4700 b-1.
 363, 35. specified. Tac., *A.*, ii, 60; Strabo, xvii, 1, 46, p. 816; Duncker, *Gesch. des Alterthums*, i⁵, 139.
 363, 41. given. Brugsch, *Reiseberichte aus Aegypten*, pp. 123-128.
 364, 2. Egypt. For all the following passage cf. Jacobs, *Vermischte Schriften*, vol. iii, p. 110 ff. and Letronne, *La statue vocale de Memnon*.
 364, 7. destroyed. Philostrat., *Apoll. Tyan.*, viii, 4, ed. K., p. 107.
 364, 28. Memnon. Letronne (*CIG*, iii, p. 1204, 4742b) quite unnecessarily hesitates to refer to him the inscription Ἀπίων Πλεῖστον . . . ἤκουσα τρις, because the word ὁ is wanting before the father's name (Lehrs, *Qu. epp.*, p. 23).
 364, 30. completed. Pliny, *N. H.*, xxxvi, 58.
 364, 39. visit. Letronne, p. 13.
 365, 8. forgotten. Alciphro, *Epp.*, ii, 3: εἰ γε ἄρα πόθος ἀλρεῖ σε . . . τῆς γε Αἰγύπτου, χρόματος μεγάλου καὶ τῶν αὐτόθι πυραμίδων καὶ τῶν περιηχούτων ἀγαλμάτων καὶ τοῦ περιβοήτου λαβυρίνθου κ.τ.λ.
 365, 15. home. E.g. *CIG*, 4917: Ν. Ν. ἦκα καὶ προσκεκύνηκα τὴν κυρίαν Ἴσιν καὶ πεποίηκα τὸ προσκύνημα τῶν φιλούντων με, ἔτους ἡ, Μεχέρ κα. Cf. on the *proscynemata* Franz, *Elem. epigr.*, p. 336 sqq. and besides the inscriptions from Egypt mentioned below, *CIG*, i, 516 = *CIA*, iii, 2, 3824 (Sunium, in the ruins of the temple of Athene: Ὁνήσιμος ἐμνήσθη τῆς ἀδελφῆς Χρήστης),

- CIG*, ii, 1826 sq., iii, 4668 sq. (on rocks between Suez and Sinai and in Sinai itself). Where *ἐμνήσθη* stands alone it cannot be understood with Letronne, *op. cit.*, p. 246, 'a laissé ce souvenir', but 'he remembered' i.e. his friends or perhaps the goddess. Lebas-Waddington, 349-358 (*proscynemata* in honour of Zeus Osogos at Mylasa by judges who had been sent thither from other cities to decide disputes), *ib.*, ii, 95a (Corinth). *Memor deorum*: *CIL*, i, 623; iii, 1, 582 (inscriptions in a grotto near Panormus in Epirus, specially visited by seamen, and now called *Grammata* [*CIG*, 1824-1827]). The name *Grammata* is also given to a now deserted natural harbour of Syra, owing to the many Greek and Latin, pagan and Christian inscriptions carved in the rock, including appeals to Aesculapius, who doubtless (like Serapis), had a temple here. De Rossi, *Bull. crist.*, i (1876), pp. 112-116; cf. iii (1878), p. 60 sq. Renier, *Inscr. de l'Alg.*, 2583-2597 = *CIL*, viii, 5504-5518 (inscriptions of a god Bacaces or Bacax). Cf. also *ib.*, 6267 ss. The inscriptions in a cave in Minorca (*CIL*, ii, 3718 sqq.) seem to refer to an annual festival held there. Inscriptions of Christian pilgrims in the catacombs, De Rossi, *Roma. sott.*, pp. 170, 172; *ib.*, vol. ii, p. 14 sq. Plutarch, *De curios.*, c. 11, p. 520 D.: τὰ κατὰ τῶν τοιχῶν γράμματα . . . ἐμνήσθη ὁ δεῖνα τοῦ δεῖντος ἐν ἀγαθῷ, καὶ φίλων ἀριστος ὄδε τις, καὶ πολλὰ τοιαύτης γέμυστα φλυαρίας.
- 365, 23. vultures. Parthey, *Wanderungen*, 2, 481; Brugsch, *Reiseberichte*, p. 328.
- 365, 25. pipes. Duncker, *Gesch. d. Alterth.*, i⁵, 173 ff.
- 365, 29. Ptolemies. Letronne, *Stat. voc. de M.*, p. 242 ss.
- 365, 32. have. *CIG*, iii, *App.*, 4821c.
- 365, 34. seen. *Archives des missions scientif.*, 1866, ii, p. 484. De Rossi, *Bull. di archeol. crist.*, v, p. 1, believes that the *θαύματα* of Rome are the catacombs, which is very unlikely.
- 365, 39. Empire. *CIG*, ii, 4832 ss. (Latopolis); 4838 c (Apollinopolis—Edfu); 4845-4858 (Silsilis); 4900-4947 (Philae); 4951 s. (Oasis Thebarum); 4980-5073 (stone-quarries in Nubia); 5039-5068 (Talmis-Kalabsha in Nubia, temple of the god Manduli); 5074-5108 (Pselcis); 5110-5124 (Hiera Sykaminos, temple of Isis and Serapis). Cf. *append.*, pp. 1188-1239, and Deville, *Inscr. grecques d'Egypte recueillies en 1861 à Philae, Elephantine, Silsilis, Biban-el-Moluk, Abydos, Antinoë, Sakharah, et Alexandrie. Archives des missions scientif. et littér.*, 2nd series, vol. ii (1866), p. 458 ss.
- 366, 6. pagan. *CIG*, 4837c; Letronne, *Rec.*, ii, p. 255, mentions as the place where it was found the *Hydreuma Panii*.
- 366, 11. battle. Henzen, 5310.
- 366, 14. priests. Strabo, xvii, in several passages.

- p. 10. Hertzberg, *Chaucer's Canterbury Geschichten*, II, 159–11, 229.
- 396, 30. crops. See Burckhardt, *op. cit.*, p. 234 ff., on all this.
- 396, 32. scenery. *Id. ib.*, pp. 237–240. St. Bruno of Cologne, the founder of the Chartreuse at Grenoble (d. 1101), in his description of the situation of a second house (della Torre) which he founded in Calabria, displays a feeling for Nature in no way different from that of the ancients. Semming, *Die grosse Karlshause zu Grenoble*, i, in *Münchener Allgemeine Zeitung*, 26 April, 1889, Supplement.
- 396, 33. written. Cf. also Janitschek, *Die Gesellschaft der Renaissance in Italien* (1879), p. 36 f. For L. B. Alberti's love of Nature cf. Burckhardt, *op. cit.*, p. 112, 2; for that of Lorenzo de' Medici, Reumont, *L. d. M.*, ii, 11 ff. When P. Jovius (*Descriptio Larii Lacus*, Venet., 1559, p. xxii) praises the promontory near Bellaggio ('Bilacium promontorium quo nihil spectatius jucundius salubriusque reperitur') because of the view over both arms of the lake, his words are quite in the style of the ancient feeling for nature.
- 396, 36. Europe. The following pages repeat, with very many additions, the substance of my essay, *Ueber die Entstehung und Entwicklung des Gefühls für das Romantische in der Natur* (1873). Many readers will perhaps think this irrelevant. My own experience has, however, led me to believe that the chief obstacle to a true comprehension of the ancient attitude towards Nature is the constant tendency, whether conscious or unconscious, to assume modern sentiments in antiquity. This tendency can, I consider, be most easily counteracted by gaining as deep an insight as possible into the development of the feeling for nature which prevails at the present day. I considered it unnecessary to consult A. Biese, *Die Entwicklung des Naturgefühls im Mittelalter und in der Neuzeit* (1888), judging from the review by R. M. Werner in *Deutsche Litt.-Zeitung*, 21 April, 1888. The observations (enclosed in quotation marks) on the value of the study of landscape painting for the history of the feeling for nature (pp. 396–398) are from the pen of G. Dehio.
- 397, 9. Scenery. Riehl, *Culturstudien aus drei Jahrhunderten*, 2nd ed., 1859, p. 57.
- 397, 12. ideal. *Id. ib.*, p. 59 f.
- 398, 21. Romantic. It is significant that Salvator Rosa, the most romantic of all the Italian landscape painters of the seventeenth century, was more esteemed in England than anywhere else.

- 402, 32. 16°. Read '16^{mo}'.
- 402, 33. divided. Zeiller, *Fidus Achates. Bedenken von Anstellung der Reysen*, iii. Zeiller already used the handbooks in pocket editions, published by Franz Schnellboltzen at Leipsic: *Deliciae Italiae*, 1600; *Itinerar. per Italiano*, 1602. *Beil. z. Allgem. Ztg.*, 10 Sept., 1885.
- 403, 1. unknown. That individual travellers, especially Englishmen, already regarded Alpine landscapes with intelligent interest in the seventeenth century is shown by the extract from Evelyn's *Diary*, June 27, 1654, quoted in Appendix xxii. It is evident that in the seventeenth century, although it was an arduous and dangerous climb, frequent ascents were made of the highest peak in the Carpathians, from which one enjoyed a view extending to a distance of 150 miles. The travellers left their names, written on parchment, in leaden cases beneath rocks, and the guides erected 'signa'. The author of the description 'could not sufficiently express the wonderful works of God upon this mountain', on the peak 'he thanked God, and praised His wonderful creation with astonishment'. *Ungarischer oder Dacianischer Simplicissimus* (1683, place of printing not stated), new edition by Seiz, Wigand, 1854, p. 61 ff. The Schneekoppe was also often climbed in the seventeenth century.
- 403, 9. Isar. Bezold, *Konrad Celtis, der deutsche Erzhumanist*, in *Sybel's histor. Zeitschr.*, N. F., xlii (xlix), 1883, p. 44. In the biography written by his friends, Celtis is called a friend of the sun, the mountains, and the forests. Two of his odes defend solitary worship of God amid the grandeurs of nature (*Od.*, i, 16, 19). In some respects he was certainly a precursor of Rousseau.
- 403, 15. romanticism. As Schwarz says, *op. cit.*, p. 342, citing this passage.

- 419, 20. Persians. Brugsch, *Persische Briefe*, in *Deutsche Rundschau*, October, 1885, p. 133.
- 419, 22. arouses. Polack, *Persien* (1865), i, p. 91 f.
- 419, 25. emphasizes. Vergil, *Aen.*, vi, 673-677.
- 419, 29. blessed. *Koran*, Suras 55 and 76. Laboulaye, *Abdallah*: A proverb says, 'Three things delight the eye: running water, greenness, and beauty'.
- 419, 39. Interlaken. Tcheng-Ki-Tong [Ch'en Chi-t'ung], *The Chinese Painted by themselves* [1884], p. 143.
- 419, 41. Lamartine. Cf. also *Sse-ma-Kuang's Garden*, a poem by statesman at the end of the eleventh century, in Huc, *L'empire chinois*. The poet says: 'I like to sit near the water, in a dark wood, or on the top of a rock. The moon has already risen, I still sit there, it is a new pleasure. The murmur of the water, the rustling of the leaves, stirred by the wind, the beauty of the sky make me dream; all nature speaks to my soul, and absorbs my attention, and the night is half over before I reach my door.' Cf. the modern poem describing evening, quoted by Tcheng-Ki-Tong, *op. cit.*, p. 180 (?).
- 420, 2. influenced. J. Falke, *Der englische Garten*, in *Nord und Süd*, Nov. 1884; A. Springer, *Bilder aus der neueren Kunstgesch.*, ii^a, 1886, p. 257. In France it was the missionaries' reports

and Sir William Chambers's book on Chinese buildings (1757) that led to a breach with the old tradition, but above all the enthusiastic propaganda of Rousseau, who had become acquainted with the great English gardens in 1766 (F. Cohn, *Rousseau als Botaniker*, p. 369). According to Falke, *op. cit.*, p. 189, in spite of the innovations of Kent and his successors, the splendid illustrated work *Britannia illustrata* still about 1750 shows the gardens, without exception, in the old style. The change, however, was rapid from that time onward, and the new style prevailed.

- 420, 6. sinuous. Cf. also Marco Polo's description of the garden laid out by Kublai Khan in the thirteenth century in Peking. Ferd. Cohn, *Die Gärten in alter und neuer Zeit*, *op. cit.*, p. 512.
- 420, 11. feelings. Wörmann, *Die Landschaft in der Kunst der alten Völker*, pp. 35-52 (after the *Mémoires concernant les Chinois, par les missionnaires de Pé-kin*, Paris, 1782, vol. viii).
- 420, 17. waterfall. Hübner, *Ein Spaziergang um die Welt, Deutsche Ausgabe*, 2nd edn. (1875), ii, 78.
- 420, 18. artistic. Miss Isabella L. Bird (Mrs. Bishop), *Unbeaten Tracks in Japan*, 1880, i, 75, 218; ii, 196 f. (flower festivals, exhibitions and gardens); cf. also ii, 182 (street-names in Tokyo).
- 420, 24. tasteless. Waitz, *Anthropol. d. Naturvölker*, iv, 91.

- 420, 40. marshes. Müllenhoff, introd. to Klaus Groth's *Quickborn* (7th edition), p. xv. Klaus Groth, *Vertelln*, p. 22.
- 421, 5. apologized. Goethe, *Werke*, xxiii, 273. What Byron (*Don Juan*, canto iii, 56) says concerning the Greek islander Lambro is the fruit of observation.

'A taste seen in the choice of his abode,
A love of music and of scenes sublime,
A pleasure in the gentle stream that flow'd
Past him in crystal, and a joy in flowers
Bedew'd his spirit in his calmer hours.'

- 421, 27. shared. Diderot, *Le salon de 1765 etc. Œuvres* (ed. Nageon), vols. xiii and xiv. Cf. esp. xiii, 234 s., 478 ss., xiv, 173 ss., 227 s., 497 s.
- 421, 29. delineation. Helbig, *Untersuchungen über die campanische Wandmalerei*, p. 350.
- 421, 38. *pulcherrima*. *Forma* is similarly used in Stat., *Silv.*, i, 3, 15: quae forma beatis Arte manus facieque locis ('facieque'

- Bährens substitutes for the corrupt 'artemque'; cf. Pliny, *Epp.*, ii, 17, 3: *Varia hinc atque inde facies*.
- 422, 2. plastic. Helbig, *op. cit.*, p. 354 f.
- 422, 4. moon. Nearly all these passages are in Motz, p. 99 ff. Horace, *Carm.*, ii, 5, 19 sq.
- 422, 5. quiver. Vergil, *Aen.*, vii, 8 sq.
- 422, 5. refreshing. *Id.*, *Georg.*, iii, 137.
- 422, 6. red. *Id.*, *Aen.*, vii, 25.
- 422, 7. waves. Catullus, 63, 277; see vol. i, p. 389 of this work.
- 422, 9. mist. Lucretius, v, 461-464.
- 422, 15. blue. So also Motz says, p. 19: We think we have found that the ancients when describing things, mentioned all the other qualities rather than the colour.
- 422, 16. blue hills. H. Blümner has pointed out to me that Gierig and Korn, the editors of Ovid, have referred the 'caerula coma' of the mountain god Tmolus in *Metam.*, xi, 158 to the blue appearance of the distant mountain. They are certainly wrong. Ovid says: *Monte suo senior iudex consedit et aures Liberat arboribus, quercu coma caerula tantum Cingitur et pendent circum cava tempora glandes*. In this rather tasteless fancy of the mountain god with a human face, nothing was further from the poet's mind than the thought of the distant view of the mountain. In this aspect indeed a mountain appears blue from head to foot, and not only at the crest (here *coma*), and the forest looks as blue as the mountain itself. Undoubtedly *caerula* is here equivalent to *κασάνη*. In Seneca, *Hercules Oet.*, 1873: *fleat Alciden Caerula Crete, magno tellus Clara Tonante*, I cannot explain *caerula*, but I do not think that an adjective which is only appropriate to the island as seen from a distance, could become an *epitheton ornans*.
- 422, 16. poetry. Perhaps also in modern literature nothing of the kind will be found before the eighteenth century. The earliest instances known to me are in Haller's *Alpen*, where the grey head of the Wetterhorn, adorned with snow and purple, puts to shame the 'blue crests of common mountains', and a ring of gleaming heights shuts in 'the blue distance'.
- 422, 27. tearful. Ovid, *Trist.*, i, 3.
- 422, 32. himself. Tac., *Hist.*, iii, 23.
- 422, 34. moonlight. Vergil, *Aen.*, vi, 270 sqq.; cf. iii, 588 sqq. Helbig, *op. cit.*, p. 362 f.
- 422, 36. plainly. Vergil, *Aen.* iii, 150 sqq. Motz, *op. cit.*, p. 105, who speaks of 'ghostly' moonlight in this connexion, introduces with this epithet into the description a new idea, which is quite as foreign to ancient sentiment as it is familiar to modern, and thus unwittingly supplies a characteristic illustration of the difference between the two.
- 422, 37. poet. Helbig, *op. cit.*, p. 363.
- 423, 13. combined. *Id. ib.*, p. 357 f. Lessing, whose ideal of beauty was entirely antique, shares with Winckelmann a dislike for landscape painting. Lessing, *Laokoon*, ed. Blümner, 2nd ed., p. 499 f.
- 423, 17. islands. Dio Chrys., *Or.*, xxxv, p. 436 M.

- 423, 23. inland. See vol. i, p. 321 ff.

- 425, 28. Matius. Pliny, *N. H.*, xii, 13.
- 425, 32. fleets. Wüstemann, p. 17 f.
- 425, 32. dwarf-trees. Pliny, *l.c.* Wüstemann, p. 18h, mistakes the cypress hedges of Pliny, *N. H.*, xvi, 140, for dwarf cypresses. The latter are probably referred to as '*metulae*' in Pliny, *Epp.*, v, 6, 35; cf. *N. H.*, xvi, 140 sqq.
- 425, 32. grafting. Pliny, *N. H.*, xvii, 120; Fronto, *Ad M. Caes.*, ii, 13, ed. Niebuhr; *Epp. ad M. Antonin. de oration.*, 4, 3. Similar tricks with grafting were practised by the old Arabs (Kremer, *Culturgesch. d. Orients*, ii, 332 f.) and in mediæval Europe (Wright, *Homes of Other Days*, p. 313).
- 425, 35. anemones. Wüstemann, pp. 23-25; Manil., *Astr.*, v, 256 sqq. On the names of the flowers cf. Prof. Ferd. Cohn's essay, Appendix xxiii.
- 425, 35. filling. Florentin., *Geopon.*, x, 1 (Florentinus mentions in the 13th book of his *Γεωπονικά* Marius Maximus, *praefectus urbis* in 218 [Teuffel, *RLG*⁴, 381, 2], so he wrote apparently in the third century. Gemoll, *Untersuchungen über die Geoponica*, in *Berliner Studien*, i, 170 f.).
- 425, 39. forming. Wüstemann, p. 17.
- 426, 15. inspiring. Wörmann, *Die Landschaft in der Kunst der alten Völker*, p. 330 ff. There is a coloured reproduction of the painting on the north wall in *Antike Denkmäler*, edited by the *Deutsch. archäol. Institut*, i, pl. 11; south wall, pl. 24. A park landscape with trees all of the same kind from a grave in the Vigna Sassi in Wörmann, p. 334. Cf. also the descriptions in Rohde, *Gr. Roman*, p. 512.
- 426, 21. middle-class. P. de Crescentiis, *Op. rural. commodor.*, ix, 2. Besides a black-letter folio edition of the original without imprint, I have used the Italian translation made from a more complete text by Dallo 'N ferigno (Milan, 1805).
- 426, 26. great. Crescentiis, ix, 3.
- 427, 4. roofs. *Id. ib.*, ix, 4.
- 427, 7. bases. Burckhardt and Lübke, *Gesch. der neuern Baukunst*, i², 238 f.
- 427, 9. Italian. The following is taken nearly verbally, but with a few omissions, from J. Burckhardt, *Der Cicerone*, i², 398-400.
- 427, 27. style. Burckhardt and Lübke, *Gesch. der neuern Baukunst* (2nd ed.), i, 237; ii (1st ed.), 258 ff.; Tuckermann, p. 77 ff. Kleinschmidt, *Augsburg, Nürnberg und ihre Handelsfürsten im 15. und 16. Jahrhundert*, gives on p. 116 ff. descriptions of the largest German gardens of that age (that of Jacob Fugger, who died in 1525, was preferred by Beatus Rhenanus to the royal gardens at Blois and Tours). On p. 161 ff. he describes the garden at the castle of Ambras in Tirol. I have not been able to see *Mittheilungen über Gartenbau im Mittelalter und während der Periode der Renaissance* by Al. Kaufmann in Pick's *Monatsschrift f. Gesch. Westdeutschlands*, vii, 129-155. For the

Venetian gardens in the fifteenth century see Molmenti, *Vie privée à Venise*, p. 262 f.

- 427, 29. ruled. Frd. Cohn, *Die Gärten in alter und neuer Zeit*, in *Die Pflanze*, pp. 485-512; J. v. Falke, *Gesch. d. modernen Geschmacks* (2nd edition, 1880), pp. 253-269; 313-316. When Casaubon was presented to James I in 1610, he noticed 'les jardins et les figures que les jardiniers exécutent en taillant les arbres'. Nisard, *Triumvirat littér.*, p. 421. Bacon (*Essay* 46) does not approve of 'the making of knots or figures with divers coloured earth' near the house; but in the garden proper, which is enclosed by hedges with green alleys running past them, he will allow of 'variety of device' . . . He did not like images cut out in juniper or other garden stuff—they be for children'. *The English Flower Garden*, in *Quarterly Review*, April, 1880, p. 330 ff.

 10, 38. emperor. Cf. vol. i, p. 123.
 11, 4. avoid. Zosim., ii, 38.
 11, 15. obligation. P. E. Mueller, *De gen. aev. Theodos.*, p. 54 sq.; *Cod. Theodos.*, vi, 14, with annotations by Gothofredus. Cf. Kuhn, *Verfassung d. röm. Reichs*, i, 206 f., l. 5 (of the year 340), who fixes the following minimum amounts for the 3 praetorships of Constantinople: For the *Flavialis* 25,000 *folles* and 50 pounds of silver, for the *Constantiniana* 20,000 *folles* and 40 lb., for the *Triumphalis* 15,000 *folles* and 30 lb. of silver. On the significance of these amounts and their reduction to modern values, I have received from Fr. Hultsch the following kind communication.
 'According to the Constantinian monetary regulations, on which these figures are undoubtedly based (*Metrol.*², p. 330 ff., and 341 ff., esp. 344) the amounts must be reduced from silver lbs. to *miliarensia* (= $\frac{1}{4}$ silver lb.), and thus:—

50 pounds silver = 3600 *miliarensia*

40 " = 2880 "

30 " = 2160 "

'Of the 3 quantities grouped together on p. 344 of the above work which may represent the *folles* mentioned in the law, the *siliqua* or *denarius follis* = $\frac{1}{4}$ *miliarense*, is the only suitable one (for the coin [?] *follis* is too low, and the silver *follis* too high), and it appears that

25,000 *folles* = 14,285 $\frac{1}{4}$ *miliarensia*

20,000 " = 11,428 $\frac{1}{4}$ "

16,000 " = 8,571 $\frac{1}{4}$ "

These are very probable amounts. They stand to the corresponding amounts of silver lbs. nearly in the proportion of 4 : 1, i.e. the Treasury paid $\frac{1}{4}$ in full weight silver and $\frac{3}{4}$ in bags of small coin (the *denarius follis* = 12 coin *folles* = 250 *denarii*). Therefore according to *Metrol.*² p. 348, the expenditure for the first *praetura* amounted to

3,600 *miliarensia* = £161

25,000 *denarius folles* = 647

£808

For the second *praetura* according to the equation we get about £647, and for the third about £485. Total about £1940. Counting in silver *folles* the whole expenditure would amount to 60,000 *folles* (at £5 11s. 9d.) + 8640 *miliarensia* (at 10 $\frac{1}{2}$ d.), or about £336,000 in all, which seems an impossibly high figure.'

 18, 14. convicted. Sueton., *Tiber.*, c. 35.
 18, 17. continuing. Dio, lvii, 14.
 18, 17. chariots. Sueton., *Calig.*, c. 18.
 18, 19. knights. *Id. ib.*, c. 30; Dio, lix, 10.
 18, 19. senators. Dio, lix, 13 (πολλοὶ τῶν πρώτων καταδικασθέντες . . . πολλοὶ δὲ καὶ τῶν ἄλλων μονομαχῆσαντες).
 18, 21. abuse. Dio, lx, 7.
 18, 25. drive. Sueton., *Nero*, c. 12 (where, as Lipsius observes, only 'quadringentos senatores' cannot be right, and 'sexcentos equites' is hardly possible). Tac., *A.*, xiv, 14; xv, 32; Dio, lxi, 17.
 18, 27. knighthood. Tac., *Hist.*, ii, 62.
 18, 30. dancing. Sueton., *Domitian*, c. 8; Dio, lxxvii, 13.
 18, 30. fight. Dio, lxxvii, 14.
 18, 32. bear. Juv., 4, 99 sqq.
 18, 33. combat. Dio, *loc. cit.*
 18, 37. arena. *M. Antonin.*, c. 12.
 18, 41. helmets. Dio, lxxv, 8.
 19, 2. helmet. Seneca, *Qu. n.*, viii, 32.
 19, 4. school. Juv., 8, 197; cf. also Fronto, ed. Naber, *Epp. ad M. Caesarem et invic.*, v, 22 s.; Dio, lxxviii, 21; Philogelos, ed. Eberhard, 87.
 19, 20. buildings. The description follows Dionys. Halic., iii, 68.
 19, 26. Maximin. *Catal. imp.*, ed. Mommsen, in *Abhandl. d. Sächs. Ges.*, ii, 647: Hoc imperatore (Antonino Pio) Circensibus Apollinaribus partectorum columna ruit et oppressit homines

- m cxii. (Cf. *Anton. P.*, c. 9): *Ib.*, *Diocletian. et Maximin.*; *Partectorum podium ruit et oppressit homines* xiii. Momm-
sen remarks, that by *partecta* (a word only found here) are
probably meant the scaffolds forming the back rows of seats.
- 19, 32. seats. Pliny, *N. H.*, viii, 7, 21; and xxxvi, 24, 101.
- 19, 34. Trajan. Becker, *Topogr.*, 667. Also the obscure statement
in Pausanias, v, 12, 4 (οικοδόμημα ἐς ἰππων δρόμους προήκον καὶ ἐν
δύο σταδίων μήκος) probably refers to Trajan's extension of the
circus. According to Richter, *Topographie von Rom*, p. 842,
'Trajan's building was preserved in the main, although it may
have been enlarged and embellished. At least Caracalla's coins
(Cohen², *Carac.*, 236) show exactly the same representation of
the circus as those of Trajan (cf. *Chron.* of 354, p. 647, 19 M.).'
- 19, 41. exhibited. Pliny, *Paneg.*, c. 51. The inscription Orelli,
3065 = *CIL*, vi, 955, in which the 35 tribes give thanks for
their 'commoda' increased 'locorum projectione', refers not to
the seats in the circus, but to the 5000 new places added by
Trajan to the places of those who received corn doles; these
are also meant by Pliny, *loc. cit.* (populo . . . locorum quin-
que milia adjecisti). Mommsen, *StR*, iii, 1, 446, 3.
- 20, 1. extensions. Marquardt, *StV*, iii², 506.
- 20, 3. course. On the disposition of the seats cf. *ibid.*
- 20, 9. bronze. *Expos. tot. mundi*, Riese, *Geogr. lat. min.*, i, 120, 10.
- 20, 13. Laterano. Preller, *Die Regionen Roms*, p. 221.
- 20, 20. resort. Cic., *Div.*, i, 58, 132.
- 20, 21. augurs. Horace, *Sat.*, i, 6, 141.
- 20, 24. boards. Juv., 6, 588.
- 20, 25. Circus. Cic., *Pro Milone*, c. 24: popa Licinius nescio quis de
circo.
- 20, 27. guests. Sueton., *Aug.*, c. 74.
- 20, 29. shops. Tac., *A.*, xv, 38.
- 20, 30. fruit-dealer. C. Julius Epaphra pomar. de circo maximo
ante pulvinar. Orelli, 4268 = *CIL*, vi, 9822.
- 20, 32. used. Juv., 3, 65: ad circum jussas prostare puellas.
Anthol. Lat., ed. Riese, i, 190: Ille habuit doctas circi prostare
puellas. *Elagabal.*, c. 26. Salmasius (ed. Lugdun., *Script.*
hist. Aug.), p. 918b.
- 20, 33. brothel. Cyprian, *Spectac.*, 5.
- 20, 35. dress. Juv., 3, 65.
- 20, 35. danced. *Priap.*, 25 (*Anthol. Lat.*, ed. Meyer, 1642). Dio
Chrys., *Or.*, xx, p. 264 M., describes similar but more decent
incidents in a Greek hippodrome: ἤδη δὲ ποτε εἶδον ἐγὼ διὰ τοῦ
ἵπποδρόμου βαδίζων πολλοὺς ἐν τῷ αὐτῷ ἀνθρώπους ἄλλο τι πράττοντας,
τὸν μὲν αὐλοῦντα τὸν δὲ ὀρχούμενον τὸν δὲ θαῦμα ἀποδιδόμενον τὸν δὲ
ποίημα ἀναγινώσκοντα τὸν δὲ εἰδοντα τὸν δὲ ἱστορίαν τινὰ ἢ μῦθον
διηγούμενον.
- 20, 37. performances. Cf. Marquardt, *StV*, iii², 511 ff.
- 21, 1. picking. Manil., *Astronom.*, v, 85 sq.
- 21, 10. won. This inscription, found in December 1887 on the
Via Campana, 3 *miglia* from Porta Portese, is not yet published
and was communicated to me by O. Hirschfeld. It reads:
Fuscus cursor prasini vix. ann. xxiv, vicit Rom, liii, ad deam

Diam ii. Bovillis i. Una palma rev(ocatus) bis eandem vicit. Hic omnium cursor(um) primus qua die missus est vicit stadi(um) C. Cestio M. Servilio cos. Machao, conser(vus) memoriae causa. On the circus of the Arval grove see Marquardt, *VG*, iii², 458, on that at Bovillae *ibid.*, p. 528, 6.

- 21, 14. millia. Pliny, *N. H.*, vii, 84.
 21, 16. day. *CIL*, iii, 2, 2007. Read 'day, as a . . . feat; Fletcher'.
 21, 19. hours. Waitz, *Anthropol. der Naturvölker*, iv, 411.
 21, 37. lion. Gell., v, 14.
 22, 7. laid. Pliny, *N. H.*, xxi, 7; Mommsen, *RG*, i⁵, 232.
 22, 12. freedom. Marquardt, *StV*, iii², 522, 4.
 22, 19. years. Henzen, 7419 d β.
 22, 21. victories. *CIL*, vi, 2, 10,047-49. Cf. Marquardt, *StV*, iii², 522, 2, and Appendix xxiv.
 22, 24. purses. Martial, x, 74. On the races, which presumably brought great profit to the victors, cf. Appendix xxiv.
 22, 26. advocate. Juv., 7, 112:

si libet, hinc centum patrimonium caussidicorum,
 parte alia solum russati pone lacernae.

For *lacernae*, perhaps *Lacertae*, the reading of the interpolated MSS. is correct. A lamp with a victorious *agitator* bears the inscription: C. ANNIVS LACERTA NICA and CORACI NICA (probably a call to the chief horse), Henzen, *BdI*, 1861, March 8. On the frequent use of the same names among this class of people see Appendix xxxix.

- 22, 27. Faction. Marquardt, *op. cit.*, p. 520, 6.
 22, 28. fees. Cf. vol. ii, p. 23 f.
 22, 33. Libanius. Liban., ed. Reiske, ii, 190, 12.
 22, 39. charioteers. Jerome, *Ep.*, 83; cf. Symmachus, *Epp.*, vi, 42.
 22, 40. train. Pliny, *N. H.*, xxix, 5: nullum histrionum equorum-que trigarii comitator egressus.
 23, 4. deemed. Martial, x, 50 and 53; cf. Haupt, *Hermes*, 1872, p. 387.
 23, 6. Scorpis. Martial, xi, 1.
 23, 9. Rome. *Id.*, v, 25:

quam non sensuro dare quadringenta caballo,
 aureus ut Scorpi nasus ubique micet.

- 23, 12. costume. Lucian, *Nigrin.*, 29; Galen., *De praenot. ad Postum.*, p. 451 ed. K., xiv, 604, mentions τῶν μὲν ὀρχηστῶν καὶ τῶν ἡνιόχων ἐκθῶς . . . τοῖς τῶν θεῶν ἀγάλμασι συνέδρους, without naming Rome, which however the context shows to be intended.
 23, 14. fame. List of representations of circus games on mosaics, reliefs, coins, contorniates and gems in Huebner, *Mosaico di Barcellona*, *AdI*, 1863, p. 137 ss. Cf. *id.* in *Monatsber. der Berl. Acad.*, Feb. 3, 1868 (a glass cup with circus games; beside the name of the victorious charioteer is written 'av(e)', and beside the names of the other three 'va(le)'); and de Rossi, *Bull. Crist.*,

- 1878, p. 151, 5 (Vetri). Cf. *CIL*, vii, 1273 sq.; Martial, iii, 95, 14. E. Brizio, *Musaici di Baccano*, *BdI*, 1873, p. 133; Marquardt, *op. cit.*, 504, 5.
- 23, 16. official. *CIL*, vi, 2, 10,048 (monument of Diocles) l. 13: Actis continetur Avilium Teren factionis suae primum omnium vicisse ∞ xi. Cf. Appendix xxiv.
- 23, 24. prize. Henzen, 7419 d β (iii, p. 590) = *CIL*, vi, 2, 10,051.
- 23, 28. drove. Head of a boy charioteer: Ersilia Caetani-Lovattelli, *Una testa marmorea di fanciullo auriga*, in *Bull. com. d. R.*, 1880, p. 163 sqq. (pl. xi). *Id.*, *Di un mosaico di colori rappresentante gli aurighi delle quattro fazioni*, in *R. acad. dei Lincei*, cclxxviii (1880/81) *seduta de 15 maggio* 1881.
- 23, 32. share. *Id.*, *La iscrizione di Crescente*, in *Bull. com.*, 1878, pp. 164-176. In an article *Aus dem Sportleben des classischen Alterthums* in the weekly journal *Der Sporn* (*Centralblatt für die Gesamtinteressen des deutschen Sports*), 1879 (xvii. Jahrgang), no. 5, p. 35, the proportion of first prizes won by Crescens is considered by no means a brilliant record, and it is added that a fashionable English jockey would hardly be content with his gains.
- 24, 16. gained. On these details and others cf. Appendix xxiv.
- 24, 33. won. *Der Sporn*, 1879, No. 48, p. 369.
- 24, 36. fortune. *Leipz. Illustr. Zeitg.*, 20 November, 1886.
- 25, 3. Epona. Juv., 8, 146 sqq. The addition: fecimus et nos Hoc juvenes (l. 163) shows that what was not seemly in the Consul Lateranus was readily overlooked if done by young men; Tac., *A.*, xiv, 14 (foedum studium).
- 25, 5. devotee. Sueton., *Nero*, c. 4.
- 25, 6. often. Dio, lxxv, 5.
- 25, 7. zeal. Sueton., *Vitell.*, c. 4.
- 25, 8. expert. Dio, lix, 5; lxi, 17.
- 25, 10. gave. Sueton., *Calig.*, c. 55; Bücheler, *Coniectanea*, in *Rh. Mus.*, xxxvii, p. 334, believes him to be the same to whom Phaedrus dedicated his third book.
- 25, 11. build. Josephus, *Ant. Jud.*, xix, 4, 4.
- 25, 12. Verus. *L. Verus*, c. 6.
- 25, 12. Commodus. *Commodus*, c. 2.
- 25, 12. Geta. Herodian, iii, 10.
- 25, 13. Elagabalus. *Elagab.*, cc. 6 and 12.
- 25, 20. Nero. Sueton., *Nero*, c. 16. The inscription, Orelli, 2596 (proc. colleg. aurigariorum iiii fact.) is not genuine (*CIL*, vi, 5, 555*).
- 25, 22. indispensable. Marquardt, *StV*, iii, 523, 1.
- 25, 23. racehorses. For the authorities see *id. ib.*, p. 523 f. I only cite those which are lacking there.
- 25, 27. incited. Schol. Juv., 1, 155; cf. also Varro, *R. r.*, ii, 7, 1.
- 25, 31. pastures. Strabo, vi, 2, 6, p. 273; cf. Cic., *Verr.*, ii, 1, 10, 28.
- 25, 34. account. Cf. also Gregorovius, *Gesch. Roms in Mittelalter*, ii, 64.
- 25, 38. horses. Hertzberg, *Gesch. Griechenlands unter den Römern*, i, 487 f., 514.

- 25, 39. distinguished. Cf. the lists *CIL*, vi, 10,053 and 10,056 (in which also the owners and vendors of the horses are named) and Roehl, *Ind. CIG*, iv, 3, p. 136.
- 25, 40. blood. Vegetius, *Veterin.*, iv, 6.
- 26, 1. Cappadocia. *Solin.*, 45, 5, p. 192, ed. Mommsen (ex auct. ignoto): terra illa Cappadocia ante alias altrix equorum et proventui equino accommodissima est. *Itiner. Hierosol.*, ed. Pinder and Parthey, p. 273: mansio Andavilis (not far from Tyana): ibi est villa Pampati, unde veniunt equi curules. Gothofredus suggests Palmati for Pampati (*Cod. Theodos.*, x, 6, 1; xv, 10, 1). Cf. Ad. Schlieben, *Die Pferde des Alterthums*, p. 97 ff.
- 26, 2. famous. *Expos. tot. mundi*, ed. Riese, p. 111, 7: Habes ergo Antiochiam quidem in omnibus delectabilibus habundantem, maxime autem circensibus . . . Ecce similiter Laodicia circenses et Tyrus et Berytus et Caesarea.
- 26, 4. Tagus. Symmachus, *Epp.*, iv, 62. Perhaps the Cappadocian studs, which were so near, were at that time exclusively imperial.
- 26, 6. three. Colum., vi, 29, 4.
- 26, 7. years. Pliny, *N. H.*, viii, 42, 162.
- 26, 8. male. Undoubted exceptions like Dicaeosyne (Zangemeister, *Rilievo di Foligno, AdI*, 1870, p. 257n.) are very rare. Cf. Appendix xxv and my *De nominibus equorum circensium, Program. Acad. Alb. Regim.*, 1875, iii; *CIL*, viii, 10,889-91 (6 names); *Eph. epigr.*, v, p. 566, 1318 (mosaic in the island of Meninx, 4 names); *ib.*, 317, 454, a leaden votive tablet from Carthage, once apparently containing 32 names, among which Beronica is perhaps masculine. Cf. Buecheler, *Rh. Mus.*, xli (1886), p. 160.
- 26, 9. Tuscus. Wilmanns, *E. I.*, 2601, l. 51.
- 26, 10. Victor. *Id. ib.*, 2600, 2, l. 3.
- 26, 16. harness. G(ustav) F(reytag), *Sportbericht eines römischen Jockeys*, in *Grenzboten*, 1869, ii, p. 447. A horse that won 54 races (1876-79) without a defeat is considered to have beaten all records (Silberer, *Allg. Sportszeitung*, 1883, No. 10; *N. Fr. Presse*, 7 March. 1883).
- 26, 17. slaves. Veget., *R. vet.*, praef., 10.
- 26, 18. victorious. Colum., iii, 9, 5: sacrorum certaminum studiosi perniciosissimarum quadrigarum semina diligenti observatione custodiunt et spem futurarum victoriarum concipiunt propagata sobole generosi armentum.
- 26, 24. goal. Pliny, *N. H.*, viii, 160. A similar case occurred at Alexandria, see Philo, *De animal.*, § 58.
- 26, 26. torches. *Solin.*, 45, 11, p. 194 M. (auct. ign.). The inciting of the horses was apparently done by the *hortatores*, *CIL*, 10,074-76. Such are to be seen on the mosaic of Barcelona (one waving a cloth).
- 26, 30. spectators. *Digg.*, xxxi, 65, 1: quadrigae legatum equo postea mortuo perire quidem ita credunt, si equus ille decessit, qui demonstrabat quadrigam.
- 26, 31. acclamations. Dio, lxxiii, 4.

- 26, 34. representing. Besides those mentioned by Marquardt, *StV*, iii^a, 524, 1, see *CIG*, 6311, and especially in this connexion, the remarkable mosaic of Barcelona, edited by E. Hübner, (*AdI*, 1863, p. 135 ss., *Tav. d'agg. D.*). On the thighs of the horses are inscribed the names of the breeders or owners, Concordius and Nicetus. In the mosaic of Gerona (*Mosaico Romano*, Gerona 1876, the inscriptions *Eph. epigr.*, iii, 1877, p. 202) there stands near each of the four *quadrigae* besides the name of the driver only the name of the principal horse.
- 26, 41. revived. Epictet., *Diss.*, i, 11, 27.
- 27, 4. business. Cf. Marquardt, *StV*, iii^a, 520 ff.
- 27, 10. rank. The inscription *CIL*, vi, 10,077 (L. Avilio Galatae fact. russ. lib.), shows that the freedmen of the parties received the Gentile names of the *domini factionum*. L. Avilius Planta was a *dominus fact. russ.* Cf. Appendix xxiv (to l. 13 of the inscription of Diocles).
- 27, 28. later. Dio, lvi, 27. Marquardt, *StV*, iii^a, 490, 1.
- 27, 35. runners. *Bull. com. d. R.*, 1886, p. 312, 1341 : A. Antonius Albanus cursor et supra cursores factionis prasinæ p. (cf. also n. on vol. ii, p. 21, 10).
- 27, 35. cellarers. *Ib.*, 1342 : cellarius factionis prasinæ.
- 28, 3. obscure. Marquardt, *StV*, iii^a, 521, 3.
- 28, 4. colours. *Ibid.*, p. 517 ff.
- 28, 10. disappeared. *CIL*, vi, 10,062 : D. m. Epaphroditus agitator f(actionis) r(ussatae) ; vicit clxxviii et at purpureum liber (i.e. manumissus) vic. viii. I do not believe that the denomination *pannus chelidonius* for the purple party is right, but as before (in Marquardt, iii^a, 518, 4) I prefer to read in the inscription *CIL*, vi, 10,046 : 'familiae quadrigariae T. Ateii Capitonis P. Anni Chelidoni' . . . etc. ; in spite of the specious analogy of 10,045 : decurionibus | et familiae | panni russei—C. Cejoni Maxim. etc.
- 28, 13. identity. Cf. the epigram of a later time, *Anthol. Lat.*, ed. Riese, 191, 5 : dilexit genitor prasinum, te russeus intrat.
- 28, 17. factions. A *factio Garamantina* in a forged inscription, Henzen 6080 = *CIL*, vi, 10,065, is made up from a call to a charioteer or a circus horse, 'Garamanti nica' (Marini, *Iscr. dol.*, no. 222, in Preller, *Regionen Roms*, p. 156 f. note), as I have shown in *Ind. lectt. hib. acad. Regim.*, 1858.
- 28, 26. Vitellius. Sueton., *Vitell.*, c. 7 ; Dio, lxxv, 5.
- 28, 26. Caracalla. Dio, lxxvii, 10 ; cf. lxxviii, 8.
- 28, 26. Caligula. Sueton., *Calig.*, c. 55 ; Dio, lix, 14.
- 28, 26. Nero. Sueton., *Nero*, c. 23 ; Dio, lxxiii, 6 ; Pliny, *N. h.*, xxxiii, 90.
- 28, 27. Domitian. Martial, xi, 33 :—

Saepius ad palmam prasinus post fata Neronis
pervenit et victor praemia plura refert.
I nunc, livor edax, dic te cessisse Neroni ;
vicit nimirum non Nero, sed prasinus.

On the reference of this epigram to Domitian, see my edition, i, p. 63.

- 28, 27. Verus. *L. Verus*, cc. 4 and 6.
- 28, 27. Elagabalus. Dio, lxxix, 14.
- 28, 28. leadership. Martial also was a partisan of the Greens; cf. vi, 46 and xi, 33; in Juvenal's time they had decidedly the upper hand (ii, 97). A monument of the Blues with the inscription: *Victoria Venetianorum semper constet feliciter*, of unknown date, Marini, *Atti*, p. 582, cf. 637 b = *CIL*, vi, 2, 10,074. Visconti, *M. PCI*, v, pl. 38-43, alludes to it and calls it an altar; Argoli on Panvin., *De lud. circ.*, i, 10, 69, speaks, perhaps by mistake, of two such stones. *CIG*, 6354 (Romae): Θ. Κ. Βασιλίου. Μνήμης χάριν ἐποίησεν Μ. Ἀδρ. Διονύσιος ἀδελφῷ (εἰς αἰ)ῶνα Βενετιανοῦ συστήματος πρίγκιπι. Theodoric had to protect the Greens against the Blues (Cassiod., *Var.*, i, 20 and 27). In Constantinople the Blues (always favoured by the emperors, at least from the time of Justinian) had the precedence (Wilken, *Histor. Taschenbuch*, 1830, p. 330). On a monument of a charioteer there cf. *BdI*, 1847, p. 123 s.
- 28, 36. colours. Cf. Marquardt, *StV*, iii^a, 517 ff. The mention of a *facio veneta* in an Arval inscription of the year 69 (Henzen, *Acta fr. Arv.*, p. 140) shows that at their races also there were four parties and four colours.
- 28, 38. bloodshed. Cf. my essay, *Die Circusparteien in der Kaiserzeit*, in *N. Jahrb. f. Philol.*, lxxiii, 745 ff.
- 29, 2. slaves. Cf. Marquardt, *op. cit.*, 491, 4 and especially the inscription *CIL*, vi, 9719 quoted below (epitaph of a slave Crescens, who is described as a *Venetianus*). Evidence of the use of the colours in the Circus games of the provinces is afforded, not only by the mosaics of Lyons, Barcelona, and Italica, but by the inscription Gruter, 339, 4 = *CIG*, 6803 = *CIL*, ii, 4315: *Factionis Venetae Fusco sacrauimus aram . . . etc.* The parties are also mentioned in *Pass. Perp. et Felic.*, c. 13: *et dixerunt (angeli) Optato: Corrige plebem tuam, quia sic ad te conveniunt, quasi de circo redeuntes et de factionibus certantes.* In the eastern part of the empire in the middle of the fourth century were very renowned circus games at Antioch, Laodicea, whence charioteers were procured for other cities, Tyre, Berytus, and Caesarea (n. on vol. ii, 26, 2), Nicomedia (habet autem et circenses, structuram valde bonam, in qua circensium spectaculum diligentius spectatur), Constantinople, Gortyn, Syracuse and Catana (in quibus spectaculum circensium bene completur). *Expos. tot. mundi*, 32, 49, 50, 65, 66.
- 29, 7. sinful. P. E. Müller, *De gen. aev. Theodos.*, ii, p. 59, note o.
- 29, 10. Attila. Gregorovius, *Gesch. d. Stadt Rom im Mittelalter*, i^a, 190.
- 29, 16. dead. Salvian., *De gubern. Dei*, vi. Cf. the poems of Luxorius, who lived at Carthage at the beginning of the sixth century, and speaks of the circus of that town and the green and blue charioteers; *Anthol. Lat.*, ed. Riese, 324-328.
- 29, 19. riots. *Expos. tot. mundi*, 50 (*Geogr. min. l.*, ed. Riese, 118, 6): *Nec non vero etiam circensium spectaculum saevissime (perniciosa et saevissima contentione C.) spectatur.*

- 29, 28. mania. See Choric., 'Ἐπὲρ τῶν ἐν Διονύσου τὸν βίον εἰκονιζόντων ed. Graux, *Rev. de philol.*, N. S., i (1877), p. 247, c. 14, 4.
- 29, 36. loyalty. Martial, xiv, 131.
- 30, 2. authority. Marquardt, *StV*, iii^a, 517, 5; Huebner, *De actis*, p. 42.
- 30, 9. bursting. Ovid, *A.*, iii, 2, 78: evolat admissis discolor agmen equis.
- 31, 11. colour. *Id. ib.*, 67 sq.; *A. a.*, i, 145.
- 30, 17. poisoned. Dio, lix, 14.
- 30, 21. Achilles. Sueton., *Nero*, c. 22.
- 30, 25. Tiridates. Cf. Dio, lix, 5; lxi, 17. The circus was generally strewn with *laminae* of mica. Pliny, *N. H.*, xxxvi, 162.

Delattre, *Inscriptions imprécatoires trouvées à Carthage* (*Bull. de corr. Hellén.*, 1888, pp. 294-302) quotes three inscriptions (all in Greek) of the seven found upon leaden plates in holes bored in the sepulchral cippi in the cemetery there. Two of them, which agree in the main, contain adjurations of a νεκυδαίμων ἄσπος to injure and to impede in their course 24 horses (including 12 of the Blues) and their 3 or 4 charioteers: ἀφέλε αὐτῶν (the horses) τὴν νεκρὴν, ἐμπόδισον αὐτοῖς τοὺς πόδας, ἔκκοψον, ἐκνεύρωσον αὐτοὺς ἵνα μὴ δυνασθῶσιν τῇ αὐρίον ἡμέρα ἐν τῷ ἵπποδρόμῳ μηδὲ τρέχειν μηδὲ περιπατεῖν μηδὲ νεικήσαι μηδὲ ἐξελεῖν τοὺς πυλῶνας τῶν ἱππαφίων, μήτε προβαλεῖν τὴν ἀρῆαν (arsam) μήτε κυκλεῖσθαι τοὺς

καμπτήρας· ἅμα πεσέτωσαν ἅμα τοῖς ἰδίοις ἡνίοχαις (their names follow). Κατάδησον αὐτοῖς τὰς χεῖρας· ἀφελε αὐτῶν τὴν νείκην, τὴν ἀπόβασιν καὶ τὴν δρασιν, ἵνα μὴ δυνασθῶσιν βλέπειν τοὺς ἰδίους ἀντιπάλους ἡνιοχοῦντας ἅμα· μάλλον ἄρπασον αὐτοὺς ἐκ τῶν ἰδίων ἀρμάτων καὶ στρέψον ἐπὶ τὴν γῆν, ἵνα πεσέτωσαν μόνοι, ἐμ παντὶ τόπῳ τοῦ ἵπποδρόμου συρόμενοι, μάλιστα δὲ ἐν τοῖς καμπτήρσιν μετὰ βλάβης τοῦ σώματος σὺν τοῖς ἵπποις, οὓς ἐλαύνουσιν. "Ἡδη, ταῦτα. The third plate with the heading *κατάρα* contains an adjuration, that Victoricus, a charioteer of the Blues, may be fettered to-morrow in the circus with his horses, ὡς οὗτος ὁ ἀλέκτωρ καταδέδεται τοῖς ποσὶ καὶ ταῖς χερσὶν καὶ τῇ κεφαλῇ.

 38, 32. prevent. Zangemeister, p. 259 f.
 38, 39. belt. Cf. the torso of a charioteer in Gurlitt, *Antike Denkmäler*, *Epigr. arch. Mitteilungen*, i, 20. Handles of charioteers' knives, see *Bull. com.*, iv (1876), p. 189, pl. 21, 2.
 39, 1. have. Pliny, *N. H.*, xxviii, 237.
 39, 2. colours. The sleeves could have other colours; cf. Brizio, *Musaici di Barcano*, *BdI*, 1873, p. 133 s. Cf. Marquardt, *StV*, 519, 4.
 39, 3. starting. In the following description I have chiefly used, besides some passages from the early fathers (as Lactant., *Inst. div.*, vi, 20; Gregor. Nyss., *De vit. Mos.*, *init.*), Sil. Ital., xvi, 315 ss., who from his account evidently had the Roman Circus before his eyes.
 39, 9. signal. Cic., *De div.*, i, 48.
 39, 11. looked. Tertull., *De spect.*, c. 16.
 39, 13. gates. We have no precise knowledge of the method of starting; cf. Huebner, *Mus. di Barcellona*, in *AdI*, pp. 150-152. It is however certain that at the time of Cassiodorus the chariots drove up to a marked line (which Zangemeister, p. 239 ff., finds, probably correctly, in the Lyons mosaic), and that the race began here (Cassiodorus, *Var.*, iii, 51); but it is quite uncertain when this arrangement was introduced. In modern trotting-races the American mode of starting is considered the best. The horses come up at a trot, and when, having passed the starting-post, they are approximately level, the signal for the start is given with the words 'Go on'. (*Zum technischen Betriebe der Trabrennen*, in *Der Sporn*, 1879, no. 6, p. 42).
 39, 14. dust. Frontin., *De aquis*, 97: circus maximus ne diebus quidem ludorum circensium nisi aedilium aut censorum permissu irrigabatur: quod durasse etiam postquam res ad curatores transiit sub Augusto, apud Ateium Capitonem legimus.

- 39, 18. lasted. For trotting races (with sulkies) the average time for 1000 metres seems now to be 1 m. 43½ seconds (*Zum technischen Betriebe der Trabrennen*, in *Der Sporn*, 1879, no. 6, p. 43; for 5000 metres 8 minutes, 37 seconds, *ibid.*, p. 208; 4800 metres in 8 m. 43 s., p. 224). [The record for 1 mile was in 1905 1 m. 58½ s.; for 1 pacing mile 1 m. 55 s. in 1906. TR.] In the Roman circus the horses evidently always ran full gallop.
- 39, 23. finish. Manil., *Astron.*, v, 71-84; cf. Philo, *De animal.*, c. 58.
- 39, 33. collisions. See Choric., *loc. cit.* (n. on p. 29, l. 28), c. 19, 8, p. 245: *τί δ' ἂν εἴποις περὶ τοῦς ἰθύνειν τοὺς ἵππους εἰδόντων, ἀπολλάκεις ἀλλήλους ἐξάγονται δυοῖν ἐν ταυτῷ συμπλεκόμενων ἁρμάτων; ἀλλὰ καὶ κίνδυνος ἐκεῖ συνεχῆς ἵππων τε κἀνδρῶν, κἀν ἀνέλη τις τοῦτο, συναείλε καὶ τὴν ἐκ τῆς ἀμίλλης ἡδονὴν τῶν θεωμένων.* Fred Archer 'hurls himself round the most dangerous corners, forces his way through the horses and at the decisive moment comes on with such an impetus, very often close to the inner barrier, even though it looks as if there were no room left for him, that by these devices and violent expedients he turns apparent defeats into victories, which would be hardly possible to any of his rivals' (cf. vol. ii, p. 24).
- 39, 37. spectators. Lactant., *Inst. div.*, vi, 20, 32.
- 40, 7. end. Seneca, *Epp.*, 83, 7; Juv., II, 197.
- 40, 9. sight. Rutil. Numat., *It.*, 201 sq.
- 40, 10. pauses. At the intervals after every 6 *missus* in the case of 24 races; after every 5 in the case of 20. Cf. Marquardt, *StV*, iii², 516 note. Cf. also Appendix xxv.
- 40, 28. AMPHITHEATRE. My essay, *Ueber Gladiatorenspiele und Thierhetzen zu Rom in der Kaiserzeit* (*Rhein. Mus.*, N. F., x [1855], pp. 544-590), reappears here, much altered and enlarged. The *Commentatio de Gladioloribus* by G. Spaeth (*Programm des Ludwigsgymnasiums zu München*, 1863) contains nothing new. The treatises of M. Planck, *Ursprung der Gladiatorenspiele* (*Ulmer Gymnasialprogramm*, 1866), and Goguel, *Les gladiateurs romains* (Strasbourg and Paris, 1870) are unknown to me. The latest works on the subject are by P. J. Meier: *De gladiatura Romana quaestiones selectae* (Bonn, 1881), and other essays which are cited below.
- 41, 2. banquets. Strabo, v, 4, p. 250 C.
- 41, 2. Etruria. Henzen, *Explicatio musivi Borghesiani*, in the *Dissertationi della pontif. Accad. Rom. di archeol.*, xii (1852), p. 74. Besides the statements of the authors (*Val. Max.*, ii, 4; *Nicol. Damasc.*, in *Athen.*, iv, p. 155 J.; Tertull., *De spect.*, c. 5, after Suetonius), there are other indications that fights of gladiators took place in Etruria; thus the word *lanista* ('executioner' in the Etruscan language according to Isidor., *Orig.*, x, p. 247) and the Etruscan Charon, who, like Mercury the guide of souls (Dio, lxxii, 19), was one of the characters appearing in the amphitheatre (Tertullian, *Apol.*, c. 15). Also a picture in a tomb at Tarquinii shows gladiatorial combats (Canina, *Etruria maritima*, pl. 85; Micali, *Storia dell'Italia*

- etc.*, p. 53); likewise sepulchral urns, P. J. Meier, *De glad.*, p. 36,

ficiis sed etiam in muneribus, quae a magistratibus, foro
gladiatorum scaenisque ludorum (?) dantur, quibus nec mora
neque exspectatio conceditur sed necessitas finito tempore
perficere cogit. Dio, xxxvii, 58 (A.U.C. 694): καὶ τι καὶ θέατρον
πρὸς παρήγυρὰν τινα ἐκ ξύλων ὑποδομημένον ἀνετράπη * καὶ ἀνθρώποι
παρὰ πάντα ταῦτα πανπληθεῖς ἀπώλοντο.
43, 27. arisen. Cf. Appendix xxxvi, and on what follows, Becker,
Topogr., 680 ff.
43, 33. gladiators. Stieglitz, *Archäol. d. Baukunst*, vol. ii, p. 301,

believes Pliny's account, fabulous as it sounds, and refers to an article by the architect Weinbrenner (*Die beweglichen Theater des Curio*, in *N. deutsch. Merkur*, 1797, p. 307 ff.). Also Prof. Rudolf Bergau of Nuremberg considers this building by no means improbable, 'as the construction and technical execution of Roman buildings compel us to presuppose a very high degree of elaboration in the machinery, the manual work and the technique generally. It is enough to recall the *velarium* stretched over the whole Colosseum, the erection of the obelisks, which was not only considered a remarkable performance in the year 1586 (Hübner, *Sixtus V*, ii, 160 ff.), but even in the nineteenth century in Paris, and the roof of the basilica in the forum of Trajan'. Paul Laspeyres (d. 1881) was of the same opinion, and remarked that the construction would be much simpler if one merely assumed a shifting of the spectators' seats; but that it would appear by no means impossible with the appliances available in that age, if one were to assume a rotation of the great masses of the timber framework, especially if the buildings in question were not on a very large scale.

43. 41. severest. Walter, *Gesch. d. röm. Rechts* (2nd edition), ii, p. 419 § 783 (Ulpian, in *collat. leg. Mos.*, xi, 7; Paul., *Sent. rec.*, v, 17, § 3, c. 1; *C. Th. ad l. Fab.* [9, 19]. *Fr. i. pr. D. h. t.*).

 58, 28. giver. Quintilian, *Decl.*, ix, 7 (instead of 'fortunae conscius aliquando fulgor' read 'f. conspicuus etc.').
 58, 35. Fadius. See vol. ii, p. 44.
 58, 41. broken. Seneca, *Epp.*, 70, 20. The carriage must have had very high wheels, like those now used by the Roman *carrettieri*. Göttling's repeatedly expressed notion (*AdI*, xiii, p. 60) that the other suicide was Thumelicus is, deservedly, quite forgotten.
 59, 3. suppressed. Tac., *A.*, xv, 46.
 59, 5. overcome. Zosim., i, 71.
 59, 12. hands. Symmachus, *Epp.*, ii, 46.
 59, 13. announced. Cf. Marquardt, *StV*, iii^a, 561. I only mention the quotations missing there.
 59, 18. begged. Cf. on the *scriptores* Henzen in Gerhard's *Archäol. Ztg.*, 1846, p. 295, and *Coll. Inscr. lat.*, 5663, 6566, 6975-6977. Zangemeister, *CIL*, iv, p. 10.
 59, 22. For 'elsewhere' read 'at various spots' (in Pompeii).
 59, 30. awning. *Museo Borb.*, i, *rel. dei scavi*. Garrucci, *Bull. Nap.*, 1853, p. 115. (TOTIVS ORBIS DESIDERIVM in an inscription quoted there is evidently also one of those advertisements). Mau, *Scavi di Pompei, Sepolcri della via Nucerrina* (*Mith. d. Arch. Instituts*, 1888, p. 120 ff.) gives two new advertisements of gladiatorial games, found on tombs by what appears to have been an abandoned road from Pompeii to Nuceria. P. 144: Glad. par. xx Q. Monni | Rufi. pug. Noia (Nolae?) k. Mais vi | v Nonas Maias et | venatio erit (not later than the early part of the reign of Augustus). P. 145 (sulla parete in fondo alla cella del monumento n. 2): Numini | Augusti | glad. par. xx et venatio Da (?) Pompei flaminis Augustalis | pugnab. Constant. Nuc. iii Pr. Non. | Nonis viii Eidus Maias | Nucerinii officia mea certo index (?). From the form *Eidus* not later than Tiberius.
 59, 37. exported. *Hist. Aug., Claud.*, 5 ('in indice ludiorum' instead of 'ludorum', Ritschl, *Tesserae*, p. 641). Garrucci, *Graffiti di Pompei*, pl. x, p. 66, gives the picture of such a *libellus*. Apparently the list was written before the games and V and M were added afterwards; otherwise the victor would always stand first.
 69, 6. arena. Even if the relief in *Bull. Nap.*, iv, plate 1, does not represent an amphitheatral *pompa* it at any rate (Jahn, *Ber. d. Sächs. Ges.*, 1861, pp. 313-315) has much in common with it. According to Pliny, *N. H.*, xxxv, 49 (where, after mentioning the decoration of ships and funeral piles, he proceeds: iuvatque pugnatorios ad mortem aut certe caedem speciose vehi), there seem to have been processions of gladiators in carriages (on their way to the amphitheatre?).
 60, 8. gauntlet. Seneca, *Apocol.*, 9, 3 (inter novos auctoratos ferulis vapulare).
 60, 9. mentioned. Eusebius, *H. E.*, v, 1 (τὰς διεξόδους τῶν μαρτί-

- γων τὰς ἐκείσε εἰθισμέναις); Tertull., *Ad mart.*, c. 5; *Passio SS. Felicit. et Perpet.*, c. 8, 33 (populus—flagellis eos vexari pro ordine venatorum postulavit), where Holstenius quotes other passages besides.
- 60, 13. naturally. Dio, lvii, 13; cf. Lips., *Exc. ad Tac.*, iii, 37.
- 60, 17. combats. Martial, viii, 80; cf. *Lib. Spect.*, 29.
- 60, 18. blunted. *M. Anton.*, c. 11; Dio, lxxi, 29.
- 60, 22. flutes. Juv., 3, 35 (quondam cornicines et municipalis arenae Perpetui comites). *CIG*, 3675: οὐκέτι χαλκελάτου φωνὴν σάλπιγγος ἀκούων Οὐδ' ἀνίσων αὐλῶν, κελαδὸν λαῶν ἀνεγείρω. *CIL*, x, 4915 (Venafrum): Tibicinis cantu modulans alterna vocando Martios ancentu stimulans gladiantes in arma vocavi; cf. Mommsen's note. Music is also often depicted in the reliefs representing gladiatorial games. Three gladiators' trumpets of the shape shown in Overbeck-Mau, *Pompeii*⁴, p. 182, 3 ft. 11 in. in diameter, were found in a tavern at Pompeii, *BdI*, 1885, p. 252.
- 60, 37. *habet*. Donat., *Ad Ter. Andr.*, i, 1, 56; Prudent., *Psychom.*, 49 sq., cf. Gronov., *Obs.*, ii, 25; Turneb., *Advers.*, xvii, 10.
- 60, 39. custom. Plutarch, *Lycurg.*, c. 19, 8: καὶ περὶ τῶν ἀθλημάτων ταῦτα μόνον μὴ κωλύσαντος ἀγωνίζεσθαι τοὺς πολλὰς, ἐν οἷς χεὶρ οὐκ ἀνατρέπειται. Krause, *Agonistik*, p. 522, 4.
- 60, 41. left. Cf. besides Schol. Pers., 5, 119; Sidon. Apoll., C., 23, 129; Garrucci, *Graffiti*, p. xi, and the monument of Scaurus, *Mus. Borb.*, xv, pl. 27 ss. Hence 'manum tollere', Cic., *Consol. fr.*, 7; 'ad digitum pugnare', Martial, *Lib. spect.*, 29, 4; Quintilian, viii, 5, 20; cf. viii, 5, 12. Meier, p. 48, 1.
- 61, 1. thumbs. A relief (from Cavillargues, now in the museum of Nîmes) shows the fight of a Samnite and a *retiarius*, and four spectators, amongst them a woman, with upturned thumbs. *BdI*, 1853, p. 130. The inscription, pug]NANTES MISSI (equivalent to 'stantes missi', *CIL*, xii, 2747; cf. Orelli, 2571 = *CIL*, x, 2, 7297 and 2581 = *CIL*, vi, 1, 10, 194, where ST. MISS. is to be taken together) is not a cry of the public, but an explanatory note. 'Stans missus' is the gladiator dismissed unconquered after an undecided fight, next to victory the most honourable issue; 'missus' is the vanquished gladiator dismissed by the grace of the master of the games or of the public. Meier, *De gl. R.*, p. 49 sq.
- 61, 6. willing. Seneca, *De ira*, i, 2, 5; Lactant., *Inst. div.*, vi, 20. In the epitaph on the *secutor* Urbicus, *CIL*, v, 25,933, the exhortation ascribed to the deceased: te moneo ut quis quem vicerit occidat, apparently recommends to the victors not to wait for the decision of the public; perhaps Urbicus was slain by an adversary whom he had previously defeated.
- 61, 12. Augustus. Sueton., *Aug.*, c. 15. The inscription of Minturnae, Mommsen, *IRN*, 4063 = *CIL*, x, 6012 (of the year 249) shows that this prohibition was not in force everywhere and at all times.
- 61, 13. edict. Sueton., *Nero*, c. 4.
- 61, 15. fight. 'Suppositicius' (Martial, v, 24, 8; *CIL*, iv, 1179;

- 'gl(adiatorum) par(ia) xxx et cor[um] supp[ositi]cii] pugn[abunt] Pompeis', cf. Pliny, *Epp.*, viii, 14, 21; Lactant., *Inst. div.*, vi, 20) is called by Petron., c. 45, *tertiarius*, as the third to the other two fighters. Meier, *loc. cit.*, p. 50 sq.
- 61, 17. ground. Martial, ii, 75, 5.
- 61, 18. sand. Petron., c. 34: duo Aethiopes cum pusillis utribus, quales solent esse qui harenam in amphitheatro spargunt.
- 61, 18. palms. Sueton., *Calig.*, c. 33: cum palma victorum more discucurrit. Meier, *loc. cit.*, p. 46, 2.
- 61, 32. shields. If the text in Cic., *Ad Attic.*, vii, 14, 2: scutorum in ludo (J. Caesaris Capuano) ICO is right (Victorius supposed *secutorum*; cf. against this Meier, *loc. cit.*, p. 19), *scuta* had by that time become a general designation for gladiators.
- 61, 32. permeated. Quintil., ii, 11, 1. A teacher of rhetoric was asked, Theodorus an Apollodorus esset? Ego, inquit, parmularius sum.
- 61, 34. Caligula. Sueton., *Calig.*, c. 32 (sica), 54 (Threx); cf. 55 (myrmillonum armaturas recidit).
- 61, 34. Titus. Sueton., *Tit.*, c. 8 (studium armaturae Threcum prae se ferens).
- 61, 35. won. Martial, xiv, 213.
- 61, 36. contempt. *Id.*, ix, 68.
- 61, 41. spoken. Sueton., *Domit.*, c. 10.
- 62, 9. identical. Pliny, *Paneg.*, c. 33.
- 62, 12. shields. M. Antonin., *Comment.*, i, 5.
- 62, 14. been. Fabretti, *Inscr. antiq.*, p. 222, 592 = *CIL*, vi, 9719, l. 10: Crescens O (mulieris) scr(vus) natione Bessus olear(ius) de portic(u) Pallantian(a) Venetian(us) parmular(ius). Vix(i) bene jaceo secur(us).
- 62, 21. backs. Cf. the slightly discrepant statements of Appian, *Bell. civ.*, ii, 102; Dio, xliii, 23; Sueton., *Caes.*, c. 39; Pliny, *N. H.*, viii, 22.
- 62, 23. performed. Dio, iv, 8.
- 62, 24. realistic. Sueton., *Claud.*, c. 21.
- 62, 29. amphitheatre. Dio, lxi, 9. The 'consummatio gladiatorum' of Pliny, *loc. cit.*, probably means such a battle, cf. Josephus, *A. J.*, xix, 7, 5 (Agrippa's spectacle at Berytos, where 700 men fought on each side).
- 62, 30. Circus. Dio, lxvii, 8.
- 62, 36. games. Livy, xxxix, 22.
- 62, 37. had. Val. Max., ii, 7, 13 sq.; Livy, *Epit.*, 51; *id.*, xxvi, 2.
- 63, 2. prisoners. Cf. vol. ii, pp. 43, 45 f.
- 63, 4. *bestiarius*. Seneca, *Epp.*, 87, 9; cf. Apulei., *Metam.*, iv, 72; Symmach., *Epp.*, v, 59; Claudian, *Cons. Mall.*, 293.
- 63, 5. dishonour. Ulpian, lib. iv ad Edict. (*Digg.*, iii, 1 § 6): et qui operas suas ut cum bestiis depugnaret locaverit (loses the right of accusation).
- 63, 6. scars. Tertull., *Ad mart.*, c. 5.
- 63, 7. unpaid. Ulpian, *loc. cit.*; cf. Tertull., *Ad nat.*, i, 18.
- 63, 9. families. Henzen, 6178 = *CIL*, v, 1, 2541 (Ateste: famil. venatoria, which, as Henzen thinks, refers rather to *bestiarii* than to hunters; cf. 7209 = *CIL*, xii, 1590: coll. venator.

- Deensium qui ministerio arenario fungunt [Sueton., *Nero*, c. 12: confectores ferarum et varia harenae ministeria]).
- 63, 9. trained. Seneca, *Epp.*, 70, 20, even mentions a 'ludus bestiariorum'.
- 63, 11. founded. Baumgarten, *Gesch. Spaniens*, iii, 207, 222 f.
- 63, 12. given. Preller, *Reg. d. St. R.*, p. 121.
- 63, 14. morning. *Ibid.*, advertisement in Pompeii: matutini erunt, *CIL*, iv, 1200. But in *CIL*, x, 7295 (Panhormi) apparently the *venator* (here *missio*) begins at noon.
- 63, 16. daybreak. Sueton., *Claud.*, c. 34. In Martial, viii, 67 the *venationes* at the *Floralia* have not ended at the fifth hour. Also in Lucian, *Toxaris*, c. 58 the beast-fights come first. *Bestiarii* seems generally to be the name of the criminals destined for the beast-fight, so it is a sign of cruelty to like to see them (Sueton., *Claud.*, c. 34), and they are worse fighters than the worst gladiators (Petron., c. 45). *Venatores* on the other hand are practised hunters, and probably not as a rule condemned criminals.
- 63, 18. games. Cf. Appendix xxx.
- 64, 18. sudden. G. Freytag, *Bilder aus der deutschen Vergangenheit*, i⁸, 344. Monach. Gall., *Gesta Karoli*, ii, 8 sq. (Pertz, *Monum.*, ii, 752). *Einhardi Annales*, 801 (*ib.*, i, 190): Ipsius anni mense Octobrio Isaac Judaeus de Africa cum elefanto regressus portum Veneris intravit et quia propter nives Alpes transire non potuit, Vercellis hiemavit. Cf. 817 (p. 197).
- 64, 19. easy. I have taken these facts from Burckhardt, *Cultur der Renaissance*, pp. 288-290. On the zoological gardens and menageries at the Hague (fourteenth cent.), Amsterdam, Lübeck, Ghent (fifteenth cent.), those of the Grand Masters of the Teutonic Order at Marienburg and Stuhm, and the court menageries of Dresden and Vienna (from the middle of the sixteenth cent.) cf. Stricker, *Zur Vorgeschichte der zoologischen Gärten*, in *Im neuen Reich*, 1879, no. 41, p. 539 ff.; also the collection of Virchow and Holtzendorff, Heft 336. Further, *Beilage zur Allgem. Zeitung*, 15 Oct. 1882 (menageries of Henry I at Woodstock, of the emperor Frederick II etc.).

- 71, 39. Miletus. *CIG*, 2858 (Βογγία).
- 71, 39. Smyrna. *Id.*, 3212 (ταυροκαθάψια); cf. also Dio Chrys., *Or.*, 66, p. 606 M. in f., and the reliefs from Smyrna, representing the baiting of zebus, in Keller, *op. cit.*, p. 70.
- 71, 39. Lesbos. Relief: before a zebu named Helix wearing a girth, lies an unarmed man, *AdI*, 1842, p. 148 sq., *tav. d'agg. Q.* The wild bull described by Philo, *De animal.*, § 51, he had probably seen in Alexandria.
- 71, 37. bull-fights. Bottiger, *Kl. Schr.*, vol. iii, p. 325 (*Stierkämpfe, ein Sieg des Alterthums über die Modernen*). Cf. also *Anthol. Pal.*, ed. Jacobs, ii, 192 (ix, 543); Heliodorus, *Aethiop.*, x, 28 ss. The subject is also treated at length in Waddington, *Voy. en Asie min.*, p. 137, on the inscription at Caryanda, no. 499, according to which the giver of the spectacle (ταυραφέρης) ἀπὸ τοῦ ἐρεθιζομένου ταύρου δένειμα the flesh, etc. He distinguishes ταυροκαθάψιαι (bull-baiting) and ταυρομαχίαι (fights between bulls), and thinks the latter were introduced into Asia Minor from Rome.
- 71, 40. Caesar's. Pliny, *N. H.*, viii, 182; Appian, *B. C.*, ii, 102; Vellei., ii, 56.
- 71, 41. irritated. Ovid, *Melam.*, xii, 103.
- 72, 1. foot. *Gallieni duo*, c. 12.
- 72, 3. horns. Sueton., *Claud.*, c. 21; Dio, lxi, 9. Cf. also *Bonner Jahrb.*, lxxi, table 3, 1, with explanation by P. J. Meier. In Spain bull-fights are first recorded in the seventh century: King Sisebut (612–620) reproached Bishop Eusebius of Tarraco for his passion for them; see Dahn, *Könige der Germanen*, v, 184; vi, 286.
- 72, 5. lions. Sueton., *ib.*; Dio, *ib.*
- 72, 7. defenceless. *Aurelian*, c. 37: sane Mnestheus postea sur-
rectus ad stipitem bestiis objectus est. Ruinart, *Acta mar.*,
p. 171: qui nudis corporibus stabant et commotis manibus
eas (feras) in semet ipsos provocabant, id enim facere jubeban-
tur. The *Sammlung röm. Denkmäler in Baiern*, published by
the Academy, 1808 (a magazine of pottery, probably near Pons
Oeni) represents numerous potsherds, among them plates v and
vii, *venationes*; plate x, men bound naked to stakes, with bears;
plate viii, bulls and figures in hooded mantles, presumably
magistri. On a lamp of about the second century is a man on
a *pulpitum*, bound naked to a stake, and a lion leaping at him
(quite baselessly connected by Bruzza with Androclus). *Bull.*
crist., 1879, p. 21, plate iii, 1. Quint. Smyrn., vi, 532: εὖτε
σὺς μέσῳ ἔρκει ἢ λέοντες ἤματι τῷ, δὲ ἀνακτες ἀολλίσσας ἀνθρώπους
Ἀργαλέως τ' εἰλέωσι κακὸν τεύχοντες θλεθρὸν θηρίον ὑπὸ κρατερῶς· οἱ δ'
ἔρκεις ἐντοὶς ἐόντες Δμῶας δαρδάπτουσιν ὁ τις σφισιν ἐγγὺς ἴκηται. Here
the δμῶες are probably attendants.
- 72, 9. were. Dio, lx, 13; lxxi, 29; Ammian., xxix, 3, 9: habebat
(Valentinianus) duas ursas saevas hominum ambestrices, Micam
auream et Innocentiam.
- 72, 12. morrow. M. Antonin., *Comment.*, x, 8. Josephus, *B. J.*,
vii, 8, 7: οἱ δ' ἀπὸ θηρίων ἡμβρωται πρὸς δευτέραν αὐτοῖς τροφήν
ζῶντες ἐφυλάχθησαν, γέλωτα καὶ παιδιὰν τοῖς πολεμίοις παρῶσόντες.

- 72, 14. body. Galen, *De anatom. administr.*, iii, 5, ed. K., ii, p. 385: τῶν τε γὰρ ἐπὶ θανάτῳ κατακρηθέντων καὶ θηρίοις παραβληθέντων ἰθεόσαντο πολλοὶ πολλὰκις ἐν τοῖς σώμασιν ὅπερ ἐβουλήθησαν ἐκδοστοτε διὰ ταχέων. Cf. also Cels., *praef. lib. i* (p. 10, ed. Targ.). The Empiricus declare the vivisection of human beings to be useless: interdum enim gladiatorem in arena, vel militem in acie, vel viatorem a latronibus exceptum sic vulnerari, ut ejus interior aliqua pars aperiatur et in alio alia. Cf. Appendix ii.
- 72, 24. devoured. Strabo, vi, 2, 6.
- 72, 30. ranking. Hirschfeld, *VG*, 182-184.
- 72, 33. substructures. According to Promis, *Aosta*, p. 169, in all three amphitheatres they belong to the time of the Antonines; cf. Appendix xxxvi, and Rucca, *Dell' uso de' sotterranei anfiteatri* (from the *Mem. dell' acad. Ercolan.*, vol. iv), Napoli, 1851; but Rucca goes much too far in his conception of the use of this basement, e.g. he thinks that with the exception of the *essedarii* and *andabatae* all the men and beasts came up through the trap-door.
- 72, 34. level. Parker, *Archaeology of Rome*, part vii, 1876, pl. iii, cf. plates iv-viii, xvi, xvii and xxvii (the amphitheatre of Capua); the text is quite useless, with the exception of the reports on the excavations.
- 72, 38. thousand. Rucca, *Sull' ipogeo dell' anfiteatro Puteolano*, p. 11 s.
- 72, 40. space. Dio, lxi, 4.
- 73, 5. together. Seneca, *Epp.*, 88, 22.
- 73, 10. killed. Dio, lxxvi, 1; cf. the coin struck on this occasion, Eckhel, *D. N.*, vii, 182. According to Dio, lxi, 1, such a ship had even served as the model for the one in which Agrippina was to meet her death; cf. Tac., *A.*, xiv, 5 sq.
- 73, 14. emerged. Calpurn., *Eclog.*, 7, 69 sqq.; cf. Haupt, *Ind. lect. Berolin.*, 1854, 2, p. 31. On theatrical decorations and machinery in the fourteenth and fifteenth centuries see Baudrilart, *Hist. du luxe*, iii, 486 ss.
- 73, 21. unhappy. Plutarch, *De sera num. vind.*, c. 9. The *Passio SS. Felicitatis et Perpetuae*, c. 18, shows that the victims of the arena were splendidly dressed; the Christian men on this occasion had to appear in the costumes of priests of Saturn (in scarlet and purple mantles, Tertull., *De testim. animae*, c. 2; *De pall.*, c. 40), the Christian women as priestesses of Ceres.
- 73, 25. torn. Tac., *A.*, xv, 44 with Nipperdey's note.
- 73, 27. tunic. Tertullian, *Ad mart.*, c. 5; *Ad nationes*, i, 18.
- 73, 31. Hercules. *Id.*, *Apol.*, c. 15.
- 73, 32. thief. *Anthol. Pal.*, ed. Jacobs, ii, 374.
- 73, 33. coals. Martial, viii, 30; x, 25. These executions also took place early in the morning; so also in Alexandria, Philo, *In Flacc.*, p. 529 M.
- 73, 39. arson. Martial, *Spect.*, 7.
- 74, 3. bear. *Id. ib.*, 21, 21b.
- 74, 5. Europa. Aelian evidently alludes to such a representation, *Nat. anim.*, vii, 4, where he says that bulls were trained to carry women.

- 74, 5. Pasiphae. Sueton., *Nero*, c. 12 : inter pyrrhicharum argumenta taurus Pasiphaen ligneo juvencae simulacro abditam iniit, ut multi spectantium crediderunt. The same spectacle in Martial, *Spect.*, 5.
 74, 6. Cupids. Juv., 4, 122.
 74, 7. Daedalus. Martial, *Spect.*, 8.
 74, 7. Hercules. Martial, *Spect.*, 16 sq.
 74, 10. stars. *Id. ib.*, 25-26.
 74, 12. NAUMACHIAE. On the *naumachiae* see Richter, *Topographie von Rom*, pp. 879, 881. The word is already found in Lucil. (*Fragment. salt.*, ed. Gerlach, 14, 4):

naumachiam licet haec inquam alveolumque putare et calces: delectes te, hilo non rectiu' vivas.

- 74, 19. land-fights. Dio, lxi, 9. The amphitheatre was built in the year 57, Tac., *A.*, xiii, 31; perhaps it was opened with this spectacle. Cf. the annotation of Reimarus.
 74, 21. feast. So Dio, lxii, 15. Tac., *A.*, xv, 37 only writes of the notorious festival arranged by Tigellinus, which took place on the *stagnum Agrippae*, without mentioning the *naumachia* and other shows. Perhaps Dio has combined the account of the latter with that of the festival of Tigellinus.
 74, 23. could. Rucca, *Dell' uso de' sotterranei anfiteatrali* (Napoli, 1851), p. 15; to the Colosseum belonged 'delle vaste conserve ne' muri addossati al monte Celio, in parte ancora esistenti', and, as Fea thinks (*Osservazioni sull' arena e sul podio etc. confutate da Fea*, p. 2) the arena was provided with water from the *Sette sale* also. Cf. Parker, *Archaeology of Rome*, p. vii, 1876, pls. x and xv. The aqueduct of the amphitheatre at Capua also still exists.
 74, 26. Corinthians. Dio, lxvi, 26.
 74, 26. battle. Sueton., *Domitian*, c. 4.
 74, 30. lake. Sueton., *Caes.*, c. 39.
 74, 33. oarsmen. Appian, *Bell. civ.*, ii, 102.
 74, 33. filled. Dio, xlv, 17.
 74, 36. due. Becker, *Topogr.*, 657 n., 1416, and Preller, *Die Regionen d. St. R.*, p. 206 n. Over this basin led a *pons naumachiarius*, which was burnt and reconstructed in the time of Tiberius. Pliny, *N. H.*, xvi, 190 and 206. Dio (xl, 10) could still see traces of this *naumachia*.
 74, 41. Persians. *RGDA*², c. 23, ed. Mommsen, p. 94. I follow Hirschfeld's restoration of these texts (*Wiener Studien*, 1881, p. 257 f. 1), viz. in *utrisque classibus* instead of *quibus in* *classibus*, and *ἐν ἐκατέρῃσιν στήλας* for *ἐν [τοῦτῳ τῷ] στήλας*.
 75, 4. Garigliano. Tac., *A.*, xii, 56 with Nipperdey's note.
 75, 6. warriors. Sueton., *Claud.*, c. 21, mentions twelve triremes on either side; Dio, lxvi, 39, fifty.
 75, 8. signal. Sueton., *ib.*; cf. *Aetna*, ed. Munro, 293 ss., as to which Sauppe, in *Gött. gel. Anzeigen*, 1874, p. 493 proposes *moveri* for 'movere' in l. 297.
 75, 29. banquet-room. Becker, *Topogr.*, n. 1418; Dio, lxi, 20; Tac., *A.*, xiv, 15.

 77, 4. eye. Cic., *Tusc.*, ii, 20, 46.
 77, 6. gave. Pliny, *Epp.*, vi, 34.
 77, 11. aroused. *Id.*, *Paneg.*, c. 33.
 77, 13. Europe. Gibbon, *History* etc., xxx (Basil, 1787, vol. v, p. 171). *Hist. Aug. Maxim. et Balbin.*, c. 8: alii hoc litteris tradunt (quod verisimilius credo) ituros ad bellum Romanos debuisse pugnas videre at vulnera et ferrum, et nudas inter se cohortes, ne dimicantes in bello armatos hostes timerent aut vulnera et sanguinem perhorrescerent.
 77, 17. spear. Cic., *Ad Fam.*, vii, 1, 3.
 77, 19. inconclusive. Varro, *Sat. Menipp.*, fr. 24; Petron.³, ed. Buecheler, p. 165.
 77, 21. wearisome. M. Antoninus, *Comment.*, vi, 46.
 77, 24. cheap. Tac., *A.*, i, 76.
 77, 26. school. Cf. vol. ii, p. 59.
 77, 29. Socrates. Symmachus, *Epp.*, ii, 46.
 77, 30. extant. In the declamations which treat of gladiators, there are no allusions to the inhumanity of these spectacles. The words of Varro, in Non., *s. lusus vel lusio*: ab hujusmodi lusionibus radices crudelitas agere solet, might perhaps be referred to gladiatorial games, although, as is well known, authors of the best period only call them *munera*, never *ludi*. Pliny, *N. H.*, xxxvi, 203: M. Varro . . . inquit . . . inde enim cinis lixius potus medetur, licet videre gladiatores, cum deluserunt, hac iuvare potione. In the inscription at Corduba, Huebner, *Ephem. epigr.*, iii, p. 37: edito ob honorem, flaminatus munere gladiatorio et duabus lusionibus, the *lusiones* are certainly not amphitheatral games. Cf. Garrucci, *Sull' epoca e sui frammenti dell' iscrizione dell' anfiteatro Puteolano*, Napoli, 1851, pp. 5-8, and Ritschl, *Die 'Tesseræ gladiatoriae'*, p. 61, n. 1. *Munus*, 'the obligation, or due performance' (Mommson, *Röm. Forschungen*, i, 345) can originally only have been the 'officium mortuorum honori debitum' (Tertullian, *Sp.*, 12).

- Munificus* is also mainly used in this sense. Poetic transference: *circi munus*, Ovid, *Fasti*, v, 190. Ritschl, *op. cit.*, p. 62 f.
- 77, 33. grief. Seneca, *Cons. ad Helv. matr.*, c. 17; cf. Jonas, *De ord. libror. L. Ann. Senecae*, p. 30.
- 77, 34. writings. *Epp.*, 7, 2. He speaks with indignation also in *Epp.*, 90, 45. Of the work *De tranq. animi* (c. 2, 13: *juvat jam et humano sanguine frui*) cf. Jonas, *op. cit.*, p. 41 sqq.
- 78, 36. greatness. In the year 58, when there was as yet no amphitheatre, German ambassadors were brought into Pompey's theatre, '*quo magnitudinem populi viserent*', Tac., *A.*, xiii, 54.
- 78, 37. contemporaries. Martial, *Spect.*, 1.
- 79, 2. robes. Not only the magistrates in office, but all who had held curule offices wore the *praelecta* at popular festivals; Mommsen, *StR.*, i², 437, 1.
- 79, 6. gaze. Suetonius, *Calig.*, c. 35: *edente se munus* (Ptolemaeus) *ingressum spectacula convertisse hominum oculos fulgore purpureae abollae animadvertit*.
- 79, 9. foreign. Josephus, *A. J.*, xiv, 10, 6. A rescript of Julius Caesar contains the words: *ἰδοῦσθαι τε Ἰρκανῶ καὶ παῖσι τοῖς αὐτοῦ καὶ πρεσβευταῖς τοῖς ὑπ' αὐτοῦ πεμφθεῖσιν ἐν τε πυγμῇ μονομάχων καὶ θηρίων καθεζομένους μετὰ τῶν συγκλητικῶν θεωρεῖν*.
- 79, 11. people. Sueton., *Aug.*, c. 43: *quodam autem muneris die Parthorum obsides tunc primum missos per mediam arenam in spectaculum induxit superque se subsellio secundo collocavit*. Dio, lxviii, 15: (Trajanus) *τοὺς . . . πρεσβευτὰς τοὺς παρὰ τῶν βασιλέων ἀφικνουμένους ἐν τῷ βουλευτικῷ θεάσασθαι ἐποίησεν*.
- 79, 14. togas. Sueton., *Aug.*, c. 58: *patris patriae cognomen . . . detulerunt ei . . . plebs . . . ineunti Romae spectacula frequens et laureata*. Dio, lxxii, 21 mentions the crowning of the senators with laurel. This was no doubt the regular practice, at least at great festivals.
- 79, 18. proletariat. Calpurn., *Eclog.*, 7, 26 and 79. Cf. Marquardt, *StV.*, iii², 557, 7.
- 79, 21. artistic. Calpurn., *op. cit.*, 7, 47.
- 79, 24. interior. Lucret., iv, 75 sqq.
- 79, 25. sky. Pliny, *N. H.*, xix, 25; cf. Appendix xxxiv.
- 79, 27. cooled. Cf. Marquardt, *op. cit.*, 558, 4.
- 79, 34. typical. Augustine, *Confess.*, vi, 8.
- 80, 12. accommodated. Stephan, *Das Verkehrsleben der Alten*, in Raumer's *Hist. Taschenbuch*, v, 9, p. 22 n.
- 80, 16. Mérimée. P. Mérimée, *Lettres sur l'Espagne*, 1830 (Monsaique, Bruxelles, 1833, p. 302).
- 80, 20. Maximilian. Maximilian, afterwards emperor of Mexico, (*Aus meinem Leben*, ii, 67) expresses a certain measure of enthusiasm for bull-fights. Cf. the expressions of disgust in Brehm, *Illustr. Thierleben*, ii, 676-683.
- 80, 23. weaning. On the gradual cessation of the amphitheatral spectacles see P. E. Mueller, *De gen. aev. Theodos.*, ii, p. 80 sqq.; or for a better and more complete account, Wallon, *Hist. de l'esclavage*, iii, 421 ss.
- 80, 29. bury. Jerome *Vita Hilar.*, c. 3. De Rossi, *Bull. crist.*, v,

- p. 77 ss., thinks that on a bucket found in Tunis with the Christian inscription ἀντλήσατε ὕδωρ μετ' εὐφροσύνης he recognizes a victorious gladiator (*thrax* or *retaliarius*), whom he considers a symbol of the victorious Christian soul. Apart from the extreme improbability of such a symbol, I have no doubt that the figure represents a charioteer.
- 80, 31. orders. *Cod. Theodos.*, xv, 12, 1 (with Gothofredus' commentary).

- 92, 2. often. Cic., *Rabir.*, c. 12; Prudent., *In Laur. marty.*, p. 144. For 'demagogy' read 'roguery'.
- 92, 6. charms. Juv., 6, 45; 1, 35; 8, 185.

- 92, 8. enriched. Cic., *Phil.*, 2, 27.
- 92, 10. pursuers. Seneca, *Epp.*, 114. Haupt, *Hermes*, vii, 182, reads *militēs fugitivi pro divites*, needlessly in my opinion.
- 92, 11. Abuse. Philo, *Ad Gai.*, p. 598 M.: καταχλευαζόμενοι καὶ κερτομούμενοι πρὸς τῶν ἀντιπάλων ὡς ἐν θεατρικοῖς μύμοις.
- 92, 12. boobies. Cf. the list of actors in the dedication plays, which according to two Roman inscriptions (of 212 and presumably of a somewhat earlier date) were arranged by soldiers of the corps of *vigiles* and of the fleet of Misenum; Mommsen, *Hermes*, v, 303 ff.; *CIL*, vi, 1063.
- 92, 13. expression. Gell., *N. A.*, xvi, 7.
- 92, 14. coarse. Philo, *op. cit.*, p. 552. ἡ ἐπὶ μύμοις ἀσχερῶν καὶ σκωμμάτων μὴ ὑπομειδῶντα σεμνότερον, ἀλλὰ μειρακιωδέστερον καυχάζοντα.
- 92, 16. flute. Grysar, *op. cit.*, p. 264 ff.
- 92, 18. action. Quintilian, iv, 2, 53; Plutarch, *Qu. conv.*, vii, 8, 4. Also the mime mentioned in *De soll. an.*, c. 19, 9, was πλοκήν ἔχων δραματικὴν καὶ πολυπρόσωπος. Troops of mimes contained also *actores quartarium*: *CIL*, vi, 10, 118 [quar]tarum in mimis saltantibus utilis actor). *BdI*, 1885, p. 240.
- 92, 21. end. Cic., *Pro Cael.*, c. 27.
- 92, 35. naked. Grysar, p. 271 ff. The idea that they showed themselves in complete nudity on these occasions cannot be proved by quoting accounts of performances at Byzantium and Antioch in the time of St. John Chrysostom. *Gloss. Labb.*: sum nudus, fero levia γυμνητάω.
- 92, 40. praetors. *Trist.*, ii, 497 sqq.
- 93, 1. verse. Martial, iii, 86.
- 93, 2. emperor. *Id.*, xiii, *praef.*
- 93, 9. immorality. Salvian., *De gubern. Dei*, vi; cf. Cyprian, *De spectaculis*, 6, and vol. i, p. 246 f.
- 93, 12. mimes. Suid., s. καθημαξευμένος: Ἀλιανός· Γύναιον ἐκ Συρίας, καθημαξευμένον ὑπὸ παντὸς τοῦ προσιόντος. ἐταῖρα γὰρ ἦν ἐμφανὴς καὶ τῶν ἐν τοῖς μύμοις δι' ἀκολασίας περιπαθεστέρα, τοῖς τε φαινομένοις εἰς τὴν κοινὴν ὄψιν σχήμασιν ἐκκαλουμένη τοὺς ὁρῶντας εἰς τὰ πάθη τοῦ σώματος, καὶ κατατείνουσα τὸν δῆμον καὶ ὅσον μετὰ τοῦ δῆμου πρὸς συνῶδὴ καὶ μαρικὴν ἀσέλγειαν.
- 93, 15. dancers. Grysar, *op. cit.*, p. 310 ff. Cf. pp. 253 and 272. Jerome, *Epp.*, 52, 2 says of the story of Abishag and King David: nonne tibi videtur . . . figmentum esse de mimo vel Atellanarum ludicro?
- 93, 17. naked. Falke, *Deutsche Trachten- und Modenwelt*, i, 278. Louis XI was received on his entry into Paris in 1461 by the most beautiful girls of the city quite naked, with poems. Among the plays which were acted at Lille in 1468 before Charles the Bold was the Judgment of Paris, in which the three goddesses appeared entirely naked in accordance with the myth. Even as late as 1520 Dürer witnessed similar spectacles during his journey in the Netherlands. The municipality of Antwerp, he writes to his friend Melanchthon, presented all kinds of shows in the street at the entry of Charles V, among which were to be seen the most beautiful and well-born girls of the

- city, almost entirely naked, being covered with nothing but dresses of thin gauze. The grave young emperor looked another way, but Dürer confesses that he gazed at them attentively 'because he was a painter'.
- 93, 39. distributed. Choricus, 'Περὶ τῶν ἐν Διονύσου τὸν βλοπτεκονίζοντων', ed. Ch. Graux, in *Rev. de philol.*, N. S., i (1877), p. 262 ss. The passages cited are : 7, 9, p. 224 ; 10, p. 229 ; 13, 6, p. 236 ; 15, 3, p. 239 ; 16, p. 240 s., 19, p. 244 s. It seems to have been the same in the West. Masculus, an *archimimus*, was condemned to death by Gaiseric because he was a Catholic, but was afterwards reprieved. Victor, *Vit. pers. Vandal.*, i, 15, 47.
- 94, 8. Laberius. Macrobi., *Sat.*, ii, 7.
- 94, 9. Atticus. Cic., *Ad. Att.*, xiv, 3 (710 A.U.C.): tu si quid πραγματικῶν habes, rescribes; sin mimus, populi ἐπισημασταν et mimorum dicta perscribito.
- 94, 16. edict. Sueton., *Aug.*, c. 43.
- 94, 18. effeminacy. *Id. ib.*, c. 68.
- 94, 20. applause. *Id.*, *Tiber.*, c. 45.

- 97, 32. theatre. Philostrat., *Apoll. Tyan.*, v, 195, p. 89, ed. K.
- 98, 2. eye. Horace, *Epp.*, ii, 1, 181 sqq., 187.
- 98, 12. dances. Cf. Appendix xxxvii. On the declamation and gestures of the tragic actors see Ribbeck, *Röm. Tragödie*, p. 667 f.
- 98, 16. composer. My essay in Marquardt, *StV*, iii², 545.
- 98, 30. parts. Cf. the passages cited by Bergk, *Ueber einige Zeichen der Plautin. Hdschr.*, in *Philologus*, xxxi (1871/72), p. 239, 11. Cic., *De Or.*, i, 60; *De Legg.*, i, 4; *Ad Fam.*, ix, 22; *Pro Sestio*, 57.
- 98, 37. applause. Pliny, *Epp.*, ix, 34. 'This strange device occurs even at the end of the sixteenth century, e.g. in the *Ansiparnasso* of Orazio Vecchi (1597), and in Monteverde's *Ballo delle ingrate*, Ambros, *Gesch. der Musik*, i, 520. It is remarkable, in view of Goethe's ideas on musical representation, that he once, if only as a make-shift, ventured on something similar on the Weimar stage (Devrient, *Gesch. d. deutsch. Schauspielkunst*, iii, 247).
- 99, 2. themselves. Cf. Mommsen, *RG*, iii⁵, 612 f. The resolution of tragedy into its elements is on the whole very accurately explained by G. Boissier, *De la signification des mots cantare et saltare et saltare tragoediam*, in *Rev. archéol.*, N. S., 2, pp. 333-343.
- 99, 8. stage. I refer in general to my essay in Marquardt, *StV*, iii², 553 f., and to the treatise of Grysar cited there, *Ueber das canticum und den Chor in der Tragödie*.

- 99, 14. vocalist. Sueton., *Nero*, c. 24, with Casaubon's notes. Grysar, *op. cit.*, p. 56, 1 and Lipsius, *Electa*, i, 24. According to Pseudolucian., *Nero*, c. 9, Nero at the Isthmian games caused an excellent rival tragedian named Epirotes to be killed by his actors: ελαπέμπει Νέρων ἐπ' ὀκρυβάτων (in *cothurni*, as Kayser explains, *i.e.* in costume) τοὺς αὐτοῦ ὑποκριτὰς ὅλον προσηκόντας τι πράγματι. Nero certainly took several actors about with him, but it cannot be concluded with any certainty from this outrage that several actors could appear on the stage together with the singer.
- 99, 15. choir. A Chorus must probably be assumed from Epictet., *Diss.*, iii, 14: ὡς οἱ κακοὶ τραγῳδοὶ μόνοι ἔσται οὐ δύνανται ἀλλὰ μετὰ πολλῶν.
- 99, 17. linked. Grysar's statements on p. 45 are mere conjectures.
- 99, 19. dialogues. The passage of Dio Chrys., *Or.*, xix, 261 may refer to dialogues, but equally well to iambic solos alone.
- 99, 30. free. Sueton., *Nero*, c. 21. Cf. Euripides, *Herc. fur.*, 1035. The parts which Juv., 8, 223, Dio, lxiii, 9 and 22, and Philostrat., *Vit. Apollon.*, v, 6, mention as played by Nero, are probably only arbitrarily chosen examples.
- 99, 34. death. Suetonius, *Nero*, c. 46.
- 99, 39. appear. *Id.*, *Caes.*, c. 39; *Aug.*, c. 43.
- 99, 41. actor. Tac., *A.*, xiv, 15.
- 100, 2. texts. Mommsen, *RG*, iii⁵, 613. Grysar (*Der röm. Mimus*, in *Sitzungsber. d. Wien. acad.*, xii, pp. 327-330) has introduced much erroneous and irrelevant matter into the section on the *scena Graeca*.
- 100, 4. audience. See vol. ii, p. 91, 24-5 and note. Choric., *op. cit.*, c. 14, 7, p. 238: ἵπποδρομίας μὲν οὖν κάρχησιν ὑπεραίρει τὸ πρᾶγμα τῷ μηδὲν στασιῶδες τοῖς δῆμοις ἐμβάλλειν, θαυμαστοποιούς δὲ καὶ τραγῳδίας ὑπόκρισιν μετιόντας καὶ λύρα χρωμένους τῷ μὴ κόρον διδόναι, ἐκείνων γὰρ οὕτως ἐνεπλήσθησαν ἀνθρωποὶ τῶν θεαμάτων, ὡς μόλις δημοσιεύειν.
- 100, 7. mime. *Id. ib.*, c. 17, 2, p. 243: μῦμος γὰρ ἅπας, καὶ ἄγαν εὐφωγος ἢ, τὰ δεύτερα φέρει τραγῳδίας ὑποκριτοῦ, ὅς νῦν μὲν εἰσέρχεται παῖδα φονέα μητρὸς ὑποκρινόμενος, νῦν δὲ μητέρα ξίφος ἐπιφέρουσαν τέκνους ὑπὸ ζήλοτυπίας ἐρωτικῆς. If there was need of φωνασκεῖν and strict diet for mimes (c. 15, 9, p. 240), both were certainly all the more necessary for tragedians.
- 100, 22. Augustus. Sueton., in Jerome, ed. Roth (p. 301, 25).
- 100, 28. god. Henzen, *Tessera di un pantomimo*, *BdI*, 1875, p. 170 ss. J. Schmidt, *BdI*, 1879, p. 170. Buecheler, *Ind. Bonn. aestiv.*, 1877, pp. 11-13. *CIL*, vi, 2, 10, 115.
- 100, 30. disuse. Cf. Marquardt, *op. cit.*, p. 551, and below.
- 100, 38. Lucan. Welcker, *op. cit.*, p. 1469; Jahn, *Proll. ad Pers.*, p. xxxiv; Genthe, *De M. Annaeo Lucano*, p. 64 sq. Cf. Teuffel, *RLG*⁴, 303, 4.
- 100, 41. Paris. Juv., 7, 92.
- 101, 5. men. Plutarch, *Qu. conv.*, ix, 15, 17. Cf. Liban., ed. Reiske, vol. iii, p. 381 sq.
- 101, 6. historical. Dosithe., *Interpr.*, iii, ed. Boecking, p. 65, says in the introduction to the section on mythology: Fabulae

- quoque pantomimorum inde accipiunt laudem et testantur in saltatione, vera esse quae scripta sunt.
- 101, 12. Cleopatra. Lucian., *De saltat.*, 54 and 58.
- 101, 15. Nero. Sueton., *Nero*, c. 54.
- 101, 17. Macrobius. Macrobi., *Satt.*, v, 17, 15: Virgil treated so beautifully the story of Dido, that his description was not only imitated by sculptors, painters and tapestry-weavers, but also 'histrionum perpetuis et gestibus et cantibus celebretur'.
- 101, 18. Gods. Lucian, *De saltat.*, c. 59.
- 101, 29. Myrrha. Lucian, *op. cit.*, 37-61. Grysar, *op. cit.*, 53 f.
- 101, 32. fall. Josephus, *A. J.*, xix, 1, 13.
- 101, 34. audiences. Cf. on later times P. E. Mueller, *De gen. aev. Theodos.*, ii, 104 sqq.
- 102, 7. turmoil. Sueton., in Jerome (ed. Roth, p. 301, 25). Cf. Macrobi., *Saturn.*, ii, 7, 18.
- 102, 8. orchestra. The first two are mentioned several times by Lucian, the last two by Ovid, *Remed.*, 753 sq., where indeed mimes may also be meant. Cf. Grysar, *Rhein. Mus.*, ii, p. 58. (Arnob., *Adv. gent.*, i, 2; Cassiodor., *Var.*, iv, 51.)

107, 29. schools. Seneca, *Qu. n.*, vii, 32: stat per successores Pyladis et Bathylli domus.

107, 31. time. Cf. Appendix xxxviii.

107, 32. Plutarch. Plutarch, *l. c.*

107, 40. accompanists. Cf. Marquardt, *op. cit.*, p. 553, 4 and 5, and Petron., c. 53 (odaria saltare). Of the inscriptions with 'cantavit saltavit et placuit' Orelli, 2605 is spurious, but 2607 = *CIL*, xii, 188 is certainly genuine. The latter (d. m. puer, Septentrionis [the name also occurs in Orelli, 2527 = *CIL*, xiv, 2977] annor. xii qui Antipoli in theatro biduo saltavit et placuit) has occasioned the following amusing comment by Wallon in his (generally very valuable) *Hist. de l'esclavage*, ii, 129: On connaît l'inscription de ce jeune enfant du Nord, 'qui parût âgé de douze ans sur le théâtre d'Antibes, dansa deux jours et sût plaire' . . . Quel sort fatal le ravit si tôt et si loin de sa patrie, sous un ciel qui le conviait à vivre par tous les charmes d'un climat plus doux?

 118, 35. games. Sueton., *Aug.*, c. 59; Mommsen, *RGDA*², p. 42, 1. Caligula's prohibition (Sueton., *Cal.*, c. 23: Actiaes Siculasque victorias . . . vetuit sollempnibus feriis celebrari, cannot have remained in force after his death. On Poppaea's delivery in 63 a 'certamen ad exemplar Actiacae religionis' was ordered in Rome, Tac., *A.*, xv, 23. Among the victories of T. Flavius Archibius, *CIG*, 5804 is in l. 24: τὸν ἐν Ἀντιοχείᾳ λερόν πενταετηρικὸν ἀγῶνα Ἀκτιακῶν παίδων (89 A.D.) and in l. 27: καὶ τὸν ἐν Ἀλεξανδρείᾳ λερόν πενταετηρικὸν ἀγῶνα Ἀκ[τιακῶν παίδων] (90 A.D.). Cf. p. 732. But here we must probably understand with Mic, *Quaest. agonist.* (Rostochii, 1885), p. 54, the *Olympia* celebrated in Alexandria (*CIG*, 5913), and by Ἀκτιακοὶ παῖδες, those whose age was fixed by the rules of the *Actia* at Nicopolis. The *Olympia* are also referred to in Gruter, 499, 6 = *CIL*, ii,

- 4136 (Tarracone) : cohorti I Breucor. trib. mil. proc. divi Titi Alexandriæ agnothetæ certaminis penetaeterici bis. On the other hand *CIA*, iii, 129 (third cent.): "Ἀκτῖα ἐν Τύρῳ and *CIL*, xiv, 474 : Actia aput Bostram.
- 118, 38. victory. Dio, li, 19.
- 118, 39. Agrippa. *Id.*, liii, 2 ; cf. Mommsen, *RGDA*², p. 41 sq.
- 118, 41. Actium. Augustus himself calls them *θεαὶ ἐκ τῶν εὐχῶν ὑπὲρ τῆς σωτηρίας* ; a coin of the year 738 shows a sacrificing priest with the inscription : pro valetudine Caesaris s. p. q. R. On the obverse is a sacrificing Apollo with : Apollini Actio. Mommsen has rightly concluded from this that the 'ludi pro salute divi Augusti votivi' (762) in Pliny, *N. h.*, vii, 158 belong to this period.
- 119, 2. alternately. Dio, liii, 1 ; liv, 19, cf. Mommsen, *op. cit.*
- 119, 3. 9 A.D. Pliny, *N. h.*, vii, 158.
- 119, 8. Agrippa. Dio, liii, 1.
- 119, 12. hour. Sueton., *Aug.*, c. 44 ; cf. Mommsen, *op. cit.* (730, 746 or 762).
- 119, 15. officials. Tac., *A.*, xiv, 21 : nec perinde magistratus rem familiarem exhausturos aut populo efflagitandi Graeca certamina a magistratibus causam fore, quum eo sumptu respublica fungatur.
- 119, 17. Caligula. Dio, lix, 9.
- 119, 19. birthday. *Id.*, lix, 13.
- 119, 19. Claudius. *Id.*, lx, 23.
- 119, 26. exchequer. Tac., *A.*, xiv, 20 ; Dio, lxi, 21 ; Sueton., *Nero*, c. 12 ; Eckhel, *D. N.*, v, 264. The reverse of a coin, struck in this year with the inscription CER. QVINQ. ROM. CON. S.C. shows a table on which are an urn and a wreath, and below it a *discus* and griffins holding a shield. *CIL*, iv, 1745 : Roma va(le) ; Neroneis Augusta(libus feliciter ?).
- 119, 28. Apollo. This is what Suetonius means, *loc. cit.* : instituit quinquennale certamen primus omnium Romae more Graeco triplex, he does not, as Nipperdey thinks, allude to the periodical return of the games, nor, as Marquardt, *Priv.*, i³, 117, 4, supposes, to the institution of contests for amateurs, for this was already the case with the chariot-races in the periodic games under Augustus.
- 119, 32. wreathed. Cf. Tac., *A.*, xvi, 4 ; Sueton., *Nero*, c. 21 ; *Vit. Luciani* and Haackh in the *StRE*, v, 584.
- 119, 37. oil. Sueton., *Nero*, c. 12 ; Dio, lxi, 21 ; Tac., *A.*, xiv, 47.
- 119, 41. arms. Tac., *A.*, xiv, 20.
- 120, 1. Sura. Schol. Juv., 4, 53 (apparently from Marius Maximus), see Valla. Cf. on Sura Appendix xi.
- 120, 5. dress. Tac., *A.*, xiv, 21 : Graeci amictus quis per eos dies plerique incesserant, tum exoleverant. Nipperdey explains 'exoleverant' as 'were no longer a novelty and no longer caused a sensation'.
- 120, 6. 65. Tac., *A.*, xvi, 4. Euseb., *Chron.* The continuance of the *Neronea* at a later period is not proved either by contorniates (Eckhel, *D. N.*, viii, p. 312, or by the cameo with the inscription : Νέρων Ἀθροῦσσε (Nero in a *quadriga* with sceptre

and *mappa*—Caylus, *Rec.*, i, tab. 86, 2) or again by the inscriptions, Gruter, 116, 3 and 499, 6, cited by Genthe, *De Lucani vita et scriptis*, p. 52 sq. (cf. note on p. 118, 35).

- 120, 10. Neronea. Aurel. Vict., *Caes.*, c. 27.
- 120, 11. Minerva. *Catal. imp.*: agonem Minervae instituit. Perhaps this is the ἀγὼν Ἀθηνᾶς προμάχου. *CIG*, 1068 (certainly after Hadrian) mentions among other victories in the *agones* also Ἀθηνᾶς Προμάχου ἐν Πώμῃ δ. (Four victories in twelve years, *CIG*, 5804.) *CIA*, iii, 129 (Anhang 19): inscription of a herald—Ἀθηνᾶς Προμάχου ἐν Πώμῃ γ (between 253 and 257).
- 120, 12. Agon. Morcelli, *Sull'agone Capitolino pubblicato da Labus*, ed. 2, Milano, 1816.
- 120, 13. Olympian. Franz, *CIG*, iii, p. 729. Cf. vol. ii, 2810 C. Add.: Πώμῃ Καπετώλεια Ὀλύμπια.
- 120, 15. summer. Morcelli, p. 12. The murders of Maximus and Balbinus took place during the Capitoline games in the year 238 (Herodian, viii, 8, 3). Clinton, *Fasti Romani*, p. 252, has collected the different reckonings of the month in which the event occurred, he himself decides for the middle of June; Ranke, *Weltgeschichte*, iii, 1, 405, 1, for the 10th of July; Seeck, *Rhein. Mus.*, xli (1886), p. 168, for the 23rd of July. For the length of the period see Censorinus, *De die natali* (written before 238), c. 18, 11; Scaliger, *De emend. temp.*, 243; Eckhel, *D. N.*, iv, 437.
- 120, 18. ceased. Sueton., *Domitian*, c. 4. On the separate contests cf. Appendix xlii.
- 120, 21. wreath. Stat., *Silv.*, v, 3, 231: mixta quercus . . . oliva (the latter the crown in the *agon Albanus*). Martial, iv, 1, 6; 54, 1; ix, 23, 5; Juv., 6, 387: Capitolinam . . . quercum. Cf. Nohl, *Quaest. Statian.*, pp. 26, 30.
- 120, 22. hand. Martial, iv, 1, 6: perque manus tantas plurima quercus eat.
- 120, 22. pronouncement. *IRN*, 5252 = *CIL*, ix, 2860 (inscription of Histonium): CORONATVS EST INTER POETAS LATINOS OMNIBVS SENTENTIS IVDICVM.
- 120, 26. Senator. Burckhardt, *Die Cultur der Renaissance*, p. 202 ff. Cf. vol. iii, p. 46.
- 120, 35. century. Preller, *Die Regionen Roms*, p. 169.
- 121, 3. men. *CIG*, 5804.
- 121, 7. before. Dio, lxxix, 10.
- 121, 11. form. Preller, *op. cit.*, p. 169 f.
- 121, 18. wreaths. Sueton., *Domitian.*, c. 4.
- 121, 22. poet. Herodian, i, 9, 2.
- 121, 23. antiquity. Cf. Appendix xliii.
- 121, 25. emperors. *Bull. com. d. R.*, 1887, p. 186, 1922 (gymnico agone saepius coronatus).
- 121, 25. Hadrian. *CIG*, 3208, mentions the victory of a *citharoedus* in the Ἀδριάνια Πώμῃ β, and *ib.*, 246 the victory of a pugilist in the Ἀδριάνεια Πώμῃ.
- 121, 28. Severus. *Alex. Sever.*, c. 35.

- 125, 3. necks. Juv., 3, 68 : et ceromatico fert niceteria collo.
- 125, 7. wreath. Horace, *Epp.*, i, 1, 49. Cf. Preller, *Röm. Myth.*, ii³, 112, 3.
- 125, 10. athletes. Of course I only speak here of inscriptions, which are the only source of our knowledge of professional athletics among the Romans. A relief of an athlete discovered near Varago in the district of Treviso bears the inscription (*BdI*, 1864, p. 27) :—
 Κλαυδιανὸν πύκτην λευτέριοι ἐνθάδε ἔθηκαν
 τευμώντες καὶ νῦν εἰκόνι καὶ στεφάνοις.
 λευτέριοι are *lintearii* or *capsarii*, cf. Neubaur, *Comm. epigr.*, p. 76 sq. Perhaps inscriptions of athletes were often composed in Greek in Italy.
- 125, 13. amateur. This is shown by the complaint of Pliny, *N. h.*, xxxv, 168.
- 125, 14. welcomed. Seneca, *De brev. vit.*, c. 12, 3.
- 125, 15. feats. *Id. ib.* : qui in ceromate (nam, pro facinus, ne Romanis quidem vitiis laboramus) sectator puerorum rixantium sedet.
- 125, 16. athletes. *Id.*, *Epp.*, 15, 3 : accedunt pessimae notae mancipia in magisterium recepta. Martial mentions *palaestritiae* among other slaves, iii, 58, 20 ; 82, 20 ; vi, 39, 9. Perhaps Pers., 4, 39 also refers to slaves.
- 125, 18. chewing. Seneca, *Epp.*, 15, 9.
- 125, 20. athletes. Pliny, *N. h.*, xxxv, 2.
- 125, 21. grounds. Martial, vii, 32.
- 125, 23. Glaucias. Stat., *Silv.*, ii, 1, 110. The meaning of 'infantes gymnici', *CIL*, vi, 10, 158-10, 160, among whom were children in their second and sixth years, is obscure.
- 125, 26. wrestling. Quintilian, xii, 2, 12.
- 125, 26. competitors. Galen, *Περὶ λατρ. καὶ γυμναστ.*, c. 46, ed. K.,

- v, p. 894 : ἀλλ' ὅμως οἱ τούτων ἀτυχέστατοι καὶ μηδεπώποτε νικήσαντες ἐξαίφνης ἑαυτοὺς ὀνομάζουσι γυμναστάς. Omit 'in other branches.'
- 125, 29. performers. Tertullian, *Spect.*, c. 22 : xystici . . . quibus feminae corpora substernunt. Martial, vii, 57 :
 Castora de Polluce Gabinia fecit Achillam,
 Pythagathos fuerat, nunc erit Hippodamos.
- 125, 29. gifts. Juv., 6, 356.
- 125, 30. diet. *Id.*, 2, 53.
- 125, 32. dumb-bells. *Id.*, 6, 246 ; Martial, vii, 67.
- 125, 35. weapons. *Hadrian.*, c. 14, 26.
- 125, 38. hour. Galen, ed. K., vi, 406.
- 125, 39. running. *M. Antonin.*, c. 4.
- 125, 40. youth. *L. Verus*, c. 2.
- 125, 40. Narcissus. *Commodus*, c. 17 ; *Pescenn. Nig.*, c. 1 ; Dio, lxxii, 22.
- 126, 1. Severus. *Alex. Sev.*, c. 27.
- 126, 10. bravery. *Digg.*, iii, 2, 4 (Ulpianus libro vi ad edictum). It is evidently from ignorance that Tertullian, *Spect.*, c. 22, includes the *xystici* among the *infames*.
- 126, 12. Emperor. Lebas-Waddington, 16, 209.
- 126, 14. compete. *Digg.*, ix, 2, 7, 4 (Ulpian, libro xviii ad ed.) : Si quis in colluctatione vel in pancratio vel pugiles dum inter se exercentur, alius alium occiderit, si quidem in publico certamine alius alium occiderit, cessat Aquilia, quia gloriae causa et virtutis, non injuriae gratia videtur damnum datum. Hoc autem in servo non procedit, quoniam ingenui solent certare. Cf. also P. E. Mueller, *De gen. aev. Theodos.*, ii, p. 65 n.

- 129, 35. part. Dio, lxxiv, 14.
- 129, 31. family. *CIG*, 5910. Cf. Kiesling, *BdI*, 1862, p. 157.
- 129, 34. Germanicus. Africanus' statement (Hertzberg, *Gesch. Griechenlands*, ii, 59 n.) that it was a team of Tiberius is refuted by the following inscription: Γερμανικὸν Καίσαρα αὐτοκράτορα Τιβέριον Καίσαρος Σεβαστοῦ υἱὸν νικήσαντα Ὀλύμπια τεθρίππῳ κ.τ.λ. Dittenberger, *Inscr. aus Olympia*, in *Denkm. u. Forsch.*, xxxv (1877), p. 36. The reason of Africanus' mistake was that Tiberius (before his adoption by Augustus, not later than Ol. 195 = 1 A.D.) had really won a victory there with a quadriga, as the following inscription shows: Τιβέριον Κλαύδιον Τιβέριου υἱὸν Νέρωνα νικήσαντα Ὀλύμπια τεθρίππῳ τελείῳ κ.τ.λ. (Dittenberger, *op. cit.*, xxxviii [1878], p. 53).
- 129, 36. consul. *Ibid.*, xxxvi (1878), p. 119.
- 129, 38. Roman. Pausan., v, 20, 4; cf. Krause, *Gymnastik und Agonistik*, p. 803.
- 130, 3. Caracalla. Secchi, *Il mosaico Antoniniano rappresentante la scuola degli atleti*, Roma, 1843, p. 4: si trovò per l'appunto ne'due semicircoli oppositi fra quali era compresa la cella solare, che perciò dal Piranesi fu definita camera della palestra. Undoubtedly the mosaic is of the time of Caracalla (p. 7 s.). Of the considerable number of Roman representations of athletes it is only possible in very rare cases to determine the period with any certainty. F. Pinder's opinion that the athletic mosaic of Tusculum (*Mon. d. I.*, vi and vii, 1, 82) belongs to the time of Hadrian (*BdI*, 1862, p. 179 ss.), is rightly declared by H. Hirzel (*AdI*, 1863, p. 412) to be quite uncertain. To the closing age of the Antonines is conjecturally assigned an athletic mosaic of the former Villa Casalia on the Caelian (*Bull. com. d. R.*, 1886, pp. 49-51). On the spread of athletic shows in the western provinces cf. Appendix xlv.

II. ROMAN LUXURY.

- 131, 5. prevalent. Roscher, *Ansichten der Volkswirtschaft*, i, p. 450 (the most grandiose example of senseless and immoral luxury is offered by imperial Rome). Goethe (vol. 39, p. 53) compares Roman luxury with that of uneducated men, who, grown rich, make a ridiculous use of their fortune, and describes it as absurd and exaggerated. Gibbon on the other hand (*History of the Decline and Fall*, chap. ii, near the end) has a good opinion of the luxury in the time before Commodus.
- 130, 17. Zumpt. Zumpt, *Stand der Bevölkerung*, p. 70 f.
- 130, 19. Becker. Becker, *Gallus*, ii^a, 284 (omitted in Göll's edition).
- 132, 5. Austin. Alfred Austin, *Rich Men's Dwellings*, in *National Review*, December 1883, p. 466 f. This author also believes that Roman luxury was the greatest in history and hardly to be beaten.
- 132, 20. emperors. Meierotto makes the same remark about the manners and customs of the Romans, 3rd edition (1814), preface, p. xxx f.; he also has a just opinion of Meursius's book.
- 132, 27. limitless. Sueton., *Calig.*, c. 37: nihil tam efficere concupiscebat, quam quod posse effici negaretur.
- 132, 28. insanity. Tac., *A.*, xiii, 3; *H.*, iv, 48; Seneca, *Cons. ad Polyb.*, c. 36; Sueton., *Calig.*, c. 50; Niebuhr, *Vorträge über römische Geschichte*, iii, p. 178. So also the physician Wiedemeister, *Der Cæsarenwahnsinn*, p. 87 ff., but on the other side Schiller, *Gesch. d. röm. Kaiserthums*, i, 306.
- 132, 31. provinces. Perhaps Sicily, Sardinia and Corsica. Marquardt, *StV*, ii^a, 298, 3.
- 132, 32. day. Sueton., *l. c.*; Seneca, *Cons. ad Helv.*, 10, 4.
- 132, 34. palaces. Tac., *A.*, xv, 42: Nero tamen, ut erat incredibilium cupitor effodere proxima Averno juga conisus est.
- 133, 3. opera. Devrient, *Geschichte der deutschen Schauspielkunst*, ii, 306 (the opera *Suleiman* at Dresden in 1753).
- 133, 4. Mühlberg. Keyssler, *Reisen durch Deutschland*, ed. 3, 1776, p. 1326.
- 133, 4. Charles. Vehse, *Gesch. der deutschen Höfe*, vol. 25, pp. 247-290. Not all the statements of Vehse are trustworthy, but they certainly deserve as much credit as most of the notices in Roman authors about luxury, and perhaps more. Cf. also Devrient, *op. cit.*, ii, 301 on the cost of the ballet and of the opera at the time of Karl Eugen. 15,000 florins' worth of gifts were distributed after the opera *Semiramis*.
- 133, 13. province. Cf. Appendix xlv.
- 133, 13. Saxony. K. Reichard, *Graf Brühl*, in *Im Neuen Reich*, 1887, no. 35, p. 327.
- 133, 14. Württemberg. Perthes, *Polit. Zustände und Personen in Deutschland unter französ. Herrschaft*, i, 506. A. v. Haller (Diaries of his travels in 1723 and 1727, edited by L. Hirzel, 1883, p. 8) estimates the revenues of the duchy under Eberhard Ludwig at about 12 million florins.
- 133, 27. Plutarch. Plutarch, *Lucull.*, 39, 2.

- 133, 29. Pliny. Pliny, *N. h.*, xxxvi, 113.
 133, 34. Asia. On the gold treasures of Cyrus see Pliny, *N. h.*, xxxiii, 51. The treasures which Alexander the Great acquired at the captures of Susa and Persepolis, and deposited at Ecbatana, amounted to 180,000 talents, chiefly in ingots. Grote, *History of Greece*, xii, 245.
 133, 36. Atahualpa. P. Chaix, *Histoire de l'Amérique mérid. au xvi. siècle*, ii, 67 s.
 134, 4. price. Clive's fortune was estimated at £1,200,000 at his return in 1760, Vehse, vol. 19, p. 220. Sir John Malcolm estimates his yearly income at £40,000, which Macaulay considers too low.
 134, 7. Aristobulus. Josephus, *A. J.*, xiv, 3, 1 sq.
 134, 12. Mennaëus. *Ibid.*, 3, 2.

 135, 6. talents. Drumann, *RG*, iv, 110, 78.
 135, 7. Pliny. Pliny, *N. h.*, xiii, 92.
 135, 14. peoples. Vol. i, p. 304 f.
 135, 19. freedman. Vol. i, p. 44.
 135, 26. poor. Alfred Austin, *Rich Men's Dwellings*, in *National Review*, December 1883, p. 467.
 135, 30. 6 per cent. Marquardt, *StV*, ii³, 60-62. A bequest at Auzia (Mauretania) *CIL*, viii, 9052 (cf. Mommsen's note) brought in 6 per cent. per annum. The same rate (ἐν τῷ συνήθει τόκῳ τριοβολίῳ ἀργυρικῷ) in the case of temple money at Arsinoë in the third cent. and that only in return for mortgage and security (U. Wilcken, *Arsinoitische Tempelrechnungen*, in *Hermes*, xx (1885), p. 448). 'A rate of interest perhaps only usual for temple money', Hartel, *Papyrus Ersh. Rainer*,

- p. 33). If at the date of the inscription *CIL*, xi, 1, 1236 (Placentia :—litteratus Graecis et Latinis, librarius, partes dixit CCC) 4 per cent. ($\frac{1}{3}$ per cent. monthly) was a usual rate of interest (Hultsch, *Ein Beitrag zur Kenntniss des volksthümlichen Rechnens bei den Römern. Neue Jahrb.*, 1889, p. 342 f.), it can only have been in cases of great hypothecary security.
- 135, 34. a year. Marquardt, *Hdbch.*, ii, 2 n., 215; *StV*, ii², 56. For the reduction I follow, as elsewhere, Hultsch, *Metrol.*², 348. The Gothic king Theodahad desired to sell the dominion of Italy for an income of 1200 pounds of gold. Procop, *B. G.*, 1, 6.
- 135, 40. Hashimid. Kremer, *Culturgeschichte d. Orients*, ii, 190.
- 136, 1. Lorenzo. Burckhardt, *Cultur. d. Renaissance*, p. 64 f. According to his statement the coin value of the *ducato, zecchino, fiorino d'oro, scudo d'oro* is about the same, viz. 11–12 francs of modern money. Vast, *Le cardinal Bessarion*, p. 368, 3, says the same (à peu près 12 fcs.), but he thinks the purchasing power was four to five times as great.
- 136, 2. J. Coeur. P. Clément, *Jacques Coeur et Charles VII ou la France au xv. siècle* (1853), v, 1, p. 1 s.; ii, pp. 1–46. Cf. i, p. lxi ss. (notice sur la valeur relative des anciennes monnaies françaises).
- 136, 12. Chigi. Gregorovius, *Gesch. d. St. Rom.*, viii, 113 ff.
- 135, 16. Fuggers. Kleinschmidt, *Augsburg, Nürnberg und ihre Handelsfürsten im 15. und 16. Jahrhundert* (1881), p. 122. W. Jacob, *Production und Consumption der edeln Metalle* translated by Kleinschrod, ii, 19: 'Capito writes to Zwingli 29 Jan. 1526 that 16 gold gulden will maintain a man for a year. Apparently, therefore, the gold gulden was worth about 10 gulden (florins)'. Hagen, *Deutsch. liter. und relig. Verhältnisse im Reformat. Zeitalter* (1844), iii, 195, 6. The expenses of a young nobleman (*Junker*) and his tutor at Erfurt, for food, lodging, washing, university fees, etc. amounted to 26 gulden for the whole year 1451/52. A boarder of U. Zasius, professor at Freiberg, paid 16 gulden for lodging and board at the beginning of the sixteenth century. Janssen, *Gesch. d. deutschen Volkes seit dem Mittelalter*, i, 23. Consequently the value of the gold gulden was certainly much more than 10 florins of the South German standard. In the time from 1500 to 1560 money was depreciated to about 50 per cent.; Schmoller, *Tübinger Zeitschrift f. Staatswissenschaft*, xvi, p. 511.

- 141, 18. wool. *Ib.*, c. 54.
- 141, 20. Conti. La pincée de poudre coûtait 4 ou 5000 livres; Taine, *Origines de la France contemp.*, p. 170.
- 141, 21. Tepper. E. v. d. Brüggén, *Pödens Auflösung*, p. 306. Troels Lund, *Das häusliche Leben in Skandinavien im 16. Jahrhundert*, p. 143 s. To burn fragrant wood in the grate was considered as healthy and as a sign of wealth. 'The old story does not sound so incredible that Ole Bager had the room heated by burning cinnamon, when Frederick II was his guest at Odense in 1580, just as Anton Fugger had done at Augsburg forty years earlier to honour the emperor Charles V'. This was certainly deliberate extravagance in the eighteenth century.
- 141, 30. indispensable. Roscher, *Ansichten* (on luxury), p. 408.
- 141, 35. unnatural. Seneca, *Epp.*, 122, 5: omnia vitia contra naturam pugnant . . . hoc est luxuriae propositum, gaudere perversis, nec tantum discedere a recto, sed quam longissime abire, deinde etiam e contrario stare. Similarly *Epp.*, 90, 19. Pliny, *N. h.*, xix, 55: nihil utique homini sic quomodo rerum naturae placet.
- 142, 2. contemporaries. Pliny, *Epp.*, iii, 5, 10 (of his uncle): cibum . . . interdiu levem et facilem veterum more sumebat.

- 142, 11. death. Seneca, *Epp.*, 108, 13-17; Tac., *A.*, xv, 63; *ib.*, xv, 45.
- 142, 14. Nature. Cf. Roscher, *op. cit.*, p. 402 (Pliny, *N. h.*, xxxiii 3).
- 142, 14. Pliny. Pliny, *N. h.*, xix, 5 sq.
- 142, 17. Varro. Gell., vi (vii), 16.
- 142, 19. asparagus. Pliny, *N. h.*, xix, 54; *heu prodigia ventris!* (cf. xix, 150).
- 142, 21. luxury. *Id. ibid.*, xix, 55; Seneca, *N. Q.*, iv, 13; *Epp.*, 78, 23 and elsewhere.
- 142, 22. Addison. Addison, *Remarks on Several Parts of Italy* (1700-1703), London, 5th edition (1736), p. 145. According to Gallio, *Annali di Messina*, iii, 3 (in Hartwig, *Aus Sicilien* [1867], i, 12), the eating of ices was not reintroduced into Sicily till after the middle of the sixteenth century. In Spain ice was eaten as early as the time of the Moors.
- 142, 26. Galen. Galen, *Περὶ συνθέσεως φαρμάκων τ. κατὰ τόπους* ed. K., vii, 508: *καὶ γὰρ εὐπορία ψυχρῶν πηγῶν ἐν Ῥώμῃ πολλὴ καὶ χύσις* (he is speaking of the composition of a cooling medicine).
- 142, 27. Sicily. Roscher, *Grundlagen der Nationalökonomie* (4th ed.), p. 184, § 102, 2.
- 142, 30. French. Dairemberg, *Oeuvres d' Oribase*, i, 625 ss. remarks that only snow was used, and not ice: *on ne parait pas avoir connu nos véritables glaces, qui font aujourd'hui les délices des gourmets du monde entier*. Cf. Backmann, *Beitr. z. Gesch. der Erfindungen*, iv, 201. Apparently Abraham a Sancta Clara (d. 1709) knew ices. He speaks in '*Das Wunderwürdige ganz neu ausgeheckte Narrennest*' of 'cooled *Frescade* or frozen juice, which they use at the carnival after their excessive exertions'. At Frankfort on the Main ices were still something extraordinary in 1759. Goethe's mother threw away the ices sent to her children from the table of Count Thorane. 'She thought it was not possible that the stomach could bear real ice, however sweetened'. *Goethes Werke*, 20, 101.
- 142, 35. ice. Neumann-Spallart, *Rückblicke auf die Pariser Weltausstellung*, in *Deutsche Rundschau*, January 1879, p. 88 f.
- 142, 41. feather-cushions. Pliny, *N. h.*, x, 53 s.
- 142, 41. Cicero. Cic., *Tusc.*, iv, 19, 46: *culcita plumea*.
- 143, 2. climate. Hehn, *Culturpflanzen und Hausihiere*, p. 303.
- 143, 5. pillows. The passages concerning feather cushions in Herzberg on Propert., iii, 57; Juv., i, 159; vi, 88; Martial, ix, 92, 4; xx, 13, 6; xii, 17, 8; xiv, 146, 159, 161.
- 143, 10. Frankfort. Beckmann, *Vorbereitung zur Warenkunde* (1794), i, 277, 1, who supposes that the trade in eider-down began in the middle of the seventeenth century.
- 143, 17. Goethe. Goethe, *Geschichte der Farbenlehre* (39, 54) 1: 'One has only to consider these things [the stupid and exaggerated luxury of the Romans], and one will understand how Seneca, who led so distinguished a life, could be angry because people enjoyed a good dinner, cooled their drinks with snow, made use of a favourable wind in a naval battle, and what not'.
- 143, 19. Seneca. Seneca, *De benef.*, i, 10.

- 143, 33. unknown. Ulrich von Hutten takes essentially the same standpoint as Pliny in condemning the luxury of his age (especially the importation of foreign goods): *De Guajaci medicina*, c. xix, ed. Boecking, v, 459 sq.; also Luther: *Von Kaufhandlung, Werke*, Aug. Jena, 1572, Theil ii, p. 465 ff. (465^b) (M. Allihn in *Grenzboten*, 1873, 18 April, p. 111 and Schmoller, *Zur Geschichte d. nationalökonom. Ansichten in Deutschl. während der Reformationsperiode*, in *Tübinger Zeitschrift für Staatswiss.*, xvi, p. 663 ff.) and Abraham a Sancta Clara: Loesch-Wien, p. 40 f. (Karajan, *Abraham a Sancta Clara*, p. 192). On street-paving and lighting see Klemm, *Allgem. Culturgesch.*, 9, 157 (the former in Paris under Philip Augustus, Baudrillart, iii, 163, in German towns not before the fourteenth cent., the latter very much later; Dresden was paved in 1559, and lighted in 1705, while Nuremberg was not even lighted in 1781. *Neues Gemälde von Dresden*, 1817, p. 7 f. Nicolai, *Beschreib. einer Reise durch Deutschland*, i, 227). In Bremen street lighting began in 1698, and proceeded very slowly. Kohl, *Alte und neue Zeit*, p. 22 ff. In Scandinavia paving was introduced about 1500 from Holland. Glass windows, not generally used in Europe till the fifteenth century (Falke, *Die Kunst im Hause*, p. 65 ff.; Wachsmuth, *Culturgesch.*, 2, 302, 7), were introduced into Scandinavia only in the sixteenth century (in which period also the habit of washing in the morning was introduced there. Troels Lund, *op. cit.*, p. 45; 116 f.; 174-176. On the use of forks see Beckmann, *Beilvåge zur Geschichte der Erfindungen*, 5, 294; Marquardt, *Prl.*, i^a, 308 f.; Baudrillart, iii, 232.
- 144, 4. wooden ones. Baudrillart, i, 36 s. Roscher, *Ansichten*, p. 408 f. Straw beds (even for the Kings of France) in the fourteenth century. Baudrillart, iii, p. 149 s.
- 144, 9. William. Th. Wright, *Homes of Other Days*, p. 358.
- 144, 13. Germany. Kohl, *Alte und neue Zeit*, p. 193.
- 144, 19. Nikon. Brückner, *Beiträge zur Culturgesch. Russlands im 17. Jahrh.* (1887), pp. 80-84.
- 144, 36. interest. Cf. the excellent description in Baudrillart, iv, 208-241.
- 144, 37. de Brosse. Reumont, *Die Gräfin v. Albany*, i, 158 f.
- 145, 4. Venetian. Molmenti, *Vie privée à Venise*, p. 539 s.
- 145, 15. latter. One of the classes of Roman luxury on which we are insufficiently informed to compare them with the corresponding modern luxuries, is that of sport, especially racing and hunting (cf. Lady J. Manners, in *Nat. Rev.*, 1884, p. 13 f.).
- 145, 17. Lucullus. Cf. Cic., *De off.*, i, 39; Nicol. Damasc., in Athenaeus, vi, 274; xii, 543; Vellei., ii, 33, 4 and Drumann, *RG*, 4, 168 ff.
- 145, 24. Tacitus. Tac., *A.*, iii, 55, it is true, only speaks of the 'luxus mensae', but it is obvious from the preceding chapters that he is thinking of luxury in general.
- 146, 3. drinkers. Galen, ed. K., xv, 699: οἱ πολλοὶ τῶν ὑγαιονόντων πίνουσιν οἶνον ὑδατωμένον.
- 146, 6. Epicurus. Diog. Laert., *Epicur.*, 11; Seneca, *Epp.*, 18, 25, 4; Stob., *Serm.*, 17, 30 and 34.

- 146, 19. cooks. Livy, xxxix, 6.
 146, 23. baked. Pliny, *N. h.*, xviii, 107.
 146, 27. cocks. Pliny, *N. h.*, x, 139: Gallinas saginare Deliaci coepere, unde pestis exorta opimas avis et suo pte corpore unctas devorandi etc.
 146, 29. ordinance. *Id. ib.*, viii, 223; cf. Becker-Göll, iii, 55 f. Gibbon, *History*, ch. xxxi, 45: 'it is reported that they (*glivres*) are still esteemed in modern Rome and are frequently sent as a present by the Colonna princes'.
 146, 30. wine. Varro in Pliny, *N. h.*, xiv, 96.
 146, 33. Posidonius. Athen., vi, 275 A.
 147, 10. Varro. Gell., vi (vii), 16. But cf. Varro, *R. r.*, ii, 6.
 147, 12. Germany. Schmoller, *Tübinger Zeitschr. für Staatswiss.*, xvi, p. 635 and 681.
 147, 14. Thuc. Thucyd., ii, 38.
 147, 19. lists. Cf. Appendix xlviii.
 147, 20. Brillat. Brillat-Savarin, *Physiologie du goût (Classiques de la table*, Nouv. éd., Didot, 1855, i, p. 252).
 147, 27. luxury. Roscher, *Ansichten*, p. 428, 54.
 147, 27. Gulliver. Swift, *Gulliver's Travels*, iv, 6.
 147, 39. commerce. Apparently Varro himself had no objection to Italian victuals (delicacies excepted). Macrobius, *Sat.*, iii, 16, 12: M. Varro pisci Tiberino palmam tribuit his verbis in libro rerum humanarum xi: ad victum optima fert ager Campanus frumentum, Falernus vinum, Cassinas oleum, Tusculanus ficum, mel Tarentinus, piscem Tiberis.
 148, 10. demand. Springer, *Paris im 13. Jahrh.*, pp. 32 and 34. Lacroix, *Moeurs usages et costumes au moyen âge*, p. 111 ss. *Nourriture et cuisine* (on foreign cheeses, p. 147; on foreign wines, p. 165) cf. the *carte gastronomique de la France*, in Lacroix, *Directoire Consulat et Empire*, p. 151.
 148, 12. Nicolai. Nicolai, *Leben des Seb. Nothanker*, v, 54.
 148, 18. sandar. Read 'sander.'
 148, 26. writers. Varro in Gell., l. c. Sallust, *Catilina*, c. 13: Vescendi causa terra marique omnia exquirere. Seneca, *Ad Helv.*, 10, 3: epulas quas toto orbe requirunt; *Epp.*, 89, 22: vos . . . quorum profunda et insatiabilis gula hinc maria scrutatur, hinc terras. Juv., 11, 14: gustus elementa per omnia quaerunt; cf. Mayor's note. Pliny, *N. h.*, xxvi, 43: hujus (ventris) gratia praecipue avaritia expetit, huic luxuria condit, huic navigatur ad Phasim, huic profundi vada exquiruntur. Drepan., *Paneg. in Theodos.*, c. 14: cibis . . . quos . . . famosa naufragiis maria misissent, quos invitae quodammodo reluctantique naturae hominum pericla rapuissent.
 148, 31. Vitellius. Sueton., *Vitell.*, c. 13.
 148, 34, 41. milk. Read 'milt'.
 148, 36. Elagabalus. *Vit. Elagabali*, c. 18: cum ipse privatus diceret se Apicium, imperator vero Othonem et Vitellium imitari.
 149, 1. *écus*. Lacroix, *XVIII. siècle*, p. 390. A dish of fish tongues at an entertainment of the Khalif Rashid for 1000 *dirhems* (francs); Kremer, *Culturgeschichte des Orients*, 290 f.

149, 3. countries. Vol. i, p. 12 ff.

149, 4. sale. Cassiodor., *Variar.*, xii, 4, enumerates the fishes ordered for the table of Theodoric : Destinet carpam Danubius, a Rheno veniat anchorago, exormiston (cf. xii, 1) Sicula (?) quibuslibet laboribus offeratur, Brutiorum mare dulces mittat avernias (?). Sic decet regem pascere ut a legatis gentium credatur paene omnia possidere. *Ibidem*, xii, 12 : Cum apud rerum Dominum solemniter more pranderemus et diversae provinciae de suis deliciis laudarentur, ad vina Brutiorum et Silani—casei suavitatem—perventum est.

149, 6. birds. Varro, *R. r.*, iii, 9, 18 : Gallinae Africanae—quas μελαγριδας appellant Graeci. Hae novissimae in triclinium ganearium introierunt e culina propter fastidium hominum. Veneunt propter penuriam magno. He does not mention the pheasant or the flamingo. *Meleagris* is the guinea-fowl. Horace, *Epod.*, 2, 53 : non Afra avis descendat in ventrem meum, non attagen Ionicus (together with Lucrine oysters, *rhombus* and *scari*). Manil., v, 370 (guinea-fowls and pheasants). Columella, viii, 8, 10 : illos qui Ponticum Phasin et Scythica stagna Maeotidis eluunt. Jam nunc Gangeticas et Aegyptias aves temulenter eructant. Petron., c. 93 (guinea-fowls, pheasants, *scari*). *Id.*, c. 119, 33 (*scari*, oysters, pheasants). Pliny, *N. h.*, xix, 52 : avis ultra Phasidem amnem peti . . . alias in Numidiam atque Aethiopiae sepulcra. Martial, iii, 67, 4 : Nec Libye mittit, nec tibi Phasis aves. *Id.*, xiii, 71 (*phoenicopteri*)—apparently introduced by Apicius, Pliny, *N. h.*, x, 133 : ph. linguam praecipui esse saporis A. docuit 72 (*phasiani*) 73 (*Numidicae*). *Id. ib.*, 45 : Si Libycae nobis volucres et Phasidis essent, Acciperes, Tu nunc accipe chortis aves. In Stat., *Silv.*, 1, 6, 77 a verse is missing, as is shown by Wachsmuth, *Rhein. Mus.*, 1888, pp. 26–28 :—

17 quas Nilus sacer horridusque Phasis,
[quas Ganges lavat (alit), quas palus Scytharum],
18 quas udo Numidae legunt sub austro.

Juv., 11, 139 : Et Scythicae volucres et phoenicopterus ingens. Lucian, *Navig.*, 23 : ὄρνις ἐκ Φάσιδος καὶ ταῦς ἐξ Ἰνδίας καὶ ἀλεκτρῶν ὁ Νομαδικός. Clemens Alex., *Paedog.*, ii, 1, 3 : ὄρνεις . . . ἀπὸ Φάσιδος, ἀτραγὰς Ἀλυππύλου, Μήδων ταῦνα.

149, 8. Italy. Martial, iii, 58, 12 :—

Vagatur omnis turba sordidae chortis,
argutus anser gemmeique pavones,
nomenque debet quae rubentibus pinnis,
et picta perdix Numidicaeque guttatae
et impiorum phasiana Colchorum ;
Rhodias superbi feminas premunt galli.

149, 9. Diocletian. Mommsen, *Ber. d. Sächs. Gesellsch.*, 1851, p. 12 : fasianus pastus *den.* 250 fasianus agrestis *den.* 225 fasiana pasta *den.* 200 fasiana non pasta *den.* 100 anser pastus *den.* 200 anser non pastus *den.* 100 pullorum par *den.* 60 lepus *den.* 150 (100 *den.* about 2s. 5½d., Hultsch, *Metrol.*, 348).

- 149, 12-15. Severus, Tacitus. *Alexander Sever.*, c. 37. *Tacit.*, c. 11.
 149, 22. inauguration. Marquardt, *StV*, iii^a, 243, 4.
 149, 34. lost. Macrobian, *Sat.*, iii, 13: cenam quae scripta est in Indice iv. Metelli illius pontificis maximi in haec verba. Cf. Böttiger, *Kl. Schr.*, iii, 217 ff.
 149, 38. priesthoods. Marquardt, *StV*, iii^a, 231, 7.

- 153, 40. Cicero. Cic., *Ad Attic.*, xiii, 52. Suetonius says even of the very temperate Augustus, c. 77: *quotiens largissime se invitaret, senos sextantes* (0.54 of a litre) *non excessit, aut si excessisset, reiciebat*. Becker-Göll, iii, p. 552 f.
- 154, 2. dietetic. In the annotations to Oribasius, vol. ii, p. 829 ss., Daremberg speaks only about the dietetic use of emetics by the ancients, from which instructive work I extract the following passages. I think it appears from them that it was not merely, as Marquardt thinks, *Prl.*, i^a, 330, 5, 'as an antidote to the effects of gluttony' that the use of emetics was considered

necessary by physicians. Baudrillart, ii, 396, has completely misunderstood me. He says: Comment ne pas sourire, en voyant M. Fr. dépassant trop cette fois les bornes; aller à justifier presque au nom de l'hygiène l'usage ignominieux des vomissements pendant le repas! What I have said in the text shows, I hope, clearly enough, that, far from excusing the mis-use of emetics, I only maintain that their use by the ancients does not necessarily presuppose intemperance.

154, 8. emetics. Herodot., ii, 77; Diodor., i, 82.

154, 9. Hippocrates. Daremberg, *op. cit.*, p. 380: Du temps d'Hippocrate les vomissements après le repas paraissent avoir été plus usités que les vomissements à jeun.

154, 13. Celsus. Celsus, i, 3, p. 27 sq. On Asclepiades cf. also Pliny, *N. h.*, xxvi, 17.

154, 16. Archigenes. Oribas., *Coll. med.*, viii, 23 (ed. D., iii, p. 202): Περὶ ἐμέτου ἀπὸ σιτίων ἐκ τῶν Ἀρχιγένους. Ἐμέτω δὲ τῷ ἀπὸ σιτίων ὑπὸ ἀνάγκης μὲν μὴ διεθλοῖ· ὧνσις δὲ θαυμαστὴ δις ἢ τρίς ὡς ἂν παρήκη κατὰ μήνα παραλαμβάνει· καὶ γὰρ τῷ δι' ἀνάγκην ἐπιμετρὸς τις ἀκολουθεῖ ραστώνῃ, ἀπὸ ἧς προήχθησαν ἤδη τυφὸς καὶ εἰς ἔθως ἐνδελεχοῦς ἀποφορισμοῦ τῶν σιτίων, οἱ μὲν ἀκριβοῦς οἱ δὲ ὀλοσχεροῦς καταστῆναι.

154, 18. Galen. Daremberg, *op. cit.*, p. 381 s.

154, 18. Pliny. *N. h.*, xxviii, 54 vomitione rara sibi mederi utile homini. The dietetic use he considers injurious: xi, 282; xxix, 27.

154, 19. Plutarch. Plutarch, *De sanit. frasc.*, c. 22, p. 134: Ἐμέτους δὲ καὶ κοίλας καθάρσεις ὑπὸ φαρμάκων, μαρὰ παραμύθια πλησμονῆς, ἀνευ μεγάλης ἀνάγκης οὐ κινητέον ὥσπερ οἱ πολλοὶ κενώσεως ἐνεκα, πληροῦντες τὸ σῶμα καὶ πάλιν πληρώσεως κενούντες παρὰ φύσιν ταῖς πλησμοναῖς οὐχ ἦττον ἢ ταῖς ἐνδείαις ἀνιώμενοι μάλλον δὲ ὅλως τὴν μὲν πλήρωσιν ὡς κώλυσιν ἀπολαύσεως βαρυνόμενοι, τὴν δὲ ἐνδειαν ὡς χώραν αἰ ταῖς ἡδοναῖς παρασκευάζοντες.

154, 21. seven. Juv., i, 94.

154, 22. dishes. *Id.*, 14, 6 s.

154, 23. oyster. *Id.*, 4, 136 sq.

154, 26. Seneca. Seneca, *Ad Helv.*, 10, 3.

154, 30. circles. This is Marquardt's opinion, *op. cit.*, p. 330, where the Romans whom Pliny and Galen describe are pictured as 'a race with pale faces, hanging cheeks, swollen eyes, trembling hands, fat paunches, with feeble intelligence and no memory, etc.'. The consequences of excesses, described by Pliny, *N. h.*, xiv, 142; Seneca, *Epist.*, 95, 15 sqq. and Martial, xii, 48, 10 (sulphureusque color carnificesque pedes) were very likely too frequent in his time—but I do not believe it possible that they were general in wider circles. (Galen, *De meth. med.*, vol. x, p. 3 sq., ed. K., speaks only of excesses, not of their consequences).

154, 34. emetics. Sueton., *Claud.*, c. 33; *Vitell.*, c. 13. Julian, *Misopog.*, p. 340 c, says about himself: οὐδὲ ἐπιτρέπω πολλῶν ἐμπιπλάσθαι σιτίων αὐτῇ. ὀλιγάκις οὖν ἐμοὶ τῶν πάντων (?) ἐμέσαι συνέβη, καὶ μέμνημαι αὐτὸ παθὼν ἐξ ἔθου Καίσαρ ἐγενόμενῃ ἀπαξ ἀπὸ συμπτώματος, οὐ πλησμονῆς. Martial associates the use of emetics with the most infamous vices: ix, 92, 11: Quod nec mane

- vomis nec cunnum, Condyle, lingis etc. ; ii, 89, 5. : Quod vomis, Antoni, of a *fellator*, with reference to Cic., *In Anton. or. Philipp.*, 2, 25, 63.

- 165, 5. civilization. I had already dealt with this subject in a lengthy essay, chiefly with the aid of the valuable book of K. W. Volz (*Beiträge zur Culturgeschichte. Der Einfluss des Menschen auf die Verbreitung der Hausthiere und der Culturpflanzen*, 1852),

when an admirable work throwing quite new light on the subject appeared, Victor Hehn's *Culturpflanzen und Hausthiere in ihrem Uebergang aus Asien nach Griechenland und Italien sowie das übrige Europa* (1870). As all the questions were here treated with unparalleled knowledge of the facts and sources, thoroughness and acumen, my only course was to throw aside my essay, and reproduce, in the order that suited my purpose, the results of this new investigation, chiefly in Hehn's own words. I have abstained from referring to Volz and the old authors, as Hehn gives full references, only here and there I have made some unimportant additions. The quotations are made from the 4th edition of Hehn's work (1883).

 173, 4. wine. Hehn, p. 77.
 173, 20. handkerchiefs. *Ibid.*, p. 146.
 173, 21. century. Marquardt, *Prl.*, ii², 485-487. In Juv., 3, 150:
 vel si consuto volnere crassum atque recens linum ostendit non
 una cicatrix, apparently the mended tunic is meant. As a
 rule the *tunica* was woollen. Cf. Petron., c. 56; Martial, xiv,
 143, 211.
 173, 24. muslin. Marquardt, *op. cit.*, p. 488.
 173, 31. Elagabalus. *Ibid.*, p. 493 ff.
 173, 34. Saracen. Kremer, *Culturgesch. d. Orients*, ii, 339. Ac-
 cording to Alwin Schultz, *D. höfische Leben z. Z. der Minne-
 sänge.*, p. 259, samite (*ἐξάμυρος*) does not mean velvet, but 'a
 very strong close silk tissue, generally figured with gold and
 silver threads, thus corresponding to what was later called
 brocade', in different colours, usually green and red. Cf.
 Heyd, *Gesch. des Levantehandels im Mittelalter*, ii, 689. (Hüll-
 mann, *Gesch. des byz. Handels*, p. 69: *purpura quae vulgariter
 dicitur samyt.*)
 173, 35. extravagance. Marquardt, *op. cit.*, p. 535.
 173, 38. clothes. *Ibid.*, p. 542 ff.
 173, 40. Agrippina. Vol. i, p. 245. Cf. Marquardt, *op. cit.*, p.
 536, 2. A robe of silver cloth worn by Herod Agrippa, Joseph.,
A. J., xviii, 6, 7. *H. A.*, *Vit. Elagab.*, 24: *usus est aurea omni
 tunica, usus et purpurea, usus et de gemmis Persica. An auri
 netrix CIL*, vi, 9213; *Ib.*, 9214: *Sellia Epyre de sacra via auri
 vestrix (?)*.
 174, 1. Charles. Falke, *Deutsche Trachten und Modenwelt* (1858),
 i, 262; cf. for cloth of gold and silver in the beginning of the
 sixteenth century, ii, 76 ff. A dress of Mme. de Montespan
 'd'or sur or, rebrodée d'or et par dessus un or frisé, rebrochée

- d'un or mêlé avec un certain or, qui fait la plus divine étoffe qui ait été jamais imaginée' (Madame de Sévigné in Baudrillart, iv, 130).
- 174, 4. Italy. Marquardt, *op. cit.*, 587.
- 174, 6. South. Paulinus of Périgueux (born between 367 and 371) says (*Eucharisticon*, 147 sq.) that in his youth he strove to get new and beautiful clothes, quaeque Arabi muris leni fragraret odore. Cf. Jerome, *Epist.*, 127, 3: Illae enim solent purpurissa et cerussa ora depingere etc. . . . fragrare mure. *Adv. Jovin.*, ii, 8, examples of odoris suavis: peregrina muris pellicula. The opinion of my colleague, Prof. Zaddach (d. 1881) was that an animal was meant of the genus *Myogale*, the musk-smelling desmans, and more probably the desman (*M. moschata*) of southern Russia which is 9 in. long, than the smaller *M. pyren-aica*. Even to-day the skins of the desman serve to garnish caps and other clothes.
- 174, 15. prices. Lacroix, *Moeurs usages et costumes au moyen âge*, p. 575 s. Cf. also on the same luxury Abraham a Sancta Clara in Karajan, p. 193.
- 174, 20. costly. Falke, *op. cit.*, ii, 47 (on trunk-hose).
- 174, 22. £150. *Id.*, ii, 253 f.
- 174, 24. centuries. Cf. Falke, i, 192 f., on the remarkably rapid change of fashions about the middle of the fourteenth century; ii, 115, on the fickleness of German fashions in the sixteenth century.
- 174, 29. ducats. Polack, *Persien*, i, 151. A hat of King Amadeus VI of Savoy cost 1000 ducats (20,666 francs). Baudrillart, iii, 214.
- 174, 30. Panama. Lady Brassey, *Voyage in the Sunbeam*⁴, 1878, p. 184.
- 174, 34. Juvenal. *Juv.*, i, 28 sq.
- 174, 38. Persia. Polack, *op. cit.*
- 175, 1. wool. Martial, ii, 46.
- 175, 6. wardrobe. *Id.*, v, 79.
- 175, 11. Meinhard. Falke, ii, 149.
- 175, 14. Clive. Macaulay, *Essay on Clive*, ad fin.
- 175, 16. Brühl. Vehse, *Gesch. d. H.*, 33, 331.
- 175, 19. wigs. Falke, ii, 312 f.
- 175, 20. dandy. *Briefe eines Verstorbenen* (1826-28), iv, 39.
- 175, 26. Persius. *Pers.*, i, 32.
- 175, 27. moralist. Martial, i, 96. Read 'To M. any one who . . . effeminate, was a hypocrite'.
- 175, 33. Atedius. *Stat., Silv.*, ii, 1, 128 sqq.
- 175, 34. scarlet. Pliny, *N. h.*, xxxvii, 204, mentions *coccum* among precious natural products.
- 175, 36. wool. Cornel. Nepos in Pliny, *N. h.*, ix, 137. For the best quality 100 sest. must be deducted for the wool; the best quality from the Padus is the same price, *N. h.*, viii, 190. Lower qualities were hardly dyed with Tyrian purple.
- 175, 39. cloak. Martial, viii, 10; iv, 61, 4.
- 176, 3. shawls. Polack, *Persien*, i, 153. (A single shawl costs there sometimes 200 ducats.)

- 176, 5. cloaks. W. A. Schmidt, *Forschungen auf dem Gebiete des Alterthums*, p. 157 f.
- 176, 7. Caesar. Sueton., *Caes.*, c. 43.
- 176, 8. Augustus. Dio, xlix, 16. Mommsen, *StR*, i³, 409 ff.
- 176, 10. Tiberius. Dio, lvii, 13.
- 176, 11. Nero. Sueton., *Nero*, c. 32.
- 176, 12. Domitian. As appears from Martial, *loc. cit.*
- 176, 15. auction. Schmidt, *op. cit.*, p. 175. *M. Anton.*, 17; *Per-tinax*, c. 8.
- 176, 17. dress. On luxury in dress in the thirteenth and fourteenth centuries cf. Alwin Schultz, *Das höfische Leben zur Zeit der Minnesinger*, p. 202 ff., in particular p. 235 f. Girdles for ladies cost 1000 marks (£2,000); the coronation robes of King Wenceslaus II of Bohemia are said to have cost 4000 marks (£8000), p. 236.
- 176, 25. placed. Gregorovius, *Lucrezia Borgia*, p. 236 f.
- 176, 29. Giuliano. Reumont, *Lorenzo de' Medici*, i, 267 f.
- 176, 34. Pollajuolo. *Ibid.*, ii, 423.
- 176, 41. ducats. Gregorovius, *op. cit.*, p. 189.
- 177, 7. Lucrezia. *Ibid.*, p. 237.
- 177, 9. Geiler. Janssen, *Gesch. d. deutschen Volkes*, i, 366 ff. On the value of the *gulden* (florin) cf. note on vol. ii, p. 136, 1.
- 177, 12. England. Falke, *op. cit.*, ii, 109.
- 177, 20. Bassompierre. *Ibid.*, 149 and 152.
- 177, 23. Christina. Grauert, *Christine Königin von Schweden und ihr Hof*, ii, 87, 19. At the time of Louis XIV a certain Madame de Puysieux wore Genoese lace worth 50,000 *écus*. Baudrillart, iv, 153. On the extravagance in lace of Gabrielle d'Estrées, and of the court of Louis XIII, see Lacroix, *XVII. siècle. Lettres et sciences*, p. 514.
- 177, 31. so forth. Lacroix, *XVIII. siècle*, p. 486.
- 177, 35. year. Baudrillart, iv, 291.
- 177, 38. cuffs. Lacroix, *XVIII. s.*, *Lettres etc.*, p. 544 ss.
- 177, 39. alb. Vehse, *G. d. H.*, 46, 59.
- 178, 2. Rzewuski. E. v. d. Brüggen, *Polens Auflösung*, p. 316 f.
- 178, 5. sable. Beckmann, *Waarenkunde*, ii, 263.
- 178, 7. Potemkin's. According to Karnovich (see n. on p. 136, 24).
- 178, 10. occasions. The robes of a peer, at the coronation of George IV of England, in 1820, cost £450 (Eberty, *W. Scott*, i, 350); the gala uniform of a Prussian Minister (1879) cost about £100. The value of the national Hungarian costume worn by Prince Nicholas Esterhazy at the coronation of King George IV was estimated at several million florins. Liszt, *Fr. Chopin*, German transl. by La Mara, p. 26 1.
- 178, 12. shawl. *Ausland*, 1865, No. 44, p. 970 (the dearest imitation French long shawls cost 1500 francs).
- 178, 12. veil. The veil worn by Miss Hannah Rothschild at her wedding with the Earl of Rosebery cost 700 guineas.
- 178, 21. paltry. Mme. de Rémusat, *Mém.*, ii, 347, 349, 379. Lady J. Manners in *Nat. Rev.*, March, 1884, p. 2, says that many ladies who are not very rich spend £600 a year on their toilet,

- those who go much into society often £1000; 60 guineas for a court dress is no uncommon price.
- 178, 28. Indian. Pliny, *N. h.*, vi, 101: digna res (?) nullo anno minus HS [DL] imperi nostri (?) exhauriente India et mercis remittente, quae apud nos centuplicato veneant. xii, 84: minumaque computatione miliens centena milia sestertium annis omnibus India et Seres paeninsulae illa (Arabia) imperio nostro adimunt. Tanti nobis deliciae et feminae constant, quota enim portio ad deos quaeso jam vel ad inferos pertinent? I quote these passages *verbatim*, to show Höck's mistake (*Röm. Gesch.*, i, 2, 288) when he speaks of imports into Rome, instead of the whole empire.
- 178, 31. amours. Read 'our hobbies'.
- 178, 33. luxuries. To which belong also, according to Aelius Marci-
 cianus, *Digg.*, xxxix, 4, 16 § 7, spices, gum, laser (*asa dulcis*),
 opium, eunuchs and wild animals. The last sentence of the
 passage quoted from Pliny, shows that he was not thinking
 only of the expenditure on dress and jewels.
- 178, 37. countries. Tac., *A.*, iii, 53: atque illa feminarum propria,
 quis lapidum causa pecuniae nostrae ad externas aut hostilis
 gentis transferuntur?
- 178, 41. Asia. Cf. the trade reports for the year 1869 (*Ausland*,
 1870, No. 13, p. 200) according to which in the 9 years 1861-
 69 £122,250,000 sterling were paid to Asia, a yearly average
 of 13½ millions; by far the greatest part to British India, only
 about £20,000,000 (in 9 years) to China. Humboldt's esti-
 mate of the yearly export of specie from Europe to Asia was
 £5,318,750; Jacob's for the period 1788-1810 only 1 million;
 Jacob, *Product. u. Consumt.*, ii, 130-132.
- 179, 2. Horneck. *Bedenken über die Manufacturen in Deutschland*,
 p. 113 ff. *Oesterreich über alles* (1708), p. 95.
- 179, 8. alone. Raudel, *Annalen der Staatskräfte von Europa* (1792),
 p. 13.
- 179, 8. 1853. Klöden, *Handbuch d. Erdkunde*, ii, 454 and 457. At
 the time of Colbert England spent more than 11 million francs
 per annum on French fancy goods. Baudrillart, iv, 437.
- 179, 19. gold. *H. A.*, *Vit. Aureliani*, c. 45.
- 179, 20. Chinese. See n. on p. 180, 11, below.
- 179, 21. betel. Pliny, *N. h.*, xii, 129: cf. Marquardt, *Pvl.*, ii²,
 784, 9-12.
- 179, 21. cinnamon. Read 'cinnamon juice'. Pliny, *ib.*, 99:
 pretia (juris cinnami) quondam fuere in libras denarium milia,
 auctum id parte dimidia est incensis, ut ferunt, silvis ira bar-
 barorum. St. Mark says that in Jerusalem a *litra* of oil of nard
 cost 300 denarii: *Mark*, xiv, 5; *John*, xii, 5; cf. Herzfeld,
Handelsgesch. der Juden, p. 100, cf. 191.
- 179, 22. pearls. Sueton., *Caes.*, c. 50.
- 179, 30. Galen. Galen, ed. K., x, 492 (ἐχουσι γὰρ αἱ πλουσῖαι γυναῖκες
 αὐτὰ πολλαχόθεν τῆς ὑπὸ Ῥωμαίων ἀρχῆς, καὶ μάλιστα ἐν μεγάλας
 πλεουσιν, ἐν αἷς εἰσι πολλὰι τῶν τοιούτων γυναικῶν).
- 179, 33. women. *Id.*, ed. K., vi, 440 (*De sanit. tuenda*, vi, 13):
 τῶν μύρων τὰ ἐν Ῥώμῃ σκευαζόμενα ταῖς πλουσῖαις γυναιξίν, ἃ φουλιάρδ

- τε καὶ σπίκата προσαγορεύουσιν. *Id.*, xii, 429: τὸ τῶν πλουσίων γυναικῶν μύρον, ὃ καλοῦσιν ἐν Ῥώμῃ φουλάτον. *Ib.*, 604: τὸ τε κάλλιστον νάρδιον μύρον—καὶ μετὰ τοῦτο τὸ Κομμαγήρνον καὶ τὸ Σουσιῶν καὶ τὰ πολυτελῆ μύρα τῶν πλουσίων γυναικῶν ἃ καλοῦσιν αὐτὰ σπίκата καὶ φουλάτα. Cf. Marquardt, *Priv.*, ii², 783 f. This does not exclude the probability that perfume merchants (*seplasiarii*) were in all the prosperous places. *Ib. id.*, 782, 16.
- 179, 35. classes. Marquardt, *op. cit.*, ii², 498.
- 180, 11. drugs. All the above is from Fr. Hirth, *Zur Geschichte des antiken Orienthandels*, in *Verhandl. der Berliner Gesellsch. f. Erdkunde*, xvi, pp. 46–64. Cf. note on vol. i, p. 308, 11.
- 180, 17. Mithridates. Pliny, *N. h.*, xxxvii, 12.
- 180, 17. diamonds. *Id. ib.*, xxxvii, 55. Cf. King, *Precious stones and precious metals*, p. 47 sq.
- 180, 20. Trajan. *H. A., Vit. Hadriani*, c. 3.
- 180, 23. Agrippa. *Juv.*, 6, 156 sq. Hübner, *Hermes*, i, 347 = *CIL*, ii, 3386: on a silver statue of Isis in digito minimo anuli duo gemmis adamant. Martial, v, 11:—
Sardonychas zmaragdus adamantas iaspidas uno
versat in articulo Stella, Severe, meus.
- 180, 25. Altai. King, pp. 282–284.
- 180, 29. hierarchy. Pliny, *N. h.*, xxxvii, 85.
- 180, 36. emerald. King, p. 48 s.
- 180, 41. market. *Ibid.*, p. 304 s.
- 181, 8. Egypt. *Ibid.*, p. 297 s.
- 181, 10. sesterces. Hübner, *Hermes*, i, 357.
- 181, 12. filbert. Hehn, *Culturpfl.* etc., p. 321.
- 181, 14. sesterces. Pliny, *N. h.*, xxxvii, 81 sq. The reading *viginti milibus* gives an impossibly low price; presumably [xx] was altered by mistake into xx.
- 181, 19. industries. Pliny, *N. h.*, xxxvii, 197, *ib.*, 83 (imitation opal), 98 (carbuncle), 117 (jasper), 128 (*leucochrysus*). Seneca, *Epp.*, 90, 33. Marquardt, *Priv.*, ii², 151. Beckmann, *Gesch. d. Entdeckungen*, i, 373 ff. Sardonyches veri, Martial, ix, 59; v, 87.
- 181, 21. way. Julian, *Orat.*, 2, p. 91 β: τοῖς τοῖς λιθογνώμοσι γὰρ οὐ μὴ ὁδὸς ἐπὶ τὴν ἐξέτασιν ἀπόχρη, ἀλλὰ συνιέντες οἶμαι τῶν πανουργιῶν ἐθελόντων ποικίλην καὶ πολύτροπον τὴν μοχθηρίαν καὶ τὰ ἐπιτεχνήματα εἰς δόξαμιν ἅπασιν ἀντιτάξαντο, καὶ ἀντέστησαν ἐλέγχους τοὺς ἐκ τῆς τέχνης.
- 181, 25. jewellers. King, p. 291.
- 181, 28. pearls. Pliny, *N. h.*, xiii, 91: mensarum insania, quas feminae viris contra margaritas regerunt. Pliny, *Epp.*, v, 16 mentions 'vestes margaritas gemmas' as things to be bought by the bride's father.
- 181, 29. jewels. King, p. 266.
- 181, 29. pearls. Pliny, *N. h.*, ix, 123. Romae in promiscuum ac frequentem usum venisse Alexandria in dicionem redacta, primum autem coepisse circa Sullana tempora minutas et vilis Fenestella tradit, manifesto errore, cum Aelius Stilo Jugurthino bello nomen unionum imponi cum maxime grandibus margaritis prodat. Fenestella was only mistaken in the second part of his statement, and only this was refuted by Pliny.

- 181, 36. exploited. Hübner, *Sixtus V.*, p. 94.
- 181, 37. *Pompe*. Yriarte, *Vie d'un patricien de Venise au xvi. siècle*, p. 50. Molmenti, *Vie privée à Venise*, p. 255 (the jewels of 25 young ladies who called (in the fifteenth century) on an aristocratic lady in childbed, were estimated at 100,000 ducats).
- 182, 4. necklaces. Haxthausen, *Studien über die inneren Zustände Russlands*, i, 87 and 309.
- 182, 4. Nero. Pliny, *N. h.*, xxxvii, 17.
- 182, 10. slippers. *Id. ib.*, ix, 114. Caligula wore similar shoes, xxxvii, 17. Margaritarum, sacculi, xxxiii, 14. For *Indyitchip-ship* (pearl-embroidered slippers, worn by women only in the house) £10–20 are often paid, but there are some at 200 piastres, and gold and silver embroidered ones at £30 and £40; C. White, *Three Years in Constantinople*, 1845, ii, 95.
- 182, 13. ears. Seneca, *Remed. fort.*, 16, 7; *De benef.*, vii, 9, 4.
- 182, 16. Servilia. Sueton., *Caes.*, c. 50.
- 182, 27. Gaius. Pliny, *N. h.*, ix, 117: margaritisque opertam, alterno texto fulgentibus toto capite crinibus (spira) auribus collo [monilibus] digitisque. The words enclosed in brackets are glosses; cf. my *programm*, *Acad. Alb.*, 1867, iv. Cf. *CIL*, ii, 3386.
- 182, 37. Algiers. King, *Precious Stones*, p. 299 s. For luxury of Spanish women in trinkets and jewels in the seventeenth century see Baudrillart, iv, 222 s.
- 182, 37. Nadir. Cf. e.g. Barthold, *Die geschichtl. Persönlichkeiten in Casanovas Mem.*, ii, 48.
- 183, 1. Madras. Macaulay, *Sir John Malcolm's Life of Lord Clive* ('He invested great sums in jewels, then a very common mode of remittance from India').
- 183, 2. wife. Vehse, *G. d. H.*, 19, 220.
- 183, 5. thalers. Schubert, *Jubelfeier der Stadt Königsberg 1855*, p. 76, 1.
- 183, 6. necklace. King, p. 116. Augustus the Strong wore on his person more than 2 million thalers' worth of jewels (Vehse, *G. der Höfe*, 32, 38); Louis XIV at the festivities in honour of the Persian ambassador 12½ million livres' worth (Baudrillart, iv, 86).
- 183, 12. ducats. Polack, *Persien*, i, 146, 157, 162. The diamonds of Mme. de Durac, who owned more than any other lady at the court of Napoleon I, were valued at more than 500,000 francs. *Mém. de Mme. de Remusat*, iii, 18.
- 183, 14. Shah. Baudrillart, i, 331 (after Gobineau, *Hist. des Perses*).
- 183, 17. clothes. Baudrillart, iii, 289.
- 183, 21. ornaments. Falke, *op. cit.*, i, 262 f. Cf. the description of his hat, p. 269, and King, pp. 63–66.
- 183, 25. worn. Lacroix, *XVII. siècle. Lettres et sciences*, p. 531.
- 183, 28. florins. Falke, *op. cit.*, i, 153.
- 183, 30. export. King, p. 267 s.
- 183, 34. back. Every Tuscan *zitella* aspires to a necklace of many strings of pearls (even if irregular in shape and of bad colour); this generally forms her dowry. King, p. 268. The jacket of a rich peasant woman in the Government of Vologda,

- made of good white silk and embroidered with gold, costs 500 silver roubles. Haxthausen, i, 229, cf. 236. The dresses of the Moorish women in Algeria are often worth more than £150. Klöden, *Handbuch der Erdkunde*, i, 461. The Arabian merchants always carry a good part of their fortunes in valuables on their persons. Maltzan, *Drei Jahre im N.-W. v. Africa*, iii, 55. Diamonds (rough or very simply cut) are the ambition of even the poorest women in Tunisia. *Id.*, *Sittenbilder aus Tunis und Algerien*, 1869, p. 21 f.
- 183, 35. barmaids. Juv., 6, 583, where Madvig (*Opusc.*, ii, 198) erroneously interprets of a rich woman.
- 183, 37. Italy. Gregorovius, *Figuren*, p. 330.
- 183, 38. Pliny. Pliny, *N. h.*, xxxvii, 44.
- 183, 41. East. It came through Oriental influence to the Greeks of Homer. Helbig, *Das homer. Epos*, p. 257 f.
- 184, 2. perfumes. Kremer, *Culturgesch. d. Orients*, ii, 208.
- 184, 8. womb. *Esther*, ii, 12.
- 184, 9. Talmud. Herzfeld, *Handelsgesch. d. Juden*, p. 100 f.
- 184, 11. Graecia. Marquardt, *Prl.*, ii², 785.
- 184, 12. cities. Cf. note above on p. 179, 35.
- 184, 16. Arabian. (Emilie Rüte) *Memoiren einer arabischen Prinzessin*, ii, 18: 'Anybody may follow our track, because our abundant perfume persistently pervades the streets we pass along.'
- 184, 16. Pliny. Pliny, *N. h.*, xiii, 20.
- 184, 19. balsam. Martial, xiv, 59:
 Balsama me capiunt: haec sunt unguenta virorum.
 Delicias Cosmi vos redolet nurus.
- Cf. Juv., 2, 41.
- 184, 19. cinnamon. *Id.*, 3, 63, 4: Balsama qui semper, cinnama semper olet.
- 184, 19. Crispinus. Juv., 4, 108.
- 184, 21. Alfonso. Reumont, *Vittoria Colonna*, p. 40 f. (from Brantôme).
- 184, 25. Martial. Martial, xii, 95; cf. xi, 27, 9: At mea me libram foliati poscat amica.

 268, 18. *concha*. *CIL*, viii, 8396 (*conchas de suo posuit*).
 268, 22. ornament. The *Passio sanctorum IV coronatorum*, edited by Wattenbach with a preface by v. Karajan: *Sitzungsb. d. Wiener Acad.* (1853), x, 115-137 and in Büdinger's *Untersuchungen s. röm. Kaisergeschichte*, iii, 323 f. with chronological annotations by Büdinger and archaeological ones by Benndorf. The question of the connexion of the legend of the martyrdom of the five Pannonian masons with that of the four Roman *cornicularii* (*coronati* was a name for higher officials, perhaps after a badge, Hirschfeld in *Öst. Mitth.*, 1885, p. 23 f.), and why the former legend was named *Passio SS. IV coronatorum*, is the subject of inquiries, with varying results, by De Rossi, *I Santi quattro coronati e la loro chiesa sul Celio*, *Bull. crist.*, 1879, p. 45 ss., C. Erbes (*Ztschr. f. Kirchengesch.*, v, 1881/2, p. 466 f.), and Edm. Meyer, *Ueber die Passio SS. IV coronatorum*, *Progr. d. Luisengymnasiums*, Berlin, 1886. De Rossi dates the martyrdom of the Pannonians 305/6, the Roman one earlier (after 288), the writing of the first (by a certain Porphyrius, *censualis a gleba*) in the time of Galerius, for whose name that of Diocletian was afterwards substituted. Meyer dates the Pannonian martyrdom 293, the Roman 303, the legend of the first he says circulated for a time among the people before it was written down. Petschenig (*Zur Kritik und Würdigung der Passio SS. IV coronatorum*, in *Sitzungsb. d. Wiener Acad.*, xcvi, 1880, p. 761) dates the composition on linguistic grounds in the sixth century at the latest, more probably in the fifth.

Vereins von Alterthumsfr. in Rheinl.*, xxvii (1859), p. 151: 'It is asserted that the fragments of a great statue, which together with very many other bronze objects are to be seen in the castle at Homburg, were found lying in front of the *praetorium* of the Roman permanent camp on the Saalburg, where a large rectangular stone is fixed in the ground. This assertion is all the more interesting, as it affords another illustration of the fact, confirmed in the case of several other permanent camps by remains and tradition, that bronze statues were erected in such positions. Among these may be counted with great probability (?) the statue found last year near Xanten'.

That at Durocortorum Remorum (Reims), the residence of the governor of Belgica, art stood under Italian influence is in itself very probable, and is indicated by the following fact. 'Among the statues at the great west door of Reims cathedral, examples of the sculpture of the best Gothic period are two female figures on the right side, apparently Mary and Elizabeth, the artistic character of which differs widely from the rest. They are undoubtedly copies of antiques. Lübke (*Geschichte der Plastik*, ii², p. 458) attributes them to the Renaissance period, which is impossible, because they were imitated

c. 1270 in Bamberg cathedral. The *motif* of the Mary recalls the Livia of the Naples museum, except that the *palla* is drawn somewhat closer round the head and breast. Elizabeth is still more completely wrapped, and wears a broad browband. The originals of both figures were evidently good portrait-statues of the first century. In other cases the Reims masons of the thirteenth century used ancient fragments as models. A saint on the left side of the door has an unmistakable Odysseus head on a body of mediæval form and dress. In this case too the original cannot have been altogether devoid of artistic merit. I intend to publish these figures in the forthcoming *Jahrbuch der Kunstsammlungen des preussischen Staats* together with the replicas at Bamberg'. G. Dehio. The originals of the two female figures must have ranked with the best Roman works of the kind outside Italy of which we have any knowledge.

305, 21. porphyry. Pliny, *N. h.*, xxxvi, 57; cf. Letronne, *Recueil*, i, p. 142.

305, 22. deities. *CIL*, x, 6303 (Tarracina—signum Memphiticum) with Mommsen's note.

305, 22. Memphis. Pliny, *N. h.*, xxxvi, 56.

305, 26. Theban. *H. A.*, *Pescenn.* N., c. 12. Marquardt (d. 1882) kindly furnished me with the following information: 'Of the black stone of which the statue is made there were two kinds; the one was found in the Thebaid between Philae and Syene and was used to make mortars (Pliny, *N. h.*, xxxvi, 157; Strabo, p. 818). Of the other kind Pliny says, xxxvi, 63: Thebaicus lapis—invenitur in Africae parte Aegypto adscripta. As Pliny counted Egypt as part of Asia, the place where this stone was found was outside Egypt. The *Thebaei*, mentioned among the soldiers first at the time of Domitian (*CIL*, iii, 37), are not the inhabitants of Thebes, but a tribe which also may have been outside Egypt, and ruled by a chief, just as at Pliny's time *reges Aethiopiae* lived in the neighbourhood (vi, 186). If the Greek epigram, which is given in a Latin translation, really called Niger *Thebaidos socius*, this Thebais must have been an independent kingdom. Any one, however, who knows the *Scriptores h. A.*, will regard it as not impossible that the author of the *vita* found the information that a *rex* had the statue of Niger made of Theban marble, and that he conjectured the king's name from that of the stone. Also Lumbroso, *L'Egitto al tempo de' Greci e Romani*, p. 51 ss., understands by the *rex Thebaeorum* the chief of a tribe of Negroes or half-Negroes, like the *limitanei* (*Pescenn.*, c. 7) who lived on the borders of Egypt and Ethiopia. Blümner, *Technol. u. Terminol.*, p. 12, believes

- the stone to be *marmo bianco e nero d'Egitto* (black with white veins), or granite.
- 305, 27. Jews. Suidas, s. v. βδέλυγμα· πᾶν εἶδωλον καὶ πᾶν ἐκτύπωμα ἀνθρώπου οὕτως ἐκαλεῖτο παρὰ Ἰουδαίους. Cf. Zonaras, p. 380; Schürer, *Neutest. Zeitgesch.*, p. 385 f.

329, 15. Pliny. Pliny, *N. h.*, xxxv, 4.

329, 18. carved. *Ibid.*, xxxiii, 157.

329, 22. Quintilian. My *Kunstsin*n der Römer, 38, 55.

329, 31. Diadochi. By *antiqui*, in Vitruv., vii, 5, according to

- Helbig, *N. Rh. Mus.*, 1870, p. 395 ff., are meant the artists of the time of the Diadochi.
- 329, 33. Tibur. Stat., *Silv.*, i, 3, 50 sq. reads according to the copy of Cod. Sangallensis (Baehrens, *praef.*, p. 13): Quicquid et argento primum, vel in aere minori Lusit et enormes manus est experta colossos. Since the *ed. princeps*, *Myronis* has been read instead of *minori*. Bergk, *Philol.*, xvi, 20, proposed *primum* for *primum* and *ut* for *et*. Baehrens thinks that *primum* means 'excellent', and that the reference is to real *colossi*, which had a place in the collection together with small bronze and silver works of art. I take the passage to refer to small studies in bronze and silver (*minori* refers to *argento* as well as to *aere*), in which the artist as it were tried the effect of the colossal figures which were to be executed later. Ed. Schwartz, *Conjectanea, Ind. lect. Rostoch. aestiv. 1889*, p. 7, gives essentially the same explanation.
- 329, 36. Myron. Stat., *Silv.*, ii, 63: Si quid Apellei gaudent animasse colores, Si quid adhuc vacua tamen admirabile Pisa Phidiacae rasere manus (cf. iv, 6, 28). In this connexion I do not think *Apellei* can be taken in a general sense as a synonym for painting.
- 329, 40. Apelles. Stat., *Silv.*, iv, 6, 10-21.
- 330, 1. Polycletus. Exceptionally Columella, *R. r.*, i, *praef.* 31 mentions Bryaxis and x, 30, Phradmon and Ageladas. Perhaps he read the first name on a pedestal. Of a number of statues, which stood in the Forum, the pedestals and inscriptions still exist (according to the shape of the letters rather of the second than the third century): Opus Praxitelis, Opus Polycleti, Opus Timarchi; a fourth inscription, Opus Bryaxidis, belonging to the same series, only exists in manuscript. De Rossi, *La base di una statua di Prassitele testè scoperta e la serie di simili basi alla quale esse appartiene*, *Bull. comun.* ii, 1874, p. 174 ss. Cf. *CIL*, vi, 10,038-43. De Rossi (p. 179 s.) supposes that the statues were erected shortly before the Basilica Julia. Cf. Löwy, *Inscr. griech. Bildhauer*, p. 319 ff.
- 330, 1. Juvenal. *Juv.*, 3, 216 sqq.
- 330, 17. masters. *My Kunstsinn der Römer*, p. 37.

- 339, 34. verse. Ranke, *Serbische Revolution*³, 66.

- 340, 1. text. Westphal, *op. cit.*, p. 13. Ambros, *Gesch. d. Musik*, i, 446. Cf. the transcription on p. 451, n. 1 of the hymn of Dionysios to Helios, as adapted by Bellermann.
- 340, 7. successful. 'The ancient musical staff extends from F to g', if one compares the primary notes with the white keys and the secondary with the black keys of our pianos. The principal octave is f to f'. This was the most convenient octave for all singers, so its absolute pitch must have been 2 or 3 tones lower, about c-c' or d-d'. Bellermann, *Anonymi scriptio de musica* (1841), introd. p. 12 f. K. v. Jan.
- 340, 13. Greeks. Mendelssohn-Bartholdy, *Gesch. Griechenl.*, i, 44. [*Christ. Anthol. carm. christian.*, p. 113. Bourgauld-Ducoudray, *Études s. l. musique ecclésiastique grecque*, p. 7. K. v. J.] Also harmony was hardly known to ancient Egyptian music: Ambros, i, 156 f.; [nor to modern Indian, Arabian, Chinese or Japanese: *Allg. Musikzeitung*, 1879, p. 583. Chappell, *History of Music*, p. 304. K. v. J.].
- 340, 16. together. Westphal, p. 19 f. Ambros, p. 452 ff.
- 340, 19. unison. Pliny, *Epp.*, ii, 14, 17 (mesochorus). *CIG*, iii, 6231: ἀρχέχορος. Dio, lvi, 35: ἐμοῦ . . . τὰ κεφάλαια ἀποσημαίνοντος καὶ ὑμῶν τὰ λοιπὰ συνεπηχούτων. Dio Chr., *Or.*, lvi, 565, 19 M.: Κορυφαίους . . . τοὺς σημαίνοντας τοῖς ᾄδουσι καὶ μέλος ἐνδιδόντας. Colum., *R. r.*, xii, 2: ubi chorus canentium non ad certos modos neque numeris praeceuntis magistri consensit etc. Apulei., *De mundo*, p. 749: quod est in triremi gubernator, in curru rector, praecentor in choris etc.
- 340, 27. sense. Guhrauer, *Zur Frage der Mehrstimmigkeit in der griech. Musik*, in *Philolog. Abhandlungen f. M. Hertz* (1888), p. 177 f. Gevaert, *Histoire et théorie de la musique de l'antiquité*, 1876, p. 350 (p. 370: la polyphonie hellénique . . . se rapprochait de la manière en usage chez les chanteurs au luth de xv et xvi siècle). K. v. Jan, in *N. Jahrb.*, 1879, p. 583. Gevaert has (p. 374 ss.) set the hymn to Helios to the accompaniment of a stringed instrument, to give an idea of the application of harmony in ancient times, as he imagines it.
- 340, 32. developed. Cf. Ambros, i, 461-494.
- 340, 37. trumpet. The *tuba* did not resemble the trumpet in its note, but the bugle of the German army; K. v. Jan, *Signal- und Schlaginstrumente*, in Baumeister, *Denkmäler d. kl. Alterth.*, iii, 1657. The σαλπικτής (*tubicen*) was admitted to the Greek agones. In the record of an ἀγὼν μουσικὸς πενταετηρικός at Aphrodisias, *CIG*, 2758 s. = Lebas-Waddington 1620d, the list of competitors begins: σαλπικτῆ- κήρυκι- ἐγκωμιογράφου- ποιητῆ- πυθαύλῃ. Seneca, *Epp.*, 76, 4: theatrum Neapolitanorum . . . factum est et ingenti studio, quis sit pythaeus bonus, iudicatur. habet tubicen quoque Graecus et praeco concursum. *Encomiographi*, evidently at the same *agon*, are mentioned in M. Caes., *Epp. ad Frontin.*, ii, 2, 4, ed. Niebuhr (ii, 6, 7: interdiu in theatro consumitur). Most probably both Seneca and Marcus Aurelius refer to the pentaeteric *Augustalia* at Naples; it is known that poets participated in these; cf. *s.g. Stat. Silv.*, v, 3, 225-227.

- 341, 8. audience. Cf. Appendix xlii. Quintilian, ix, 4, 11; i, 10, 25. Details of the construction of the instrument in Chappell, *op. cit.*, p. 325 ss., and K. v. Jan in Baumeister, i, 563 ff., who remarks, p. 569, that no organist is ever mentioned in an inscription as crowned a victor, and that the organ never occurs in writers on music like Plutarch and Ptolemy; but that it seems to have been especially used in the amphitheatre to give the signals.
- 341, 10. *virtuosi*. The simple flute is regarded as the instrument of the soloists by Ambros, i, 487, Guhrauer (*Zur Gesch. der Aulosmusik*, in *N. Jahrb.*, 1880, p. 289 ff.) and apparently Gevaert (*op. cit.*, pp. 696, 699, 1). On the other hand v. Jan (*op. cit.*, 1879, pp. 581-584) thinks it was the double flute, which as a rule was played in two parts, the one half of the instrument rendering the melody, and the other maintaining a high note as an accompaniment. Cf. v. Jan, *Die musikalischen Festspiele der Griechen* (*Verhandl. der 39. Philologenvers.*), p. 80, 4, where the *aulos* is designated 'double clarinet'. See also his article *Flöten* in Baumeister, i, 553 ff. On the kinds of double flute in Roman theatrical music cf. my article in Marquardt, *StV*, iii², 545, 8 (K. v. Jan, *op. cit.*, p. 591, 21 and in Baumeister, i, 569).
- 341, 12. hautboy. Westphal, p. 21. Fortlage (*Rhythmica*, *StRE*, vi, 608). Ambros, p. 476. On the other hand K. v. Jan (in Baumeister, i, 553) considers the Greek *aulos* was not an oboe, but a clarinet.
- 341, 16. instruments. Westphal and Ambros, *opp. cit.*
- 341, 17. *cithara*. On the differences between the two cf. K. v. Jan, *Die griechischen Saiteninstrumente*, in *Archäol. Zeitung*, 1858, p. 181 (plate cxv); also his *Doctordissertation, De fidibus Graecorum* (Berol. 1859), p. 5ss., and his article *Saiteninstrumente* in Baumeister, iii, 1539 ff.
- 341, 24. Hebrews. *Ibid.*, 1544 ff.
- 341, 30. fingers. Jan, *Mus. Festsp.*, p. 80.
- 341, 32. antiquity. Ambros, i, 461-476. On the structure of the *cithara* cf. Gevaert, p. 254ss.
- 341, 38. to it. Westphal, p. 21. Cic., *Pro Murena*, 13s. (Quintilian, viii, 3, 79): ut aiunt in Graecis artificibus eos auloedos esse, qui citharoedi fieri non potuerint. K. v. Jan, *N. Jahrb.*, 1879, p. 591 explains this as due to the slight favour in which 'aulodic' was held. By this he understands the recital of an *auletes* who alternately played and sang. Guhrauer however (*op. cit.*, 1880, p. 689 ff., and *Zur Geschichte der Aulodik bei den Griechen*, *Progr. v. Waldenburg in Schlesien*, 1879) probably rightly understands it as the recital of a solo singer, accompanied by an *auletes*. A baritone voice accompanied in unison by a sort of oboe an octave higher, cannot have been particularly attractive, or even adapted to definite requirements. In reality the solo voice was accompanied by the *cithara*, which did not require a second musician; the function of the flute (apart from its use as the solo instrument of the *auletae*) was to accompany the choirs and to lead them with its more powerful tone.

- Guhrauer, *Zur Gesch.* etc., p. 15 f.; so also now v. Jan, *Mus. Festsp.*, p. 80.
- 342, 2. voice. Meyer, *Anthol. Lat.*, 955, 957.
- 342, 4. song. Westphal, p. 115: the polyphonic accompaniment of song might be effected either by several wind instruments, or by several stringed instruments, or finally by a combination of the two. So Pindar, *Ol.*, 3, 6: *φόρμιγγά τε πακιλδογάρων και βοᾶν αὐλῶν ἐπέων τε θέσιν συμμίζειν προκόντως*. Fortlage, *op. cit.*, p. 607. A changing accompaniment of wind and stringed instruments is assumed by Jahn, *op. cit.*, p. 430 f., on Horace, *Epod.*, 9 (l. 5: sonante mixtum tibiis carmen lyra, Hac Dorium, illis barbarum).
- 342, 6. choruses. Pliny, *Epp.*, vii, 17; Gell., xix, 9.
- 342, 9. alike. Aristides Quintilian., ii, ed. Meibom., p. 91: *οὐ γὰρ ταῦτ' ὧς εἶδος ἐν τε κιθάρα, καὶ ἐν αὐλῷ πρόπον*.
- 342, 14. husband. Pollux, iv, 80. *Ibid.*, 83: *Ἀθήνησι δὲ καὶ συναυλία τις ἐκαλεῖτο συμφωνία τις αὐτῇ τῶν ἐν Παναθηναίοις σιναυλοῦντων. οἱ δὲ τὴν συναυλίαν εἶδος προσαυλήσεως ὡς τὴν αὐλωδίαν*. Aristides Quintilian., ii, ed. Meibom., p. 101, cf. also p. 108 sq.
- 342, 39. Canus. Plutarch, *An seni ger. s. resp.*, c. 5, 6, p. 786. Cf. Plutarch, *Galba*, c. 16; Martial, iv, 5, 8.
- 343, 5. devout. Philostrat., *Vit. Apoll. Tyan.*, v, 21, ed. K., p. 93.
- 343, 19. Arions. Gesner on Quintilian, i, 12; cf. Bitter, *J. S. Bach*, i, 304 f.
- 343, 26. vases. Westphal, p. 22 f. I borrow the comparison from Ambros, i, 510.
- 343, 37. triumph. I follow here H. Guhrauer (*Der pythische Nomos, eine Studie zur griech. Musikgeschichte*, in Fleckeisen's *Jahrbb. f. cl. Philol.*, Supplementband viii, pp. 310–351), except that with K. v. Jan (in *Philologus*, xxxviii, p. 378 ff. and *Jahrbb.*, 1879, p. 577, whose view has since been adopted by Guhrauer himself [*Zur Gesch. der Aulosmusik*, in *N. Jahrbb.*, 1880, p. 703 ff.]) I do not assume the co-operation of two other instruments (*σάλπιγξ* and *ὄριγξ*). Guhrauer, rightly in my opinion, prefers the account in Pollux, iv, 84, to that in Strabo, ix, p. 421 C (p. 322 f.); and I regard as very probable his conjecture that Strabo mentioned Timosthenes not as a composer, but as his authority, and that the passage contains a lacuna (p. 316). Guhrauer also rightly points out (p. 341) that the Roman designation for a solo flute-player, *pythaulēs*, shows that the Pythian *nomos* was a solo.
- 344, 3. boiled. Athen., viii, 338 B.
- 344, 14. trumpet. Horace, *A. P.*, 202. Cf. K. v. Jan in Baumeister, i, 558.
- 344, 16. spinets. W. v. Kügelgen (d. 1867), *Jugenderinnerungen eines alten Mannes*, p. 348: 'There was as much difference between the instruments of that day (1817) and this, as between toy drums and kettle-drums.'
- 344, 20. carriages. Ammian. Marcellin., xiv, 6, 18.
- 344, 28. unison. Athen., v, p. 201 F.
- 344, 34. together. Ambros, i, 155.

- 344, 39. singers. *Id.*, i, 163.
- 344, 40. Alexandria. I do not know on what authority the following statement of O. Müller (*Gr. L. G.*, i, 293, quoted by Ambros, i, 313 f.) is based: 'At the courts of the Macedonian rulers, from Alexander onwards, symphonies were performed with hundreds of instruments, and we must believe from the statements of ancient writers that the instrumental music of that day, especially as regards wind-instruments was not less rich and varied than ours' (?). There is nothing of the kind in the passage quoted by Müller, Plutarch, *De mus.*, c. 18.
- 345, 5. Eastern. Ambros, i, 183.
- 345, 6. *sambuca*. Livy, xxxix, 6: Tunc psalteriae sambucistriaeque (Ambros, i, 181) et convivalia ludionum oblectamenta addita epulis.
- 345, 8. fife. Mommsen, *RG*, v, 462, 1.
- 345, 9. kettle-drums. Horace, *Sat.*, i, 2, 1; Juv., 3, 62 sqq.
- 345, 11. Nero. Ambros, i, 180 f. (where however the *pythaulas* is confused with the *utricularius*).
- 345, 17. Alexandria. Lumbruso, *L'Egitto nel tempo de' Greci e de' Romani*, p. 100, 3.
- 345, 21. cithara. Cf. vol. i, p. 359.
- 345, 27. harp. Ambros, i, 161.
- 345, 30. played. Athen., iv, 183 E.
- 345, 32. airs. Ovid, *A. a.*, iii, 318.
- 345, 34. ballets. Martial, iii, 63, 5.
- 345, 35. symphonies. Cic., *In Verr.*, ii, 3, 44, 105; 5, 13, 31; *Pro Coel.*, 15, 35.
- 345, 36. *symphoniaci*. *Id.*, *Divin. in Caecil.*, 17, 55; *In Verr.*, ii, 5, 15, 64; *Pro Milone*, 21, 55.
- 345, 39. flute. The 'collegium symphonicorum qui sacris publicis praestu sunt' (Henzen, 6097) is no other than the coll tibicinum et fidicinum Romanorum qui s. p. p. s. (Orelli, 2448, inscription of 111 A.D.). *CIL*, vi, 2191-93. Marquardt, *StV*, iii², 226, 8. *CIL*, vi, 3, 23, 3369: Ode C. Cassi symphoniaci vixi ann. xiix. Moschion contubernali.
- 346, 5. Pylades. Cf. vol. ii, p. 102.
- 346, 17. foot. In monuments the *scabillum* appears more often as an independent instrument standing on the ground by the dancer. Jahn, *Columbarium der Villa Doria-Panfili*, pp. 24, 47. The *scabilla* seem to have been sometimes furnished with bells. Augustine, *De musica*, 3, 1: cum symphoniaci scabella et cymbala pedibus feriunt. K. v. Jan, *Signal- und Schlaginstrumente*, in Baumeister, iii, 1662.
- 346, 23. Northerner. Ambros, i, 292n. Mendelssohn, *Reisebriefe*, p. 146.
- 346, 31. Horace. Horace, *Carm.*, iv, 1, 22. Cf. Jahn in *Hermes*, ii, p. 432.
- 346, 37. drums. Athen., vii, 361 E.
- 346, 41. song. Max. Tyr., *Diss.*, xxxii, 4. Cf. also the description of the wedding music in the *Epithalamium Laurentii*, *Anthol. Lat.*, ed. Riese, ii, p. 742 (of the time of Claudian, *praef.*, xxvii), 60-64 (with Haupt's remarks in *Hermes*, ii, 14):—

Tympana, chorda simul, symphonia, tibia, buxus, cymbala, bambilium, cornus et fistula, sistrum, quaeque per aeratas inspirant carmina fauces, humida folligenas exclament organa voces.

- K. v. Jan (in Baumeister, i, 563) reads with Burmann *bombilium*, which is said to be a deep flute, instead of *bambilium*.
- 347, 8. stage. Seneca, *Epp.*, 84, 10. According to Phrynichus, p. 163 Lob. (who is probably speaking only of Greek theatres) κωμῳδοὶ καὶ τραγῳδοὶ appeared on the λογεῖον, but αὐληταὶ καὶ κιθαρῳδοὶ καὶ ἄλλοι τινὲς ἀγωνίζοντες . . . καὶ οἱ χοροὶ in the ὀρχήστρα (incorrectly called θυμέλη).
- 347, 19. flutes. *Vit. Carin.*, c. 19.
- 347, 21. great. Ammian., xiv, 6, 18.
- 347, 27. severity. Cic., *De legg.*, ii, 15, 39: Illa quidem (sc. theatra) quae solebant quondam compleri jucunda severitate Livianis et Naevianis modis, nunc ut eadem exultant, ut services oculosque pariter cum modorum flexionibus torquent.
- 347, 32. melodies. Varro in Non., 7, 16 (Buecheler, Petron., ed. min.³, p. 199, n. 365. Vahlen, *Conjectanea*, p. 16): Saepe totius theatri tibiis, crebro flectendo Commutari mentes, frigi (*frigier* V., *erigi* B.) animos eorum. Cf. Horace, *A. P.*, 211 sqq.
- 348, 2. divine. Plutarch, *De mus.*, 15, 1. As Westphal, *Harmonik u. Melopoïe*, pp. 51–57, has shown, the treatise is the first essay of a Platonizing musician, who has to a great extent plagiarized Aristoxenus.
- 348, 2. Plutarch. Plutarch, *Quaest. conv.*, ix, 15, 17: ἡ ὀρχησις . . . τῶν μὲν ἐμπληκτικῶν καὶ ἀνοήτων κρατεῖ θεάτρων, ὥσπερ τύραννος ὑπήκοον ἐαυτῇ πεποιημένη μουσικὴν ὀλίγου τὴν ἅπασαν.
- 348, 7. virility. Quintilian, i, 10, 31.
- 348, 11. tickling. Plutarch, *De esu carniū*, ii, 2, 3.
- 348, 37. unnatural. Thibaut, *Ueber Reinheit der Tonkunst*.³ te Ausgabe (1851, Iste, 1825), pp. 10 ff., 77, 92, 112 ff.
- 349, 24. 'chapels'. Read 'bands'.
- 349, 26. serfs. Prince Nicholas Borisovich Yusupov (ii, p. 137) 'had in his service not only a large orchestra, but also an operatic company and a *corps de ballet* consisting entirely of his serfs'. Bernhardi, *Gesch. Russlands*, iii, 677.
- 349, 28. inheritance. Vol. ii, p. 112. Cf. Cic., *Div. in Caecil.*, 17, 55; *In Verr.*, ii, 5, 15, 64.
- 349, 33. flutes. Cic., *Pro Roscio Amer.*, 45, 134.
- 349, 35. musicians. *Id.*, *Pro Milone*, 21.
- 349, 37. song. *Id.*, *Pro Coel.*, 15; Seneca, *Epp.*, 51; vol. i. p. 338.
- 349, 37. Maecenas. Seneca, *Quare aliqua incommoda* etc., c. 3, 10.
- 349, 38. Caligula. Sueton., *Calig.*, c. 37.
- 349, 41. table. Was the custom derived from Greece? Cic., *Fam.*, xvi, 9 writes in 50 B.C. to Tiro: Symphoniam Lyconis (a musical banquet at Patrae) vellem vitasses. Seneca, *Vit. beat.*, c. 11, 4: vide hos eosdem . . . aures vocum sono, spectaculis oculis, saporibus palatum suum delectantes. Horace, *A. P.*, 374 (ut gratas inter mensas symphonia discors). C., iii, 19, 18. At the banquet of Nasidienus there is no music. Lib., ed. R., i, 192: οἱ δὲ περὶ τὰς τραπέζας ὑμῖν δδόντες μέλι καὶ

ὅφ' ὦν τοῖς ἄσμασι πνεύε . . . εἰσὶν ἡδύτοι αὐτοῦ τοῦ πόματος. It is said of Stilicho by Claudian, *Laud. Stilich.*, ii, 141: nullo citharae convivium cantu Non pueris lasciva sonant. Cf. Mueller, *Gen. aev. Theodos.*, ii, 7.

- 350, 3. Martial. Martial, ix, 77, 3.
 350, 5. Andalusians. Juvenal, ii, 162.
 350, 8. cithara. Gell., xix, 9, 3.
 350, 11. lute. Pliny, *Epp.*, i, 15.
 350, 11. Martial. Martial, v, 78.
 350, 23. house. Petron., *Sat.*, 31, 32, 33, 35, 36, 41, 47.
 350, 26. hymns. Dessau, *BdI*, 1884, pp. 154-156: Ti. Claudio Veloci hymnologo primo M. d. I. et Attinis publico etc. *CIL*, vi, 9475 = Orelli, 2617: Ti. Claudio Glypto hymnologo de campo Caelimontano. Firmicus, *Math.*, iii, 6: hymnologos et qui deorum laudes cum jactantia et ostentatione decantent.
 350, 28. Isis. Vol. i, p. 256.
 350, 30. sacred. On music in Roman worship cf. Marquardt, *StV*, iii^a, 186 f. It is an error of Ambros (*Gesch. der Musik*, i, 528) to understand by *λεπὰ μουσική* in Julian, *Epp.*, 56 sacred music in the modern sense; the predicate is evidently an honorific one applied to the art generally.
 351, 3. ballads. Reumont, *Lorenzo de' Medici*, i, 597 f.
 351, 10. places. Ovid, *Fast.*, iii, 535; *A. a.*, iii, 317.
 351, 13. Cicero. Cic., *Acad. prior.*, ii, 7, 20.
 351, 15. disapproval. Cic., *De orat.*, iii, 25, 98: quanto molliores sunt et delicatiores in cantu flexiones et falsae voculae quam certae et severae! quibus tamen non modo austeri, sed si saepius fiunt, multitudo ipsa reclamat.
 351, 21. performance. Polyb., xxx, 13. Athen., xiv, 4 (at the triumphal games of L. Anicius in 587 = 167 B.C.).
 351, 27. colours. Marquardt, *PrI.*, ii^a, 580 f.
 351, 29. hand. *Auct. ad Herenn.*, iv, 47, 60; cf. Cic., *De orat.*, ii, 80, 325; *Tusc.*, v, 40, 116.
 351, 32. cithara. Psilocitharistae, Sueton., *Domit.*, c. 4.
 351, 32. varieties. Trigonon, cf. vol. ii, p. 345.
 351, 32. flute. Appendix xlii.
 351, 33. organ. Vol. ii, p. 341. Sueton., *Nero*, c. 41, 54: voverat . . . proditurum se . . . etiam hydraulam et choraulam et utricularium. Organ-playing on contorniates: Sabatier, *Descr. gén. des méd. cont.*, pl. x, 6-9. In the Nennig mosaic the organist is accompanied by a performer on the crooked horn. Gevaert, p. 372: La grande vogue du jeu de l'orgue (hydraulus) sous l'empire romain témoigne d'une certaine culture de l'harmonie. On ne concevrait pas qu'un instrument aussi compliqué que celui dont Héron d'Alexandrie et Vitruve nous ont laissé la description eût simplement fait entendre une musique homophone, que des instruments moins riches, mais doués de la précieuse faculté de l'expression pouvaient rendre avec infiniment plus de charme.
 351, 35. dramatic. Appendix xlii.
 351, 35. lyric. *ψῳδ.*: Appendix xlii. Sueton., *Nero*, c. 42: jocu-

lariâ in defectionis duces carmina lasciveque modulata . . . etiam gesticulatus est.

- 351, 39. Leucothea. Pseudolucian., *Nero*, c. 3. In the imperial age there was also at Olympia a contest for singers. *Archæol. Zeitung*, 1879, 210, n. 331: Πεισάιοι Σπερχειὸν ἀρμόμιος εἴρεκα μόλπης, Ol. 253 = 233 A.D.; *ibid.*, 1884, p. 54, n. 339 (second cent.): Ἰσό[δη]μος Ὀλύμπιον ὕμνον ἀέσας Εἰδρυμαὶ βουλῆς ψῆρεψ Ὀλυμπιάδος.
- 351, 40. *virtuose*. Citharoeda: Orelli, 2609. ΧΟΡΑΥΛΙΣ, 2610.
- 351, 41. Alexandria. Cf. vol. ii, p. 345.

VOL. III.

I. BELLES LETTRES.

- 1, 26. phraseology. Tac., *Dial.*, c. 30 sq.
- 1, 28. Tacitus. *Id. ib.*, c. 37.
- 2, 12. many. Diodor., i, 2.
- 2, 13. Seneca. Seneca, *Contr.*, ii, praef., p. 151, 27, ed. Kiesel.
- 2, 31. youth. Martial, ii, 90, 2; Marquardt, *StV*, ii^a, 106 f.
- 2, 37. Latin. Rohde, *Der griechische Roman*, p. 302, 3.
- 2, 40. child. Horace, *Epp.*, ii, 1, 126.
- 3, 2. generation. Cf. my *Programm, De historiarum enarratione in ludis grammaticis, Ind. lect. aestiv. Regim. 1874*. Also Marquardt now agrees with me; *Pril.*, i^a, 106, 7.
- 3, 7. days. Cf. vol. ii, p. 337.
- 3, 14. poets. Horace, *Epp.*, ii, 1, 128-131.
- 3, 16. use. Jerome, *Ep. ad Lact.*, 107, quotes a verse of Syrus with the remark: legi quondam in scholis puer. Phaedr., iii, *epil.* 33: Ego quondam legi quam puer sententiam: Palam mutire plebejo piaculum est (Enn., *Trag.*, 376 Vahlen), obviously also in a collection of maxims.
- 3, 19. Homer. Pliny, *Epp.*, ii, 14, 2. So also in Augustine, *Conf.*, i, 14; Paulinus Pellens., *Euchar.*, 72.
- 3, 19. Quintilian. Pliny, *ib.*; Quintilian, i, 8, 5.
- 3, 26. Ovid's. Ovid, *Trist.*, ii, 369. Vol. i, p. 230 f. Menander and Homer were also the principal authors used in the Greek schools; see Stat., *Silv.*, ii, 1, 114. On the overrating of Menander by Greek stylists see Phrynichus, *Epit.*, p. 418, ed. Lobeck.
- 3, 27. Greek. Auson., *Protrept. ad nepot.*, *Id.*, 4, 46: Conditor Iliados et amabilis ursa Menandri Evolvenda tibi. *Vita S. Fulgentii episcop. Ruspens.* (468-533): quem . . . mater . . . Graecis litteris imbuendum primitus tradidit, et quamdiu (ut quando?) totum simul Homerum memoriter reddidisset, Menandri quoque multa percurreret: nihil de Latinis permisit litteris edocere. Migne, *Patrol. lat.*, lxxv, col. 117.
- 3, 33. read. Stat., *Silv.*, v, 146-175.
- 3, 34. countries. On the interpretation of the Greek poets in the Greek countries cf. Lehrs, *Qu. epp.*, p. 14; Aristid., i, p. 142 D, where Homer, Archilochus, Hesiod, Simonides, Stesichorus, Pindar, Sappho, Alcaeus and others are mentioned as poets who were interpreted in the school by Alexander of Cotyaeum. Cf. also Galen, ed. K., xvi, 566: καὶ γὰρ ῥήτορος ἤκουσα μελετῶντος ἐν παρακοπῇ καὶ γραμματικοῦ βιβλίον ἀναγινώσκειν οὐδέμινου

Βακχυλιδεῖον ἢ Σαπφικόν. Aristides dreamed that he heard the pupils in the schools of Alexandria read his own hexameters; he speaks as if it really could have happened (t. ii, p. 310, 12, ed. D.).

- 3, 40. Sabinus. Cf. vol. ii, p. 220.
- 4, 22. Martial. Sueton., *Ill. gr.*, 16.
- 4, 27. schools. Horace, *S.*, i, 10, 80-84.
- 4, 32. orator. Tac., *Dial.*, c. 26. Cf. Genthe, *De vita Lucani*, p. 82.
- 4, 33. Suetonius. Sueton., *Vit. Lucani*, f., poemata ejus etiam praelegi memini.
- 4, 35. Martial. Martial, xiv, 194. Hence also the use made of Lucan by Florus (Teuffel, *RLG*⁴, 348, 2 and 4) and in metrical inscriptions. *Pharsal.*, vii, 1-3, on a tablet found near Trèves, perhaps as Bücheler supposes, a specimen of calligraphy or the signboard of a *quadratararius*; considering the good writing it is not likely to be of late date. (I suppose *lux* for *lex* to be a mistake.) Bücheler, *Trierer Inschriften*, in *Bonner Jahrb.*, lviii, 1876, p. 175 ff.
- 5, 1. probable. Pers., *S.*, i, 29 c. schol.
- 5, 3. Italy. Stat., *Theb.*, xii, 810 sqq.
- 5, 5. indecencies. Martial, i, 35:—

Versus scribere me parum severos,
nec quos praelegat in schola magister,
Corneli quereris etc.

- 5, 10. men. Martial, viii, 3, 15.
- 5, 17. prose. Bernhardt, *RLG*⁴, n. 213.
- 5, 23. outdid. Quintilian, x, 1, 125-131.
- 5, 35. schools. Cf. also Martial, xi, 90 (composed 96 at latest).
- 6, 19. others. Quintilian, i, 8, 8. Bernhardt, *RLG*⁴, n. 212.
- 6, 22. Virgil. *Vit. Hadriani*, c. 16.
- 6, 34. Horace. Fronto, *Ad M. Caesarem et invicem*, i, 8, ed. Naber, p. 23. He has however echoes of Virgil and Horace. Hertz, *Renaissance und Rococo*, 47, 76. *Id.*, *Anall. ad carm. Horat.*, hist. iii (*Ind l. Vratist. aest.* 1879), pp. 4-6.
- 7, 1. sewers. Fronto, *Ad M. Antoninum de orationibus*, ed. N., p. 155 sq. (according to Naber 162 A.D.).
- 7, 9. Cicero. Gell., xii, 2.
- 7, 15. wind. *Id.*, ii, 22.
- 7, 30. audience. Juv., 7, 82-86.
- 7, 32. schools. Sueton., *Vit. Lucani*, f.: poemata ejus praelegi memini. But perhaps his banishment from all the schools was not carried out everywhere and did not last long (cf. above n. on p. 4, 35). Certainly he was again a school author in the fourth century. Jerome, *In Rufin.*, lib. ii, opp. ii, p. 639, ed. Vallars: puto quod puer legeris atque Lucanum.
- 7, 35. Virgil. *H. A.*, V. *Ael. Veri*, c. 5.
- 7, 36. antiquity. Cf. my edit., i, p. 67 f.
- 7, 38. Ennius. The sentence from Ennius read by Phaedrus in the school (see n. on p. 3, 16) certainly stood in a collection of sentences.

- 8, 1. Puteoli. Gell., xviii, 5.
 8, 3. Ennius. *Id.*, xix, 10, 13: Tum Fronto ad grammaticum . . . audistine . . . Ennium tuum dixisse. *Id.*, xx, 10, 2: Tum ille (grammaticus) . . . sic quid ex Vergilio Plauto Ennio quaerere habes, quaeras licet.
 8, 9. Ennius. Fronto, *De fer. Als.*, ed. N., p. 224.
 8, 15. day. Cf. Appendix lx.
 8, 16. Ennius. Gell., xix, 8, 3.
 8, note. Ritschl. *Neue Plautin. Excursus*, p. 124 n.
 8, 27. everywhere. Gell., xviii, 5, 7: quumque aliquot eorum qui aderant, 'quadupes equus' apud suum quisque grammaticum legisse se dicerent.
 9, 16. Petronius. Petron., *Sat.*, c. 118.
 9, 29. comedy. Sueton., *De gramm.*, 11 and 21.
 9, 36. *Thebaid.* Stat., *Silv.*, v, 3, 133-145, 195-208, 233-238.
 9, 41. Catullus. Catull., 68, 15 sqq. (on l. 18 see Crusius, *Rhein. Mus.*, N. F., xlv, 1889, p. 449 f.).
 10, 6. sprout. Ovid, *Trist.*, iv, 10, 19-28, 57 sq.

- 61, 14. cattle. Stat., *Silv.*, iv, 5.
- 61, 16. city. *Id. ib.*, iii, 5, 12.
- 61, 18. Nomentum. Martial already owned his Nomentanum in the year 84 (xiii, 42 and 119; cf. introd. to my edition, i, p. 5). If i, 55 was compared before he owned it, then this is one of his earlier poems included in Book i, and the possession of the Nomentanum was no reason for omitting it. Seneca owned a large vineyard near Nomentum (vol. i, p. 160 f.), and considering that Q. Ovidius (who was a friend of Seneca's most intimate friend Caesonius Maximus, see note on vol. iii, 59, l. 40) had also a vineyard near Nomentum (Mart., i, 105; vii, 93; x, 44) the supposition is plausible, that Seneca's heirs had given parts of the principal estate to both of them.
- 61, 20. lead. Martial, xii, 57; x, 58, 9; xiii, 15; x, 48, 9; x, 94, 4; vii, 91; xiii, 42.

 63, 37. dine. *Mart.*, ix, 19.
 63, 39. do so. *Stat., Silv.*, iv, 4 (Epistula ad Vitor. Marcellum); iv, 5 (Carmen lyr. ad Septimium Severum); v, 2 (Protrepticon ad Crispinum). *Martial*, iv, 31:—

Quod cupis in nostris dicique legique libellis
 et nonnullus honos creditur iste tibi etc.

- 64, 5. Gallienus. *H. A., Vit. Gallieni*, c. 11.
 64, 13. honoraria. *Mém. sur Napoléon et Marie-Louise*. Par la générale Durand, 1886, p. 66 f.
 64, 20. love. *Stat., S.*, i, 2, 248 sqq. In Lucian, *Lapithae*, 21 a Stoic, prevented from appearing at the wedding feast, sends a letter asking for it to be read to the guests: Φιλ. Ἦπρου, ὁ Λυκῖνε, τῆς νύμφης ἐγκώμιον ἢ ἐπιθαλάμιον, οἷα πολλὰ ποιούσιν; Λυκ. ἀμέλεις καὶ ἡμεῖς τοιοῦτον ψήθημεν. After that a grammarian who was present read a ridiculous elegiac epithalamium.

- 64, 38. Martial. Genethliacon Lucani, Stat., *Silv.*, ii, 7 = Martial, vii, 21-23. Capilli Flavii Earini, Stat., *Silv.*, iii, 4 = Martial, iv, 11-13, 16, 36. For the other parallel poems of the two see notes on iii, p. 63, lines 11 and 33.
- 65, 30. many others. Martial, iv, 49 (where, however, as in v, 53, tragedies may also be meant); viii, 3; ix, 50; x, 4. Cf. also xiv, 1. The epigrams date from the years 88 to 97. The *Thebais*, on which Statius worked 12 years, was still incomplete in 89/90 (S., i, 5, 8) but already published at the beginning of 92 (S., i, *præf.*). This fact is wrongly contested by Kerckhoff, *Duae quaest. Papinianae*, Berol. 1884, pp. 25-27. For it is impossible to understand the words 'pro Thebaide mea, quamvis me reliquerit, timeo' to refer to a complete, but unpublished poem (K., p. 27) nor is there any reason to be found why Statius should have postponed the publication of the completed poem for three years (on p. 26 K. says that it was not completed till the end of 94). In the passage iv, 4, 87 sqq. written in the summer of 95, Statius informs Vitorius Marcellus that he has begun the *Achilleis*; and adds that the *Thebais* is already safe in harbour, and that he has made a thank-offering, no doubt for its good reception by the public. He is not speaking of its completion but of its success. Cf. Nohl, *Quaest. Statianae*, p. 23 sq. and Appendix lvi. For a correction of Martial in Statius see note on vol. ii, p. 190, 8. In the other parallel passages of the two poets, mentioned by E. Wagner, *De Martiale poet. Aug. aetat. imitatore* (Regim. 1880), p. 38, 1, and by H. Nohl (in the *Philol. Rundschau*, i, no. 20, p. 632 f.), the similarity is only based on the fact that it is not possible to avoid certain poetical expressions and reminiscences, while the divergences (Martial, i, 41, 4 = Stat., i, 6, 73; Mart., iv, 75 = Stat., ii, 2, 145) rather betray the intention to avoid or to surpass the expressions of the other.
- 65, 39. brilliancy. Stat., *Silv.*, *præf.*, ii and iv; *Theb.*, xii, 819.
- 66, 9. benevolent. Martial, i, 3.
- 66, 11. epigrams. *Id.*, xi, 20.

Haase, *Philologie*, in Ersch and Gruber's *Encyclop.*, p. 379, 17. Melancthon (*Declam.*, t. i, p. 409) in defending Latin poetry specially points out the fact, that, as in Roman times contempt of poetry was followed by general ignorance and extreme *infantia*, so in Germany the reconciliation with *meliores litterae* only set in, after the most educated men ceased to be shy of making *versiculos*.
- 82, 28. practice. *Corp. Reform.*, i, 783 in Paulsen, *Gesch. d. gelehrten Unterrichts*, p. 239; cf. p. 240: the belief that the art of poetry may be learnt 'is one of the fundamental ideas of humanism, it dominates the whole of poetical literature until the so-called 'Sturm und Drang' period, which regarded from this standpoint appears as the revolt against the aesthetic views of humanism.

II. RELIGION.

- 85, 10. satisfaction. Gibbon, *History*, ch. xv. Tac., *Hist.*, i, 22: cupidine ingenii humani libentius obscura credendi (of Otho's belief in astrology).
- 85, 17. indifference. Marquardt, *StV*, iii³, 70 f.
- 85, 19. creed. Horace, *C.*, 134, 2.
- 85, 32. gods. Cic., *De har. resp.*, c. 9; cf. on Cicero's attitude towards religion Gaston Boissier, *La religion romaine d'Auguste aux Antonins* (1874), i, 61ss.
- 85, 38. stories. Strabo, i, 2, p. 19 C.
- 86, 3. crime. Epictet., *Diss.*, ii, 20, 32-35.
- 86, 3. statesmen. Maecenas in Dio, lii, 36.
- 86, 12. assistance. Lucret., iii, 48-58.
- 86, 14. Sulla. Plutarch, *Sulla*, c. 29.
- 86, 18. believers. Boissier, i, 67ss.
- 86, 18. Juvenal. *Juv.*, 6, 342.
- 86, 38. prompt. Lucret., i, 62-101.
- 87, 10. fathers. Zeller, *Philosophie d. Griechen*, iii³, 1, 398, 2.
- 87, 11. Sextus. *Ibid.*, iii³, 2, 47, 2.
- 87, 26. Tacitus. I do not, like Nipperdey, recognize in *Hist.*, v, 5, *Germ.*, c. 9 a silent approval of Jewish and German worship, although in other respects I follow his commentary (Tac., *Ann.*, pp. xiv-xvi).

- 87, 31. interfered. Tac., *Hist.*, iv, 78 : nec sine ope divina mutatis repente animis terga victores vertere. *A.*, xiv, 22 : Nero desecrated the *aqua Marcia*, by bathing in it, secutaque anceps valetudo iram deum affirmavit.
- 87, 36. so doing. Babucke, *De Quintiliani doctrina* (Regim. 1866), pp. 11-16.
- 88, 9. due. Pliny, *N. h.*, xxiv, 1 ; xxvii, 8 (with Sillig's note) : xxxvii, 205 ; ii, 12-27. In xxxvii, 60 he asks how it was possible to discover that the blood of a he-goat softens diamonds, and answers : numinum profecto muneris talis inventio est nec quaerenda ratio in ulla parte naturae, sed voluntas.
- 89, footnote. So Sillig.

- 110, 12. lamentation. *Id. ib.*, 69.
- 110, 14. *sistrum*. *Id. ib.*, 63.
- 110, 35. tragedies. Pausan., i, 3, 2.
- 111, 8. Zeus. *Vit. Alex. Sev.*, c. 17: ο Μάρνα, ο Ιούπας, δι' ἀθανάτων ἐκ. Apparently both apostrophes are meant for the same god.
- 111, 9. Dionysus. Schürer, *Neut. Zeitgesch.*, pp. 378–385, and ii¹, 20. On the cult of Dusaris cf. Lebas-Waddington, p. 478s. Mommsen, *RG*, v, 481; cf. n. on *CIL*, x, 1566. Julian, *Orat.*, 4, p. 150 C.: οἱ τὴν Ἑδέσσαν οἰκοῦντες (Ἑλλήες) Μόμιον καὶ Ἀρτίον συγκαθεδρεύουσιν—Μόμιος μὲν Ἑρμῆς, Ἀρτίος δὲ Ἀρῆς. Cf. p. 154 B. Also the Tyche worshipped in Arabia and Syria, L.-Wadd., 2413 F. must be a Hellenized goddess of the country.
- 111, 13. children. Porphyry, *De abstinentia*, ii, 27, p. 149 sq. ed. Rhoer. Tertullian, *Apol.*, c. 9: Infantes penes Africam immolabantur palam usque ad proconsulatum Tiberii, qui ipsos sacerdotes in eisdem arboribus templi sui obumbraticibus scelerum votivis crucibus exposuit, teste militia patriae nostrae, quae id ipsum munus illi proconsuli functa est. Sed et nunc in occulto perseverat hoc sacrum facinus. Apparently Tiberius (?) had been proconsul shortly before, and the soldiers who took part in the crucifixion of the priests were still alive at the time of Tertullian. Borghesi puts him in the year 657 = 97, because of the SC ne homo immolaretur (in magic rites, cf. Sillig's note), a law which referred only to Rome and Italy. Pliny, *N. h.*, xxx, 12; Tissot, *Fastes des prov. Afric.* (*Bullet. trimestr. des antiq. Afric.*, Juli, 1882, p. 81), agrees with Borghesi.
- 111, 15. god. Henzen, *Inscr. dell' Algeria*, AdI, 1860, p. 83 sq. *CIL*, viii, 4583: Deo frugum Saturno frugifero Aug.; cf. 2666. H., 840 Plutoni Aug. frugifero. 8826 Deo sanc(to) frug(ifero) Aug. Cf. *Eph. ep.*, v, no. 572; 815. It is very unlikely that the 'Saturnus Aug. Achaiae' of *Eph. ep.*, vii, no. 86 ought to be distinguished on account of this designation from the Punic one, considering the slight veneration of Κρόνος in Greece.
- 111, 28. Provence. Seneca, v, 17. Thierry, *H. d. Gaulois*, iii, 289; cf. ii, c. 1.
- 111, 33. preservers. *Eph. ep.*, vii, n. 530: Dis patriis et Mauris conservatoribus.

 206, 14. population. Tertullian, *Ad Scapul.*, c. 2.
 206, 24. forum. *Id.*, *Apol.*, 37.
 206, 28. world. According to Max Müller (*Essays*) the Christians in 1865 amounted to 30·7 per cent. of the total population of the world. In 1885 there are said to have been 445 million Christians [30·8 per cent.] and 1004 million non-Christians. [The *Blue Book of Missions*, 1907, estimates the Christians at 559 millions (34·4 per cent.) out of a total of 1623 millions. *TRL.*] Chastel, *Hist. de la destruction du paganisme dans l'Orient*, p. 36, estimates the Christians [in the West?] at the time of Constantine at $\frac{1}{4}$, in the East perhaps at $\frac{3}{8}$, on an average at $\frac{1}{2}$ of the population (so also La Bastie); Gibbon at $\frac{1}{3}$; Keim (*Rom. u. d. Christenthum*, p. 419) at $\frac{1}{2}$ (a

- little over 16 millions); and V. Schultze, *Gesch. d. Untergangs d. griechisch-röm. Heidenthums*, p. 22 f. does not think this too high.
- 206, 32. empire. Orig., *C. Cels.*, viii, 69.

- 208, 9. contempt. Galen, ed. K., viii, 579, 657; *ib.*, p. 171.
- 208, 22. writers. Phlegon apparently mentioned the solar eclipse and the earthquake during the crucifixion of Christ without any expression of doubt (13th or 14th book of the *Chronica*), Orig., *C. Cels.*, ii, 33; a prophecy of St. Paul (which was fulfilled) he attributed to Christ, *id. ib.*, ii, 14. With an author who was so full of interest in all sorts of marvels, no conclusion can be drawn from these passages respecting his attitude towards Christianity, or indeed his knowledge of it.
- 208, 24. mob. Minuc. Felix, *Octav.*, c. 13; Fronto, ed. Naber, p. 263.
- 208, 25. Celsus. Cf. Aubé, *Hist. des perséc.*, ii, 196ss., who thinks he can find in Tertullian reminiscences of Celsus, p. 193ss. Keim, *Celsus' wahres Wort, Älteste Streitschrift antiker Weltanschauung gegen das Christenthum vom J. 178* (1873); O. Heine, *Ueber Celsus' ἀληθὴς λόγος* (*Schriften f. M. Herts*, pp. 197-214), who believes Celsus to have been a Greek freedman because of his knowledge of Greek literature.
- 208, 31. shadow. Orig., *C. Cels.*, iii, 1.
- 208, 35. Domitilla. Vol. i, p. 258. Renan, *Évangiles*, pp. 228-233, supposes Clemens and Domitilla to have professed a kind of Jewish Christianity, and the latter at least to have been a real Christian.
- 208, 40. plans. Dio, lxvii, 14. Sueton., *Domitian*, c. 10. It is therefore incomprehensible why De Rossi, *Bull. crist.*, 1865, p. 20, says: Il biografo di Agricola (c. 45) manifestamente allude in especie ai consoli Flavio Clemente ed Acilio Glabrione uccisi, alle due (?) Domitelle ed agli altri ad un tempo dannati per la causa medesima. A paper by him: *Les nouvelles fouilles du cimetière de Priscille, sépulture des Acilii Glabrones* (contained in the *Congrès scientifique international des catholiques tenu à Paris 8-13 Avril, 1888, Tome II, Bureaux des Annales de philosophie chrétienne*, 1888, pp. 261-267 was unfortunately inaccessible to me. De Rossi believes also that the Apollonius who was beheaded as a Christian under Commodus (Euseb., *H. e.*, v, 21: ἄνδρα τῶν τότε πιστῶν ἐπὶ παιδείᾳ καὶ φιλοσοφίᾳ βεβηγμένον) was a senator, relying on the untrustworthy statement in Jerome, *De vir. ill.*, 42; ed. Vall., ii, 883. For these traditions cf. Aubé, *Les chrétiens dans l'empire Romain de la fin des Antonins au milieu du 3 siècle*, 1881, p. 35ss. In the inscrip-

- tion: εὐμοῦλῳ Οὐρανῷ θυγάτηρ. 'Ηρώδης, De Rossi finds no less a person than Herodes Atticus (*Bull. crist.*, 1872, p. 65 s.). Aubé, *H. des perséc.*, i^a, 161-185, has clearly demonstrated that the tradition of Domitian's persecution is baseless.
- 209, 11. Tertullian. Tertull., *De anima*, c. 20.
- 209, 13. faith. Lactant., vi, 24; cf. v, 22.
- 209, 16. studies. Augustine, *C. D.*, vi, 10 sq.
- 209, 17. hated. Vol. iii, p. 184.
- 209, 18. God. Augustine, *ib.*, 11 (ed. Haase, iii, 427, 43): *mirabatur haec dicens et quid divinitus ageretur ignorans.*
- 209, 21. feelings. Augustine, *C. D.*, vi, 11. Casaubon says: multa Seneca scribit quae intellegi aut credi sine verae pietatis sensu non queunt: quo bono cum ipse caruerit, sequitur ut ea dicamus ab illo scripta non ex certa scientia aut fide, sed veluti μαρτυρούμενον et more poetarum ἐνθουσιάζοντα (Wiese, *Tagebuch des Casaubonus*, in *Zeitschr. f. Gymnasialwesen*, 1851, p. 289).
- 209, 24. forgeries. E. Westerburg, *Der Ursprung der Sage, dass Seneca Christ gewesen sei* (1881), has made it very probable that only letters 10-12 date from the fourth century, and all the others from the Carolinian age, and that the basis of the latter (and of the Pseudo-Linus) was a conciliatory treatise based on Ebionite fables, in which Seneca played the part of mediator between Nero and the apostle. Afterwards, he thinks, anti-Pauline tendencies connected Seneca with the latter. Kreyher's work, *Seneca und seine Beziehungen zum Urchristentum*, 1887, I only know from the review by Gertz (*Berliner philol. Wochenschr.*, 1887, nos. 2 and 3). The author sees in the M. Anneus Paulus Petrus of the inscription in Ostia a son of the philosopher!
- 209, 35. Christians. De Rossi, *Bull. crist.*, v (1867), p. 6. The inscription stands in *CIL*, xiv, 566 among the pagan ones.
- 210, 11. sources. Zeller, *G. d. Phil.*, iii^a, I, 637, 1 and 644 f.

- 235, 5. faces. Lucian, *Hermotim.*, 2, 6, 48-67, 77, 79. Cf. also *Paras.*, 43; *Ver. hist.*, ii, 175; *Dialog. mort.*, 20, 5.
- 235, 18. education. Aristid., *Or.*, xlv, p. 96 Jebb; ed. Dindorf, ii, 128 sq.
- 235, 23. philosophy. Baumgart, *Aelius Aristides*, pp. 25-35.
- 235, 28. time. Aristid., *Or.*, xlvi, p. 307 sqq. Jebb; ed. D., ii, 397 sqq.
- 235, 36. practise. *Id.*, *Or.*, xlvi, p. 307 J.; ed. D., ii, 397 sq. (on p. 398 instead of the meaningless τελών, a word like *ὀνειδίζοντων* or *λοιδορουμένων* is required). Jebb's mistake in referring the whole passage to the Christians instead of the philosophers needs no refutation. He is, however, followed by A. Haas, *Quibus fontibus Aristides in componenda declaratione ὑπὲρ τεττάρων usus sit* (Greifswald, 1884), pp. 58 and 64. Cf. Baumgart, p. 26, 19. Choricus, *Apol. mimor.* (ed. Graux, *Rev. de philol.*, i, 222), 6, 27, understood the passage right: ὁ γ' Ἀριστείδης, οὗς λοιδορεῖ φιλοσόφους καὶ πλείστη φησὶν ἀκολασία συζῆν, τοῖς Σοφοκλέους ἀπεικάζει σατύροις (p. 307 J.). Perhaps Aristides was thinking here especially of the Cynics, but certainly not of them alone, as Bernays supposes (*Lucian und die Cyniker*, pp. 38 f. and 100 ff.). This is shown by the excuse of consideration for wife and children, which Aristides mentions, not merely as if it were an exceptional thing (Bernays, p. 103).
- 236, 21. wise. Aristid., *ib.*, p. 309 sq. J.; D., 404 sq. (p. 405, 6 instead of ὥσπερ οὐ καὶ τοὺς δούλους perhaps we should read ὥσπερ ἴδαμεν καὶ τοὺς δούλους, and p. 407, 2 instead of εἶδον δ' ἐγώ γε καὶ ἐν ψαλμῳδίᾳ θεράποντας: ἐν κωμῳδίᾳ). Minuc. Felix, *Octav.*, 38, 5 and Lactant., *Inst. div.*, iii, 15 take the same view, which is perhaps partly to be explained by their rhetorical training.

Prudent., *Hamartig.*, 401: Hinc gerit Herculeam vilis sapientia clavam Ostentatque suos vicatim gymnosophistas. Augustine, *C. D.*, xiv, 20, 5: Et nunc videmus adhuc esse philosophos Cynicos; hi enim sunt, qui non solum amiciuntur pallio, verum etiam clavam gerunt. Also in the rescript on the *colluvio* of the false philosophers in the year 369, *Cod. Theod.*, xiii, 3, 7 (with Gothofred's commentary) the Cynics seem to be chiefly meant. Cf. Zeller, iii^a, 1, 775 f.
- 278, 28. friendship. Zeller, who had doubted the assertion in *Vit. Hadrian.*, c. 16 (iii^a, 1, 660^a, 4), admits (iii^a, 1, 738, 3) the possibility that Hadrian, when he went to Greece (125/6, 129/30) visited Epictetus, who was 20 years old when Musonius was exiled from Rome, A.D. 65.
- 278, 37. concerned. Seneca, *Epp.*, 44, 1 and 2.
- 279, 19. influences. Epictet., *D.*, iv, 7, 6; M. Antonin., xi, 7. I see no reason for Renan's assertion (*Les Apôtres*, ch. 13) that *Sicarii* and Zealots are meant here, and in the second passage (where the text has οἱ Χριστιανοί) it seems to me quite impossible.
- 279, 27. influences. Boissier, *La religion rom.*, ii, 426. Cf. vol. iii of the present work, p. 222.
- 279, 30. antiquity. Cf. Zeller, iii^a, 1, 267 f. etc.
- 279, 37. benefits. *Id.*, iii^a, 1, 278 (Seneca); 660 (Musonius); 675 (Epictetus); 683 f. (Marcus Aurelius). Goethe could only have thought of these when he called the Stoics 'Christians among the heathen' (Riemer, *Briefe von und an Goethe*, p. 315).
- 280, 8. fellow-slaves. Zeller, ii^a, 1, 571 (Plato); 2, 537 f. (Aristotle); iii^a, 1, 278–80 (Stoics).
- 280, 14. Epictetus. Orig., *C. Cels.*, vi, 2. An interesting testimony to the repute in which the doctrine of Epictetus was held is furnished by an inscription (of about the second half of the second century) in a sanctuary of Apollo in Pisidia. The author of this inscription was also a man of servile descent, trained in the Stoic school. Kaibel, in *Hermes*, xxiii, 1883, p. 541 ff.
- 281, 14. guilt. Seneca, *Beneff.*, i, 10; *Epp.*, 97.
- 281, 17. events. Tac., *A.*, iii, 55; *H.*, i, 3; Non tamen adeo virtutem sterile saeculum, ut non et bona exempla prodiderit.
- 281, 19. each. M. Antonin., *Comm.*, vii, 1; vi, 48.

IV. BELIEF IN THE IMMORTALITY OF THE SOUL

- 282, 4. assumed. Cf. Lehrs, *Vorstellungen der Griechen über das Fortleben nach dem Tode*, *Populäre Aufsätze* (2nd ed. 1875), pp. 303-362.
- 283, 17. future. Pliny, *N. H.*, vii, 188-191 (on the omitted passage cf. Zeller, i^a, 620, 1).
- 283, 25. stars. Pliny, *ib.*, ii, 95; Zeller, iii^a, i, 388.
- 283, 29. destiny. *Anthol. Palat.*, ix, 49: 'Ελπίς καὶ Τύχη μέγα χαλπετε τὸν λιμέν' εὐρον; Οὐδὲν ἐμολ' ἑὐμῖν· παλτερε τοῖς μετ' ἐμέ. Benndorf-Schöne, *Lateran. Mus.*, 345 ff.: Evasi effugi: Spes et Fortuna valete: Nil mihi vobiscum: ludificate alios. Cf. Orelli, 1174 and *CIL*, ix, 4756: Hac luce si excessi, Spes et Fortuna valete: Nil amplius in me vobis per saecula licebit. Quod fuerat vestrum amisi, quod erat meum hic est. These thoughts of course are not necessarily Epicurean. Lucret., iii, 398 sqq. (Horace, *S.*, i, 1, 119). The figure occurs first in Bio, *Borysthenit.* (Stob., *Floril.*, v, 67): ὡς περ ἐκ συμποσίου ἀπαλλάρτομαι οὐδὲν δυσχεραλῶν οὕτω καὶ ἐκ τοῦ βίου, ὅταν ἡ ὥρα ᾗ. Heinze, *De Horatio Bionis imitatore* (Bonn, 1889), p. 121. Similarly Caesar declared in the senate regarding the punishment of Catiline's followers: mortem—cuncta mortalium mala dissolvere, ultra neque curae neque gaudio locum esse (Sallust, *Catil.*, 51, 20); mortem ab dis immortalibus non esse supplicii causa constitutam, sed aut necessitatem naturae aut laborum ac miseriarum quietem. Boissier, *Relig. rom.*, i, 313, 1.
- 283, 34. sleep. Orelli, 1192.
- 283, 35. character. Somno aeterno: Orelli, 4428; cf. Henzen, *Index*, p. 200.
- 283, 36. immortality. Orelli, 3743 = *CIL*, iii, 5825: Perpetuae securitati; Orelli, 4448: J. O. M. (D. M. ?) et perpetuae securitati; 4453: D. m. s. perpetuae securitati; *CIL*, viii, 3873: securitati perpetuae; 4615 (perp. sec.); 3763: secur. eterne. These formulae are hardly to be taken always literally. *Securi* was a popular expression for the dead (Wilmanns, 575; *CIL*, xiv, 4276: *secura facta est v Idus Oct.* sepulta etc.), and *Securitati* (aeternae) is not only connected with D. m. (Wilmanns, 246; *CIL*, 3654; v, i, 3322, 2896), but *Dis securitatis*, Orelli, 2201 = *CIL*, vi, 2268; *Dis securis*, Gruter, 562, 6; *Dibus securis*, Orelli, 3091, were also said for *Dis manibus*.
- 283, 40. awaking. Stephani, *Tit. Gr.*, v (*Ind. schol. Dorpat.*, 1850), s. xviii, p. 12 = Kaibel, *Epigr. Gr.*, 101.
- 283, 41. inscription. Marini, *Iscr. Alb.*, 117, 6.
- 284, 1. Greek. *CIG*, 6298.
- 284, 6. image. Stephani, *Bull. hist. phil. de l'Acad. de St. Petersb.*, xi, 238. Lebas-Waddington, *Asie min.*, *Add.* (Smyrna), 1532.
- 284, 10. distich. *Anth. Gr.*, xiii, 798 no. 44 = Welcker, *Syll. Epigr.*, n. 61, p. 93 sqq. (95) = Keil, *Syll. inscr. Boeot.*, p. 189. Stephani, *Tit. Gr.*, v, 18 = *CIG*, 6745 = Kaibel, *Epigr. Gr.*, 1117.

284, 14. Marcus. Orelli, 4811.

284, 19. woman. Orelli, 4809 = *CIL*. v, i, 1939. Cf. the appeal to the reader of the epitaph in Renier, *Inscr. de L'Alg.*, 717 = *CIL*, viii, 2885 : Non fueras : nunc es iterum nunc desines esse. *CIL*, v, i, 1813 = Henzen, 7337 : n(on) f(ui) n(on) s(um) n(on) c(uro) ; *ib.*, 2893 ; *CIL*, viii, 3463 : non fui. fui. non sum. non desidero. *Mém. des antiquaires de France*, xiii, 171, tab. 3, n. 17 (Lactora) : D. i. m. Non fui. fui. memini (?) non sum. non curo. Kaibel, 595 = *CIG*, 6265 : εὐφυχῶ Νικομήδης, ὅστις οὐκ ἤμην καὶ ἐγενόμην, οὐκ εἶμι καὶ οὐ λυποῦμαι. *CIL*, v, i, 3415, l. 6 : nec scio quit nunc sim nec scio qu(it) fuerim) ; *ib.*, ix, 4840 : Olim non fuimus nati, sumus inde quieti. Nunc sumus ut fuimus. Cura relicta vale. Auson., *Epit.*, 38, ex sepulcro Latinae Viae :—

Non nomen, non quo genitus, non unde quid egi.

Mutus in aeternum sum, cinis ossa nihil.

Non sum, nec fueram : genitus tamen e nihilo sum.

Mitte, nec exprobres singula, talis eris.

CIL, xi, i, 856, 6 ; sumus mortales, immortales non sumus.

284, 21. remedy. Murat., 1597, 3 (Marini, *Inscr. Alb.*, p. 117, 7).

284, 23. Nothus. Henzen, *Inscr. antiche latine*, *BdI*, 1878, p. 240.

A second fragment of the same inscription (which may thus have been in common use) De Rossi, *BdI*, 1880, p. 1018.

284, 29. come. *CIL*, ii, 1434 (epitaph of an eight year old child) ;

ib., 1877 : Es bibe lude veni. *Ib.*, 2262 : Tu qui stas et leges

(sic) titulum meum, lude jocare veni. Lebas-Waddington, 798 =

CIG, 3827 S. = Kaibel, 362 : παῖσον τρύφησον ζήσον· ἀποθάνειν

σε δεῖ. Lebas-Wadd., 977 : "Ἄνθος τοῖς παροδείταις χαίρει·

λοῦσαι πλε φάγε βέλυσον· τούτων γὰρ ὡδε κατὰ οὐδὲν ἔχεις.

In *CIL*, vi, 3, 19,683 the concluding words may be restored

approximately as follows : Ecce meo jaceo tumulto neque

sentio quicquam. Tu, moneo, fruire, dum tibi vita data est.

Ib., xi, i, 2547a : dum vibes homo vibe, nam post mortem

nihil est ; omnia remanent, et hoc est homo quid vides.

284, 31. kind. Marini, i, i, 3 ; *CIL*, vi, 3, 16,169 : joceris, ludas : hic summa est severitas.

285, 7. form. Marini, *Inscr. Alb.*, p. 117 = Fabretti, *Inscr. dom.*, c. v, no. 387.

285, 9. fire. *CIL*, vi, 3, 17,985a (Henzen, 7410 from an interpolated copy in *Cod. Barberin.* ; otherwise Jahn, *Ber. d. S. Ges.*, 1851, p. 178 f.).

285, 22. manner. See above, note on p. 284, 29.

285, 25. lost. Muratori, 1677, 2 ; *CIL*, vi, 18,131 ; cf. Stephani, *Der ausruhende Herakles*, p. 36 (288), although I do not share his notion of a 'belief in the continuance of the effects produced by what has been eaten and drunk in this life'.

285, 31. himself. Orelli, 4816 = *CIL*, vi, 3, 15,258. Gruter, 910, 12 in Stephani, *op. cit.*, p. 16 f. Cf. cum vives, benefac (tibi : namque) hoc tecum feres : Henzen, 6042. De Rossi, *BdI*, 1853, p. 89s. Henzen, 7407 = *CIL*, ix, 2114 (Buecheler,

Spec. anth., l. epigr., lxxxii): Dum vixi vixi quomodo ingenuum decet. (Nam) quod comedi et ebibi, tantum meum est.

- 285, 33. epitaphs. Among these one must count also some which presume a dissolution into the elements. *CIL*, iii, 3247 (Sirmium): D. m. Terra tenet corpus, nomen lapis atque animam aer. Quammerus ser(vus). *Ib.*, ix, 2042 = *IRN*, 1804 (Beneventum): Zoticus hic nomen nudum vanumque reliquit. In cineres corpus et in aethera vita soluta est. *Ib.*, xi, 1, 973a (Reg. Lepidum):—Quoius ut est lenis patrium diffusus in aer (sic) Spiritus, hic mater (i.e. tellus) corpus operta tenet. Tocilescu, *Inscr. a. d. Dobrudscha*, in *Oesterr. Mitth.*, vi, 1882, p. 30 (a good poem, which denies the survival of consciousness after death): ἐξ ὕδατος καὶ γῆς καὶ πνεύματος ἡα παροίθεν, ἀλλὰ θανάων κείμει πᾶσι τὰ πάντ' ἀποδοῦς. πᾶσιν τοῦτο μένει· τί δὲ τὸ πλεον, ὁππόθεν ἦλθον εἰς τοῦτ' (αὐτ') ἐλύθη σῶμα μαραινόμενον. Inscriptions expressing doubts: Kaibel, 700 (ἀλλ' εἰ γ' ἐν φθιμένονασι τις αἰσθησις, τέκνον, ἐστιν); 722: εἰ δὲ τίς ἐστι νόος παρὰ Τάρταρον ἢ παρὰ Λήθη.
- 285, 39. jesting. Nor obscene ideas: Luxor. (*Anthol.*, ed. Riese 319), *De sarcophago ubi turpia sculpta fuerant*. Cf. the sarcophagus in O. Müller, *Denkmäler d. alten Kunst*, ii, plate xlv, no. 548.
- 286, 3. half-educated. Cic., *Tusc.*, iv, 3, 7; *Fin.*, i, 7, 25. Zeller, iii^a, i, 348 n. 3; cf. 353 f.
- 286, 35. Greece. Lehrs, *Pop. Aufs.*^a, p. 344n.
- 287, 5. principle. *Id. ib.*, p. 336 ff.
- 287, 12. *Phaedo*. Platonic doctrines on the survival of the soul, found in the Stoics, especially Seneca: Lehrs, *op. cit.*, 339 f.
- 287, 18. opponents. Cic., *Tusc.*, i, 17, 39; 21, 49.
- 288, 18. fire. Plato, *Phaedo*, p. 113c; Virgil, *Aen.*, vi, 741; Lehrs, *op. cit.*, p. 308 ff.
- 288, 20. dogma. Gregory, *Dialogi*, iv, 39, 57; Ebert, *Gesch. der christl. lat. Litteratur*, i, 522 f.
- 288, 26. Plutarch. Plutarch, *De ser. num. vind.*, c. 22.
- 289, 40. epitaphs. For Elysium cf. Lehrs, p. 344 f. So e.g. the epitaph on Persius' friend, the physician Claudius Agathernus (Pers., ed. Jahn, p. xxvii, Lehrs, p. 346): μετ' εὐσεβέων δ' ἐσμὲν ἐν Ἑλυσίῳ. The formulae εὐσεβέων εἰς ἱερὸς θαλάμους, εἰς δόμον εὐσεβέων, ἐπ' εὐσεβέων χώρον, μετ' εὐσεβέεσσι, ἐν εὐσεβέων etc.: Kaibel, *Epigr. Gr.*, 215, 218, 222, 222^b, 253, 338, 569; Elysium, 338; Isles of the Blest, 648, 649. Tocilescu, *Inscr. a. d. Dobrudscha*, in *Öst. Mitth.*, vi, 1882, p. 32 f. (νῆσσον ἔχεις μακάρων). *CIL*, iii, 1759 (Epidaur. Dalmat.) 5—nam mens aeterna profecto Pro meritis potitur seditibus Elysiis; 1992 (Salonae): vivas, qui dixeris: vivit Elysiis. *Ib.*, vi, 2, 12,877.
- 290, 16. gods. Lehrs., p. 340 ff. Kaibel, 314: καὶ με θεῶν μακάρων κατέχει δόμος ἄσπον ἴοντα 324: ψυχὴ δ' ἀθανάτων βουλαῖς ἐπιδήμιος ἐστὶν Ἀστροῖσι καὶ ἱερὸν χώρον ἔχει μακάρων. 650 (τελερσιν ἐν αἰθερίοισιν). Lebas-Waddington, 2771 = *CIG*, 2747: ἠρπασεν ἀθανάτων με χορός etc. *Ib.*, 1024 = *CIG*, 3847: ψυχὴ δ' ἀθανάτων αἰθέρα ναιετάει. *Ib.*, 1771: ἐς δὲ θεὸς ἀνέλυσσας καὶ ἀθανάτοισι μέτεμι. *Inscr. de l'Alg.*, 2017 = *CIL*, viii, 7427 (Cirta): haec abit

- ad superos. *CIL*, vi, 2160 = Henzen, 6008: *cujus spiritus inter deos receptus est. Oesterreich. Mitth.*, viii, 1884, pp. 136, 139: sede beatorum recipit te lacteus orbis. Sometimes in accordance with the later Platonism the soul is called a god: Lehrs, p. 351 ff. Kaibel, 314 = *CIG*, 3272 (perhaps of the third century, at Smyrna): Θεοῖς ἤρωσιν. The parents of a four year old child, τέκνω γλυκυτάτῳ καὶ θεῶιδίῳ ἐπηκώρ.
- 290, 26. departed. *Stat.*, *Silv.*, v, 3, 19-27.
- 290, 29. stars. *CIL*, vi, 2, 10,764: Sed non hic Manes nec templa Acherusia visit, Ad caeli quoniam tollitur iste pius. *Ib.*, viii, 8567: Non tamen ad Manes, sed caeli ad sidera pergis. *Ib.*, xi, 1, 2839: — — corporeos nexus linquens et vincu[la carnis], aeternas sedes meruit complecti pio[rum]. Sublimes animas nullus putet ire sub [umbras]: Occubat in terris sapiens sed vixit in a[lt]o. *Ib.*, 3963: Terrenum corpus; caelestis spiritus in me Quo repetente suam sedem nunc vivimus illic, Et fruitur superis aeterna in luce Fabatus. *Ib.*, vi, 2, 13,528:—
- Hic corpus vatis Laberi. Nam spiritus ivit
illuc unde ortus; quaerite fontem animae.
Quod fueram non sum; sed rursum ero quod modo non sum.
Ortus et occasus, vitaeque morsque itidem est.
- The conception is apparently that the soul lives again in another form.
- 290, 32. glory. Pliny, *Paneg.*, c. 89. An official apotheosis had therefore not yet taken place. Hirschfeld, *Z. Gesch. d. röm. Kaisercultus*, in *Sitzungsber. d. Berliner Acad.*, 1888, p. 847, 65.
- 291, 21. immortality. Zeller, iii^a, i, 740. Tertullian, *De anima*, c. 6: Soranus—corporealem animae substantiam vindicat, etsi illam immortalitate fraudavit.
- 291, 25. decided. Quintilian, v, 14, 13.
- 291, 31. Chrysippus. Tac., *Agric.*, 46. Cf. Zeller, iii^a, i, 185, 5.
- 291, 35. body. Zeller, iii^a, i, 593.
- 292, 38. life. Cic., *Tusc.*, i, 12 sqq.; *Rep.*, vi, 9 sqq.; *Ad Atticum*, x, 8, 8: tempus est nos de illa perpetua iam, non de hac exigua vita cogitare. Lehrs, *Pop. Aufs.*, p. 349 ff.
- 295, 10. demand. Cf. vol. ii, p. 309.
- 295, 16. purpose. On what follows cf. E. Petersen, *Sepolcro scoperto sulla via Latina*, *AdI*, 1860, p. 348ss.; 1861, p. 190ss.
- 295, 35. death. Cf. for the use of the Heracles legend by the Stoics, Bernays, *Die Heraclitischen Briefe*, p. 45.
- 296, 8. mysteries. Plutarch, *Cons. ad ux.*, c. 10.
- 296, 23. fields. A ceiling painting, certainly from a tomb, probably near Rome, in the *Cod. Pighian.*, published by Jahn. *Ber. d. Sächs. Ges.*, 1869, p. 1 ff. is of an allied kind. The principal picture (a figure in a *quadriga*, probably the deceased borne to heaven), is surrounded by pictures, referring to the after life: the Danaids, Heracles and Alcestis, Apollo and Marsyas, Eros and Pan (before Dionysus and Ariadne), all of which correspond with reliefs on sarcophagi, and are surrounded again by smaller figures, including many Cupids.
- 296, 38. peoples. Peschel, *Völkerkunde*, p. 270 f.

- 296, 39. exceptions. *Id. ib.*, pp. 308 f. and 317.
- 297, 12. rebirths. *Id. ib.*, p. 284 ff. The doctrine established in Buddhist communities expressly demanded from adherents that they should renounce the knowledge of the existence or non-existence of the perfectly blessed. This did not exclude the hope of eternal bliss. Oldenburg, *Buddha* (1881), p. 283 f.
- 297, 23. husband. Vol. i, p. 265. Cf. *Inscr. de l'Alg.*, 3864 = *CIL*, viii, 9691 (Cartena): *Mi fil(i), mater rogat ut me ad te recipias.* Gruter, 376, 5 (cf. Mommsen, *Hermes*, iii, 60, 5): *mater rogat, quam primum ducatis se ad vos.*
